878. Would you like to see everything irregular, and no regular corps at all ?—I think it is dangerous to have too many regular cavalry. I think that it requires a large number of Europeans to keep them in check also.

879. (*Major-General Hancock.*) Had you any Madras regular native cavalry with the force ?—No, I think not.

880. Nor Bombay ?—No.

881. (*Marquis of Tweeddale.*) In what does the superiority of the native soldier to the European consist ?—I think that he is a better horseman, and knows the use of his sword better.

882. (*Colonel Burlton.*) He has a much greater command of his horse ?—No doubt of it.

883. He has wonderful command of his horse ?—Yes.

884. (*Major-General Hancock.*) Of course, in respect to the horse itself, it is a very inferior horse to that of our cavalry ?—I do not know that ; they use the horses more ; they are always riding them.

885. (*Chairman.*) How is the native soldier armed, comparatively to the English dragoon ?—Some of them are armed with spears and some with swords, but the spear they like best, and the spear we find to be the most useful weapon.

886. (*Duke of Cambridge.*) You prefer the lance to the sword in India ?—Certainly. The 9th lancers have got a new lance latterly.

887. (*Viscount Melville.*) Did you never see a lancer thrown off from his horse by his own lance ?—I have no doubt there are exceptions of that sort.

888. (*Chairman.*) But the natives were more afraid of the lancers than of the others ?—Certainly ; I have always understood that.

889. (*Marquis of Tweeddale.*) Have you ever observed what use our dragoons make of their swords ?—I hardly ever saw them use their swords.

890. You do not know whether they cut or point ?—They point, I have always understood.

891. (*Sir Harry G. W. Smith.*) Have you ever been in a position personally to observe the superiority of the irregular calvalry over the British dragoons ?—I saw a charge the other day made by our dragoons in a body, and the irregular men came forward in line, and they both pulled up ; I believe the majority of the cavalry we engaged in Rohilcund were our old regular Bengal cavalry with a certain number of the irregulars ; they both turned round and went away ; neither would face the other.

892. What were they charging ?—They were charging our cavalry at Bareilly ; they charged within 200 yards of each other, and they both pulled up ; our cavalry fired a few shots, when the enemy galloped off, we then came away ; we did not follow them up ; they were in immensely superior numbers.

893. (*Duke of Cambridge.*) Did you ever see the irregular cavalry charge a square of infantry ?—No ; they seldom formed at all ; they never waited charge ; they scattered and broke up.

894. Did you ever see them charge in a body without scattering ?—No.

895. Is it not their system to scatter ?—I think it is.

896. (*Chairman.*) What was the character of the native artillery who were opposed to you ?—They were very good indeed.

897. (*Duke of Cambridge.*) As soldiers, the natives are very good artillerymen ?—Yes ; at times they have been as good as could be, at other times they have not even fired off their guns. There is no accounting for it. Sometimes they have conducted themselves remarkably well, and at other times they have not fired a shot.

898. (*Chairman.*) How was their fire ? Did they keep up a good fire, and was it well directed ?—Yes.

899. (*Duke of Cambridge.*) And the guns have been well served ?—Yes ; at other times they have not stood to their guns at all.

900. (*Colonel Burlton.*) Were not the mutinous sepoys that you were opposed to chiefly the Bengal artillery ?—Yes.

901. Not purely native artillery ?—They disappeared when we got there.

902. (*Viscount Melville.*) Did you not find that the natives fired without laying their guns properly ?—They very often made first-rate practice—as good as we could make. They generally had their guns in a good position when we arrived.

903. (*Duke of Cambridge.*) Do you not think that there are duties in India which it would be impossible for artillery to perform unless they were natives ?—No, I think not.

904. Such as going into very unhealthy portions of the country, jungles, &c. ?—No, I think not.

905. (*Chairman.*) Had you any portion of natives attached to the artillery during the time of the campaign ?—I think nothing but Madras men. There might have been a few others, but I do not think there were. We had, I believe, only Madras natives.

906. (*Duke of Cambridge.*) Were there no gun lascars, as they are called, attached ?—I believe there are lascars.

907. Do you know in what proportion ?—I do not.

908. (*Major-General Montgomerie.*) How was the battering train drawn, the heavy guns ?—By bullocks principally.

909. Those drivers, of course, were natives ?—Yes, those were just drivers of the cattle.

910. But the heavy guns were drawn by bullocks ?—Yes, and elephants. We had the 68-pounders latterly drawn by elephants—Sir William Peel's guns.

911. (*Chairman.*) What quantity of sappers and miners had you with you ?—I do not know ; a very large number.

Brevet-Major Sir D. Baird, Bart

11th Aug. 1858.

912. Were they all European ?—No, not all European.

913. (*Duke of Cambridge.*) Was a large portion European ?—We had a very large number of natives too. I do not know the number or the proportion, but I should say that there was not a greater proportion of Europeans than of natives, from what I remember. I am, however, not certain of that. There were an immense number of native sappers and miners. I think from Madras, also, there were native sappers and miners.

914. (*Viscount Melville.*) Were the European regiments able to maintain their camp followers in the late mutiny, or did they desert ?—I think they remained with them.

915. (*Duke of Cambridge.*) All the regiments had camp followers ?—Yes.

916. And a sufficient supply ?—Generally speaking, I believe a sufficient supply.

917. You are not aware of their having deserted when they came near the enemy, or anything of that sort ?—No ; I have heard that some men have gone away, but it has never been thought to be serious.

918. (*Sir Harry G. W. Smith.*) Were the tents pitched by natives ?—Yes, in some of the regiments, not I believe at first ; I think they were generally pitched by natives.

919. (*Chairman.*) Are there any other of the questions which were given to you upon which you can favour the Commission with any opinion ?—One question is, whether the Bengal native army should be composed of different nationalities or castes ? I always hear that it should be divided into as many castes as possible, and with the same number of each, as far as possible.

920. (*Viscount Melville.*) How are the irregular regiments which are raised in the Punjaub officered ?—By Europeans.

921. How many Europeans to each regiment ?—I think they are varied ; the more the better. It was remarked that they, the officers, suffered more than other regiments, and I suppose it was because they exposed themselves more.

922. (*Chairman.*) Do you think that any advantage would be derived from the Bengal army being divided ?—I fancy not.

923. (*Duke of Cambridge.*) You did not hear during the recent campaign, opinions expressed that it would have been an advantage if the army had been divided into two, that one part would have neutralized the other more than it did ?—No, I never heard it.

924. (*Viscount Melville.*) Are there any means of knowing the commander-in-chief's opinion as to which would be the proper place to be established permanently for the head-quarters for Bengal ?—I had an idea that he thought somewhere in Central India, but still to move about the country, occasionally to be where the governor-general was.

925. (*Chairman.*) I suppose you had no opportunity whatever of forming any opinion as to the composition of the native regiments, the manner in which they are officered, or whether any improvements could be made in them ?—No, I do not think that I had.

926. (*Duke of Cambridge.*) Have you ever heard an opinion expressed that the commanding officers of native regiments have not sufficient power ?—Yes, I have often heard it talked of out there, that the commanding officers have not sufficient power.

927. Are you at all aware how that has arisen ?—They want more power ; I do not know in what way, but I have always heard that they are interfered with ; they have not sufficient power.

928. Are you aware that there has been a great deal of petitioning going on on the part of the natives to the commander-in-chief direct, without passing through any intermediate channel ?—I have heard it talked about.

929. (*Major-General Hancock.*) Did you ever hear any Bengal commanding officer complain of having the power of inflicting corporal punishment taken away ?—I do not remember hearing complaints of that.

930. (*Duke of Cambridge.*) Are you aware whether corporal punishment has been made use of with the native troops during the recent operations ?—I do not remember any case with us.

931. (*Chairman.*) Was the general discipline of the native troops which were with you good ?—Yes.

932. (*Sir Harry G. W. Smith.*) To what native troops do you allude ?—The Sikhs.

933. The newly raised levies ?—We had very little to do with them ; they have scarcely ever been in action.

934. Then what are the native troops that you allude to ?—The Sikhs or some of the regulars that we had.

935. (*Duke of Cambridge.*) Were not they newly raised levies ?—Yes. I understood at Question 933, that the last raised levies were meant.—They are raising others in the low country ; they have never been out.

936. Are you aware upon what principle they are raising them ?—From low caste men, what they call sweepers and water-carriers, but there are great doubts whether they will fight at all ; they have given them muskets.

937. (*Major-General Hancock.*) Have they not been fighting at all ?—Not those men.

938. (*Duke of Cambridge.*) How are they officered ?—By old officers in the sepoy regiments.

939. Does there appear any difficulty in getting those low caste men to come forward ?—No, I believe there is no difficulty.

940. (*Major-General Hancock.*) Do you know how the native commissioned ranks have been filled in those corps ?—I believe they are filled from well-behaved men who have stuck to us. I have seen them with their regiments drilling them.

941. (*Chairman.*) Are there many European officers disposable ?—Yes, I believe so.

The witness withdrew.

Captain G F S. Browne.

Captain G. F. S. Browne, 24th Madras Native Infantry, examined.

942. (*Chairman.*) How many years have you served in India ?—Over fifteen.

943. In what presidency ?—In Madras ; but I have been serving for the last six years up in the north-west in civil employment.

944. In the course of your service, I suppose you have seen service both with the European and with the native troops ?—I saw service the other day at Agra with both Europeans and natives.

945. Have you been able to form any opinion as to the proportion of European and native forces which ought to be maintained in the Bengal presidency ?—I should say that one-fourth, when things are settled, should be European on the aggregate, giving a larger proportion of infantry and artillery to the Europeans compared with cavalry.

946. Would you have any native artillery at all ?—I see no reason why the half-castes should not be used as drivers. I think they would be very good drivers. I would have no natives, excepting as gun lascars.

947. (*Duke of Cambridge.*) Have you any reason to think that the half-castes are likely to be faithful ?—I saw them serve uncommonly well at Agra in the militia there, and fight very well. Their interests are very much bound up with ours ; they are of the same religion and feelings.

948. (*Chairman.*) Are you able to form any opinion as to the amount of force which will be required hereafter in the presidency of Bengal?—I should say 40,000 Europeans when things are quiet.

949. That would make 200,000 men?—If you take into consideration the police, we should have that number.

950. Then you consider the police as a portion of the whole?—They have proved themselves to be a portion of the Bengal army. They were taken from the same sources, and they sided against us at once. The police were a part of the men who were arrayed against us.

951. Then your estimate of one-fifth of Europeans includes the police?—The police battalions; they are raising police battalions now. They will be equipped and armed as the line.

952. (*Duke of Cambridge.*) Is it your opinion that the police battalions should be armed?—I would arm them, but in an inferior way. I would make them serviceable against any internal enemy only.

953. Would you give them a musket?—Yes; it might be a question whether I would give them a percussion musket at present or not. As the whole population of India will be disarmed, the enemy which they would have to oppose would be a very insignificant one.

954. (*Chairman.*) Would you make any distinction between the native troops and the police, as to the arms which you would give them?—Yes; I would arm the native troops with a percussion musket, with a company of rifles in every regiment.

955. Would you arm them the same as the Europeans?—No, I would not give them the Enfield rifle; I would only give them the ordinary rifle.

956. (*Viscount Melville.*) Are you not aware that they cannot use the ordinary rifle?—I commanded a rifle company in Madras for many years, and I never saw better practice anywhere; the practice at 150 and 200 yards was first-rate with them. We tried all sorts of experiments. The multigrooved rifle would have been better, no doubt, on account of the difficulty of loading the two-grooved.

957. Are you not aware that in the Sutlej campaign the rifle companies of the Bengal army threw away their rifles, and demanded to have back their matchlocks?—Yes, I have heard that mentioned.

958. (*Chairman.*) But does that arise from the fault of the ammunition or of the rifle?—From its being a two-grooved rifle, I think; the ball is too large.

959. That is the fault of the ammunition then, and not of the rifle?—Yes; the ball is decidedly a size too large.

960. Do you think that the native force ought to be regular or irregular, or both combined?—I would have a mixture of both.

961. In what proportion?—About one-half of each; but I would have no regular native cavalry.

962. Would you have irregular infantry?—Yes, with the same proportion of officers as they are now posting into the Punjaub regiments.

963. (*Duke of Cambridge.*) How many is that?—A commandant, a second in command, and an adjutant, and two officers doing duty in case of contingencies.

964. (*Chairman.*) Do you think that the discipline of a native regiment is materially affected by the number of European officers attached to it?—I think in the field the more European officers the better; but as to discipline on the parade ground, I never saw native troops that could beat the Gwalior contingent on the parade, and they were officered merely with three officers,—the commandant, the second in command, and the adjutant.

965. (*Viscount Melville.*) But have not those men all mutinied?—I say on parade merely.

966. (*Major-General Hancock.*) You recommend six European officers then for an irregular corps?—Five; two officers doing duty.

967. Only in the field?—At all times.

Captain G.F.S.Browne

11th Aug 1858.

968. (*Viscount Melville.*) There are no European officers in command of companies in the regiments which you speak of?—No, they are doing duty, and they draw staff allowance for it. I think it is 150 rupees a month.

969. Who command the companies?—The native officers, just in the same way as if these two officers were not there.

970. Who pays the men?—They should be paid before the adjutant in the irregular regiments. All irregular corps are paid in the presence of the adjutant; sometimes he and the commanding officer divide the regiment between them.

971. How are the native officers selected for the irregular infantry of which you have spoken?—I do not know how they have been selected at all in most of the regiments. I saw Colonel Coke's regiment of Punjaub rifles the other day. He selects the native officers pretty much as he likes, I believe, for general efficiency and intelligence; but then he has his men divided into separate companies. He has his company of Affghans with their Affghan native officer, and a company of Patans with their native officer, and Sikhs with their native officer, and others with their native officers, and each individual company has to look up to its own particular native officer.

972. Do they ever act as a regiment?—They have been serving all throughout the campaign.

973. As a regiment or as detached companies?—As a regiment. It is merely that the different castes and tribes are kept *entirely distinct in the different* companies.

974. (*Duke of Cambridge.*) Do you think that that answers?—I think so.

975. Better than mixing them all up?—Yes, I think it prevents combination. The men are more strangers to one another in that way.

976. Is it not also found to create emulation?—Yes, and the men, I think, got on better together. Each native officer understood his own company better from its being of his own caste and tribe.

977. It had the effect of making native officers have more influence over their men?—Yes, and they were selected as men of intelligence.

978. Did it produce jealousies at all?—I never heard of it, and I made particular inquiries as to that point.

979. Is there any other corps established upon that principle?—I am not aware of any other.

980. (*Chairman.*) Do you think that European non-commissioned officers would be beneficial in the native regiments?—I think not more than at present. I think *they do not get on well in the regiments.* I think two are very useful; one as a drill instructor, and the other in charge of the stores.

981. (*Lord Stanley.*) Has not the plan of having each caste or tribe in a separate company been pursued in forming the irregular corps of the Punjaub?—No.

982. Is it not the case in the guides under Lumsden?—I do not think they are separated into companies or tribes in the guides; they may be in the cavalry, perhaps.

983. (*Viscount Melville.*) Were Coke's men differently organized from Lumsden's guides?—No; they are very much upon the same system; the whole thing was very much taken from Lumsden's guides, but I am not sure whether the guides are separated as Colonel Coke has separated his men into companies or not.

984. (*Duke of Cambridge.*) Is it not probable that they are, as the two were established on the same design?—It is very probable; I know that the men of that regiment always call themselves the younger brothers of the guides.

985. Should you be afraid that native officers, having that influence which it appears these officers have over the men of their own caste, would, in the event of a mutiny hereafter, play a more conspicuous part than natives have hitherto done?—Of course, the greater intelligence there is in a native officer the

Captain G F S. Browne.

11th Aug. 1858.

greater the danger if he turns faithless; but the native officers that I have ever had any experience of are utterly useless. I have never known above one or two in a regiment that really had any influence in their companies at all.

986. What are the duties which a native officer is supposed to perform?—He should be the link between the European officer and the men; he should watch the men in their lines, and he should understand anything that goes on in the lines, where of course the European officers cannot interfere or pry, and he should be the go-between in all matters or references upon questions of caste or religion. The native officer should be expected to suggest to the European officer how any little difficulty may be smoothed over in such cases.

987. (*Chairman.*) But I understand that in your opinion the present class of native officers are inefficient?—I think perfectly inefficient.

988. (*Major-General Hancock.*) From what cause?—From reaching so great an age before they are promoted.

989. What is that in consequence of?—In consequence of the seniority system. I am speaking both of the Madras and the Bengal armies. You must promote the senior havildar to be a jemadar on a vacancy, unless you can show very good reasons to the contrary. General age and failure of mental qualities are not considered a sufficient bar to promotion.

990. (*Duke of Cambridge.*) So that if you commanded a regiment, and assigned that as a reason for not promoting a particular individual, you would be ordered to promote him?—Yes, I have seen that rule prevail when I was adjutant in my own regiment.

991. (*Viscount Melville.*) Does the rule of promoting havildars to be jemadars prevail to the same extent in Madras as in Bengal?—It does not prevail to the same extent in making havildars; but when a man is made a havildar, he must be promoted to be a jemadar unless he is grossly unfit. In the grade from naik to havildar the commanding officer can pass over a man merely by stating that the man is not a smart naik and is not likely ever to make a smart havildar. In Madras the roll goes in once in three months, and then, unless the reason is given why the senior naik is not appointed as a havildar, a reference comes back for an explanation.

992. (*Major-General Montgomerie.*) Is that the senior in the company?—No, the senior in the regiment; but all promotions are made at head-quarters to the native commissioned ranks.

993. (*Major-General Hancock.*) You mean by the Government?—Yes.

994. (*Chairman.*) Do you consider that the commanding officer should have more power than he has at present to reward and punish?—I think so, certainly.

995. (*Major-General Hancock.*) Would you introduce the system of selection in all the promotions of the non-commissioned grades, and from havildar to the commissioned grades?—Yes, I would do so, certainly, when a man proves that he has not a sufficient knowledge of his general duties and of reading and writing.

996. Would you have them undergo an examination?—Yes.

997. (*Duke of Cambridge.*) Have they to do anything of the sort now?—Not in the native commissioned ranks.

998. Do you know any instances of their not being able to read and write?—Yes; numbers of the elder ones cannot read and write. Of late years there have been no havildars made unless they could read and write, and that, of course, has rendered the number who cannot do so fewer.

999. Do you conceive that the position of the native officer is essential, and that you cannot get on without it?—I think that if you have a good one he is a most useful man, and that if you have a bad one he is worse than if he was not there, because the men have influence over him.

1000. (*Viscount Melville.*) In Madras, what is the system of carrying on duty in the way of mounting guard?—We always took the regulations for the Queen's army as the model, and worked up to it as strictly as we could. The men were never allowed to take off their accoutrements in the 24 hours when on guard.

1001. (*Duke of Cambridge.*) Is that the case in Bengal?—No.

1002. Is it according to the regulation in Bengal?—Yes; the men in Bengal were always allowed, one-third of them, to take off their accoutrements to eat. We never allowed that in Madras, and though we entertained Bengal sepoys, we never permitted that practice.

1003. (*Major-General Hancock.*) Are not the Madras men allowed to go from their guards home to eat their dinner?—Yes, from ordinary guards one-third are allowed to go away.

1004. (*Major-General Montgomerie.*) During certain hours?—Yes; after saluting hours are over.

1005. (*Duke of Cambridge.*) Do you not think that such a system as that in Bengal, the men performing their duties in that loose and irregular way, is very detrimental to discipline?—Most undoubtedly.

1006. Do you think that it has had any effect generally, amongst other things, in producing the laxity of discipline which appears to have existed?—Yes; I think the men got into the habit of taking great liberties, and they certainly gave themselves much greater liberties than I would have submitted to in my own regiment. If the men asked for leave, and have been told that it was not convenient for them to get it, they have said, "It is my right to "have leave, and if I do not have it I will appeal."

1007. Was that expression taken notice of?—No.

1008. (*Marquis of Tweeddale.*) Were you up in Saugur?—Yes, I was up there with my regiment, and then got into civil employment.

1009. In what year was that?—I was there in the beginning of 1851.

1010. (*Viscount Melville.*) Had you any opportunity of forming an opinion of the new Sikh regiments?—Yes; I took a great deal of notice of them. They struck me as being most efficient men. I saw a regiment up at Moultan, where I was staying some days on my way home, which had only been raised a couple of months, and it performed wonderfully well on parade.

1011. Had you any means of knowing what the feeling of the Sikhs was?—Yes, I have heard many officers talking and saying that the Sikhs have said, half in joke and half in earnest, "The time will come "when we will settle with you; we hated the Hin-"dostanees and have killed them." They have said, "The Raj will be yours to-morrow, but who can say "whose it will be in another two years?" I do not know whether it has been in jest or in earnest. I have talked with Sikhs myself, and they have said that it has always been a matter of chance who has had the upper hand.

1012. You do not think that they bear us any good-will?—I think not. I think they merely serve us from its being a good service with good pay, and plenty of plunder, and from a bitter feeling towards the Bengal sepoy; but I think that when things settle down, in four or five years, we shall find them fully as dangerous, if not more so, than the Bengal sepoy; and I think that the rising of any chief in the Punjaub might bring those men into arms against us.

1013. (*Colonel Burlton.*) Holding that opinion, do you think that one European in five would be sufficient hereafter for the holding of India?—I look for the safety of India to another precaution, namely, the preventing the importation of sulphur. You would then deprive them of the use of fire-arms.

1014. (*Duke of Cambridge.*) I suppose you would also take railroads into account?—I would not so much take railroads into account, because labour is

Captain G.F S Browne

11th Aug. 1858.

so very readily obtained in India that they would dig up a quarter of a mile of railroad in a night. I think you might find your troops placed in a very difficult position, with probably the enemy strongly entrenched in some position, and a quarter of a mile of the rails taken up.

1015. (*Chairman.*) Would you have any alteration as to the manner in which the native army is enlisted now?—I would enlist every man for general service and for service in foreign countries, and would as much as possible keep the regiments in which the preponderance of men had been raised from the north down towards the south of India, and those men who had been raised from Oude I would keep pretty much up in the Punjaub, and I would never allow more than two regiments raised in the same locality to be in the same garrison one with the other. It would be very undesirable to have men who came more from one part of the country than from the other.

1016. (*Major-General Hancock.*) Could not that be prevented?—It would require, I think, very great care to prevent it; it would very soon be known that there was a prohibition against too many men coming from one part of the country, and if a man said, "I "come from Rohilcund," whereas he really came from Oude, he may deceive you in that way.

1017. (*Major-General Montgomerie.*) You could not mistake a Sikh?—No.

1018. (*Marquis of Tweeddale.*) Would you have the Madras troops do duty up in the Bengal country? —I see no reason against it.

1019. How would you manage the families?—I would make it a tour of foreign service; they do not take their families on foreign service now; the regiments go over now in turn, and as the turn comes round they are shipped off, and their families are left behind them. Bengal sepoys go whose brothers will not cross the water; they enter our regiments, and are shipped off without saying a word.

1020. (*Duke of Cambridge.*) How do you account for that?—Merely from the difference of discipline. I have known cases in my own regiment where we have had a Bengal sepoy a man from Oude whose brother has been serving in some Bengal regiment; the man in the Madras regiment is shipped over the water as soon as his turn comes, and he fares like all the other men.

1021. (*Major-General Montgomerie.*) Are you not aware that they eat their food in a different way, supposing, for instance, a man is a rajpoot?—Yes.

1022. So much so that sometimes a boat is put astern for the purpose, even in a Madras regiment? —Yes; but I think that there is a great deal of nonsense in it. I do not believe that there is any such real prejudice. No Bengal Brahmin will eat his food until he has taken off his clothes and bathed; but they will do it in Madras.

1023. (*Duke of Cambridge.*) Why?—Because they see all the rest around them do it.

1024. Men of the same caste who make an objection in one case do not in the other?—Yes.

1025. That is discipline again?—That is discipline and custom.

1026. Without referring to any other cause, do you not think that the system of discipline in the armies of Madras and Bombay kept them sound, probably, when the Bengal army was shaken?—I do not look upon the Bombay army as having been at all sound. The Madras army, I think, was sound, having a different description of men altogether; we have quite a different description of men. The mass of our men are from Southern India.

1027. (*Major-General Hancock.*) Are there not a large proportion of Mahomedans in the Madras native infantry?—We have generally about one-third in every regiment.

1028. Have they all behaved very well during this mutiny?—I believe they have.

1029. (*Duke of Cambridge.*) Would you trust the Mahomedans as much as the others?—I prefer the Hindoo to the Mahomedan; I know no more dangerous man than a religious Mahomedan.

1030. Would you have no Mahomedans at all?—I do not say that; but I would not allow them to preponderate in any regiment as they do in the Madras cavalry corps. I suppose four-fifths of the men there are Mahomedans, and taken from one particular class.

1031. (*Marquis of Tweeddale.*) Are they not a different class of Mahomedans from the infantry; would not you designate the Madras cavalry as the high-born Mussulmans?—They come from the same parts, Arcot, Vellore, and Trichinopoly, and we enlist from the same locality for the infantry.

1032. (*Viscount Melville.*) When Madras troops go beyond the presidency and their families are left behind, do they get extra batta?—They are getting batta in the field now, and when they cross the water they get extra batta.

1033. (*Sir George A. Wetherall.*) Full batta?—Yes.

1034. (*Major-General Montgomerie.*) When the men serve in Bengal it is considered as foreign service and they get extra rations, do they not?—They get full batta.

1035. And provisions?—No, I fancy not.

1036. (*Viscount Melville.*) Do not all troops 200 miles from the presidency get extra batta?—Not the men; that applies to the officers.

1037. (*Major-General Hancock.*) Do not all the Madras soldiers get on foreign service extra batta?—On foreign service they get what is called full batta. They used to get extra batta over at Penang in the Straits, and at Burmah.

1038. (*Duke of Cambridge.*) Would you be afraid of the admixture of colonial troops with the rest of the Indian army?—I should not object at all to the Africans; I should not like to see the Malays in India, they are very bigoted Mahomedans.

1039. Would you object to the Hottentots?—No.

1040. Do you think that their appearance would have a bad effect upon the native army of India?—I do not think so; I think it would be beneficial to the native army, as showing that we could get other native troops to serve us. They have now an overweening opinion of themselves.

1041. (*Chairman.*) Do you think that any advantage would be derived from dividing the Bengal army into two armies?—I do not think so, provided the commander-in-chief was in a central position. I think that at present, from Calcutta being very far off, great delay is necessary.

1042. What change should you propose in the system of promotions as regards the native commissioned and non-commissioned officers who, you say, at present are inefficient?—I would make a lance naik of no man above five years' standing. He would probably run through the lance naiks in three years, and upon passing an examination he would be a young man by the time he became a havildar.

1043. (*Major-General Hancock.*) Would you not allow selection for havildars?—Yes, for special services in the field, and as a special promotion; I would leave that to the commanding officer. I also think that the commanding officer should be able to lower a non-commissioned officer in his grade for offences.

1044. That is not possible in the Queen's army?—No; but I think that the European is such a different material altogether to deal with that a difference might be made.

1045. (*Viscount Melville.*) Have you ever seen the Bombay army?—I have.

1046. Are you aware of the system which prevails there in the promotion from havildar to jemadar?—They promote very young men to be native officers.

1047. Do you know how it is done?—I do not; but I have always understood that they go into the opposite mistake, and select the very junior men.

1048. (*Duke of Cambridge.*) Would you like to see the introduction of any gentry of a superior class

Captain G.F.S.Browne.

11th Aug.1858.

as native officers in regiments in regular corps?—Not in regulars, but I think it might be done in irregulars.

1049. Why not in regulars?—Because I think that it would be such a total change, and that it would produce discontent, the other two armies of Bombay and Madras not having any system of that sort.

1050. (*Viscount Melville.*) Do you not consider that in the Bombay army, from the mode which they adopt, they get the most intelligent native officers?—I have seen very young men,—men of 10 or 12 years' standing,—promoted as jemadars, and I am not quite sure that injury was not done to their seniors, who were quite as efficient men.

1051. (*Major-General Hancock.*) Do you not consider that in the system of seniority, the circumstance of passing over a man causes jealousies and heartburnings, which would not be the case in the system of selection?—I think that under the present system, where every man considers that he has a right to promotion from the day he becomes a lance naik, it is a grievance if he is not promoted.

1052. And by the other system there is no grievance?—No; if a man enlists with the understanding that he is never to rise higher than his qualifications and merits entitle him to rise, there can never be any grievance.

1053. (*Chairman.*) You would make that a condition on enlistment?—Yes.

1054. What do you consider the average age of the native officers under the present system when promoted?—I suppose they are verging on 60, or between 50 and 60, when promoted to jemadars.

1055. (*Major-General Hancock.*) How old are the private soldiers when they are promoted to the first grade, that of naik?—I suppose they are 40; they are grey-headed men.

1056. (*Viscount Melville.*) To what age do they retain men in the ranks in the Bengal army?—As long as they are efficient for duty, until a medical committee declares them unfit for further active service.

1057. (*Major-General Hancock.*) Do you not think that such a system takes away a great stimulus on the part of all ranks to good conduct?—I think so; I have had young men who have exerted themselves to learn English and to make themselves accountants, and they have come and said, "What is the use of "my doing all this? I cannot rise. I shall be an "old man before it comes to my turn for promotion."

1058. (*Viscount Melville.*) What is the earliest period of service at which a man can get a pension?—After 20 years' service.

1059. Then if he is not unfit he still goes on?—He must go on; he has no right to claim his pension until he is pronounced unfit by a medical committee.

1060. But at 20 years he can receive a pension if he is unfit?—Yes.

1061. (*Colonel Burlton.*) It used to be 15 years in Bengal?—I think it is 20 in Madras.

1062. (*Major-General Hancock.*) Are you aware that the officers commanding regiments in the Bengal army have been during the last eight years prohibited from carrying out sentences of corporal punishment?—I have heard it very often mentioned that after the order was promulgated, a confidential circular came round to the officers commanding regiments, telling them to hold the order in abeyance, and not to inflict corporal punishment; I have heard that mentioned repeatedly.

1063. Do you think then that no native soldier of the Bengal army, since the articles of war issued in 1847, has been flogged?—I think that the order for flogging was issued in 1850, that is to say, the last one re-introducing flogging; I do not think that flogging has ever been re-introduced into the Bengal army; it has been in the Madras army; we have flogged frequently.

1064. Did you ever see the circular?—No; I saw the circular which came round in the Madras army, but it was not prohibiting flogging, for we frequently flog.

1065. (*Duke of Cambridge.*) Was it limiting it?—It was merely limiting it. It was more a letter of advice and caution than anything else.

1066. But the other was prohibiting it?—I have always understood so.

1067. But you have not seen that letter?—No.

1068. (*Chairman.*) What number of European officers do you think it necessary to have in the native troops?—An efficient officer for every company. I think very few officers are efficient or able to manage a company who have not been three years with the regiment.

1069. (*Duke of Cambridge.*) In order to have a proper supply of efficient officers, you would require to have an additional number learning the duties?—Yes.

1070. (*Chairman.*) Do you think that any inconvenience arises from the number of European officers who have civil appointments?—I think not.

1071. (*Duke of Cambridge.*) What is the establishment now altogether?—Seven captains, eleven lieutenants, I think, and five ensigns.

1072. (*Major-General Hancock.*) Why do you consider more European officers necessary with the regular native regiments than with the irregular native regiments, where you recommended only six?—They are rather on a different system; more is left in the hands of the native officers.

1073. Why should not that be done with the regular regiments?—It might be done with a different class of native officers, but not with the present class of native officers. I think that the more a European officer can look to his company now, and the less he trusts to the native officer, the better it will get on.

1074. Provided the regular and irregular native officers are equally efficient, you see no reason why there should be more Europeans in the one case than in the other?—No; excepting that in action you cannot have too many European officers.

1075. Does not that apply equally to both?—Yes.

1076. (*Viscount Melville.*) How many field officers are there to a native regiment in Madras?—Generally only one present.

1077. Do you not think it better to have a second?—The senior captain always mounts on parade.

1078. But he gets no allowance for it?—No; and that I think has been a cause of heartburning.

1079. (*Duke of Cambridge.*) Do you not believe that there are many regiments which have not got a European officer to a company, whether regular or irregular?—I have known cases where young lieutenants have been holding three and four companies for months together.

1080. Do you think that that is a good system?—Certainly not.

1081. What has produced that?—A greater draft of officers away for the staff than should be allowed, and from a large number being away on leave, going on furlough or private affairs.

1082. You said, as I understood you, that there was no objection to the present staff arrangement?—Not limiting it to six; but there have been very often eight or ten officers away.

1083. (*Major-General Hancock.*) What army are you now speaking of?—I am speaking of the Bengal army.

1084. (*Duke of Cambridge.*) Is that the case at Madras?—No; they are very particular indeed. I was myself kept out of a staff appointment for a year merely because there was one officer too many away.

1085. Do you not think that the feeling of an officer joining a regiment in India is to get through his drill, and so on, as rapidly as he can, in order to qualify himself for a staff appointment as soon as possible?—I do.

1086. Do you think that that is an element which can work well as regards the discipline and control of a regiment?—I do not think it does; but I think

Captain G.F.S.Browne.

11th Aug 1858

that most men of active mind or body very soon get tired and wearied of the monotonous life, and, in fact, the utter *requiem* that there is in commanding a native company in a regiment. There is nothing whatever to do except looking after your company, which, if you once get it into order, should not give you further trouble.

1087. (*Major-General Hancock.*) Do you not think that placing a limit to the period for which an officer was allowed to be away from his regiment on staff employment, and obliging him to return after a fixed period to his regiment, would obviate the difficulty?—I think that it would create a great deal of inconvenience; you must put in new men. Take the adjutant-general's office, if you withdrew every man after five years you must put in another and a fresh man.

1088. Take brigade majors and other military appointments?—You would probably get rid of a very efficient officer, and get in another who would not learn his work under some months.

1089. He would become efficient after he had had the same opportunity?—Yes; after a time.

1090. Then the army would gain by having a large number of efficient staff officers?—Certainly.

1091. (*Duke of Cambridge.*) Would not the experience which those officers gained on the staff be advantageous on their falling back to their regiments?—I think they would feel very discontented. They would not know what to do with themselves.

1092. (*Major-General Hancock.*) Do not you think that the public service now suffers very great injury from officers remaining ten, fifteen, and twenty years away from their corps, and afterwards taking command of them?—Certainly.

1093. (*Duke of Cambridge.*) How would you obviate that?—By a staff corps, which would prevent it.

1094. Would you propose that a man once getting on the staff should be placed on the staff corps?—I would give him the option, on getting on the staff, whether he would rise in the staff corps, or work his way up in his regiment to the command of it.

1095. (*Sir Harry G. W. Smith.*) Do you happen to be aware that in the Bengal army there is a regulation which limits the number of officers who shall be upon the staff?—Yes, I know that.

1096. (*Sir George A. Wetherall.*) When the Madras troops go beyond sea they get their full batta?—Yes.

1097. And they get free rations, do they not?—They used to get them at Penang, in the Straits. I do not know whether they get them now or not.

1098. Did the Bengal troops, when so employed, get free rations?—Yes.

1099. To the same amount?—Yes.

1100. (*Marquis of Tweeddale.*) Have not there been instances of the Bengal army getting garrison pay, when a regiment of the Madras army on the same station has been getting batta and rations?—I know of no instance of the kind.

1101. A sentry standing at the door of the Governor of Bombay on the one side is receiving batta and rations, and on the other side that man has been receiving garrison pay?—I am not aware of any such rule obtaining in Madras.

1102. (*Major-General Montgomerie.*) Do you know whether the men of the Madras army at this moment serving under General Whitlock in Hindostan get different pay from the men who embarked at Madras as a brigade to go to Calcutta?—I imagine not; under the regulations of the service, unless any particular indulgence was allowed, they should be both getting the same.

1103. (*Viscount Melville.*) With reference to the number of officers serving with their regiments, how would you propose to furnish officers for civil employment and for the staff?—Excepting for purely military staff, I would remove them altogether from their regiments, and put them into a staff corps.

1104. An officer in commencing the service should commence regimentally?—Yes.

1105. And be promoted afterwards to the staff corps?—Yes.

1106. Then would you propose that a regimental officer selected for the staff corps should pass an examination before being promoted to the staff corps?—Yes.

1107. (*Major-General Hancock.*) Would you give the governor or the commander-in-chief that power; he might take half a dozen away?—It certainly might be liable to that abuse; but I think that in the instruction of all young officers going out to India a great benefit might be gained if they had to pass through a course of instruction in all three branches of the service, either at home or when they got out to India.

1108. (*Duke of Cambridge.*) Do you think that the European officers attached to the native regiments would be benefited if they first underwent European drill?—Yes.

1109. Both in cavalry, infantry, and artillery?—Yes.

1110. (*Viscount Melville.*) Then would you propose that all cadets nominated to the Company's army should be sent to Chatham, Canterbury, or some garrison, in the same way as the engineers are now sent, in order to go through their course of drill and instruction; you are aware that the engineers are now all sent to Chatham?—Yes; I think it would do them more good if they were sent out and attached to European corps in India, than giving boys the liberty of running about in a garrison town.

1111. (*Colonel Burlton.*) They might employ themselves in learning the languages also?—Yes. I think it would be better if they were attached to regiments in India rather than in England.

1112. (*Duke of Cambridge.*) Do you not find that you have literally no school for a European officer joining a native regiment in India, because he joins at once a native regiment?—Yes. It very often happens that we have what they call supernumerary cadets, who are unposted for some months, and are sent to European regiments to learn drill. As far as my experience goes as adjutant, I have always found that when those men joined native regiments they were better up in their drill than any others.

1113. In fact they knew their drill before they joined?—Yes.

1114. (*Marquis of Tweeddale.*) Since you have been in the Madras service, have you known any difference in the duty done by a native, in comparison with that done by a Queen's soldier, with regard to the orders, rules, and regulations?—The aim has been to copy the Queen's regulations, as far as drill and discipline went, as closely as possible.

1115. Do you know of any distinction?—I do not know of any particular distinction.

1116. When a Madras regiment is on foreign service, is it heavily equipped, or is it free from all burthen?—It is free from all burthen of families whatever.

1117. You consider that it is equipped as lightly as a regiment can be?—Yes.

1118. There are no incumbrances?—No incumbrances whatever.

1119. (*Duke of Cambridge.*) Is that the case with the Bengal army?—Yes, when they are shipped for foreign service; just those few regiments which will go on foreign service.

1120. They are enlisted for general service?—Yes.

1121. (*Major-General Hancock.*) And for an unlimited period?—Yes.

1122. For life?—For life.

The witness withdrew.

Adjourned to Tuesday, the 24th instant, at Twelve o'clock.

Tuesday, 24th August 1858.

PRESENT:

Major-Gen. the Right Hon. JONATHAN PEEL, M.P.	Major-Gen. Viscount MELVILLE.
General H.R.H. the Duke of CAMBRIDGE.	Lieut.-Gen. Sir HARRY G. W. SMITH.
Lord STANLEY.	Major-Gen. HANCOCK.
General the Marquis of TWEEDDALE.	Colonel BURLTON.

Major-General PEEL in the Chair.

Sir GEORGE CLERK, K.C.B., examined.

Sir G. Clerk, K.C.B.

4th Aug. 1858.

1123. (*Chairman.*) Will you have the goodness to state to the Commission what opportunities you have had, by residence in India, of forming an opinion upon the questions which have been submitted to you?—My opportunities have been such as were afforded by my service in different parts of India, and I have been a good deal in camps. I have been occasionally residing at the head-quarters of the army in different parts of India, and latterly I was the Governor of Bombay.

1124. What was the length of your residence in India?—I was about 27 years in India.

1125. Up to what period?—I left India ten years ago.

1126. Have you formed any opinion as to the proportion which the European should bear to the native troops in the Bengal presidency?—If there is to be a regular native sepoy army, as it is called, I should say that the presidency would require one European to three natives, or taking the whole "regular" and irregular, if you compose it in that way, one to four would be ample.

1127. Do you include among the natives the police?—No.

1128. It is exclusive of the police?—Exclusive of the police, but including the regulars and irregulars.

1129. Do you take into consideration the contingent forces?—I should suppose that very few of those remain in the native states. I do not take into consideration the Punjaub force, for nobody knows what that is at present; that, I think, must be separately considered; but taking Bengal and Hindoostan Proper up to the Sutlej, I should say that that would be the proportion with which it now might be held in security.

1130. (*Duke of Cambridge.*) Of course, even up to this moment, there have been more Europeans in the Punjaub comparatively than in Bengal Proper?—Yes; and more than there ever have been in any other province in India.

1131. Therefore you do not take those into account?—No; especially with reference to what may now be necessary in the Punjaub; they may require still more in the Punjaub than they even did before. It was only the day before yesterday that I heard from a member of the Council of India, who is in the best situation to judge, that in his opinion they will require 20,000 Europeans for the Punjaub alone, to hold in check its native army; therefore I think that should be considered separately from the north-western provinces and Bengal.

1132. Then for Bengal and the north-western provinces you think that the proportion should be one to four?—Yes.

1133. (*Chairman.*) Would you have any native artillery or sappers and miners?—It would be a secure measure to have a European sapper and miner corps, and no natives; nevertheless, there would appear to be inconsistency and weakness in excluding them altogether from the scientific departments when we are educating the people in the higher branches of European literature and science. They are very apt to learn, and they will learn; we may depend upon that; it is rather our duty to keep ahead of them, I should say. But the line at present of course could be drawn to exclude them from the laboratories by introducing there nothing but Europeans.

1134. (*Duke of Cambridge.*) You would do that at present?—It is generally considered now to be a measure of safety, and I believe that it would be generally advocated. I am not altogether of that opinion myself.

1135. (*Chairman.*) I believe that the previous witnesses whom we have examined have been perfectly unanimous upon the point that they would have no native artillery whatever, that they would not entrust the natives with guns or allow them to be drivers, with the exception of gun Lascars to assist?—That I think shows very little confidence in ourselves. Their artillery when served by themselves in this rebellion, was, I believe, found indifferent compared to that served by European officers. The most formidable artillery which we have encountered, I believe, was that which had been formed by French officers across the Sutlej, and still that could not resist British artillery inferior in numbers. I believe that at present every brigade of horse artillery, for instance, has one troop native and two troops Europeans. I do not see why that proportion should not be continued; you could always annihilate the native portion.

1136. (*Duke of Cambridge.*) From the fact of the artillery being a very powerful arm, would it not be more dangerous to give such a weapon to a population in whom you have *not* full confidence?—I do not consider that any danger has hitherto arisen from it excepting that which is owing to our want of ordinary precaution in allowing the natives to occupy walled towns and arsenals, and to blunders of that kind. Of course if we do that, no measure will be safe.

1137. Is it not almost an admitted fact that religious fanaticism has had a great deal to do with the recent rebellion?—Certainly.

1138. Would not the result of that be that if a body of men had the means of artillery to carry out their religious fanatical views, they would be far more dangerous than infantry or cavalry with a very inferior arm?—Certainly.

1139. In that point of view, do you not think that it would be hardly reasonable, at all events till the country has quite reassumed its original tranquillity, to entrust the power of artillery to native hands?—Not if the proportion was small. I should say, for instance for horse artillery six-pounders, there could be no danger in having a troop of natives as you have now in every brigade; and after all, their religious fanaticism has arisen from our interference with their religion. They are people of some discernment, and if that interference is to be continued, no precaution of that kind only will suffice; you must pour in a vastly larger amount of European artillery than we have there now. But if that cause of irritation is removed the danger is not likely to recur; they will not rush with any less provocation into rebellion, and sacrifice good pay, and pensions, and the means of purchasing land which they value almost more than their lives. When provocation is at an end, there will be an end of the insurrection.

1140. Still have they not done so this time to a great extent?—Yes.

1141. More than could ever have been anticipated by those who had the greatest experience there?—No; I should imagine that all those who had taken a dispassionate view of the native character and circumstances must have anticipated that this mutiny would have occurred at any time within these last fifty years if the same causes had been in operation; it could not have been otherwise. There would have been the same desire to rise and to resist; there would not have been the same means of resistance, because you have never before left Hindoostan Proper so denuded of troops as you have lately done; that afforded success to the insurrection.

1142. (*Lord Stanley.*) If I understand you, you think that there would be no risk in having a native artillery, provided it formed a small proportion of the whole?—Just so.

1143. Provided the European force was everywhere in a majority?—Yes.

1144. (*Colonel Burlton.*) How would you provide for artillery at the outposts?—You would not furnish native artillery to the outposts; you would have a larger proportion of Europeans. I would not detach native artillery at least until you find that confidence is restored; but I do not see why they should not again serve as they have served for half a century, when confidence is restored. The fact after all is that they have lost confidence in us, and we in consequence have lost confidence in them.

1145. Would you consider it safe to detach a troop of native horse artillery or a light battery of foot artillery by themselves to any of the small outposts?—I think the period will come, I would not do so at present.

1146. (*Chairman.*) Would you arm the native troops with the Enfield rifle, the same efficient weapon with which you would arm the European troops?—I should not object to do so, because I should reckon on the European troops always keeping ahead of them, whatever arms were put in their hands; the former will always be cooler and better marksmen, and always be superior, whatever the weapon was. I believe the natives have done no mischief yet with their Enfield rifles.

1147. (*Duke of Cambridge.*) Do you think that there would be in the native mind a bad feeling produced if you were to trust the natives less by giving them a worse arm than the Europeans?—No; I should not attach much weight to that. I do not think that they would feel it. They are generally indifferent marksmen with all European fire-arms.

1148. (*Lord Stanley.*) Does not it appear to you that it would be a piece of bad economy when you are at the expense of employing a soldier, whether native or European, not to make him as efficient as possible for the purposes of war?—I think so. I would let the native have the best rifle which was to be procured, and I believe that the European would still be always superior to him.

1149. (*Chairman.*) Can you form any opinion as to the amount of force which will be required in the Bengal presidency after the country is settled?—In considering that subject lately, it seemed to me that 50,000 European troops are required for the Bengal presidency, including Burmah.

1150. (*Duke of Cambridge.*) Does that include the Punjaub?—Yes; 50,000 Europeans kept up to strength for what is called the Bengal presidency.

1151. And including artillery?—Yes.

1152. (*Chairman.*) Then you would have 150,000 natives, according to your proportion?—Yes; regular and irregular regiments.

1153. (*Lord Stanley.*) That would not necessarily give 150,000 natives, according to your estimate, because from that estimate you expressly excluded the case of the Punjaub?—But then I gave a smaller proportion.

1154. (*Major-General Hancock.*) You said one to four?—Yes.

1155. (*Chairman.*) There would then be 200,000 natives if you had 50,000 Europeans.—Yes; with the addition of the several levies it cannot be less, that is, during disturbances and until you recover the country.

1156. (*Viscount Melville.*) Is that exclusive of police?—Yes.

Sir G Clerk, K.C.B.

24th Aug. 1858.

1157. (*Chairman.*) I think you stated that you would have a much larger proportion of European artillery than of native artillery?—Yes.

1158. What proportions would you have?—I am afraid that I am not a competent judge on that point. But, as formerly in the brigades of artillery in Bengal, I would have two troops of European horse artillery to one troop of native.

1159. (*Duke of Cambridge.*) You think that that might be the proportion?—Yes, about that proportion.

1160. (*Major-General Hancock.*) The proportion hitherto in Bengal has been 3,000 Europeans to nearly 5,000 natives?—That includes foot artillery; I merely was referring to the horse artillery.

1161. (*Duke of Cambridge.*) You would recommend that the Europeans should be two to one?—Yes.

1162. (*Chairman.*) It has been stated by previous witnesses that the present allowance is two guns to 1,000 men; that would give 500 guns for these 250,000 men?—Yes.

1163. You would have a large proportion of European artillery?—Yes.

1164. Then you would leave the native infantry and cavalry with even a much larger proportion than four to one?—I do not propose to exclude natives from the artillery.

1165. (*Lord Stanley.*) I do not understand you to have stated at any time that you thought that 200,000 were necessary?—Not of regular and irregular regiments exclusive of local levies.

1166. I understand that from your estimate of 50,000 Europeans required for the Bengal presidency, you exclude the Punjaub. I think you said that 20,000 European troops would probably be required for the Punjaub?—Yes; but while there are peculiar circumstances now affecting our military position in the Punjaub, I include in the 50,000 the 20,000 which it is said are at present required for its security.

1167. That is to say, you think that altogether about 30,000 Europeans would be required for Bengal and the North-western Provinces?—Yes.

1168. Then your estimate of four natives to one European would be based upon that lower calculation of 30,000 Europeans being required for Hindoostan and Bengal, making 120,000?—Yes, regular and irregular regiments and native artillery.

1169. (*Chairman.*) What proportion of natives would you have for the 20,000 Europeans?—You have already 82,000 raised in the Punjaub, a great proportion of whom I believe are still there.

1170. Would you retain those 82,000?—No, by no means; I think that that is one of the most difficult questions; I would endeavour to reduce them to 30,000.

1171. (*Duke of Cambridge.*) Then you would have 20,000 Europeans to 30,000 natives in the Punjaub?—Exclusive of policemen. In assigning 20,000 Europeans to the Punjaub, I am rather stating what is reported from India to be required for that province than what I consider our position in the Punjaub to be.

1172. (*Sir Harry G. W. Smith.*) From your great experience in the Punjaub, to what cause do you attribute the loyalty of the Sikhs to our government?—Their lust of plunder. They want to plunder Hindostan. They have vowed to do so, sooner or later.

1173. (*Duke of Cambridge.*) Then you think that it would be a considerable risk to run to keep up a very large Sikh force?—An enormous risk.

1174. The risk might be even greater than the risk has been before?—Certainly greater, that I believe; and that it may warrant the estimate which I saw yesterday, from Calcutta, of 20,000 Europeans. I had not, perhaps, estimated it so high, but I know that they have always had 13,000 in and on the Punjaub ever since they have commenced the levelling system of government there.

1175. And the result of that system has been proved in this instance; for when the mutiny broke out, the Punjaub alone was kept in good order?—

ir G Clerk, K.C B.

th Aug.1858.

Not by Sikhs, but by being, in proportion to the extent of the province and the amount of population, very strongly garrisoned.

1176. But by a large proportion of Europeans ?—Yes, and so might India Proper have been held ; and so the insurrection would have been averted, if there had been anything near the same proportion of European troops.

1177. (*Marquis of Tweeddale.*) Upon what do you base the statement which you have made with regard to the number of troops, European and native, which you think would be necessary for maintaining the peace of the Bengal presidency ?—I have no better grounds to go upon than what I feel would be about the number that I should like to spread over the country, if I were responsible for bringing it back to good order. There is an enemy on foot now which has arisen since the first outbreak of the rebellion, namely, the plunderers ; you must suppress all that entirely, and continue in great military strength until it is done.

1178. You are speaking of the present condition of things ?—Yes.

1179. Not of the future ?—No, I should look to reducing that army hereafter ; in the course of three or four years, I think, it would be disgraceful to us if we could not make some reductions.

1180. (*Duke of Cambridge.*) Ultimately, if things come right again, as we may hope, what do you suppose the force ought to be ?—That, I think, is connected with questions regarding Madras and Bombay. I think that a great deal of territory which is now said to be occupied by the Bengal army, ought to be placed under Madras. First of all it is due, I think, to that army for having served so well during this crisis. In the next place, it would be a proper and lasting punishment to the Bengal army to abandon its old recruiting ground. I would make over Bundelcund and Saugur, and other provinces in that direction to the Madras army ; and, of course, a proportionate reduction in Bengal follows.

1181. Would not it require an increase to the Bombay and Madras armies ?—Certainly.

1182. (*Chairman.*) The distribution which you have now made of the 50,000 European troops, has reduced your comparison to one to three, I think ; that is, 50,000 Europeans to 150,000 native troops ?—Yes.

1183. That would be 200,000 troops altogether ?—Yes.

1184. Taking what has been calculated by every previous witness who has been examined, namely, about two guns to every 1,000 men, there would be about 400 guns ; therefore that would make 10,000 of these 50,000 Europeans who would have to be in the artillery ?—Yes, I suppose about that.

1185. Do you consider that the native force in the Bengal presidency should be on the regular or irregular system, or both combined ?—I would combine them. I would have both experimentally, but differently composed. Such a lesson has been given from recruiting all of one caste, that every commanding officer will be weaned from that ; they will recruit the men more as they are recruited in Madras and Bombay, where there are more workmanlike battalions.

1186. (*Major-General Hancock.*) Would you have both infantry and cavalry on the irregular system ?—Yes ; though not exclusively irregular. I would have some irregular infantry also.

1187. (*Sir Harry G. W. Smith.*) What is your general opinion as to the irregular cavalry ? Do you place great confidence in their utility ?—Yes, I think they are very useful if properly paid; but in the Bengal presidency they never have been adequately paid. You get some of the best soldiers in India to enter it.

1188. You can speak with some degree of confidence as to their loyalty ?—No doubt of it ; they always have been loyal until within these last few years, when there have been causes in operation to make them otherwise, which would have made any people or any army in the world disloyal. Nevertheless they did not take the lead in the rebellion, but the men of the line and the regular cavalry. I would punish them heavily in all future time by enlisting few of them hereafter. I would have fewer of the Gangetic rajpoots and fewer regular sepoy regiments.

1189. The object of my question was to ascertain, as it is generally considered that there is an idea of difference between the regular troops and the irregular troops, whether upon the late occasion they all combined together, and whether one was just as good or as bad as the other ?—I think that the men of the line have proved the worst of the native soldiery.

1190. Still the irregulars went with them ?—There was not a Hindoo, I believe, in the party which first broke into open mutiny. They were Mahomedans of the 3rd regiment of regular cavalry.

1191. But the irregulars immediately joined the revolution ?—Yes.

1192. (*Chairman.*) Do you consider that the Bengal native army should be composed of different nationalities or castes, and if so, in what proportion ?—I should not be very particular as to proportion. I should recruit a good soldier wherever I found him, whatever might be his caste ; some of the high-caste men are very good soldiers.

1193. Would you preserve the nationalities in the shape of regiments or companies, or should the men be distributed promiscuously throughout the regiment ?—Promiscuously, I think. It has been proved. It works well in Madras and Bombay, and I do not know why it should not work well elsewhere.

1194. (*Duke of Cambridge.*) Are you aware that in some regiments latterly they have tried the system of having separate companies of different clans or nationalities, and are you aware whether that system has answered or not. For instance, there is Coke's corps ?—Anything that has answered well I would try again. I was not aware that the corps was formed exactly in that manner.

1195. When you were in India it was not a custom ?—No.

1196. (*Major-General Hancock.*) You think that it might be desirable to try both systems ?—I think everything should be tried which experience has shown to be useful.

1197. (*Duke of Cambridge.*) You see no reason against trying it ?—Certainly not.

1198. (*Sir Harry G. W. Smith.*) Are you inclined to place as much confidence in the Mahomedan levies as you would in the Hindoos ?—Yes.

1199. You would not have fewer Mussulmans in a regiment or company than you would have Hindoos ?—In the infantry you will always have fewer Mahomedans, excepting in certain localities where the bulk of the population are Mahomedans. As for Coke's corps, I take it for granted, from the position where it is recruited, that the men are nearly all Mahomedans. The guide corps, which has been recruited in the Peshawur valley, I suppose is chiefly Mahomedan, with a few Sikhs.

1200. (*Colonel Burlton.*) Would you exclude Brahmins from our ranks altogether ?—No.

1201. You would have no exclusion ?—No ; I think it looks like weakness in the Government to have to exclude any class from our army. There are good Brahmin soldiers.

1202. (*Major-General Hancock.*) In fact, you would throw the native army open to all castes and all nationalities ?—Yes ; every colonel commanding who looks after his corps would, I think, avoid having a large number of any priestly caste, Brahmins or what not.

1203. I take for granted that you would not leave that to the officers of corps, but that you would make it a matter of regulation ?—Yes.

1204. (*Chairman.*) When you say that you would enlist men of different castes, would you recognise caste at all after a man has enlisted ?—Yes, you must

Sir G. Clerk, K C.B

24th Aug. 1858.

do so in some instances, at least, that is the way in which the native army of India had been wisely handled when required to take and securely to hold wide dominions for us.

1205. Would you allow caste to be pleaded as an excuse for the non-performance of duty ?—Not in obvious matters of duty. In enlisting a recruit I should take care to ascertain that he did not object to a particular line of duty on the ground of caste.

1206. (*Major-General Hancock.*) You would simply explain to each recruit what his duty was, and if he objected you would not enlist him ?—Just so ; I think those points should be well ascertained in the first instance.

1207. (*Chairman.*) And afterwards you would not allow the question of caste to stand in the way ?—Certainly not.

1208. (*Lord Stanley.*) You would take care that the recruit should not be able to say that he had been entrapped into the army, and that something had been put upon him afterwards to which he objected ?—Certainly.

1209. (*Duke of Cambridge.*) You would think it very detrimental to the army if caste were allowed, and put forward as an excuse for not performing military duty ?—Yes, specified military duty.

1210. (*Chairman.*) How would you make this understanding so notorious as always to be able to show that the understanding had taken place ?—By the form of enlistment. Formerly sepoys were not required to serve beyond sea, now I believe they are required to serve beyond sea. Let either Hindoo or Mahomedan enlist on any well understood terms, and should he become troublesome for no other reason than because of these terms, he would get no sympathy from his comrades. They would jeer him and laugh at him ; you would then turn him out of the regiment ; there would be nothing unfair in it, it would create no bad impression among his comrades.

1211. (*Duke of Cambridge.*) That is to say, if it was clearly understood when he enlisted ?—Yes.

1212. General enlistment you think desirable ?—Yes.

1213. (*Major-General Hancock.*) You would think it expedient, I suppose, not to allow any one nationality or caste to predominate very greatly in any one corps; I mean that you would not allow the Brahmin class, for instance, or any leading class, to predominate ?—I would not allow Brahmins to predominate ; but there is a class now very much identified with the Brahmins. People talk of the Bengal army having revolted because it was composed of Brahmins ; but it is composed principally not of the Brahmin class, but of the second class, the fighting class, and if you excluded it, it would be very much like excluding Irishmen from the British army ; you would lose the very pith of your martial races, therefore I would not object to a proportion of the men being of high castes ; I would not have a great preponderance of them, but I would not be alarmed at having a good proportion of them.

1214. Do you not think that the large preponderance of Brahmins and Rajpoots in the Bengal army was one of the principal causes of the combination, or one of the principal things which facilitated it ?—It was not the cause of revolt. It may have facilitated combination ; but so it would if you had a large predominance of any inferior caste.

1215. You would avoid having a predominance of any particular class in the same corps ?—Yes ; a large predominance.

1216. (*Duke of Cambridge.*) Would you have it laid down as part of the regulation under which men enlisted that there should be no regiment in which any one particular class should predominate ?—Yes ; I think so, that there should be no large predominance. I speak guardedly on that point, because, for instance, in raising men in the valley of the Indus, if on an emergency you have to raise regiments, they must of necessity be very much of one faith. If the Affghans were coming down upon you, of course you would have to take your money bag, and go and enlist other Mahomedan tribes entirely.

1217. Take a station in Bengal Proper ; if you regularly recruited there, could you avoid any predominance of a class ?—Certainly.

1218. And that you would think an advantage ?—I think so ; trusting to Ghoorkas and trusting to Sikhs is to be avoided of course.

1219. You think that Ghoorkas are as little to be trusted as Sikhs ?—You cannot get them ; they will not enlist. You are safe on that one point in our relations with the Ghoorkas.

1220. The 66th is an exclusively Ghoorka regiment, is it not ?—There are no Ghoorkas in it ; there is not a genuine Ghoorka in the regiment. The men from whom they are descended were Ghoorkas. At the termination of the Ghoorka war in 1817, on first acquaintance with these men, the British Government found them to be such smart plucky fellows that it was resolved to raise two regiments of them. The Nepaul government heard of it, and they consulted whether it should be allowed or not, and they considered that it would suit very well. They said :—" It is time that we should keep ourselves informed " of the military organization of this English nation ; " they wish to enlist two regiments, and they shall " do so, and they will be paying for our espionage." They kept themselves well informed of all our proceedings by having those men in our service, but they never allowed us to recruit more than three regiments.

1221. (*Marquis of Tweeddale.*) Would you allow the sepoys of the different presidencies to exchange, namely, that the Madras men should be in Bengal and the Bengal men in Madras ?—I have never considered the question ; I would move more Madras troops up to the west of the presidency of Bengal, to hold other territories.

1222. (*Duke of Cambridge.*) But then you would give up those territories to Madras, you would make a different territorial arrangement ?—Yes.

1223. Therefore it would be part of the same army ?—Yes.

1224. (*Chairman.*) There is a different proportion of European officers in the regular and irregular native regiments, is there not ?—Yes.

1225. Would you make any alteration in that respect ; would you give more European officers to the irregular regiments than it has been the habit to do ?—I do not think it necessary ; they have proved to be remarkably good troops on service ; and in quarters very orderly, wonderfully so, considering they are Mahomedans.

1226. (*Duke of Cambridge.*) Do you think that the regular native regiments have a sufficient number of officers ?—Yes ; I think they have.

1227. That is, I suppose, according to the establishment; but do you approve of there being so many absent at the same time ?—Yes ; I think there are enough present when they have eight or nine officers with the regiment.

1228. So that you do not attribute what has happened now to the great want of officers with the native regiments ?—Certainly not; perhaps the reverse may be the case, but certainly that is not the case

1229. (*Major-General Hancock.*) Do you think that a necessity exists for having more European officers with a regular native regiment than with an irregular regiment ?—Yes ; I think you ought to have some regiments formed as regular regiments. One motive for retaining irregular regiments with few European officers is that the native gentleman likes that service better. If you increase the number of European officers the service is less attractive to him. He loses authority and privileges.

1230. In the Bombay presidency very few are native gentlemen, but they have all gone through the ranks ?—Still they rise to the rank of native gentlemen if invested with adequate authority.

Sir G. Clerk, K.C.B.

——

24th Aug. 1858.

1231. Might not that be done with the native infantry regular corps, would you not admit native gentlemen there ?—If you had few European officers, of course you would.

1232. Do you think it expedient to do so ?—I think so with certain battalions. I have always advocated the system of reserved battalions on purpose to have suitable positions for native officers of rank.

1233. Do you not think that there is an advantage in the irregular regiments over the regular regiments in having selected officers for their commandants, seconds in command, and adjutants ?—Yes.

1234. Could not that system be extended to the regular service ?—It might be extended very considerably ; still I think it might be better to retain some regiments regularly organized.

1235. Still do you not think that greater advantage would accrue to the service from having a selected commanding officer and an adjutant ?—Certainly ; I attribute entirely the circumstance that all authority has been withdrawn from commanding officers to the fact that you cannot select.

1236. Does not that pervade the regular army throughout ?—From the colonel of a regiment down to the subahdar.

1237. The man who succeeds to a lieutenant colonelcy must be placed in command of a corps, unless there is anything against him ?—Yes ; an officer, even if incompetent, must be placed in a responsible position ; therefore his authority is curtailed ; it goes down the whole scale ; the authority of all is curtailed, and pride and zeal in the service are less felt than formerly by those who are competent. There has been less authority trusted to officers commanding regiments and to officers commanding companies than there used to be. They have less means of promoting natives or conceding privileges to them.

1238. (*Duke of Cambridge.*) Which you think very objectionable ?—It must strike every commander-in-chief as very objectionable, but then he finds himself in this difficulty, that he cannot get rid of an incompetent colonel, and therefore of course he curtails his authority.

1239. Do not you think that there should be means of getting rid of an incompetent officer ?—Certainly ; I would devise means, but they have never existed.

1240. You think they ought to exist ?—Certainly, and then of course every commander-in-chief would invest his officers with due authority.

1241. In the evidence which we have had there was a case quoted, in the time of Lord Hastings, where a lieutenant-colonel was found incompetent, and he was superseded by another officer, but he was retained in his position ?—I was not aware of it. I merely speak of what I have observed. I have heard the subject spoken of by the commanders-in-chief. I speak with great diffidence as far as my own opinion goes. But he sees that an officer is not fit to command a regiment; and he proposes to get rid of him, but the adjutant-general says " You cannot."

1242. (*Chairman.*) You consider that not even a European officer to each company is necessary in the regular native regiments ?—When I said that seven or eight officers are sufficient for a regular regiment of sepoys, I supposed that battalions would be reduced to 600 men.

1243. (*Duke of Cambridge.*) You think that they are too large now ?—Yes, for discipline of that class.

1244. (*Chairman.*) And you would consider that the promotion should be by selection ?—Yes, for commanding officers.

1245. (*Duke of Cambridge.*) The system is the seniority system ?—Yes ; selection would be preferable.

1246. (*Major-General Hancock.*) Might not the commanding officer be appointed by selection in this way ; for instance, if the field of lieutenant-colonels were sufficiently increased to leave room for the selection of, say 25 out of 100, could not it be carried out ?—Certainly.

1247. And under that arrangement there would be no stigma ?—No ; but of course a commander-in-chief would keep in view the officer's seniority, provided he was also competent ; if he is incompetent and has failed to qualify himself to command, I should not care about his feeling the stigma of being superseded.

1248. If the system be as at present, that every officer must be promoted to lieutenant-colonel in his turn, and if promotion to that rank entitles an officer as a general rule to the command of a regiment, does not a stigma necessarily attach to a lieutenant-colonel who may be specially excluded by the commander-in-chief from that command ?—Yes.

1249. And under the system which I propose to you as possible, there would be no stigma attached. The officer would get his promotion to lieutenant-colonel just the same : he would have no grievance ?—Just so, and he would not be retained in command.

1250. Would you extend the principle of selection to the native officers as well as to the European officers ?—Certainly.

1251. Throughout the whole promotions of the regiment ?—I think so.

1252. Would you give the commanding officers of regiments greater power than they have now, either to reward or to punish ?—Yes ; I would.

1253. (*Duke of Cambridge.*) You ascribe the reason of power having been taken out of the hands of the commanding officers, which in recent years has been the case, to the fact there are some commanding officers who are not competent to their positions, and to guard against that the commanders-in-chief have taken the authority into their own hands ?—There are some such cases ; and even if one case occurs in the course of a twelvemonth, of course it strikes the commander-in-chief of the army that he must do something ; he no sooner turns his attention to it than he finds he is powerless. I should have mentioned that the invalid corps was a resource.

1254. (*Major General Hancock.*) That was by gentle compulsion ?—Yes ; and then again, it was held very naturally that, in the constitution of that invalid corps, it was intended as an honourable retirement for disabled officers, but it has been used for those who could not be got rid of by other means.

1255. And of course commanding officers are very averse to attaching a stigma merely for incompetence to any individual officer whose character has been generally respectable ?—Naturally.

1256. (*Duke of Cambridge.*) The real fact is, that you cannot get rid of an incompetent man, who has not committed himself, without giving him an equivalent in the shape of retirement ?—Yes.

1257. (*Marquis of Tweeddale.*) It has been stated here that the native officers, in consequence of their age, become incompetent ; that they do not keep up that communication between the sepoys of the regiment and the European officers which they should. Would there be any objection to their being pensioned, and native gentlemen being appointed as officers in the same way that our European gentlemen are appointed to be officers in the Queen's army, pensioning off the old men, and having native gentlemen appointed in the same way that our young gentlemen are appointed to the Queen's commissions, without going through the sepoy rank ?—I see no objection to it if you can obtain the supply ; but of late years the civil government has been bent upon extirpating the race of native gentlemen in the interior of India.

1258. I mean for the encouragement of the natives and for securing a communication between the sepoys and the European officers ?—I do not think that the latter will follow necessarily. The European officer who is not selected for his knowledge of native character, and whose education may render him a better style of man than the native officer, will probably look down upon that native officer more, *Sir G. Clerk, K.C.B.*

24th Aug,1858.

from the circumstance of his calling himself a native gentleman.

1259. (*Duke of Cambridge.*) Do you think that there has been any inconvenience in the fact that a very young European subaltern has invariably the command of a regiment, a detachment, or corps, over the heads of all the old native officers; do you think that that has been much felt by the natives?—It may have been felt in some degree, but what is more felt is that there is very little sympathy between that subaltern officer and the subahdar of greater age

1260. You think that there ought to be more communication?—Yes; the subahdar would sink all the rest, provided there was a more cordial feeling existing between them.

1261. You think that the European officers are too exclusive?—They are too exclusive, and the larger their number the more society they have among themselves, and the more averse they are to devote their time and their thoughts to native soldiers.

1262. Is not the difficulty of caste somewhat in the way?—Not at all; you see the reverse of all that in the irregular cavalry. It is not necessary that European officers should eat and drink with native officers or adopt native habits. Without that, officers of irregular corps ever have found, and still do find means of obtaining an extraordinary degree of influence over their men of every rank.

1263. Could not the regulations for the regular native army be so arranged as to oblige the European officers to be more associated with the native officers?—Certainly.

1264. You think that that ought to be done?—Unquestionably; and I think that some regulations might be adopted, from which it would necessarily follow that officers would be disposed to know more of their men, for instance, by which they would be qualified to speak to their men. Diffidence and bashfulness prevent many a young officer from obtaining information from his subahdar, when that subahdar, though he has served 30 years, would be delighted to be talked to by a young educated Englishman, though so much his junior.

1265. And you think that if the native officers were talked to and associated with, the European officer would have more power with his native officers and with his men, and would feel more interest in them?—Infinitely.

1266. And that has been the result of experience in the irregular portion of the army?—Yes, as far as my experience goes.

1267. Perhaps that has been the cause in your opinion why the irregulars have been superior to the regulars?—Yes. It has been one of the principal causes.

1268. (*Chairman.*) You state it as a fact, that there is more communication between the European officers and the native officers in irregular than in regular corps?—Necessarily. A regiment of irregular cavalry, for instance, is at an outpost; not another soldier there, except that corps, 700, strong with three European officers. I have known these cases, and no European troops within a week's march. Did not those officers keep themselves well informed regarding everything concerning their men, discipline and good feeling could not possibly be secured.

1269. (*Lord Stanley.*) From that point of view, a larger number of European officers, so far from being a benefit would be a disadvantage as diminishing the responsibility and diminishing therefore the interest which each man would feel in the state of the regiment?—Yes; I think that that will be found to have been the case. I think that that will be found to be combined with other causes to change that spirit which once attached the sepoys with so much devotion to the British cause.

1270. (*Colonel Burlton.*) Are you of opinion that in former days, going back some twenty or thirty years, there was a much more intimate association between the European officers and their men than there has been in the last ten or twelve years?—Yes. That association was not a preference. Formerly the officer had fewer comrades, the civilian no associate. Their duties were more pressing and uninterrupted. They therefore found more objects of interest in attending to those duties. They had not everywhere large stations, with a variety of permanent English society, with its amusements and connexions of every sort. There were not reinforcements of European troops close at hand. There were not daily importations of their own race from England. The necessity of knowing the native soldiers and the people was imposed on them in order to continue our dominion. It was not the adoption of native habits, though it is the conceit to say so. There were exceptions. There are such now. But generally Englishmen were as English then as they always are everywhere. There existed the necessity, which latterly has been so disregarded, that we should be on every side guarded and circumspect.

1271. Probably you recollect that in former days the officers used to attend the religious meetings of their men?—Out of compliment to the native officers, they attended, I believe, on some festive occasions, though considering it a tax upon their time.

1272. (*Major-General Hancock.*) Has that been discontinued of late years?—Very much.

1273. (*Duke of Cambridge.*) Do you think it an advantage that that should be the case?—I think that there is no harm done in showing the natives some attentions, from which we now superciliously, and from motives of personal convenience, abstain.

1274. We have been talking of the difference between the regulars and the irregulars, and that the fact of the irregulars having but few officers attached to them gave them a greater insight into the feelings of their men, and that there was more harmony. Do you not think that the fact of those three officers being always selected officers makes a considerable difference?—Certainly. And if favour, not qualification, has put an officer there, he soon finds that his time is his men's, not his own, and so he soon comes to be full of intelligence, vigilance, and resource.

1275. Would there not be considerable difficulty in selecting officers if a greater proportion of the army were irregular? You now have a large field. You take the European officers from the native regular army and put them into the irregulars. Supposing you have not a large regular native army, from whom are you to select?—I would extend the field, by having more qualified officers; for instance, an officer should be obliged to speak the language before he joins any corps.

1276. In the examination for his commission?—Yes; that is not now the case.

1277. Is not an officer compelled to know the language now before his appointment?—No. If you improve the qualifications of the whole body, you have a greater choice for the irregular corps.

1278. (*Viscount Melville.*) With regard to the question of the introduction of native gentlemen into the regular regiments without going through the sepoy ranks, do you not think that if we mean to retain possession of India we must, both in the civil service and in the military service, employ the gentlemen of the country?—Certainly we must.

1279. (*Duke of Cambridge.*) And in the army in a greater proportion than we have done?—You have increasing field for their employment in irregular corps. I do not know that you could improve it in the estimation of the native yeomen, excepting in point of pay.

1280. Do you run no risk that in the case of any outbreak you will find leaders if you raise highly the military position of the gentlemen of the country. Is it not a fact that lately there have been few native leaders of position, and would there not be more risk on a future occasion if the course you recommend were adopted?—I believe they have had leaders on this occasion, as they always have had before our time.

Sir G. Clerk, K C B.
——
24th Aug 1858.

1281. From amongst the men who have been officers?—No doubt of it. They have had leaders out of the sapper corps in Delhi, and they have had leaders in the artillery, but they have had no public press to publish them.

1282. You say from the sapper corps and from the artillery; those are scientific corps, men highly educated?—Yes.

1283. If you were to educate the gentlemen and the men more highly, which you think there would be no objection to, would you not run more risk of creating leaders on a future occasion?—Then you must be strong enough to encounter the disadvantages of their being educated. It is the great boast of our Government at present, that you are advancing them to a high state of education, and how you can reserve one department or another from their knowledge I cannot see.

1284. Excepting that a civilian probably would be less dangerous in that respect than a military man, if he had been taught military science?—I thought that Lord Melville's question pointed more to position in regiments. Sir Henry Lawrence made an observation which he published upon the subject, regarding the sepoys. He said it was painful to see a gallant and deserving native officer passed over because he had not received some English schooling as some of the younger ones had, and that it applied to some of the best of the native officers. His expression was, "Do not educate them beyond their position."

1285. (*Viscount Melville.*) Do you think that the native gentlemen would enter the infantry service in the same way as they now enter the irregular cavalry?—No; you must alter the costume to begin with.

1286. The cavalry service is more popular?—Yes.

1287. (*Duke of Cambridge.*) I think I heard you say that you thought a good deal of having reserved battalions?—Yes.

1288. What is the meaning which you attach to that?—That a battalion which could be almost exclusively officered by native officers whom you wished to reward, would be advantageous as a reserve battalion used for certain duties, whilst the other battalion should be rather organized for active service.

1289. Without any Europeans at all?—No; I would have one or two European officers with it—retired officers. That battalion could take up many duties; they could also prepare recruits for the regiment. I would try it as an experiment, 20 or 30 regiments.

1290. (*Sir Harry G. W. Smith.*) Are you not of opinion that giving authority in the military and civil service to the native gentlemen at this period of the revolution would be regarded as weakness and concession?—I would not immediately devolve more authority on native officers.

1291. (*Viscount Melville.*) You said that you thought that the irregular cavalry were insufficiently paid; what pay would you propose?—I speak with some doubt. I have inquired since I left India. The pay then was only 25 rupees a month, and it ought to have been 30. I have heard lately that in the Punjaub, which is the granary of Upper India, and has been for these 50 years past, they have 30 rupees, whilst all the old regiments of irregular cavalry remain upon 25 rupees, and that is not sufficient for a man to find him in all he has to provide in that branch of the army. I now take it for granted that they will all be brought up to the higher pay.

1292. (*Chairman.*) Do you consider that any benefit would be derived by dividing the Bengal army into two or more armies?—No; I do not.

1293. (*Lord Stanley.*) In the event of the Punjaub and part of the north-western provinces being erected into a separate presidency, you would then think it expedient that the army should be divided, would you not?—No, I do not think that it need necessarily be divided.

1294. (*Chairman.*) Do you think that any alteration should be made in the code under which the native army of Bengal is now enlisted?—I believe that at present it is a general service enlistment.

1295. You would enlist for general service?—Yes; perhaps some points might be introduced regarding caste, such as were alluded to just now.

1296. (*Duke of Cambridge.*) You would alter the code to a certain extent?—Yes.

1297. (*Major-General Hancock.*) Do you not think that the Government have derived great advantage from having the Bombay and Madras armies separated from the Bengal army during the late mutiny?—Very great indeed.

1298. Would not the same advantage have accrued to the Government if the Bengal army had been only half its size, and there had been a fourth presidency; if there had been a combination of 50,000 or 30,000 men instead of 100,000?—If the army is properly organized and officered, I do not see why it should be too large for one command.

1299. Then do you see any difficulty in the whole being made a national army?—Yes; that would be unwieldy.

1300. What is the objection?—I think that the extent of dominion is so vast, that the head-quarters offices would be too distant.

1301. Do not you think that the Bengal presidency, including the Punjaub and Oude, is too large to constitute one presidency; is there any advantage to the Government from having it so disproportionate in size from the Madras and Bombay presidencies?—The Bengal presidency in its military charge should be considerably reduced.

1302. Do you think it of no advantage to the Government to have the armies of the three presidencies equalized in any way by a different distribution of the territory?—I do not see any great advantage in it, excepting that I would introduce the Bombay and Madras army into such parts of the Bengal presidency as Bundelcund, Saugur, and Rajpootana.

1303. The effect of that would be to reduce the Bengal army?—Yes.

1304. What would be the advantage of increasing the Madras army and reducing the Bengal army?—I would not confide to the sepoy of the districts on the Ganges so much territory as before, and I would almost abandon that recruiting ground.

1305. For the same reasons, would you not reduce the recruiting ground on the western coast?—I see no necessity for that.

1306. Suppose there is a fourth presidency along the line of the Punjaub down the Indus?—That is not exactly where I would have a fourth presidency. Of course, if there were formed a fourth presidency lying so far over to the westward, you might in time require a detached army for it.

1307. (*Duke of Cambridge.*) But you do not see any advantage in it?—Not at present. There is a political and difficult question involved there.

1308. I am talking militarily?—I think that the Punjaub and Scinde should be allowed to develop themselves for a few years, and be combined hereafter. It might be a proper occasion then to revise the establishment of the armies.

1309. (*Major-General Hancock.*) Do you not think that the Madras and Bombay armies have been at a disadvantage in many respects from being smaller armies. Do you not think that the Bengal staff officers have had much higher pay?—That I am not informed of; but I think that the Madras army has been greatly overworked, and has not been in sufficient numbers to undertake its duties, and the Bombay army the same, and principally because the Bengal army was averse to undertake duty, for instance in Burmah, in Scinde, &c. The other armies have admirably discharged those duties.

1310. Have not the armies of the minor presidencies been at a disadvantage in this respect, that the Bengal army has formed the standard by which everything proposed in the minor presidencies has been regulated?—Not in my estimation, because I have looked upon the others as the standard for efficiency.

1311. Are you aware that the answers from the Government of India have not uncommonly been, that no such system obtained in Bengal?—Yes; I believe that there has been a great deal of that.

1312. In fact the Bengal army has been regarded as the pattern army by which the other two armies have been regulated?—Yes; there is, however, an end of that.

1313. (*Viscount Melville.*) Do you think that any advantage would attend a suggestion which has been made by Sir Patrick Grant, with the view of obviating the necessity of raising the Bengal army to its former strength, namely, to transfer certain districts to Madras and Bombay?—Yes; I have previously stated that there are certain territories in Central India which I would transfer to Madras and Bombay; perhaps Sir Patrick Grant alludes to those.

1314. He proposes to transfer the Saugur district and some others?—Yes; Nagpoor and Saugur should be under Madras. They have held it during this insurrection in a most satisfactory manner.

1315. (*Chairman.*) When you say that you would for the future enlist for general service, would you abolish all allowances made for going out of any particular district?—If you send troops to the eastward by sea, I believe you must allow additional batta. It is unnecessary, I think, to give them additional batta going northward or to the north-west, because they get into the cheaper countries.

1316. (*Major-General Hancock.*) The existing rules are that there shall be extra rations for foreign service; that means, beyond the continent of India?—The proper line, I think, would be that there should be additional allowances for foreign service beyond the continent of India, not internally.

1317. (*Chairman.*) Why should the troops receive an extra allowance for going beyond India?—Their expenses are considerably enhanced, they have to leave their families and provide remittances for longer periods, and to prepare supplies for going across the sea. The Hindoos are put to considerable expense in going to sea.

1318. What difference do they receive now; take, for instance, the troops now at Canton?—I cannot state.

1319. If they were placed in the same position as other British troops as to pay and rations, that would not be sufficient in your opinion?—I should think so, if it equalled their present rates of allowance on such service.

1320. (*Viscount Melville.*) I do not think that the regiments going to Burmah take their families, but they get extra pay?—Yes.

1321. (*Chairman.*) Would you under the new system retain all these allowances?—Yes; it is a great inducement to general enlistment.

1322. Do you consider that any admixture of European and native forces should be regimentally or by brigade?—I once suggested the organization of some native battalions with flank companies of Europeans in each. It was the recommendation of General von Gügern after his tour of inspection in Java. But I have found our military authorities in India opposed to it.

1323. (*Major-General Hancock.*) What advantage did you anticipate from it?—That aide-de-camp said that it worked well in Java; I thought it might perhaps improve the discipline of the native portion of the army, and that officers could pass through the European companies to the native companies, and so forth. I still think that officers for the native army might advantageously be passed through the European regiments first before taking up their duties with native troops.

1324. (*Duke of Cambridge.*) So as to get thoroughly disciplined?—Yes.

1325. In fact there is not an opportunity for an officer to get the discipline required, unless he goes through a European corps?—No. What is wanted is exact discipline and a knowledge of the language of the country.

1326. (*Chairman.*) I think you have answered the question as to promotion?—As far as is consistent with a due regard to seniority, I would have it by selection.

1327. (*Major-General Hancock.*) What do you consider a due regard to seniority?—I mean in selecting for the command of a corps.

1328. We are speaking of the non-commissioned native ranks?—I would regulate it by selection.

1329. (*Duke of Cambridge.*) You are aware that in Bengal now it is all by seniority?—Yes.

1330. You are against that?—Yes.

1331. Would you make seniority the rule and selection the exception, or would you make it purely selection?—I think that seniority should be the rule and selection the exception, with power to select always.

1332. (*Sir Harry G. W. Smith.*) What would you do then with those who were passed over?—They would be passed over on account of disqualification for the higher grade, and they must be content to remain in the lower.

1333. (*Duke of Cambridge.*) Would you introduce any regulation by which those men could retire or be got rid of?—I would dispose of some of them in reserved battalions.

1334. (*Major-General Hancock.*) Do you allude to the native commissioned and non-commissioned ranks or to private soldiers?—To the native commissioned and non-commissioned ranks.

1335. (*Duke of Cambridge.*) Would it not be a very dangerous thing to put a number of discontented men, who had been passed over, into a reserved battalion where you would have very few Europeans indeed; would not it cause great discontent in the battalion itself?—Not if they felt their disqualifications. I would encounter that. You have to do it for efficiency in other departments.

1336. (*Major-General Hancock.*) What objection do you see to making the system that of selection for merit and qualification, without any reference to seniority, and leaving the commanding officer perfectly free to give that consideration to seniority which he thinks due?—I think that it amounts to the same thing. You require more than respectability for active service, and I think that a man in command who is shy of encountering anything which places him in an invidious position, is himself not fit for command. He must encounter the discontent of those from whom he makes a fair selection.

1337. You would leave his hands free?—I should not mind encountering the feeling of discontent if the selection was just.

1338. You mean, that if the principle of selection were fully carried out, you would not be afraid of encountering the discontent?—No.

1339. (*Duke of Cambridge.*) Do you not think that looking at the character of the native mind, it is very objectionable to countenance the power which the sepoy now has of going direct to the head authority with a complaint by petition, without its passing through his commanding officer, the captain of his company?—Certainly.

1340. Do you not think that, particularly in eastern nations, it has a very lowering effect upon the authority and position of his commanding officer?—I do.

1341. Are you aware that that has been a good deal the practice of late?—I am.

1342. Do you not think that it is very objectionable?—Very objectionable.

1343. And do you not think that it should be done away with by regulation?—Yes.

1344. (*Major-General Hancock.*) Are you aware that one of the great complaints of officers commanding Bengal regiments is alleged to be that they have not sufficient power to reward and to punish?—I am.

1345. Is not a system under which seniority is the rule for promotion one of all others which would deprive them of that power?—Yes.

Sir G Clerk, K.C.B.

24th Aug.1858.

1346. (*Duke of Cambridge.*) Would you see any objection to the introduction into India of Africans, such as West Indian regiments or troops raised in other colonies?—When there was a great paucity of troops in India, early in the present outbreak, I recommended your Royal Highness being applied to on the subject of the West Indian regiments. I felt sure that they would take up the garrison duty at Fort William or Bombay, with great advantage to the State, releasing to that extent the Europeans. But when India comes to be settled again, I really think that there are sufficient classes and castes of every description there, martial races, to give us a very workmanlike army, with the assistance of Europeans, rendering it unnecessary to go elsewhere abroad for men.

1347. Would you see any objection to an exchange, such as a West Indian regiment being sent to India, and an Indian regiment being sent for general service to the West Indies or to the Cape?—I think the time has scarcely come for that. It might hereafter be salutary to change them about, but not yet. I think it would be attempting too much at once. The first great thing is to restore confidence in India throughout all classes.

1348. If confidence was restored probably the fact of their being moved into other portions of the empire would act rather as a link of connexion?—Yes; it might be so in time. The Kaffirs have been spoken of, but I should think that they could not be used to any good purpose in India.

1349. (*Viscount Melville.*) Do you not think that if you were to introduce these troops into India it would cause great dissatisfaction in the country?—I think it would if you introduced them permanently there, nor do I think that you require them.

1350. (*Lord Stanley.*) Practically, do you think that there is the slightest necessity, if India is governed as it ought to be, to introduce barbarous races from all parts of the world to keep down the Indians?—I think not.

1351. (*Major-General Hancock.*) You think that any native army must be fully trusted by the Government?—They need not be trusted, if you can furnish Europeans enough to coerce them; but that they may be trusted again, I am satisfied.

1352. And you think that they may be employed in all branches of the service?—Yes, if you withdraw the causes of irritation; otherwise you will never get zealous service from them, and you will not have the country restored to order even with far larger European forces than you have there now.

1353. (*Sir Harry G. W. Smith.*) Then you appear to me to be of opinion, that when things have once settled down from the present moment of irritation, India may hereafter be carried on upon the same principles as it has been heretofore with a native army, without introducing barbarians and others?—Yes, provided you are more guarded—provided you adopt ordinary military precautions, that is a necessary proviso; and provided when you annex territories your native army is allowed to benefit by it. The rule has latterly been to annex territories, and not to increase the army. On annexing territories the British army, European and native, must be adequately increased.

The witness withdrew.

Lieut.-Col. T. L. Harington

Lieutenant-Colonel Thomas Lowth Harington examined.

1354. (*Chairman.*) What rank do you hold in the Indian army?—I am a brevet lieutenant-colonel and major in my regiment. I am in the Fifth Bengal Cavalry, a regiment which has not mutinied.

1355. How long have you been in the service?—Thirty-one years.

1356. How many years of that period have been passed in India?—Twenty-nine.

1357. You have served in the Bengal presidency?—Yes.

1358. Of course you have been associated, during the period of your service, with both European and native troops?—Yes.

1359. Have you formed any opinion as to the proportion which the Europeans should bear to the native troops in the Bengal presidency?—I think we want one-fourth Europeans. In service we ought to have one to three.

1360. You mean three natives to one European?—Yes.

1361. Would you have any native artillerymen and sappers and miners?—Certainly not artillerymen, native sappers and miners I do not object to. I have seen many military officers in this last year, and they are all averse to native artillerymen. The natives place great dependence upon that arm.

1362. Have you been able to form any opinion as to the amount of force which will be required in the Bengal presidency after the country is settled?—I had never given any consideration to that subject until I received the Commissioners' letter the other day. I should think about 100,000 natives would be sufficient, regular and irregular.

1363. Then you would have about 30,000 Europeans?—I am speaking of infantry now. I would have sixty regiments of foot native regular, and forty irregular, and twenty what I call veteran battalions, (which Sir George Clerk called reserve regiments,) men unfit for active service, to be transferred to those battalions before they were invalided; these corps would do to take garrison duty, to escort treasure, and to guard the gaols, and to receive net pay without batta.

1364. (*Duke of Cambridge.*) Would you put them on the regular or the irregular footing?—On the irregular. Officers unfit for active service and wounded might have the command of these regiments.

1365. Are you of opinion that 30,000 Europeans would be sufficient for the Bengal presidency, including the Punjaub?—I think that twelve more regiments of infantry added to the force out there before the outbreak, viz. 18 regiments of foot, would be sufficient.

1366. You would have 30,000 infantry?—Yes.

1367. What number of cavalry?—About 10,000.

1368. And how much artillery?—The same as now, two guns to 1,000 men.

1369. I understood you to say that you did not wish to see any native artillery?—Certainly.

1370. Therefore does it not result from that, as there has been hitherto native artillery, and as you propose an army of 100,000 natives, that you must have a much larger proportion of European artillery than you have hitherto had?—Certainly.

1371. Then you would have the Europeans that you have at present and add to them the portion which was native before?—Yes, to make up the number.

1372. That would be about 10,000 artillery, I apprehend?—There are only four troops of native horse artillery and two battalions of native foot artillery (that is to say, six companies in each battalion). I do not include the artillery of the contingents.

1373. You would have 5,000 additional, according to the present return?—Yes.

1374. That therefore would amount to about 10,000 European artillery?—Yes.

1375. Would you have any of the contingent artillery as it is at present, or would you not allow the native princes to have any?—I would not allow them to have any; they might have a gun or two just to fire salutes, but there should be no force of artillery.

1376. (*Viscount Melville.*) If you deprive the native princes in that way, how will you hold or govern the country?—I should not care about the

Lieut.-Col T L Harington

24th Aug 1858

native princes at all. I do not think they are worthy of it. Look at the Gwalior contingent, how badly they behaved, and all of them. The Sikh Rajahs of Puttialah and Jheend are exceptions.

1377. (*Duke of Cambridge.*) Would you have European engineers or native?—I see no objection to the sappers and miners being native, doing merely digging, sapping, and mining.

1378. (*Colonel Burlton.*) Would you let them into the laboratories?—I do not think they are let into the laboratories now.

1379. (*Duke of Cambridge.*) If they are, you would not admit them into the laboratories?—No.

1380. And you would not admit the natives into the arsenals for scientific purposes?—Certainly not.

1381. (*Major-General Hancock.*) Is your objection to native artillery founded simply upon distrust of their loyalty?—No, certainly not; but I think the natives place such dependence upon that arm, that no body of men would fight unless they had artillerymen, and had guns with them. I think they are just as loyal as the others.

1382. (*Duke of Cambridge.*) Do you think that the irregular or the regular system of native troops is the best?—You must have both.

1383. Would you have a larger number of irregular troops than you have hitherto had?—No, certainly not.

1384. Would you introduce the irregular system into the infantry?—They have that already.

1385. To a very small extent?—To a large extent. The following are irregular infantry corps, viz.:—

1 Khelat-i-Ghilzie;
3 Ghoorka Corps;
4 Sikh Local Infantry;
2 Sikh Corps (Loodianah and Ferozepore);
6 Corps Punjaub Irregular Infantry on the North-western Frontier;
1 Guide;
5 Oude Locals;
6 Gwalior;
1 Hurrianah Light Infantry;
1 Bhaugulpore Hill Rangers;
1 Ramgurh Light Infantry;

and some six or seven others.

1386. You would continue that system?—Yes.

1387. Would you have any regular cavalry at all? Yes.

1388. There has been a good deal of evidence upon that point; I believe you have commanded regular cavalry?—Yes.

1389. The evidence has been rather the reverse, namely, that the native infantry should be regular and irregular, but that the native cavalry should be all irregular; why would you think it necessary to maintain the two?—I think that, for purposes of active service, the regular cavalry are very superior to the irregular. In the first place, irregular cavalry will save their horses in action; I have seen it. A dismounted trooper, if unable to mount himself within a given time (the exact period I do not recollect), has his pay reduced from 20 rupees to 5 rupees (I think) a month; on service it is often difficult to procure a good horse. The men are exactly the same; and in many of the regiments raised in 1846–47, inferior. In former years the irregular horsemen were enlisted from the cavalry of the armies of native chiefs, Mahrattas, &c., engaged in constant warfare, and trained to the use of arms from their birth. On the defeat of these native powers by the British, these men took service with us. Such were the men that formed the famous regiments of Skinner's, Gardner's, and Roberts' horse. Since then they have been enlisted, and from the same class of men as the regular cavalry. The commanding officers of several of these corps have introduced a system of spoiling the irregulars by aping the dragoons,—making the men purchase Nolan's bridles, shabracques, brass-mounted pouch and belt, and a larger and more expensive description of horse. The consequences are, that these corps are greatly involved in debt to their regimental bankers. A regiment disbanded at Peshawur (for mutiny) last year owed nearly 10,000*l.*

1390. (*Major-General Hancock.*) Does not the Government grant a fair remuneration for horses lost in action?—Yes; sufficient to purchase a horse fit for irregular cavalry, but not to meet the cost of horses that some commanding officers of irregular cavalry wish to mount their men on. Every man contributes a monthly subscription to the horse fund; the sum allowed from this fund for the purchase of a horse is (I believe) from 120 to 150 rupees. Anything above that sum must be paid by the soldiers, and is generally borrowed from the regimental banker. This must make the men dissatisfied.

1391. (*Sir Harry G. W. Smith.*) Are you of opinion that the irregular cavalry are as well horsed as the regular?—Certainly not.

1392. (*Major-General Hancock.*) Suppose that the Government gave them a remunerative price which would enable them to supply themselves with equally good horses?—A very considerable increase would have to be made to the pay of irregulars to enable them to purchase horses equal to the regular cavalry. Our horses sometimes cost 400 or 600 rupees. The Government horses are very superior horses, and are mostly stud-bred.

1393. (*Chairman.*) What number of European officers do you consider it desirable to have with a regular and an irregular regiment?—On all services on which they have been employed latterly, they always had officers taken from the line. I have spoken to many officers in the cavalry and infantry, and they all wish for more officers. In an action there are more European officers killed and wounded with native soldiers than with the same proportion of European soldiers. Unless the officers are before, the men will not follow.

1394. Therefore you do not agree with Sir George Clerk in the opinion that it would be rather advantageous than otherwise to reduce the number of European officers attached to a native regiment?—I do not see how they could otherwise supply the irregulars. I do not think you could reduce the number of officers, so many go away sick to England.

1395. (*Duke of Cambridge.*) Do you think the present establishment sufficient?—Yes.

1396. Do you think that too many are taken away for staff employment?—Yes, in my own regiment the average number with the corps during the last ten years has been six, not including commanding officers and staff, six officers always on staff employ.

1397. How many do you think sufficient?—Five or six for ordinary cantonment duty in excess of commanding officers and staff. I speak of my branch, for a cavalry regiment of 500 sabres.

1398. You do not think it necessary to have one to a troop?—No.

1399. Do you object to the present system of having a certain number of European officers from the regiment on the staff?—I do; because every young officer who comes out now says, "My father is a director," and so and so; "directly I have passed my examination, in a couple of years I shall be off, and care nothing for the regiment." And no wonder, when the threat of being sent back to one's regiment is held out as a punishment for misconduct or misbehaviour. Regimental officers are constantly taunted with the remark "that the best and most intelligent officers are selected for the staff." Officers *are* selected: but the *rule* is interest, and merit the *exception* that guides these selections. There are just as intelligent and excellent officers in every respect remaining with their regiments as those on staff employ. A captain, than whom a more gallant officer never lived, who had had two chargers shot under him in action, and was so severely wounded in the Punjaub campaign of 1848–49 as obliged him to leave the service, passed in this country for the engineers with the "highest credit" (he received a cavalry cadetship, as no engineer appointments were available that season). In India he passed the interpreter's examination. This

Lieut.-Col. T. L. Harington.

24th Aug 1858.

officer could never obtain staff employ; whereas another officer of the same corps, a man notorious for dishonest conduct in many pecuniary affairs, had never seen a shot fired—had not passed in the native languages, was, from interest, appointed adjutant to a corps of irregular cavalry. Commanding officers are seldom or ever asked the character or fitness of an officer for staff employ. The large increase of allowances is, of course, another great inducement for staff employ.

1400. (*Chairman.*) Do you think that all staff officers should be made supernumeraries in their regiments?—I would have a staff corps.

1401. (*Major-General Hancock.*) Do you think a staff corps practicable?—That is the difficulty.

1402. (*Duke of Cambridge.*) Do not you think that they might have the means of exchanging back into their regiments if they chose?—I would not have that system.

1403. (*Chairman.*) Do you think that the present system leads an officer to be always looking out for staff employment instead of its leading him to take the interest which he otherwise would in his regiment as a regimental officer?—I am certain of it, it is the first thing which they think of when they come out.

1404. (*Duke of Cambridge.*) Do you think that the regular native cavalry would have a greater *esprit de corps* and be more efficient if their dress was more assimilated to the native dress?—I have never heard any objection to the dress urged by the two regiments which I have served with, the 3rd and the 5th. For appearance sake, the natives certainly would look far better in their own dress. As to horsemen, I think they are superior to any that I have seen, either Europeans or the Hindoostanee horse; they are first-rate horsemen. Recruits are never wanting; the service is a favourite one.

1405. Do you think that the regular cavalry ride as well as the irregular?—Most certainly, and they manage their horses better. It is no uncommon thing to see a corps of irregulars, after a charge, spread over the parade like a flock of sheep, whilst the regular regiment pulls up in compact order.

1406. (*Colonel Burlton.*) The irregulars are never taught?—Now they are. I have seen half a dozen of them tumble off on a field day, and not one of our men has done so.

1407. (*Marquis of Tweeddale.*) Do you see any objection to Mahomedans being enlisted into the cavalry?—Certainly not; the cavalry are, most of them, Mahomedans.

1408. I am talking of the regular cavalry?—Both in the regular and irregular the Mahomedans predominate.

1409. (*Chairman.*) Do you consider that the Bengal native army should be composed of different nationalities or castes; and if so, in what proportion?—I think that any man fit for a soldier should be enlisted.

1410. You would enlist them without any reference to caste?—Yes.

1411. Would you maintain the nationality in the shape of companies or regiments, or should the men be distributed promiscuously?—Some men, such as the Sikhs, will not serve in Bengal; and directly they cross the frontier they desert in great numbers. I think it is better to have them by regiments. There might be just a few regiments of that sort for men like the Sikhs and the Punjaub Mussulmans; but the rest, I think, should be as they are now, of all castes. I may observe that the Sikhs have an objection—a religious one—to cut hair or beard.

1412. (*Major-General Hancock.*) In Bengal they are exclusively of one or of two castes, Rajpoots and Brahmins, are they not?—Mahomedans, Rajpoots, and Chuttry (Brahmins) form the chief number.

1413. (*Duke of Cambridge.*) In your regiment, namely, the 5th Regiment, of what nationality were the men composed?—About one-fourth Mussulmans and two-thirds Brahmins, of the fighting class, and the others a lower class.

1414. Do you think that we ought to have more low-class men?—No, I do not advocate having more low-class men at all.

1415. (*Major-General Hancock.*) Have you ever had them in any number in your regiment?—No. A carpenter enlisted in my regiment, and he formed a smart man, and became a drill havildar.

1416. Upon what do you ground your objection to low-caste men?—I do not think the natives themselves would like to associate with them.

1417. (*Duke of Cambridge.*) You said that your regiment had not mutinied?—It has not.

1418. Where was it situated?—At Peshawur.

1419. Was it disarmed?—Yes.

1420. If it had not been disarmed, might it not probably have mutinied?—Yes, if it had been down the country, for the men were of the same caste, country, and feeling as the other corps of regular and irregular, cavalry which mutinied and murdered their officers in the Doab, Oude, and other stations in the provinces.

1421. (*Duke of Cambridge.*) Would you allow caste to interfere at all with the performance of duty?—No; I have never heard of its doing so. The men have swept up the dung of the horses and cleaned their horses themselves, and never once murmured.

1422. (*Sir Harry G. W. Smith.*) If your men were cooking and you wanted them to fall in abruptly, the enemy appearing in the neighbourhood, would they cook again that day?—They would throw away that food, but they would mount.

1423. (*Marquis of Tweeddale.*) Would you consider a man an efficient soldier who threw away his meat in that way?—That is his own look-out; he is only hungry a little longer. They buy their own food and they cook it themselves; it is only a little flour which they make into chuppatties and bake over a wood fire; a little parched gram will satisfy them for days. After Chillianwallah, for three days, on account of heavy rain, they could not cook. The men of my corps took only parched gram and sweetmeats; I never heard a murmur of discontent.

1424. (*Sir Harry G. W. Smith.*) It is their ration?—Yes, and we never interfere with their food at all; they may eat or not as they like. Some live upon sweetmeats for days together.

1425. (*Marquis of Tweeddale.*) Who supplies them?—They supply themselves.

1426. Is there no commissariat?—Yes; the regimental bazaars are supplied by the commissariat, and then they purchase from the regimental bazaars.

1427. (*Duke of Cambridge.*) The difference between the regular soldier and the irregular consists in one furnishing everything himself and the other not. Does not that make a great difference in the commissariat arrangement?—On foreign service I should say it did not. There was an officer, an old friend of mine, Colonel Alexander, now dead, who commanded the 4th irregular cavalry in Lord Keane's army; they wanted to come upon the commissariat, and Lord Keane refused it to them upon the ground of their being an irregular corps, and they lost more than a fourth of their horses, because they could not supply themselves; this was at the commencement of the campaign, afterwards they were allowed to draw on the commissariat.

1428. So that is no saving of expense or trouble in an irregular regiment compared with a regular regiment on foreign service?—No; except that the irregulars are not supplied with tents and carriage (camels).

1429. But in their own territory they supply themselves?—Yes.

1430. In line in any advance or charge, do you think that an irregular regiment would have the same chance as a regular one?—No.

1431. To what would you ascribe that?—To European officers. I know of no instance, from the Cabul campaign of 1842 to that of the Punjab of 1849, of a regiment of irregular cavalry being opposed to or charging any body of enemy, horse or foot, of equal

Lieut.-Col T. L. Harington.

24th Aug 1858.

strength or numbers. A squadron of the 1st irregular cavalry, during the last campaign, on camel graze guard, fell in and cut up a small body of Sikh horse, some 18 or 20 in number; other similar small affairs may have occurred, but nothing has been done by this branch to merit the high encomiums passed on it; a searching inquiry into the services of regulars and irregulars would prove this.

1432. (*Chairman.*) Then you attribute their efficiency in service to the European officers?—Yes; I think the officer is the soul of it.

1433. (*Duke of Cambridge.*) And still you think five officers enough?—Yes, to manage them.

1434. Even on service?—They ought to have more on service, certainly.

1435. What number ought there to be on service?—I think if kept on the present footing it would be quite enough.

1436. (*Major-General Hancock.*) What number do you understand that to be?—Four cornets, eight lieutenants, seven captains (which is one too many), one major, and one lieutenant-colonel. I speak only of my own service, a regiment of 500 sabres.

1437. (*Sir Harry G. W. Smith.*) Have you ever observed the effect of artillery on irregular cavalry in action?—Yes; only once.

1438. What is the effect?—The irregular regiment was on the left flank of my corps and was steady.

1439. (*Duke of Cambridge.*) For out-post duties and those kind of duties, I apprehend that the irregular cavalry is very valuable?—I do not object to the irregular cavalry at all, because I think they are very good men; but only keep them irregular cavalry, and do not follow the present system of rising higher and aping the dragoons, and making them wear expensive dresses. The dress of both officers and men should be fixed by regulation, and not allow the whims and fancies of commanding officers to make alterations; the style of dress, arms, and horse appointments should be in conformity to native and not European taste. The pay of the privates should be made up to 25 rupees a month, and the regimental banks abolished.

1440. In short you would have a certain proportion of real irregular cavalry?—Yes.

1441. And a certain proportion of native regular cavalry; would you increase the proportion of regular native cavalry, or would you diminish it?—I would propose having a squadron of regular cavalry to the European dragoons; as an entire regiment of regulars, I would do away with them. I would have three squadrons of European dragoons, and one squadron of natives.

1442. And you think that that admixture would not be objectionable?—I think not. I have heard the opinion of many other cavalry officers upon the same point, and they think that it would answer. At Peshawar last year, to the two troops of European "Peshawar Light Horse," Major-general Cotton attached a troop of my corps; these men lived in their own quarters, but took their share of duty on guard with the Europeans, and at field exercise were formed upon the flanks of the European squadrons, (the corps for exercise being divided into two squadrons). The system worked well.

1443. What advantage would there be in it?—In hot weather duties the natives would save much exposure to the Europeans.

1444. (*Major-General Hancock.*) Would not that be the case also with the native artillery?—No. I object to native artillery.

1445. (*Duke of Cambridge.*) Supposing that system were adopted, and the Europeans had a really good Minie carbine or Enfield carbine, would you give the natives an inferior arm?—No; I would give them the same carbine, only lighter.

1446. (*Marquis of Tweeddale.*) What is the opinion of the people of the country respecting the regulars and the irregulars; do they consider that the irregulars plunder more than the others?—No.

1447. They supply themselves, do not they?—Yes; it is merely that they are permitted to wear their own country dress, and the horses being their own property.

1448. Have you not heard complaints of their plundering when they are upon service?—Yes, when they are by themselves they do plunder sometimes.

1449. (*Colonel Burlton.*) And so would the regulars, I suppose?—Yes; it is in the nature of natives to do so when they have the opportunity and away from European officers.

1450. They are the same men?—Yes; relatives and villagers serve in both services.

1451. (*Duke of Cambridge.*) If you say that you think the regular cavalry very valuable, why do you wish to do away with the regular regiments altogether?—I think that they are very expensive in horses and arms altogether, that the horses are too expensive for the men whom you put upon their backs. The irregular cavalry answer quite well enough for native cavalry; for six years the regular cost the state upwards of 200*l.* and the irregular 144*l.* Thus:

COST of an irregular and regular trooper for six years.

Irregulars.				
20 rupees a month, including every charge to the state	1,440	0	0	
Regulars.				
Cost of horse (to last six years)	600	0	0	
Nett pay, at 9*r.*	648	0	0	
Groom, 1. 5. 4, one for three horses	96	0	0	
Grasscutter, 3. 8	252	0	0	
Gram, 4½ ~~sees~~, at 30 seers the rupee	328	0	0	seers/
Contract for shoeing; stable gear, &c., &c., 3*r.*	216	0	0	
Saddle, cost of	30	0	0	
	R.2,170	0	0	

Clothing, arms, tents, pensions to syces (grooms), grasscutters, not included.

1452. Then it is a matter of economy?—Yes; I think that if the natives were properly dealt with they would be almost equal to dragoons in service, as they have hitherto proved themselves to be.

1453. (*Sir Harry G. W. Smith.*) Are you of opinion that a squadron of native dragoons amalgamated with a regiment of British dragoons, and got into a right good milling match, would stick by the white faces?—Yes, I think they would; there has been a very good feeling indeed between the men. I really think that it would work well.

1454. (*Chairman.*) Do you think that any alteration should be made in the code under which the native army of Bengal is enlisted?—I certainly think so; that much more power should be given to officers commanding regiments; they have no power at all now; they can only reprimand a havildar serjeant once or twice, and the third time bring him to a court-martial.

1455. How would you enlist the men under the code; would you enlist them for general service, for instance?—Not for service beyond sea. I would call for volunteers for service beyond sea.

1456. (*Duke of Cambridge.*) Do you think that a soldier is worth anything if he will not do anything or go anywhere that he is told?—Certainly a soldier should obey all orders, but a native of India has a great objection to the sea, and allowances should be made for this prejudice.

1457. Is not it the root and foundation of discipline and everything else, that a soldier does what he is ordered?—Certainly; in going to Affghanistan and all those places they have never objected to it at all.

1458. Should it be a question; should there ever be a doubt?—I think, as to beyond sea, there should be; they have a great antipathy to going beyond sea.

1459. (*Chairman.*) As it is to be for the future the Queen's army, do you not think that it ought to be

Lieut.-Col. T. L. Harington.

24th Aug. 1858.

liable to serve anywhere in the Queen's dominions?—I do not think that you would find them of any use beyond India and China. I think that is one of the reasons of the discontent.

1460. (*Marquis of Tweeddale.*) What are the objections to the sepoys serving beyond sea?—Their relatives and friends, the Hindoos, do not receive them well when they return.

1461. You think the objections insuperable?—Yes, I would certainly call for men to volunteer for foreign service beyond sea.

1462. (*Chairman.*) But you would make them all liable to serve in any portion of India?—Certainly, in Affghanistan, or anywhere within or beyond Her Majesty's Indian dominions when they have not to cross the sea.

1463. Without any additional allowance?—The present allowance is very handsome; if a man dies on foreign service the man's family gets a pension.

1464. You think the present allowances sufficient?—Yes, certainly.

1465. Do you think that any advantage would be derived from dividing the Bengal army?—No. I would not divide it.

1466. (*Duke of Cambridge.*) Do you not think that the State places itself under obligations to its army when it calls for volunteers to go on service beyond sea?—No; I think not as regards the natives of India.

1467. (*Chairman.*) Should you recommend any and what change in the system of promotion as regards the native commissioned and non-commissioned officers?—That is a very difficult thing; there are many good men, but who cannot read or write; very worthy men, and who prove themselves good soldiers, but who perhaps are a little slovenly, or do not look well, and they have been passed over; and when a man is once passed over he hangs his head, and does not seem to care for anything afterwards. I have seen those very men who have been passed over afterwards promoted, and become very good non-commissioned officers.

1468. That is because the present system is by seniority?—Yes. With natives I do not think the non-commissioned officers exert the same authority over their men that European non-commissioned officers do.

1469. Does not that perhaps arise from that very circumstance?—No. I think caste has something to do with it. I knew a native officer who happened to be a bunya, that is to say, a caste of men who sell grain; he was threatened with the licking of the shoe as soon as he went out of the cantonment to his own house.

1470. (*Major-General Hancock.*) What did the commanding officer do?—The native officer was afraid to report it, because the man who threatened him was a Brahmin.

1471. (*Duke of Cambridge.*) And yet you do not object to having Brahmins in your regiment?—No, because they are good soldiers.

1472. Does not it strike at the root of all discipline that because a man who threatens a native officer happens to be a Brahmin or a man of high caste he is not reported?—True; but duty is still carried on and has been so for years in the native army.

1473. How are you sure that those men will do duty?—Because they always have done so; they will not object to do anything.

1474. (*Major-General Hancock.*) Is a man always passed over in promotion in the Bengal army if he happens to be of that caste which you have mentioned?—No; I would not myself recommend selection, because I think it is open to abuse. Some young men of the sepoys get the length of the commanding officer's foot and obtain promotion, and that is the system which is adopted in the irregulars, that young men are promoted.

1475. Do you think that abuse would be the rule and not the exception?—I think so.

1476. (*Chairman.*) Under the present system, what is the age at which the natives become officers?—Forty or forty-five.

1477. (*Sir Harry G. W. Smith.*) What do you think was the cause of the revolution among the sepoys?—It was caused I think by many things. The annexation of Oude was perhaps one cause. Then there was the withdrawal of pensions from many widows and others, the reason given in general orders that such and such person had been proved to be the aunt, sister, or some other relation not entitled to pension, the evidence given by informers might or might not have been true, for natives think nothing of giving false evidence. The witnesses who had given evidence before the Pension Committees had their pensions forfeited. The government were not to blame for this.

1478. Did religion form no part of the revolution, in your opinion?—Ill affected men towards the British rule may and I believe did stir up the sepoys, by the plea that their religion was to be interfered with by government; we never interfered with them. They always had their native holidays.

1479. We are speaking generally?—I never saw any interference with their religion, either regimentally or in any other way. The sepoys were treated in the most liberal manner; tents were lent to them and gunpowder given for their festivals; the government has ever shown the greatest consideration for the religious feelings of the sepoys.

1480. (*Viscount Melville.*) In what way did the annexation of Oude cause the revolution among the sepoys?—It deprived them of the great advantages which they before had. Formerly if a man had any complaint to make in Oude, that man's complaint was forwarded by the commanding officer to the resident at Lucknow, who made it over to the Prime Minister, and it was immediately listened to, free of all law charges, &c. When Oude was annexed, it became as other British provinces, governed by regulations, and the men had to appoint attornies, petition on stamped paper, &c., and their plaints filed and settled in due course, which took months. The soldiers had no advantage over the other natives; this was not injustice.

1481. (*Sir Harry G. W. Smith.*) Upon the question of religion, were the natives impressed with the idea that we desired to make them Christians?—I never heard a man hint such a thing.

1482. (*Major-General Hancock.*) Do you not think that the native commissioned and non-commissioned officers of the Bengal army would have been much more efficient had they been appointed by selection?—I do not think that they would have given more information to their officers of what was occurring in the ranks; certainly not.

1483. (*Duke of Cambridge.*) What is the particular duty of a native officer; is not it his duty to report everything that happens in the ranks to the European officer?—Yes.

1484. Do you think they did that?—No.

1485. Why not?—Because there was a clanship amongst them; they preferred adhering to their own countrymen to informing against them to foreigners, as they consider that we are.

1486. Has that irregularity crept in in modern times, or has it existed from all time during the whole of your experience?—I think that it has been so in all times. Officers had other sources of information in former days which they have not now.

1487. Do you not think that the special duty of the native officer ought to be to give that information?—Certainly.

1488. Do you know of any regulation which could be introduced into the army which would render that a duty?—Nothing, except dismissal; to dismiss the man at once, if he did not give that information.

1489. (*Colonel Burlton.*) I believe there have been a great many native officers on the late occasion brought to a court-martial for not giving information?—Yes; I have heard so.

Lieut.-Col. T. L. Harington.

24th Aug 1858.

1490. (*Duke of Cambridge.*) You partially heard the evidence of Sir George Clerk ?—Yes.

1491. Did you hear him say that there was not sufficient communication between the European and the native officers ?—Yes.

1492. Is that your opinion ?—Not in the cavalry. The European and native officers walk up and down twice a day at stable duty, and converse freely.

1493. You think that it would be an advantage that there should be a good deal more intercourse ? —Yes.

1494. Should you think that there has been less of it in the army in India than there ought to have been ?—Yes.

1495. (*Chairman.*) With regard to promotion, your general opinion is in favour of seniority ?—Yes, provided the man is fit for it.

1496. (*Duke of Cambridge.*) Have the powers of the commanding officer been very much trenched upon lately ?—Certainly ; he has no power whatever.

1497. Since when has that been the case ?—Since Lord William Bentinck's time ; he commenced it.

1498. That is not according to regulation, but by circulars ?—By circulars.

1499. Then you think that if the regulation was strictly carried out it would not be the case ?—The circular is now introduced as a regulation of the army.

1500. (*Major-General Hancock.*) What are the powers which the commanding officer of a regiment in Bengal possesses to reward ?—None.

1501. What powers do you think that he ought to possess ?—There are no powers of reward to give him. I do not know what reward he might give a man.

1502. (*Duke of Cambridge.*) Do you not think it a reward to promote privates to naiks and havildars ? —Yes ; that is, if you adopt selection.

1503. But you would not have that ?—No, not as a rule.

1504. (*Major-General Hancock.*) In fact your rule deprives officers commanding regiments of the only power of reward which they could possess ?—Yes, as far as regards promotion certainly. That might be objectionable.

1505. (*Viscount Melville.*) How are the men selected for promotion to naiks and havildars ?—The senior man, if he can write and is a well-conducted man, and there is nothing against his character, is promoted.

1506. The privates do not go by seniority, do they ?—Yes ; they take seniority on the roll.

1507. (*Duke of Cambridge.*) What is the average age of a man when he is promoted ?—I am sorry to say that he generally fulfils twenty years' service before he becomes a non-commissioned officer.

1508. What age is he when he becomes an officer ? —fifty-five or sixty.

1509. Surely a man of that age is not fit for an officer ?—He ought to be removed and put into a veteran battalion.

1510. (*Chairman.*) Is not that a sufficient objection to the system ?—I think it a very unfair thing for a man who has behaved well to be passed over.

1511. (*Duke of Cambridge.*) Do you think that a man of fifty-five is as fit as a younger man ?—No.

1512. (*Major-General Hancock.*) Have commanding officers of regiments in Bengal been left free to exercise the powers vested in them by the articles of war in carrying out corporal punishment ?—No ; that has all been stopped by circular.

1513. How long ago ?—About three years ago ; we are not allowed to punish the men except for theft and other disgraceful conduct.

1514. (*Chairman.*) Are these circulars addressed to regiments or merely to commanding officers ?—They are written confidentially, but they are just like a general order.

1515. (*Major-General Hancock.*) Have you seen the circular ?—Yes.

1516. Was it issued under the authority of the Government ?—No ; from the Commander-in-Chief.

1517. Have officers commanding regiments in Bengal been left free to exercise the powers vested in them by the articles of war as regards punishments for slight offences ?—There is no punishment at all except ten or fifteen days' drill. Confinement in quarter guard and such light punishment.

1518. (*Marquis of Tweeddale.*) I understand that it is considered that the native officers ought to keep the European officers acquainted with the feelings of the sepoys in their regiments ?—Yes, they ought to do so.

1519. Upon the late occasion in the Bengal army that seems to have failed ; does it occur to you that there is any other means of keeping up that communication which is so desirable between the native sepoys and European officers ?—No ; except you have spies. The native officers fail in their duty, and they ought to be punished by dismissal if they are found out.

1520. In what way have native officers failed in their duty ?—It was an understood thing that this was a well-concerted mutiny, and not a single native officer of the corps which I commanded, either commissioned or non-commissioned, ever came to me, or hinted or gave information upon the subject.

1521. (*Colonel Burlton.*) Was there a single instance throughout the army of a native officer doing so ?—I do not know ; not at Peshawur, I know.

1522. Did they not all join in the revolt ?—Yes.

1523. (*Marquis of Tweeddale.*) Is there no means of getting the information ?—On other occasions when a man has behaved disorderly in the ranks the native officer has come forward. In my own regiment, I know as a fact, that on the late occasion not a single native commissioned or non-commissioned officer or sepoy ever came to me and told me of this revolt. They have from first to last denied it ; they said that it was not premeditated, and that they knew nothing about it.

1524. (*Duke of Cambridge.*) Having this serious mutiny before our eyes, and legislating for the future, do you think that we should be justified in leaving matters exactly as they were before, and that we should leave the native officers exactly in the same position to do harm as they have done ?—Certainly not. I would not have native officers in the regular regiments ; they are, I think, the very bane of the army. I would have no man above a havildar, a serjeant.

1525. (*Marquis of Tweeddale.*) Do you not think that it is an object that the havildars should have something to look to superior to their rank in the way of pension when they are are too old for service? —No ; I think the pension established is ample for them. You can appoint them to one of the police or veteran battalions as native officers, to be promoted from the line and transferred to these corps.

1526. (*Duke of Cambridge.*) In that state of things where would be the line of communication which is so necessary as you admit, and as we all think ?—The havildar should be lowered to the ranks again if he did not give the information.

1527. (*Marquis of Tweeddale.*) Then would they not fail just in the same way ?—I think not ; they are more dependent upon their own men. As non-commissioned officers, they could be reduced to the ranks, flogged, or imprisoned for gross neglect of duty. The commissioned officer could only be dismissed the service.

1528. (*Duke of Cambridge.*) Do you think that a European non-commissioned officer, a serjeant and corporal, should be attached to every troop ?—No, I think not. I do not think it advisable at all ; it would be of no use.

1529. There are two non-commissioned officers in a regiment ?—Yes, two European non-commissioned, staff serjeant-major and quartermaster serjeant, and that is enough.

Lieut.-Col T. L. Harington.

24th Aug 1858.

1530. (*Chairman.*) I understand you to say that individual misconduct the native officers have reported?—Yes.

1531. But for general mutiny they have not?—No. They gave no information on the late general mutiny.

1532. (*Sir Harry G. W. Smith.*) As commanding a regiment, what is your ultimate power short of a court-martial to punish a serjeant who has misbehaved himself?—A reprimand to the serjeant. I should recommend dismissal and flogging.

1533. (*Marquis of Tweeddale.*) Is flogging a native punishment?—I believe so; both native officers and non-commissioned officers have often expressed their opinion, that flogging should be allowed, stating that so and so, naming some bad characters in the corps, well deserved a beating.

1534. Are you not aware that it has been from time immemorial the great punishment of India?—No; I think putting to death is the great punishment.

1535. Are you not aware that flogging is one of the most refined things in India. That when a person has committed a crime equal to murder, he is flogged on his bare back. That if he committed a crime less than that in former days, cloth used to be put between, and that the thickness of the cloth was increased according to the smallness of the crime?—That may be a fact, but I never heard of it. I know that in all the gaols they flog well. I think there should be flogging, and subsequent dismissal if that is not sufficient.

1536. (*Duke of Cambridge.*) Are you aware that there has been a practice introduced, not by regulation, of allowing men if they have a grievance, to go direct with petitions to the commander-in-chief, and that their petitions have been listened to, even if they have not gone through the proper channel, namely, the commanding officer of their troop and regiment?—I know that it has been done.

1537. Do you consider that very detrimental to discipline?—Of course it is.

1538. Has it been done to any extent, do you think?—Never with me.

1539. Is there any circular on that subject?—No.

1540. (*Chairman.*) Can you tell what were the former powers of commanding officers?—When I first entered the service I saw a man dismounted on parade, and a good flogging given him, if he did not trot his horse, and men could be turned out of the regiment if found unfit. Now every difficulty is thrown in the way of getting rid of bad characters.

1541. Corporal punishment could then be inflicted without a court-martial?—Yes. The man was dismounted, and a trumpeter called from the ranks, who laid on with a cane a dozen or so cuts, and it had the very best effect.

1542. What admixture of European and native forces would you recommend; should it be regimentally or by brigade?—As far as the cavalry is concerned regimentally, but as far as regards the infantry by brigade.

1543. (*Viscount Melville.*) Why would you make a difference?—I cannot well say why there should be a difference. In the cavalry I think it would act better. I do not know that it would in the infantry, it might be tried. I have not paid that attention to the infantry branch of the service that I have to the cavalry. I think that a native squadron attached to the dragoons would be efficient, and take off a good deal of the hot weather duty from the Europeans, and I know that they work well together.

The witness withdrew.

Major W. L. Merewether.

Major William L. Merewether examined.

1544. (*Chairman.*) What rank do you hold in the Indian army?—Brevet major.

1545. How long have you been in the service?—Seventeen and a half years.

1546. How many years of that period have you been in India?—All the time till the last three months.

1547. In what presidency have you served?—In Bombay.

1548. In what arm of the service?—First of all in the 21st regiment of native infantry, and afterwards entirely with the Scinde horse, fifteen and a half years with the Scinde horse, and two years with the 21st native infantry.

1549. Of course you have had opportunities of seeing the European and native troops act together?—Yes.

1550. Have you formed any opinion as to the proportion which the Europeans should bear to the native force in the Bengal presidency?—I think that question cannot be answered proportionally for this reason, that the number of Europeans must be decided according to the locality, according to the climate where they can be best placed, and according to the purposes for which they may be required. For instance, in the Punjaub and the north-western provinces there will always be more Europeans required than in any other part of India.

1551. The question refers to the Bengal presidency alone?—Yes; but I suppose that the Punjaub is included in that question, therefore I mention it now. The north-western provinces, the Punjaub, and Lower Scinde are especially adapted for locating European troops; the stations are healthy, you can place them in spots where the loss of Europeans will be very small indeed, and yet they can be readily moved to wherever they are required. Therefore I do not think that you can say proportionally, with regard to Bengal, what the number should be.

1552. (*Duke of Cambridge.*) Still, speaking generally, taking into account the localities, taking into account that the Punjaub is healthier than other parts, and that there would be a greater proportion of Europeans to natives there, and that Bengal Proper is unhealthy, what would you say the amount of force should be in the whole of the Bengal presidency?—For Bengal I should say that 12,000 Europeans would be ample. For the Punjaub and the north-western provinces, including Scinde, which I should propose joining to the Punjaub, you would require 20,000, that would be 32,000 for those two presidencies. I propose afterwards making two presidencies of them.

1553. (*Chairman.*) What number of native troops would you recommend?—With regard to the native troops the presidency would be divided again, and I would propose the number of native troops to be equal to what the Bengal army and the Bombay army are now together, divided into three equal parts, one part for Bombay, one part for Scinde and the Punjaub, and the other part for Bengal.

1554. (*Duke of Cambridge.*) Then if I understand you rightly the proportion of natives to Europeans upon your calculation would be a greater proportion of natives to Europeans than has existed before the outbreak?—No, it would be the same, I think.

1555. If you had only 12,000 Europeans for Bengal and 20,000 for the Punjaub, and you divided the three armies equally, I think the proportion of Europeans would be rather less than it had been before?—It would in Bengal, certainly.

1556. Is it your opinion that that should be so, after what has occurred?—Yes. I do not think the proportion is less than it has been, but about the same. My opinion is that we must have a native army, and a good native army, one in which we can place implicit confidence. We do not require, therefore, the European troops to overawe the native army; if we require that, I consider that our hold in India is gone; that

Major W. L. Merewether.

24th Aug. 1858.

is the essence of my opinion. For that reason I do not consider that any great increase to the European army is essential for permanent maintenance in India.

1557. (*Chairman.*) I understand you to say that you do not consider a European army necessary at all to keep the native army in subjection?—No; but merely for supervision. I entirely think so.

1558. (*Major-General Hancock.*) You think that no increase is required for that purpose?—That is my opinion.

1559. (*Chairman.*) Would you have the European army kept merely as an example to show the natives superiority of discipline?—That is certainly one of the principal reasons; and also to work with them whenever service requires; we know that the European troops are necessary for that.

1560. The native army I take for granted you would have officered by European officers?—Certainly, that is to say, in the principal positions in the army, but not in such large numbers as hitherto. This will be shown hereafter.

1561. (*Colonel Burlton.*) Are you of opinion that the revolt of last year could have proceeded to the great lengths to which it did if there had been double the number of Europeans in the Bengal presidency at the time that it broke out?—I think not, certainly.

1562. Does not that rather go against your opinion that you do not require Europeans to keep the natives down?—No; I think not, because my opinion is that we must treat our native army upon a different principle, not by force; that a moral power must be substituted. By an increase and continued use of physical power we shall do more harm than good.

1563. (*Sir Harry G. W. Smith.*) An increase of physical power as to what—as to the dominion of India?—Yes; and using physical force to overcome the natives in place of a better application of moral power.

1564. (*Duke of Cambridge.*) In what way has the physical power been used hitherto; where have there been any symptoms of physical power being used?—It is being used at this moment in India.

1565. But before the outbreak?—Not before it, certainly; nor was moral power properly. It was the neglect of the proper use of moral power that rendered the application of physical force necessary.

1566. I thought you said that it had an effect in making the army mutiny?—No; I did not mean to say that. What I said was with regard to the future treatment of the army, that if you increased the number of Europeans it would be applying physical power and not moral power; that to prevent a similar outbreak we must improve our system.

1567. (*Chairman.*) In what way would you improve the system?—By making the native army really an army of soldiers; by giving the officers who have command in that army increased powers, so that the men may look up to them as their benefactors and their leaders in everything; and by the changes which are necessary to carry out that policy.

1568. (*Duke of Cambridge.*) What changes would be necessary to carry out that policy?—They will all come, I think, in reply to the questions which have been furnished to me.

1569. (*Colonel Burlton.*) It appears from your former answer that the want of European soldiers, in other words, the absence of sufficient physical force, led to a considerable extension of this outbreak which might not otherwise have occurred?—Yes; it enabled the natives to do what they did, but surely was not the cause of the outbreak.

1570. Still you say that although the absence of physical power led to the extension of the horrors which we have witnessed, you would not have that physical power hereafter?—I am speaking now (and I suppose the question refers to it) of the state of affairs after the rebellion has been suppressed; I say that to prevent a similar outbreak we should not use physical power, but have a better system. We have suppressed this outbreak; but to prevent our next army falling into a similar state, we should have a different system from that which has been hitherto adopted; it should be controlled morally, and not by physical force.

1571. (*Sir Harry G. W. Smith.*) The question which I asked you a little while ago had not allusion to the occupation of India by European soldiers for the purpose of overawing the native army. Our object is to frame the future organization of the Indian army for the possession of the country of India, without reference to whites or blacks at all?—For the whole of India, my opinion is that 50,000 European troops are sufficient.

1572. (*Viscount Melville.*) Does that include artillery?—No; there should be a proportion of artillery with that, but it includes cavalry and infantry.

1573. (*Major-General Hancock.*) That is after the restoration of tranquillity, of course?—Yes; but the difficulty in the question is with respect to the Bengal presidency, determining the proportion for the Bengal presidency. I can speak more clearly of all India than I can with regard merely to that particular locality.

1574. (*Chairman.*) Do you agree with Sir James Outram that it is impossible to take into consideration the Bengal army in relation to that question without taking into consideration the whole of the Indian empire?—Quite so; it is an imperial question, not a local one, I think.

1575. Do you consider that the native force in the Bengal presidency should be on the regular or the irregular system, or both combined?—The irregular as it is called now, but with as much regularity as in the best disciplined regiment in Her Majesty's service. I am speaking of both infantry and cavalry.

1576. (*Viscount Melville.*) With the view of elucidating that question, will you be so good as to state the system of organization which prevails in the Scinde horse?—I shall be most happy to do so. There are at present three regiments of Scinde horse, and there are four European officers to each regiment; the commanding officer, the second in command, the adjutant, and assistant-surgeon. That is the only European element with the regiment. The regiments are each 800 strong; these are divided into four squadrons and troops as usual; each troop is commanded by a native officer.

1577. (*Duke of Cambridge.*) What do you call him?—A russuldar or russaidar. The principle of the system is, that the commanding officer is a person who teaches the soldiers to look up to him for everything; he has his second in command and his adjutant to assist him in the interior economy of the regiment. With regard to the native officers he makes them feel, first, that they hold important positions, and next that they are strictly responsible to him for the due performance of all duty, and that any neglect of that duty will meet with immediate punishment through his means. Under those circumstances you have a good regiment, a well disciplined regiment, and men who are thoroughly attached to the service, because they find that when they do their duty they are highly honoured, and when they neglect it they are immediately punished.

1578. (*Sir Harry G. W. Smith.*) What is the immediate punishment to which you allude?—I do not think that the power is sufficient at present, but the punishment to commissioned native officers as it is conveyed now is a representation made to head-quarters to the commander-in-chief in Bombay, which is almost immediately listened to. The knowledge of this exists, and it is known that it is a certainty. The commanding officer reports the case to head-quarters, and the man is summarily dismissed the service.

1579. (*Chairman.*) On what system is the promotion of native officers in these regiments carried on?—Entirely by selection and merit.

1580. Not by seniority?—No.

1581. Who has the power of selection?—It has been allowed to General Jacob, and to me after him,

Major W. L. Merewether.

24th Aug. 1858.

in commanding the Scinde horse; but I believe it is an exception to the general rule.

1582. The power is given to the commanding officers?—Yes.

1583. I am speaking of the promotion of the native officers?—The promotion is by merit exclusively; they are selected by the commanding officer.

1584. Therefore it would appear that the commanding officers of those irregular regiments have much more power than those of the regular regiments?—Yes.

1585. (*Colonel Burlton.*) They only recommend, do they?—They select the officers, and recommend them to the commander-in-chief, who confirms the recommendation.

1586. (*Major-General Hancock.*) As regards promotion from the ranks, and all the way up, the non-commissioned grade, the officer commanding the Scinde horse has it all in his own hands?—Yes.

1587. He is never interfered with by the commander-in-chief, or by any authority?—Never.

1588. As regards the native commissioned rank, what is the system in the Scinde horse?—The commanding officer selects the man whom he thinks best qualified; he sends the name up with a recommendation through the adjutant-general to the commander-in-chief, and that recommendation is invariably listened to.

1589. (*Chairman.*) That is not with regard to seniority, but entirely by selection?—By selection. With the promotions from the senior non-commissioned rank to the commissioned rank, there never has been any interference; the recommendation has been invariably attended to.

1590. How are these native officers originally appointed? is it by promotion from the non-commissioned ranks?—They are promoted from the non-commissioned ranks for merit. When a promotion takes place the senior non-commissioned ranks are examined as to their efficiency; these, called kote duffadars in the Scinde horse, answer to the troop sergeants in a regiment of cavalry; these men are examined both on parade and as to their general character by the commanding officer, and one amongst them is selected to fill the vacancy. Should there be be more meritorious men in the next grade, among the duffadars (serjeants) they are also taken out to compete; the best is selected.

1591. Then it is necessary to rise through the ranks before a person can become a native commissioned officer?—Certainly, from the lowest grade in the ranks.

1592. (*Duke of Cambridge.*) In no instance in the Scinde horse have you made a native officer who has not passed through the ranks?—Never.

1593. (*Marquis of Tweeddale.*) Then all the gentlemen pass through the ranks?—Yes. We have several sons of native officers of the old school, who entered in the lowest rank.

1594. (*Duke of Cambridge.*) What is the result of that; do you get the gentry of the country to pass through the ranks in order to become native officers or not?—We have some few; there are not so many now as formerly, for the same reason Sir George Clerk mentioned, namely, the smallness of the pay.

1595. (*Chairman.*) Would it, in your opinion, be possible to get a superior rank of native officers if they were promoted directly without going through the ranks?—I do not think it advisable, excepting in very particular cases.

1596. (*Sir Harry G. W. Smith.*) Are you aware that in the Bengal presidency irregular corps of horse are formed by the gentlemen of the country riding into the camp with thirty tolerably well-conducted men and offering their services?—Yes; I do not approve of it; I entirely object to it; it is totally against all proper system and discipline.

1597. (*Duke of Cambridge.*) How were the Scinde horse originally formed?—They were originally formed from a squadron of the Poonah horse doing duty in Kutch, at Bhooj. On the advance into Affghanistan it was necessary to form a regiment of irregular cavalry in Scinde; that squadron was handed over as a nucleus; on that the regiment was formed.

1598. Did they come in by masses brought by an individual, a superior man, or did you enlist them as you would ordinarily?—Individuals were sent to all parts of the country, and the men were enlisted in the same way as you would enlist troops in England; no person brought in large bodies.

1599. (*Chairman.*) Are they upon the same system as the other irregular cavalry, finding their own horses and provisions?—Yes, that is the system; the soldier receives a certain sum of money from the State, and receiving that sum of money he supplies himself with horse, arms, accoutrements, and everything, and is prepared to go to any part of the world at that rate of pay.

1600. (*Duke of Cambridge.*) What is his rate of pay?—Thirty rupees a month.

1601. Five rupees more than the Bengal pay?—Ten rupees. I think Sir George Clerk made a mistake in that respect; the Bengal pay is 20 rupees. When they went to Scinde they were given 7 rupees extra, making 27 rupees, foreign service batta, as it was called. When they were serving with us at Peshawur, Lord Melville was commanding there, they were increased to the same rate as ourselves, namely 30 rupees; but when they went back to the provinces they went back to the 20 rupees.

1602. (*Chairman.*) Have you found any hesitation in them as to exposing their horses to be killed?—Never since I served with them, and I have been in considerable service with the Scinde horse.

1603. (*Sir Harry G. W. Smith.*) Did you ever charge any of the enemy with them?—250 of the Scinde horse charged, broke, and dispersed about 4,000 of the flower of the Affghan cavalry at the battle of Goojerat.

1604. And you have had them under the fire of artillery, have you?—Yes; as Lord Melville witnessed at Mooltan and at Goojerat. At the battle of Meeanee the Scinde horse were drawn up and exposed for some time to a heavy artillery fire, while the army was being formed up behind them.

1605. (*Viscount Melville.*) Will you state the mode in which the Scinde horse are armed?—The principle of the system, as I said before, is that the Government pays a certain sum to each soldier; with that sum originally they were allowed to supply any kind of arms they pleased; they got bad swords, bad matchlocks, and bad spears. General Jacob, when he joined the Scinde horse, determined to improve this system. I must mention that the discipline in those days was nothing; he insisted upon discipline being maintained. After he had got that effected, he proposed to arm them in the most efficient way that he could, and for that purpose he wrote to England, and obtained what were then supposed to be the best style of carbines, and afterwards the best swords that could be made. These are paid for entirely by the men; the arms are got out to India, and during the time that they are being made and sent to India a monthly stoppage is taken from each of the sowars which they agree to pay, and by the time the arms arrive in the country, or shortly afterwards, a sum of money is ready to pay for them. These arms were at first single-barrelled carbines, but we found that the effect of the carbine would be doubled if the barrel was doubled; so the single-barrelled carbines were done away with and double-barrelled carbines were got out, and three regiments, each 800 strong, are now armed with a double-barrelled carbine, and a very good curved sabre made by a firm at Birmingham.

1606. (*Duke of Cambridge.*) And you see no reason why the whole of the Bengal irregular cavalry should not be organized and armed in the same mode?—I see no reason whatever.

Major W L. Merewether.

24th Aug. 1858

1607. (*Viscount Melville.*) Did not the men gladly exchange the native sword for the European one when it was first sent out ?—Very gladly indeed, and they are as proud of it now as if they had made it themselves ; it is the same as the old dragoon sabre used to be,—the curved dragoon sabre, and they delight in it.

1608. But it is worn in a wooden scabbard covered with leather, and not in a steel scabbard ?—Yes. The edge is thus kept from being blunted.

1609. (*Sir Harry G. W. Smith.*) Did you ever see any execution done with that carbine for which they have so nobly subscribed ?—Yes. I was once engaged where my party consisted of 132 men and the enemy were 700 ; they resisted stoutly and would not surrender for some time ; the single-barrelled carbines were used freely amongst them.

1610. (*Duke of Cambridge.*) And with good effect ? —Yes ; only 120 at last surrendered out of the 700. The remainder, with the exception of a few mounted who escaped, were all killed. This success was mainly due to the efficiency of the arms.

1611. (*Chairman.*) It has been stated by one or two witnesses that the natives are much more afraid of the lance than of the sword ; do you find that to be the case ?—No, I think not. I think the lance a useless weapon in war.

1612. (*Viscount Melville.*) The natives gladly took the sword instead of the lance ?—Gladly.

1613. (*Chairman.*) For what length of time are these irregular troops enlisted ?—No particular time ; it is pending the pleasure of the commanding officer.

1614. (*Major-General Hancock.*) It is unlimited service ?—Yes.

1615. (*Chairman.*) They are regularly enlisted ?—Yes. The plan of the enlistment of the Scinde horse is this : there is always a body of expectants, as we call them, who are present at head quarters ; a vacancy occurs, and these men are brought up before the commanding officer, the commanding officer personally examines them, to see that they have got good thews and sinews. Having approved of a man so far, it is then to be shown whether he has the other requisites for a soldier, namely, pluck and the capability of sitting on the outside of a horse. He is mounted bare-backed on a horse and made to ride with others over a course in which there are several sharp turnings. If he goes boldly round at a gallop, shows no hesitation, and turns the corners without falling off, he is then taken as a recruit.

1616. On what terms is he taken as a recruit ?—On his being thus approved of by the commanding officer he is brought back to the orderly room, where a declaration is read out to him (a copy of which I have by me, which I shall be very happy to furnish to the Commissioners,) to this effect, that he has that day been received into the service of the Government ; that he enters the regiment binding himself to obey all orders given to him, to agree to every arrangement which is made for the benefit of the regiment by the commanding officer, and to pay all stoppages regularly out of his monthly pay, which are arranged by the commanding officer ; and that should he, after a number of years' service, misbehave and be dismissed the service for disgraceful conduct, he will forfeit all these stoppages.

1617. Is this period of enlistment for life ?—It is unlimited.

1618. Are there many desertions amongst the cavalry ?—The only cases of desertion in the Scinde horse have been where men have committed crimes and fled to save themselves the punishment of their crimes. These were two cases of murder.

1619. (*Major-General Hancock.*) They are enlisted to go wheresoever ordered ?—Yes.

1620. (*Duke of Cambridge.*) They went to Persia ? —Yes.

1621. Was there any hesitation about it ?—No ; none in the least. The regiment cheerfully endured the greatest discomfort. They were kept for weeks on board ship, dodging between Bushire and the Euphrates. Instead of returning to Scinde as first ordered, they were sent to the Deccan, and afterwards directed to march back to Scinde through the disturbed districts, viâ Malligaum, Mhow, Neemuch, and Nusseerabad to Roree on the Indus. They were present at the taking of Awah, and one squadron was at Kotah. The distance marched by the regiment was upwards of 1,100 miles.

1622. You think that all soldiers ought to be enlisted for general service ?—Yes; no volunteering as it existed in the Bengal army should be allowed for a moment.

1623. (*Chairman.*) How are the re-mounts provided for in the irregular cavalry ?—The men supply them. There is also an arrangement which has been approved of throughout the whole army, that of establishing a regimental fund ; each man subscribes to it, and in the event of a horse dying he receives a certain sum of money from the fund, according to his subscription to it, towards replacing it. With us it is 100 rupees, which the man receives towards replacing the horse if it dies. He is then made to replace it himself. The commanding officer does not interfere in any respect whatever, except when the horse is brought before him to approve of it or not. The man goes with his money into the market, he buys a horse, he brings it up before the commanding officer ; the commanding officer examines it critically, if it is fit for the service it is passed ; a brand is then put on the horse, and it is admitted into the ranks.

1624. Then the commanding officer has the power of insisting upon each man being efficiently armed, and having a proper horse ?—Decidedly so ; and if he is not fit for the corps, the sooner he is out of the service the better.

1625. (*Major-General Hancock.*) About what is the average price paid for a horse ?—Formerly it was 175 rupees, latterly it has been higher ; it went up to 300 last year, owing to the great demand for horses.

1626. (*Duke of Cambridge.*) Do you think that the irregulars are mounted equally, or better, or worse than the regulars ?—In an inferior manner to the regulars, for the reason that they cannot afford to buy the horses.

1627. (*Major-General Hancock.*) Do you think that the amount of compensation allowed by the Government is sufficient on a fair average of cases in the Scinde horse ?—Yes, I think it is quite sufficient as it stands at present ; but I would propose that the pay of the irregular cavalry of India should altogether be raised. Compensation might then be done away with.

1628. With a view to enable them to buy better horses ?—Yes, and we should get a better class of men.

1629. Then, of course, if they were to buy better horses, you would raise the Government amount of compensation ?—Yes. But it would be better to do away with it altogether, and to consider the increased pay as covering everything.

1630. (*Duke of Cambridge.*) You could force the men to buy better horses if a larger allowance were made ?—Yes.

1631. (*Viscount Melville.*) Is it within your knowledge that in 1847 I recommended an increase of pay for the Scinde horse, in order to enable them to be better horsed, and that the Government refused it ?—Yes ; and not only was that the case, but when the second regiment of Scinde horse was being raised in 1844, there was a very severe struggle on the part of General Jacob to get the 30 rupees' pay for the Scinde horse. There was a habit in those days of saying that everything was to be assimilated to Bengal, and they said that because a Bengal regiment was stated to be very good at 20 rupees a month, it must be put up with. General Jacob said that he considered 20 rupees not enough, and Lord Hardinge, the Governor General, was kind enough at last to agree that General Jacob was right.

Major W. L. Merewether.

24th Aug 1858.

1632. (*Duke of Cambridge.*) Have you been at all mixed up with the regular cavalry of Bombay in your service?—Yes; I have been with all three regiments.

1633. The Bombay cavalry, I believe, behaved well?—Yes, particularly the 3rd cavalry last year in Persia.

1634. Do you think that there should be a proportion of regular to irregular?—No; I think the regular cavalry are comparatively useless, there is so much trouble in moving them; the necessity of a commissariat makes it difficult. They are very expensive, costing per man about 82 rupees a month.

1635. (*Marquis of Tweeddale.*) Could you procure a better class of horse in Bombay than the one that you have at present, if you had a larger allowance?—Very much better.

1636. From what part of the country?—From the Persian Gulf. If they increased our irregular pay we would mount ourselves on the same horses as the Bombay regular cavalry are now mounted on, which are the best in the world.

1637. (*Viscount Melville.*) I believe that such a thing as a court-martial in the Scinde horse has never been known from the day when it was first raised to the present hour?—Our system is by what they call a regimental punchayet. Five native officers are assembled by the commanding officer to try all prisoners. In all my experience I have very seldom known those decisions either to be unjust or to have to be reversed. The regiment was raised in 1839; up to the present moment that has always been the system. The only two occasions on which it was diverged from, I think, occurred after your lordship left. There were two men tried for murder by court-martial of the officers of the regiment, by order of the Commander-in-Chief.

1638. Has the commandant of the Scinde horse the power of dismissing a man for misconduct?—He has.

1639. Without reference to the Government?—Without reference to the Government.

1640. (*Duke of Cambridge.*) How comes he to have that power when it is not used in the rest of the army; it is not the case in any other regiment, regular or irregular?—No, it is not; but the reason of it was the perfect confidence of the Commander-in-Chief in General Jacob, and the perfect confidence that the means which he used for maintaining his regiments in such perfect efficiency must be right.

1641. In fact the Scinde horse is an exceptional regiment in that respect?—Yes.

1642. And in favour of a very intelligent and distinguished officer?—Yes. It is a principle which I would advocate for the whole army, that the commanding officer should have that power. The Scinde horse were placed under the articles of war some years ago; they gave commissions to the native officers, and of course when they took commissions they were amenable to the articles of war.

1643. (*Chairman.*) How are the members of the punchayet courts selected; by the commanding officer?—There is a regular roster, in the same way as you select a court-martial in the army.

1644. What do they consist of?—Always commissioned officers.

1645. Then it is in fact a court-martial, only under another name?—Yes; a regimental court-martial, but it is styled there a punchayet, and it is guided by the rules of common sense.

1646. What sentence have they the power of inflicting?—They merely record their finding, and recommend the sentence to the commanding officer.

1647. Does it go to the extent of corporal punishment?—No, that has never been given to them, that is always reserved to the commanding officer.

1648. How is corporal punishment administered; is it without any court-martial at all?—For disgraceful crimes the commanding officer takes upon himself to order the administration of corporal punishment; it would only be given for disgraceful crimes, and after dismissal from the regiment.

1649. (*Major-General Hancock.*) That is under the civil regulations as a magistrate?—It has been done on the parade ground when the man has been dismissed.

1650. No such power is vested in the officer commanding the Scinde horse by the Government or by the Commander-in-Chief?—No.

1651. (*Viscount Melville.*) At the time when the Scinde horse were in Persia, or a portion of them, was there not a Bengal regiment stationed at Jacobabad?—Yes.

1652. What was its strength?—About 500 altogether.

1653. And I think it mutinied?—No, it did not; it has just returned to the Punjaub.

1654. (*Duke of Cambridge.*) Was that a regular or an irregular regiment?—Irregular; the 6th Bengal Irregular Cavalry.

1655. (*Major-General Hancock.*) What are the punishments usually inflicted in the Scinde horse for minor breaches of discipline?—Punishment drill is the usual punishment given.

1656. Simply ordinary drill?—Ordinary drill and confinement in the quarter-guard during that time.

1657. (*Duke of Cambridge.*) Is there no imprisonment?—If a man was considered worthy of undergoing any imprisonment, he was regarded as unfit for the service, and was dismissed the service.

1658. (*Viscount Melville.*) What was the way in which the regiment was generally recruited, and in what localities?—The greater portion of the regiment comes from the immediate neighbourhood of Delhi, the very hotbed of the rebellion.

1659. (*Duke of Cambridge.*) Did it affect those men at all?—Not the slightest.

1660. (*Marquis of Tweeddale.*) In fact you seem to think that discipline is the secret of an army being kept in order, whether it is native or European?—Most undoubtedly.

1661. (*Major-General Hancock.*) Is corporal punishment frequently had recourse to in the Scinde horse?—Very seldom indeed.

1662. (*Duke of Cambridge.*) Do you conceive that in an army which is in good discipline mutiny is less likely than where the discipline is not good?—I should say that it was an impossibility.

1663. (*Marquis of Tweeddale.*) The European officers would be informed in a regiment with good discipline of everything which was taking place in the ranks?—Most certainly.

1664. (*Major-General Hancock.*) All the officers in the Scinde horse are selected officers, are they not?—Yes.

1665. During the time that General Jacob has held command, has he not been allowed to select his own officers?—Always.

1666. (*Colonel Burlton.*) What particular difference do you point out with regard to the organization and the discipline of the system of the Scinde horse from that of any other irregular cavalry regiment in Bengal?—I think that if I entered into the particulars of the system you would see the difference. The system in the Scinde horse is that of the highest state of discipline; that is to say, that it is carried on exactly the same as in the best European regiment.

1667. (*Chairman.*) Do you consider that any native artillery should be allowed in the Bengal army?—I think that where you have such an expensive arm as artillery, it should be of the best, and therefore that the whole should be European, with the small exception of certain places where natives are absolutely necessary, where you cannot get on without them on account of the extreme heat of the climate. There are certain places where Europeans cannot live, but where you must have artillery, as, for instance, on the north-western frontier of Scinde. European soldiers cannot live there; but it is necessary to have artillery, and you must have it native.

1668. Do you exclude the native artillery on account of any doubt which you have about them, or merely because you think the European artillery superior to them?—I think that the European artillery would be so superior and that it is such a valuable article that it is infinitely better to pay a higher sum and get the best, than to pay a number of small sums and get an inefficient article.

1669. (*Major-General Hancock.*) You would have so much native artillery as should be sufficient to save the Europeans from exposure on service in unhealthy climates or at particular seasons, and during the extreme heat of the monsoon?—Quite so; and those should be for certain positions.

1670. (*Duke of Cambridge.*) You would name the stations and keep them there?—Yes; and they should be maintained there for service in any part of the world, but they should be stationed in particular localities; for instance, in the one I have mentioned with respect to the frontier field force, it is proposed by General Jacob now that there should be three troops of native horse artillery there; they are necessary there, you cannot keep Europeans.

1671. (*Chairman.*) With regard to sappers and miners, are you of the same opinion?—Yes; quite so. With regard to the artillery, I was going to mention that of course there would be a full complement of gun Lascars to each company of artillery, and a company of gun Lascars, the old strength perhaps would be the best. 120, I think, was the complement. With the sappers and miners I would do the same, they should be European, with a full company of Lascars attached to them.

1672. Would you give the native troops an inferior rifle to the Europeans?—Most certainly not; that is a question I think of a great deal of importance. I would most certainly give the best article that I could provide to the whole army, native and European.

1673. (*Major-General Hancock.*) With respect to all the native troops maintained by the Government, would you not train them to the highest state of efficiency and utility, and give them implicit trust?—Most decidedly so; the opinion in that respect I think cannot be expressed too strongly; I always prefer high-pressure.

1674. (*Chairman.*) Do you consider that the Bengal native army should be composed of different nationalities and castes, and if so, in what proportion?—I would not allow the question of caste to be introduced at all; I would enlist a man for his thews and sinews, not because he was a Brahmin, or a Patan, a Sikh, or a Ghoorka, but merely because he was a good man, and looked likely to be a good soldier, and I would always teach him to be proud of himself as a soldier, and not as a Brahmin or anything else.

1675. (*Major-General Hancock.*) You would not allow commanding officers to exclude any caste whatever?—None whatever; they should take the best men they could find.

1676. (*Duke of Cambridge.*) You would not allow the men to bring caste forward as an excuse?—Certainly not.

1677. (*Sir Harry G. W. Smith.*) You would receive a native of any caste, but could you induce him to forget his caste when he had enlisted?—I should think my right hand had forgotten its cunning if I could not. We have proved it in the Scinde horse.

1678. (*Major-General Hancock.*) Have not the highest caste men in the Bombay army, as well as in the Scinde horse, as you know, stood shoulder to shoulder with men of lower caste, and slept in the same tents and done the same service perfectly well?—Yes, over and over again. The 21st regiment of the native infantry, which mutinied the other day, when I was with it had a large number of high-caste men. They built our houses and their own barracks, and they repaired and built the fort walls at Seebee.

Major W L Merewether

24th Aug. 1858

1679. (*Duke of Cambridge.*) But they mutinied afterwards?—Yes.

1680. What made them mutiny?—The question of caste being allowed amongst them, undoubtedly.

1681. (*Major-General Hancock.*) Was not there a large predominance of that particular class; were not three-fourths Hindostanees?—I think there were more Hindostanees when I was with the regiment. I am not quite certain of that. The reason why they have misbehaved now was from the commanding officers having allowed the consideration of caste in the regiment.

1682. You mean that the European officers in that corps for many years past have had that predilection for high-caste men which has induced them to enlist a large predominance of them?—No, I mean more than that. I mean that they have actually allowed the question of caste to be conversed upon, and to be recognized, and to affect decisions.

1683. (*Duke of Cambridge.*) In coming to a decision they would take caste into account, and would say, "That is a high-caste man, and therefore we "must not punish him?"—Not quite that; but they have allowed the question of caste to be brought up at orderly roll, and have entertained it and discussed it, which I say is the real reason why that regiment mutinied.

1684. (*Chairman.*) Then, as I understand you, you would not recognize caste at all in enlisting the men?—Not at all.

1685. (*Colonel Burlton.*) Did General Jacob ever call upon any of your men, whether Mahomedans or Hindoos, to do an act which they considered distinctly contrary to their caste?—I was never placed in that position, nor do I think that General Jacob was, for this reason, that we never thought whether it was likely to be discussed by the men.

1686. But you know what is contrary to caste; you know that a Mahomedan will not eat pork?—Yes.

1687. Suppose you had asked one of them to do it?—I should no more think of doing it than I would ask an English soldier to do a thing disgusting to him.

1688. But General Jacob has stated in a pamphlet which he has published, that if he asked your men to break caste they would do so. They have never been called upon to do what they consider contrary to caste?—No; but if anything were necessary to be done for the good of the State, no matter what, they would be ordered to do it, and would assuredly obey the order.

1689. (*Duke of Cambridge.*) It has been stated that when an Indian cooks, and he is suddenly ordered to mount his horse on the approach of the enemy or for duty, he throws away his ration for the day and fasts for that day, is that so in the Scinde horse?—No, certainly not; but I think that the very investigation of those little circumstances has led to all this mischief, that we ought never even to think about them or to talk about them.

1690. (*Chairman.*) Would you preserve nationalities; would you have men of one caste in the same company or regiment, or would you mix them up as much as possible?—I would enlist a man for his thews and sinews, not because he was of this or that class or nation.

1691. You would not preserve that nationality or caste by keeping them together in one particular company?—Most certainly not; but they should be distributed indiscriminately.

1692. (*Major-General Hancock.*) You would not allow commanding officers the opportunity of enlisting all of one caste, or any great predominance?—I should leave it to the commanding officers. I would make them strictly responsible for having an efficient regiment, and leave them to enlist whom they liked.

1693. Then you would place no restriction?—No restriction.

1694. Then if a commanding officer had a great predilection for the men from Hindoostan, the Brah-

Major W L Merewether

24th Aug 1858.

mins and Rajpoots, you would allow him to have Brahmins and Rajpoots?—Certainly; but I should think that any man of common sense would never attempt it.

1695. You would not control the commanding officer at all?—No.

1696. (*Chairman.*) Do you think that any alteration is necessary in the code under which the Bengal native army should be enlisted?—Certainly; they should be enlisted for general service only.

1697. You would make them go out of the country or anywhere?—Anywhere where they are ordered; they should be enlisted to obey orders and nothing else. I think also that the present Articles of War do not apply to our Indian army. I think that it is a mistake treating the Indians with a code which was made for Anglo-Saxons. I would apply the principle which I partially explained a little while ago, with regard to the Scinde horse, namely, that the commanding officer should have the control of the regiment in every possible way, that he should regulate promotions, enlistments, discharges, and reductions, and that he should be held strictly responsible for the performance of the duty.

1698. (*Duke of Cambridge.*) In fact you would make him more patriarchal, more paternal?—Certainly; that is the position which the native best understands.

1699. (*Chairman.*) You would give him the entire control of punishments and rewards?—Yes.

1700. Do you think that there would be any advantage in dividing the Bengal army into two or more armies?—I think it advisable to form a fourth presidency, and with that view the Bengal army would be divided. The Bengal army was no doubt too large.

1701. With respect to the system of promotion, as regards native commissioned and non-commissioned officers, I understand you to recommend the system which is now adopted in the Scinde horse?—Yes, namely, promotion entirely by merit. Of course where two men of equal merit came together their length of service would be taken into consideration.

1702. (*Duke of Cambridge.*) You are not of opinion that there should be no native officers?—Most certainly not. I should make the native officers more responsible than they are. At present, in our regular native army in India, either the Europeans are of no use or the native officers are of no use.

1703. (*Chairman.*) I think you have expressed your opinion very strongly as to giving the commanding officers more power than they have at present?—Yes.

1704. (*Major-General Hancock.*) Then I apprehend you think that all commanding officers should be appointed by selection?—Certainly.

1705. And that this power could not be safely entrusted to every officer who chanced to come to the command of a regiment?—Most certainly not. I think that upon the seniority system there would be a great evil in giving this power. I would propose one general list for the army, from which the officers for the native army should be selected.

1706. (*Viscount Melville.*) Do you concur in the recommendation of Sir Patrick Grant, that officers selected for the irregular service should be struck off the rolls of the regiment altogether, and be entirely confined to the irregular service?—Not at all. I would recommend that all should be on a general indiscriminate list, and from that indiscriminate list the officers should be selected. There should be a commandant, a second in command, an adjutant, a quartermaster, and one lieutenant as waiting officer, to fill any vacancy by sickness. Some inconvenience is experienced now by officers coming in who do not know anything of the duties.

1707. Then am I to understand that, supposing a lieutenant is taken for the second in command of the Scinde horse, and he comes by seniority to be a captain in his own regiment, he is to be taken away from the Scinde horse and to go back to the regiment?—Certainly not. When the officers are taken away in that manner, if he is performing the office of second in command, I would give him the rank of, say, lieutenant-colonel; I would give the commandant the rank of colonel; I would give the adjutant and quartermaster the rank of captain. If they were removed for inefficiency in those regiments they would remain unemployed upon a reduced rate of pay, with the rank which they had obtained by gradual rise in the general list.

1708. (*Chairman.*) Do you consider that, in any admixture of Europeans and native forces, it should be done regimentally, or by brigade?—If there is any admixture at all, of course it should be by brigade. I would have no admixture of Europeans and natives regimentally.

1709. (*Duke of Cambridge.*) You do not think that it would answer?—No, I am quite sure it would not.

1710. A system which would do for natives would not do for Europeans?—No, they would be continually clashing.

1711. It would lower the Europeans?—Yes, and it would lower the natives too.

1712. (*Viscount Melville.*) Before you left Scinde did you know that Lord Elphinstone had given an order for two infantry regiments of rifles to be raised upon the same system as the Scinde horse?—Yes, and I have since seen a general order to that effect.

1713. Can you state how far the system which now exists with regard to the Scinde horse can be made applicable to infantry?—It can be made applicable in every possible respect, and would be the best. The system of the men providing their own arms can be made equally applicable to infantry by giving them a little higher pay than they get now. At present the lowest rate of pay is seven rupees for a sepoy; that increased to ten rupees will enable him to supply his own arms.

1714. Then you propose that the arms should be supplied to these infantry regiments in the same way as they are now supplied to the Scinde horse?—Yes; that is, that the men should supply themselves.

1715. With English arms?—Certainly; the best arms that can be procured.

1716. (*Sir Harry G. W. Smith.*) Have you any armourers in your corps?—We have, I suppose, the best regimental establishment of armourers in India.

1717. (*Duke of Cambridge.*) Would you have no native regular infantry?—None at all, either infantry or cavalry.

1718. (*Viscount Melville.*) You would have them all irregular?—All irregular; that means a small proportion of European officers. Five officers I hold to be necessary, besides the doctor.

1719. (*Duke of Cambridge.*) Is that enough for action, do you think?—Quite. I never found the want of more with the Scinde horse.

1720. (*Major-General Hancock.*) Are not the native commissioned officers of the Scinde horse perfectly competent to command a troop or a squadron?—Perfectly, in every respect.

1721. (*Duke of Cambridge.*) In an outbreak or mutiny is there no disadvantage in that?—Certainly not.

1722. Supposing a regiment mutinied, would it not give leaders to regiments which hitherto have not had any?—If a regiment should be so mismanaged as to turn them into mutineers, I grant that the cleverer a man is the more dangerous enemy he is likely to be; but I think, under the system of making the natives responsible, putting them into responsible positions, and raising their own character in their own eyes, they are less likely to mutiny.

1723. (*Major-General Hancock.*) And, above all, giving the commanding officer full power?—Yes; then they look up to him as their father.

1724. (*Chairman.*) Will you be so good as to furnish the Commission with the system and organization upon which the Scinde horse is established?—See *Appendix*, ~~p.~~ . Tab. p. 11.

The witness withdrew.

Lieutenant-Colonel ROBERT AUGUSTUS MASTER examined.

Lieut.-Col. R. A. Master

24th Aug 1858

1725. (*Chairman.*) What rank do you hold in the Indian army ?—Lieutenant-colonel.

1726. How long have you been in the service ?—Very nearly 33 years.

1727. How many years of that period have you passed in India ? – The whole of it.

1728. In what presidency have you served ?—Bengal.

1729. (*Duke of Cambridge.*) What have you commanded ? – I commanded the 11th irregular cavalry from March 1848, and I joined my own regiment, which is the 7th light cavalry, immediately prior to my promotion as lieutenant-colonel in 1855.

1730. So that you have served in both regular and irregular regiments ? – Yes.

1731. (*Chairman.*) And of course you have had many opportunities of seeing both European and native troops ?—Not many, except in the Punjaub, at least in the field.

1732. Have you formed any opinion as to the proportion which the European should bear to the native troops in the Bengal presidency ?—I never gave it a thought ; but I must say that, after what has taken place, a very strong body of Europeans is necessary in India on the Bengal side.

1733. In what proportion ?—I can hardly judge ; but I should think hardly less than 40,000 or 50,000 Europeans altogether.

1734. (*Duke of Cambridge.*) To how many natives ?—I think sixty regiments of native infantry plenty. I do not know exactly what is required.

1735. (*Chairman.*) Would you have any native artillery or sappers and miners ?—Certainly not ; not to use the guns against their officers as they have done lately. I do not see any harm in native sappers and miners, except that they might construct mines for their own people—for the enemy.

1736. You would not teach them the scientific branch of it ?—No.

1737. (*Duke of Cambridge.*) You had a large number of native sappers and miners opposed to you at Lucknow, had you not ?—There were supposed to be some 250 ; all those who came from Meerut, and also those on leave.

1738. And they proved themselves pretty good sappers, did they not ?—Yes ; a serjeant of the 32nd Foot, serjeant Day, himself a professional miner and the head of that department under the engineer-officers, who was there, told me they made as beautiful mines as could be made in any part of England ; he said that he never saw such mines before.

1739. (*Chairman.*) Of course you consider a native army necessary ?—I feel that it is absolutely necessary on account of the climate.

1740. Although you are not prepared to state exactly the proportion in which you would have it to Europeans ?—No. I have never given it a thought ; I should say 60 regiments of infantry.

1741. Would you have that native army regular or irregular, or both combined ?—I think irregular is quite sufficient for the duties ; the irregular would be less expensive to the Government.

1742. (*Duke of Cambridge.*) But on principle, speaking militarily, would you have the regular or the irregular system ?—Irregular.

1743. For both infantry and cavalry ?—For infantry and cavalry.

1744. And the cavalry you would have irregular ?—I think the irregular system is much less expensive to the Government.

1745. We have nothing to do with expense here ; we are only now asking militarily which system is the best ?—I should think the irregular.

1746. (*Chairman.*) How many European officers do you consider it advisable to have ?—I think that the admission of three officers to an irregular corps, one European officer to command each squadron, independently of the commandant and the adjutant, would make it just as perfect as any regular native cavalry could be. A second in command I consider perfectly useless.

1747. (*Colonel Burlton.*) That would be five officers ?—Six with the surgeon.

1748. (*Duke of Cambridge.*) You would have a commandant and four squadron leaders ?—No, a commandant, an adjutant, and three squadron leaders.

1749. (*Viscount Melville.*) Do you think that that would give sufficient encouragement to the native officers to induce them to do their duty well ?—I do not think, from what I have seen of the irregular cavalry, that the native officers are at all adapted to command a squadron, as far as manœuvring goes ; in the 11th Irregulars there were only two *really smart* native officers.

1750. (*Duke of Cambridge.*) You prefer the irregular to the regular cavalry ?—Yes.

1751. And you have had considerable experience in both services ?—Yes.

1752. How many years in each ?—I was eight years with the 11th Irregulars and twenty-two years with the 7th Cavalry, as subaltern and captain before joining the irregulars ; I left them in May 1855, to join my own corps, the 7th Cavalry, when on the eve of promotion from major to lieutenant-colonel.

1753. In what respect, militarily, do you think that the irregular service of cavalry is superior to the regular service ?—I think that having their own horses they take much better care of them when the European officers are not with them.

1754. We have it stated in evidence that in a charge an irregular horseman would not charge from the fear of losing his horse ; are you aware of that ?—I do not believe that, certainly ; he would not think of it for a moment.

1755. (*Colonel Burlton.*) You think that he would do his duty and charge ?—Certainly.

1756. Have you ever charged with a regiment of irregular cavalry ?—We never made a charge ; we were going to charge at Goojerat, but we were pulled up by a deep ravine, the whole brigade, under Brigadier Lockwood.

1757. (*Sir Harry G. W. Smith.*) You propose that all the cavalry, which must be very numerous in India, should be irregular. How could irregular horsemen to that amount of numbers mount themselves, because we know that the Bengal cavalry is mounted with the greatest care and circumspection from the studs which are the finest things in the world ?—I think that the Government might find most of the irregular cavalry in horses and mares which might be considered too slight for the weight of a "regular cavalry" trooper.

1758. (*Duke of Cambridge.*) If you do that you do away with the irregular principle ?—The horses are not of a very good class in the irregular cavalry, except in some of the old regiments ; in fact there has been such a drain in the country that they cannot get them in some parts of the country.

1759. In ordinary times would there be a difficulty ?—No, I should say not.

1760. (*Colonel Burlton.*) I suppose when you speak of the Government furnishing them, you allude to the under-sized rejected horses in the studs which are not admitted into our cavalry regiments, that they might have the option of purchasing them ?—They would hardly be big enough, I think, except for light weights.

1761. They are 14 hands 1 inch in height ?—They are almost too small. Many of the barren mares sent every year for sale to Calcutta would answer well.

1762. (*Duke of Cambridge.*) It has been stated to-day that it would be a good thing if a squadron of regular native cavalry were attached to a regiment of Europeans of three squadrons ; are you of that opinion ?—I think it would save the Europeans, particularly in the hot season of the year.

Lieut.-Col. R. A. Master.

24th Aug. 1858.

1763. You would see no objection to that plan?—Not the least.

1764. (*Major General Hancock.*) Do you think that a better plan than keeping the natives separate, they would be equally available in hot seasons of the year?—I would prefer that plan to keeping a regular corps, certainly.

1765. (*Duke of Cambridge.*) Then you are decidedly opposed to regular cavalry?—Yes.

1766. Is there any military ground for that besides the economical one which you have stated?—No; except that I have lost all confidence in them myself.

1767. Why should you have more confidence in the irregular cavalry than in the regular, have not almost as many irregular regiments mutinied as regular?—Yes; so far, I think, that the irregulars are a better class of men altogether, and men of better family, all their children are brought up from boyhood to be soldiers, which is not the case in the regular cavalry; I mean to say that I have lost confidence in native troops altogether.

1768. You think then that as a man, the irregular soldier is a better dragoon than the other?—Certainly, from my experience.

1769. And it is upon that ground that you prefer the irregular system?—Yes.

1770. (*Sir Harry G. W. Smith.*) Did the regiment under your command ever behave ill before the enemy?—They never had an opportunity; they were under the command of Major Phillips in the Punjaub in 1848 49, the only time they were ever on service since I was posted to it.

1771. (*Duke of Cambridge.*) Did the 7th regular cavalry mutiny at Lucknow?—Yes; two troops mutined and killed their officers while in command in the district, and a third galloped over to the rebels in a body on the morning after the infantry regiments had mutined at Lucknow.

1772. Had you any knowledge of that previously?—Not the slightest. Two days before, Sir Henry Lawrence made me acquainted with the circumstance that a mutiny was expected. Five separate detachments had been bringing in treasure, and Sir Henry himself was very much pleased with the way in which they had conducted themselves. I went on parade as I had done before, particularly to see whether I could observe any bad feeling in the sixth detachment, and it was perfectly impossible to see anything approaching to a feeling of insubordination; the troop went off that night for the sixth time, and the next morning they went over in a body to the enemy.

1773. Is there any difficulty in provisioning the irregular cavalry on service?—At Moultan they were a little hard set for grain.

1774. How did you supply that?—They got boosa, a kind of chopped straw.

1775. Was it furnished them by the Government?—No; the men furnished it themselves; they were obliged to do so.

1776. (*Viscount Melville.*) Those were not the regular cavalry?—No; the irregulars.

1777. (*Duke of Cambridge.*) On service you never found it necessary to go to Government for supplies?—No; I believe that at Moultan they got compensation for the shortness of provisions.

1778. Do you think that that system would induce men to plunder?—I think that they are always ready to plunder.

1779. Do you think that an irregular regiment would be more likely to plunder than a regular one, for that reason?—Certainly, for food for their horses and for themselves also.

1780. (*Viscount Melville.*) Were not both the 11th and the 7th at Moultan?—The 11th regular cavalry, with the 7th and 11th irregular cavalry, were there.

1781. Was the regular regiment differently supplied with boosa from the irregular regiment?—The regular cavalry have their own grass-cutters, and the irregulars have perhaps one boy amongst three horses; when they cannot get grass they are obliged to buy boosa.

1782. Then you get no assistance from the commissariat at all?—None whatever, except when food for the men could not be otherwise procured.

1783. (*Sir Harry G. W. Smith.*) As to buying boosa with a campaigning army, it is quite as impossible as buying it in this street; the stock is exhausted?—Yes, just so; it was very scarce at Moultan.

1784. *Duke of Cambridge.* Still, in war, you would think it necessary to take account of irregular corps that were on service?—Yes.

1785. You think it advantageous that the commissariat should take account of them and lay in provisions?—Yes, in case of necessity; certainly it is not often the case that provisions are not procurable.

1786. Should the native army be composed of different nationalities and castes, and if so in what proportion?—I would have no caste whatever; I would not admit the name of caste in any way whatever; that has been the ruin of the army, in my opinion.

1787. You would not consider whether a man was a Brahmin or not; you would call upon him to do whatever duty you thought necessary?—I would not have beyond a certain number of Brahmins in each regiment certainly. They are a very intriguing, influential class of men, who will do more harm than good in every corps, from what I have seen of them.

1788. (*Viscount Melville.*) But in enlisting can you always tell whether a man is a Brahmin or not?—You can; because they always wear what they call the Brahminical thread round their bodies.

1789. But they may conceal it?—They often wear it when they are not entitled to it.

1790. (*Duke of Cambridge.*) You say that you think caste has been too much considered, and that that has been very much the cause of the mutiny?—Yes; there are too many Brahmins in all the corps; in the infantry corps there are certainly three-fourths.

1791. Then would you regulate the number of Brahmins in each regiment?—Certainly.

1792. (*Marquis of Tweeddale.*) Do you think that, the Mahomedans are not as dangerous as the Brahmins?—They have proved themselves so; the Brahmin is always at the bottom of every intrigue.

1793. (*Major-General Hancock.*) Is not a due admixture of all classes and castes the best system that can be adopted?—Certainly.

1794. (*Duke of Cambridge.*) Have you ever heard of the system adopted of late of having nationalities by different corps?—I know it is the case in some of the irregular corps, but I would not allow it; that becomes a kind of clique at once.

1795. Would you enlist the native army of Bengal under a new code?—No; I think there is no harm in the code at all.

1796. I refer to the terms of enlistment; would you have the terms of enlistment what they have hitherto been?—Certainly not. I would enlist every man for general service, to go where he is ordered.

1797. Including the going by sea?—Anywhere, in any direction.

1798. (*Viscount Melville.*) Do you not think that there would be some difficulty in carrying that into effect, as regards embarking on board ship?—I dare say there might be at first, but I think that when they found that other men went they would go themselves.

1799. (*Major-General Hancock.*) There would be no difficulty if a man enlisted, engaging to go?—I should think not if he engaged to go wherever he was ordered.

1800. (*Colonel Burlton.*) They might desert?—That is very likely; Brahmins particularly.

1801. (*Duke of Cambridge.*) Do you think that you would get men to enlist on those conditions?—Yes; I think a much less quantity of Brahmins would enlist, because they have a particular objection to crossing the Indus, and going on board ship.

1802. Has it not been lately the order that men are to be so enlisted?—Yes, during the last two years.

1803. Have you found any falling off in the enlistment in consequence?—Not in the least.

Lieut.-Col. R. A. Master.

24th Aug 1858.

1804. (*Colonel Burlton.*) Still you think that when they were ordered to embark a great many of them might desert ?—I think it very likely ; I speak of Brahmins.

1805. (*Duke of Cambridge.*) Is flogging now in existence in the Bengal army, or not ?—No, except in particular cases ; disgraceful conduct, for theft, or cases of that sort.

1806. Do you think that the punishments in the army are sufficient for the objects in view ?—Certainly not. I think that the abolition of flogging did more harm to the army than anything else. My own native officers have often said to me, “ As long as that rod was “ hanging over that bad man's head he was all right, “ but now they do not care for the commanding officer “ or anyone else.”

1807. Is corporal punishment a native punishment which is used in India, or not ?—Certainly, amongst themselves.

1808. (*Major-General Hancock.*) When you were in command of a corps were you allowed the free exercise of the powers vested in you by the articles of war for native troops as regards corporal punishment. Was there any interference with you from head-quarters ?—Certainly not.

1809. (*Duke of Cambridge.*) Then, do you think that the commanding officer has power enough ?—No ; I think that he should have a little more power. In minor punishments the commanding officer can only give fifteen days' drill to a man ; they laugh at it. A man looked upon four days' extra duty as a much more severe punishment than anything else, because he had to clean his arms and accoutrements daily.

1810. (*Marquis of Tweeddale.*) When corporal punishment was done away with in 1835 by Lord William Bentinck, was not there a punishment more distasteful to the natives established instead of it ?—I do not recollect it.

1811. I mean the penal service of working on the roads ?—If a man was sentenced to, I think, three months working on the roads, he was struck off the rolls.

1812. Was not it an objectionable punishment to the high-caste sepoy to be sentenced to penal service? —Certainly.

1813. So that he and his family lost his caste by being handcuffed along with Pariahs ?—Yes, I believe they have some feeling of that sort with regard to being obliged to work with men of lower caste.

1814. (*Duke of Cambridge.*) Is any change required in the system of promotion as regards native commissioned and non-commissioned officers ?—I think myself that promotion ought to go by merit entirely.

1815. And not by seniority ?—No. In the irregular cavalry men care less for being passed over ; but in a regular regiment a man if he is passed over makes a complaint at once. He looked on promotion as his right.

1816. Is that complaint listened to ?—Yes, in my own experience ; a native officer submitted a complaint against me which proved to be false, and was punished with four months suspension from rank, pay, and allowance by native officers who tried him ; this was in the 11th irregular cavalry.

1817. (*Major-General Hancock.*) By a court-martial ?—By a general court-martial.

1818. (*Viscount Melville.*) Do you mean to say that a man sent a complaint to the commander-in-chief without its going through you as the commanding officer ?—It was sent direct to the commander-in-chief by the officer commanding the division.

1819. (*Duke of Cambridge.*) Was that tolerated ? —It was.

1820. And listened to ?—Yes.

1821. (*Sir Harry G. W. Smith.*) What power, under those circumstances, had you to act ?—I was not aware of it.

1822. If a native officer had come to you and said “ That fellow has sent a complaint to the commander-in-chief against your decision,” what should you have done ?—I should have put him in confinement at once.

1823. (*Major-General Hancock.*) Did the native officer who made those complaints against you to the commander-in-chief suffer punishment by court-martial in consequence of doing so ?—Charges were preferred against the native officer, and he was put upon his trial, and he was punished for it, namely, for making false charges against me. His name was Naib-Musseer Shei Alum Khan ; to the best of my memory his trial took place at Dinapore in July 1854.

1824. (*Duke of Cambridge.*) If he was punished, why do you object ; if it was treated as a crime, the complaint was not attended to ?—I think that the punishment given by native officers, men of his own caste, was very light.

1825. (*Marquis of Tweeddale.*) Is it the custom in the army to send petitions to the Commander-in Chief against officers or against any one without sending them through the commanding officer of the regiment ? — I fancy it must have been, for there was another case when I commanded the 7th Cavalry of a man who had been dismissed upon trial by his own officers in a regimental court-martial ; he made a complaint in Calcutta. The man had been struck off, I think, about three months. I was called upon to give my account of the affair, and I did so ; I heard nothing more of it.

1826. (*Major-General Hancock.*) That was the case, as I understand you, of a man who had been struck off the regiment who made a complaint ; he was not under your command at the time ?—No ; the other was.

1827. (*Duke of Cambridge.*) Was that native officer dismissed the service ? — No, he got four months' suspension from rank, pay, and allowances only.

1828. And he resumed his position in the same regiment as an officer ?—Yes.

1829. (*Major-General Hancock.*) Do the regulations of the Bengal army permit native officers and soldiers to address written complaints to the Commander-in-Chief direct ? — I fancy so, from the fact of these complaints having being sent without my knowledge.

1830. Do you mean that that has been the allowed practice ?—I presume so from that.

1831. (*Duke of Cambridge.*) Has it been so in your experience ?—Certainly ; and it has happened in other regiments besides my own.

1832. Do you think that promotion should be by selection and not by seniority ?—Not by seniority certainly with the natives.

1833. Why not ?—Because there are very few fit for it. Most natives, on promotion, become careless and lax in performance of their duties.

1834. You have stated that you commanded a regiment, namely, the 7th regular cavalry, which was one of those that mutinied ; were you put in possession of the likelihood of that fact before it took place ?—I did not know a single word of it. I fancied that some bad feeling must exist in the army generally.

1835. Ought you not to have been put in possession of it, if the native officers had done their duty ?—Certainly ; I saw the subahdar major of the regiment the very day before Sir Henry told me of it, and it was his duty to have told me what he knew of any coming outbreak.

1836. Were the native officers in the habit of telling you what took place in the regiment or not ?—Very seldom ; they were always very willing to tell against a man who was no relation or connexion of theirs, whom they did not like, but they would not say a word about a relation.

1837. Had you ever any reason to chide any man for not informing you of what was going on ?—I believe I have frequently done so ; I cannot recollect the instances just now ; it was not about any supposed outbreak.

Lieut.-Col. R. A Master.

24th Aug 1858.

1838. Do you attribute the late mutiny to a general conspiracy or to general laxity of discipline in the Bengal army?—I think the natives are afraid to tell one of another; in fact, a native officer told me afterwards that it was as much as his life was worth, and that he dared not tell me; he was an old gentleman, and died the other day at Cawnpore. I conceive the mutiny to have been a general conspiracy.

1839. What was that man's age?—About seventy-one.

1840. And he was a native officer?—Yes; the subadar major of the 7th cavalry.

1841. Do you not conceive that the very fact of men being of that age in those positions disqualifies them from holding those positions?—He was a most wonderful man for his age, he was particularly smart, and a most excellent soldier, perhaps one of a thousand, who had his energies about him.

1842. Do you think that a man of that age is qualified to hold a position of that description?—Generally speaking, not.

1843. What is the average age at which a native non-commissioned officer would attain to the rank of a commissioned officer?—I cannot tell; some of them are between forty and fifty when they are made jemadars, and much beyond that when they are made subahdars—that is the senior rank of all in the regular corps.

1844. Have you ever superseded a senior man by another man on account of inefficiency?—Certainly.

1845. Has that been permitted?—It has been sanctioned in some instances. I was obliged to send the names of two or three senior men to the one whom I recommended for promotion, and to include their names in the roll, and my remarks for passing them over.

1846. Were those remarks admitted?—They were.

1847. You know of no instance in which they were not?—No; I only commanded the regiment for something short of three years.

1848. Do you think it desirable that there should be any admixture of European and native forces either regimentally or by brigade, that is to say, do you think it desirable to have two companies of a regiment European and the six or eight other companies natives, or would you rather have a European regiment to two or three native regiments?—The latter certainly.

1849. You would not mix the Europeans with the natives?—Certainly not.

1850. Why not?—I do not think that they would agree together; and the Europeans, generally speaking, do not know enough about the castes of the men; they give frequent annoyance in that way.

1851. (*Major-General Hancock.*) What powers have regimental commanding officers in Bengal with regard to granting leave of absence to native officers and others?—None whatever. Leave of absence commences generally in April, and it is granted to so many commissioned officers and non-commissioned officers. The commanding officer of a regiment can grant leave between musters and from the 5th of one month to the 4th of another, but he cannot grant general leave.

1852. Supposing a man requires leave in excess of that period, who can grant it?—He then gives notice to his commanding officer, and if he is satisfied that there is a real necessity for the extension of leave, then the commanding officer of division grants that man six weeks or two months, or whatever it may be, at the solicitation of the man's commanding officer.

1853. (*Marquis of Tweeddale.*) What proportion of sepoys have leave in the year?—Sir Henry Lawrence particularly ordered that all men wishing to go on leave should get it.

1854. But, as a general rule in the Bengal army, how many men have annually leave to go to their homes?—I think five commissioned officers and twenty non-commissioned officers; and I think last year it was ten per troop, but those generally went for half the leave; that is to say, three and a half months out of seven; and on their return, the others went, according to the distance of their homes.

1855. Are you talking of the cavalry?—It is exactly the same in the infantry, except, perhaps, that there may be a few more men per company in the infantry; there are seventy or eighty men in the infantry, and in the cavalry sixty per troop.

1856. (*Major-General Hancock.*) Have not officers commanding corps power to grant leave beyond thirty days?—Certainly not; the commanding officer of the division has that power.

1857. The extensions of leave are granted by officers commanding divisions?—Yes; if the man requiring the leave satisfies his officer that the matter is urgent, the commanding officer then applies for it.

The witness withdrew.

Adjourned to To-morrow at Twelve o'clock.

Wednesday, 25th August 1858.

PRESENT:

Major-General the Right Hon. JONATHAN PEEL, M.P.
General H.R.H. the Duke of CAMBRIDGE, K.G.
The Right Hon. Lord STANLEY, M.P.
General the Marquis of TWEEDDALE, K.T., C.B.
Major-Gen. Viscount MELVILLE, K.C.B.
Lieut.-Gen. Sir HARRY G. W. SMITH, G.C.B.
Major-General HANCOCK.
Colonel BURLTON, C.B.

Major-General PEEL in the Chair.

Colonel ORLANDO FELIX examined.

Col. O Felix.

25th Aug 1858.

1858. (*Chairman.*) You are a colonel in Her Majesty's service?—I am.

1859. And you were Deputy Quartermaster-General to Her Majesty's forces at Madras?—Yes.

1860. What is the length of your service?—I was in India about 18 years; 4 years in Bombay, as private secretary to two Governors, Sir Robert Grant and Mr. Tavish; 12 years in Madras, as Deputy Quartermaster-General H.M. Forces, during two of which I was also private secretary to the Marquis of Tweeddale, who was both Governor and Commander-in-Chief; I was one year in Bengal, and for a short time military secretary to Lord Dalhousie, with whom I left India.

1861. Of course you have seen European and native troops?—I have.

1862. Have you formed any opinion, therefore, as to the proportion which the Europeans should bear to the native force, not only in Bengal presidency, but in any other presidency?—Yes; I think that in Bengal the proportion should be two natives to one European; in Bombay, three to one; and in Madras, four to one, making the average three to one throughout the whole of India.

1863. Do you include the police force in that proportion?—No; I speak only of regulars.

1864. Have you considered at all what amount of force will be required in these presidencies after the country is settled ?—Yes.

The Witness delivered in the following Papers :

EUROPEAN FORCE.

	Regiments of Cavalry.	Battalions, Infantry.	Batteries, Artillery
For Bengal - -	–	6	8
The Upper Provinces -	3	15	19
Central India - -	1	4	5
Punjaub and Scinde	2	12	15
Bombay Presidency -	2	9	12
Madras Presidency - -	2	10	17
Burmah - -	–	4	4
	10	60	80

10 regiments of cavalry, each 500 strong -	5,000
60 battalions infantry, each 800 strong - -	48,000
80 batteries artillery - - - -	7,000
*European force - - - - - -	60,000
Average proportion of natives to Europeans, 3 to 1	
Native force - - - -	180,000
Indian army - - -	240,000

80 batteries = 480 guns, or 2 to 1,000 men.

Rough Estimate of the EUROPEAN FORCE that would be required for India after the Country is settled, with the present means of communication.

	Cavalry Regiments.	Infantry Regiments.	Artillery Batteries.

Col. O. Felix.

25th Aug 1858

1865. (*Duke of Cambridge.*) I presume you have made that calculation upon certain data ?—Yes, I went over the different stations requiring European troops.

1866. Knowing the presidencies well, and the requirements, you went over them, and in your mind sketched out what you thought necessary ?—Yes ; railways will make a great change in the number of troops required ; when you have those laid down you will want much fewer troops, and there is nothing more important than establishing rapid means of communication by railway.

1867. (*Chairman.*) Your general opinion is that it would require a European force of 60,000 men, and a native force of about 180,000 ?—Yes.

1868. Exclusive of the police ?—Quite so.

1869. (*Duke of Cambridge.*) Why have you put that lower figure to what the establishment is now ?—Because the barracks are bad in India. Soldiers ought not to be crowded in barracks in that country, and the force can readily be increased for service by adding 200 men to each regiment.

1870. This is for a peace establishment ?—Yes.

1871. You think it is more important to have more corps than to have the corps stronger ?—Yes.

1872. You think that the moral effect produced by more regiments would weigh in the mind ?—Yes.

1873. (*Viscount Melville.*) Do not you think that that increases the expense without adding to the strength, and you must know that although the establishment of a regiment is 1,000, yet there is not one single regiment in India which is not 200 under its establishment ?—The 43rd, when I left India, was above its establishment, but regiments are generally below it.

1874. (*Marquis of Tweeddale.*) When the regiments are so strong as 1,000 men, are they not very apt to send the wings away ?—Yes.

1875. And has not that one of the worst effects upon the discipline of the army ?—Yes, it is very injurious to discipline.

1876. (*Viscount Melville.*) If you reduce the establishment to, say, cavalry 500, and infantry 800, the practical effect will be that the cavalry will not muster 400, and the infantry very little above 600 fighting men ?—You may increase the establishment, but I do not think you would do so with advantage.

1877. Do you know that taking the establishment at any strength you like, before you can muster your men on parade, you must allow for casualties to at least the extent of 200, if not 250, even supposing your regiment is complete ?—The average of sick in the 15th Hussars for the 12 years I knew the regiment was 10½ per cent.

1878. (*Chairman.*) Do you consider that the police might be employed more generally than they have been ?—Yes, I do, very much.

1879. Are you in favour of the employment of a large police force ?—Yes.

1880. What duties would you propose that they should do ?—The escort duties principally.

1881. How would you arm those police ?—With common carbines ; I would not put any rifle into a native's hand.

1882. (*Duke of Cambridge.*) Your chief experience has been in Madras ?—Yes.

1883. What number of regular troops do you think were employed upon police duties in Madras, upon the average ?—I am not prepared to say ; I had nothing to do with the police duties.

1884. I mean those duties which you now propose to hand over to the police ?—The police duties were in treasure escorts ; but I am not at all prepared to say how many men were engaged in them.

1885. What number of men do you suppose would be employed on such duties on the average, at ordinary times ?—I have not a notion.

1886. (*Major-General Hancock.*) Supposing all those duties to be transferred to the police, what duties would remain to be done by the regular na-

---

* By adding 200 to the cavalry and infantry regiments the force might at any time be increased to 74,000."

Col. O. Felix.

25th Aug. 1858.

tive army?—The regular native army would have their military duties.

1887. Being available for service if required?—Yes.

1888. (*Chairman.*) How would you arm the native troops?—With muskets, as they have been armed.

1889. (*Duke of Cambridge.*) The old percussion musket?—Certainly.

1890. (*Chairman.*) Would you give them the same arms as the Europeans?—No; I would not give them a rifle.

1891. (*Duke of Cambridge.*) Why would you not give them a rifle?—Because I think that the superiority of the European should be kept up in every possible way.

1892. Do you not think that that is showing a great want of trust in troops, and is it not a great risk to run to raise troops and then to show at once that you distrust them?—We have not had any great proof that we can trust the native troops entirely; I should think not.

1893. (*Major-General Hancock.*) Would you adopt that rule throughout the three presidencies?—Yes; I think that it would be a good rule; I do not think that the natives would mind it; they would, indeed, I believe, prefer the musket to the rifle, but I should not humour them if it were otherwise; there was no bad feeling between regiments when we had only two rifle regiments in the Queen's army.

1894. (*Lord Stanley.*) Does not it strike you as an arrangement very uneconomical, to go to the expense of raising a native army, and then not to arm that army in such a manner as to make it as efficient as it might be?—But I think that you would arm it sufficiently for all purposes that you want in India.

1895. (*Major-General Hancock.*) Including foreign service?—Including the foreign service which you have there.

1896. To send troops to Persia, for instance, or to Burmah?—Even in Persia I think it would be quite sufficient.

1897. (*Colonel Burlton.*) You conceive that no force against which they could be employed would have so good an arm as the common percussion musket?—Just so.

1898. (*Lord Stanley.*) That is to say you would intentionally deprive your native army of a part of its efficiency in order to maintain the European superiority?—I would.

1899. (*Major-General Hancock.*) Did you hold those opinions previously to the outbreak of the late mutiny?—I did not.

1990. You would have trusted native troops with the best description of arms previously?—Certainly; I never had a suspicion of them, but since we have had this great trial I think we should be very imprudent if we ventured too much again.

1901. Do you think that a mutiny of the Bengal army would not be obviated in future by a different organization and a different system of discipline?—I do not think that we should trust to anything of the sort. We have had such a lesson that we should take every possible means to guard ourselves in future.

1902. (*Lord Stanley.*) Does not your argument rather lead you to the conclusion that there ought to be no such thing as a native army, than that it ought not to be properly armed?—If I could do without it I would not have a native army, but you cannot possibly do without it in India; you must have a native army, and a large native army.

1903. (*Major-General Hancock.*) But if the native army is not to be trusted to keep the peace within Hindostan, do you think that it would be expedient for the government to keep up a large native force to do nothing but remain in their cantonments?—But I think that the peace is kept as well with muskets as with rifles.

1904. Are not the native regiments of the line very much more expensive than the police corps?—Very much.

1905. What would be the advantage to the government in maintaining them at all if you do not make them efficient in every respect?—I would make them as efficient as necessary for meeting the enemies we have to oppose in India. We have an immense extent of territory, and must have a large native army; but as we are to maintain a European force partly for the purpose of controlling that army, it will be but prudent to give this force every aid that can secure its superiority.

1906. (*Colonel Burlton.*) You are of opinion, I suppose, that in India hereafter we must depend chiefly upon the predominating force, and more powerful element of Europeans?—I think so.

1907. Physical force, in fact?—Physical force combined with moral force. The moral effect is always more felt where you have a good physical force to back it.

1908. (*Duke of Cambridge.*) You would let the moral force go as far as it could, and have it backed by a good physical element?—Yes.

1909. (*Chairman.*) With your distrust of native troops, would you employ any of them as artillerymen?—No, not a man.

1910. (*Major-General Hancock.*) Would not that involve the employment of Europeans on service in unhealthy districts, where the sacrifice of life would be very great indeed occasionally?—I would not let a gun go into the hands of a native.

1911. But would not that frequently involve a very great sacrifice of European life?—No, I do not see that it would; European officers have always gone where guns have gone, I think.

1912. Not always.—There is no place which has guns where European officers would not have gone.

1913. Are you acquainted with the climate of Upper Scinde?—Yes.

1914. Would you locate European artillery or European troops of any sort there permanently; I mean from Sukkur along the frontier?—You are a better judge than I am of that. I have not been so high.

1915. Are there not districts in the Madras Presidency, where the employment of Europeans would be attended with great sacrifice of life?—Yes, but I would not send guns there.

1916. Do you think that a few companies of native artillerymen spread over the presidency would involve any danger to the state?—I have given my answer that I would not have any native artillerymen.

1917. (*Chairman.*) Do you extend that to all the presidencies?—I would not touch the other presidencies.

1918. (*Duke of Cambridge.*) Would you keep up what they have?—No.

1919. (*Colonel Burlton.*) You would let them die off?—I would let them die off.

1920. (*Viscount Melville.*) Do not you think that that would be showing a distrust towards the natives which would damage the government and render the government of the country much more difficult?—No; we have trusted them too much and we have made them rebels. I think that in any future experiment we must not trust them too implicitly.

1921. Do you think it possible to govern a country without showing confidence in the inhabitants of that country?—I would show confidence in the way that I have said. I would arm them well with muskets.

1922. (*Major-General Hancock.*) You mean that you would make a show of trust, but maintain an utter distrust?—I would not arm them in the way that the Europeans are armed.

1923. (*Duke of Cambridge.*) You mean to say that you wish the European element to be maintained as supreme in all respects?—Yes.

1924. And you think that in one respect it ought to be shown, by the natives having an inferior arm and no artillery?—That is what I mean.

1925. (*Viscount Melville.*) Considering that the subsidized states have always had a proportion of artillery in the different contingents, do you think that depriving them of their artillery will at all increase the confidence which they will feel towards your government?—I *think that it* would give you a greater security in India. In Madras the Moplahs were the most troublesome people possible; you have taken the arms from them and they have been quiet.

1926. Those were a fanatical race like the Mormons?—They are a fierce and fanatical, but a very industrious race, of Arab descent, numbering about 80,000, and settled as traders on the western coast. Occasionally a certain number will band together and devote themselves to death under the belief that if they die fighting against "unbelievers," they secure instant admission into paradise. They begin by murdering some Hindoo enemy, and then take up a strong position and wait to be attacked.

1927. (*Marquis of Tweeddale.*) Have they not defied both the British and the Company's troops?—The native troops will not face them. Europeans are called out, and the fighting is desperate, for they refuse quarter. Their memory is highly honoured. I have seen the translation of a poem, celebrating one of these outbreaks.

1928. (*Duke of Cambridge.*)—Would you go to the extent of actually depriving the native contingents which have not revolted of the artillery which they possess?—No, but I would let them die out.

1929. (*Viscount Melville.*) Then you must make fresh treaties?—That is a diplomatic affair.

1930. (*Duke of Cambridge.*) That is a political question?—That is a political question, I have nothing to do with that.

1931. Then I suppose, as a matter of course, if those are your opinions, you would not employ scientifically in the arsenals any man who was not a European?—Certainly not.

1932. You would only make the natives do the labour?—Certainly.

1933. (*Major-General Hancock.*) Would you have no native sappers and miners?—I would have them in Bombay and Madras, but I would not have them in Bengal again; Bengal is the only presidency to which I look now as the one upon which an experiment is to be tried. Bombay and Madras have been faithful and I would not touch them.

1934. But I understand you to say that, although you would not disband the native artillery already employed in those presidencies, you would let them die off?—Yes.

1935. (*Duke of Cambridge.*) Would you let the sappers and miners die off also in Madras and Bombay?—No, I would keep them up there; they are very good men indeed, in Madras, and so long as they were faithful, I would not touch them. In Bengal I certainly would not have them.

1936. Would you teach them scientifically?—No.

1937. (*Major-General Hancock.*) What are the reasons for which you think that they may be safely maintained in Madras, and that a similar class of men may not be maintained in Bengal?—In Madras they have been faithful, and are not subject to the influence that might affect them in Bengal.

1938. Have they not hitherto been a different class of men in Bengal; have they not been enlisted all from one district, and belonging generally to one caste, namely, the higher caste of Hindoos?—Yes, certainly.

1939. (*Marquis of Tweeddale.*) What is the confidence which the Madras army have in the sappers and miners; do not the Madras army look upon it, that whenever there is any danger of a place being stormed, both Europeans and natives can depend upon the sappers placing the ladders?—Yes, they are most excellent troops.

1940. (*Duke of Cambridge.*) Could not you make the Bengal sappers equally good?—Yes, if you took these men, and had the same system.

1941. Could not you introduce the same system into Bengal which you have for Madras?—Bengal officers would better answer that question.

Col. O. Felix

25th Aug 1858

1942. (*Colonel Burlton.*) The sappers and miners of the Madras presidency are all of the very lowest caste?—Yes, they are very low caste men.

1943. (*Chairman.*) Do you consider that the native force should be on the regular or the irregular system, or both combined?—I think both combined; infantry regular and cavalry irregular.

1944. (*Duke of Cambridge.*) Do you think that the whole of the infantry should be regular?—Yes.

1945. (*Chairman.*) And the whole of the cavalry irregular?—Yes, but I would give them six officers.

1946. (*Duke of Cambridge.*) That is to say, two orderly officers in addition to what they have?—Yes, six officers altogether. So that if a squadron were detached, it would be commanded by a European officer.

1947. (*Major-General Hancock.*) How many European officers would you have with the regular native infantry regiments?—I should like to see them complete.

1948. Do you mean to the full fixed establishment?—Yes.

1949. Always serving with the regiment?—Yes.

1950. Why should there be a much larger number with the native infantry regular corps than with the irregular cavalry?—Because you cannot select.

1951. Why should upwards of 20 European officers be necessary with a native infantry regiment of the line, and three or four suffice with an irregular regiment of nearly equal strength?—Because the irregular officers are selected.

1952. Do you think that the regular infantry regiments of the line have done better service?—I think so.

1953. (*Chairman.*) Do you consider that any inconvenience has arisen from the want of European officers with the native regiments?—Yes, I should think so.

1954. (*Duke of Cambridge.*) You think the establishment sufficient, provided it is kept up?—Yes.

1955. But you would not allow so many officers to be on the staff?—I would not.

1956. Why should not the infantry do as well with six officers, or perhaps even more, say eight officers, on the irregular principle, if you think that the cavalry would do as well with six officers?—If the officers could be selected, it might do as well, but not so taking the general run of the service; and as the regular cavalry in Bengal has mutinied, I would try a new experiment.

1957. Are you not aware that the irregular cavalry have also gone over?—Yes.

1958. Then why should you give the preference to the irregular system over the regular system?—The expense is so much less. The irregular regiments are very efficient, and if a man deserts he does not carry off the horse with which the government provides him.

1959. I am talking militarily. Of course expense is a very important thing for the Commission to consider, but militarily do you see any reason for the preference?—I think that supposing you could have them really good cavalry corps, the regular system might be better.

1960. But you think that the irregular are better cavalry corps?—Yes, more generally serviceable.

1961. Have you much irregular cavalry at Madras?—Yes; there are a great many at Hyderabad; the Nizam's are irregular cavalry, and very good cavalry they are.

1962. Are they on the same footing as the Bengal cavalry?—Yes; exactly as the Scinde horse.

1963. (*Marquis of Tweeddale.*) Which are you speaking of?—The Nizam's.

1964. (*Major-General Hancock.*) There is no irregular cavalry in the Madras army?—No; there are the Mysore horse, but they are mere police.

1965. (*Chairman.*) Has there been generally the same proportion of European officers to the native regiments in the different presidencies, or has any difference existed in that respect?—There have been

Col. O Felix.

25th Aug 1858

fewer European officers in Bengal, than in the other presidencies.

1966. (*Major-General Hancock.*) You do not mean that there has been any difference in the establishment?—No; but more staff appointments were given away, and more of the Bengal officers were taken from that army than from the other armies.

1967. (*Duke of Cambridge.*) Do you partially attribute the outbreak which has taken place to the want of European officers in the Bengal army?—I attribute it very much indeed to the want of communication between the officers and the men, and I do not think you will ever break through that until you encourage the men to learn English. I think that when you make them speak your own language you will then gain their sympathy and affection, and I am glad to have an opportunity of saying that I consider this to be most important.

1968. (*Lord Stanley.*) Upon the whole, is it not easier for a small number of educated officers to learn the language of the country than for a large number of common soldiers, taken from the lowest class, to learn a foreign language?—I do not speak of the soldiers, I speak of the native officers; and I think that a knowledge of English should be a qualification for promotion; there would then be no complaint of want of communication between the European and native officer, for although an English officer dislikes to converse in a language that he knows imperfectly, all natives who speak English are eager to talk it; they have no shyness. At Madras there is a great deal of English spoken—most dragoon horse-boys know English; all the native writers and servants speak it, and these are the people who really are attached to you.

1969. Would not one effect of English being made an indispensable qualification for a native officer be, that European officers would give themselves less trouble than they do now to learn the native languages?—No, I do not think they would; besides which I think, as I have said before, that it is of the greatest importance for the natives to learn English. As long as I have been in India, I have thought that until you get them to speak your language you will never engage their sympathies.

1970. Do you think that you will turn them into Englishmen by making them speak English?—I only know that in Madras the natives about the offices, and where I have been, are very faithful and attached.

1971. (*Marquis of Tweeddale.*) In what language do the civil and military European officers speak to their native officers in the Madras presidency?—In English always.

1972. In what language do they speak to them in Bengal?—In Hindostanee.

1973. (*Colonel Burlton.*) Do you not think that any attempt to force the native soldiers to learn English would alarm them much more than anything which has yet been done in regard to their religion?—I would not force them.

1974. But you would not give them promotion without it?—I would encourage them in every possible way to learn English.

1975. You would not promote a man to be an officer unless he could speak English?—I would give a preference to those who did speak it.

1976. Do you not think that that would excite the greatest possible alarm?—I do not think so.

1977. (*Sir Harry G. W. Smith.*) Are you not aware that in the presidency of Madras all the civilians and men of rank look down upon those natives who speak English, and never take a servant into their service who can speak English?—In Bengal it may be so, but certainly not in Madras; there is no such thought.

1978. (*Lord Stanley.*) Do you not conceive that requiring this qualification of speaking English for a native officer would exclude from promotion many of your most deserving soldiers?—I think most of them would learn English. I think they would be too happy to do so.

1979. (*Duke of Cambridge.*) If they would be too happy to do so, why should they not have done so before?—They had no encouragement; we learn Hindostanee; there is a law about the officers learning Hindostanee, and we go to them instead of making them come to us. If the French had had India as long as we have had it, the whole of the officials would have spoken French.

1980. (*Lord Stanley.*) Excluding private soldiers, I think the Europeon population of India is something under 10,000?—I dare say it may be; I never had the means of ascertaining.

1981. And the native population of India is loosely reckoned at between 100,000,000 and 150,000,000?—Yes.

1982. To which party is it easier then to learn the language of the other?—I only talk of the officers, as I think that it would be the way of bringing about that communication between the European and the native officers which is wanted.

1983. (*Colonel Burlton.*) Are you aware of the general average age at which a native officer arrives before he becomes an officer?—About 50.

1984. Do you think that he could begin learning then?—But you are trying a new experiment in Bengal; you are raising new men.

1985. Then you would only begin with the newly raised recruits?—Just so.

1986. How long would it be before that system came into operation?—I could not say; large sums of money are expended by Government in educating the natives in and through their own languages, and my wish would be to see an effort made to spread the knowledge of English.

1987. (*Chairman.*) Your opinion is that it would be a great advantage if the native officer was encouraged to learn English?—Yes.

1988. (*Marquis of Tweeddale.*) Are you aware what language the new accounts of the presidency are kept in?—I think Mahratta.

1989. They are then changed into what?—Into English.

1990. And at the presidency they are all kept in English?—Yes.

1991. And all the copiers of letters are obliged to write them in English?—Yes.

1992. (*Sir Harry G. W. Smith.*) Are you aware that in all corps of irregular cavalry the officers give the word of command in English?—Yes.

1993. Do you attach any benefit to that at all?—Not the least.

1994. None of the native irregular cavalry thereby learn English, do they?—No.

1995. (*Chairman.*) Do you consider that the native army should be composed of different nationalities or castes, and if so, in what proportion?—I would mix them up as much as possible. I would receive a man who would take a pick-axe and would work, and would go to sea, without inquiring what he was. I would not inquire as to his caste, so long as he would do the work which the Europeans would do.

1996. You would not recognize caste?—I would not. When a man comes into the army he must take all its duties, the pick-axe duty and the going to sea, like Europeans.

1997. What alteration should you recommend in the terms of enlistment?—I would enlist the men to go wherever ordered.

1998. (*Duke of Cambridge.*) For general service?—For general service.

1999. (*Major-General Hancock.*) For limited or unlimited service?—For limited service, I should think; I would not give a native an increase of pay, but I would give him an increase of pension. I do not think that increase of pay would be so much valued by a native soldier as the certainty of having a good provision for his old age; while the hold over him which the pension gives would be an additional security for his loyalty.

Col. O. Felix

25th Aug 1858

2000. (*Viscount Melville.*) Do you not think that the having no present advantages is a great drawback, and prevents men enlisting? Is not the looking forward to 21 years before a man is to get any advantages a prospect which is not encouraging, and which is detrimental to recruiting?—In the Madras army a man's regiment is his home, he has his wife and family and all his people about him, and you get as many men as you want.

2001. (*Duke of Cambridge.*) By saying that, I presume you mean that in Bengal that is not the case? —In Bengal that is not the case.

2002. What then has been the great difference between the system in the Madras native army and in the Bengal?—That is the difference, namely, that in Bengal the men's families are left in their villages. The Bengal sepoy will not have his wife with him.

2003. Do you think then that it is an advantage for them to have their families?—I think it is a great security.

2004. And you would like to see it extended?—Yes, because they are hostages; if a sepoy goes on service you have his wife and family under your care.

2005. Does not that make the movement of troops very difficult?—Yes, very clumsy; it is very unmilitary, but it has the advantage I have mentioned.

2006. Still you think that that disadvantage would be fully counterbalanced by the advantage which you would derive in having a greater hold over the men? —I do.

2007. (*Chairman.*) Would not that raise an objection to enlistment for general service?—No, for the Mádras troops always go wherever they are ordered; they never doubt about where they are to go.

2008. (*Marquis of Tweeddale.*) Have you ever known an instance of a Madras soldier refusing to go on any service upon which the government wished him to go, if he had the allowances which he had been promised given to him, so as to enable him to make out the family certificate before going on board ship, or before leaving his family behind?—Never.

2009. (*Chairman.*) I understand that for the future you would do away with all those extra allowances? —No, I would not do away with the rations when a man goes abroad, because he supplies his family with them; those are the means which he has of supporting them when he is absent, but I would do away with any increase of pay, that is to say, good-conduct pay, or anything of that sort, and I would add it to his pension.

2010. (*Duke of Cambridge.*) There is now good-conduct pay the same as in the European army?—Yes; and length of service pay.

2011. And that you would abolish?—Yes.

2012. (*Viscount Melville.*) For what reason would you abolish the good-conduct pay?—I think that a pension is a much greater inducement to a man to behave well throughout his career.

2013. (*Major-General Hancock.*) Are you aware that no native soldier has any claim whatever to a pension until he is reported by a medical committee totally unfit for active service?—Yes.

2014. (*Duke of Cambridge.*) Would you allow that system to continue?—No; I would give him a pension after 21 years.

2015. (*Chairman.*) Has there been any difficulty in enlisting for the Madras army?—None whatever.

2016. You said that a great portion of the sappers and miners in the Madras army were low-caste men, does that extend to the others?—Yes; they are almost all low caste men in the Madras army.

2017. (*Viscount Melville.*) Where is the Madras army chiefly recruited?—Wherever you can pick up men. In the northern districts principally.

2018. (*Marquis of Tweeddale.*) And the southern? And the southern too.

2019. (*Duke of Cambridge.*) Are you aware that there are men in the Madras army who have relations, brothers, in the Bengal army?—Very few, I should think, in the Madras army.

2020. Still the same class of men, if there were such men (and we have had it in evidence that there are) in both armies, would do the duties in Madras which they refuse to do in Bengal?—In Madras nobody doubts about doing his duty.

2021. There is no doubt about their going to sea? —No; there never was an objection to going to sea.

2022. (*Major-General Hancock.*) You said, I think, that you would advise enlisting men for limited service. For what period would you have them enlisted? —I think for 21 years.

2023. (*Duke of Cambridge.*) With a certain pension at the expiration of that time?—Yes.

2024. Should such a system be adopted how would you get native officers, because, as I understand it, a man is not promoted to be a non-commissioned officer till he has served 20 years?—I should alter that system. I would not go by seniority; I would select the native officers.

2025. You do not think that it would render the promotion to the upper ranks more difficult if you were to have the men enlisted for only 21 years?—If you chose to re-enlist them, and they chose to re-enlist, you might do it.

2026. (*Chairman.*) You say that the Madras army has never refused to go anywhere. Is there any difference in the scale of pay between a Madras sepoy and a Bengal sepoy serving at Aracan?—I do not know.

2027. Would not the Madras sepoy have higher pay because he went by sea?—He would be entitled to rations; and the Bengal sepoy probably would not, because he does not go by sea.

2028. Therefore there would be a difference between the two?—Yes.

2029. (*Duke of Cambridge.*) In favour of the Madras man?—Yes.

2030. Otherwise the rate of pay in Bengal and Madras, with the exception of going to sea, is pretty much alike, is it?—Yes; seven rupees a month.

2031. (*Chairman.*) Do you consider that there would be any advantage in dividing the Bengal army into two or more armies?—I should think so. Bengal is now so enormously large, that I think it would be an advantage.

2032. (*Duke of Cambridge.*) How would you divide it?—I would join Scinde to the Punjaub, taking the line of the Sutlej and Indus.

2033. (*Major-General Hancock.*) Do you mean that you would divide the territory into two, and make a fourth presidency?—Yes.

2034. Do you think that it would be an advantage to increase the armies of the minor presidencies, so as to make the four armies nearly equal?—I do not think you would want to increase them much.

2035. (*Duke of Cambridge.*) Would you give the Madras army any more territory to occupy?—Yes; up to Saugur, and the Bombay army up to Mhow.

2036. (*Chairman.*) Do you consider that there is an advantage in maintaining separate armies?—I think the greatest possible advantage.

2037. (*Marquis of Tweeddale.*) In looking at the map, does not it appear to you that placing the Madras army towards Saugur will be the most effectual means of supporting the Bengal army in the event of its being required?—Yes; the Madras force would be the support in the Saugur and Nerbuddah, and the bombay force at Mhow and Neemuch.

2038. (*Major-General Hancock.*) The officers of the Bengal army have had some great advantages, have they not, in respect of emoluments for appointments over the officers of the other presidencies?—Yes; but efforts were made of late years to equalize the advantages. Lord Dalhousie made no distinction between the different armies; it has been my duty to submit to him the names both of Bombay and Madras officers for appointments in the irregular corps of upper

Col O Felix.

25th Aug 1858.

India; though from better acquaintance with the language and the country, and from claims of service, the proportion of Bengal officers employed was much greater.

2039. Do you not think that the armies of the minor presidencies have been at a disadvantage in consequence of the Bengal army having been so very much larger ?—I think so. It was the most important army.

2040. (*Chairman.*) Although you would have separate armies, you would place them all exactly on the same footing ?—Yes ; as regards pay.

2041. (*Major-General Hancock.*) Do you not think it desirable in all respects to place the armies of the three or four presidencies upon exactly the same terms ?—Yes ; as far as possible.

2042. (*Duke of Cambridge.*) Still keeping up the presidential armies ?—Yes.

2043. (*Marquis of Tweeddale.*) How would you do that as regards the appointments ?—I would give the same pay for the same appointments.

2044. (*Major-General Hancock.*) If you equalized the armies I suppose there would be no difficulty in equalizing the emoluments of the appointments ?—I think there would be no difficulty, if the armies can be equalized.

2045. You are aware that the principle upon which larger emoluments are annexed to staff and other appointments in the Bengal army is that of a greater responsibility attaching to them ?—I am.

2046. Are you aware that the Government of India has constantly carried out the principle of equalization when it involved a reduction of staff allowances under the Madras and Bombay presidencies, and has refused to admit the principle when it involved an increase ?—I have heard it so stated.

2047. (*Duke of Cambridge.*) There is no reason for it ?—Not the slightest, except it be on the principle of larger responsibility.

2048. (*Chairman.*) Do you consider that any change is required in the system of promotion as regards the native commissioned and non-commissioned officers ?—I would promote them entirely by selection. Of course, if the senior officer was the best I would promote him, but I would not bind myself to do so.

2049. (*Marquis of Tweeddale.*) What has been the custom in the Madras army ?—Selection at first ; a man is made a naik, and after that if he is fit to be promoted he is promoted ; but if there is anything against him, another is selected.

2050. Would you give the promotion of the native officers to the officer commanding the regiment, or allow him to have a direct influence in their appointment, or would you leave it to the Commander-in-chief ?—I would let the commanding officer recommend.

2051. (*Major-General Hancock.*) Are you not aware that that is the existing system ?—Yes.

2052. Does not the commanding officer of the regiment in every case nominate from the non-commissioned to the commissioned ranks, and send up the name to the Commander-in-chief ?—Yes.

2053. (*Chairman.*) Are all the native officers of the Madras army selected from the non-commissioned officers ?—Yes.

2054. (*Duke of Cambridge.*) Do you think that that is a good system ?—Yes.

2055. You do not think that it could be improved? —No.

2056. (*Chairman.*) Do you consider that the commanding officers should have more power than they now have to reward and punish ?—I think they should ; promotion is the great reward which they ought to have the power of bestowing ; their recommendation should always be attended to.

2057. (*Duke of Cambridge.*) Is that the case in the Madras presidency ; have you reason to suppose that their recommendations are always attended to ? —I have ; but you will have better information upon that point.

2058. (*Chairman.*) What is the power which the commanding officers have with regard to punishments in the Madras army, as respects the native troops ?—They have courts-martial.

2059. (*Major-General Hancock.*) They have also the power of awarding summary punishment for minor offences, have they not ?—Yes ; drill, and punishments of that kind.

2060. There is the same power for all three presidencies ?—Yes.

2061. (*Marquis of Tweeddale.*) What are the courts-martial composed of, European or native officers ?—Native officers.

2062. (*Major-General Hancock.*) Are you aware that in the Bengal presidency any restriction has been placed upon officers commanding regiments, with regard to the powers vested in them by the native articles of war, to carry out sentences of corporal punishment or to inflict minor punishments for slight offences ; have they been interfered with and overruled by authority from head quarters, or from the government of India ?—I am not aware of the restriction.

2063. Do you know nothing of any circular having been issued within the last eight or ten years under the authority of the Commander-in-chief, or of the Government, prohibiting officers commanding regiments in Bengal from carrying out corporal punishment ?—No, I do not.

2064. (*Duke of Cambridge.*) Is it the system in Madras that the native soldier is permitted to present a petition to the Commander-in-chief, without its going through his commanding officer, or the officer commanding his company ?—It ought not to be done ; it is entirely against the orders of the army, but it is done.

2065. The orders are not enforced ?—I fear not always.

2066. Do you not think that a very bad system ? —Of course it is.

2067. Do you not think that those orders ought to be scrupulously attended to ?—Certainly.

2068. Is it your opinion, as a military man, that that practice would shake discipline almost more than anything ?—Certainly.

2069. And there is no particular reason why it should be allowed for the natives if it is not allowed, as we know it is not, for the Europeans ?—There has been a great laxity in that respect ; memorials have been sent home to the Court. I have known a commanding officer write a memorial home to the Court against the Commander-in-chief.

2070. Surely that would strike at the root of all discipline of any army, would it not ?—Yes, but the Court of Directors have rather encouraged it ; at least they have always allowed it, and I have known that case of a commanding officer writing a memorial against his Commander-in-chief to the Court of Directors.

2071. (*Colonel Burlton.*) Then he must send it through the regular channel ?—Yes.

2072. (*Major-General Hancock.*) Do you mean a memorial against the Commander-in-chief, or against the decision passed by the Commander-in chief ?—Against a decision passed by the Commander-in-chief. This commanding officer preferred charges against one of his officers. The Commander-in-chief went into the question, found that a court-martial was not required, and settled the case, but the commanding officer refused to submit to the decision of his Commander-in-chief, and forwarded a memorial to the Court against it.

2073. (*Colonel Burlton.*) But he did it through the regular channel ?—Yes.

2074. Would you deprive officers of the power of making an appeal against what they thought an unfair decision ?—It is unheard-of in the Queen's army for an officer to dispute the authority of the Commander-in-chief, but it is not so in the Indian army. The Commander-in chief decided that question, *Col. O Felix.*

25th Aug 1858

and I think the memorial was the most unmilitary proceeding I ever heard of.

2075. (*Lord Stanley.*) Do you not conceive that in any case of such an appeal the greatest weight would be given to the opinion of the Commander-in-chief, and that it would only be in the event of that opinion being obviously erroneous that a reversal or modification of it would be allowed ?—But in this very case there was no punishment to the Officer ; the answer which came from the Court was to say that he was wrong in what he did, and that was all. It was a very bad example, and most injurious to the discipline of the army.

2076. (*Duke of Cambridge.*) You see no objection to the appeal, provided that if it is a frivolous one it is dealt with severity ?—If such an appeal as I have mentioned be made and prove frivolous, it should certainly be dealt with very severely.

2077. But in the case to which you allude there was no severity at all ?—Not the slightest severity.

2078. (*Chairman.*) Do you consider that there should be any admixture of European and native forces, either regimentally or by brigade?—By brigade generally, but I have thought that it would not be a bad plan to attach four companies of natives to every European regiment in Bengal, as an experiment, with the view of bringing them together and giving them the feeling of comrades. Whenever natives and Europeans do get together they become good friends.

2079. (*Viscount Melville.*) It was proposed yesterday to attach a native squadron to each regiment of cavalry, you would put the native companies in the same way to European regiments ?—Yes, I should be disposed to do so as an experiment.

2080. (*Chairman.*) Would you make any distinction in the duties done by the regiment of which those natives formed a part ?—The natives would take all the day duties. In cantonments and in camps there are a great many day duties and police duties which the Europeans cannot take.

2081. In other points you would not have the natives inferior to the troops who were serving ?—Not in the least ; my wish would be to bring them together, to make them friendly, that is the object which I should have. I think that if you did so you would find that these natives would pick up English.

2082. As those men would form part of the same regiment if you armed them with an inferior weapon to that which the rest of the regiment had, it would require two sets of ammunition, and the very greatest disadvantage must follow ; what would you do with regard to that ?—I would still give them the plain musket, I hold very much to that.

2083. (*Lord Stanley.*) And yet with that inferior weapon you would call upon the native part of the same regiment to do the same duty which the European part did ?—Yes, in quarters.

2084. (*Duke of Cambridge.*) In action would you expect the four companies of natives whom you propose to attach to the Europeans to do the same duties as the Europeans ?—I do not know whether the plan which I propose would be good or not, but in action each weapon would have its fitting use, as was the case in the Queen's army when the rifles were brigaded with other regiments.

2085. You have a doubt about it ?—I only suggested whether it would be worth trying it as an experiment.

2086. But you think that there would be an objection ?—I think that there might be an objection in regard to the two sorts of ammunition.

2087. (*Sir Harry G. W. Smith.*) Have you not heard that between the British soldiers and the native army of Bengal there is the greatest comradeship ?—I have heard that the Europeans and natives that served at Jullalabad were the greatest friends possible, and my suggestion was made with a view of fostering this feeling.

2088. (*Duke of Cambridge.*) Would not the same result be obtained, with perhaps less objection, if it were done, as it has hitherto been done, by brigades ?—It might, but the men would not be brought so much together as if they served under the same commanding officer.

2089. Do you not think that if a real brigade system were more carried out in India as elsewhere, it would be an advantage to the service in general, and in its results might produce the effect of bringing certain regiments permanently on duty together ?—Yes, it might do so.

2090. (*Viscount Melville.*) Under whose command would you place these four companies of natives ?—Under the command of the officer commanding the European regiment.

2091. Then how is the same commanding officer to carry on discipline, seeing that the articles of war for Europeans are totally different from those for natives ?—I do not see any difficulty in it.

2092. You are aware that the articles of war for the Queen's troops and those for the natives are totally different ?—Yes.

2093. Then how is the commanding officer of a Queen's regiment knowing nothing of the articles of war for the native army to carry on discipline ?—But he would know them, I conclude he ought to know them.

The Witness withdrew.

Major-Gen. Sir S W. Steel, K.C.B.

Major-General Sir Scudamore W. Steel, K.C.B., examined.

2094. (*Chairman.*) You are a major-general, I believe ?—I am.

2095. How long have you been in the service ?—I sailed for India on the 4th of March 1806.

2096. How many years have you been in India ?—I left in April 1856. I was there all that time, nearly 50 years.

2097. In what presidency have you served ?—Madras.

2098. In what arm of the service ?—Infantry.

2099. Of course you have had many opportunities of seeing European and native troops ?—I have been employed upon the staff for more than 40 years in all ranks and all grades.

2100. Have you formed any opinion as to the proportion of European to native troops which ought to be employed in Madras ?—I have not exactly done so, because I received from the Commissioners a memorandum entirely regarding Bengal.

2101. It would be of great advantage to us if you would give us to your opinions regarding Bengal. What proportion of European forces do you think should be employed in India ?—I have not considered that question.

2102. In your opinion what should be the proportion of Europeans to natives in Bengal ?—One to three. I think that the number of Europeans should be 40,000 to 120,000 natives.

2103. In your opinion is that the amount of force which will be required in the Bengal presidency after the country is settled ?—I should say from 160,000 to 200,000, exclusive of artillery, horse and foot.

2104. Do you consider that the native force should be on the regular or the irregular system, or both combined ?—Both combined.

2105. Do you apply that both to Bengal and to Madras ?—To all.

2106. (*Duke of Cambridge.*) Do you think that there ought to be more irregular force in Madras for instance ?—Yes, it would be useful, but they are not with the regular army ; they are always with the contingents, there are some at Hyderabad, and a few at Nagpoor.

Major-Gen. Sir S W. Steel, K C B.

25th Aug 1858.

2107. (*Chairman.*) In the proportion of one to three, which you have stated as the proportion which in your opinion ought to exist between the Europeans and the natives ; do you take into consideration the police at all ?—No.

2108. Are you in favour of the employment of a police force for doing the duty which is now done by the native regiments ?—They might do everything except that which is done by the troops as a regular army.

2109. (*Duke of Cambridge.*) You would give some of the duties now performed by the regular army to a police force ?—A great many of them.

2110. You think that that would be an advantage ?—Yes.

2111. What sort of duties would you give to the police ?—The gaol duties and the escort duties, many of them.

2112. (*Chairman.*) Having a police force to do those duties, would you reduce the proportion which you have now stated of natives to Europeans ?—No.

2113. (*Colonel Burlton.*) You would take the police into account ?—Yes, separately.

2114. (*Marquis of Tweeddale.*) Would you make the police military or civil ?—They must be under the civil government.

2115. Would you drill them as soldiers, or make them an ordinary police force. I am speaking of the rural police ?—I think they might be civil altogether.

2116. (*Duke of Cambridge.*) Do you think it better that they should be civil altogether ?—I should say so if they are confined to those duties.

2117. (*Chairman.*) Taking the proportion of three natives to one European, would you make any difference in the manner in which you would arm them ?—I would make an exception as to the Enfield rifle. I think that no native, either on the regular or irregular system, ought to be armed with or instructed in the use of the Enfield rifle, the Lancaster, or any other improved fire-arm.

2118. Do you consider that any native artillery should be allowed in the Bengal army ?—None.

2119. Do you extend that opinion to the Madras army ?—Certainly, to the whole army.

2120. (*Duke of Cambridge.*) Do you think that the same system which you propose for Bengal should be, as far as practicable, introduced into the other armies ?—Certainly.

2121. (*Chairman.*) Do you hold the same opinion with regard to native sappers and miners as you do respecting native artillery ?—Natives are most efficient sappers and miners. The corps of sappers and miners of the Madras army wherever employed have proved themselves to possess all the requisite qualities ; they are capable of great bodily exertion, are brave, zealous, and hardworking, and amenable to discipline without any scruples of caste, and under proper superintendence they are equally skilful with Europeans ; they would perform an amount of labour under which European sappers within the tropics would be forced to succumb.

2122. What is the principal caste of the sappers and miners in the Madras army ?—They are all of low caste.

2123. (*Colonel Burlton.*) They are the same as the old Madras pioneers ?—Yes, they were transferred from the old Madras pioneers.

2124. (*Marquis of Tweeddale.*) Have you not had great experience of the conduct of these men on service ?—Yes, in Burmah, in both wars, and wherever I have been.

2125. (*Major-General Hancock.*) What would you advise as to the sappers and miners in Madras and Bombay. Would you limit the employment to men of low caste ?—Yes, as sappers and miners.

2126. (*Duke of Cambridge.*) Would you have any European sappers and miners ?—Yes ; but not in the same corps, except as superintendents.

2127. Would you confine the scientific duties to the Europeans, or would you allow the natives to perform the scientific duties also ?—I would allow them to perform all they were capable of doing, but they would be the workmen principally, and the others would be the superintendents.

2128. Would you employ any natives in scientific duties in the arsenals ?—Not of the artillery.

2129. For instance, in the making of copper caps ?—No, certainly not.

2130. (*Colonel Burlton.*) You would have no native artillery whatever ?—No ; I would not mind their being drivers.

2131. (*Sir Harry G. W. Smith.*) You would have no objection to the employment of the half coloured men, the creoles, in the arsenals in the artillery ?—Certainly not; many of them are the best artificers which we have.

2132. (*Chairman.*) Do you consider that the native army should be composed of different nationalities or castes, and if so, in what proportion ?—It would be of advantage to diversify the nationalities and castes as much as possible in each regiment, so that no one caste should predominate, and natives should be accustomed to serve as far from their own homes as the service may require.

2133. (*Duke of Cambridge.*) That means that you would have men enlisted for general service ?—Yes.

2134. (*Chairman.*) From what you have stated before you seem to prefer the low caste men ?—Yes, for sappers and miners. I do that because they have no scruples.

2135. Would you acknowledge or admit caste at all ? Would you allow caste to be an excuse for the non-performance of duty ?—If you have men of caste you must make allowance for their prejudices.

2136. Have you ever found caste to interfere with the performance of duties?—Undoubtedly, very often.

2137. (*Duke of Cambridge.*) In what way ?—Men of very high caste cannot eat their meals without undressing.

2138. (*Chairman.*) Have you found any practical inconvenience from high caste men in the performance of their duty ?—Undoubtedly, on certain occasions.

2139. (*Lord Stanley.*) Will you state some of the cases in which caste has interfered with the performance of military duty ? In what respect does it so interfere ?—When they go on guard they cannot eat until they have stripped and washed, and they cannot cook food on board ship ; they are obliged to take food not requiring to be cooked.

2140. (*Chairman.*) Have you ever found them object to going on guard or going on board ship in consequence of their caste ?—Yes ; to going on board ship constantly.

2141. (*Duke of Cambridge.*) Your experience has been chiefly in Madras ?—Yes.

2142. I thought that the Madras troops never objected to go to sea ?—They sometimes do ; they are allowed the option, but they generally volunteer to go.

2143. (*Marquis of Tweeddale.*) I dare say you recollect that during the war in which you served in Burmah in 1825 there was only one sepoy out of 25 regiments who refused to go on service ?—He did not go, and he was discharged immediately. They were allowed the option, and they were allowed to fall out if they wished it.

2144. (*Major-General Hancock.*) When the Government wish to send Madras regiments on foreign service what course are they obliged to adopt ; have they to ask them as a favour to go ?—No.

2145. Do you mean that the Government order men to go on general service who are not liable to be sent on general service, and then wait to see whether they will obey the order or not ?—No ; when they were first required to go the thing was inquired into amongst the men, and they said that they would volunteer.

2146. Then the Government must communicate with the commanding officer of the corps, and ask

Major-Gen Sir S W Steel, K.C B.

25th Aug 1858

whether his regiment will volunteer ?—Yes ; through the adjutant-general.

2147. (*Marquis of Tweeddale.*) Is it not expected that the Commander-in-chief will inspect such a regiment previously to the muskets being put in the chest and ascertain whether any man wishes to remain behind ?—That has been the practice.

2148. (*Major-General Hancock.*) Are the Madras troops enlisted only to serve within their own presidency ?—No ; they serve wherever they are ordered, excepting on board ship.

2149. (*Colonel Burlton.*) But the unhappy man who refused to go in 1825 was dismissed ?—Yes.

2150. (*Chairman.*) I think you stated that you considered that there should be as many different nationalities and castes as possible ?—Yes.

2151. Therefore you would not recommend that the nationalities should be preserved in the shape of regiments or companies, but you think that they should be distributed promiscuously throughout ?—Yes ; no class should predominate, but one should nullify the other.

2152. (*Duke of Cambridge.*) Practically in the mode of embarking regiments the Madras troops go, but they have a right to say that they will not go if they choose ?—When once they have had the option and they do not object they are then returned as deserters if they do not go.

2153. Practically it is found that they do not object ?—They do not object.

2154. (*Chairman.*) They have a right to refuse in the first instance ?—Yes; and I doubt whether a man could be punished for refusing.

2155. (*Marquis of Tweeddale.*) The Madras sepoy has invariably gone on service when he has been required by the Government ?—Yes ; and that has been so, long before my time. When I arrived in India in 1803 I found that men had volunteered as far back as 1796 to go to the eastern islands.

2156. When they went to Java, when they went to the Mauritius, when they went to Ceylon, and when they went to the different islands to which they have been sent, you never knew an instance except the one which I have mentioned of their refusing ?—No ; there was a demur once or twice.

2157. Do you believe that an army could be raised in India of men who would volunteer to go on service without being asked that question ?—I should say not ; that they would not go without being asked unless they were told so when they enlisted.

2158. (*Duke of Cambridge.*) The question asked you is whether you could raise an army in India for general service ?—Yes ; I think so.

2159. (*Major-General Hancock.*) Men who would go on foreign service wheresoever ordered?—There must be a limit certainly. I do not think that you could ask them to go to America, or to go to England.

2160. (*Chairman.*) Do you consider that there should be any alteration in the terms of enlistment ?—The code would require to be well considered. All should be enlisted for general service, and to the utmost limit to which that term has hitherto been applied in the Madras army.

2161. (*Major-General Hancock.*) What is that limit ?—That is, to go anywhere in India ; anywhere to the eastward, and to Persia.

2162. (*Chairman.*) I understood you to say that in the Madras army at the present moment they would not go without being asked ?—They will go ; but it has been the custom to ask them ; many corps have gone without any demur.

2163. You would for the future do away with even the necessity of asking the question by making it compulsory ?—I would do so ; I would not ask them the question. What was considered the limit of general service should be adopted.

2164. (*Sir Harry G. W. Smith.*) Do you include China ?—Yes, anything eastward ; I would even include Persia.

2165. (*Major-General Hancock.*) Does not going beyond the continent of India come under the head of foreign service, and entitle the men to extra rations ?—It entitles them to rations whenever they go on board ship.

2166. (*Lord Stanley.*) Do you find that there is any difference between the high caste men in Madras and those in Bengal, so far as you know them, with regard to their willingness to do things which are sometimes supposed to be contrary to their caste ?—I have seen a difference.

2167. You have observed a difference ?—Yes, although they are men of the same caste, Rajpoots and Brahmins ; we have not so many Brahmins ; we have many Rajpoots ; they do not make an objection. I have known men of the same caste in Madras take their food without being allowed to undress and bathe, but they will not do so in Bengal.

2168. (*Chairman.*) From what do you suppose that difference to arise, from the difference of discipline ?—I think it is more from habit ; they see men of the same class do it in Madras, but they do not do it in Bengal, and they are ashamed, and think that they shall be accused of breaking caste.

2169. (*Major-General Hancock.*) Do you not think that it probably arises from a greater deference being paid by the officers of the Bengal army to caste than in Madras ?—I do not think that, but that by standing out they are allowed to have their way.

2170. (*Duke of Cambridge.*) Then you think that it is a question of discipline as much as anything ?—Not exactly that, it is deference to caste, in fact.

2171. Is not deference to caste, if it is found practically to exempt a man from doing what he is ordered, a want of discipline ?—I think that it will not be done unless it is the habit ; that it will not be done by any one person.

2172. (*Colonel Burlton.*) Perhaps you mean that the sepoys of the Bengal army have been rather more indulged than in the other presidencies ?—Yes.

2173. (*Sir Harry G. W. Smith.*) You are aware, I dare say, that almost from the origin of our possession of India the Madras army were employed against Frenchmen, and that their habits became much more soldierlike than in the lower part of Bengal, from that very circumstance ?—Yes.

2174. (*Major-General Hancock.*) The same predilection for high caste men has not obtained among the officers of the Madras army as in Bengal ?—That is so.

2175. (*Marquis of Tweeddale.*) Do not they consider the Brahmins of Bengal a higher caste than the Brahmins of Madras ?—The highest caste of all are those of Seringum and Ramisseram near Ceylon.

2176. (*Chairman.*) Do you consider that by degrees any difficulty as to the performance of duty on account of caste might be broken through ?—I think it might be by degrees, and by telling the men on their enlisting, " You will have to do this."

2177. (*Duke of Cambridge.*) You think that if it is clearly put to a man before he enlists, you are then justified in making him do what you order, and not allowing him to come forward with caste as an excuse ?—Just so.

2178. But it must be clearly put to him ?—Yes, and he must understand it on enlistment.

2179. (*Colonel Burlton.*) Do you think that a law of that sort would at all militate against the recruiting of the army ?—It would at first, but not afterwards.

2180. (*Duke of Cambridge.*) You think that it might be introduced by degrees ?—Yes.

2181. (*Chairman.*) Do you think that there would be any advantage in dividing the Bengal army into two or more armies ?—There might be an advantage I think in dividing it into two ; it is so very extensive. I think that the Punjaub might have one army, and the lower part of Bengal another army.

2182. (*Marquis of Tweeddale.*) Will you explain the reason of that opinion ?—Because it is so difficult to communicate with head-quarters.

Major-Gen.
Sir S. W. Steel,
K C B.

25th Aug 1858

2183. But supposing they put the head-quarters half way, say, at Agra or one of those places, would you then allow the command to remain under the same Commander-in-chief?—It might be done in that case; but there is a vast disadvantage in the Commander-in-chief being at a distance; we found that in Burmah, where we could not get an answer from him under three months.

2184. (*Sir Harry G. W. Smith.*)—Do you think that it would be of advantage to have two Commanders-in-chief in the same presidency?—No; but then they must be divided into two separate integral armies, the same as in Madras and Bombay.

2185. Do you think that those two separate armies would work so well together by being under two heads as by being under one?—You would have one part do one duty, and the other the other.

2186. (*Major-General Hancock.*) Has any inconvenience that you are aware of been found from Madras and Bombay troops serving with Bengal troops?—None whatever.

2187. (*Chairman.*) Although you recommend separate armies, I suppose you would have them under the same system?—Yes, and under one general Commander-in-chief for India.

2188. (*Duke of Cambridge*) You think that that is of importance?—Yes. There would be four armies instead of three.

2189. (*Major-General Hancock.*) Do you not think that it might be of advantage to make the armies nearly of equal strength, instead of allowing one army to be so immensely disproportionate to the others?—I did not calculate upon altering the system of the army.

2190. Do you not think that an advantage would be gained to the State by having armies of nearly equal strength, instead of having one army of 100,000 men and another of 30,000? — In some things I think it would.

2191. Do you not think that the late combination of the Bengal army would have been prevented if, instead of its being so large an army, it had consisted of two separate armies?—Undoubtedly; it would not have been so general.

2192. They would not have fraternized so readily one with the other?—I think not; they would not have been so connected.

2193. (*Chairman.*) Do you consider the number of European officers now attached to the native regiments to be sufficient?—If they were present they would be amply sufficient.

2194. But you consider that there is some inconvenience in having them detached for civil duty?—Not when there are only a few of them so detached, but when the number is so numerous as has often been the case, it occasions inconvenience; in some instances there have only been three or four regimental officers present.

2195. Are they not all looking forward to civil employment?—Of course they are.

2196. Does not that in some way interfere with their military duties?—No; it does, perhaps, make them look forward to something of that sort, and render them somewhat discontented.

2197. (*Duke of Cambridge.*) Would you like to see a staff corps established to obviate that difficulty?—I am not sure that it would answer; I do not know how it would be arranged.

2198. On the principle of the engineer corps, in the mode in which the engineer officers are formed into a corps without men?—If that were established and it were known when officers were posted, it might answer, but then how would the selection be made from the present army for the staff? There would be a difficulty there.

2199. (*Major-General Hancock.*) It would involve an entire alteration of the system of promotion throughout the army, would it not?—Entirely, and it would have to be regulated differently.

2200. (*Marquis of Tweeddale.*) Do you think it necessary that a certain number of European officers should always be with the native regiments?—Undoubtedly.

2201. (*Duke of Cambridge.*) How many?—One to a company at least.

2202. You think that the present establishment if kept complete with the regiments would be sufficient?—Perfectly sufficient.

2203. Having regard to officers being sick, and so on, you would like to keep the present establishment complete?—Taking the whole number of captains and subalterns, and so on, it perhaps would give three to a company. I do not think so many are necessary.

2204. But one to a company ought always to be present?—I think so.

2205. That then would amount to about ten?—And there would be the staff.

2206. (*Marquis of Tweeddale.*) Do you approve of the principle on which the officers are removed from the regiments for employment in the civil service?—It is to their individual advantage, but not to the advantage of the army.

2207. You say that there ought to be a certain number with the regiment. Supposing that the remainder are put on the staff, would you keep those as officers not belonging to the regiment, but on the staff, in a separate list?—I think that the difficulty would be in arranging that, making a staff corps of them.

2208. (*Sir Harry G. W. Smith.*) May I ask you your opinion as to whom you would think the most effective staff officer; an officer selected for his abilities from a regiment, or one selected from a corps, called a staff corps, who had not been in the habit of serving with soldiers?—I should say the man selected for his abilities, certainly.

2209. (*Duke of Cambridge.*) Would you object to a system being introduced by which after a man had performed and well performed regimental duty, and was selected for staff employment, he should be put in some staff corps and struck off the roll of his regiment, his place being filled up of course by another officer?—I would not object to it. I think that he ought to have the option of giving up.

2210. Suppose that he has that option?—If it is done with his own consent, it will be for his own advantage, and he cannot object to it afterwards.

2211. Do you think that such a system would be an advantage to the service?—Yes, I do.

2212. (*Viscount Melville.*) If this officer, who is employed upon civil duty, is struck off the roll of his regiment, how do you propose that his promotion is to go on?—I spoke of a staff corps; my answer did not refer to an officer employed on civil duty, because he would then give up promotion altogether.

2213. In either case, you say that he must give up promotion?—He would give up promotion in one regiment, and get it in the other.

2214. (*Chairman.*) Do you consider that any change is required in the system of promotion, as regards native commissioned and non-commissioned officers?—The present seniority system in Bengal, which requires a roll to be kept, to show the relative position of every private native soldier, should be entirely remodelled.

2215. In what way would you remodel it?—By giving promotion in the way in which it is done in Madras, for instance.

2216. (*Duke of Cambridge.*) In what way is it done in Madras?—The very lowest of all, namely, the lance-naik, who is a lance-corporal, is selected by his company officer.

2217. That is to say, that the promotion to the lower grades of non-commissioned officers goes in companies?—The first selection is made by the company officer.

2218. (*Chairman.*) Am I to understand that the promotion of the Madras army is by selection, and not by seniority?—Certainly, the first promotion is by selection, and afterwards it is by seniority, unless there is any objection, but there is no rule. The lance-naik or the lance-corporal is made a corporal, then he is in the line of corporals, and from the corporals a man is selected not by seniority.

2219. In the Madras army the system of promotion is by selection, whereas in the Bengal army it has been entirely by seniority?—Yes.

2220. (*Viscount Melville.*) I presume that the seniority system prevails so far much the same as it does in Her Majesty's service, namely, that where a sergeant or corporal is the senior on the list, the commanding officer promotes him if there is no objection to him?—They can claim it, I believe, in Bengal.

2221. I am asking as to Madras; in the Madras army, as I understand you, the company officer names the lance-naik?—Yes.

2222. Is that lance-naik the oldest sepoy in the company?—No.

2223. He may take any that he chooses?—Yes.

2224. And after that the commanding officer names the most fit man to be sergeant?—In general they keep it to the companies, but the selection is made in the adjutant's office.

2225. (*Chairman.*) Do you consider that the commanding officers should have more power than they have to reward and punish, for instance, the power of selecting for promotion or of punishing for crime?—They have a certain power now; a man can be ordered to do extra duty, and so on; he cannot be flogged.

2226. (*Duke of Cambridge.*) Why cannot he be flogged?—Not by the commanding officer's order.

2227. (*Chairman.*) Has that power been interfered with in the Bengal army by means of circulars?—It has been interfered with in all the armies in India, I think. In Madras it is in the same way, it is by a letter from the adjutant-general.

2228. Do you think that that matter should be restored to its original state, or that it should remain as it is now?—I do not see any objection to its remaining as it is now, as far as I know in Madras.

2229. (*Duke of Cambridge.*) In what way is it in Madras?—It is very seldom interfered with, it is sometimes; I have known the adjutant-general to interfere with the decision of the commanding officer.

2230. Have you known of corporal punishment being inflicted in Madras?—Certainly not.

2231. You never inflict it?—We never inflict it ourselves; no commanding officer does so, except by sentence of courts-martial.

2232. By sentence of court-martial they can inflict in Madras corporal punishment?—Yes, undoubtedly.

2233. Have they done it?—Constantly.

2234. And it has not been interfered with?—No.

2235. Are you aware that that has not been allowed to take place in Bengal?—I am not.

2236. (*Chairman.*) Has a soldier in the Madras army the power of appealing from the punishment of the commanding officer, and demanding a court-martial?—Certainly he has.

2237. Does he exercise the power of petitioning without going through the commanding officer?—They ought not to do so, but they have done so; they are not allowed by regulation to do it.

Major-Gen Sir S. W. Steel, K.C.B.

25th Aug. 1858.

2238. (*Duke of Cambridge.*) Do you think that they ought to be allowed to do so?—I should have no objection to it under proper regulation.

2239. Am I to understand that you would not object to a man appealing without going through his commanding officer?—Yes. I would object to it without going through his commanding officer.

2240. Have they not been in the habit of doing that?—They have done so sometimes.

2241. Do you approve of that?—No.

2242. (*Major-General Hancock.*) Has the Commander-in-chief in Madras allowed that system?—He has not allowed the system, but it has been done sometimes.

2243. Has he punished the men when they have done it?—Sometimes he has not.

2244. (*Sir Harry G. W. Smith.*) Are you of opinion that a private or a non-commissioned officer has a right to demand a court-martial?—The right is not acknowledged.

2245. Then is it not a right?—It is not a right.

2246. (*Duke of Cambridge.*) It is considered as a right?—No, but it has been done.

2247. But you consider that an irregularity?—Of course it is so.

2248. And you think it a serious irregularity?—A man is liable to punishment for it; he may be brought to court-martial for it.

2249. (*Chairman.*) Do you consider that there should be any admixture of European and native forces either regimentally or by brigade; would you attach any proportion, for instance, of natives to a European regiment?—Not at all regimentally, certainly.

2250. (*Duke of Cambridge.*) You have served with Bengal troops, I believe, a good deal, as well as with Madras troops?—I have served with them in Burmah in 1824-26 and 1852-55.

2251. Have you observed a great difference of system between those two native armies?—Of course there is a vast difference.

2252. In what respect?—In the privilege of caste and generally in the way of performing duty; we in Madras have thought that in Bengal they were more lax in their system with the men; they allow so many more men to undress than we do, and so many more men to go away for their food.

2253. In other words you think that the discipline in Bengal has been less severe?—Yes.

2254. Do you attribute to some extent the difference between the Madras and Bengal armies to the permission which is given to the Madras men to have their women and families with them?—I think that that is an advantage, because it binds them so much more.

2255. Would you like to see that system introduced into Bengal?—I dare say they would not like it.

2256. But is it your opinion that it would be an advantage?—I think so.

2257. (*Major-General Hancock.*) You are aware that divisions both of the Madras and Bombay native armies have been serving against the mutineers in the north-western provinces?—Yes.

2258. Do you know that they have done good service and been perfectly loyal during their employment against the mutineers in Bengal?—As far as I know.

The witness withdrew.

Major-General ROBERT ALEXANDER examined.

Major-Gen R. Alexander

2259. (*Chairman.*) You are a major-general in the Indian army?—I am.

2260. (*Duke of Cambridge.*) Were you adjutant-general?—I was.

2261. (*Chairman.*) How long have you been in the service?—About 30 years in active service.

2262. How many years of that period have been passed in India?—Almost the whole of it, and with a very slight exception always in the Madras presidency. On first going to India I served for a short time in the Bombay presidency, but that was when I was a very young officer.

2263. In what arm of the service have you been?—In the infantry and on the staff.

2264. And you have served as adjutant-general in the Madras army?—Yes, for ten years.

2265. Have you formed any opinion as to the proportion which the Europeans should bear to the native troops?—I have.

Major-Gen. R. Alexander.

25th Aug 1858.

2266. What proportion do you consider that the Europeans should bear to the native troops ?—The European troops over all India should be in that proportion, that when a force is formed for field service, it should, as a general rule, be able to take the field in the proportion of one European to three native infantry regiments ; the cavalry and the artillery being relatively in their proper proportions.

2267. By that answer you would have native artillerymen ?—Some, I would have. I would have about as many as they have in the Madras army ; but in Bengal and Bombay, I think they had much too large a proportion. The establishments of the three armies are :—

	BENGAL.	MADRAS.	BOMBAY.
Troops of horse artillery -	13	6	4
Companies of Europeans -	24	16	8
,, of Golundauze -	18	8	12

Of the Madras horse artillery, two troops are natives; but I do not know how many native troops are in Bengal or Bombay. The native artillery have much esprit de corps and pride in their profession, and at Madras they have been distinguished by their loyalty. There are duties and occasions to which native artillery are peculiarly suited, and upon which their employment would prevent a great and unnecessary loss of European life, and greater expenditure of public money.

2268. Your first answer was that you would have them in the same proportion as the infantry and cavalry ; that is, one European to three natives ?—In increasing the Indian artillery I would fix the present proportion of natives that exists at Madras, as a maximum quantity not to be exceeded ; all future increase being in Europeans.

2269. (*Duke of Cambridge.*) Your saying that you would have "some" native artillerymen would lead one to imply that you would have fewer native than European artillerymen ?—Most certainly.

2270. (*Viscount Melville.*) I understood you to say, one European regiment to three native regiments, and native artillery in the same proportion ?—I would have three European batteries to one native battery.

2271. (*Duke of Cambridge.*) You just invert the order as regards artillery ?—Just so, as the corps now stands ; but I would have its increase to be in Europeans.

2272. Do you mean that you would have one-fourth of the cavalry and infantry European ?—I would have the means of putting in the field one European infantry regiment to three native regiments, or two Europeans to five natives, according to the nature and emergencies of the service to be performed. I do not think that so large a proportion of European cavalry is required.

2273. (*Chairman.*) Would you make any difference in the manner in which you would arm the natives from that in which you would arm the Europeans ?—None at all.

2274. And you would give them all the best arms which you could possibly procure ?—I would give them all the best arms that could be made.

2275. (*Major-General Hancock*). And the highest military training ?—Yes ; we shall never find safety in the inefficiency of our army, and showing the natives that we suspect their loyalty : they will not become better subjects by merely making them worse soldiers.

2276. (*Chairman.*) Would you extend the proportion which you have mentioned to sappers and miners ?—I would not have European sappers and miners at all in the Indian army, except as non-commissioned officers. They would neither be efficient in the climate, nor justify the expense. I believe that from the natives of India you can form a most efficient body of sappers and miners, equal to any duty ; and that we have such in Madras.

2277. Your opinion is formed upon the sappers and miners of the Madras army ?—Precisely so, but I cannot speak so confidently regarding those of Bengal.

2278. I believe they are almost all of low caste ?—Yes, generally ; there are Mahomedans among them, and numbers of the artizan and respectable classes.

2279. (*Lord Stanley.*) I suppose their being low-caste men in the first instance was not owing to any preference on the part of the Government for such men, but because they were the only men who would undertake to fulfil the conditions of the service ?—I presume so. The regiment was originally a pioneer corps ; the men were enlisted to perform every duty incidental to such an arm ; many, indeed most, of which are repugnant to a man of high caste. Madras pioneers have in former wars done what Bengal men objected to.

2280. (*Viscount Melville.*) Are the non-commissioned officers of the sappers Europeans ?—The sappers and miners trained in this country are sent out as non-commissioned officers to India, and attached to the sappers and miners, but they have their own native commissioned and non-commissioned officers besides.

2281. (*Chairman.*) Have you formed any opinion as to the amount of force which will be required when the present mutiny is at an end ?—There I must fall back upon opinions which I have formed long since. My own impression is that our system of dealing with our troops in India has been a very faulty one ; that we have scattered them about in small parties ; and thus endangered their discipline ; that we have harassed them with duties upon which they ought never to have been employed, and I have often, under the different Commanders-in-chief with whom I have served, brought to their consideration that there ought to be more concentration of our forces. As regards the question before me now, I would say generally that for Upper India, which I will suppose to embrace the whole Bengal presidency, north of the Nerbudda, and from Calcutta to Peshawur, the system which appears to me advisable would be to have three or four large military bases from which operations could be carried out along radii in any direction in India. I would have the principal one somewhere about Meerut, and there I would have the head-quarters of the artillery, with the principal depôts and magazines, and a force of not less than about 8,000 infantry, with cavalry in proportion. I can only state these things generally, because there is a great deal of local and topographical information required, in which I feel myself to be deficient ; but, looking from thence northward, I would take somewhere about Almora as one position, and Loodianah as another. North of the Sutlej, I would have a strong force at Lahore, and posts both at Peshawur and in the vicinity of Attock. That would be the general view which I should give of occupying strategetically the country lying in the large triangle between the Himalayas, the Indus, and the Vindya range of mountains. South of that, at about Allahabad, I would have a large proportionate force with suitable depôts and artillery, having the command of both the Jumna and Ganges. Again, at about Moorshedabad, looking eastward, I would have a third grand military position, with outposts towards the Nepaul country, and further south and east as political and local circumstances might indicate. With these three great bases taken up, with railway communication, and the command of all the rivers of Upper India, your great forces would have easy communication with each other, and with the intermediate garrisons and cantonments, so that you could move out an overwhelming body of troops wherever it might be necessary, particularly towards the north-western frontiers. Calcutta, with a strong garrison, would be the entrepôt for receiving and forwarding all military supplies which could not be more conveniently sent by the Indus. Nepaul being on one flank, and the independent native states on another, other measures for the tranquillity and military occupation of India must be dependent upon political arrangement.

2282. (*Viscount Melville.*) Would you have no post between Lahore and Attock ? Do not you think

Major-Gen. R. Alexander.

25th Aug 1858.

that Jelum is a better position than Attock ?—Very probably; it is more central, and lies better between Lahore and Peshawur. I can only give my general idea. I confess to want of local knowledge of Upper India.

2283. (*Chairman.*) What number of troops do you consider would be necessary ?—At Meerut I should say certainly not less than 8,000 infantry.

2284. (*Duke of Cambridge.*) We want the number generally ?—Speaking as to the whole of Upper India, I should doubt whether you could do with less than 60 or 70 regiments of native infantry, supposing that you increased the European force beyond what it was before the Crimean war in Europe.

2285. (*Chairman.*) What is the amount of European force which you would consider necessary ?—I should suppose at least from 25 to 30 regiments of European infantry ought to be in the Bengal presidency, and five or six regiments of cavalry.

2286. (*Sir Harry G. W. Smith.*) Including Lahore? —Yes, including the whole. In carrying on my view it would be necessary to have a fourth force north of the Nerbuddah, in the neighbourhood of Saugur, for the whole of that part of Central India; and, of course, about Mithenkote and Mooltan you must have positions held in strength. The desert which runs along the left bank of the Indus is a sufficient safeguard as far as it extends. As a rough estimate, submitted under a full sense of liability to error, I should suppose that a disposition of regiments of European infantry might be made somewhat on this scale, viz.:—At Agra, two or three regiments; Almorah, one; Loodianah, two; Lahore, two; Peshawur, one; Attock, one; Allahabad, two or three; stations around Agra, four; Moorshedabad, two or three; stations around Moorshedabad, three; Saugur, one; stations around Saugur, two; Calcutta, one; and of cavalry, at Agra, one or two regiments; at Loodianah, one; at Lahore, one; at Allahabad, one; and one at Saugur.

2287. (*Chairman.*) In your proportion of 1 to 3, do you take into consideration the police force at all? —I am supposing that in future a police force will be organized, to take from the army those very objectionable detached duties to which officers and men have been hitherto exposed.

2288. In what proportion would you have the police to the army ?—That is very much of a civil question. There is nothing in which India is more sadly deficient than a system of police, and in proportion to its future good organization and efficiency may the numerical strength and location of the army be regulated. It is a most important subject, very difficult to condense in a short answer.

2289. I mean merely in reference to those portions of the duties which are now done by the army which you propose to transfer to the police.—I have never made an estimate. It would be a very difficult calculation to make in this country, because it would require a knowledge of every district, the state of the inhabitants, and what police they would require for their protection and subordination. I have the strongest conviction that our army ought to be organized with a view to ultra Indian eventualities.

2290. Between these large positions which you recommend to be taken up you would have the intermediate duty to be done by the police?—Yes; but I would also have smaller military stations where necessary. The idea which I have in my mind is, that for the military occupation of India we ought to hold it in great strength in commanding positions, having open communication with each other, and so that you can immediately come down upon any part of the country, or throw your forces forward to your frontiers.

2291. Do you imagine that your plan for the military occupation of India would render necessary a less force than there has been hitherto in India ?—Gradually I think it would. My own impression is that you must take into account in India many moral considerations. A European regiment there is looked to, not as a body of so many hundred men more or less, but its influence is felt upon the natives as a foreign power which may be brought against them at any time, and the soldiers as a race of beings, in military prowess and prestige, superior to themselves. When India is quiet I would never have a European regiment more than 800 strong, but each with a reserve in this country of 400 men, from which I would send out, not raw undisciplined recruits, but trained soldiers, not one of whom should be under 21 years of age. Such a system would secure greater efficiency and a judicious economy. I also consider that a European cavalry regiment need not be more than 500 strong, with its reserve doing duty in this country ready to reinforce it.

2292. I think you stated that you considered that there would be 25,000 or 30,000 Europeans in the Bengal presidency alone, besides cavalry and artillery, which would be in a much larger proportion to the natives than the infantry, and still you think it would require not so many troops as before ?—I will put it in another way, which perhaps will make my idea clearer, say that there would be from 20 to 25 or from 25 to 30 European regiments of infantry. I do not think that you require European cavalry in the same proportion, and that you do require more artillery than has been hitherto maintained.

2293. You are talking of the Bengal presidency alone ?—Yes; but still I would apply these principles generally to all India. In other parts of India I do not think that you require so many Europeans. Looking to its western frontiers, I consider that Bombay requires a large European force.

2294. There would be 25 regiments of infantry in the Bengal presidency, and what proportion of cavalry and artillery ?—For artillery, which I think a most important branch, and one which has been sadly neglected in India, I would have a permanent establishment of four guns to every regular regiment of infantry, or say to every 1,000 men.

2295. (*Duke of Cambridge.*) Is there not a very large proportion ?—Not too large, if we consider the garrison defence of the country, and having a force available to take the field. Adverting to European organization of armies, and their improved ordnance, it will be barely sufficient, and certainly not too much. I know that in the late wars, so entirely exhausted was the Indian artillery, that if they had continued we could not have supplied batteries. In the Affghan war we had formed, in the Madras presidency, the very last battery that we could, with any claim to prudence, have spared for foreign service, by drawing away the gunners from other companies, and rendering them inefficient. The general orders of the Bengal army showed that the same expedient was had recourse to in that presidency. As it is now, our artillery in India is inadequately manned and inadequately horsed.

2296. (*Major-General Hancock.*) And inadequately officered too ?—Yes. A royal troop of horse artillery has 236 men and 248 horses. A Madras troop has 115 men and 164 horses. A royal field battery has 236 men and 210 horses. A Madras battery, with the native drivers, has 176 men and 130 horses. The royal artillery has officers in proportion to the men.

2297. (*Chairman.*) Then do you propose to have four guns to each battalion upon the same footing as the royal artillery ?—I would.

2298. (*Viscount Melville.*) How would you have the batteries, of four guns instead of six ?—I would have the batteries of eight guns. There are objections to a six-gun battery. You must consider that batteries in India have to be divided, and if you have a battery of six guns there is a brigade and a half instead of two brigades of guns, which latter is a very efficient force to send with a brigade of infantry on service.

2299. (*Major-General Hancock.*) They are commonly two, divided into two guns to a station ?—Yes, but I have known one gun sent on service, which is contrary to the principle laid down by the Duke of

Major-Gen. R. Alexander.

25th Aug 1858.

Wellington. It was in consequence of seeing that mistake made of sending one gun, that in the Madras General Regulations there is an order never to send less than a brigade of guns on field service. Breaking up companies and batteries of artillery *into* small permanent detachments is, in my opinion, injurious to their discipline and efficiency, and ought to be more avoided than it is.

2300. (*Chairman.*) Do you consider that the native force should be on the regular or the irregular system, or both combined ?—The regiments of which I have been speaking, I would have all regular regiments ; but I believe that auxiliary to them, both for military and political reasons, it is necessary that you should have irregular corps. I would have the regular army as it has always been.

2301. (*Duke of Cambridge.*) Even the cavalry ?—Yes, I would have regular cavalry ; I believe that in India we must always anticipate the possibility of being brought into contact with European armies, and that irregular cavalry would not do to charge against European regulars. We have weight in India in men, we have weight and blood in horses, and we have a good spirit in the men if they are properly treated ; I would therefore always have a proportionate regular service of cavalry to bring into the field against any regulars to which it might be necessary to oppose them.

2302. (*Chairman.*) Your proportion then of one in four of Europeans is exclusive of these irregular regiments ?—Yes, I would have a sufficient number of irregulars for foraging, for covering baggage, and many duties, relief from which would afford a powerful body of the regular and heavier cavalry to be brought forward in action. Many circumstances arise in India for which irregulars are best adapted, and in which their places would be very ill, if at all, supplied by European troops. The irregular cavalry is composed of some of the finest soldiers in India, and has been the favourite service of many of our most distinguished officers. The names of Sutherland, Skinner, Davis, Spiller, Pedlar, Wilkinson, Jacob, and Tait, and the brilliant services of the Hindostanee, Deckanee, Poonah, and Scinde horse are familiar to all who know the history of Indian service for the last forty years. In the present condition of India, it is also good policy to have these native officers and men in our service and pay, rather than that they should be unemployed, impoverished, disaffected, and ready for any desperate hazard of a change.

2303. (*Duke of Cambridge.*) You would not put them in line ?—No.

2304. You would consider them entirely light troops, and not troops for the line at all ?—Precisely.

2305. (*Viscount Melville.*) Would you have infantry irregular as well as cavalry ? — There are irregular regiments, which are raised for service in particular localities such as in hill countries, which, I think, for many reasons are advisable, and in some parts of India, indispensable. They are auxiliary to the police, and could be called into use if necessary with the line.

2306. (*Chairman.*) The native army of which we have been treating, of which you say the proportion should be three natives to one European, you consider should be all regular ?—Yes.

2307. Do you consider that the native army should be composed of different nationalities or castes, and if so, in what proportion ?—It should be composed of all the inhabitants of India, who are called natives, as the principle is in the Madras and Bombay armies. At Madras our ranks are open to any man physically fit, without reference to his caste ; but there is always a watch upon the recruiting ; for example, in some of our regiments we raise the men in Telingana, the greater part of those men would of course be Telingas ; other regiments would have larger proportions of Mahomedans, &c. But I think that there is no likelihood in our army of any one class obtaining a dangerous preponderance. If a regiment composed principally of Telagoos is brought into a force, such as I have been describing, it will be cantoned or encamped with another regiment, of which, perhaps, the majority of the men will be from the ceded districts, from Mysore, or Trichinopoly, or some other *country*; and thus we are always so far safe in our own nationalities and in our castes.

2308. Would you preserve the nationalities by keeping them in regiments or companies, or would you disperse them as much as possible throughout the army ?—A regiment wanting to recruit gets its men principally from the place at which it is raised; but it is customary to send out recruiting parties all over the country, and thus draw in men from different parts. I would have a wide system ; I would avoid anything which could draw the attention of the natives to a policy of exclusion as regarded any of them, or of preference for any of them. A great deal must be done in India by careful continuous observation, in a way which I am sure you cannot carry out by hardly defined rules.

2309. You say that you would refuse no nationality or caste ; would you recognise the caste at all after having once enlisted a man ?—Most undoubtedly; so far, that his caste should be registered in the regimental records and monthly returns, because it is very necessary to know how the army is composed. In the Madras army we recognise every man's caste as to be respected ; we never allow it to interfere with any military duty, nor do we allow any one to interfere with or intrude upon caste observances in the sepoy lines. If there was an act committed to insult or disturb a Mahomedan, a man of high or low caste, or of no caste at all, we should deal with it according to the articles of war, as contrary to good order and military discipline.

2310. (*Duke of Cambridge.*) Still you would not allow caste to be put forward as an excuse for not performing any military duty ?—We never do in the Madras army.

2311. And you never found any difficulty in that respect ?—Not the slightest. The same men as those who have mutinied in Bengal do duty in our army exactly as it is done by British soldiers.

2312. How do you account for that ?—From the difference of discipline.

2313. Then you conceive that the discipline in the Madras army is much more severe than it has been in Bengal ?—I would not call it more severe ; it is more efficient and soldierlike.

2314. (*Chairman.*) You consider that discipline may overcome any difficulties which would arise from caste in the execution of military duties ?—No doubt of it, taking discipline in the highest sense of the term, both moral and military.

2315. (*Marquis of Tweeddale.*) Do you know any case where high caste Brahmins have wished to show their superiority of caste in the Madras army over Pariahs ?—As Brahmins they would, off duty, command any respect that their fellow countrymen will yield to them. There is no interference with caste questions unless they are made a pretext for interfering with others, or, as *sometimes happens*, a cause of quarrel and disturbance. I have no doubt that if they had a weak commanding officer, high caste men would try it whenever they might think they could succeed.

2316. Do you recollect an instance of your receiving a petition from a high caste man through the subahdar major of the regiment, complaining of a havildar having a palanquin marriage in the lines ?—I remember the circumstance, but it came to head quarters through the officer commanding the regiment and his superiors in the division.

2317. Was not that a case in point ?—It was.

2318. Where a high caste Brahmin wished to force the Commander-in-chief to allow him to take supremacy in the lines and to prevent low caste men from so acting ?—Your lordship brings to my recollection what I have just replied to.

2319. What was the answer of the Commander-in-chief ?—The case was this. There were caste people

Major-Gen R. Alexander

25th Aug 1858

who wished to carry a bride in a palanquin, and the higher caste men forbad it. The Commander-in-chief's orders were, that if a palanquin and procession went quietly through the lines nobody was to interfere with it; that if there was any question of caste, they might go and settle it amongst themselves at their village or any of the pagodas; and that they might have leave of absence for the purpose; but that they were to make no disturbance in the lines. I remember that once at Penang there was a serious quarrel; the commanding officer allowed the Mahomedans and the Hindoos to get into a caste dispute about hanging bits of beef and passing through particular parts of the lines, which were common to both. The moment the knowledge of it came to head-quarters, just a simple common-sense order put down the quarrel immediately. There are often occasions of dispute between men of different, or of the same castes and persuasions, or of different regiments, which are easily disposed of if officers treat them with kind consideration and impartial justice; and the men are glad to have them so settled by an authority they feel confidence in, and respect.

2320. (*Duke of Cambridge.*) That can be avoided by good tact and management?—Yes; just the same as at Woolwich or Chatham.

2321. (*Chairman.*) That seems to be more a dispute among the castes themselves than with respect to performing their military duties?—Yes. But as regards military duty, I may give, for example, that during the Chinese war, our troops ate and drank, and cooked on board their ships; but the Bengal troops insisted upon being landed every evening to cook their food. A captain of a transport killed an ox or cow on board his vessel for his crew; the Bengal sepoys objected to remain on board, and another ship was provided for them. The same thing happened on board a Madras transport, and the Hindoos disliked it, while the Mussulmans have no scruple about killing a cow; and after the Bismillah, are glad to eat the beef. There was no offence to the Mahomedans, and the Hindoos were gratified by an immediate arrangement being made, that, in future, all cattle were to be slaughtered on shore. The Hindoos remained in the ship.

2322. (*Duke of Cambridge.*) And yet some of them were of the same class of men?—Precisely so. When I commanded a regiment, my Hindostanee men were among the best men I had in the regiment. I liked them particularly.

2323. In the Bengal army it was not put down by superior authority; it was tolerated?—Yes.

2324. But you would not have tolerated it?—We do not as regards the discharge of military duty and inevitable exigencies of service in the field against an enemy.

2325. (*Marquis of Tweeddale.*) With reference to the discipline of the Madras and the Bengal armies, do you recollect an instance of three regiments of the Madras army being sent out of the Bengal presidency because the Bengal army were such a mutinous set?—I do not. I was absent from my duty for nearly a year at the Cape of Good Hope.

2326. Do you recollect that when three regiments were ordered to Jubbulpoor a representation was made by the officers commanding the regiments that they would not be responsible for the duties done if they remained under the discipline under which they were placed?—I remember that our troops were sent up to the Saugur division. Our regulations were not generally recognized by the general commanding the division; the consequence was, that on these things being represented in Bengal, authority was given to us to send a brigadier up to command our troops at Saugur. The authorities, however, did not get on well together. The regulations for Madras bazaars and against sepoys getting into debt were disregarded; our men fell into a habit of contracting debts, and were brought before Courts of Requests in a manner which reports and correspondence showed to be a more common practice in Bengal than with us. The remonstrances from head-quarters of the army were not effectual to check that evil, nor to prevent a relaxation of the rules and standing orders established for the discipline of troops and companies. Our officers felt that it was lowering the tone of discipline and injuring the men, as regarded the duties of visiting barracks and inspecting dinners, &c.

2327. (*Viscount Melville.*) Do you mean that European officers inspected the dinners of the natives?—No, of the European troops; we had European artillery there also, and our reglations were disregarded in both arms of the service.

2328. (*Sir Harry G. W. Smith.*) You have stated that the troops are called upon to perform certain services which they ought not to be?—Yes.

2329. Will you be so kind as to state what those services are?—The duties over gaols, the duties over local treasuries, and many escort duties from which they ought to be exempted. Then there is a bad system of sending them out in small detachments to hold posts, merely to be stationed where there is no particular duty for them to do.

2330. (*Chairman.*) Do you think that the present number of European officers with native regiments is sufficient?—I think it is quite sufficient, I do not enter into the opinion which I have heard very loudly proclaimed, that more European officers are required. I believe in fact, that if all the officers were present, there would be more than are wanted with a native regiment. With due consideration for the number withdrawn for the staff, I think that the present establishment will supply that; but there are duties in which officers are employed which I think ought to be discharged by other persons.

2331. (*Viscount Melville.*) What are those duties?—I would organize a commissariat department which would no longer be a draught upon the regiments of the line. I would restrict the withdrawal of officers from regiments to military staff, to scientific, and to political or diplomatic duties. Civil staff duties should in all proper cases be discharged by officers of high character, who are not physically equal to the more active duties of their profession.

2332. (*Chairman.*) Do you not consider that a European officer now on joining his regiment is always looking forward to getting some civil employment?—Almost always to that or staff duty.

2333. Does not that interfere with the manner of his performing his military duties; does not it make him look more to the civil service than to the military service for his future career?—It stimulates a very praiseworthy ambition.

2334. (*Lord Stanley.*) Is it not a means of drawing into the army men who, perhaps, would not go there if they knew that they would be confined to regimental duty all their lives?—I am not aware of any who have entered the army on such an alternative, though I believe all are more or less influenced by the prospects that have hitherto been open to men of good conduct, energy, and ability. The result has been, that when officers in the army have had fair fields before them, they have qualified themselves up to every requirement. I do not remember having ever been called upon by the Government when I was adjutant-general to supply an officer for any required duty or employment, that I did not know where to put my hand upon one for it.

2335. (*Viscount Melville.*) Still, with all the advantage and stimulus given to officers in this way, is it unfortunately the case that regimental duty is considered a lower grade, and that in short a man considers that he is disgraced if he is not placed on the staff?—I do not consider that. Of course, the staff is the object of ambition, but in a well commanded regiment I believe that the officers have a great deal of *esprit de corps*, are very proud of their regiment, and some remain contentedly with it. But there is a great deal that is depressing; there is a great deal that requires entirely remodelling in the Indian army, both as regards the European officers and the natives. There is now, no doubt, a feeling of depression among the old officers, and that affects,

Major-Gen. R. Alexander.

25th Aug. 1858.

and must affect, the whole service, Europeans and natives.

2336. (*Duke of Cambridge.*) Do you not think that the service would be benefited if you were to introduce a staff corps, making every officer pass through his regimental duties first, but upon appointment to the staff to be placed in a separate corps of officers without men, much in the same way as is done when engineers are established in this country, from which corps he might be again exchanged into the line, either at his own option or upon the wish of the authorities ?—That has been often considered. I believe that it would be very useful as regards the regiments. One objection to the present system is, that in withdrawing men from their regiments there is no means of filling up the vacancies. It very often imposes a very inconvenient restriction upon the choice of officers, and if you could remove an officer when appointed to the staff, and fill his place in the regiment, it would be very advisable.

2337. You think that such a plan would be desirable if it could be effected ?—Certainly, and I have no doubt that it could be effected by those who understand the organization of an army.

2338. (*Marquis of Tweeddale.*) Would you allow those officers to return to their regiments when their services were no longer required in their military and civil situations ?—It would very much depend upon whether they were in civil or military situations. An officer in the adjutant or quartermaster-general's department acquires a much larger acquaintance with his professional duties ; and attached as they are in India to forces and brigades, they learn more of field movements and tactics, and become better qualified for the higher duties of a regiment than many who have no opportunities beyond commanding a company or troop, and marching on its flank.

2339. Then you draw a distinction between civil and military employment ?—Certainly ; I think that after a certain time officers so employed should have the option of going entirely away from the army, letting their civil salaries be a compensation for the military service they resign.

2340. (*Chairman.*) Do you think that any alteration should be made in the code under which the army is enlisted ?—In speaking of that I must speak very frankly, and seeing that the Bengal army has entirely gone, I should say let the code never be heard of again, at least, any code that I know of belonging to that presidency.

2341. What is meant by the question is, would you enlist men for the future for general service to serve in any portion of India or abroad ? Would you enlist them for a limited service or for their lives, or would you make any alteration in the terms of their enlistment ?—I think it is imperatively necessary for the safety of India that great alterations should be made, and for that reason it is that I mentioned just now that if the Bengal code is never heard of again I think it will be a great advantage. The present system in the native army is one which holds out very little inducement for the sepoy to remain in it, and great inducement to get out of it at as early a period as possible. I would be careful not to bind up the hands of the Government by restrictions unnecessarily imposed in the terms of service. A great objection in Bengal to enlistment for general service is the dread of going on board ship. I believe one of the concurrent causes of the late mutiny is an order that they should be enlisted to go on foreign service beyond sea. We have no such order in Madras, and though it is not on record, that any Madras regiment ever refused to go, I should be extremely sorry to see such an order issued. It is put to our men whenever we order a regiment on foreign service, that any who choose to remain may do so if they please. By degrees we wished to get rid even of that; we wanted to bring the Madras army, without offending the prejudices of the men, or alarming them, up to the very state which you now propose, namely, that they should be familiarized with the idea that they are to go wherever they are ordered, and for a short time we dropped out of the letter of instructions which is sent by the adjutant-general to every regiment ordered on foreign service, that part of putting the option to every man ; thus leaving it as an unwritten custom of the service ; they knew that they need not go unless they liked ; the omission attracted notice in Bengal, and we were ordered immediately to put it back again. But we never have any difficulty, and although they all have the option, Mahomedans, Hindoostanees, Rajpoots, and Brahmins all go ; their provisions are put on board the ship for them, according to their castes, and they see and approve of the water they are to drink.

2342. (*Marquis of Tweeddale.*) How many Hindoostanee men have you in the Madras army ?—Not a great many. I should think that when I left India there would not be more than, perhaps, 1,500 or 2,000 in the whole army.

2343. (*Sir Harry G. W. Smith.*) In the event of a regiment saying "We do not mean to go," what is the alternative ?—It never has happened. You must of course take a service with all its contingencies. When the troops were ordered to China, the whole of their war pensions and wound pensions had been reduced ; the men were willing to go, but they wanted their old pensions ; they did not like the idea of coming back wounded, and being turned adrift unable to work, and left to beg. I was acquainted with the opinions and feelings of the men, and there was a melancholy joke among them ; they said, "Let the old sepoys who came into the service before 1837 go and fight ; if they lose their limbs, they will get good pensions ; but what shall we '*buchas*' (children) get ?"

2344. Then you are of opinion that that difficulty ought to be obviated by a new code ?—Yes ; but I would not drive the blunt edge of the wedge against the minds of the people. It is a very severe thing to tell the population of India, that they are to be forced to go on board ship. I feel assured that a new pay code could be framed to render the regimental service in the army much more acceptable to officers and men, European and natives, that a judicious liberality might be extended to all ranks, and military finance be economized by reforms.

2345. (*Duke of Cambridge.*) All these questions are prospective ?—I remember what was told me by General De Lacy Evans, a brother of Sir De Lacy Evans, who was one of our best officers, and was of a generation before me. He described the troops when we wanted them to go to the Mauritius and to the Isle of Bourbon ; and before that, when they went to the Moluccas. Volunteering used to be proposed to the native officers ; and the regiment would meet together, sit down, and quietly discuss the subject. One and another would state an objection, and at last it came to this, "Well, if the subahdar major goes, or if the grenadier company goes, I will go." It was a mere formal thing ; the discipline and the whole tone of feeling in the army was different from what it is now. They invariably went ; and it is well known how well they served on those occasions.

2346. (*Marquis of Tweeddale.*) What has caused the difference in the discipline of the army between that time and the present ?—We have very much lost sight of conciliating the native opinions ; there is a harsher line of feeling between the European officer and the native than there used to be ; and the Government does not pay sufficient attention to the natives ; we do not consider that they are feeling and thinking beings so much as we ought to do ; we treat them too much as instruments for our purposes.

2347. With regard to pay and pension, has that no effect ?—The pension is of the greatest importance. Before 1837, the sepoy looked forward to the pension as a retirement for his old age ; he now looks upon it as an escape from a service which generally he dislikes.

2348. (*Lord Stanley.*) If you had to frame the new terms of enlistment for the Bengal army, how would you frame them in regard of this question of general service?—I would immediately draw up a new pay code. The pay of the native army in Southern India is insufficient; its batta has been reduced to an insufficiency; and its hutting money is insufficient; its pension is impolitic by being given too soon; it is upon fifteen years' service. You have only to go over the returns of the army, and see the men who are pensioned at fifteen years' service, to notice how many of them are for chronic rheumatism and pains in the joints, for which a man will simulate pain for a sufficient time. His malingering baffles the skill and wears out the patience of the medical and other officers, and he becomes a burden upon the regiment; but when he gets his pension, he is soon round again. In Southern India are to be seen numbers of stout hearty fellows, who turn out to be pensioned sepoys. It would evidently be better financial economy to have these men in our ranks on good pay than having to support them with pensions, and pay the sepoys who step into their places in regiments. The result since 1837 has been such as ought to have been anticipated when the period of service that entitled to a pension was diminished by one-fourth, and the amount of pension increased 12½ per cent. to a sepoy.

2349. You mean, that those men have imposed upon the medical officer?—Yes, many of them; and it is wonderful how they will persevere and what they will endure in order to do so.

2350. (*Sir Harry G. W. Smith.*) Do you not think that an increase of pay for good conduct is preferable to a pension upon discharge?—I would adopt the European system of making the pay better according to service. What they now call "good-conduct pay," is a misnomer altogether; it is not good-conduct pay; it is long service pay; and if a man is of a delicate constitution, he is eligible to be pensioned upon four rupees a month, before he can get an increased pay of one. His object is to get out of the army; his four rupees make him a richer and greater man than most in his village. Without underrating the many substantial advantages he enjoys, the condition of a sepoy in the Madras army is in some respects worse than it was in the days of Hyder Ali. If you look back into history, you will find the sepoy worse paid now in proportion than he was in the days of the Hindoostanee empire two centuries ago; and, without the prospects open to his energy and ambition in a state service, which, though more precarious, had higher prizes.

2351. (*Marquis of Tweeddale.*) You recommend that the pay should increase according to the length of the service?—Yes.

2352. Do you mean that that is the feeling of the sepoys themselves?—The sepoys do not sit down and calculate these things as we do, but they are quite ready to receive any boon; and I am perfectly certain that the sepoys of the Madras army are looking now for boons from the Government, while they feel most deeply the reductions of their pay and batta, and the severe duties to which they have been put of late years.

2353. (*Lord Stanley.*) If I understand rightly what you suggest should be given, it is mainly this, a better rate of pay, an increased pay for long and good service, and the pension not to be granted so soon as after 15 years' service; but when it is granted, to be granted without any condition as to the man being unfit for duty?—Not quite that. After five or seven years, I would give an increase of pay if the man had not been tried by a court-martial, nor been so many times in the defaulters' book the year before. At three periods of service, say, at 6, 12, and 18 years, there should be increase of pay. At 14 years' service, if a man was unfit for, or chose to leave the service, I would give him a gratuity and let him go; and after 20 years' service, if he was unfit, I would pension him. They now enlist at 16 years of age, which I think is two years too young. After 20 years' service, a man at the age of 36 or 38 is in a good condition to be a valuable sepoy. He would work from one end of India to the other, and if that man had ten rupees a month, he would remain with you cheerfully. I am informed that a common cooly, working on a railway, now gets eight rupees a month in Southern India, and an infantry sepoy's pay is seven, until he has served 16 years.

2354. (*Chairman.*) You would have the terms of enlistment, I suppose, the same for each of the armies?—I would have one pay code for all; the organization the same; and I think we should attach them much more to us if we did not tighten them up in European dresses.

2355. And you would have that code perfectly and clearly understood at the time of enlistment, and no alteration made afterwards?—Yes; at least, no alteration to the detriment of the sepoy.

2356. (*Marquis of Tweeddale.*) What you stated just now is, I understand, what you consider to be the feeling of the natives with regard to pay and pension?—It is.

2357. During the discussions upon this subject, was not it an idea that the native sepoy would sooner have a larger pay when he first entered the service for reasons which I shall state, than a prospective pay for length of service. The fact which I mean to state is this: A Hindoo marries a wife, and he has four children upon the average. A Mussulman marries two wives, and he has eight children. Does not it naturally follow that the latter man requires a larger amount of pay during the time he has all these eight or ten mouths to feed than afterwards, and is not that a consideration with the natives?—That is a consideration which I should leave entirely to the natives themselves; they are very shrewd, and understand their own affairs very well; poverty is both practically, and by the precepts of the Koran, if a sepoy should happen to understand them, a restraint upon polygamy. Give them better pay, and you will attach them to you. Give them at the end of their service the prospect of a pension, and they will be perfectly content. I believe that you may make the Indian army in all the presidencies as faithful and as good soldiers as there are under the sun.

2358. (*Viscount Melville.*) You have mentioned about our want of consideration for the natives, and that they reason and think upon different things, do you think that there would be any possibility, with a view of conciliating the natives, of introducing into the infantry service or into the regular service native gentlemen of the country without their going through the grade of sepoy?—I have no doubt of it; but this is a very important question, and I feel great difficulty in shutting such questions up to a short answer. To answer such properly I should like to go back a little into the history of the army. Now, what the real military feeling of the natives is may be inferred from the officers and soldiers that fought for and under us in the days of Lawrence and Clive. At that time, instead of the native officer being depressed, ill paid, and without an object of ambition beyond mounting guard, and falling in under a young ensign, we had natives commanding armies, and even with bodies of Europeans serving under them; they undertook sieges, and in every way showed themselves to be not only soldiers but generals. The palmy days of the native officer, and the native military spirit, were up to the time of the fall of Hyder. After that period, and since the fall of Seringapatam, the native spirit has been restricted, and, of course, depressed; there has been no field for ambition, although there have been men in the native army capable of anything that you could put them to. I am bound to say that many of our native officers in the Madras army, in the infantry, cavalry, and artillery, have a knowledge of military tactics which would do credit to any European.

2359. (*Duke of Cambridge.*) Having that opinion, in which I fully share, do you not think that if you give more power to the native you must treat him

Major-Gen. R. Alexander.

25th Aug. 1858.

differently, that is to say, that you must have more power over him if he commits himself?—The best and the only power which you can exercise over the native to any beneficial effect is that power over his affection and interest which will bind him to you.

2360. (*Major-General Hancock.*) You mean moral power?—Yes.

2361. (*Duke of Cambridge.*) But that has been deteriorating of late, you say?—No doubt.

2362. (*Sir Harry G. W. Smith.*) You say that the Indian soldiers are as good troops as any under the sun; to what do you attribute the recent general mutiny of the Bengal army?—Simply to this; that I believe the Bengal army was ill composed, and ill disciplined.

2363. (*Chairman.*) In what respects do you object to the composition of it?—From its not embracing sufficiently the different nationalities, and low caste men; from the way in which high caste was pampered and got the upper hand of discipline and subordination.

2364. In fact you think that the bad discipline consisted in recognizing caste?—Not in simply recognizing but in giving it impolitic exaltation, and making undue concession to it. I think that the whole army was badly disciplined, and that the whole system was bad.

2365. In what did the discipline of the Bengal army differ from that of the armies of the other presidencies?—I think in the lax way in which duties were carried on. I take as an example, that when our troops got up into the Saugur division, the officers were allowed to quit their posts when on detachment duty; to be absent from their detachments when marching; and I have already mentioned other relaxations of discipline. In the Bengal army there were, at some stations, committees or boards of officers, who judged of the credit, which is synonymous with the character, of brother officers who wished to borrow money from banks in which the members of the committees had an interest. These and other practices, I think, are injurious to military discipline and *morale.*

2366. (*Colonel Burlton.*) Have you any personal knowledge on which you found these statements?—That they are notorious.

2367. May I ask you to mention any authority which you have for them?—The official reports and correspondence of my office afford authority for the facts regarding discipline. My intercourse and correspondence with officers of the Royal, Bengal, and Bombay armies, as well as with those of my own, who have served in Bengal, are my sources of information; as well as the general orders of the Bengal army, particularly those of Sir Henry Fane and Sir Charles Napier, when Commanders-in-chief, and some of Sir Colin Campbell's. If any competent authority disproves what I have stated, I am quite willing to admit that I have been misinformed.

2368. (*Viscount Melville.*) Do you not know, from your experience of the Bengal army, that the European officers in that army actually considered it no disgrace to be brought before a Court of Requests, in order to oblige them to pay the wages of their servants, when in the Madras presidency an officer would have been turned out of his regiment for such conduct?—I do not know that; but speaking from notoriety, I believe there were some officers, in the Bengal army, frequently so brought up. It was a rare thing in Madras; we have had instances of debt and its demoralizing consequences in the Madras army, but they were more exceptional. Some, I am sorry to say, were very disgraceful; but all the offenders were not turned out of their regiments.

2369. Is there not an order from the Commander-in-chief in Bengal that every month a Court of Requests shall be assembled, at which these officers are summoned; and is it not the fact that, not only one, but sometimes ten and twelve officers in a single month are brought before these courts?—I cannot answer that question any more than that it is a standing order throughout India that a Court of Requests shall assemble at every military station every month. At Madras, most certainly, officers are not brought up in such numbers, nor in any approaching to them. It is to be remembered, that a highly honourable officer is liable to be summoned if he justly refuses to pay an account which he denies to be due.

2370. (*Colonel Burlton.*) In every presidency?—In every presidency.

2371. Is it confined to officers?—No; it is for all the sepoys—for anybody in the cantonment.

2372. (*Sir Harry G. W. Smith.*) You appear, with your great experience in India, to advocate the principle of encouraging native officers, and you assert that since the days of Hyder Ali there has been no post of ambition for them. You are aware, of course, that Hyder Ali raised himself from being a captain to be a king. Are you not of opinion that if we had encouraged natives in the way that you speak of, some great native would have risen up in the late mutiny and turned us out of India?—That is a liability which you must always bear in mind. I believe that there are Hyder Alis in your ranks now. There were many circumstances in the late mutiny which were very much against any native taking that commanding position. There was not sufficient time to organize it; and although there was evidently a great deal of communication, yet they had not picked out men to be their leaders. There was no cohesion, nor concerted action, under recognized chiefs, at its commencement; and it flared up at one part after another. Evidently there were evil-disposed men who had been watching for an opportunity; but the mutiny seemed to be premature for them. Our safeguard for the future lies in the firmness and justice of our military as well as civil administration, and while we highly maintain our authority, we must leave no just grounds for complaint and disaffection, nor make undue concessions in any way. If we do the natives will gain experience by the past, and, at some future crisis, turn to evil purpose lessons which we have now opportunity to improve for their and our own best interests. It was after the hopes of the mutineers must have culminated, that Koer Sing, Ummer Sing, and others, rose out of the necessity of their circumstances to be leaders.

2373. (*Duke of Cambridge.*) Do you not think that the principle which you advocate, that is to say, the raising of native officers to the extent which I have gathered from what you have stated, would increase that danger?—I think not.

2374. (*Lord Stanley.*) On the contrary, you hold that, in enabling men to gratify a lawful ambition, you would find the best security against their indulging an unlawful one?—Precisely so.

2375. (*Major-General Hancock.*) Do you not also think that the native army may be organized by mixing races and nationalities so as to render such a combination as has lately taken place next to impossible?—Yes.

2376. (*Chairman.*) Do you consider that the Bengal army ought to be divided into two or more armies?—I should say not. Such a division of authority would weaken a power that ought to be concentrated in one mind. I would have the three armies commanded as they now are, and a paramount authority in a military minister of war, a constituent member of the supreme government in India.

2377. Do you consider that any change is required in the system of promotion as regards the native commissioned and non-commissioned officers?—The different armies have different systems; the system in the Bengal army is different from that of Bombay and Madras.

2378. Would you recommend promotion by selection or entirely by seniority?—By selection.

2379. That is the system which now prevails in the Madras army?—Yes.

2380. Is it entirely the system which prevails?—The system is this:—It is one of the principles laid

Major-Gen R Alexander.

25th Aug 1858

down for the discipline of the Madras army, that every grade is to exercise its own responsibility. The officer of a company has the first promotion to a lance-naik ; he selects the fittest man that he thinks proper ; and if on trial that man is unfit he is remanded to the ranks. When he is promoted to be a naik, that is to say, a corporal, he is brought into a general regimental list, and he rises in it if he behaves well ; if not, he is brought to court-martial and reduced. So far the seniority goes on in that way, but no man is ever promoted by seniority unless he is competent.

2381. (*Major-General Hancock.*) You mean that after a man has been promoted to naik, the promotion is made from the top of the list unless the man is considered unfit ?—Precisely so.

2382. (*Viscount Melville.*) What is the system in the promotion to the rank of native commissioned officers ?—The same ; but you will find havildars, who, from age or incompetency, would not make good commissioned officers though tolerable non-commissioned officers. These are passed over in promotion.

2383. Does the commanding officer of the regiment select the havildar who is to become jemadar, or does he submit a certain number of names from which the Government choose ?—If it is the senior havildar, and he is of proper character and qualification, no question is asked ; but if he passes over any, he has to send in the name of every man whom he proposes to supersede, with his reason for so doing. If the reasons were satisfactory, the Commander-in-chief ordered the promotion to be made, and the recommendation rolls went on to Government. If they were unsatisfactory, investigation was made, and if the seniors were proved to be incompetent they were passed over.

2384. What would you call incompetent ?—A man may not have ability, physical or mental.

2385. Do you consider age as constituting incompetency ?—Not unless it involves weakness and inefficiency. So defective, however, are the pension-regulations, that native officers will appeal to their commanding officers not to have them removed to the pension-list, so inadequate are its provisions to the condition of a native officer, while its inducement to a sepoy to get out of the service is so great.

2386. What is the average age of a man when he becomes a native officer ?—He would be a fortunate man who was promoted to be a commissioned officer in 15 years. I think that generally it is 18 or 20 years ; which, assuming him to enlist at 19 years' of age, and to get his commission in 19 years, will, I think, give an average of above 50 years of age, and upwards of 30 years' service, for a subahdar to receive a smaller pension than is granted for shorter service to a European sergeant. I assume these numbers, not having official returns to refer to.

2387. (*Chairman.*) A native officer must pass through the ranks before he can become an officer ?—Yes.

2388. Do you think that any advantage would be derived from his coming in direct ?—I think that that system might be introduced. All these things require to be done with great judgment and consideration, but if you introduce such men, you must take into consideration what his Royal Highness has been asking me about, namely, that there must be for gentlemen and for men of high feeling, high appointments ; you must attach them to you by such means, and no longer consider that a pension of 25 rupees a month to the native officer of highest rank, and 12 rupees a month for a jemadar (or respectively 30*l.* and 12*l.* 8*s.* a year) are sufficient rewards for the long and honourable services of men who are expected to uphold their rank and position as officers and gentlemen.

2389. (*Lord Stanley.*) You cannot bring in the lowest grade of commissioned officer without giving him a prospect of promotion to some higher appointment ?—Precisely so.

2390. That which is an object of ambition to a private soldier, would be no object of ambition to a gentleman, and it would be to him simply a service in which he had nothing to look to ?—That is true, partly ; but it must be borne in mind that a private soldier in India and a private soldier in England have very different feelings. In the case of many a private soldier in the Indian ranks, his grandfather or his ancestor may have been a man of high rank at the courts of Aurung-Zebe, Hyder Ali, Tippoo Sultaun, the Nizam, or Nawab of Arcot. I have had a servant, a Syed, the highest class of Mahommedan, whose father was a man of high rank ; and if you go among the Mussulman population, you will see men in abject poverty, whose fathers and grandfathers held high positions in the country. Their sons enter into our service, but they enter with the recollections, and with a great deal of the high feeling of their ancestors. It is in the cavalry and in the artillery that you find these men, more than in the infantry. The Hindoos have also their recollections of ancestral rank and wealth.

2391. (*Chairman.*) Do you think that any advantage would be derived if the native officer was encouraged to learn the English language ?—With us the English language is very freely spoken by men in the ranks ; more, however, by younger men than the native officers.

2392. Do you not think that it would tend to greater intercourse between the European officers and the regiment if the English language was encouraged as respects the native officers ?—It depends upon circumstances ; I believe that we have done a much better thing in our army of late years by insisting upon the European officers learning more of the native languages. That I believe brings them more together than the native officers learning the English language. None of the Bengal sepoys, as a general rule, speak English, but with us it is spoken very largely, and I have known men enter our ranks as sepoys well educated in English.

2393. Do you think that there has been more intercourse between the European officers and the soldiers in the Madras army than in the Bengal army ?—I cannot say that; I should imagine that the Bengal officers were very much attached to their men. I think that in the late mutiny we see the confidence which they put in them, and they were very familiar with their languages. We have seen, in many instances, how nobly the men have followed their officers, while instances of misconduct in the field before an enemy have been few. The histories of the various Indian campaigns, and particularly of the wars in Afghanistan and the Punjaub, make it evident, I think, that the Bengal army might have been brought to the highest standard of military efficiency if its caste prejudices had not been so much pampered, and if strict discipline had been maintained.

2394. (*Duke of Cambridge.*) Do you think it desirable to have English more introduced, or not ?—I would leave it to find its own way for the present. My first object would be to improve the native regimental schools, which are now in a very low, and, in some degree, a dangerous state. They might be made the means of giving sound knowledge, suitable to the sepoy's condition in life, and of beneficial influence when, after having been discharged or pensioned, he should return to the domestic community of his countrymen.

2395. (*Chairman.*) You do not attribute the mutiny at all to any want of communication between the officers and men ?—I should think not generally. The mutiny appears to me to be a calamity which might have been guarded against. When it occurred, those stronger and worst passions, which are always latent in native character, were brought into action, and broke up and destroyed the mutual good feeling that had previously existed between officers and men.

2396. (*Sir Harry G. W. Smith.*) You attach considerable want of discipline to the Bengal army ; do you do so from personal observation or from hearsay ?—I have stated before ; partly from personal observation, when many years ago I saw but did not serve with a Bengal force ; partly from what came

Major-Gen R. Alexander.

25th Aug 1858

before me in official correspondence, as well as from what I have read in general orders, newspapers, and the information I have derived from officers of the Royal, Bengal, Bombay, and Madras armies; and from notoriety.

2397. But notoriety does not establish facts?—Of course not; but it proclaims them.

2398. (*Colonel Burlton.*) Notoriety may be disputed?—It may be.

2399. (*Marquis of Tweeddale.*) Has it not come under your knowledge, when you have been reporting the state of certain parts of the Madras army, that the officer who commanded it in the Madras presidency said that if those men were allowed when they went on guard to do as was done in the Bengal presidency there would be an end of discipline in the Madras army, that is to say, that the guard was mounted of 12 or 14 men, and the sentries used to relieve one another and the guard took their clothes off?—I do not immediately recollect that, but the whole of their system is very different from ours, and some of our lazy fellows used to grumble and send in anonymous petitions, stating that the Bengal army were allowed to do so-and-so, and asking for the same privileges and promotion by seniority.

2400. (*Duke of Cambridge.*) You speak of petitions. Is it the case that petitions are sent direct from native officers and men to the Commander-in-chief without going through the commanding officer?—Never in the Madras army; it is expressly prohibited. Anonymous letters and petitions are sometimes written, and ought always to be read and considered; they require to be dealt with with good judgment, as, notwithstanding a just aversion to such communications, it may in some instances be dangerous to disregard them.

2401. (*Chairman.*) Do you consider that the commanding officers of the Madras army have sufficient power to reward and punish?—I think so; I know that some make complaints and say that they have not power enough. A great deal depends upon the Commander-in-chief how much he will support them, and how he will exercise his patronage for the benefit of individuals or for the public service. For many years, in the Madras army, the Commander-in-chief took no advantage of his patronage in regimental appointments; he gave no appointment to an interpreter who was not a qualified officer, nor to an adjutant who was not recommended by his commanding officer. A good commanding officer, of course, picked out his best and smartest officer to be his adjutant, but when I was adjutant-general, I have had a commanding officer writing to me to the effect that, "I must recommend so-and-so, because he "is a senior, but I shall be very glad if you will put "in another, because he is a smarter officer."

2402. (*Major-General Hancock.*) Why must he recommend him because he was senior?—Merely because the senior looked him in the face boldly and said "Why are you going to pass me over?" The senior may also have been qualified, but not the best qualified.

2403. That must have arisen from the regiment having a man at the head of it not fit to command it?—Of a man deficient in some important qualities, though of mediocre fitness to command.

2404. (*Chairman.*) Do you consider that the admixture of European and native forces should be made regimentally or by brigade; do you think that there would be any advantage in mixing regimentally any of the native troops with the European troops?—I think that it would be fatal.

2405. The admixture must be by brigades?—Keep them in entirely separate regiments, as they are now, and brigade them. I imagine that it would be fatal to attempt to mix them up in that way. I have seen it proposed and should dread the experiment.

2406. (*Viscount Melville.*) It has been proposed to put companies of natives to a European regiment, and a squadron of dragoons to the European cavalry, you think that that would not do?—I think not. If you were to put the natives to Europeans, the natives would be looked upon as secondary, and feeling themselves to be degraded, would lose their spirit. As regards having a company of Europeans in a native regiment, it would never do to let the natives see more closely the drunkenness and scenes which go on amongst Europeans. Familiarity would, I fear, breed contempt on both sides. There certainly would be no safety in having one company of Europeans in such close and undefended connection with nine companies of natives, with by no means an impossibility that physical strength in individuals might be on the side of the latter.

2407. (*Marquis of Tweeddale.*) It has been stated that petitions have been received and acted upon by the Commander-in-chief from junior officers and soldiers of the army, without their passing through the commanding officer of the regiment—Do you know any instance of that?—It is contrary to our orders that petitions be received from sepoys. They are to make their applications and complaints *viva voce* to the officers.

2408. (*Duke of Cambridge.*) It has been stated in evidence that it has been done?—I can call to recollection some instances, which were disposed of according to the rules of the service. I remember one in which a havildar had taken advantage of a sepoy's absence on duty to seduce his wife. The sepoy not obtaining redress sent in a petition to headquarters. The sepoy's allegations were investigated, and having been proved true the havildar was punished and sent out of the regiment. Still in that instance the sepoy was admonished of what the consequence would have been had his statement been untrue.

2409. (*Colonel Burlton.*) What particular personal opportunities have you had of forming an opinion upon the Bengal army. How often have you served with them?—Never.

2410. You have never served with them in cantonments or in the field?—Never at all. My information is from our own officers who have served with them, from Bombay officers who have served with them, and from Bengal officers with whom I have had communication. I was once for a short time with a Bengal force at Nagpoor, but did not serve with it.

2411. (*Marquis of Tweeddale.*) How many nights have the Madras sepoys been in their beds during the week?—At this present time, and for many years, the Madras army has been worked to a degree that has produced great discontent, and it is a very dangerous state for them to be in. Their foreign service presses particularly hard. About one-fourth of the native army is beyond sea, while its duties in India have not proportionally diminished. In 1819, the strength of Madras artillery was greater than it is now, when it occupies eleven more stations than it did then. It is important to consider that the Madras sepoys being generally married men, the welfare and safety of their families gives them and their numerous relations an interest in the stability of a good government. The excellent institution of boy establishments attached to every regiment in which their orphans are provided for, with a view to their becoming sepoys if they are fit and willing at the proper age. is also a strong hold upon the attachment and good feeling of the men.

2412. (*Duke of Cambridge.*) You said something, I think, about the mode of dressing the army?—Yes.

2413. Do you say that the present mode is objectionable?—I think so.

2414. How would you clothe them?—I would clothe the men more in the native style. The Zouaves afford a good suggestion for Europeans; and the French have lately clothed their native officers and sepoys at Pondicherry in an oriental costume, which, if adapted to our officers and men, would, I think, be most acceptable to the whole army. Our sepoys should not be obliged, as they now are, to pay for their regimental head-dresses, great coats, and the

Major-Genl. R Alexander.

23th Aug.1858.

sandals or shoes of the regimental pattern, which they wear when on duty and in uniform. These articles are supplied gratuitously to Europeans.

2415. You would have an entirely native dress for them ?—I would have it as near as possible to the native dress, with due regard to military *esprit* and uniformity. There is another very important point which I marked down, supposing that I should be examined upon it, that is, with respect to forming cantonments. All the cantonments with which I am acquainted, or most of them, are so laid out that the barracks are merely traps in which European soldiers might be destroyed in the event of a sudden outbreak ; barracks, magazines, and arsenals are placed where they are easily assailable, and without means of communication or support for a general defence. I believe that there is nothing which should occupy the minds of military men more than the question of locating the troops and laying out our cantonments. They should be so ordered, that a check might be kept upon the immense population which is always accumulating in bazaars, and occupying the ground in cantonments that ought for military and sanitory reasons to be kept clear ; and every European body of troops should be located in such manner that it can defend itself if necessary. Every magazine and arsenal ought to be a fortress, and I would remove the principal ones, as well as gunpowder manufactories, from the sea-coast to central positions in the interior.

2416. (*Chairman.*) Whose duty has it been to lay out these cantonments ?—It is in the department of the Quartermaster-General.

2417. Therefore the faults which you mention have arisen from the want of a proper administration of the duties of the Quartermaster-General ?—It has been from a want of proper care in the first instance. Some of our principal cantonments were at first camps ; by degrees houses were built, and thus they became cantonments. I would give as an example Secunderabad, our principal cantonment in Southern India. It is about six miles, with a good road, from a city that could suddenly pour out 40,000 or 50,000 armed Mahomedans. The European infantry barracks are commanded by hills, and flanked by native lines—a considerable distance from them is the arsenal, in the middle of four native regiments—across the parade-ground for the whole force are the European artillery barracks, with a native infantry regiment, and the Golundauze on their rear and flank ; and the magazine within a short distance of a clubhouse. The native horse-artillery have a separate position on the left of the whole line, and the cavalry are cantoned by themselves some little distance on the flank of the foot-artillery. When I left India, the main guard was on the left rear flank of the cantonment close to the sepoys' hutting lines and amongst the bazaars and native population.

2418. You would recommend immediate attention to the different cantonments ?—Yes. And a most important thing certainly is to bring up the artillery to an efficient and a much larger establishment than it has ever been at. The condition of the European officers requires a great deal of consideration ; recent arrangements have thrown many of them out, and disappointed them just at the time when they thought they were rising to rank and command, and others are depressed by long service and supercessions.

2419. Supercessions arising from what ?—For example, when the Royal artillery go out they supersede every man whom they come near.

2420. It appears to have been an absolute necessity ?—The necessity was clear, but it might have been remedied.

2421. (*Viscount Melville.*) You have spoken about the clothing ; would you have any alteration in the clothing of the Europeans in India ?—The European clothing and accoutrements have been improved of late years ; but I would carry improvement farther, and make much use of calico or other light clothes.

2422. With regard to calico clothes, are you not aware that on service it is impossible for European troops to do without cloth clothing ?—Quite so. It is also required during the cold season.

2423. With a man's calico clothing, how on service can he manage to carry both ?—A knapsack will carry a red jacket ; on field service a red jacket, cloth trowsers, and a grey great coat are all the woollen clothing that a man can expect, and that he would carry or have on him.

2424. How would you carry the linen clothing ?—That must be dispensed with in the field. The kit in barracks is very large, but on service must be reduced to what is simply required for health and efficiency.

The witness withdrew.

Thursday, 26th August 1858.

PRESENT :

General H.R.H. the Duke of CAMBRIDGE, K.G.
The Right Hon. Lord STANLEY, M.P.
General the Marquis of TWEEDDALE, K.T., C.B.
Major-General Viscount MELVILLE, K.C.B.
Lieut.-Gen. Sir HARRY G. W. SMITH, G.C.B.
Major-General HANCOCK.
Colonel BURLTON, C.B.

MAJOR-GENERAL THE RIGHT HON. JONATHAN PEEL, M.P., IN THE CHAIR.

JOHN F. THOMAS, Esq., examined.

J F. Thomas, Esq.

26th Aug.1858

2424. (*Chairman.*) You belong to the civil service ?—The Madras civil service.

2425. Will you have the goodness to tell the Commission how long you were in India ?—I was there close upon 39 years, that is to say, from the commencement of my service to the termination; of course I had furlough and absence.

2426. What position did you hold there ?—I was both in the revenue and in the judicial department for some time ; but during the latter part of my service, the last ten years, I was chief secretary to the Government, and a member of the Government.

2427. Is your knowledge confined entirely to Madras, or do you know anything of the Bengal presidency ?—I know nothing personally or practically of Bengal, but only through papers and official records.

2428. (*Marquis of Tweeddale.*) Had you the means of knowing what was going on in regard to military matters in the army ?—Necessarily, as a member of the Government and chief secretary, every military paper came before me, and it was my duty in both capacities to make myself acquainted with them.

2429. (*Chairman.*) Have you formed any opinion as to the proportion of European to native force which ought to be employed in Madras ?—I certainly have formed an opinion, but it would be guided

J F Thomas, Esq.

26th Aug 1858.

partly by preliminary questions as to whether you would constitute your native army as efficiently as you would a European force; and further, what would be the character of the police establishment, whether it should be a military police corps, or what it should be; in fact, what force you would have, independently of the military force, for governing the country.

2430. You consider that with the European force, not only the native force, but the police as well, must be taken into consideration?—Yes, most assuredly; I may refer to the province of Malabar as an instance, where, for 25 years, a section of the Mahomedan community was always lawless and violent. The native police and the sepoy regiments both shrank before them and were powerless. We were always under the necessity of calling in the European arm. That deranged the whole of our arrangements for European troops in the division. It was then proposed by the Government, that there should be a law passed which would give the local civil officers greater power in these particular cases. The outrages were very extensive. I may mention the last but one which occurred two years before I left India. A party of Mahomedans assaulted a family, put to death the father, the wives, and all the children, young girls, and even down to an infant of six months old, and we had no means of restraining them, they were determined to sell their lives as martyrs. The result was that the Government got a law passed which gave them greater authority, a police corps was formed, and a company of Europeans was brought down and located in the heart of the country, but they were only called upon to support the civil power in cases of emergency. Without these measures a whole corps and more than one corps of Europeans would have been required to keep that country quiet.

2431. (*Duke of Cambridge.*) What sort of police force was it which you established?—There was a police corps established with two European officers, one a captain and the other a lieutenant; and Sir Henry Pottinger and the Madras Government proposed that there should be a considerable element of European non-commissioned officers with this corps. That was overruled in England; but I have no hesitation in saying, that if we had been allowed to carry out our own plan, of having a European to every fifteen or twenty natives, making a corps of 100 to 150, as found necessary, we should have had a most efficient body for restraining outrage in that country, supported as it would have been by a European company.

2432. It was a military force?—Yes.

2433. Not a civil police?—The civil one, the police of the country, remained as it was; this was an extra corps, but of course under the magistrate.

2434. Was it armed?—Yes.

2435. In what way?—They had a rifle given them in consequence of the peculiar character of the people who attacked them, and other arms too. I think that they had even revolvers; but that was not a matter into which the Government entered.

2436. (*Chairman.*) Do you consider that the efficiency of the native troops or police is dependent upon the number of Europeans employed with them?—In all dangerous or difficult or lawless districts I think it essential; and in all districts where there is a contest between the races (for in this Mahomedan section it was partly agrarian and partly fanatical), I think the European element is essential; it secures impartiality and efficiency and trustworthiness, which nothing else can do.

2437. What proportion of European and native troops and police should you recommend to be established in the Madras presidency?—In the Madras presidency, if you take our peaceable, quiet districts in the south of India, where the people neither use nor carry arms, I should say that one European regiment is enough for even five or six districts. I should say, generally speaking, that in the Madras presidency one to three or one to four would suffice.

2438. Do you include the police in that proportion or not?—Yes, the native army and the police; all armed bodies.

2439. (*Marquis of Tweeddale.*) It would depend upon the character of the population?—Yes.

2440. (*Duke of Cambridge.*) Would you give that estimate, supposing the Madras presidency were extended; that is to say, supposing it took in Saugur and so on?—Certainly not. I conceive that the whole of the Nizam's and the Saugur and Nerbuddah country, are districts with a comparatively warlike armsbearing population. Our Madras population for the most part consists of peaceable people, neither using nor carrying arms.

2441. In case there should be any alteration in the territorial arrangement of the presidencies, and that portion to which I have alluded were added to Madras, you would not consider one to four the right proportion?—Certainly not.

2442. (*Chairman.*) Would you arm the native troops and the police in the same manner as the Europeans?—If you arm the native troops in the same manner as the Europeans you must increase the number of your Europeans.

2443. Then you would not give the natives so efficient a weapon as the Europeans?—Certainly not. I conceive that if you wish to avoid the necessity of having a very large European force you must keep the artillery and the rifle in the hands of the European alone. That would be my opinion. Upon the same principle that I refuse the native the great gun, because I have more confidence in the European, so I refuse the native the rifle.

2444. Then you would have the whole of the artillery European?—Entirely.

2445. Does that extend to sappers and miners?—Those I would have natives. The sapper and miner in Madras, and I believe it must be so throughout India, is a low-caste man; he has very little in common with the higher classes; he therefore is almost allied by his interest and circumstances to the British Government, and I conceive that there is no disadvantage nor danger in employing largely the low-caste sappers and miners.

2446. What is the proportion of low castes to the other castes in the native army in Madras?—I can get no actual data, but as far as I know from communication with the Adjutant-General's Office, and from general knowledge, I believe you will find these proportions to be about correct: 15 per cent. of higher caste men, 35 per cent. of Mahomedans, and the rest the lower classes of Hindoos, so that there would be from 45 to 50 per cent. of the lower class of Hindoos.

2447. Is caste acknowledged at all in the native army, is it any excuse for not doing military duty?—It is only acknowledged in this way: Sir Thomas Munro proposed, on the first Burmese war, to issue an order that all men of caste, and all men who on religious grounds did not choose to embark, might absent themselves, but the commander-in-chief of that day said that the order should be that any man who did not like to follow his colours was at liberty to take his discharge.

2448. (*Major-General Hancock.*) But you are aware that the Madras troops were enlisted on the terms of not being liable to be sent beyond sea?—They are enlisted on that ground, and therefore as soon as they come to the seaboard they are at liberty to take their discharge.

2449. Of course if they are enlisted on those terms the Government have not the power to send them beyond sea?—They have not the power, but practically the Madras troops have for very many years been in the habit of going beyond sea; and when they were called upon to say whether they would embark, the order went out, "Does any caste man "object?" they threw up their caps and said, "Who "cares for caste?"

2450. What is the course adopted by the Madras Government when they require troops for foreign

J. F. Thomas,
Esq

26th Aug 1858.

service ?—They call upon the commander-in-chief, saying that they require such and such a force, and he issues his orders to the generals of divisions and to the adjutant-general for such and such a force to be prepared to embark.

2451. What orders are given to the officers commanding regiments ?—If any man chooses to say that he will not embark, in consequence of caste views, he has liberty to take his discharge.

2452. Then, in fact, the commander-in-chief of the army orders the regiments to embark ?—Yes.

2453. And if they decline to embark they are considered to be guilty of no crime ?—We never had a regiment declining to embark on the ground of caste.

2454. But any individual man ?—Yes, but he takes his discharge.

2455. (*Duke of Cambridge.*) On principle do you not think it a very awkward matter. Suppose a regiment said that they would not embark ?—If it had ever been brought to that in the Madras presidency, the Government must have taken up their ground.

2456. (*Major-General Hancock.*) Is it not liable at any moment to come to that point ?—Never, with our low-caste men.

2457. (*Lord Stanley.*) Does not that arrangement which you describe place the Government under the suspicion of calling upon those men to do that which it has been expressly promised to them that they shall not be called upon to do ?—It would be so if our army was constituted of high-caste men, where there was a real palpable known objection, and an honest objection, on the ground of caste, but it does not apply to the low-caste men.

2458. I do not care whether the objection is an honest one or not, or whether it is made by high-caste men or by low-caste men; the question is, whether an engagement has not been made with the men when they enlisted, which engagement, by your description, is not strictly observed afterwards ?—I should say myself that every man having the power of relinquishing the army whensoever he chooses without disadvantage to himself, the engagement is fulfilled to him. If he was subject to penalty or loss because he did not do that which the Government had engaged that he should not be called upon to do, then I should say that there was a breach of contract with him.

2459. He is subject to the penalty of being deprived of his means of subsistence ?—That is to say he takes his discharge. If his regiment embarks beyond sea it is palpable.

2460. (*Major-General Hancock.*) Further than that, is not that man liable by the Articles of War to be brought to trial by court-martial, and condemned to death for disobedience to orders ?—Certainly not in the Madras army.

2461. Why not ?—Because the option is really given to him of embarking or not embarking without penalty or loss.

2462. Then you mean that that Article of War has no reference to the Madras army ?—That question I would not answer; practically we have no difficulty.

2463. (*Chairman.*) Surely he would not be subject by the Articles of War to a punishment for doing that which he was not enlisted to do ?—Certainly not; and more than that, when the Government gave every man the option, they could never bring a man to a court-martial for disobedience to orders, it would be a contradiction of terms.

2464. (*Duke of Cambridge.*) Then the Government is subject to the caprices of any man who does not choose to embark ?—Certainly.

2465. (*Sir Harry G. W. Smith.*) When a regiment is ordered to embark, if any man or men refuse to go, and apply for their discharge and get their discharge, do they lose caste when they return to their own villages ?—Certainly not. There is one peculiarity which makes the question, as regards the Madras army, so different from the question as respects another army, namely, that the Madras army are nearly all low-caste men who are married. The corps is their home, it is their village, they are all isolated from the body of the population; there is no public opinion influencing them; if the acts which they do are of good esteem in the regiment it is sufficient; their families or their relations are living with them in the regiment, and they are under no disadvantage, and no discomfort, from following out what the regiment sees to be right, therefore there is no possible objection or motive not to go.

2466. (*Chairman.*) Might not the Madras troops refuse to serve in Aracan ?—I should say myself that under the enlistment every man might refuse to go across the sea as well as one man; but I imagine that if the corps said they would not go, the only thing would be to disband it.

2467. (*Lord Stanley.*) That is to say, you would punish the whole regiment for refusing to do that which it has been expressly promised them that they shall not be called upon to do ?—The whole regiment might be punished for it; it would not be for not agreeing to what they had originally engaged to do, but under the circumstances of the Madras army it would be positively a species of mutiny. For there is no reason why one corps should not embark as well as another corps.

2468. That is to say, you tell a man that you will punish him, not for refusing to do that which he has been told that he shall not be called upon to do, but because you consider that his refusal shows a mutinous spirit ?—Not only so, but also if there is no ground whatever for his refusal.

2469. (*Duke of Cambridge.*) Why then put it in the enlistment ?—That is the old usage.

2470. (*Major-General Hancock.*) Do you think that that can possibly be a right system by which the Government breaks faith with any servant, makes an engagement with a soldier that he shall only serve within certain limits, and then orders him to go beyond ?—I beg pardon, they do not order him to go beyond; they allow him to volunteer or to decline to volunteer.

2471. I understood you to say that the troops were ordered in the first instance, and were discharged if they refused ?—The regiment is ordered, but an individual man of the corps may embark or not; it is an anomaly.

2472. (*Chairman.*) Do you recommend any alteration in the terms upon which the enlistment for the Madras army shall take place for the future ?—Most decidedly. I should say that the ordinary principle of the Indian Government should be perfect openness, and perfect clearness, with every man in their employment.

2473. The men should be enlisted to go everywhere ?—For service beyond sea; for every service for which the Government can want a soldier.

2474. (*Duke of Cambridge.*) Then, though practically you find that the system as it has hitherto worked has worked well in Madras, still you admit that on principle you would prefer and would recommend an alteration to the extent that a man should go where ordered, and not be asked whether he liked it or not ?—Most assuredly, and no other principle is compatible with the present state of India.

2475. (*Viscount Melville.*) Do you think that you could get the men to enlist easily under those conditions ?—I should say that there is not the slightest difficulty in the Madras presidency. I believe that on a regiment embarking scarcely a man holds back. I only speak from general knowledge; but one would have heard of it if the contrary had been the case.

2476. (*Chairman.*) Do you consider that the native force of Madras should be continued on the regular system, or should the irregular system be introduced into it ?—It would depend upon circumstances.

2477. What is the system ?—There are no irregular corps; it is all the regular army, regular infantry and regular cavalry.

2478. What is the number of European officers attached to the native regiments in the Madras

J F. Thomas, Esq.

26th Aug. 1858.

army ?—There are seven captains and eleven lieutenants. I think it is the same as in Bengal.

2479. What is the proportion usually present in the regiments ? Does any inconvenience arise from their being detached upon the civil service ?—Certainly ; but a rule which is distinct and express for all the presidencies has been kept at Madras with a rigidness unknown in Bengal. Over and over again we have had discussions with the Bengal Government upon that subject.

2480. (*Duke of Cambridge.*) You do not allow any more than a certain number of officers to be absent ? —Never more than the regulated number.

2481. How many officers would that give present ? —With the regiment, five captains and six lieutenants. These are details with which I am not so familiar.

2482. Generally an officer to a company would be present ?—Certainly, including the lieutenants.

2483. (*Chairman.*) Do you consider it absolutely necessary, in the native regiments, to have a European officer present with each company ?—Yes, to make them efficient and safe.

2484. (*Major-General Hancock.*) There are much fewer civil, staff, and other detached appointments in Madras than in Bengal, are there not ?—Yes ; in Bengal the large number of political appointments connected with the seat of Government takes off a number of officers, which is not known much in Madras.

2485. (*Chairman.*) What is the police force which is employed in Madras ; has it been employed to any extent ?—There have been no police corps to any extent ; they are now organizing a regular police force, and have appointed two lieutenants and a captain to be superintendents of police besides the commissioner of police ; but, excepting in the small district of Kurnoul, there has been no military police of any extent.

2486. Are any duties now done by the native troops which you would recommend being transferred to the police force ?—There are several duties done by the native troops which are not necessary for troops. At the same time it is a difficult question, it depends upon the part of the country. I think that in the provinces in which I was, where the population was perfectly peaceful, the charge of the treasury and of the gaol might be given to veterans, or to any persons who received pensions, so that there was a hold upon them ; but otherwise I think it would be unsafe. The great use of the regular army in all these extra duties is, that they are pensioned and promoted, and you have a hold upon them which you have not upon a man who is on a monthly salary.

2487. (*Viscount Melville.*) In Madras are the treasury guards furnished by Europeans or by natives ?—At the treasury in the fort of Madras, and over the bank of Madras upon the beach, it is European ; but the treasury guards in the provinces are all native guards.

2488. (*Major-General Hancock.*) I imagine that at any station at which European troops are located those guards are taken by Europeans, are they not ?—I should say decidedly that we have very few Europeans. Bangalore is not within the Madras presidency.

2489. Nor the arsenals ?—No ; on the contrary, I remember that the whole of the arsenal at Bangalore was in the hands of the native sentries.

2490. (*Duke of Cambridge.*) I understand you to say that you would wish all the artillery to be Europeans ?—Certainly.

2491. Of course you are aware that the Madras army has not mutined ; would you therefore allow the present system to go on and to die off (if I may so express myself) as far as the artillery are concerned; that is to say, not to enlist further natives for the artillery, or would you at once introduce a change by disbanding the native artillery and substituting Europeans for them in the Madras presidency ?—I should be sorry to have such a question depend upon any opinion which I could form, but speaking generally, and viewing the character of the native, I should prefer (seeing what they have done) not showing more distrust, but allowing them gradually to fall off, and a new and better system to be introduced.

2492. Substituting it by degrees ?—Substituting it by degrees. At the same time, if I found that military men connected with the artillery said that the thing could be well done, and that it was better to do it at once, I should defer to their judgment.

2493. (*Chairman.*) Do you consider that the Madras army should be composed of different nationalities or castes, and if so in what proportion ?—Unquestionably it should be composed of different castes, and I should myself say that the larger the body of low-caste men the better, because the low-caste man has a direct interest with us ; he is kept down by the feelings and views of the higher classes. The Mahomedan never can be allied with us in feeling, although he may be very valuable. In my early days, if the question had been asked, "Will you stand faithful to the Government?" the answer of the Mahomedan would have been, "I "have eaten the Company's salt, how can I be faith- "less?" The answer the other day of the men of the 3rd Madras cavalry, when asked by their officers what they thought of the mutiny, was, "We thought "that our fellow Mahomedans were fighting for their "rights and their religion, and they were quite "right."

2494. (*Sir Harry G. W. Smith.*) It has been stated before the Commission that to elevate the natives both in civil employment and in military employment would tend greatly to the quietude of the country ; are you of that opinion ?—I am decidedly of that opinion as respects civil employment, but I cannot think that it is wise with so small a body as we are, and such an enormous population surrounding us, to give them the power of the sword, the power of the great gun, the military arm; on the contrary, I think it a plan well calculated to prevent any chance of their rising to give them full civil advantages, but I cannot think that that applies to the military arm.

2495. (*Chairman.*) What has been the system of promotion in the native army of Madras ?—By seniority after they get the junior grade of naik or the lower grade, corporal and sergeant ; it is then pure seniority in the native army.

2496. Do you prefer the system of selection to that of seniority ?—On the same principle that I do not think it expedient to make the native army a powerful, well-organized army, and formidable to ourselves; I would have the seniority system. I have seen it stated over and over again by men who have taken the opposite view, that had there been well-trained young native officers in command of the native troops, we should have had a very different state of things in India in the late mutiny.

2497. Then you are for the seniority system because you consider that it deteriorates the troops ? —If I were allowed the expression, I would say that I am for the seniority system because I think that by that means the native officer is not so efficient for the purposes of injury or the purposes of damage to the British Government, and also because I think it just to the men themselves.

2498. (*Lord Stanley.*) You consider it as a guarantee for inefficiency ?—I consider it as a guarantee for inefficiency, just as I do the refusal of the rifle or the great gun.

2499. (*Chairman.*) For what purpose do you propose employing these native troops whom you are to keep inefficient, by the manner in which you appoint their officers and arm them ?—I view the state of India at the present hour. When we first entered India there were large native powers surrounding us with their forces. The Mahratta powers and the powers in the north, and Hyder's power all originally had large well-armed bodies of troops, many of them with European discipline. It was necessary for us to raise a large military force to cope with them. The circumstances are wholly altered now, there is not a native power throughout India which can bring

J. F. Thomas, Esq.

26th Aug 1858

any disciplined men into the field in any numbers. In order to meet an effective army in former days our troops must have been made equally effective as those troops, but we are now in totally different circumstances, we only require to garrison the country. Whether you look to Pegu, or to any part of the southern Mahratta country, there is not a native power that can bring a large well-disciplined and equipped native force against us. Therefore all I can say is, that I recommend that you should have a military force comparatively defective and ineffective compared with the European army, but effective beyond what any native power can bring into the field.

2500. (*Duke of Cambridge.*) Then you would have the native army organized entirely for the internal purposes of the country, and as regards the country alone, and not apply to it all the advantages of science and art which European troops have gained in modern times ?—Certainly.

2501. (*Major-General Hancock.*) You would reduce the native army to a mere police force, would you not ?—I would not.

2502. You would not call it that. but it would be so practically ?—A police force depends upon the manner in which you would form and arm it. The constabulary police force of Ireland is an armed body thoroughly efficient ; they might go into the field tomorrow, but the police force of the metropolis and of Great Britain is a differently constituted force.

2503. (*Colonel Burlton.*) If you think it advisable to have inefficient native officers, do not you think it a better arrangement to have none at all ?—It appears to me that if you have a large body of 600 or 700 or 1,000 men you must have officers.

2504. What do you think of having European non-commissioned officers attached to native regiments ?—I think it very desirable.

2505. Instead of the native officers ?—No ; there is a non-commissioned officer attached now.

2506. (*Duke of Cambridge.*) You would increase the number ?—I would assuredly.

2507. Some to each company ?—Yes.

2508. (*Major-General Hancock.*) With what object ?—Two objects. In the first place, those men marry either native women or East Indians, and I think that by mixing them with the native regiments a right feeling would grow up. Further than that, where you employ your native troops, as they will be employed, in keeping the internal peace of the country, as your native army is composed partly of Hindoos and partly of Mahomedans, I think it essential and very much calculated for general peace that a European, who can have no more regard and affection for one than for the other, should be present. We did it at Trichinopoly, where there was a very severe religious contest. That arrangement itself tends to keep the peace.

2509. (*Colonel Burlton.*) Do you think that these European non-commissioned officers attached to native regiments would form a better channel of intercommunication between the natives and the European officers than the present native officer does ?—Decidedly. The married woman, whether native or East Indian, lives in the bazaar, and walks about, and there is decidedly more intercourse than the European can now have.

2510. (*Major-General Hancock.*) Do you mean that you would make the wives of serjeants the medium of communication ?—Certainly not, any more than the mistress of an officer in the Mahratta war ; but we know perfectly well through what channel it was that the best information was got.

2511. (*Chairman.*) Do you then consider that the present communication between the European and the native officers is not sufficient ?—It certainly is not, as a general rule.

2512. (*Colonel Burlton.*) You are aware, I suppose, that during the whole of the late mutiny in Bengal no single instance has been known where a native officer has given the European officer information of what was in operation ?—Just so, and in the 8th native cavalry of Madras, which has been disbanded for disobedience, the native officer concealed the state of the regiment. He has an interest which is distinct from that of the European officer.

2513. (*Sir Harry G. W. Smith.*) With your great experience in India, admitting that the native army is formed upon the principle which you mention, half police as it were and half soldier, as being sufficient to keep the whole population in order, what resources would the Governor-General have in the event of wishing to carry on war in Chittagong, Rangoon, China, or any other place ?—My opinion would be that the Eastern powers, unassisted by the powers of the Western world, are powerless against any native force armed in the manner I recommend, with British artillery to back it ; there is no power equal to cope with it, not even Persia.

2514. (*Chairman.*) Have you formed any opinion as to the amount of force which will be required in the Madras presidency after the country is settled ?—May I ask for an explanation of what is meant by "the Madras presidency ?" The Madras presidency as managed and immediately under the Government is of a limited extent, and it is a most peaceful country ; but if you apply the term "the Madras presidency" to wherever the Madras troops are sent who are paid from the Madras treasury, and who are under the orders of the Madras commander-in-chief, with his staff, it is then a very different thing.

2515. I mean that portion held by the Madras army ? — The Madras army garrisons Penang, Singapore, and the Straits ; it has been sent to Labuan ; then all Burmah is entirely garrisoned by Madras troops ; there are eleven native regiments there besides artillery.

2516. Include all those ?—Then the whole of the Nizam's country, Saugur and Nagpoor, is held by Madras troops.

2517. Including the whole of that territory what force would you have for Madras ?—I imagine that the present force, namely, fifty-two native regiments, would be found sufficient. I cannot conceive the Madras cavalry to be a desirable arm : they are chiefly Mussulmans.

2518. (*Viscount Melville.*) How many Europeans would you have ?—I should say one to four.

2519. (*Chairman.*) According to your smallest proportion you would have ten European regiments ?—Yes. If you took the Nizam's country, and part of the distant southern Mahratta country, it would be too few ; but if you took the actual Madras presidency under the civil government, it would be more than ample. There everything is in order.

2520. In proportion to those fifty-two native regiments how many European regiments would you have ?—I would have twelve, if the Madras army is to garrison countries with a comparatively warlike or lawless population.

2521. (*Duke of Cambridge.*) Including Burmah ?—Yes.

2522. (*Chairman.*) Is that inclusive or exclusive of the artillery ?—Exclusive of the artillery.

2523. (*Viscount Melville.*) Is it exclusive of European cavalry ?—Yes ; the European cavalry is only one regiment.

2524. (*Duke of Cambridge.*) What would you do with respect to cavalry ?—I can only just offer a mere suggestion, of little value in itself, arising from my knowledge of what has taken place now. The Madras cavalry is, seven-eighths of it, Mahomedan, and on that account is untrustworthy. Three months with General Whitlock's force (an officer writes) have given me but one opinion respecting the Madras cavalry, namely, that it is worth nothing to us. An officer of the Madras cavalry in Bengal also wrote, that when he advanced with his troop against the mutineers, every man of the Madras cavalry left him alone, and his pariah servant hallooed out "Is that "the way you act ; is that to be a soldier ?" Therefore I believe, that as long as your cavalry are Maho-

J. F. Thomas, Esq.

26th Aug. 1858.

medan, when you bring them against men who are fighting for their religion, you can have no confidence in them at all, simply because they are Mahomedan. They are as good soldiers in every other respect as any other part of the army.

2525. What would you propose instead?—I have merely seen, as everybody else has seen, a proposition to have a man of light weight for European cavalry.

2526. (*Lord Stanley.*) You are clear upon the point that the fact of being a Mussulman should be a disqualification for military employment?—I am clear upon the point that a regiment being so constituted as to be seven-eighths of it Mahomedan is an evil; but if the Mahomedans were there in small proportions, I should think it an injustice to debar any part of the Mahomedan population from military employment.

2527. (*Chairman.*) How do you account for such a very small proportion of low-caste men being in the Madras cavalry, when you say that in the other branches of the army they preponderate?—We have no horsemen; it is not the habit of the country. We have only a little poney, merely an animal to carry baggage, whereas in the Mahratta country the horse has been long used.

2528. (*Major-General Hancock.*) Has there been any difficulty in recruiting the Mahrattas?—None at all. The Rissalahs in Mysore are Mahrattas, I believe.

2529. Could not many of that class be made available for the regular cavalry regiments?—I suppose they might be if they were enlisted; they are not within our own presidency, and the Mahomedans are enlisted from men of our own territory.

2530. (*Chairman.*) I understand you that the cavalry are all regular?—Yes, there are eight regiments of them.

2531. Are not the horses supplied by the Government?—Yes.

2532. (*Colonel Burlton.*) Where do they get their horses, from Bombay?—From the Gulf, and latterly a good deal from the Cape.

2533. Have they a stud?—They have no stud; they have horse agents.

2534. (*Viscount Melville.*) They always used to have a remount agent at Bombay?—There was a remount agent, but they have dispensed with that, and they have gone direct to the dealers, and an agency is now established at Bangalore, and the dealers bring them without a remount agent.

2535. (*Sir Harry G. W. Smith.*) Are you of opinion that irregular cavalry might not be raised in the Madras presidency?—From Mahomedans no doubt, they could, but whenever you have the Mahomedan element you must allow for the natural and just feeling of every Mahomedan; if he is not an infidel in his own faith he is decidedly hostile to Christian superiority and supremacy.

2536. (*Viscount Melville.*) What is the predominant caste in the infantry?—The Sudra, or the lower agriculturists. Rules have existed not to enlist the actual Pariah of latter years, but still the predominating caste is what we should call the common Ryot or Sudra.

2537. Then are there few Mahomedans in the infantry?—About thirty-five per cent., I think.

2538. (*Duke of Cambridge.*) You do not object to that?—I think the proportion is decidedly too large for safety and trustworthiness. I have asked the question if there could be any data obtained as to the present proportion, and I have been answered that there are no actual data yet framed.

2539. It has been stated in evidence before us by several witnesses that the same caste which would refuse to embark or to do certain duties on account of caste in Bengal would do those duties in Madras; that is to say, that they would do in Madras what they would not do in Bengal; is that your opinion, or are you aware from your experience that such has been the case?—We know it actually to be the case.

2540. Can you account for it in any way?—Yes, I could account for it.

2541. In what way?—It arises from the European influence over the native. In Bengal and in Calcutta the feeling has been shared to such an extent that a man like Sir Charles Metcalfe never had ham on his table, because he did not wish to offend the Mahomedan prejudices. In Bengal, a ham, or any other dish connected with pig, was brought in by the very lowest servant, and put upon the table. If my butler had objected to do it in Madras I should have sent him out of the house in an instant. When Lord Wellesley went to Bengal he ordered his bearers to pull his punka, and they declined; the same men do all that without scruple at Madras, and it was not without Lord Wellesley's firmness that after three days' strike the thing was put an end to. Why they should allow caste so largely to influence them in Bengal I am not sufficiently master of the question to say. A lady of considerable experience with whom I was acquainted lived in Bengal from 1780, in Warren Hastings' time, until very lately, and from her I knew the whole facts of Bengal society for half a century and why the Bengal people allow all this I cannot tell you.

2542. Then you think it is merely because they have given way to prejudices of caste more than the Madras people, and consequently the difference has been very great?—We have the actual fact.

2543. The result then is that European influence is greater in Madras than it is in Bengal?—I believe so decidedly over the native; then there is another thing to be said, the Madras Brahmin population will never entertain to a man as soldiers; they are totally distinct men from the Brahmin population in the north-west.

2544. (*Sir Harry G. W. Smith.*) Then from your great experience in India, you are of opinion that just authority tends to a better result than conciliation, as to the obedience of the natives?—I should only qualify that by saying that by "just authority" I mean pure, full, and ample justice, not merely authority because I order it, though it may be just in that sense; but it must be based upon principles of full and ample justice to the individual.

2545. That is preferable to attaining the same end by conciliation?—Far preferable; it is the only way which will secure us, in my opinion.

2546. (*Colonel Burlton.*) I believe that in the remarks which you have just made respecting deference to caste, regarding the matter of hams and pulling punkas and so forth, you alluded only to the Government House?—Those are the habits of society.

2547. (*Lord Stanley.*) What I understand you to mean on the subject of compliance with caste is this: you do not, I presume, object to its being respected whenever its observances do not conflict with military or other duty?—On the contrary, I should say that consideration to a man's private feelings is a bounden duty.

2548. And you hold it, I presume, to be very important to show the people of India, that where caste rules are interfered with, it is not done in the wantonness of power, or from a wish to assert the superiority of our habits over theirs, but simply because those rules which we break through stand in the way of something which it is necessary should be done.?—That is precisely my view.

2549. (*Duke of Cambridge.*) Then the result would be that if on a man's enlistment certain things were put before him which he would be called upon to do, and he were told, "If you cannot do these things we cannot enlist you," you would take it for granted that if he accepted that enlistment with those conditions, caste would afterwards not stand in the way of performing the duties which he had undertaken to do?—Precisely so.

2550. (*Chairman.*) And I understand you to say that under proper regulations you do not find caste to stand in the way of the performance of military duty?

J. F. Thomas, Esq.

26th Aug. 1858.

—Just so; on the contrary, in Madras high-caste men have done things which in Bengal they have refused to do.

2551. What has been the total strength of the Madras army?—The infantry may be about 50,000, and the cavalry about 2,000 and upwards.

2552. (*Duke of Cambridge.*) Natives?—Yes, I am referring to the native army; and then there have been the sappers and miners, 1,700, I think, and the native artillery.

2553. (*Marquis of Tweeddale.*) Has the native army of Madras been recruited up to the full establishment?—At one time the corps were 750, and then the Bengal Government ordered them to be increased to 900.

2554. Do you think that at any time the regiments of the Madras army have been complete according to the numbers?—I do not believe they have.

2555. Do you know the reason?—No, I am not aware of the actual reason.

2556. (*Viscount Melville.*) From the situations in which you have been can you say whether the natives of Madras are allowed to go about armed?—In some of the districts, such as those bordering upon the Nizam's country and bordering upon the Mahratta country, in time of alarm they are pretty generally armed; but in our peaceful part, in the south of India no man carries arms; indeed the Government were obliged to issue an order that a reward should be given to those who carried a gun so as to resist the attacks of private robbers.

2557. (*Duke of Cambridge.*) Would you not rather see the population without arms, taking into account all that has lately occurred?—The possession of arms is a more manly and better basis of character, than that of the man depressed and kept down as a serf.

2558. (*Viscount Melville.*) Are you not aware that Sir Charles Napier's government at Scinde ordered the disarming of the natives there?—Scinde was comparatively a lawless country; in Malabar in the same way the Government of Madras disarmed the population upon the same ground, and I am quite in favour of disarming all the lawless classes of our subjects; at the same time I would always grant permission under licence to men to carry arms.

2559. (*Major-General Hancock.*) Firearms as well as others?—Yes, under permission. Whilst I would disarm every lawless vagabond, and every warlike class, I would not withhold the use of arms from the respectable portion of the natives.

2560. (*Duke of Cambridge.*) You say that you would disarm every lawless person, is it not somewhat difficult to make a distinction in an entire population?—I believe not, the classes are so distinct in India; the Moplar Malabar man, for instance, is a Mahomedan totally distinct from the whole Hindoo population.

2561. (*Sir Harry G. W. Smith.*) Do you recollect to what extent, as to numbers, the people under one civil authority have reached?—I had the district of Tanjore and Trichinopoly; the one contained more than 500,090 and the other about 1,200,000, so that there were about 1,700,000; but that was an enormous district, and it was subsequently divided into two.

2562. (*Viscount Melville.*) Were the natives there allowed to go about armed?—They never carried arms.

2563. (*Major-General Hancock.*) But they were free to do so if they wished?—Yes. There was a police law, that if they carried arms they might be called upon to account for them, if anybody was found about the country with arms, but that was a mere matter of local police.

2564. (*Marquis of Tweeddale.*) Did you make any observation with regard to the Company's European troops respecting their being in an efficient state of discipline?—We could not help doing so. When the Company's European troops were ordered, as they have been at different times, to embark for Burmah, Madras has always been in a state of disorder and siege; every native was in danger of being knocked down, and the very houses and places at Madras in the Black Town have been for a few days barricaded.

2565. What has been their conduct in the field?—In the field I have always understood that they fight admirably.

2566. To what do you attribute that?—I attribute it to the European standing up against the native.

2567. To what do you attribute their conduct when they come into large towns?—To their not being under the same discipline as the Queen's troops are; and they cannot be from the system which exists, namely, the system of seniority, just as it is in the native army. I also think that the European, remaining in India, being of the same ruling, dominant class as his officer, he does not look up to him to the same degree.

2568. (*Duke of Cambridge.*) Then you would rather have the Europeans changed; you would rather that they should come and go?—Certainly; but then, again, these men form marriages in the country, become allied and attached to the natives in a way in which perhaps a corps which only comes and goes would never be. I think that there are opposite considerations.

2569. (*Major-General Hancock.*) What do you mean in saying that the system of seniority with the Company's European troops is one of the causes of the state of things you have described?—In the Company's army the officers cannot purchase over each other.

2570. Why should that be a reason for their not being amenable to discipline?—I should say that the Queen's troops owe part of their discipline to younger men and men of energy, who buy commissions and take a great pride in their regiments, and command them as very young men, also they have a natural influence from their position; many of the men, perhaps. come from the same county, and they know their families, and there is an hereditary influence in the Queen's army which cannot exist in a mere army of seniority. But these are questions upon which I can merely state the thoughts which have occurred to me.

2571. (*Colonel Burlton.*) You have expressed an opinion that it would be advisable to have European non-commissioned officers attached to the companies of every native regiment. Do you think it also advisable to have companies of Europeans attached to native regiments; two flank companies, for instance?—I am not competent to give you more than a mere off-hand opinion; but it seems to me that there is something so distinct in the whole discipline and character of the Europeans, that it is not expedient to put them with the natives in such numbers, or to have a company; it is, however, a mere thought which occurs to me rather than anything else.

2572. (*Chairman.*) You consider that any admixture of European and native forces should be by brigades, and that they should not be mixed up regimentally?—Not by companies, I should say, so far as I can throw out anything for consideration.

The witness withdrew.

Lieutenant-Colonel ALFRED THOMAS WILDE examined.

Lieut.-Col A. T. Wilde

2573. (*Chairman.*) What rank do you hold in the Indian army?—Brevet lieutenant-colonel.

2574. How long have you been in the service?—20 years.

2575. How many years of that period have you passed in India?—The whole.

2576. In what presidency have you served?—I belong to the Madras army.

Lieut.-Col. A. T. Wilde.

26th Aug. 1858.

2577. In what branch of the service ?—The 19th Madras native infantry. I have been 11 years in the Madras army, and nine years in the Punjaub irregular infantry.

2578. You have been in the Bengal presidency ?—Yes, for nine years.

2579. Of course you have had opportunities of seeing European and native troops act together ?—Yes, frequently.

2580. Have you formed any opinion as to the proportion which the Europeans should bear to the native troops in the Bengal and Madras presidencies ?—I think one European to four natives ought to be about the average. I consider however that the real safety of our Empire in the East depends upon other arrangements. I don't believe that a purely European force could hold India however large it might be, or rather if as large as the revenues of the country could support.

2581. Do you take the police into consideration at all ?—No, not in that estimate; that is exclusive of police, but including all branches of the service.

2582. (*Duke of Cambridge.*) Including the artillery branch of the service ?—Yes, the artillery, cavalry, and infantry.

2583. (*Chairman.*) Would you have the artillery exclusively European, or would you have any native artillery ?—I would have no purely native batteries or troops, but I would mix the two together. I would have some natives, probably half, in the troops and batteries.

2584. (*Duke of Cambridge.*) You would mix them up ?—Yes.

2585. What formation would you adopt for that purpose; would you have the natives as drivers, or partially both gunners and drivers ?—I would have them as drivers. I think that the question could be better answered by an artillery officer, but I think that they might and ought to be employed with our Europeans in serving the guns; for instance, in the reserve artillery, half of them might be natives to serve guns in battery.

2586. (*Major-General Hancock.*) You mean gunners ?—Yes.

2587. (*Duke of Cambridge.*) Would there be no difficulty in the interior economy of a company or troop so organized ?—I think not.

2588. Would there not, as to the means of cooking, rationing, &c., be some considerable difficulty ?—I think not; I think that any artillery officer would be able to work out that plan very easily.

2589. (*Sir Harry G. W. Smith.*) Do not you think that in cases of disaffection it would afford great facility for these men mixed up with our artillery to spike the guns in the night ?—Of course there is that danger, but with European soldiers to watch them the probability of success almost, in my opinion, amounts to an impossibility.

2590. (*Chairman.*) Have you formed any opinion as to the amount of force which will be required after the mutiny is suppressed ?—It is difficult to speak without statistics; I should think for Bengal about 25,000 Europeans to 100,000 natives.

2591. (*Duke of Cambridge.*) Do you include the Punjaub in Bengal ?—Yes.

2592. (*Chairman.*) Do you include the artillery in those numbers ?—I include all branches.

2593. What force would you recommend for Madras ?—I cannot detail the exact number required as it must depend upon political considerations.

2594. (*Duke of Cambridge.*) Are you aware that that proportion of Europeans is actually less than you had before the mutiny broke out ?—No, I think it must be more. I do not include Burmah and China in the Bengal Presidency.

2595. Do you consider that there should be fewer of European troops in Bengal, including the Punjaub, now, with the experience which we have had, than there were before the rebellion broke out ?—No, my intention was to have more. Not having statistics, I can only give general ideas. I do not wish to have more than four to one, and 25,000 Europeans to 100,000 natives would be that proportion.

2596. Would you think that there should be fewer Europeans than there were before ?—No, unquestionably more; we had too few at that time.

2597. (*Chairman.*) Then, as I understand you, you would reduce the proportion of natives to Europeans without expressing any opinion as to the total number ?—Yes.

2598. Do you consider that the force should be on the regular system or the irregular system, or both combined ?—I prefer the irregular myself, I think it far more efficient.

2599. (*Viscount Melville.*) Both for infantry and cavalry ?—Yes.

2600. (*Sir Harry G. W. Smith.*) Have you served much in the irregulars ?—Nine years. I commanded a regiment seven years of those nine.

2601. (*Colonel Burlton.*) The Punjaub irregular regiment ?—The 4th Punjaub Irregular Infantry.

2602. (*Sir Harry G. W. Smith.*) You have served with the irregular cavalry also, have you not ?—Not actually with them. I have had them under my command frequently.

2603. You belong to the infantry ?—I do.

2604. (*Duke of Cambridge.*) Would you have any regular native infantry or cavalry at all ?—I would have none. I would have them all irregular.

2605. Will you explain why you prefer that system ?—I think that the irregular system is more in accordance with the ideas and habits of the native soldiers; you have greater authority over the men; they look up to their European officers to a greater extent than they do in the regular service; and having served under both systems I find that the irregular one is certainly the best.

2606. In what way have you more authority over the men ?—There is greater power to punish the bad and reward the good men. Men are selected for promotion according to their merits, and not by seniority.

2607. Since when has that existed ?—Since the Punjaub force was raised; we have always had the power of promotion in the hands of commandants.

2608. Is that according to the regulations of the service ?—Yes; the regulations of the irregular service.

2609. (*Chairman.*) Then you attribute the superiority of the irregular over the regular force to the greater power given to the commanding officers ?—Yes; and another very strong reason is, that the native officers in an irregular regiment are very superior to those in a regular one. The average age of my native officers was 26 years. They were actually the leaders and commanders of companies.

2610. (*Viscount Melville.*) By whom was that power which you have just mentioned given to commanding officers in irregular regiments ?—It was allowed by the civil government, Sir John Lawrence, and Brigadier Chamberlain. In fact the Punjab irregular force was originally constituted on this basis when raised under the orders of the Marquis of Dalhousie on the annexation of the Punjab.

2611. (*Major-General Hancock.*) The corps to which you are alluding are civil corps, I suppose, under the Government, not under the commander-in-chief ?—Yes they are under the civil authority.

2612. (*Duke of Cambridge.*) Take the ordinary irregular cavalry of Bengal ?—That is different.

2613. That is not upon the principle which you have explained ?—No, it is separate. The Bengal irregular cavalry were under the orders of the commander-in-chief.

2614. (*Sir Harry G. W. Smith.*) Are the irregular horse as well mounted as the regular cavalry ?—No, certainly not, but still sufficiently well mounted to perform all the duties of light horse, which work, owing to their equipment and organization, they performed admirably.

2615. And in the event of all the cavalry in India being irregular, how would you propose to mount so rge a number ?—I do not think that there would be ny difficulty in getting horses ; we never found ny.

2616. (*Duke of Cambridge.*) You said that the regular Punjaub regiments were under the civil uthority ?—Yes, they are.

2617. Do you mean to say that they are not t all under the military authority ?—They were rganized in this way originally. The whole of the nterior economy was managed by a brigadier, who was first of all called the inspector under the civil uthority ; but then came the difficulty of how the ivil government was to convene a general court-martial for the European officers, or even for the ative officers ; it was decided that where officers, ither European or native, had to be tried, a reference to his Excellency the Commander-in-chief, hould be made. Every other matter, whether of romotion or of inferior court-martial, was settled by he civil authority.

2618. (*Viscount Melville.*) Then in what sense were the Punjaub irregular troops under the military, were they within the Articles of War or not ?—They were.

2619. (*Duke of Cambridge.*) How could they be nder the Articles of War if they were not under military authority ?—It was an anomaly, but still hat was the system, and the freedom of action it ave the officers of the force enabled them to lead heir men to participate in the recapture of Delhi nd Lucknow.

2620. (*Major-General Hancock.*) Do you mean hat all ranks in the regiment were amenable to the Articles of War ?—Yes; but still the civil authority f the country, that is to say, the chief commissioner n the Punjaub, formerly Sir Henry Lawrence, and ubsequently his brother, Sir John Lawrence, conirmed and settled all courts-martial inferior to general ourts-martial.

2621. (*Chairman.*) How did promotions of native fficers take place in that irregular force ?—By reommendation to the brigadier, and the confirmation f the chief commissioner.

2622. Then they were appointed by selection, and not by seniority ?—Entirely by selection.

2623. Was it necessary for them to go through the anks ?—No ; occasionally direct commissions were given to natives of property in the country.

2624. And you consider that that had a beneficial ffect ?—Yes.

2625. (*Colonel Burlton.*) Was that the case with nfantry as well as cavalry ?—Both.

2626. How did an officer learn his duty in the first nstance ?—You sent him to the drill-ground, and he earnt his duty the same as a young English officer.

2627. He learnt it without objection ?—Yes.

2628. (*Duke of Cambridge.*) Then you would ike to see the whole of the native army of Bengal, upon the Punjaub system, which you have explained, and not upon the usual system of the Bengal presidency ?—Yes, I should like to see it all upon the rregular system, or an improvement upon that. I would go so far as even to abolish the native Articles of War altogether. A code, simple, intelligible, and severe, is required for our native troops ; one giving great power to the brigadiers commanding, and to the commandants of regiments. These views I have more fully explained in a paper now in the hands of the secretary.

2629. (*Major-General Hancock.*) Did the native gentlemen upon whom commissions were conferred receive the same rates of pay ?—Yes, they took their place as jemadars or subahdars.

2630. Were those rates higher than the rates given to others ?—No, they were the same rates of pay.

2631. (*Duke of Cambridge.*) They did not pass through the lower ranks ?—As a rule they passed through the lower ranks though often rapidly ; direct commissions were occasionally given ; these men merely went through the drill as a European officer would on joining his regiment as a cadet.

Lieut.-Col. A. T. Wilde.

26th Aug. 1858

2632. Was any qualification necessary ?—No, it was merely the recommendation of property in the country, or influence over a tribe, if you had a number of them in the regiment.

2633. Did those men bring a number of the tribe with them ?—Yes, it was generally the condition of service that they brought thirty or forty men.

2634. Did that answer ?—Wonderfully ; those men fought and died for the native officer ; and these native officers, from the high position they held in the regiment, became much attached to the European officers.

2635. (*Chairman.*) What is the proportion of European officers in those regiments ?—We had only four.

2636. (*Duke of Cambridge.*) Do you think there should be more ?—We require six.

2637. (*Chairman.*) What were the terms upon which those natives were enlisted ?—General terms, for service anywhere ; never to be given more than seven rupees a month, under any circumstances, and that their baggage was to be carried for them. That did away with all questions of batta. They were entitled to that payment in any part of the world where they went.

2638. Was that service for an unlimited period ?—They were entitled to discharge after three years.

2639. (*Duke of Cambridge.*) Therefore they did not serve for a pension ?—Yes, they were entitled to a pension after 20 years' service if pronounced incapable of performing further service by a board of medical officers.

2640. (*Chairman.*) Were they enlisted then for three years ?—Yes.

2641. (*Viscount Melville.*) And the native officers in the same way ?—Yes ; after twenty years they were entitled to a pension.

2642. (*Sir Harry G. W. Smith.*) Upon the question of discipline, in the event of any portion of the irregular force under your command refusing to march, what power had you over them ; to whom did you report, to the civil authority or to the commander-in-chief ?—To the civil authorities.

2643. (*Major-General Hancock.*) What punishment could you inflict ?—We should have taken the law into our own hands at once.

2644. What would that be ?—To flog the first man that refused obedience. In any extreme case we should have taken the law into our own hands, as we always felt we should be fully supported by the brigadier and the government.

2645. (*Duke of Cambridge.*) Without court-martial ?—Yes, without court-martial. I think it would be better for me to explain that during the first two years when we raised that force we had the powers of a magistrate ; the force in fact was not under the Articles of War. Our wish was to have that privilege continued to us ; however it was ruled otherwise, and we were placed under the Articles of War for five years ; we continued under those rules, and held courts-martial. On the breaking out of the mutiny when we marched to Delhi with two or three regiments, we asked the Government for our old power of magistrates over our men ; it was granted, and from that time to this we have never had any difficulty.

2646. Had you any trouble under the Articles of War ?—It was beginning ; the men began to look beyond their commandants to get their punishments reprieved or remitted, or their promotion granted.

2647. (*Sir Harry G. W. Smith.*) In other words, your discipline consisted in the goodwill of those under your command ?—I think it would be more correct to express it by saying that the discipline consisted in the men first of all fearing to disobey us ; while respecting the position of their commandant, they found it was also their self-interest to please.

2648. (*Chairman.*) What was the strength of those regiments ?—800 men.

Lieut.-Col. A. T. Wilde.

26th Aug. 1858.

2649. How many native officers were there?—Twenty.

2650. (*Duke of Cambridge.*) Did you find that sufficient?—Yes.

2651. (*Major-General Hancock.*) You mean commissioned officers?—Yes; there were 100 non-commissioned officers.

2652. (*Viscount Melville.*) Did I rightly understand you to say that the commandants of these regiments were appointed magistrates as well as commandants?—For the first two years after the force was raised they had the powers of a magistrate; they could give to a man three years' imprisonment with hard labour, or simple imprisonment, or they could dismiss him from the service, or give him fifty lashes, or fine him fifty rupees.

2653. In short they had the same powers as a cantonment magistrate?—I expect they were the same; and in the last year we had the same powers restored to us.

2654. (*Duke of Cambridge.*) Supposing the officer commanding a regiment had not that power which you have now explained to us so fully, would you still prefer the irregular system to the regular system?—Yes, because I should still have the power of patronage. Men look up to me for their furlough and their promotion.

2655. Is that the system in the irregular cavalry of Bengal?—No, we are talking now of the Punjaub force.

2656. If the officers commanding the Punjaub force had not that power, would you be for the irregular system of Bengal or for the regular system?—I should prefer the irregular system, for the reason I have given, namely, that you would still have the power of rewarding, and with natives that is quite as strong a hold as the power of punishment.

2657. (*Major-General Hancock.*) What power have you of rewarding under the Bengal seniority system of promotion?—Little or none.

2658. (*Duke of Cambridge.*) Is not that the system in the irregular cavalry of Bengal?—Not in the Punjaub cavalry, but in the irregular cavalry it was the system.

2659. Still you say that you would prefer that?—Yes, it was not so strict; the limit was broader.

2660. (*Chairman.*) Of what proportion of different nationalities or castes were these troops of the Punjaub composed?—The 800 men were composed of 400 Mussulmans and 400 Hindoos; the 400 Mussulmans were divided into 200 Affghans and 200 Punjaubee Mussulmans; the Hindoos had also a proportion of Sikhs; the whole 800 were a thorough mixture of races of different nations and tribes. The idea was struck upon by the late Sir Henry Lawrence; he first ordered us to enlist 120 Sikhs; he then increased the number up to 200, but never more, and we have kept it at 200 ever since; and in the same way with the Affghans.

2661. Have you ever found any difficulty on the ground of caste; has it been made an excuse for refusing to do anything?—Never; but it was a strong system; they dared not refuse; they would have been severely punished if they had made caste a pretence to avoid duty.

2662. (*Colonel Burlton.*) Have you ever had occasion to ask them to do a thing which was contrary to their caste; did you every try the experiment?—No; no officer would ask them to do a thing absolutely contrary to their caste. There are certain things we know they cannot do, and these we do not exact.

2663. (*Lord Stanley.*) What particular things are those which you know they will not do?—For instance, take a case which may occur any day, if the water bag in which they carry water was made of pig's skin, you would not ask a Mussulman to drink out of it; and to prevent that we always had the bags made of sheep's skin, which was just as good.

2664. (*Colonel Burlton.*) Upon the same rule, if it was made of cow's hide you would not ask a Hindoo?—Yes; precisely.

2665. (*Chairman.*) Did you ever know caste set up as a plea for not performing duty?—Never.

2666. (*Duke of Cambridge.*) You would not have tolerated it, I suppose, if it had been set up as an excuse?—Not as a mere unfounded excuse; if a mistake was made it would be rectified.

2667. (*Lord Stanley.*) Are you of opinion that a judicious commanding officer, who would carefully avoid unnecessarily hurting the feelings of the men, may always steer clear of the difficulties arising out of caste?—Exactly so.

2668. (*Sir Harry G. W. Smith.*) The irregular cavalry are only called upon to do certain duties which belong to themselves; they are not called upon to do duties of fatigue parties, digging trenches and so on, are they?—That is so as a rule; but on the frontier the Punjaub cavalry often used to throw up entrenchments and perform other fatigue duties with the infantry.

2669. (*Lord Stanley.*) You were ready to do any work which you were ordered to do?—Yes.

2670. (*Duke of Cambridge.*) Was your regiment ordered to dig in the trenches?—Yes; at Bahadoor Khail the regiment dug the entire foundations of a fort, and carried stone for the walls of it. At Delhi they worked in the trenches with the European soldiers.

2671. And you never had any difficulty?—No; they dug out the ground and built a fort themselves.

2672. (*Major-General Hancock.*) And the high-caste men worked just as well as the others?—The Brahmins were working amongst them.

2673. (*Viscount Melville.*) Were the different castes which you had in your regiment together in the same company?—They were all mixed up in the same company. There has been a great discussion in the force upon that point. Properly speaking, the opinion of the majority of my brother officers (I am in a minority) is, that it is better to have class companies, as they call it; that is to say, separate tribes in separate companies and troops. I myself prefer having them mixed up, and in my own regiment they are mixed.

2674. (*Duke of Cambridge.*) In Lieutenant-colonel Coke's regiment they are in companies?—Yes.

2675. And that has answered admirably, has it not?—Yes; but still I think there are good reasons for the other mode.

2676. (*Chairman.*) What alteration should you recommend in the terms of enlistment for the future?—To enlist for service anywhere, in any part of the world, mentioning also that the men will have to go beyond seas if necessary.

2677. Would you recommend a further period than the present one of three years?—No, I think not; they are so fond of military service there is no necessity. No man takes his discharge after three years; it is a mere nominal thing.

2678. (*Duke of Cambridge.*) They serve as long as they can serve?—Yes.

2679. That is the feeling among them?—Yes. There is one class to which that answer would not be applicable, namely, the Affghans; they come and go; they sometimes serve for five or six years and then take their discharge, and afterwards come back to us.

The witness withdrew.

Colonel John T. Leslie, C.B., examined.

Lieut.-Col. John Leslie.

2680. (*Chairman.*) I believe you have retired from the service.—What rank did you hold in the Indian army?—The rank of a captain of a regiment of artillery and brevet lieutenant-colonel.

2681. How long were you in the service?—Twenty-two years.

2682. What portion of that period was passed in India?—Twenty and a half years.

Lieut.-Col. John Leslie.

26th Aug. 1858.

2683. In which presidency ?—In Bombay.

2684. In what branch of the service were you ?—In the artillery.

2685. (*Major-General Hancock.*) You served with Bengal troops also, did you not ?—Yes, in Affghanistan.

2686. (*Chairman.*) I suppose that you have had several opportunities of seeing European and native troops act together ?—Yes, frequently.

2687. Have you formed any opinion as to the proportion which the European troops should bear to the native troops in the presidencies in which you have served ?—I have not thought the matter over particularly. In the present day I should say that there should be two Europeans to one native.

2688. (*Major-General Hancock.*) Do you mean in Bengal ?—Yes ; I am alluding to present circumstances, of course.

2689. (*Duke of Cambridge.*) But after the present circumstances, and with our former experience, what would you say should be the proportion ?—I have not thought of the question in that way ; it would be a loose answer if I gave one ; but I should imagine that although the proportion which at present exists would be perhaps a fair one, yet in quiet times there should be a larger proportion of European troops than there has heretofore been.

2690. (*Chairman.*) Would you have any native artillery ?—Yes, a proportion, certainly.

2691. In what proportion ?—I should say about a company to each battalion of 400 strong. I say so because I think it would be a great relief to the Europeans.

2692. (*Major-General Hancock.*) That would be four Europeans to one native ?—Yes. There are about 400 Europeans to a battalion, and I should say there should be a full company of native artillery to assist in the minor duties of the gun ; for, under certain circumstances, you fall so short of European troops that it would be necessary to have some part of the duty done by natives.

2693. (*Duke of Cambridge.*) You would have gun lascars, I presume ?—No ; I would have them superior to gun lascars. I would have them regular native artillery, instructed in everything.

2694. (*Viscount Melville.*) In what proportion ?—About one company of 100 strong to about 400 Europeans. I say so because I feel, from the little experience which I have had, that it would be almost impossible to guard against a want of men for working the guns, if you had not some assistance of that sort; the Europeans sometimes fall so very low in numbers.

2695. (*Duke of Cambridge.*) In what way ?—In the sickly season, and in many ways, from perhaps not being sufficiently recruited at the moment.

2696. Surely that is an arrangement which could be always prevented ?—It may be, but it took us a long time before we got a number of men out to fill up vacancies. In the present day they are well filled up, but in my day it was not the case ; we were frequently reduced in a company to 30 or 40 men, which ought to have been 80 or 100 strong. If you can be sure of men, I say certainly have all Europeans.

2697. (*Colonel Burlton.*) You would not trust the natives with the guns ?—By no means.

2698. (*Chairman.*) If it could be avoided you would not trust the natives with guns ?—Certainly not.

2699. (*Duke of Cambridge.*) But you would not object to some gun lascars, probably ?—Just so ; I think the assistance of natives is absolutely necessary to take small detached duties, and other things, or you kill your Europeans in a short time.

2700. (*Chairman.*) Would you arm the natives with the same arm as the Europeans ?—I would if I had them at all. I would not lower them in the estimation of those about them. I would give them the same arm as the others, and put trust in them.

2701. (*Major-General Hancock.*) Do you not think it desirable to have a small portion of native artillery to take service in unhealthy districts, such as Upper Scinde ?—Yes, provided they were with the Europeans. I would not have them separated. I think they should be with the European troops.

2702. Do you not think that there are some stations in the Bombay presidency where the European troops could only serve with a great sacrifice of life, on the Scinde frontier, for instance ?—Yes, a few stations.

2703. Would not that apply to the coast of Persia, for instance ?—Yes, European troops would have suffered very much there.

2704. Do you think that there would be any danger to the state in employing a few hundred native artillerymen in such localities as those ?—As far as my experience on the Bombay side goes I should say not, but still my opinion is that they should always be with Europeans. I would embody the native artillerymen with the Europeans.

2705. Do you mean that you would keep up native artillery but would never detach them for any service ?—That is what I mean. When I answered you before I spoke as to the Bombay side ; we have never had any distrust of them, but I should certainly prefer having Europeans if possible, or Europeans with natives.

2706. (*Chairman.*)) Would you have the native force which you propose to employ on the regular or the irregular system, or both combined ?—Both combined.

2707. (*Duke of Cambridge.*) Both the cavalry and infantry ?—No, the infantry I would have in regular and the cavalry in irregular corps.

2708. Would you have all the cavalry irregular ?—Yes, all the native cavalry irregular, certainly.

2709. (*Chairman.*) Do you contemplate the employment ofpolice at all ?—No.

2710. You have not taken that into consideration ?—No.

2711. (*Marquis of Tweeddale.*) Why would you have the native cavalry irregular ?—Because in my little experience I think they were far more efficient.

2712. (*Duke of Cambridge.*) In what respect ?—As light troops, as troops for general duty, they are more effective in every way.

2713. (*Chairman.*) Does your answer with respect to the artillery extend to the sappers and miners ; would you have them European, if practicable ?—Yes, if practicable ; but I would certainly say combine natives with them for utility. I think that European sappers would be almost useless in India as working men. For scientific assistants of course they are the best, but I think there should be a proportion of native sappers always with them, in the same way as with the artillery.

2714. For the scientific portion you would have Europeans ?—Certainly.

2715. And for the labour you would employ natives ?—Yes.

2716. (*Major-General Hancock.*) You would have Europeans merely as overseers ?—Yes, simply because they could not work in a climate like India, they are not suited to it.

2717. (*Marquis of Tweeddale.*) You are aware that a great deal of the work in building barracks and those things is done under the engineers ; would you not have the natives instructed as mechanics to assist in that work for the use of the Government ?—Yes, I see no objection to that.

2718. (*Duke of Cambridge.*) Would you employ the natives in the scientific branches of the arsenals ?—Certainly not.

2719. You would not allow them to make copper caps and things of that sort ?—No.

2720. (*Sir Harry G. W. Smith.*) You would have no objection to half-caste men ?—No, because I think that their connexion with Europeans is so close that there would be no fear from their having any scientific knowledge of that kind.

2721. (*Chairman.*) Would you have the army composed of different nationalities and castes, and if so, in what proportion ?—I think the more they

Lieut.-Col. John Leslie.

6th Aug 1858.

are mixed the better. I cannot say in what proportion, because it is rather a difficult question.

2722. Have you in your experience found any difficulty to arise in the performance of military duties from caste ?—I have. I can instance one case.

2723. In which army was that ?—I was serving with the Bengal army at the time.

2724. (*Duke of Cambridge.*) Was it in the Bengal army that it took place ?—There was a party of sappers ordered in front of the troop of horse artillery which I commanded; they were Bengal men. I must say that they were not the men to do the work, for they were never at the spot, and they never had their tools, and they were never willing. Whereas a company of Madras sappers, which I had occasionally, were quite the contrary. I think the Bengallees were a high-caste set of men, and they did not care about doing the work.

2725. (*Chairman.*) Did they plead their caste as an excuse for not doing the work ?—Certainly not; they went about it, but they went about it in such a way that I dismounted my own men and made them do it, and put the others on one side.

2726. (*Sir Harry G. W. Smith.*) Were they Europeans whom you dismounted ?—Yes; I did it more than once.

2727. (*Chairman.*) Would you make any alteration in the terms of enlistment of the native army ?—I should enlist them for general service, if it was possible, and I do not see why it is not. I have never known any objection on the part of the Bombay native troops.

2728. (*Duke of Cambridge.*) Are they enlisted for general service ?—No; but they have never objected to go on general service, to go abroad, or anywhere.

2729. (*Chairman.*) But it was necessary to ask them ?—Yes; I think that they should be enlisted for any service, and that there should be no exclusiveness at all.

2730. (*Duke of Cambridge.*) Do you think there would be any difficulty in finding a sufficiency of men to enlist on such terms ?—I think not; certainly not on the western side of India, as far as my knowledge goes. I have a very imperfect knowledge of native troops, having always been with Europeans.

2731. (*Major-General Hancock.*) Are you not aware that the whole of the Bombay army are enlisted for general service ?—I was not aware of that.

2732. (*Chairman.*) Then you would place the terms of enlistment for the different presidencies precisely on the same footing ?—Certainly.

2733. Do you consider that any change is required in the system of promotion as regards native commissioned and non-commissioned officers ?—I would have it the same in all the presidencies.

2734. You prefer promotion by selection to that by seniority ?—Most assuredly.

2735. (*Duke of Cambridge.*) What is the existing system ?—The system on the Bombay side is by seniority and merit combined I believe; I have no particular knowledge of the native army, never having served with it, but I believe that to be the case.

2736. (*Marquis of Tweeddale.*) Is it so with the native officers ?—Yes, as far as my knowledge goes; I of course speak under correction.

2737. (*Chairman.*) Do you consider that the commanding officers of regiments in India have sufficient power to punish and reward, or would you give them more power ?—I have no objection, as far as my own presidency goes, on that point. I have heard that their power is limited in Bengal, but whether or not that is the case I cannot positively say. My knowledge upon that point is imperfect.

2738. When you say that you would have an admixture of European and native forces, how would you recommend that it should take place, regimentally or by brigades ?—I have thought the point over, and I should say regimentally, if it was possible to arrange it so.

2739. How would you propose to arrange it ?—I would attach a certain number of native companies to each European regiment.

2740. How many ?—In about the proportion which I mentioned, about two Europeans to one native in the present state of things.

2741. (*Duke of Cambridge.*) Would there be no difficulty in the organization of a regiment so composed ?—There would be a difficulty; it is a loose thought of mine, but I think it would be as good a way as any other, unless you made them entirely independent regiments, as they were before. I am speaking of Bengal.

2742. (*Sir Harry G. W. Smith.*) What would be the advantage of forming Europeans and natives together in that way ?—My principal reason for mentioning it is to save European life, to have these men under the control of the commanding officer of the regiment, in order to save Europeans as much as possible.

2743. (*Chairman.*) Have you formed any opinion as to the amount of force which will be required in the Bombay presidency after the mutiny is suppressed ?—In the Bombay presidency I should say that the present army is sufficient, as far as I have thought the matter over, with an increase of artillery.

2744. What is the present force ?—The present force, I think, is two European battalions and a native battalion, and a brigade of European horse artillery; they want an increase of artillery decidedly in Bombay.

2745. (*Duke of Cambridge.*) What is the establishment, both European and native, of a troop and company of Bombay artillery ?—The field establishment is 130 men, as far as I recollect (I have been fourteen years away), and 230 horses.

2746. Do you think that that establishment is sufficient ?—Quite sufficient for the troop as it was then constituted, and twenty-four gun lascars attached.

2747. (*Viscount Melville.*) You have served with both Bombay and Bengal horse artillery; will you be so good as to say which you consider the best organization ?—Of course I say my own, the Bombay side; although I must say at the same time that I saw one or two troops of the Bengal horse artillery, under Major now Colonel Anderson, and no troop could have been better, but there was the officer to be considered there.

2748. (*Duke of Cambridge.*) I wish to ask you not which is the best artillery, because I consider one as good as the other, but I wish to know whether the principle of horse artillery as constituted in Bombay, that is to say, with mounted detachments, is in your opinion preferable to the principle of horse artillery as established in Bengal, which has no mounted detachments, but where the men ride on the limbers and the off-horses ?—I certainly say that the Bombay detachment system is the best.

The witness withdrew.

Colonel John Hill.

Colonel JOHN HILL examined.

2749. (*Chairman.*) You have retired from the service; what rank did you hold in the Indian army ?—My last rank in the army was lieutenant-colonel.

2750. How long were you in the service ?—I entered the service in 1834.

2751. (*Duke of Cambridge.*) When did you come back from India ?—In January 1858.

2752. (*Chairman.*) Then you were twenty-four years in India ?—Yes.

2753. In what presidency have you served ?—In Bombay.

2754. In what branch of the service ?—In the engineers.

2755. Of course you have had opportunities of

Colonel John Hill

26th Aug. 1858

seeing both European and native troops act together?—Yes, often.

2756. Have you formed any opinion as to the proportion which the European should bear to the native force; you know both the Bombay and the Bengal presidencies?—Do you allude to the Bengal army in particular, or the Bombay army?

2757. To both; first the Bengal, and then the Bombay, if you make any distinction between them?—I am not acquainted with the provinces of Hindoostàn, but in a general way I should say that if the whole force of the European army was one-third of that of the natives it would be sufficient. I give that as a rough calculation.

2758. (*Major-General Hancock.*) Are you alluding to Bengal?—I mean in Bengal. In Bombay I think that it would be sufficient likewise, provided the European cavalry portion of the force was efficiently armed.

2759. (*Duke of Cambridge.*) What do you mean by "efficiently armed?"—European dragoons at present are armed with only a common carbine which is useless in war, the swords likewise are not efficient in war.

2760. In what respect?—They are too straight, and the steel scabbards are objectionable.

2761. (*Chairman.*) Do you carry the same proportion of one-third European through the whole branches of the service?—Only through the regular portion of the army.

2762. (*Duke of Cambridge.*) Would you have an irregular portion besides?—I would have an irregular native army in addition.

2763. Including that, what proportion would you have of Europeans to natives?—Then it would be considerably less than one-third.

2764. (*Chairman.*) How many irregular troops would you have, compared with regular native forces?—I would have them much as at present in the Bombay army.

2765. What is that?—There are nearly 30,000 regular native troops in the Bombay army, infantry, cavalry, and artillery, and there are about 10,000 irregular troops.

2766. Then it would not much alter your proportion?—It would make it about one fourth of the whole.

2767. You would have the Europeans about one-fourth of the regular and irregular troops?—One-fourth of the whole.

2768. Do you extend that proportion to each branch of the service, would you have the artillery three-fourths natives?—No; I do not think that at all necessary.

2769. Would you have any native artillery at all?—Yes; I would have a considerable body of native artillery, because there are many localities in which European artillery could not serve at all times; for instance, take the Bombay presidency, in Upper Scinde European artillery could not serve; they have been tried there on several occasions and failed in the hot season.

2770. Then you would have no hesitation in trusting native troops with guns?—None whatever, provided a proper system of discipline was maintained, of course.

2771. Do you extend that opinion to the sappers and miners, that you would have native sappers and miners as well as European?—I should have by far the larger proportion native sappers.

2772. (*Major-General Hancock.*) You have commanded the corps of sappers and miners in the Bombay presidency, have you not?—Yes.

2773. For how long?—I commanded them from 1855 until the end of 1857.

2774. You have served with them in garrison and in the field, have you not?—Yes, on several occasions.

2775. And in the field with Bengal troops?—Yes.

2776. At Moultan, and again in Persia?—Yes; and in Scinde on the first occupation of the country in 1839 and 1840.

2777. Is the corps of Bombay sappers composed of both high-caste and low-caste men?—Yes, men from all parts of India, Hindoostan, Bombay, and Madras.

2778. Have you found all do their duty alike as good soldiers in the field on all occasions?—Yes, all have behaved excellently whenever I have been associated with them, particularly during the late war in Persia, and subsequently to that during the time that they have been employed with the field forces against the mutineers.

2779. You did not find the high-caste men offer any difficulty to the performance of any service upon which you put them?—On the contrary, the highest-caste man whom I had in the corps was left in hospital when we marched from Poonah to embark for Persia, and the day before embarking for Persia this man appeared with his company, having broken out of hospital and marched night and day to overtake his company; and when asked how it was that he appeared in Bombay, he replied that he would be disgraced if his company went on service without him.

2780. What caste was he?—He was a Brahmin from Oude.

2781. (*Chairman.*) You never found caste urged as an objection to the performance of any military duty?—Not the slightest; high-caste and low-caste stand next to each other in the ranks, sleep next to each other in the tents, and do everything just the same as English soldiers, except when they are off duty.

2782. Upon what terms were they enlisted originally, for general service, or were they merely confined to India?—For general service.

2783. (*Duke of Cambridge.*) That is the practice in the Bombay presidency generally, is it not?—Yes.

2784. And you find no difficulty in getting men on those terms?—None whatever.

2785. (*Chairman.*) Should you recommend that system to be extended to all the other presidencies?—Most decidedly.

2786. You would have all men enlisted on the same terms for all the presidencies, namely, for general service?—I should enlist men to serve as soldiers, and not make any terms with them whatever; they should enlist to obey all orders, whatever orders were given them.

2787. (*Duke of Cambridge.*) And provided that it is fully explained to a man before he enlists that such and such duties will be required of him, you conceive that the excuse of caste should not interfere with the performance of any duty?—Caste never interferes with the performance of any duty, whether it is cleaning the lines, or whether it is fatigue parties, or working parties of any description, or going by sea, wherever it may be.

2788. (*Major-General Hancock.*) Have you ever known it interfere with the performance of duty by the Bengal troops when you have been serving with them?—Yes.

2789. (*Chairman.*) How do you account for the difference?—I have known the Bengal troops refuse to work.

2790. (*Duke of Cambridge.*) On the plea of caste?—On the plea of caste.

2791. Was that plea attended to?—The officer commanding them, when applied to by me, by order of the general commanding the troops, for working parties, informed me that to order the Bengal troops to work on fatigue parties was tantamount to ordering them to mutiny at once, that such a thing was never heard of in the Bengal army.

2792. (*Colonel Burlton.*) What was the standing of that officer?—He was a colonel in the Bengal army.

2793. Do you know of how many years' service?—Between thirty and forty. I had some very emergent duty to perform at the time, and I asked him then to

Colonel John Hill.

5th Aug 1858.

order his doolie bearers to be placed at my disposal and he immediately said that it could not be done; that they would all mutiny and desert if such an order were given.

2794. (*Chairman.*) How do you account for objections being raised on the score of caste in one presidency and not in the other?—It is simply the system which has been followed in the Bengal presidency, and the entire want of discipline which has ever prevailed in that army.

2795. You think that with proper discipline caste will never be found an objection to the performance of military duty?—I think that with proper discipline caste would never be found to interfere with duty in any way whatever, but it would always be preferable to have men of various castes mixed up together.

2796. (*Major-General Hancock.*) Was the occasion which you have mentioned the only occasion on which you have known Bengal troops refuse to work or hang back from working?—At Moultan they did no work whatever in the trenches. When the Bombay column joined in the siege with the Bengal troops the Bengal troops did not actually refuse to work there; they marched to the trenches and took the pickaxes and shovels in their hands, but they did no work.

2797. (*Chairman.*) I understand that you consider that native troops should be composed of different nationalities and castes, and distributed as much at possible?—Yes, there should be a fair proportion of the various castes.

2798. Would you keep them separate as castes, or would you mix them up?—I do not think that the word "caste" or "nationality" should ever be known or mentioned in a corps. The commanding officer of a corps should himself comprehend the natives sufficiently to know the men he is enlisting, and not to take more than a fair proportion of each class of men, but he should never make the slightest allusion to the men about caste.

2799. With such proportion would you mix them up or would you keep them separate?—On all duty matters they would be treated the same as if they were English soldiers; off duty they would do just as they pleased. I would mix them up together.

2800. (*Duke of Cambridge.*) You would not have them by companies?—No.

2801. (*Major-General Hancock.*) Would you in any way alter the organization of the existing Bombay corps of sappers and miners?—Yes, certainly.

2802. (*Duke of Cambridge.*) In what respect?—For many years past the pay of the commanding officer of the sappers has been so low, when compared to the pay of officers of corresponding rank in the Public Works Department, that no officer of military talent and experience could ever be obtained willingly to perform duty with the sappers and miners. In fact, to such an extent has that been carried that the commander-in-chief in Bombay has repeatedly urged on the Government the necessity of placing the sappers and miners on a more efficient footing, and also making the commandantship of that corps such that the best talented officers would be glad to hold the appointment; but his representations have always been made in vain; he has never been attended to in any instance that I am aware of; on the contrary, when the Government have found officers imbecile and useless in the Public Works Department they have placed them at the disposal of the commander-in-chief to do duty with the sappers and miners. I knew one officer who was placed at the disposal of the commander-in-chief in that manner, who during the whole time that he was in command of the corps never once appeared on parade; and when the native officers of the corps went up to his quarters to see him he shut his doors in their face and would not see them.

2803. (*Sir Harry G. W. Smith.*) Does he still remain an officer in that army, or was he removed from his position?—He was subsequently given a higher appointment in the Public Works Department.

2804. (*Major-General Hancock.*) Is it the same with regard to the adjutancy of the corps?—Yes.

2805. (*Chairman.*) Do you think that any change is required in the system of promotion as regards the native commissioned and non-commissioned officers in the Bombay army or in the Bengal army, if you have had an opportunity of judging with respect to the latter army?—In the Bengal army it is merely a system of seniority; in the Bombay army the system is a very excellent one indeed, namely, by general merit; but it is not in all instances carried out so well as it should be.

2806. (*Duke of Cambridge.*) Why is it not so well carried out?—I do not consider that commanding officers pay sufficient attention on all occasions to the general intelligence and soldierlike qualities of the men promoted.

2807. What do they look to more?—Partiality is sometimes shown, and sufficient general attention is not given to the qualifications of the men.

2808. Still you are for the system of selection in preference to that of seniority?—The system in general pursued in Bombay is most excellent.

2809. (*Sir Harry G. W. Smith.*) You would recommend that the rule should obtain of promoting by selection, but that it should be more justly attended to?—Yes.

2810. (*Major-General Hancock.*) You mean that all officers commanding regiments have not carried out the system as it was intended to be carried out in promoting men according to their merit?—Some regiments are much better commanded than others, and much greater attention is paid by some commanding officers to the efficiency of their corps than by others.

2811. (*Duke of Cambridge.*) Still, as regards the system as established by regulation, you think that it is a good one?—An excellent system, and the only just system which can be pursued with regard to the promotion of natives or Europeans.

2812. (*Viscount Melville.*) You have seen the Bombay and the Bengal troops together. With reference to this system of promotion, can you state what was the effect as to the qualifications and the efficiency of the native officers in the one army and the native officers in the other?—The native officers in the Bombay army were young, active, intelligent, useful men; the native officers in the Bengal army, and the native non-commissioned officers likewise, generally were merely old women.

2813. (*Major-General Hancock.*) Did you see a marked difference in the discipline of the troops when they were serving together?—A great difference.

2814. (*Marquis of Tweeddale.*) In what did that consist?—I have marched with Bombay troops and Bengal troops in the same force; the Bombay troops marched in the usual orderly manner, and the Bengal troops cast off their accoutrements and hung them together with their arms on the camels and different beasts of burthen and on the camel drivers, and they went on paddling in water and plundering in fields.

2815. (*Duke of Cambridge.*) Do you mean to say that that was tolerated?—I have never seen anything else. I have seen a Bengal cavalry regiment on the line of march, within two miles of the enemy's guns, and every horse was led by a horsekeeper, the arms and accoutrements of the men were on the horses, camels, and horsekeepers, and the men were plundering in the fields and paddling in water at the wells.

2816. (*Chairman.*) You consider the discipline of the Bengal army inferior to that of the Bombay army?—Very much indeed.

2817. Do you consider that the admixture of European and native troops should be regimentally or by brigade?—I would have them by brigades, not by regiments.

2818. (*Major-General Hancock.*) Would you have any European sappers?—I think there ought to be a large body of sappers, and for the Bombay army I would propose that there should be eight companies of native sappers and two companies of Europeans.

Colonel *John Hill*

26th Aug 1858.

2819. (*Viscount Melville.*) Have you any European
pers now excepting non-commissioned officers ?—
ne but non-commissioned officers ; but I must
ntion that all the non-commissioned officers who
ve been sent out of late years by the East India
mpany are a superior body of young men, and most
tainly would not consent to perform the laborious
ies of private sappers ; they would find other
ployment in the numerous channels opening up in
lia where English skill and intelligence are re-
red. I should say that the same thing would apply
royal sappers in India, though in time of war they
uld do anything and go anywhere for the sake of
ing field service, yet if they were good mechanics
intelligent men they would purchase their dis-
rge and take employment in the numerous channels
ning up in India in time of peace.

820. (*Duke of Cambridge.*) You said that these
ropeans sent out by the East India Company were
uperior description of men. I presume you do not
an that they are superior to the royal sappers as a
ss of men ?—I mean that I imagine that their
ication is superior to the education of the men
erally in the royal sappers.

821. What makes you come to that conclusion ?—
cause they are all selected men.

822. Selected from what ?—Selected from the
st India Company's depôt.

823. (*Viscount Melville.*) Do you not think that
tead of having European sappers it would be better
ave an increased number of these non-commis-
ed officers, and to have the working men natives?
rovided that the pay of the men was increased ;
if there were simply to be an addition of the non-
missioned officers to serve with the sappers on the
e pay that they now get, they would not consent
lo it, but would purchase their discharge.

2824. (*Major-General Hancock.*) The pay which they now get is exactly that paid to a native infantry soldiers, is it not ?—Exactly the same.

2825. In former years it was considerably higher? —In former years the pay was higher. The native sapper received 3*s*. a month more pay than the soldier of the line.

2826. When that was the case you were able to get the pick of the men out of the whole army, I suppose ? —Yes ; we got the pick of the whole army, and a better body of native sappers than then existed there could not be ; they were never employed upon any civil works, under civil officers ; they were always kept ready for field service, at the head-quarters of the corps, and never moved away except for field service.

2827. (*Chairman.*) You recommend the pay of the sappers and miners to be placed on a different footing ? —It must be placed on a different footing.

2828. (*Major-General Hancock.*) You mean that you cannot get eligible men for that particular service without higher pay ?—You cannot ; men may enlist for the sappers, but directly they have had a little education and training with the sappers they will volunteer to join the regiments in which their brethren are in the line.

2829. (*Duke of Cambridge.*) They prefer that, do they ?—The duties of the line are so much easier than those of sappers, and the pay is the same.

2830. (*Sir Harry G. W. Smith.*) Does not a man get working pay when he works ?—The rules and regulations regarding working pay are very strict indeed, and the working pay is so small that the greatest amount of working pay which a man can get is an ana and a half a day ; formerly the working pay was two annas a day; the native officers receive as working pay 1*s*. a day.

The witness withdrew.

Colonel JAMES SINCLAIR examined.

Colonel *James Sinclair*

831. (*Chairman.*) You are a colonel in the Indian
y ?—In the Bombay artillery.

832. How long have you been in the service ?—
ve forty-one years, including my time at the
tary college ; it is thirty-nine years and a half
e I landed in India.

833. How many years of that period have been
sed in India ?—Thirty-four.

834. Of course you have had many opportunities
eeing European and native troops acting together?
es, several.

835. Have you formed any opinion as to the pro-
tion which the Europeans should bear to the
ive troops in the Bombay presidency ?—I think
the proportion of one-third European would be
ir proportion, one European to two natives ; that
ncluding the artillery and cavalry, and embracing
Europeans of both the British and Indian services,
s hitherto distinguished as "Queen's" and "Com-
y's."

836. Have you formed any opinion as to the amount
orce which will be required in Bombay in future?
should say that the artillery should be about 5,000
, horse and foot, exclusively European. I would
e no native artillery. The regular cavalry ought
to be European, about 2,400. I have estimated
e regiments of 800 men each, men enlisted
ially for the service, small active adult men, of a
ght to be readily horsed in India, not growing
ths.

837. (*Viscount Melville.*) Would you have no
ve cavalry at all ?—None of the description
ned "Regular."

838. (*Chairman.*) How many infantry would you
e ?—Infantry, eight regiments of Europeans.

839. (*Duke of Cambridge.*) That is 8,000 ?—No ;
00 men each, eight regiments, 6,400.

840. (*Chairman.*) Would you have the sappers
miners Europeans ?—I should say mixed ; there are many duties of a sapper which could scarcely be done by a European in a hot climate, and yet the European energy is necessary to direct.

2841. Would you confine the scientific portions of that service to Europeans ?—I should say so ; but I would speak with diffidence upon the question of the organization of an engineer corps. The native mind is peculiarly susceptible of instruction in the science suitable for an engineer, whether as overseer or workman.

2842. (*Duke of Cambridge.*) Would you confine the scientific portions of the arsenals to Europeans ? —Entirely.

2843. You have no hesitation upon that point ?— None whatever. The controlling authority in our arsenals should be European, and European only ; whether in the commissioned, warrant, or non-commissioned grades; and these should uniformly be drawn from the artillery service, so that as artillery soldiers they should feel a personal interest in the efficiency of the ordnance department, which the mere "store-keeper" cannot feel.

2844. (*Chairman.*) How many European sappers and miners would you propose ?—I would rather not offer an opinion on that point.

2845. (*Duke of Cambridge.*) What native troops would you have to the force of Europeans ?—About twenty regiments of regular infantry of 800 men each, and I would supplement them with irregular infantry, say ten regiments.

2846. How many native cavalry would you have ? —Six regiments.

2847. Regular or irregular ?—The native cavalry should be irregular, on the constitution of the present Scinde horse.

2848. You say that you would prefer the irregular cavalry to the regular cavalry, why would you do so ? I believe that some of the regular cavalry of Bombay have behaved very well, have they not ?—Yes.

Colonel James Sinclair.

26th Aug 1858.

2849. Then why would you prefer the irregular?—I consider that expense is an element in the consideration of this question. Merely taking the question of soldiers fighting in the field, I would have all Europeans; but the country cannot bear that expense. The irregular cavalry are very much less expensive than the European; moreover the native horseman never seems at home in the saddle as a "regular" cavalry soldier.

2850. Are they sufficiently organized to do all the duties that cavalry ought to do in the field?—I should say that the Scinde horse, as I saw them last, were as capable of doing service as any men in the world could be, whether as an organized body acting together (to the extent their physical weight and the power of their horses would allow), or as light cavalry skirmishers.

2851. Then you would take the Scinde horse as a model of an irregular cavalry regiment?—I think so.

2852. And you would like to see the same system introduced probably into the Bengal army?—As a model for all, I can imagine no better; their interior economy and discipline is admirably suited to the native character.

2853. (*Chairman.*) You would make the total proportion of the Bombay army about 14,000 Europeans and about 28,000 natives, making 42,000?—About that; and here I may remark that as the proportion of artillery which I have stated of 5,000 men for Bombay alone may be considered a large proportion, I may as well explain that my idea is that as artillery will be required at stations occupied chiefly by native troops at those stations I think it desirable that the artillery should have the means of protecting itself, for considering what has passed, I should be sorry to trust implicitly to natives; therefore I think that the proportion of men with artillery should be greater than that required merely to work the guns; the additional men would form a guard not merely to the guns but to the ammunition depôt of the station, and the detachment of Europeans thus brought together would be a more efficient body in various ways, and would be held under better discipline, if all of one regiment and under one regimental command, than if composed partly of cavalry or infantry soldiers detached from their own regiments for the occasion.

2854. (*Major-General Hancock.*) Wherever you had a European battery of artillery stationed you would require either European cavalry or European infantry to support it?—A battery may be frequently stationed where there would be no European regiment.

2855. Do you think that a good plan, distrusting the natives as you do?—It might be necessary, but I would have, as I have already endeavoured to explain, a strong guard of European artillerymen with the guns.

2856. Supposing a battery were placed in Upper Scinde at Shikapore, what support of Europeans would you give them?—I should be sorry to put more Europeans there than I could help, because it is a very unhealthy climate; but still the service may require artillery there. A full company of artillery as a guard in addition to the company required to work the battery would be sufficient.

2857. (*Duke of Cambridge.*) Would you think it desirable for such stations as that which has been named to have some native artillery?—I think not.

2858. Your objection to having any native artillery is so great that it would be greater than the objection of a bad climate for the European?—I think so.

2859. (*Viscount Melville.*) Do you not think, with reference to that station of Shikapore, that the result of it would be a positive and absolute necessity in the month of March of withdrawing those troops and bringing them down to Kurachee probably, where they must remain until the following October; you could not keep them at Shikapore during the hot season?—I hope that that would not be the result. I think that if they were relieved every year they might get through the season very well at Shikapore were proper accommodation afforded them in barracks or quarters.

2860. (*Duke of Cambridge.*) You think that it is as much owing to the badness of the barracks as to the climate?—I think the European artillerymen could stand the climate for a season were they carefully housed and sheltered and their requirements in quarters attended to liberally.

2861. (*Major-General Hancock.*) Do you think that Europeans could perform field service upon the frontier of Upper Scinde without a very great sacrifice of human life, in the hot season?—I do not; but I think that it would be necessary to have troops at Shikapore, consequently artillery.

2862. That is merely in barracks; but do you think that they could perform field service?—Not well, nor the native either, because the native gunner would be inefficient without his commanding officer. Wherever the European officer can go the European soldier can on an emergency go also.

2863. Are you not aware that the Scinde horse have served in the very hottest season?—Yes.

2864. That they have made a forced march of thirty or forty miles?—Yes.

2865. With a European officer at the head of them?—Yes. I have known that it has been Colonel Jacob's habit to say, "Gentlemen, we will have a pic-nic to-day;" and they have mounted saddle in the heat of the day and gone 40 or 50 miles as a patrol or to visit outposts, with a squadron or so of sowars, and this in the hottest season of the year.

2866. (*Sir Harry G. W. Smith.*) Are you of opinion that the sacrifice of soldiers' lives is of less value than the sacrifice of a few officers with the native troops?—I am not of that opinion. I could not set a direct value on the life of any human being; I should be sorry to do so; but I consider the sacrifice of a soldier's life of less consequence to the country than the sacrifice of the life of an officer; not that any officer would set a value on his own life when duty demanded the sacrifice thereof.

2867. (*Chairman.*) In the proportion of the force which you have suggested, have you at all taken into consideration the employment of the police?—I would let the police be *ad libitum*, as the necessities of the country may require, but entirely distinct from the army.

2868. Do you think that there are any duties now performed by the military native regiments which might be transferred to the police; and do you think that by that transfer you might reduce the number of the native regiments?—I would reduce the number of the native regiments as much as would be consistent with safety, and this I have done in the estimate I have given. It has not been the custom in the Bombay Presidency to employ the army in police duties, although occasionally a force may have been called on to aid the civil authority.

2869. Would you propose to arm the native two-thirds of the force which you suggest in Bombay the same as the Europeans?—Yes, with the most efficient weapon. I would arm all parties whom we employ in the service with the most efficient weapon.

2870. Should the Bombay army be composed of different nationalities and castes, and if so, in what proportion?—I would certainly confine the enlistment of the native troops to their own presidency, and encourage a mixed multitude amongst them; this arrangement would greatly tend to prevent collusion between the native troops of the several presidencies.

2871. (*Duke of Cambridge.*) But that has not been the system hitherto, has it. Have you not in the Bombay presidency a great many men that come from Oude and from the Bengal presidency?—Unfortunately we have had lately. They have found favour in the eyes of some officers, because they have been sightly men; but that was a point which I always myself opposed, even in the artillery, and having the command of some batteries of artillery lately I wrote very strongly on the subject. Saying, "These Purdasees," (strangers,) as we call them,

Colonel
James Sinclair.

26th Aug. 1858.

are not so efficient for the artillery as I would undertake to make even the small low-caste men to whom I have been accustomed in the Ordnance Department, as "lascars" and labourers generally.

2872. (*Major-General Hancock.*) What was defective in the men whom you speak of?—In the first instance, the Golundaz in Bombay have lately been very much deteriorated by their pay being reduced to the infantry rate, and our consequently not having a selection of recruits; but, independently of that, I do not think that the native artilleryman from Hindostan was equal to his work; he was a large and good looking man, but still he had not the activity and intelligence that the lower caste man has, and there was this objection also to him in Western India, that the Bombay officer generally learns a different language from the Hindostan man. The dialects of India are so very different that I have frequently known a man who could communicate well with the subjects of the Bombay presidency have a difficulty in communicating with Hinnostan men, or rather in understanding them; and my repeatedly expressed feeling was very strong on the subject that the Hindostan man was not so efficient as the smaller man from our own presidency would have been.

2873. (*Duke of Cambridge.*) Therefore you would prefer to see the men enlisted within the circle of the presidency?—Yes.

2874. (*Chairman.*) But of course you would enlist them for general service?—Yes; as I would form the army generally of the presidency from our own districts alone, remarking however that I think the irregular corps, both horse and foot, should be localized, and that they should be enlisted principally from the more warlike class of the province from which they would take their name, and not be, like the regular corps, of a mixed multitude. It would I think be a matter of policy to keep this branch of the service very distinct, but all of course available for general service.

2875. (*Duke of Cambridge.*) You would have it more a clanship?—Yes, more a militia or yeomanry; for instance, in Scinde the Beloochees would form an excellent element, and in Katteawar there is a description of men who have never yet entered our service. These Cattees would form an excellent body of soldiery, as would most certainly the Parsees could they be induced to serve.

2876. (*Marquis of Tweeddale.*) What is the number of natives in the Bombay service attached to a gun—I refer to the low-caste men that you talk of?—We take for our exercise the Royal Artillery book of drill, and we drill our men to that. In the field artillery we have only eight men; but hitherto these have all been high-caste men.

2877. Natives?—Natives as well as Europeans; we have made our natives do the same duty as the Europeans in all respects.

2878. And what is the number in Bengal?—I do not know.

2879. Where do you enlist your artillerymen?—They were chiefly enlisted from Hindoostan; recruiting parties were sent to Hindoostan for that purpose.

2880. You are talking of Hindoostan men when you say that there are eight to a gun?—Yes; in Bombay we had almost exclusively Hindoostan men in our native artillery.

2881. (*Duke of Cambridge.*) Did you command a battalion of entirely native artillery, or was it composed of Europeans and natives mixed?—I have served with both horse and foot, both European and native, artillery. My command lately was of a division of artillery where there were both horse and foot, European and native.

2882. (*Major-General Hancock.*) Are you not aware that these Hindostanee men were enlisted into the artillery in such large numbers in consequence of the difficulty experienced of obtaining men within the limits of the Bombay presidency?—The idea was first of getting high-caste men for what we considered high-caste service. Volunteers of this description were called for from the infantry on the formation of the Golundaz Battalion, and were liberally supplied.

2883. Whose idea was that?—The idea among artillery officers, participated in, I am persuaded, by the army generally.

2884. (*Chairman.*) Did you ever find caste urged as an objection to the performance of military duties?—Never.

2885. (*Duke of Cambridge.*) Have you ever heard of it in any other presidency?—Yes, in Bengal.

2886. In what way?—That it interfered in every possible way.

2887. How do you account for the difference?—As in many cases the Bombay sepoys are of the same class of men who serve in Bengal, the difference must be attributable to the differences of system between the Bengal and Bombay armies.

2888. Do you think that it ought to interfere?—Certainly not. I would not allow it to interfere with the slightest duty; nor is it necessary.

2889. You think that without injuring the feelings of the natives there is no necessity for its interfering?—Just so. I am persuaded the native may, under judicious military training, be induced to consider his duty as a soldier his first object, and this without any offence to his religious feelings.

2890. (*Chairman.*) Under proper discipline?—Under proper discipline. I never knew it interfere.

2891. (*Viscount Melville.*) From what part of the country did the low-caste men whom you said you would prefer in the artillery come?—Our store lascars, the persons of whom I spoke, were chiefly Comata men. A class, originally coming from the Nizam's territory, Hyderabad I think, of whom a number are congregated in Bombay; they are Hindoos, small inferior-caste men. They generally perform the duty of bearers to palanquins in private service, and are active, intelligent, and strong.

2892. Have you ever had them as gunners?—Never. I was for a considerable time a commissary of Ordnance, and these men were very efficient as labourers in the Ordnance department. It is from that I judge that they might be rendered efficient as artillery men.

2893. Then would you recommend that they should be enlisted as artillerymen?—No. I would recommend no natives being taken, but if natives were taken I should say take those, or men like them, Mahrattas and others, in fact men of any caste, who possessed the requisite physical capabilities, but all your own presidency. After all, I am well assured that unless high rates of pay in comparison with infantry be given, and a selection thus ensured of recruits, an efficient corps of native artillery will never be formed.

2894. (*Marquis of Tweeddale.*) If you enlisted natives how many men would you require to a gun, eight being the number which you have stated of Bombay men?—I think this number would in the case of light field ordnance be able to do the duty, although more frequent reliefs might be necessary in a battery than if Europeans were employed.

2895. (*Major-General Hancock.*) Do you think that the establishment of the Bombay artillery is usfficient, or that it should be increased to the same strength as the royal corps?—I think that it is at present insufficient.

2896. (*Duke of Cambridge.*) You think that the royal corps is a better establishment for a field battery or troop than your establishment?—I do so.

2897. (*Major-General Hancock*) Do you not think that it also should extend to the European commissioned officers?—Yes; I speak of the European commissioned officers. I understood the question to refer to the European officers.

2898. No, I meant it to refer to men and everything?—I think that the constitution of a battery in India, whether of horse or foot artillery, should be essentially different from what it is at home. I would have native followers exclusively. European artificers ~~will never~~ be able to follow their craft on

Colonel James Sinclair.

26th Aug 1858.

field service in India. In light field batteries served by foot artillery I would have native drivers.

2899. (*Duke of Cambridge.*) Do you not think that the driver of a gun is almost, if not quite, as important a man as the gunner?—He is a very important man certainly, although his importance has never been sufficiently appreciated in India, where he has not been treated liberally. As I said before, I would have all fighting men Europeans if I could, but I do not think that the finances of the country would bear the expense. A European driver, unless he were a very small man, would oppress the horse. On this subject I have had a letter by last mail from one of the best battery commanders in India, and who has been given European drivers, small men as could be picked up. He complains that they distress the horses.

2900. Might not you have a small man expressly enlisted for the purpose?—Then unquestionably the European driver is the more efficient man, but I think that the native would answer the purpose sufficiently well. We could find trustworthy men for the purpose, native Christians for instance, and this is a main point.

2901. (*Major-General Hancock.*) But with your distrust of the natives would you trust a native to guide a horse artillery gun?—Not horse but foot. For horse artillery we have always had European drivers in Bombay, and I would still have it so. The system of gunner and driver in one person has in the Indian horse artillery worked well.

2902. (*Viscount Melville.*) Are you not aware that in consequence of having the European drivers in the horse artillery it is much more efficient, and that the driving is much better than it is in a battery where they have native drivers?—I have seen batteries driven by natives as well as men could drive them. I do not mean to compare the native with the European in all respects, even as a driver; but natives properly trained are quite equal to the task of driving a horse battery, and of driving it well.

2903. (*Sir Harry G. W. Smith.*) Have you served at all with guns drawn by bullocks?—Yes.

2904. What is your opinion of their efficiency?—They are very inefficient for field artillery, there can be no question about it. They should never be employed with field artillery, but the transit of heavy ordnance must be effected with them mainly in the present agricultural state of India.

2905. (*Major-General Hancock.*) With regard to foot artillery, you have never had the same establishment of commissioned officers as with the royal artillery, have you?—No.

2906. (*Duke of Cambridge.*) Have you not the same number of European officers to a troop and battery in the European troops and batteries as in the royal artillery?—No.

2907. How many have you?—Generally a captain, and sometimes two subalterns, sometimes one—the horse artillery has, however, been generally kept better officered than the foot.

2908. Is that for the establishment?—The establishment is a very different thing from the actual practice.

2909. What is the establishment for a troop or battery?—The establishment fixed by regulations has been one captain and three subalterns with a troop, or battery, but that has been constantly reduced; for instance, Colonel Leslie went through the second Affghanistan campaign with one subaltern only to his troop, and there was a battery in that campaign commanded by a subaltern without any officer to assist him, and numerous instances of this fact may be adduced.

2910. Surely that is not a good system?—Certainly not.

2911. Do you not think that you ought to have the same number of officers that a Queen's troop has?—We ought to have an adequate proportion of officers; say 1 captain and 4 subordinates to a troop of horse artillery, 1 captain and 3 subordinates to a horse battery.

2912. (*Major-General Hancock.*) During the last ten years have not batteries been very frequently commanded by subaltern officers?—Almost always.

2913. (*Duke of Cambridge.*) Can there be anything worse than such a system?—In fact those men have done the duty of captains without having the rank, scarcely the authority.

2914. Can anything be so bad as the system of subalterns commanding so important an arm as a troop or a company of artillery?—It is bad, no doubt, but unavoidable in the present constitution of the service.

2915. (*Chairman.*) What has caused this reduction of officers from the establishment?—They have been called away for other duties, and a proportion have of course been absent on furlough and sick leave.

2916. (*Duke of Cambridge.*) What other duties?—For staff employment; the ordnance department, for instance, has always been officered from the artillery.

2917. (*Major-General Hancock.*) The establishment of officers of the artillery corps is calculated to allow for those appointments, is it not?—But it has not been sufficiently calculated.

2918. (*Duke of Cambridge.*) What would you recommend as an alteration in that respect?—I would fix the establishment necessary to perform properly the regimental duty of the army, whether in the artillery, or the other branches of the "regular" service. I would then second, as is done in the Royal Artillery, officers drawn away for political or staff employ, duty with irregular corps, or on furlough out of India.

2919. Would you prefer that to a system of staff corps?—I do not see how a staff corps system could work in India. I have to the best of my power given the thing consideration, and I have never been able to satisfy my mind that a staff corps, as has been frequently proposed, could work in India.

2920. Why not?—It would deprive the regimental officer, so to speak, of hope; it would close to him the door of hope for employment away from his regiment.

2921. Do you think it a good thing to encourage that feeling?—I do.

2922. How can there be any feeling of *esprit de corps* in a regiment where the officers wish to get away from it?—An *esprit de corps* has been kept up notwithstanding that system. I think this matter has been much misunderstood in England, and I can fancy nothing more wretched than the prospect of a mere regimental subaltern in India, without the door of hope of employment in the staff being open to him. At home there are a thousand things to distract his mind from his position; he has friends and many objects of interest all around him; in India he is in a different position, and I should be very sorry to see the door of hope closed to the subaltern of an Indian regiment. His efficiency as a mere regimental officer would be utterly destroyed. Under the existing system there have always been good men and true doing regimental duty awaiting in hope their chance of other employ, but meantime doing their present duty well.

2923. But why should it be closed to a subaltern or to any officer because you have a staff corps; supposing that no officer could be put into the staff corps without going through whatever branch of the service he might be in, and that any officer might be put back again to the artillery or infantry whenever it might suit his convenience or the convenience of the Government, what objection could there be to that?—Then there would be a system of purchase similar to that in the Queen's service.

2924. No purchase at all; but the mere system of a record of staff officers able to be transferred to their own regiments whenever it suited either their own wish or the convenience of the service?—I may be in fault on the subject, but it strikes me that the simplest plan would be to second the officers withdrawn *ad libitum* from regiments, and to let them be

Colonel James Sinclair.

26th Aug. 1858.

borne on the strength of their corps, and return to it under certain regulations after they have served on the staff for a certain time, or on attaining regimental promotion.

2925. Supposing you had a great many officers so seconded, how could you bring them back again?—By degrees, as they were promoted, just as at present.

2926. Would not it stop promotion altogether in the lower ranks?—I think not injuriously so.

2927. (*Chairman.*) You say that by the present system great inconvenience arises from so many officers having been withdrawn from their regiments for staff duty?—Because they have not been replaced, consequently too few officers have been left with regiments for the proper routine of duty.

2928. (*Major-General Hancock.*) How could they be replaced under the present system of promotion by seniority?—I do not perceive any difficulty in the matter. The officer removed would be replaced by promotion in the regiment, and by the nomination of another cadet to complete the *duty roll* of the regiment. Under this system, undoubtedly there would be a larger number of officers sometimes in one regiment than in another, and that might be supposed to cause inequality in the promotion in one regiment over another. I do not think this of any consequence; the evil, if evil it may be deemed, would correct itself as time wore on. The inequality of promotion has been sometimes very extraordinary in the Bombay army as unequal as it could possibly be under any system human ingenuity could devise, and this notwithstanding a strict adherence to a regimental seniority system.

2929. (*Chairman.*) Do you consider that any change is required in the system of promotion, as regards native commissioned and non-commissioned officers?—I do not think that any change is necessary in the Bombay army; they have always hitherto been promoted according to merit.

2930. (*Duke of Cambridge.*) You think that that answers well?—Certainly.

2931. You have never heard of its being complained of as an inconvenience or an injustice?—Never; I never heard a complaint from any quarter.

2932. (*Chairman.*) You prefer the system of promotion by selection to that by seniority?—Unquestionably.

2933. Do you consider that the commanding officers of the native regiments in Bombay have sufficient power to reward or punish?—I think their power has been more circumscribed than ought to have been the case.

2934. (*Duke of Cambridge.*) In what way?—They have not had power to reward and punish as I think would have been desirable.

2935. What power have they now?—They have the power of promotion; but they have not the power of punishment or discharge, as I think they might have with advantage.

2936. (*Chairman.*) Do you consider that the discipline of a regiment depends upon the degree of the power which the commanding officer has?—To a very considerable extent, especially in the native army; provided always care were taken to prevent any officer commanding a regiment who was not equal to the command.

2937. (*Major-General Hancock.*) Do you know what power of punishment the commanding officers of regiments have under the Articles of War?—I speak generally; the Articles of War change from time to time, and I have been now three and a half years absent from India, and therefore alterations may have taken place.

2938. Will you be good enough to specify the punishment which commanding officers have the power of awarding under the existing Articles of War?—I cannot do so from recollection, I have been so long absent from the mere detail of regimental duty.

2939. What is your reason for supposing that they do not possess sufficient power?—I have heard the matter discussed at messes, and among officers generally.

2940. You are not speaking from your own knowledge as to what powers they do or do not possess?—Not directly.

2941. (*Viscount Melville.*) I think that the Articles of War are specific enough, but what power do the commanding officers possess in what is called giving secondary punishments, not trials by court-martial, but drill, confinement to quarters, and that sort of thing?—I have been for many years commanding a division of artillery, and all that detail of minor punishment to the men under my command was carried on by captains of troops and companies, and it came in no way under my cognizance, except on my annual inspection of books and records; it was carried on by commanders of troops and companies, under the station brigadier, and was not referred to the artillery commanding officer at all; therefore it did not, for some years of my residence in India, come under my immediate ken.

2942. (*Major-General Hancock.*) It simply amounts to this, that you do not know what powers commanding officers of regiments in the Bombay presidency do possess?—I know that they have not the power of discharge. I know that they have the power of promotion by selection; that is in their hands exclusively, although not perhaps promotion to native officers from non-commissioned officers. That is a question in which the adjutant-general's office exercises a very strict surveillance.

2943. (*Duke of Cambridge.*) Have you the power in the Bombay army to inflict corporal punishment?—That is only done in the native army in the case of mutiny, or offences of grave nature, and then the man is turned out of the service. I speak under correction. I am under the impression that if a man is once flogged he is turned out of the service.

2944. (*Viscount Melville.*) Is not it the custom in the artillery in Bombay that the captain of the battery deals with the men as if he was the commanding officer of a regiment?—Yes.

2945. And that instead of going to the colonel who commands the station, and the defaulter being brought up before that colonel, each captain commands his own battery as if it was a separate regiment?—Quite so.

2946. Do you think that a proper system?—I think it is necessary to the efficiency of the service.

2947. Do you not think that where the artillery are stationed together the defaulters should be brought before the senior officer of the artillery of the station, and that each captain should not be permitted to do as he likes?—I think that each captain of a troop or battery must when detached from his battalion or head quarters, have control over his own battery, as complete as the officer commanding a regiment has over his regiment. A battery is a very important command, and the captain of it should have complete control, as far as an officer commanding a regiment has control over the men; I think that the command of a troop or battery is in some degree assimilated to that of a ship-of-war; although ships-of-war do duty together, the officer commanding a particular ship has his own command reserved to him. Where two or more batteries, troops, or companies are serving together the general and professional command should of course be vested in the senior officer.

2948. (*Duke of Cambridge.*) Though you have not served out of the Bombay presidency, have you an impression or feeling that there ought to be a fourth army; that is to say, that the Bengal army ought to be divided into two; do you think that there would be any advantage in that?—I think that there would be an advantage. I should say that as it has been constituted it is too large; that it would be for the advantage of the empire were it to be broken.

2949. You think that the fact of the armies of Bombay and Madras having been separate from the army of Bengal has been of great advantage to the State in general?—Yes, of very great advantage at the present crisis.

Colonel
ames Sinclair.

th Aug.1858.

2950. And you think that that advantage would be further extended if Bengal were divided into two presidencies?—I should say so.

2951. (*Marquis of Tweeddale.*) Would you have two commanders-in-chief or one?—A commander-in-chief in each presidency. I think that each army should have its own commander of the forces or commander-in-chief.

2952. (*Colonel Burlton.*) Would you have a separate staff, an adjutant-general and a quartermaster-general for each?—I think so. There are a thousand little differences between the presidencies which it is difficult to explain, and difficult to recollect, in fact; and it is of importance that such distinctions should be kept up, and even exaggerated.

2953. (*Viscount Melville.*) Do you not think that there ought to be one system for all three presidencies?—With regard to the Europeans, yes. With regard to the natives, I would leave the system to be established as much under local influence as possible, and I would have arrangements made that the native armies, even if called upon to act together, as they would be in extended operations, should be kept apart as much as possible, and should be taught that they were separate, to prevent any collusion between the separate armies.

2954. (*Chairman.*) But you would make no difference in the terms of enlistment, or the pay or allowances given?—None in the case of the "regular" army; those deemed "irregular" I would pay according to the social habits and requirements of the clan or class from which each regiment may be formed, so as to give to each man a certain pecuniary stake in his berth (Hind., *assamee*), in lieu of the pension for mere length of service, to which the soldiers of the regular army would be entitled.

2955. (*Duke of Cambridge.*) Would you not think it very desirable, with your experience as an artillery officer, that the whole artillery system of the country should be the same in all the presidencies?—Yes.

2956. That the whole matériel should be the same?—Yes.

2957. You are aware that that is not so now?—The matériel of the artillery in all the presidencies has been assimilated of late years; but our carriages differ from those used in Europe. The whole differ one from the other, and from the royal artillery, in many points of discipline and drill.

2958. Do you not think that that is a very great drawback and a very great inconvenience?—I think it is inexpedient that considerable differences should exist. Those now existing have not hitherto operated as a drawback to efficiency; they have all done their duty well.

2959. (*Major-General Hancock.*) Do you not think that the emoluments attached to military staff appointments should be equalized in all the presidencies, including Ordnance appointments and all others? At present you are aware that Bengal officers enjoy very great advantages over those of the other presidencies?—Supposing the Bengal army to be divided I think that that might be done; but that is a question to which I have really never given a thought.

The witness withdrew.

Colonel
M. Willoughby.

Colonel Michael Willoughby, C.B., examined.

2960. (*Chairman.*) You are colonel of the Bombay artillery?—Yes.

2961. How long have you been in the service?—thirty-seven years.

2962. How long have you been in India?—About thirty-four years.

2963. Of course you have seen the European and native troops acting together?—Yes.

2964. Have you formed any opinion as to the proportion which the Europeans should bear to the native troops in the Bombay presidency?—With an adequate proportion of artillery, one European to three native soldiers would, I think, be sufficient.

2965. As regards cavalry, what is your opinion?—I would do away with the regular native cavalry altogether, and I would substitute regiments of European cavalry, consisting each of about 500 sabres.

2966. Would you have no native cavalry?—None, excepting irregular cavalry.

2697. In what proportion would you have Europeans to the irregular cavalry?—It must depend much upon circumstances.

2968. (*Duke of Cambridge.*) Take it generally for the Bombay presidency?—Some of them are police corps.

2969. We are talking merely of the military corps?—Then about the same proportion as to infantry. There are three regiments Scinde horse, one Poonah, and two of the Southern Mahratta corps.

2970. (*Chairman.*) Would you still keep the same proportion of one to three?—Yes.

2971. Would you have any native artillery at all?—I do not think that we could do without native artillery. For there are parts of the country where it would be almost impossible for Europeans to live; and I am of opinion that no European battery ought ever be sent away without the support of a company of European infantry, or an equal proportion of reserve artillery.

2972. (*Viscount Melville.*) If the European artilleryman dies, will not the European infantry soldier die?—For that reason I think that we must keep up native artillery for unhealthy stations. I would only have European infantry to support European batteries.

2973. (*Sir Harry G. W. Smith.*) Are you of opinion that the Minié rifle will in a great degree do away with the necessity of having detachments of artillery in India?—Certainly not. The moral effect of artillery in India is very great; perhaps greater than in any other country.

2974. (*Chairman.*) Would you arm the native troops in the same way that you do the Europeans?—If we are to retain India I think we must have a native army; and must put confidence in it, and arm it, if it is to take the field, as we should arm Europeans.

2975. Would you put the same reliance upon them with regard to the artillery; would you entrust them with the guns the same as you would the Europeans?—Certainly, provided the pay of the artillerymen were increased. The prestige of the corps is gone; I think from the time that the reduction of pay took place in 1840.

2976. (*Major-General Hancock.*) The men only get the same pay as the infantry?—They do; and the duties of a native artilleryman are at all times greater than those of an infantry soldier. He is taught his many and various duties in English, which require much time and labour to acquire, without receiving any additional pay. The service is not looked up to by the natives as it was formerly.

2977. (*Duke of Cambridge.*) Do you think that their having to do this in English has anything to do with it?—No; I attribute it to the reduction of pay.

2978. (*Chairman.*) Do you extend that opinion to the sappers and miners?—Yes.

2979. Then you would recommend that both the sappers and miners and the artillery should be restored to their former rate of pay?—Certainly.

2980. And you think that that would have the effect of restoring the favourable feeling towards those branches of the service?—In all probability it would.

2981. (*Duke of Cambridge.*) Would you keep up the same proportion of native artillery to European, which you have mentioned for the other portion of the Bombay army, namely, three to one?—I would diminish the strength of the native artillery.

2982. And make them merely auxiliary?—Yes.

Colonel M. Willoughby

26th Aug. 1858

2983. (*Chairman.*) What proportion of Europeans to natives would you have in the artillery ?—I think we have at present 1,700 Europeans to about 1,000 natives.

2984. (*Duke of Cambridge.*) And what would you have the proportion hereafter ?—Six companies, or one battalion of natives, I think would be sufficient to one brigade of horse artillery, and five battalions of Europeans.

2985. (*Chairman.*) To how many Europeans ?—2,500. Our present strength is not sufficient for the requirements of the service. At present we have a reserve battalion of artillery, strange to say, without its due proportion of European officers ; at this moment in the Bombay presidency, there is one battalion of artillery without any officers excepting what it can get from the other battalions.

2986. (*Duke of Cambridge.*) How has that arisen ?—Artillerymen were so much required when the mutiny first broke out that the local government considered it expedient to raise a reserve battalion.

2987. Europeans ?—Yes ; and without any officers. From the want of them, detachments of artillery with guns were sent off on important duty without their proper commanders. I have myself, at Lord Elphinstone's request, on one occasion sent off a detachment of artillery without a single commissioned officer. When the mutiny first broke out at Kolepoor, I received a letter from the governor early on Sunday morning, telling me that there was no time to communicate with the brigadier, and desiring me to make arrangements for sending off immediately two guns with artillerymen down the coast ; I did so, but they were despatched without an officer in command ; and, moreover, with an unselected sergeant, for we were even so reduced in strength that there were few non-commissioned officers at head-quarters.

2988. (*Sir Harry G. W. Smith.*) Did any escort go with those two guns ?—Yes.

2989. (*Duke of Cambridge.*) How do you account for this great want of officers ?—It has been pressed upon the Bengal government over and over again, that we should have an increase, not only of artillerymen, but of officers also ; and had this been attended to, in all probability the mutinies would have been more promptly put down ; and in many places, we may infer, there would have been no rising.

2990. What is your supposed establishment of officers to a troop or battery ?—A captain and two or three subalterns ; but a battery has been left with merely a captain and frequently a subaltern in command.

2991. What is the establishment according to regulation ?—I think it is a captain and three subalterns to a troop ; one captain and two subalterns to a battery. We have, for each battalion a colonel, a lieutenant-colonel, a major. When I was in India a few months ago, there were five captains to a battalion. There are now six. There are ten lieutenants and five second lieutenants.

2992. That is to how many companies ?—Four companies of Europeans to each battalion and six companies of natives.

2993. (*Major-General Hancock.*) Are you aware that during the last ten years every commander-in-chief successively has most strongly urged upon the Government the necessity of greatly increasing the European commissioned officers of artillery ?—I have heard that it has been urged over and over again.

2994. (*Duke of Cambridge.*) And it has been as often refused ?—I cannot say that it has been refused ; but it has not been attended to.

2995. Is it your opinion that the number of officers to a European troop or battery in India ought to be equal to that in a troop or battery of the royal artillery ?—Certainly.

2996. (*Sir Harry G. W. Smith.*) Are the artillery officers selected for staff situations, either civil or military ?—Yes, the officers of artillery conduct the duties pertaining to all Ordnance matters.

2997. Is that confined to their own department ?—They are also eligible for the civil as well as the general staff of the army.

2998. (*Duke of Cambridge.*) Are there a great many employed upon the staff ?—No ; very few on the general staff.

2999. (*Major-General Hancock.*) Are you aware that during the last ten years the commander-in-chief has constantly opposed the withdrawal of officers from the artillery for staff employment, except regimental, in consequence of the great paucity of officers ?—The paucity of officers has stood in the way of their advancement.

3000. They have been excluded from their fair share of appointments, civil and military, solely on account of the paucity of officers, and of the commander-in-chief protesting against their being taken away ?—Yes, that has frequently happened.

3001. (*Viscount Melville.*) Does the establishment to a troop of horse artillery allow a first and second captain, or only one captain ?—Only one captain.

3002. (*Major-General Hancock.*) Has it not been the case during the last few years that even infantry officers have been placed in command temporarily of a battery of artillery ?—They have temporarily commanded batteries at out-stations.

3003. (*Chairman.*) Do you consider that the Bombay army should be composed of different nationalities and castes, and if so, in what proportion ?—Certainly ; and I think that they should be mixed up as much as possible.

3004. (*Duke of Cambridge.*) Would you wish to have them enlisted from the nationalities or castes within the boundaries of the Bombay presidency, or would you extend the enlistment of them to any portion of India ?—I would extend their enlistment to any portion of India.

3005. (*Chairman.*) Have you ever experienced any inconvenience on account of caste, in the performance of military duties ?—None whatever.

3006. None exists in the Bombay army ?—None. I commanded a company of golanndaze for a long time at a detached station, and found no difficulty whatever. They require to be ruled with firmness.

3007. But you consider that under proper discipline no inconvenience arises from caste ?—Just so.

3008. (*Duke of Cambridge.*) You see no reason why, with proper discipline, caste should be allowed to interfere at all ?—I see no reason whatever.

3009. Would you enlist the men for general service ?—Yes.

3010. (*Chairman.*) Would you make any alteration in the code under which the Bombay army are enlisted ?—None. In Bombay they are enlisted for general service.

3011. (*Viscount Melville.*) With regard to caste, does any difficulty arise at the time of any of the great feasts, in men doing their duty when those feasts are going on ?—Not that I am aware of.

3012. Are they allowed to attend the feasts ?—A certain proportion are usually allowed to attend them.

3013. (*Chairman.*) Do you consider that any change is required in the system of promotion, as regards the native commissioned and non-commissioned officers ?—No ; I think the system of promotion in the Bombay army is good ; it rests with the commanding officer.

3014. It is by selection ?—Yes, I believe it is.

3015. And you prefer that system to promotion by seniority ?—You cannot get efficient men without it.

3016. (*Duke of Cambridge.*) You think that that system, as now introduced and existing in the Bombay army, is quite satisfactory ?—Yes, satisfactory. I would however, delegate more power to officers commanding native regiments, brigadiers and officers commanding divisions.

3017. (*Major-General Hancock.*) In what respect ?—I would allow those officers to confirm *all* courts-martial, without reference to higher authority.

Colonel
M. Willoughby.

26th Aug 1858.

3018. (*Duke of Cambridge.*) You would have no district court-martial at all, but have all courts-martial regimental?—A commanding officer should have the power of convening and confirming *any* court-martial.

3019. (*Viscount Melville.*) Do you mean to say that a commanding officer in the Bombay army cannot confirm a regimental court-martial?—Before the mutiny there were certain offences for which he could not try a sepoy and confirm the sentence without reference to a higher authority.

3020. It depends upon the nature of the court-martial. A general court-martial goes to the commander-in-chief, a district court-martial goes to the officer commanding the brigade or division, and a regimental court-martial the commanding officer confirms; but do you mean to say that in the Bombay army a commanding officer has not the power of confirming a regimental court-martial?—Yes, he has that power; but what I am desirous of bringing forward is, that officers commanding corps, brigades and divisions, should *always* have the same power they *now* possess of inflicting summary punishment for *any* offence; this power was obliged to be given to them when the mutiny broke out.

3021. (*Chairman.*) Do you consider that the discipline of a regiment depends upon the powers in possession of the commanding officer?—In a great measure it does.

3022. (*Duke of Cambridge.*) And do you think that that is more the case with natives than it would be with Europeans?—I think so.

3023. According to the Bombay system, what is the average age of a man when he arrives at the grade of a commissioned officer?—They are, generally speaking, young-looking men.

3024. What do you suppose their average age to be?—About thirty-three.

3025. (*Major-General Hancock.*) Commanding officers of regiments under the Bombay presidency have full power of giving leave of absence?—Yes.

3026. (*Duke of Cambridge.*) Is it not so in the other presidencies?—I think not; but I will not speak positively.

3027. Is it the habit in the Bombay presidency to send in petitions to higher authority from native officers or soldiers, without their passing through the proper channel, namely, the commanding officer of the company?—I am not aware of any instance of a petition having been so received.

3028. (*Major-General Hancock.*) Are you aware that it is entirely opposed to the established system?—It is quite opposed to the regulations of the service.

3029. (*Duke of Cambridge.*) Is it your opinion that there should be any admixture of Europeans and natives, and if so should that admixture be regimentally or by brigade?—Yes, by brigade.

3030. You would not have it regimentally?—No.

3031. Have you any reason for not having it regimentally?—I do not think that native and European recruits would work well together.

3032. Do you think that there is a sufficiency of European officers for the native infantry regiments?—Yes, I think that each regiment is amply provided for.

3033. Have you given your attention at all to the idea of separating the Bengal army into two distinct bodies; in fact, having an additional presidency formed? I think it would be very desirable; the Bengal army is on too large a scale.

3034. Would it be desirable to assimilate the appointments and allowances in all the presidencies?—I think that they ought to be upon one footing; a great deal of jealousy exists now.

3035. And that, of course, is very undesirable?—Yes.

3036. (*Major-General Hancock.*) You mean, in consequence of the superior advantages, enjoyed by the officers of the Bengal presidency over those enjoyed in the other presidencies?—Yes.

3037. (*Viscount Melville.*) You say that you think that the native regiments have a sufficient number of European officers; do you mean that in general terms, or that the establishment is sufficient?—The establishment is sufficient.

3038. You are aware that that establishment is very seldom present, and that when officers are upon the staff, and a campaign takes place, all the officers on the staff are immediately ordered to join their regiments. It sometimes happens that a man comes and takes command of a regiment who has not seen it for years, and has to go to campaign without knowing a single man, and knowing hardly an officer in the regiment. Do you think that a good system?—There are certainly some difficulties attending it; but I think, as a general rule, that in garrison the number of officers are quite sufficient. There is not occupation enough in a native regiment to employ more than a certain number of officers.

3039. (*Duke of Cambridge.*) What number do you think should be always present?—If you had selected men, you would not require a great number. Looking at our irregular cavalry regiments, there are not more than three or four officers in each regiment, yet they have always done their duty well in the field and in garrison also.

3040. (*Viscount Melville.*) Admitting that it is necessary to take officers for the staff, which I do not deny, do you think that it is a good thing, when a man has been in the command of a regiment, and that regiment is ordered on service, and an officer who is on the staff is ordered to join that regiment, and of necessity from his seniority takes the command, that the officer who has been so long in command should be superseded at the most critical moment when it is necessary for the commanding officer to know the men?—That system is objectionable, no doubt; but I do not know how it could be remedied.

3041. (*Duke of Cambridge.*) Could that objection be met by the formation of a staff corps?—Yes; it might be met by the formation of a staff corps, or officers on staff employ being seconded, according to the royal artillery system.

3042. (*Major-General Hancock.*) Do you think that the formation of a staff corps is practicable without upsetting the whole established system of promotion?—I think that it would be very difficult indeed to carry it out.

3043. Do you not think that the system might be remedied by appointing to the commands of regiments by selection?—Yes.

3044. Supposing that the field of selection were increased by augmenting the number of lieutenant-colonels, would not that enable the commander-in-chief to provide every regiment with a perfectly efficient commander; suppose, for instance, there were 100 lieutenant-colonels, to provide commanders for 25 regiments? Do you think that that system would work well?—No doubt it would, provided the best are selected.

3045. (*Duke of Cambridge.*) Then that would not be the seniority system?—No.

3046. (*Viscount Melville.*) Is it not the system now that where a lieutenant-colonel and a major are both present with a regiment, the lieutenant-colonel is moved, in order to give the major the command of the regiment?—It frequently occurs.

3047. Is it not the rule?—I am not aware it is the general rule.

3048. (*Marquis of Tweeddale.*) It is the practice?—I do not think that in the last few years any lieutenant-colonel has been removed without some special reason.

3049. (*Major-General Hancock.*) Are you not aware that the transfers of lieutenant-colonels under the existing system are not made in order to place the majors in command of regiments, but for the purpose of placing a field officer in command of every regiment as far as practicable?—Yes.

Colonel M. Willoughby

26th Aug. 1858.

3050. Is not that the rule ?—Yes, that a field officer should be placed in command of a regiment whenever one is available for that purpose, superseding a captain if he is in command.

3051. (*Viscount Melville.*) But the rule is, that the man to be moved is not the major but the senior officer, the lieutenant-colonel ?—Yes ; formerly the major was moved, now it is the lieutenant-colonel.

The witness withdrew.

Adjourned to to-morrow at 12 o'clock.

Friday, 27th August 1858.

PRESENT :

Major-General PEEL.
H.R.H. the Duke of CAMBRIDGE.
Lord STANLEY.
Marquis of TWEEDDALE.
Viscount MELVILLE.
Lieut.-Gen. Sir HARRY G. W. SMITH.
Major-Gen. HANCOCK.
Colonel BURLTON.

MAJOR-GENERAL PEEL IN THE Chair.

Sir CHARLES E. TREVELYAN, K.C.B., examined.

Sir C.E. Trevelyan, K.C.B.

27th Aug. 1858.

3052. (*Chairman.*) Will you have the goodness to state to the Commission the length of time that you were in India ?—I was 12 years in India, from the year 1826 to the year 1838.

3053. Will you have the kindness to state what situation you held in India ?—During the first six years I held various situations in connexion with the residency at Delhi, including acting as political agent at Kotah and Bhurtpore, and during the last six years I served at Calcutta as deputy secretary in the political department.

3054. Then your knowledge of India is confined to the Bengal presidency ?—I have travelled through the other presidencies, and read and heard a great deal about them, but I have not served in them.

3055. Have you formed any opinion as to the proportion which the European should bear to the native troops in the Bengal presidency ?—I have ; but both the aggregate amount of force which will be required for general service in the Bengal presidency, and the proportion in which that force should consist of Europeans and natives, will depend chiefly on other arrangements which are not of a military kind.

3056. (*Duke of Cambridge.*) What other arrangements ?—The large amount at which the native army of the Bengal presidency has been hitherto maintained has been chiefly owing to two causes ; one that it has been employed not only for the legitimate purpose of an army, that is, for maintaining the general peace of the country, but also in carrying on to a great extent the civil administration, in performing functions which in other countries are performed by police and others, for instance, guarding the public offices, gaols, and treasuries, furnishing treasure parties, and various other duties. If those duties were performed, as they ought to be, by a police organized on the general principle of the county police in England, a strictly local force, the demand for troops for general service would be very much diminished. Another cause of the great amount of the army was that it was necessary to counterbalance the forces maintained by the native states, Oude, the Punjaub, Gwalior, Holkar, Hyderabad, and so forth. Several of those states have been consolidated with our own dominions, other states are of a strictly national kind, depending upon Jaghiredar forces, so that nothing is to be apprehended from them ; but there will still remain several which ought to be organized in a military point of view in the same manner as our own army, and, in fact, to be consolidated with our own army ; and if that is properly done, that also will greatly diminish the demand for maintaining a force for general service. Then the extension of railroads, by making the same force more generally available, will diminish the necessity for making it so large. And, lastly, a proper arrangement for disarming the country, especially in reference to firearms and to the manufacture of gunpowder. If all these arrangements are properly carried out, and our civil administration is conducted in a manner which is, on the whole, acceptable to the population, the force for general service may be brought within very reasonable limits. The native force for general service will merely be that which will be necessary as subsidiary and auxiliary to the European force. I should say, therefore, that subject to these conditions a European reserve of from 30,000 to 40,000 men, with twice that number of native auxiliaries, would be sufficient for the whole Bengal presidency, including Bengal Proper, the North-Western provinces, and the Punjaub. This would re-establish our Indian finances and leave a large annual surplus available for the improvement of the country, which would further tend to diminish the necessity for maintaining a large standing army.

3057. (*Chairman.*) I understand your opinion to be that several of the duties hitherto performed by the military might be transferred to a police force, and that afterwards there would be required about 40,000 Europeans and twice that number of native troops in the presidency of Bengal ?—Yes, that is my opinion.

3058. (*Marquis of Tweeddale.*) Would you make the police military or civil ?—Civil, but with a certain *quasi* military organization. In my opinion they should not be police corps, which would be only another name for a standing army, but they should be a civil force, properly organized in each district under a European officer ; and a certain proportion of the police in each district should be armed with firearms, and subjected to the necessary amount of discipline, and should be employed in guarding the gaol and treasury, and other duties which have heretofore been performed by the sepoys; they would be a sort of company *d'élite* in each district out of the aggregate of the police.

3059. I understand you to say that you would have them formed like the rural police of England ?—According to the general organization of the rural police ; the police of each county is subjected to a regular organization under a superior officer.

3060. The principle, as I understand it, of the police of Scotland is, to have about 1 in 1,400 men, and the object is merely to be able to give evidence in the event of individuals committing a crime where there is a large mob, or a large party over which a small body of the people would have no power ?—The object of police in every country is to preserve the peace, and I would propose that the police of the different districts should be maintained, with every necessary improvement, on the present civil footing, but that out of them should be selected, with certain superior advantages and with a certain amount of

Sir C. E. Trevelyan, K.C.B.

27th Aug. 1858.

military discipline, a sufficient number in each district to perform the civil duties which have hitherto been performed by the sepoys. We know that persons of that class are quite competent for such duties from the experience both of the United Kingdom and of India. The gaols under the convict department, for instance, are not guarded by military, but by civil persons on the footing of constables. In Ireland the police have a still more military organization given to them; but I consider that the model of the English county police, with the modification mentioned by me, is more suited to the state of India than any other.

3061. (*Duke of Cambridge.*) More so than the Irish police would be?—I think so, because they are more entirely local. In all our arrangements, of course, we should have in view exemption from such a catastrophe as has lately occurred. If a large portion of the duties formerly performed by the native army were performed by local police, we should have this security for their fidelity, that they would be locally known, and their property and families would be in the district where they served, and that, not being moveable, they would have no communication with the police in other districts, and with the exception of a limited number of the most trustworthy persons, selected for the purpose, they would not be armed with fire-arms. So that to that extent the danger which has hitherto arisen from a native army would be avoided.

3062. (*Sir Harry G. W. Smith.*) You have stated in your evidence that upon certain conditions being carried out, applying especially to the civil government, a certain number of troops would be sufficient. It appears to me that those conditions which you have stated are very prospective indeed; therefore, as India is just now in a most disorganized state, it becomes our duty to consider what number of troops are applicable at this present moment. Will you be so kind as to give us your opinion upon that point?—I am not competent to give an opinion upon that point. I am not sufficiently acquainted with the number at present employed, or with the exigencies which call for their employment.

3063. (*Lord Stanley.*) You were speaking of what would be required in the ordinary state of things in India?—Yes.

3064. Subject to the condition, as I understood, of the police being employed to perform those duties which in this country are considered to belong to them?—Yes; and that the contingents should be incorporated with our army, and subjected to all the conditions of safety which the constitution of our own army will afford.

3065. (*Duke of Cambridge.*) You also mentioned the disarming of the country?—Yes.

3066. (*Sir Harry G. W. Smith.*) There was another great condition which you stated, that is to say, if the government was carried on in a manner which was acceptable to the people; upon that hinges the great question of all, in my mind?—Yes; the fulfilment of that condition must be assumed.

3067. (*Duke of Cambridge.*) Referring to railroads, it was stated the other day by one of the witnesses, that he did not attach much importance to railroads, for that in India it would be a very simple and easy process to destroy a railroad at any moment, that the inhabitants would be very handy in taking up the rails, and that therefore he did not take into account railroads so much as he otherwise would do; is that your opinion?—No; that objection seems to suppose that disturbance would break out in the whole country at the same time, but we know from experience that it is not so; disturbance breaks out at a particular place, where a rallying point is established, the remainder of the country remaining for the time in a state of tranquillity.

3068. (*Marquis of Tweeddale.*) Then you think that previously to any breaking out you would have the magazines all stored with those things which were necessary to oppose an enemy in the event of a mutiny taking place?—Certainly. I consider that the magazines should be deposited in fortified places at the principal stations, and should be entirely under the charge of the European troops.

3069. You say "fortified places," that is a new view, looking at what has been the case in India before. In India before I have always understood that the great object was to have no fortification excepting at the Presidency?—Experience shows that that was a mistaken view; our policy should be, I conceive, to mass our troops in large bodies, to have as few detached posts as possible which would easily yield to an attack, always to have a due proportion of European troops at each of these large stations, and to have at each of them some kind of *place d'armes* or fortified post; I do not mean an expensive fort.

3070. (*Duke of Cambridge.*) But a redoubt, or something of that sort?—Some place capable of a certain degree of defence, in which the treasury, the military chest, the records, the stores and magazines of all kinds, and the women and children might be deposited, and that this stronghold should be properly provisioned and be held entirely by Europeans, so that in case of an outbreak we should at least be secure on these main points, and the bulk of the force would be available to be employed in any direction in which it might be required.

3071. (*Viscount Melville.*) That being the case, if this stronghold is to be always held by Europeans, it will render so many Europeans incapable of service in the event of a campaign. Are you not aware that the Duke of Wellington laid it down that to hold a large country with a small army, the rule was to have as few fortified places as you possibly could maintain?—My view is this: we must have magazines and stores, we must keep them in a state of security in the event of war or disturbance, and if we had no strongholds of the kind described by me, we should have to employ a larger force of Europeans in guarding the magazines and stores than if we had such fortified posts.

3072. (*Duke of Cambridge.*) For instance, it would be your opinion that if at Cawnpore there had been a post such as you describe, probably the European force under Sir Hugh Wheeler could have resisted long enough until it had been relieved?—Certainly; and I also contemplate a much smaller number of military stations than we have hitherto had. The necessity for having such a large number of military stations has been chiefly owing to our depending upon our army for the performance of civil duties. I assume that all those duties will be performed by police.

3073. (*Chairman.*) Do you consider that the native force which you have mentioned should be on the regular or the irregular system, or both combined?—I consider that they should be subsidiary to the European troops; that they should bear the same relation to the European troops which the light-armed auxiliaries did to the Roman legion and the Grecian phalanx, and that they should be organized and disciplined and armed accordingly. To meet this view they would be modelled much more according to what is called the irregular than the regular force. Particular care should be taken to avoid the pedantry of European discipline; for instance, it is by no means necessary that they should be dressed according to the European fashion; on the contrary, there would be great advantages in dressing them according to the native fashion; it would make the service more popular, and it would preserve in a much greater degree the distinction between the different nationalities and races, which is a point very necessary to be attended to for our security.

3074. You said that they should be "armed accordingly," would you give them an inferior weapon to the Europeans?—No; having determined that that is to be the object of these troops, that they are to be light-armed auxiliaries, I would make them as efficient for that purpose as possible. I would give them the best equipments and the best weapons, and in every point of discipline, exercise, and instruction I would make them as efficient as possible.

3075. You would make them as efficient as possible to perform the duties which you contemplate their doing?—Yes.

3076. (*Sir Harry G. W. Smith.*) Are you of opinion that they ought to find their own arms. I infer from your evidence that you are not; but it has been stated before this Commission that the irregulars ought to find their own arms, and it has also been stated that that has been done under very fortunate circumstances; are you of opinion that the Government ought to arm them or not: I allude to the irregular horse?—I do not consider that a point of essential importance. I do not think it is either necessary or desirable that there should be entire uniformity.

3077. Are we to give them arms, or may they be allowed to find their own arms?—I think that generally in India we have aimed at uniformity at the expense of other more important considerations. There is often a positive advantage in maintaining diversity of practice in the native portion of the army, for it not only tends to prevent combination against us, but gives variety to our experience and enables us more easily to detect the causes of any failure. Under some circumstances it might be desirable to provide our irregular cavalry with arms from the government stores. In other cases it might be desirable to allow them to provide their own arms, and to pay them accordingly. The prevailing practice is that they should provide their own arms, and if care is taken to see that the arms are of a good kind, and in good order, there can be no objection to that.

3078. (*Duke of Cambridge.*) I understand you to mean that hitherto it is your opinion that the native army has been attempted to be assimilated too much to the European fashion, and that you would propose in lieu of such arrangement that the best arms should be given to native troops consonant with the practices and habits of the country?—Yes, that is my meaning.

3079. (*Chairman.*) Would you make any alteration in the manner of officering these native troops?—Yes; I am of opinion that the command of native troops is a duty of first-rate importance, which ought to be intrusted only to officers specially selected for the purpose. I think that the officers should be few in number, and should be intrusted with large powers, and should be personally of a very efficient character.

3080. You are speaking of European officers?—I am.

3081. How would you propose that the native officers should be appointed, or would you have any native officers?—Yes; I consider that the ordinary motives which influence human conduct must be brought to bear upon the native army. The principle that the lowest European officer should command the highest native officer must be maintained, but that only makes it more necessary that our European officers should be men of tried ability and energy. The native officers should be promoted by merit, so that we may give them the necessary motives to zeal and fidelity, and that we may have tried and approved native subordinates to maintain our hold over the rest of the troops.

3082. (*Viscount Melville.*) Did you ever consider the possibility or the expediency of introducing into the native force as officers native gentlemen of the country, without their entering as sepoys and being promoted from the ranks?—Yes, I have considered it in former years. I saw a great deal of the irregular horse. I was well acquainted with Colonel Skinner, and associated with the native gentlemen at Delhi and elsewhere. I am clearly of opinion that it would not be advisable to introduce native gentlemen as officers without their passing through the ranks. They should all be promoted from the ranks, in my opinion.

Sir
C.E. Trevelyan,
K.C.B
27th Aug 1858.

3083. (*Lord Stanley.*) Will you state your reason for the opinion which you have expressed, that native gentlemen would not be eligible as officers?—I think that the power of promoting from the ranks is a great public advantage; it furnishes the strongest motive to good conduct and fidelity on the part of the whole of the troops, and it is very undesirable that we should give up that advantage. And provided promotion is made from the ranks, and the troops are properly paid and properly treated, I conceive that the native gentry will enter in the ranks, and they do so to a considerable extent; most of the officers of Colonel Skinner's irregular corps, for instance, held the position of native gentlemen, and they had for the most part risen from the ranks.

3084. (*Marquis of Tweeddale.*) Is that so in the regular army?—No.

3085. Would it not be desirable to have native gentlemen in the regular army as officers?—No doubt as an abstract proposition it would be desirable, but I consider that to promote the most deserving persons from the ranks, whatever their original social position may have been, is preferable; and if native gentlemen were brought in at once as officers, they would be placed in an invidious position in reference to the European officers; it would be difficult for us to offer to them further promotion.

3086. But you are aware that there have been such persons as volunteers in the British army, and that they have turned out very well; that they have done duty in the first instance as privates, and that afterwards, when they have learned their duty thoroughly and have distinguished themselves, they have got promoted?—I have no doubt that if we admitted native gentlemen at once as officers, and offered them further promotion, they would many of them acquit themselves well. But our position in India is a very peculiar one; we can give much more scope to the employment and promotion of the natives in the civil department than we can in the military. And in the view which I have submitted, I assume that it will be necessary to maintain the keys of our military power in our own hands. I have stated what I conceive to be the best general system, but this would not preclude the employment of native gentlemen at the head of their retainers when circumstances rendered it desirable; and encouragement should always be given to native gentlemen to enter as privates, with a view to their subsequent promotion when they have learned their duty and have distinguished themselves.

3087. (*Chairman.*) I understand you that having appointed competent officers to command these native regiments, you would give them great power in the selection of officers, and in rewarding those placed under them by promoting them?—Yes.

3088. I also understand that you are favourable to having some military experience or some knowledge of every person, before he is appointed an officer?—Certainly; I consider that we should have experience of him in all the points of soldierlike qualities and zeal and fidelity.

3089. (*Colonel Burlton.*) You are perhaps aware that during the recent revolt there has been no single instance brought to notice of a native commissioned officer, who has been promoted on the principle which you advocate, proving either zealous or faithful to his duty. No one has ever, I believe, given information of what was in agitation amongst the men?—In the great bulk of the Bengal army the promotion of native officers was entirely by seniority; they went up by a sort of routine. They felt themselves under no obligation to their commanding officers for their promotion. I assume that promotion will be according to qualification and merit, that is to say, that only those soldiers will be promoted of whose fidelity and intelligence we have had actual experience.

3090. (*Duke of Cambridge.*) And you do not think that that has been the system with the Bengal army

Sir C. E. Trevelyan, K.C.B.

27th Aug. 1858.

hitherto ?—Certainly not ; it was so at Madras, and there the army remained faithful.

3091. And it was the same at Bombay ?—It was so at Bombay also, and the disaffection in the Bombay army has been very partial, and has been chiefly confined to what may be called the Bengal element of it.

3092. (*Sir Harry G. W. Smith.*) You surely do not attribute the revolt of the army of Bengal to what you have stated in the answer which you have now given as to the selection of the native officers ?—Whatever security there may be against such contingencies in holding out motives to fidelity to the native officers, and in a careful selection of the native officers, so that only those in whom we have confidence should be promoted, and also in the expectation which the soldiers ought to have of early promotion in case they acted with fidelity, we had not that security.

3093. (*Duke of Cambridge.*) You think that it would be an incentive to fidelity ?—It would undoubtedly be an incentive to fidelity. In most even of the sepoy regiments there were some soldiers who remained faithful. If the promotion of the native officers had been according to merit, many of those faithful sepoys would have been promoted, and they would have been placed in situations of influence.

3094. Then you hold it to be of great importance to keep up the connecting link between the European officer and the native soldier through the native officer ?—Yes, that is my opinion.

3095. And you think that by what you propose that object could be secured ?—As far as it can be in our very peculiar position in India. I would give further advantages to the superior native officers, and would make their situations as agreeable and respectable as possible.

3096. In what way would you do that ?—I have not gone into the details. I mention this as a general principle. In governing a body of men you must have in view the ordinary motives of human conduct, and if we give our native troops nothing to expect, no reward to hope for from consistent fidelity and good conduct, we cannot expect those qualities from them.

3097. What do you propose to do, then, with the old soldier who is worn out in the service, and who will of course by this change not be promoted ?—I would give him a liberal pension.

3098. Do you think the pension sufficiently liberal as it is now, or do you think that it ought to be increased ?—Speaking generally, I believe it to be sufficiently liberal.

3099. I understood you to say that you would have the best European officers that you could find for the native regiments ; from what body of persons would you select them, because, as I understood, you would propose that the generality of the native army should be irregular ; how would you select the European officers for the native army ?—I have thought a good deal on the subject, and the plan which I have framed in my mind as the one best adapted to the new circumstances of India is as follows : I think that the European infantry, cavalry, and artillery should form a portion of the royal army, and should be subjected to regular reliefs. The engineers probably should be local, or should at least form a separate branch of the corps of royal engineers, owing to the peculiar circumstances under which public works in India are conducted. Then there will remain the auxiliary native force, and in order to provide officers for them I would propose the following arrangement : I consider that the least important duties which can be assigned to European officers in India are of such grave consequence that there ought to be a sifting and selection of the candidates from the very first ; and of those young men who apply for appointments in the Indian army I would select those who appear to be best qualified, according to such tests as may be thought best. I consider that the plan of appointing all those who come up to a certain standard is altogether insufficient, for there is no standard of acquirement which may not be crammed up to, and I think that the only real security is a comparative test to see who your candidates are, and to take the best of them. Then, having selected the cadets on that principle, I would subject them all to a short training at a military college in this country, in order to test their moral qualities, to teach them the elements of military science and of the native languages, and to eliminate those who turn out not to be qualified. Then I would appoint them as supernumeraries to the European infantry in India, where they should serve for at least a year. For all the native services, that is to say, for providing officers for the auxiliary native infantry, the auxiliary native cavalry, for the different departments of the staff, the military staff, the commissariat, the pay department, the audit department, stud, and so forth, I would have one body of officers, who should be borne on one list and should be recruited by selecting from the young officers serving as supernumeraries with the European regiments those who are willing to enter the local native service and are reported to be best qualified for it.

3100. A sort of staff corps ?—A sort of staff corps ; and I would tell off from this aggregate staff corps officers for the different duties, for the command of the different regiments of native infantry and cavalry, for the different branches of the staff, and so forth, according to their qualifications, assigning proper rates of pay for the different duties, and making the improvement in the position of the officers dependent upon their ability and conduct. I would reserve the utmost freedom of transferring officers from one branch to another. For instance, an officer might have been in the first instance appointed to the cavalry, and it might turn out that he had not the peculiar qualifications necessary for that branch of the service, or as he advanced in life he might become unfitted for it, in either of which cases he might be transferred to the infantry ; an officer appointed in the first instance to an infantry regiment might show that he possessed superior qualifications, and it might be desirable to transfer him to some branch of the staff, and so on. If it should be necessary to employ military officers on civil duties, they should in like manner be selected from this body.

3101. (*Marquis of Tweeddale.*) Would you give the commander-in-chief in India this power ?—I would give the commander-in-chief the power of selection to all the military offices, but I would make proper arrangements for assisting the commander-in-chief. I would establish a proper system of military inspection, and proper means of recording the conduct and qualifications of the different officers. There should be an official organization expressly for the purpose of regulating the promotions and transfers, and noting the qualifications and services of officers.

3102. And that would do away with all the heart-burnings and the letters which appear in the press, which undermine military authority ?—Such feelings must always exist in some degree ; but the prevailing tone of the army is likely to be satisfactory when it is seen that pains are taken to do justice to the officers. They would all enter the army with the expectation that superior merit would be rewarded as it is in the law and other professions ; and as all would be stimulated to exert themselves, it would not often be necessary to pass over officers in making promotions.

3103. (*Major-General Hancock.*) What is the system of promotion which you would introduce under this plan ?—Entirely according to conduct and qualification, so far as the actual employment of the officers is concerned.

3104. Would that apply to promotion all the way up to colonel ?—The promotion would be of two kinds ; first of all they would form one body.

3105. (*Duke of Cambridge.*) Like the engineer corps ?—Like the engineer corps or the artillery.

3106. (*Major-General Hancock.*) You mean of different grades ?—Of different ranks of officers ; I mean colonels, lieutenant-colonels, captains, and so-forth; and it should be quite open to the commander-in-chief to make promotion from rank to rank, even in the general body.

3107. Promotion should be made for what, for superior qualification?—Promotion on the general list from rank to rank out of the order of seniority would chiefly be for distinguished service; but the kind of promotion upon which I most rely is promotion from one appointment to another. For instance, a young man might be appointed first to an infantry regiment. I assume that there would be a much smaller number of officers in the infantry regiments than there is at present, and that they would be highly qualified, leaving more room for rewarding the native officers. We will suppose that a young man has been posted to an infantry regiment; he acquits himself extremely well; he applies himself zealously to the performance of his military duties; he is very favourably reported on by his commanding officer and by the inspecting general officer; he studies the native languages and acquires great facility of communicating with, and shows a genius for commanding and influencing natives. Under these circumstances he would probably be selected for some appointment on the staff, or if he preferred the cavalry service he might be transferred to the cavalry. That is the sort of promotion on which I would chiefly rely. It would be consistent with a certain amount of succession. For instance, if there were three or four officers in a cavalry corps, and a vacancy occurred, it would be open to the commander-in-chief to promote the junior officer to that vacancy.

3108. You are speaking rather of promotion from one appointment to a superior appointment than from one rank to another rank. Do you mean that when a young officer is reported upon as being extremely highly qualified, thereupon the commander-in-chief is to make him, if he is a captain, a major, and put him over the heads of all the others in the service?—No; I mean that there should be a limited establishment for each regiment, say three or four officers.

3109. Of what rank should those officers consist?—It should be fixed; say a lieutenant-colonel, a captain, and two lieutenants. Take the case of a young man appointed to an infantry regiment so composed; we will suppose that he has shown superior qualifications; it would then be open to the commander-in-chief either to promote him to a vacancy in the native regiment in which he happened to be serving, or to select him for any superior employment, say to the commissariat, or the pay department, or any other duty.

3110. (*Colonel Burlton.*) Do you consider that this proposed arrangement of yours could in any form or shape be made applicable to the present officers in the army, without interfering with every sort of rule and condition on the faith of which they entered the service?—In all great changes of this sort it is indispensably necessary to make a clear distinction between the prospective arrangement which will be permanently desirable and the existing arrangement; if those two things are confused it becomes impossible to make any change whatever. I conceive that the first and the most important thing is to settle what is the most desirable model as a permanent prospective arrangement; having determined upon that, the next thing will be to provide for the existing officers, including them, if possible, in the new arrangement, but at any rate keeping strict faith with them, and giving them a full equivalent for any advantages to which they may have been entitled. As a general rule the new arrangement would apply only to new appointments; the young men appointed after the establishment of the new model would enter under the revised terms of service. For instance, if it were determined to adopt a plan of this sort, the young men would be selected and instructed at home and in India in the manner I have described, and would be selected for appointments afterwards.

Sir C. E. Trevelyan, K.C.B.

27th Aug 1858.

3111. (*Major-General Hancock.*) In the explanation which you have given you have only stated instances in which you think that the commander-in-chief should appoint an officer from a regiment to the commissariat or to the pay department, or advance him from an inferior to a superior appointment. Will you be good enough to state upon what system the commander-in-chief would make the promotions from ensign to lieutenant, from lieutenant to captain, and so upwards? Is it your plan that the commander-in-chief should make those promotions simply upon the report of a general officer that a young officer was particularly highly qualified without reference to the service which he had seen or the comparative claims of other officers; in fact, would you leave the promotion from rank to rank entirely in the hands of the commander-in-chief according to his judgment of each officer's qualifications and claims?—The main principle of promotion must always be seniority.

3112. You mean promotion from rank to rank?—Promotion from rank to rank, must always mainly depend upon seniority; but in every case of admitted deficiency an officer should be passed over, and in every case of superior good service an officer should be promoted out of his turn.

3113. But in ordinary times, when serving in garrison, suppose there are 1,000 officers, and a young lieutenant is highly reported upon to-day to the commander-in-chief, is he to select this officer and make him a captain to-morrow?—No. According to the plan which I have suggested the ordinary mode of meeting the claims of a young man who has shown superior qualifications would be by promoting him to a more advantageous appointment.

3114. Supposing you had the officers of the whole army together, how would you arrange them for promotion, and according to what system would you let them be promoted from rank to rank, setting aside staff appointments, commands, and everything else, and taking the simple question of promotion from rank to rank?—Mainly by seniority, largely qualified by superior efficiency or inefficiency, and good or bad service.

3115. If I understand you, you would allow the existing system to continue as a general rule, but you would admit exceptions, and give the commander-in-chief the power of selecting officers for superior qualifications or good service, and giving them a jump over the heads of all the others?—Yes.

3116. (*Duke of Cambridge.*) I apprehend that what you mean is this, that you would have a fixed establishment of officers in the several grades, lieutenant-colonels, captains, and subaltern officers, and that you would allow promotion to go on in those grades according to the establishment, as far as practicable, by seniority, and that wherever there was great merit you would allow that merit to count, and that if there was not an opportunity by seniority of promoting a man at a period when he was very highly spoken of, you would so adjust your staff, civil, and other appointments as to promote a man without giving him a step of rank, but promoting him in position by giving him a higher appointment better paid?—Yes; I should consider the general roll of the officers chiefly as a means of regulating the relative ranks, and preserving the coherence of the body of officers. Having in that way provided for the existence of a large body of officers selected and trained as I have described, I would make their employment and remuneration depend upon their special qualifications for the various appointments connected with the Bengal army. The artillery and engineers furnish the nearest parallel. The royal artillery has a large body of officers who are variously employed. I would have the same large body of officers in India, with a further modification of the seniority principle, and a greater freedom of appointing them to different situations. The situations to which they

Sir C E Trevelyan, K.C.B.

27th Aug 1858.

would be eligible in India would be more various than those to which the artillery are at present eligible, and would furnish a much greater opportunity of employing the different officers according to their qualifications, and rewarding them according to their merits.

3117. It would be a sort of graduated scale of rewards in employment; that is to say, that, without reference to military rank, you would have rewards of position in employment?—Yes. For instance, there would be so many native cavalry regiments, with so many posts held by officers of different ranks, and so many infantry regiments in a similar manner, and the same in the different departments of the staff; and officers taken from the general list would be appointed to these different posts, and be transferred and promoted according to qualification and merit. If a young officer appeared to be better qualified for the cavalry, I would appoint him to the cavalry.

3118. (*Viscount Melville.*) Suppose he did not like to go?—Then he need not go. Reasonable attention should, of course, be paid to the taste and inclination of officers.

3119. (*Sir Harry G. W. Smith.*) May I remind you that we must always begin at the beginning. Now the beginning of all armies is effective regiments, and regiments cannot be kept effective unless they are right well officered. It appears to me that the system which you advocate is that which would denude the regiments of their best officers, and injure the efficiency of the army beyond measure. I should like to hear your own opinion upon that point?—I consider that it would very much increase the efficiency of officers with native regiments constituted as I have suggested. The officers would all be selected officers, appointed to the different regiments for their efficiency.

3120. (*Viscount Melville.*) Do not you perceive that your scheme would be liable to what is known under the description of partiality, favour, and affection, and would not lead to a just selection of the officers?—I assume that proper arrangements will be made for recording the qualifications and services of the different officers, and that they will be appointed and promoted according to qualification and service.

3121. (*Lord Stanley.*) What check is there, according to your plan, upon favouritism, or, in plain words, upon jobbing?—In the first place, all the officers will be of a superior class; they will not, as at present, be appointed indiscriminately, subject to passing a very moderate examination, and the public opinion of such a body will be in itself a very important check. In the next place, I would provide the commander-in-chief with every possible facility for judging of the qualifications and services of the different officers by a proper system of military inspection, and by proper records and reports; and, lastly, the test afforded by the system of examination in languages and professional subjects which already exists in India might be much improved.

3122. (*Duke of Cambridge.*) How would you get rid of those officers who were found inefficient; because, of course you are aware that in a seniority service, if five or six men stand at the head of the list of their rank, and are constantly passed over, they are worse than useless; how would you get rid of those officers; they might not have committed themselves sufficiently to be brought to trial by a court-martial for any military offence?—That is an evil which must exist to some extent under every system; but I conceive that if the candidates are in the first instance properly sifted, and if afterwards proper motives to zeal and exertion are afforded to them, the quantum of inefficiency will be reduced to a minimum; it will certainly be very much less than it is at present, when an officer's promotion does not depend at all upon his zeal and ability, provided he only performs his duties with moderate propriety.

3123. (*Viscount Melville.*) I understood you to say that you proposed to have a selected list of lieutenant-colonels, majors, captains, and all ranks, from which the commander-in-chief was to select officers for particular appointments, such as commanding native regiments, staff appointments, &c. Are those officers to remain on the strength of their regiments, or in what way are the duties of those regiments to be provided for if those officers are placed upon a select list?—I propose that there should be a general list; so many colonels, so many lieutenant-colonels, so many captains, and so many lieutenants, and that the promotion on the general list from rank to rank should be mainly by seniority, qualified to a certain extent by merit or demerit, but chiefly by proved eminent service; and the practical application of this arrangement would be that for the different branches of the native service, cavalry and infantry, and the different departments of the staff, there would be fixed establishments, consisting of a limited number of officers, and that officers would be selected from the general list for these different appointments; and that except in a case of distinguished service, in which a promotion would be made to a superior rank on the general list, the officers would look for their reward to more advantageous appointments in the different branches for which they would be eligible.

3124. Then am I to understand that the officers are still to remain on the strength of their regiments?—No. Their permanent position would be on a general list, like the artillery, the engineers, and the Indian civil service.

3125. (*Chairman.*) As I understand you the promotion is not to be regimental, but by selection from the whole body, partly by seniority and partly by merit?—The promotion from rank to rank would be as it is in the artillery on a general list, but it would not be so entirely according to strict seniority.

3126. Making these irregular regiments the same as the different battalions of artillery?—Yes. The officers would be assigned to the native regiments, and other branches of the local military service as occasion might require.

3127. (*Viscount Melville.*) Then do you mean that the whole army should be one corps?—The officers of the native infantry and cavalry and staff should all be one corps.

3128. (*Sir Harry G. W. Smith.*) We will suppose that a regiment distinguishes itself, that it takes the Redan, for instance, and loses three captains and six lieutenants, who are killed on the field, and that the other fellows hold up their heads like men, how would the survivors like to have men put over their heads taken from a general list, when we look for it as a birthright to jump into the shoes of the gallant fellow who has been killed?—The first question would be whether in a case of eminent service of that sort the officers should not be promoted to the superior rank on the general list. If a difficulty occurred in doing that, the officers who so distinguished themselves would no doubt be noted for the first good appointments which fell vacant in any branch of the service for which they might be qualified. I may mention that the principle which I advocate has long been in operation in India in reference to the irregular troops, both infantry and cavalry, and to a great variety of staff and civil situations. The difference is, that the officers were selected for these various situations from the regiments, thereby diminishing the strength of the regiments and discouraging the officers who remained to do regimental duty, whereas I propose that, instead of being selected from the strength of the regiments, they should be selected from a general list. Since the mutiny a still nearer approach has been made to the system which I recommend, because the original native regiments now exist only in name, and the officers belong in reality to a general list, from which they are selected for the different irregular corps which at present compose the Bengal native army. The change therefore would be much less than at first sight appears, and would chiefly consist in regulating in a systematic

Sir
C.E. Trevelyan,
K.C.B.

27th Aug 1858

manner an arrangement which has been already brought about by the force of events.

3129. (*Major-General Hancock.*) From whence would you recruit this general corps?—I would do so in the manner I described, by selecting a young man in the first instance in England, by passing him through a year's course at a military college in this country, and afterwards posting him to the European infantry in India previously to his being transferred to the local native service.

3130. (*Chairman.*) I understand you to object in the first instance to any fixed standard of mere qualifying examination, because you say that that can always be obtained by cramming?—Always.

3131. You would select from the candidates those who showed comparative superiority?—Yes.

3132. Could not that comparative superiority also be obtained by cramming; and would it not be very probable indeed that those who were the most crammed would obtain that comparative superiority? —A good examiner will always make the distinction between solid and superficial knowledge; and even supposing that cramming applies to both, still there is the greatest possible difference between taking the best of a number and taking at haphazard those who happen to be offered.

3133. You have also stated that you consider that every candidate should have some military instruction previously to his appointment to a commission?—Yes, first of all in this country. He should be instructed in the elements of military science, and of the native languages, and there should especially be a probation of his moral qualities.

3134. So that you would have an opportunity, before you appointed him to a commission, of judging as to what his character and capabilities were?—Yes.

3135. (*Duke of Cambridge.*) You would like him to go to a military college?—Yes; I think that they all should go through a military college for a short period.

3136. Six months or a year?—There should be a standard course of instruction calculated to be passed in a year, and if they were able to pass sooner it would be so much the better for them.

3137. (*Chairman.*) Would you have the native Indian army enlisted for service in India only, or would you have it enlisted for general service?—The limited auxiliary native army, such as I have described, should be enlisted for general service.

3138. Therefore these officers whom you appointed would also be available for general service?—Yes.

3139. Would you allow them an opportunity of exchanging into the Queen's army?—Not according to the present arrangements of the Queen's army. I consider that purchase should be absolutely excluded from the Indian army.

3140. (*Duke of Cambridge.*) Supposing that a man chose to take the option, and said, "My health does not suit India. I should like to go into the Queen's army. I will go into the Queen's army, with all the disadvantages," if you like to say so, "which attach to it," would you allow him to exchange?—In an exchange one officer goes out and another comes in.

3141. Of course the one coming in must be qualified?—But he would not have gone through all the conditions which I have described. I conceive that the conditions which I have suggested are necessary for obtaining properly qualified officers for the native Indian army. The most essential point of all is to establish a system which will secure good European officers for the army.

3142. Suppose that a man knows the languages, surely that is all the qualification which is required; then if he could go through a course of examination in the native languages, having obtained all the discipline which European troops would give him, would not that be sufficient?—He might know the languages, but if he entered the native Indian army in a superior rank he could not have had experience of native troops.

3143. (*Major-General Hancock.*) Nor could he have any acquaintance with the native customs and usages and religions?—No. The successful management of the natives of India, whether in a civil or military capacity, is the business of a life, and requires an early and entire appropriation to the duty.

3144. (*Viscount Melville.*) Alluding to the system of purchase, are you not aware that practically at this moment a system of purchase does exist in the Company's service?—Yes; but it is not open to the peculiar objection to which purchase in the Queen's army is open, namely, that an officer is promoted over the head of a more deserving officer, solely because he happens to have more money; it is merely a mode of retirement in the Indian army.

3145. (*Chairman.*) Do you consider that the artillery should consist entirely of Europeans, or would you have any native artillery?—I think that they should all be Europeans, and that all the services connected with the magazines, all scientific matters, such as the preparation of caps and fuzes and shells, and so on, should be entirely in the hands of Europeans.

3146. (*Marquis of Tweeddale.*) And the making of gunpowder?—The making of gunpowder, certainly.

3147. (*Major-General Hancock.*) Your plan for a general corps of Indian officers would entirely exclude from all staff and other appointments in India all the officers in Her Majesty's army serving in India, would it not?—There should be, in my opinion, only one military staff.

3148. (*Duke of Cambridge.*) Would you exclude all the officers serving with European troops, wherever they were, whether Queen's or local European troops, from all staff appointments in India?—The general military staff, which would apply both to the European and native troops, should be composed of officers taken from both services.

3149. You would not exclude them?—I would not exclude them from the general military staff.

3150. (*Major-General Hancock.*) You would confine them entirely to military staff appointments?—I think that those branches of the staff which have a special reference to Indian business and Indian habits, such as the commissariat, or to Indian local regulations, such as the pay department and the audit department, should be officered entirely from the officers of the native army; but that the general military staff should be composed of officers drawn from both services, both from the European service and from the native service, subject to a proper qualification in the native languages.

3151. (*Chairman.*) Do you consider that the native Bengal army should be composed of different nationalities and castes; and if so, in what proportion?—Yes, I consider that all the different nationalities and castes which can furnish efficient soldiers should be represented in the army.

3152. How would you represent them in the army; would you acknowledge the caste at all when once a man was enlisted?—I think that it would be undesirable to aim at uniformity of practice in this respect. In some cases the persons drawn from the different nationalities and castes would be mixed in the same regiment; in other cases it would be convenient to compose particular companies of particular castes; for instance, there might be a company of Mairs, or of Koles, or a company of native christians; in other cases, entire regiments would be composed of a particular nationality, for instance, Sikh regiments, Ghoorka regiments, or Mahomedan regiments from beyond the Indus; and in the last case it would be desirable, as a general rule, to employ the regiments so composed in parts of the country from which they were not themselves recruited.

3153. Would you allow caste to be considered as an excuse for the non-performance of any duty?—Certainly not; the recruits should enter for the performance of all the duties required by the military service, and so far as they were required for any military service the word "caste" should not be men-

Sir C. E. Trevelyan, K.C.B.

27th Aug 1858.

tioned. When they were off duty then they might follow the observances of their respective religions and castes.

3154. Have you known any instances of caste having interfered with the performance of duty?—I have not had sufficiently detailed experience to give instances.

3155. Under proper discipline you consider that caste ought not to be any objection to the performance of any military duty?—Certainly not.

3156. (*Major-General Hancock.*) Do you think that any undue deference to caste has been the system followed in the Bengal Presidency?—I have no doubt that it has.

3157. In the army as well as elsewhere?—In the army certainly.

3158. (*Duke of Cambridge.*) Do you think that it has been more so in Bengal than it has been in Madras or Bombay?—Certainly. I had not been ten days in India before I became aware of the difference between the Bombay and the Bengal presidencies in that respect. When I first went to India I was staying at Poonah with my brother, who was adjutant to a battalion of native infantry, and every morning after breakfast I used to go out with him to see his recruits, and I observed that they were of two different kinds, one tall, slim, well made looking men, and the others shorter and darker looking men. I asked him the difference, and he told me that the tall handsome men all came from Bengal, and that although they gave themselves great airs in Bengal and refused to perform various kinds of duty, such as handling the pickaxe and so forth, yet when they entered the Bombay army they adopted the customs of the Bombay army, and did as well as any of their low-caste Bombay men.

3159. (*Major-General Hancock.*) Do you think that undue deference to caste has exercised an influence over the officers of the Bengal army in administering punishments, and deterred them from duly maintaining discipline? Can you speak from your own knowledge to that point?—No, I will not venture to speak from my own knowledge; but I conceive it to be a notorious circumstance that the discipline of the Bengal army has to a considerable extent been influenced and modified by feelings connected with caste.

3160. (*Chairman.*) Do you consider that the native army of Bengal should be enlisted under a new code, or rather under new terms of enlistment from what has been the case hitherto?—My impression is that the code should be simplified, that the plan of trying offences in all cases by native courts-martial should be got rid of, and that much greater power should be given to the commanding officer; but I am not qualified to enter into details.

3161. I do not mean so much in that respect. In Bengal I believe the men are enlisted only to serve within the presidency, would you have them enlisted for general service?—Certainly, for general service.

3162. Would you have all the presidencies upon the same terms with respect to that matter?—Certainly.

3163. (*Duke of Cambridge.*) You think that you would have no difficulty in recruiting our army for general service?—None whatever. There are large sections of the population which would afford excellent troops which have not yet been drawn upon; for instance, the low castes in our own provinces, the aboriginal tribes in the adjoining mountainous and jungle country, and the Sikhs, to whom we are now so much indebted.

3164. (*Viscount Melville.*) Do you think that the Sikhs can be fully relied upon?—We are now falling, in respect of the Sikhs, into the old error which has brought us into such trouble in reference to the Oude sepoys, it being understood that we have at present about 70,000 Sikhs in our pay, and it would undoubtedly be very desirable to diminish that number by not filling up vacancies, and to balance them by recruits drawn from other portions of the population.

3165. (*Chairman.*) Do you consider that there would be any advantage in dividing the Bengal army into two or more armies?—I think not; the division and separation should be within the army itself, that is to say, in the *corpus* of the army; at head-quarters we should have nothing but unity and harmony of action. I entirely agree that the army itself should be effectually separated in the manner which I have described, by taking it from different portions of the population, and by preserving distinctions of dress, and every proper distinction which can be maintained; but the general command and arrangement of the reliefs and transfers, and of the recruiting, and of all the functions which belong to superior command, should be one and indivisible, in my opinion. If we broke up the Bengal army into two or more portions we should lose the advantage which we should otherwise have of employing the regiments drawn from one province in other provinces. For instance, Hindoostan and Oude will probably be garrisoned chiefly from the Punjaub, and *vice versâ*. If the Punjaub and Hindoostan were under separate commands we should lose that advantage.

3166. (*Major-General Hancock.*) Are not the armies of the Madras and Bombay presidencies made available for service in Bengal; are there not divisions from both those armies now serving in the upper provinces of Hindoostan?—Yes; but I understand that to be an exceptional arrangement.

3167. (*Chairman.*) I thought that, for the future, you recommended that the whole army of each of these presidencies should be enlisted for general service, so that we might send them anywhere we pleased?—Yes, certainly.

3168. (*Major-General Hancock.*) Surely you do not mean that the men of one army are not to be liable to serve in any other presidency?—Undoubtedly they ought to be liable to serve in any presidency.

3169. (*Lord Stanley.*) I presume you mean this, that though they should be liable to serve in case of necessity or emergency in any part of India, or beyond it, still, as a general rule, it is desirable that the army of the presidency should be employed within that presidency, at least in time of peace?—Yes; I assume that, as a general rule, the army of each presidency would be employed within the presidency, and my answer had reference only to the supposed case of breaking up the Bengal presidency into several commands.

3170. (*Viscount Melville.*) Then you would not advocate a fourth presidency?—Not for military purposes.

3171. Would you for civil purposes?—I think that the Punjaub and Scinde should be erected into a lieutenant-governorship.

3172. (*Marquis of Tweeddale.*) You would keep the Bengal army united; would you make it imperative that the commander-in-chief should be always at the seat of council at Calcutta, as I understand he is obliged to be now?—I think that the commander-in-chief does not ordinarily give much assistance in the general administration of the government; it would be better if he had his head-quarters in some central position, with reference to his primary function of the command of the army.

3173. (*Duke of Cambridge.*) You would, I have no doubt, also think it very desirable that he should have the means of moving about and seeing the army personally?—Certainly; he should have his head-quarters at Allahabad or Agra, or some central situation, and during the cold weather should make a tour of inspection of his command.

3174. (*Sir Harry G. W. Smith.*) As a member of the Council he would then be at a disadvantage, would he not?—He would under those circumstances, but his functions as commander-in-chief are so much more important than those exercised by him as a

Sir C.E.Trevelyan, K.C.B.

27th Aug 1858

member of the Council, that the one should yield to the other.

3175. (*Major-General Hancock.*) Do you not think that the great extent of the Bengal presidency, as you propose it should remain, would be much too large an area to admit of the commander-in-chief exercising that personal supervision over the different troops which is very desirable ?—No, I think not, because the force in Bengal proper is small, and the bulk of the force will be stationed in the Punjaub and Hindoostan; and those two provinces, with the help of railroads, which are rapidly increasing, will not be more than might be properly commanded by a single officer. If the troops are massed at large stations, and the duties at the civil stations are performed by police, an effective military superintendence may be more easily maintained.

3176. The only disadvantage which you have mentioned as likely to attend the division of the Bengal army into two is that it would place an obstacle to the troops of the one half serving in the other half of the presidency ?—Yes, that is one obvious objection.

3177. Are there any others which occur to you?—Yes; within the limits to which one man is capable of exercising the command, the larger it is the more efficiently it is likely to be exercised, because the commander-in-chief would have a larger experience, and a freer power of selecting his officers.?

3178. Do you think that that has been shown in the case of the Bengal army, which has been so very much larger in proportion than either of the others —The system on which the Bengal army was constituted was defective in several respects.

3179. Was not that perfectly well known to the commander-in-chief in India and to the Government of India, and has it not been known for the last 25. years ?—We were aware of the existence of these defects, but we none of us believed that they would be productive of such speedy and disastrous results.

3180. Has not the result shown the superiority of the systems obtaining in the other presidencies?—It has shown the necessity of changing our system in every respect in which it is defective; for instance, in recruiting our native troops from various nationalities and castes, instead of from one nation and caste, and in promoting both officers and men according to qualification and merit, instead of according to strict seniority. But the one and undivided command, according to my view, was not one of the defects of the Bengal army, but was rather an advantage.

3181. What was the advantage ?—The advantages which I have mentioned, of an enlarged experience and an enlarged power of selection, which however was very much limited by the seniority system.

3182. Has not all your evidence to-day gone towards advocating the entire abandonment of the Bengal system and the entire adoption of the Bombay system ?—I have recommended a considerable approximation to the Bombay system.

3183. It appears to me that you have exactly described the Bombay system from first to last ?—No.

3184. In what respect does it differ ?—In the Bombay system the officers are appointed in the first instance to particular regiments.

3185. I do not allude to the system of appointing European officers, but to the organization of the native army, the mixture of castes, the promotion by merit, and the great power placed in the hands of the commanding officers of regiments; in fact, to everything that pertains to discipline ?—In all that respects the recruiting and management of the native troops the system of the Madras and Bombay presidencies is very preferable to the one which prevailed in Bengal, and I have suggested that the Bengal system should be closely approximated to that which now prevails in Madras and Bombay.

3186. Does not that show that the commanders-in-chief who have commanded smaller armies have exercised a much more effectual supervision, and established a much better discipline, than the commander-in-chief of the army of Bengal has been able to establish, although supported always by the Government of India ?—I consider that the different results in Bengal and in the other two presidencies are sufficiently accounted for by the other circumstances more immediately affecting the native troops.

3187. Will you have the goodness to state those circumstances ?—In the Bengal presidency the native troops were recruited from a single province, and from one or two castes; in the Madras and Bombay presidencies they were recruited from all castes. In the Bengal presidency they were promoted entirely according to seniority, in the other two presidencies they were promoted by selection.

3188. Was not the Bengal system established and maintained under the authority of the Government of India and of the commander-in-chief in India, with the full knowledge that different systems obtained at Madras and at Bombay ?—Yes, it was; but it is not an easy thing for any commander-in chief to alter a system which has prevailed for a long period, and upon which a variety of powerful interests have grown up; even in its present state of disorganization great difficulty will be found in recasting the Bengal army on a new model; how much more when that army was still in its integrity.

3189. (*Colonel Burlton.*) Do you consider that if the army of Bengal had been smaller than it is, if the geographical limits had been less extended, it would have caused any difference in the system of recruiting and in the pay ?—None.

3190. Or in the system of promotion by seniority instead of by selection ?—I think not; it was a deep-rooted established system, which was quite irrespective of the extent of the command.

3191. (*Major-General Hancock.*) Surely you do not think that had the Bengal army consisted of two armies of equal size, but separated as the Madras and Bombay armies, under separate commanders-in-chief as the Madras and Bombay armies are, so extensive a combination would have taken place as has occurred with the whole united under one head, and enlisted almost entirely from one part of the country? —I think it probable that the sepoys of both armies would still have come, the great majority of them, from Oude, and that having that feeling of brotherhood, and that close sympathy they would have combined and mutinied.

3192. Are you of opinion under separate commanders-in-chief they would have been recruited from the same district, and would have been composed of the same high-caste men, Brahmins and Rajpoots, in as large a proportion ?—I think it probable that they would, because the Bengal presidency proper has not been considered as capable of furnishing a sufficient number of suitable recruits.

3193. You are aware that there are a very large number of sepoys in the Bombay army recruited from precisely the same district, and that many of them have been employed against the mutineers, and have done good service against them, although of their own caste ?—Yes, they have done it under a better system.

3194. (*Viscount Melville.*) With respect to your statement that you thought that the commander-in-chief's head-quarters should be in a somewhat central position, in which I quite agree, are you aware that more than one governor-general has opposed it, and has expressed his opinion that the greatest inconvenience was experienced from the commander-in-chief being absent from the seat of government ?—Yes, I am aware that such objections have been made, and it is by no means a one-sided question. The commander-in-chief has at present two functions, one as a member of the government, the other as commander-in-chief. I consider that his functions as commander-in-chief greatly preponderate in public importance, and that every other consideration should be postponed to their proper performance.

3195. Then how would you propose the military communication to be maintained which the governor-general has always complained has been neglected

Sir C.E.Trevelyan, K.C.B.

27th Aug 1858.

when the commander-in-chief was absent ?—There would be a military secretary at head-quarters.

3196. So there is now, but still the governor-general always complains ?—Possibly some inconvenience may arise of that kind; but the advantage of having the commander-in-chief in the midst of his army, and in close communication with all the superior officers of the army, greatly preponderates; and I think it extremely probable that the civil government itself will be removed to a central situation. Many of the arguments in favour of removing the military head-quarters to a central situation equally apply to the removal of the civil government.

3197. (*Major-General Hancock.*) Have not the officers of the Bengal army enjoyed great advantages over those in the minor presidencies, the superior emoluments attached to the various military appointments, though identical in nature, from the circumstance of the Bengal army being a larger army, and being under the immediate authority of the commander-in-chief in India and the government of India ?—The rates of pay generally, both European and native, and also the civil pay, have to a certain extent been superior in the Bengal presidency.

3198. Upon what ground ?—From the first a higher standard of expenditure appears to have been established in the Bengal presidency; it applies throughout.

3199. Is that the only ground upon which the superiority of pay has been maintained ?—It obtained from the first; it has been so from the time of Warren Hastings and Lord Clive; so that I cannot conceive that it is merely owing to the circumstance of the Bengal presidency having been the seat of the general government. But one of the improvements which is required in the present state of India is, that the general government should be more completely separated from all the local governments, and should be established in a central situation independent of them all, and that the distinction should be clearly drawn between the central and the local governments.

3200. Do you not consider that in respect of the emoluments annexed to staff appointments the officers of all three presidencies should be placed upon precisely the same footing ?—As a general principle they ought to be; as close an approximation to equality should be made as possible; but the habits which have grown up in the course of several generations cannot be at once set aside.

3201. Do you think that they should be set aside as soon as practicable ?—It depends upon a variety of considerations, partly upon the facility of getting recruits as regards the natives. I do not, however, wish to see the armies of the three presidencies practically fused into one. The absence of sympathy between them has been our great security.

3202. I am speaking of the emoluments of European commissioned officers annexed to staff appointments, such as those in the adjutant and quarter-master-general's departments, and all the other appointments of the army ?—As far as the necessary differences in the expense and habits of living permit, the allowances should be equalized as much as can be.

3203. (*Colonel Burlton.*) Do you not think that it is consonant with every right principle that an adjutant-general at the head of an army of 150,000 men, or a commissary-general expending a million of money per annum, should have a higher amount of salary than an adjutant-general at the head of an army of 20,000 men, or a commissary-general who only expends 300,000*l.* per annum; is it not fair and proper that responsibilities and allowances should be somewhat proportionate ?—Undoubtedly the pay should be in proportion to the duty and responsibility, and also to the expenses of living, in which are included the habits and domestic arrangements which the circumstances of the country require.

3204. (*Marquis of Tweeddale.*) I wish to ask your opinion upon the following point. A general officer belonging to the Bengal presidency has the command of an army in the field, there is a division of the Madras army on the one flank and a division of the Bombay army on the other flank, has that officer who commands the Bengal army, who is acting against the enemy, the power of calling in to his assistance the two other generals with their troops ?—I presume that the senior officer has the power of calling in the junior officers to his aid.

3205. Is not the governor-general the only person in such a case who can command those troops to obey the orders of the officer who is in command of the force to which I have alluded; and if the governor-general is at a great distance is not that officer obliged to send to the governors of the two presidencies to get them to give the order ?—This is hardly a question upon which I am a good witness. In field operations I understand that a commanding officer is selected whom all the others obey; and in the case of bodies of troops coming into connection commanded by officers holding independent commands, the junior officer would obey the orders of the senior officer.

3206. (*Duke of Cambridge.*) Irrespectively of the presidency to which he might belong ?—I imagine so; but it is a question which should rather be put to a military officer than to a civilian.

3207. (*Chairman.*) In any admixture of European and native forces do you consider that it should be regimentally or by brigades ? Would you put two companies of Europeans with eight companies of natives, for instance, or would you have a regiment of Europeans with one or two native regiments combined with them in brigade ?—The system of management of Europeans and natives is so different that it would be advisable to keep them in separate regiments. All natives of India, whatever may be their religion or nationality, can be combined in the same regiment; whatever the differences may be, they have still a great deal in common; but when you come to such differences as those which exist between a body of natives and a body of Europeans, you require two systems of management; you must keep them separate; there would otherwise be constant collision; the Europeans would beat down the natives, and you would get none but the dregs of the people in your native regiments; it would be quite inconsistent with a proper *esprit de corps* in the native regiments.

3208. (*Duke of Cambridge.*) Are you in favour of the continuance of the present system of regular native troops and the admixture of irregulars, or are you for having the whole of the native troops, cavalry and infantry, on the irregular system ?—The tendency of my opinions is in favour of the system which is called irregular, though it is to a great extent improperly so called; but it is very undesirable to lay down a fixed rule which is not to be departed from. Under some circumstances it might be desirable to approximate our native troops to the regular native troops, but in the majority of cases they should be formed on the irregular model. In all cases they should have the degree of discipline which is necessary for their efficiency, and they should be dressed and armed appropriately, and no departure should be made from the dress which properly belongs to their nationality and religion, which can be avoided.

3209. You would attach no value to their having a special dress more of a European description ?—None at all; on the contrary, I think it positively undesirable. I think that we shall have a better class of natives by making as little departure as possible from their native usages, and that the distinctive class feeling, or caste feeling, or provincial feeling, or whatever it may be, will be maintained in a greater degree; there will be more individuality in the different bodies composing the army, in which our security will to a great degree consist for the future; the Sikhs will be less likely to unite with the Ghoorkas, and the Ghoorkas with the Oude men, and the Oude men with the low-caste men, and so on. Railways and cheap postage, and the silent influence of a single administrative system, are

Sir C.E. Trevelyan, K C.B

27th Aug 1858

tending to make all natives homogeneous. The same emissaries will soon be able to see and harangue the whole Bengal army in a week. This should induce us to study and develope every available means of military security.

3210 (*Viscount Melville.*) I presume that in the cavalry you would do away with the use of the European saddle?—Yes; I am quite against it. In the cavalry, where I was able to form a clear opinion, I very much preferred what is called the irregular system to the regular. I think that it is a great mistake to dress the native horsemen in European clothes, and to set them to ride on smooth saddles.

The witness withdrew.

Colonel Skeffington Poole examined.

Colonel S. Poole.

3211. (*Duke of Cambridge.*) You have been in India for how long?—I was in India about thirty years.

3212. How many years were you in the service?—I entered the service on the 4th of January 1821, and retired at the end of 1849.

3213. In what service were you, in the infantry, cavalry, or artillery?—In the Bombay light cavalry, the lancers.

3214. You were the whole time in the cavalry?—Yes.

3215. (*Major-General Hancock.*) You have served with Bengal troops as well as with Bombay troops in the field, have you not?—Yes.

3216. (*Duke of Cambridge.*) Can you give us any opinion as to the proportion of European to native troops to be maintained in the Bombay presidency, or if you have sufficient experience of Bengal, in the Bengal presidency?—I do not consider myself sufficiently acquainted to speak as to Bengal.

3217. Then as to Bombay?—It is very difficult to answer that question. There is such an immense extent of country now to what there was when I was there, that it would be very difficult to give an opinion upon that point, but I should think about one sixth.

3218. That is to say, one European to five natives?—Yes.

3219. Do you know at all the proportion which has existed hitherto?—About one to ten, I should think, including irregulars, of whom there are many thousands.

3220. (*Colonel Burlton.*) It has been about one to four in Bombay?—I was not aware that that was the proportion.

3221. (*Duke of Cambridge.*) Knowing as you now do that the proportion is as one to four, is it your opinion that the proportion hereafter should be as one to five?—No, certainly not.

3222. Then what would be the result of the knowledge which you now have of the proportion being one to four, would you increase the Europeans, or would you leave the relative proportion as it is at present?—I should think that one to four would be quite sufficient.

3223. Do you include in that proportion the artillery, or not?—No, not the artillery.

3224. Would you have the whole of the artillery European, or would you have a portion European and a portion native?—I would have as much European as there could possibly be for the efficiency of the service, but there are some places where it would be almost impossible for European artillery to exist for any length of time; therefore it would be necessary to have some small proportion of native artillery.

3225. But as small a proportion as you could?—As small a proportion of native artillery as would possibly suffice.

3226. (*Marquis of Tweeddale.*) For that particular purpose?—For that particular purpose.

3227. (*Duke of Cambridge.*) What is your opinion as to the sappers and miners, should they be natives or Europeans?—Natives, to a great extent, they must be; it is impossible that a European can stand the climate and the hard work which there is to be done.

3228. Do you think that there would be no difficulty in getting natives who would do all the work which would necessarily be performed by sappers and miners?—I do not think there would be any difficulty in getting natives to do the work, but they should be under the superintendence of Europeans.

3229. Would you allow the native sappers and miners to do any scientific portion of the work?—As little as possible.

3230. Would you allow any natives to work at the scientific portions of the work in the arsenals, such as the making of fuzes, copper caps, and so on?—I believe that a great number are employed at present.

3231. Would you have Europeans or natives?—I think that you would require some natives, because the work cannot be done by the Europeans in many cases.

3232. In what respect could the work not be done by Europeans?—It would be too fatiguing for them.

3233. Scientific work such as I describe?—Anything where there is fire; it would be too overpowering for the men to work at for any length of time; it would cause great mortality among the Europeans.

3234. Can you give us any approximate estimate as to the amount of the force, European and native, which will be required in the Bombay presidency hereafter?—No, I do not consider myself competent to do so.

3235. Would you have the force in the Bombay presidency on the regular or the irregular system, or would you have both combined?—Both combined in certain proportions.

3236. In what way would you have both combined; would you have the cavalry all irregular, or would you have a proportion irregular and a proportion regular?—I would have a proportion of each.

3237. Can you give us any reason for that?—For regular service you want men who are well drilled and used to working together. In detachment duties and outpost duties, where say a non-commissioned officer is sent with a party of 12 horses and 12 men, the horses if they are Government horses are not likely to be so well looked after as if they were the men's own horses, as is the system in the irregular service.

3238. Would you have any irregulars for the infantry?—I should say that it would be a very good plan for the same sort of work, going out to villages, where small parties are required.*

3239. Are you at all acquainted with the system in existence in the formation of the Scinde horse?—I have heard a great deal of it, but I do not know that I could speak to the interior economy.

3240. Are not the duties performed by the Scinde horse of that description that no regular regiment could perform them more satisfactorily than they do?—I think that a regular regiment could not perform them so satisfactorily for the good of the service as the irregular horse do.

3241. Then for what duties would you particularly wish the regular cavalry to be employed?—On any service where European officers can accompany them.

3242. What then is in your opinion the advantage of the regular over the irregular system?—For actual service the regular cavalry would be much better than the irregular.

3243. (*Colonel Burlton.*) You mean for actual conflict with the enemy?—Yes.

---

* Since giving this evidence I have remembered that there are numerous corps of this description.

Colonel S. Poole.

27th Aug. 1858.

3244. (*Sir Harry G. W. Smith.*) Are the irregular cavalry as well mounted as the regular cavalry ?—Certainly not.

3245. (*Duke of Cambridge.*) I understood you to say that as far as the native artillery were concerned you would allow only a very small proportion of natives, and that as far as practicable you would have them Europeans, and the same as to the sappers and miners ?—Yes.

3246. Would you have the Bombay army composed of different nationalities or castes, and if so, in what proportion ?—It is very difficult to get them in certain proportions, but I would have all castes entertained which were fit for service, the same as they now are.

3247. Would you have the castes mixed up in regiments and companies, or would you have them separated in any way ?—I would have them all mixed together in each company, the same as they now are.

3248. Do you think that it would be an advantage if the army were all dressed more upon the system of the country, that is to say, more according to the native dress than the European ?—Certainly; the tight dress is a great detriment, particularly in the cavalry; the men have not the free use of their limbs.

3249. Do they object to it ?—The men in my regiment have never objected to wear any dress; they even wear the leather peak to the shako, but the head-dress is so cumbersome and so unwieldy that when the wind blows the men cannot keep their shakos on their heads when they get into motion. My regiment wore helmets for many years, and I found it the most comfortable head-dress I have ever had, and with a white cover it is a perfect protection from the sun. An improvement on this would be what is called the Solar Topee, as it is made of felt, and very light. It might be ornamented according to fancy. To be seen at 78, Gracechurch Street.

3250. (*Sir Harry G. W. Smith.*) Would you recommend an alteration of the saddles in the regular cavalry, that they should have native saddles in preference to the heavy English saddle ?—No; if the trees are English, and of the very best seasoned wood, they are very good indeed, and the covering is very easily done in India.

3251. (*Major-General Hancock.*) Do you think that the regular trooper rides as well on the English saddle as the irregular trooper in the native saddle ?—I should think that he does generally.

3252. (*Duke of Cambridge.*) Taking troops in line in a charge, would you rather be at the head of a regular or of an irregular regiment ?—I have never been at the head of an irregular regiment, therefore I cannot give an opinion with regard to that point.

3253. (*Colonel Burlton.*) Have you ever seen irregular cavalry in an action charging ?—No, I have only seen them moving on parade, when they have appeared to me to work very loosely.

3254. (*Major-General Hancock.*) You did not see the Scinde horse on service at Moultan ?—I have seen them on parade there only.

3255. (*Colonel Burlton.*) Not in action ?—Not in action.

3256. (*Marquis of Tweeddale.*) Do you think that the discipline of an irregular regiment would be equal to the discipline of a regular regiment in charging in line ?—No.

3257. (*Colonel Burlton.*) The charge would not be so effective ?—No.

3258. (*Viscount Melville.*) Do you not consider that the only difference as regards the irregular cavalry and the regular cavalry in a charge is the difference of the horse, the men being perfectly equal ;—No, the irregular cavalry do not work so close together.

3259. (*Major-General Hancock.*) Do you think that that arises from defective training and drill in the irregular corps ?—If the drill was the same in the irregular as with the regular, I consider that the one would be just as good as the other.

3260. (*Colonel Burlton.*) It would no longer be irregular ?—Just so, therefore both regular and irregular corps are required.

3261. (*Marquis of Tweeddale.*) If the horses and the drill and the discipline were equal, the two corps would be the same ?—Yes.

3262. Do you not think that there is an advantage which the regulars have over the irregulars from the superior number of officers ?—I have seen regiments do uncommonly well with three or four European officers. I have seen my own regiment for a very great length of time with only three or four European officers, and all the others native officers, and those native officers could conduct the duties just as well on parade, and command a troop just as well as a European officer.

3263. (*Duke of Cambridge.*) Then you do not attribute very great value to the number of European officers attached to a regular regiment as compared with an irregular one ?—No.

3264. (*Major-General Hancock.*) You think that a smaller number of highly qualified officers, officers selected, for their superior qualification, would make a regiment more efficient than a larger number of European officers under the existing system ?—Yes; but I do not consider an officer "highly qualified" unless he has been well instructed in the cavalry drill and field movements.

3265. (*Duke of Cambridge.*) Do you consider that the Bombay army should be enlisted under a new code ?—I do not consider any change necessary. As far as regards my own regiment we enlisted all classes of men, and they all entered alike; from Brahmins to Dobies among Hindoos; and about one third might be Mahomedans. In the infantry the castes are much lower.

3266. Would you enlist men for general service ?—Yes, I would enlist all classes and castes for general service, provided they were fit for service.

3267. And that, I apprehend, is the system which is adopted at present in Bombay ?—Yes.

3268. But it is not so, you are aware, in Bengal ?—It is not.

3269. You have served with Bengal troops ?—I have.

3270. Have you experience enough to give an opinion whether that general service system might be extended to Bengal without any detriment to that presidential army ?—I should say so. I cannot see any reason why the same system should not be adopted there as in Bombay.

3271. (*Major-General Hancock.*) Have you ever found high caste interfere with the performance of the duties required from your regiment in the field?—Not in my own regiment.

3272. (*Duke of Cambridge.*) In any other regiment ?—Yes.

3273. In any regiment of the Bombay army ?—No.

3274. But you have in the Bengal army ?—I have seen it in the Bengal army.

3275. Will you explain what you did see ?—When I was in command of a cavalry brigade on the left of the line, at Moultan, one evening when I was going past the lines, I saw a number of our men collected together, and there was a naik's party of the Bengal army going past. When they had passed on, I asked what was the matter, and one of my native officers said, "The naik is a lower caste man of that party than one of the privates, and the private has just said, 'We have left our lines; I intend to take command, and you go into the ranks, and you will obey me.'"

3276. Was any notice taken of that circumstance ?—It was no business of mine; I could not interfere in a thing of that sort.

3277. Do you suppose that that is a solitary instance ?—No; I was informed by native officers in my own regiment that it was not a solitary instance; and these were men who had connexions and relations in almost all Bengal regiments. The man who told me was a man from their own people.

3278. Then the same caste who would make objections on account of caste in one presidency would not make those objections in the other ?—Exactly so.

3279. Can you account for that extraordinary state of things ?—It arises from the difference of system and the difference of discipline throughout the army.

3280. You think that it is caused by the want of discipline ?—Yes.

3281. You mean to say that caste is more taken notice of in Bengal than in Bombay; that it would be accepted as an excuse in one place when it would not in the other ?—Yes ; everything appears to be by caste there.

3282. (*Major-General Hancock.*) Did you see any other instances at Moultan while you were serving there with the Bengal troops ?—On my giving over the command of the brigade of the garrison of Moultan, before I left, our troops were relieved by the Bengal troops, and they were on the gate guard, going into the town. There was a great altercation going on about wood and supplies going into the fort. The sentry on duty was taking what is called *Dustooree* from each man who entered, that is to say, he was taking a few sticks out of each bundle and putting them down, and when he came off guard he took them away with him for his own perquisite for lighting his fire. I had just put the brigade in orders, giving over the command to the next senior officer. I went and told him what I had seen, and left immediately. I do not know what took place after I reported it. I also saw the same thing going on at the guards at other places ; had I remained in command, I should have taken notice of it.

3283. (*Duke of Cambridge.*) That you conceive was an evident indication of caste prejudice ?—No, I relate it as a great proof of insubordination.

3284. It was want of discipline ?—Yes ; a man in our service would not dare do anything of the kind.

3285. Is any change required in the system of promotion as regards native commissioned and non-commissioned officers ?—As far as I know, in the Bengal army there is ; from what I understand, the promotion in that army is entirely by seniority ; it goes from the junior to the senior, by seniority, and if a man lives long enough he must get to the head.

3286. (*Colonel Burlton.*) You are not speaking from personal knowledge ?—No.

3287. (*Duke of Cambridge.*) But that is the system ?—That is the system, as I have always been informed by those who have served in the Bengal army, and by my own native officers, who were constantly visiting their relations in the Bengal lines.

3288. You do not suppose that that is a good system ?—Certainly not.

3289. What is the system in Bombay ?—In Bombay the men from the ranks are generally recommended by the officers in command and in charge of companies, and submitted to the officer commanding the regiment for his approval ; those men are selected for smartness, for being good drills, and for general good conduct.

3290. How is the promotion to the commissioned ranks effected ?—That is done entirely by selection. I have known a havildar promoted to be a native officer who had only been a short time in that grade.

3291. You commanded a regiment ?—Yes.

3292. Supposing a vacancy occurred among the native officers of your regiment, and you had to recommend which ever havildar you thought proper, how would you make that selection ?—I should select the smartest man, and the one best fitted for it ; from my personal knowledge of the man's habits, conduct, smartness, and proficiency in every respect, so I should select him.

3293. What effect does such selection produce upon those native non-commissioned officers who are thereby passed over ?—It is the custom of the Bombay service, and they think nothing of it.

Colonel S. Poole.

27th Aug 1858

3294. Would they continue as efficient non-commissioned officers as before ?—Perfectly.

3295. And would they serve without discontent ?—Yes ; it is a frequent case. The last promotions before I left the regiment were those of two young havildars. It was in consequence of their both having been havildar-majors ; they had been selected for havildar-majors the same as the serjeant-major of a regiment is ; they had both served well in that capacity. They were the smartest men in the regiment, and they were both promoted.

3296. (*Marquis of Tweeddale.*). Do you consult the captains of troops on these occasions ?—You may consult them, but the commanding officer does not consider it in that case at all necessary to consult them ; he knows himself what a man's capabilities are, and he recommends him to the commander-in-chief.

3297. (*Duke of Cambridge.*) But for the non-commissioned ranks you consult the captains or the officers commanding troops and companies ?—Yes, I always did so, as it makes the men look up to their officers.

3298. Do you think that native officers selected as you state, by merit, and not by seniority, would give the European officers of their regiment more information of what was going on than on the other system ?—I should think that they would ; I have never found any man that failed in giving information of any sort whenever I have asked for it.

3299. (*Viscount Melville.*) Suppose anything was going wrong ?—I should consider that they would then give information.

3300. (*Duke of Cambridge.*) Are you not aware that in the recent mutiny there is no instance on record, as I believe, or hardly any, in which a native officer gave any information to the European officers? —I believe that in the 21st regiment two brahmins did.

3301. (*Viscount Melville.*) That is in Bombay ?—Yes ; and I know that at Nusseerabad, where the Bombay Lancers were surrounded by mutinous Bengal troops, and every inducement held out them to join, they never failed to report everything to their European officers.

3302. (*Duke of Cambridge.*) But in Bengal ?—I believe they gave no information.

3303. Do you think that, supposing there had been a different system of promotion, it is very probable, and more than probable, that some information would have been given ?—I think so.

3304. (*Chairman.*) Your general opinion is, that the principle of selection for promotion is much better than that of seniority ?—Yes.

3305. (*Duke of Cambridge.*) And it is quite compatible with the general interests of the service, that is to say, that it would not injure the feelings of those men passed over ?—You tell a man, "You know you are not fit for a native officer." "No," he says, "I am not ; I am very lucky in having got so high as I am, and it is by the favour of the officer commanding my troop that I ever got here."

3306. (*Marquis of Tweeddale.*) Have you been constantly with your regiment ?—Yes.

3307. You have not been on the staff ?—No.

3308. Supposing that you had been absent on the staff for several years, and that that staff situation had not justified your remaining after you had got the rank of lieutenant-colonel, do you think that it would have been right for you to have selected a havildar to make him a native officer without consulting the captains ?—No, I should not; I think that any officer joining a regiment after a long absence would consult his juniors, or his adjutant, or whoever may be present, to know who are the best men.

3309. (*Chairman.*) Selection must always be made by perfect knowledge of the capability of the person promoted ?—Yes.

3310. (*Viscount Melville.*) Do you recollect what was about the average age of your native officers when promoted ?—About 35, I should think.

Colonel
S. Poole.
27th Aug. 1858.

3311. (*Duke of Cambridge.*) Do not you think that that is rather old ?—No ; that for a commission is rather young, that would be rather under the calculation ; but there was one man who was promoted in my regiment from the ranks within two years, and I should say that he was a native officer and high up in the regiment when he had served 20 years.

3312. Do you think that it would be at all a good system to introduce any native gentlemen as native officers, without their passing through the ranks of the army ?—Certainly not.

3313. Have you any reason for giving that opinion ?—I think that they would be overbearing, and that it would upset the present system, which works well altogether.

3314. Would you like to see more European noncommissioned officers introduced than you have; you have two, I believe ?—Yes.

3315. Would you like to see any more introduced ?—No.

3316. You think that there would be no advantage in that ?—Certainly not; that class of men cannot be kept under the same restraint with a native regiment that they are with a European corps, and very few behave well for any length of time. I should say from 30 years experience that 9 out of 10 take to drinking.

3317. (*Marquis of Tweeddale.*) Do you think that there is the communication between the natives and the European officers which there ought to be in a regiment ?—I can only speak for my own regiment, and I have heard that it is the same in a great many others in Bombay. The terms on which I was with my native officers were these : if a native officer was sick, on my way to parade in the evening, I should start half an hour sooner and go and visit him in his native house, and sit with him for a quarter of an hour or twenty minutes, and then go on to parade.

3318. You think that there is a sufficient communication between them, so as to enable the European officer to know everything which is going on in the regiment ?—We know everything. I do not believe that a man was ever out of my lines at night without my knowing it.

3319. Was it the same with the other officers of the regiment ?—Yes ; generally speaking you would not go round the lines, in the morning, without finding one or two native officers up in the European officer's houses or tents, talking with them upon general topics.

3320. (*Sir Harry G. W. Smith.*) When a native has attained the rank of officer, to what more has he to look forward ?—He has to look forward to being subahdar major of the regiment.

3321. (*Colonel Burlton.*) And the order of merit ?—And the order of merit, and there are several titles, "Bahadoor," and "Sirdar Bahadoor," &c.

3322. (*Sir Harry G. W. Smith.*) Those are complimentary ?—No, not exclusively ; there are pensions with them.

3323. (*Viscount Melville.*) You were at Moultan, you had an opportunity of seeing all the cavalry there ; can you give any statement as to what your view was of the comparative efficiency of the native officers of the Bengal and the Bombay regiments ?—I saw very little of the Bengal cavalry, they were a long way from me, they were nearly two miles off ; but on the way to Cabul I saw something of them, and I knew the commanding officer well, who was the same commanding officer who was at Moultan. There was a very bad system of the horses not carrying their head and heel ropes, all those things might go one road and the regiment might march another, which did occur more than once.

3324. (*Duke of Cambridge.*) Why was that ?—It was the system of the Bengal service.

3325. How were they carried, then ?—By the grass cutters.

3326. Then a dragoon could not picket his own horse ?—No.

3327. Did not he picket his own horse ?—I believe not.

3328. How was that done ?—By the horsekeepers. The European dragoons did not clean their own horses, nor did the 2nd cavalry clean their horses, when we joined the Bengal army at Quetta.

3329. The Bengal cavalry did not clean their own horses ?—No.

3330. (*Colonel Burlton.*) What European dragoons do you speak of ?—16th lancers, from which corps we got a serjeant major.

3331. (*Duke of Cambridge.*) Do native troops not clean their own horses in Bengal ?—I believe not.

3332. Do they in Bombay ?—Always.

3333. In your opinion should there be any admixture of European and native forces, either regimentally or by brigade ?—Certainly not ; it would never answer in the same lines.

3334. Why would it not answer ?—The natives would never be happy as long as the Europeans were close to them on account of their women.

3335. You think that it would not answer at all ?—No. In all our cantonments in India you will find that all the European lines are pitched some distance away from native lines. The Europeans would never be kept from interfering with the native women, and there would be nothing but rows.

3336. (*Chairman.*) Does your opinion extend to brigades as well as to regiments ; can they be brigaded together ?—Yes, on parade ; but their lines must be distinct. Look at the Poonah brigade ; look at the Deesa brigade ; look at any other brigade where there is a European regiment ; the native lines and the European lines are some distance apart to prevent any interference with the women.

3337. Still native and European regiments are in the same brigade ?—Yes, on parade.

3338. (*Duke of Cambridge.*) The question which I asked you was whether you would wish them to be brigaded together or to be put together in regiments? —Europeans and natives should certainly not be mixed up together in one regiment.

3339. (*Chairman.*) Your answer then refers merely to their being mixed up regimentally ?—Yes, on account of the women.

3340. (*Duke of Cambridge.*) Would you have it by brigades ?—A regiment in a brigade, of course.

3341. Have you ever heard of such a system existing in Bombay as that of making complaints and sending in petitions to superior authority without their passing through the commanding officer of the regiment or squadron ?—Yes.

3342. Has that taken place in Bombay ?—Yes.

3343. Can you give any instances of it ?—Yes.

3344. What instances ?—I can give an instance in my own regiment. A havildar was brought to trial for something which was very insubordinate, and he was reduced to the ranks ; he sent in a petition to the commander-in-chief direct, or, rather, he got leave to go to Deesa on the plea of seeing his friends, instead of which he went direct to Bombay and laid his petition before the commander-in-chief himself.

3345. (*Marquis of Tweeddale.*) That was after his dismissal ?—Yes ; that is to say, after he was reduced to the ranks, not dismissed.

3346. (*Sir Harry G. W. Smith.*) By a court-martial ?—By a court-martial.

3347. (*Duke of Cambridge.*) Was any notice taken of that ?—Yes ; he was tried again and was dismissed the service.

3348. Do you know of any instance where such a petition has been sent in and no notice has been taken of it ?—No, I do not.

3349. It was considered a great military offence, and was dealt with accordingly ?—The sending in a petition without its going through the proper channel was considered a great military offence, and it was dealt with accordingly.

3350. To whom was the petition addressed in the case which you have mentioned ?—That I do not recollect ; but I know that it went to the commander-

Colonel S. Poole.

27th Aug 1858.

in-chief, and it came back through the proper channel, through the adjutant-general.

3351. Do you think that the commanding officers of regiments ought to have more power than they possess at present?—Yes, a great deal more power.

3352. In what respect?—In regard to courts-martial. A man may be tried, and the sentence ought, perhaps, to be carried out immediately; but the sentence of the court-martial would have to go perhaps 200 or 300 miles to the divisional officer in command for approval, and he might not perhaps be satisfied with it when it came to him, and it might come back again for revision.

3353. (*Viscount Melville.*) Does that apply to regimental courts-martial?—Yes; with some regimental courts-martial I have known it to be the case.

3354. (*Duke of Cambridge.*) In a regimental court-martial must it go to further authority?—Yes.

3355. (*Major-General Hancock.*) That was in former times?—Yes.

3356. (*Sir Harry G. W. Smith.*) If there is a regimental court-martial, and a sentence is passed, cannot you confirm it?—Not in some cases; at least it was so when I left the service.

3357. (*Major-General Hancock.*) When did you leave the service?—In 1850. I do not think that I had a court-martial in my regiment for two or three years before I left the service, not one of that kind; but when I was at Rajcote I remember perfectly well having to send the sentence of a regimental court-martial to Baroda to be confirmed. The men could not be punished for some crimes without it; corporal punishment could not be given without its being confirmed.

3358. (*Duke of Cambridge.*) In what respect would you give a commanding officer more power?—I would give him as much power as is compatible with propriety, much more than there was when I was there.

3359. (*Major-General Hancock.*) Do you mean merely as regards bringing soldiers to trial before a court-martial?—Yes. I would give the commanding officer as much power as possible, and trust to him. The men look more to their commanding officer than to any one else; if the commnding officer has not the power to punish a man, they do not consider that he is the responsible person.

3360. (*Chairman.*) You consider that the discipline of a regiment depends a good deal upon the power of the officer commanding it?—I do; and if he cannot be trusted with that much of responsibility he had better be removed.

3361. (*Duke of Cambridge.*) Particularly with native troops?—Particularly with native troops.

The witness withdrew.

Major-Gen. J. G. Griffith

Major-General Julius George Griffith examined.

3362. (*Chairman.*) How long have you been in the service?—I was upwards of 36 years in India.

3363. In what presidency?—In the Bombay artillery. I commanded it for ten years.

3364. Have you any knowledge of the other presidencies?—I was born under the Madras presidency, but I know nothing of that service at present.

3365. You wish to confine your evidence to Bombay?—I could speak generally to the army altogether; what is good for one, is good for another, in my opinion.

3366. But your knowledge of the presidencies is confined to Bombay?—Yes.

3367. Of course you have had many opportunities of seeing European and native troops serving together?—Continually. I was on service in the Mahratta campaigns of 1816, 1817, and 1818 under Sir Lionel Smith.

3368. Have you formed any opinion as to the proportion of European and native troops which will be requisite for the Bombay presidency?—For any presidency I should say the same, one European to four natives at the least, or rather one in four.

3369. (*Colonel Burlton.*) That is less than we had before the mutiny?—I would not have less than that, but rather more, one-third.

3370. (*Chairman.*) Would you be prepared to recommend so great a proportion of natives to Europeans in Bengal as that which you have stated?—I could not speak so well as to Bengal, never having been there, but Bombay I can speak more positively about.

3371. Do you take into account any police force?—Not at all. I refer to what I call the regular army.

3372. Do you think that there are any duties now performed by the native troops which might be transferred to the police with advantage?—Yes, a great many.

3373. If those duties were transferred to the police, that of course would enable you to reduce the number of native troops?—No doubt of it; but I would keep the regiments strictly to their military duties.

3374. You think that police might be employed with great advantage to do a part of the duties now performed by the army?—Yes, but independently of the regular army.

3375. What amount of force do you consider will be required in the Bombay presidency hereafter?—I have not given particular attention to the Bombay presidency. In the questions which were sent to me my attention was directed to Bengal, and the information respecting that I could only give at second hand, having picked up the opinion of Sir Charles Napier. I do not know it myself at all.

3376. Perhaps you can express an opinion formed on your own knowledge of Bombay as to what number of troops you think requisite there?—As near as I can judge, from 30,000 to 35,000 men, which I should call a corps; above that number, an army.

3377. Does that include artillery and all branches of the service?—Yes; a corps is composed of 27,000 infantry; 3,000 cavalry; 2,000 artillery; 1,000 engineers; 33,000 total; with 10 batteries, or 60 pieces of field artillery.

3378. (*Major-General Hancock.*) Do you think it necessary to have an increase to the existing establishment?—I do not know what the existing establishment is.

3379. (*Chairman.*) According to your proportion you would have 7,000 Europeans and 28,000 natives?—Yes; 7,000 European to 21,000 natives—one in four.

3380. (*Viscount Melville.*) You would not diminish the present proportion?—Certainly not, as far as my knowledge extends of the present day.

3381. Before the mutiny I think that the number of Europeans in Bombay was 10,000 to 40,000 natives; you would not diminish that proportion?—The proportion would be the same, one *in* four, not one to four.

3382. (*Chairman.*) Do you consider that the native force in Bombay should be on the regular or the irregular system, or both combined?—Both combined. My opinion is, that the whole Indian army should be reconstructed on strict military principles. The Bengal army to be divided into two corps within that presidency, and independent of the Punjaub, which should have a corps or army of its own. The regular cavalry should be all Europeans, regiments of six troops each. The native cavalry, all irregulars, formed like the corps of Skinner's horse, Gardner's horse, and Jacob's horse in Scinde, in which the aristocracy of the native states, as well as of our own presidencies, would be too glad to take service under Her Majesty the Queen, if invited to do so. The present native cavalry, regulars, of each presidency, to be absorbed

Major-Gen. J G Griffith.

27th Aug. 1858.

into these corps by volunteering. The European infantry should be in proportion of one to four natives, though one-third would be better. The artillery should be entirely composed of Europeans, either on the present system of formation of 23 officers per battalion of four companies each, or incorporated with the Royal service, after an equalization of ranks, according to *length of service*. The engineers in due proportion, about one-half of the artillery; the sappers and miners to be all Europeans, but the natives to be confined to the duties of pioneers, to build barracks and lines, and forming entrenchments and encampments in the field. All extra corps and contingents to be fully officered and brought into the line. *Civil* corps to be excluded, and considered irregulars, for guarding gaols, &c., escorting prisoners and treasure when necessary.

3383. You would have both, regulars and irregulars ?—Yes.

3384. In what arm would you have the greater proportion of irregular troops ?—I would have the irregular system entirely in the native cavalry.

3385. Would you have the whole of the native cavalry irregular ?—Yes; but Europeans for the regular cavalry.

3386. And the native infantry regular ?—Yes; I would not have the extra corps irregular, but all brought into the line.

3387. (*Major-General Hancock.*) You are alluding to what are called local corps ?—Yes; I call all those extra corps.

3388. (*Chairman.*) Do you think that there should be any native artillery in the Bombay presidency ?—Certainly not; from my experience I know that it is the most mischievous thing which could be done to keep up any native artillery.

3389. You would have the whole artillery in India Europeans ?—Yes.

3390. Would you have any gun lascars ?—Yes, a few; about 24 or 25 men to each troop or company.

3391. (*Marquis of Tweeddale.*) Would you not have a few native artillerymen for going into districts where the Europeans could not go ?—No; I would rather keep the Europeans at a healthy station, and send them off wherever they might be wanted for service.

3392. (*Major-General Hancock.*) Would you keep Europeans at Kurachee, and send them up to Upper Scinde when they were wanted there ?—Yes.

3393. Do you think that Europeans could serve during the hot season in Upper Scinde ?—For a special purpose; but I would not keep them there all the year round because I wanted them at some particular season.

3394. Would it not be very advisable to have some native artillery for service in such localities? —I would not have a single native at a gun.

3395. Why? in consequence of the late mutiny ?—Yes. I say that this mutiny would never have occurred if all the artillerymen had been Europeans; they would not have dared to show their faces against us.

3396. (*Chairman.*) Would you arm the native troops, the infantry and the cavalry, in the same manner as you would the Europeans; would you give them the Enfield rifle ?—If I considered them as regulars I certainly would, and I look upon what I call the army as regulars, therefore I would teach them the Enfield rifle.

3397. Although you would not trust them with the guns you would trust them with the rifle, and arm them in the same manner, and make them as efficient as the European troops ?—Yes, for I would keep them in check by the artillery and European cavalry.

3398. Does the opinion which you have expressed about the native artillery extend to the sappers and miners ?—The sappers and miners I would have Europeans entirely, and a small portion of what we now call native sappers and miners I would call pioneers, and I would enrol or enlist artizans of every sort, so that they might be put to roads, and building barracks, and every kind of field work; but they should have nothing to do with anything scientific or of European knowledge or invention.

3399. All the scientific branches you would confine entirely to Europeans ?—Yes.

3400. You would neither admit the natives into the arsenals, nor give them an opportunity of learning how to make copper caps, and so on ?—Certainly not.

3401. Do you consider that the Bombay army should be composed of different nationalities and castes; and if so, in what proportion ?—I would not acknowledge caste in any way; a man is enlisted as a soldier.

3402. You would enlist anybody whom you considered fit to be a soldier ?—Yes.

3403. But you would not recognize caste after he was enlisted ?—I would leave the caste business entirely to the commanding officer of the regiment, and he should apportion the men as he pleased, according to the duties which they were to perform.

3404. Have you ever found any difficulty in the performance of military duties on account of caste ?—My duties have been principally in the civil department of the ordnance, at least for the 30 years that I was on the staff.

3405. Have you ever known caste urged as an excuse for not performing duty ?—Yes, in a trifling way, but nothing serious.

3406. But under proper discipline you consider that caste ought not to be any objection ?—Certainly not; I look upon a man as a soldier, and he has to serve the state as a soldier. I would not allow caste to be mentioned. The only use of knowing the different castes in a regiment is when the commissariat have to provision; for instance, on our side of India we are always boating up and down the coast, and therefore the commissariat wish to know how many natives there are of this and that caste, so as to provision them properly.

3407. After you had enlisted men of different castes, would you endeavour to place the high-caste men in the same company, or would you mix the different castes together ?—I would mix them together. I would not make any distinction whatever.

3408. Would you recommend any alteration in the code under which the army is at present enlisted ?—Yes, to simplify it a good deal; there is too much refinement in our military code.

3409. You would enlist the men for general service, to go wherever ordered ?—Yes.

3410. (*Major-General Hancock.*) What is the refinement in the present code to which you refer ?—It is this, that the officer is just as much under the authority of the sepoy as the sepoy is under the authority of the commanding officer.

3411. In what respect ?—If the officer transgresses in any way in the estimation of the sepoy he is brought up immediately; it is a kind of retaliation which the natives are quite up to, no discipline could be kept up under such terms.

3412. (*Chairman.*) Do you consider that any change is required in the system of promotion as regards the native commissioned and non-commissioned officers ? —Yes; I should make it entirely by selection by the commanding officer.

3413. Do you think that the commanding officers of regiments require more power than they now possess ?—No doubt of it.

3414. (*Major-General Hancock.*) In what respect? —A commanding officer should do everything within his lines according to his own will and pleasure. Everybody under his authority should look up to him as the father of the regiment, and the protector of the interests of everybody in the regiment.

3415. (*Chairman.*) You consider that the discipline of a regiment depends mainly upon the degree of power which is given to the commanding officer ?—Entirely so. I say that the Government look to the commanding officer of a regiment as the proper instrument for conducting the discipline of the army.

Major-Gen. J. G. Griffith.

27th Aug. 1858.

3416. He is responsible ?—He is responsible for every man under his authority.

3417. And therefore he ought to have the power of reward and punishment ?—Yes, and nobody should interfere with him, and particularly the staff; the staff should not be allowed to say one word to the commanding officer.

3418. Have you known any instances of petitioning without going through the commanding officer ?—Yes.

3419. Do you consider that a very objectionable system ?—Yes, very much so. I have known instances of the adjutant-general of the army corresponding and communicating with the sepoys of regiments.

3420. (*Major-General Hancock.*) In the Bombay Presidency ?—No.

3421. Will you state instances ?—I cannot state instances.

3422. Upon what ground do you make the statement ?—Because it was generally known ; everybody knew it.

3423. It is hearsay ?—No, it is fact ; I speak of 30 or 40 years ago. I could mention names, but the fact is notorious.

3424. (*Chairman.*) In mixing together European and native forces, would you do it regimentally or by brigades ?—I would not do it regimentally ; I would do it by brigades only.

3425. Can you give any instance of any interference with the power of commanding officers ?—Yes ; I think that this is one. In the year 1824, a general order was issued under the presidency of Bombay to this effect, and it is now in existence ; it is dated the 31st May 1824 : "The whole of the officers of artil- " lery, to whatever branch of the artillery they may " be attached from time to time by the commander-in- " chief, shall continue to form one general list for pro- " motion, and continue to rise in one corps as hereto- " fore." Now that was not the case; heretofore it was not the case, but from this date it was ; the practice was not in existence before the year 1824 ; and I find in the course of my reading that there was a Warrant published by George the Second, which is given in Symes' Military Guide, the 3rd edition, page 288, dated 1781 : "Order to empower colonels " and commanding officers of every regiment in His " Majesty's service to post the subaltern officers in " such a manner as they shall think may best conduce " to the good of His Majesty's service.—G. R. " Whereas it has been humbly presented to us that " disputes have frequently arisen amongst our forces " concerning the posting subaltern officers to troops " and companies, whereby the service hath suffered " or may suffer : We have therefore taken the same " into our Royal consideration, and have thought fit, " in order to remedy the said inconvenience for the " future, hereby to authorize and give full power " to the colonel and commanding officers of every " regiment in our service to appoint the subaltern " officers in such a manner as he or they shall think " fit, and may best conduce to the good of our ser- " vice, and the regular disciplining and due govern- " ment of the troops and companies under their " command, having regard always to the seniority of " such subaltern officers, as far as may be, to the " end that no prejudice may happen to our service " or to them ; and this our pleasure the colonels, field " officers, and every other commanding officer in our " service, are to observe and pay due obedience to " accordingly. Given at our Court at St. James's, " this 22nd day of April 1736, in the ninth year of " our reign. By His Majesty's command. Signed, " William Yonge." That is a warrant of His Majesty George the Second, declaring that it is the business and the duty of the commanding officer of a regiment to post subaltern officers whenever he pleases and as he pleases, and this power was taken away from the commandant of artillery in the year 1824 by the commander-in-chief at that time. Now that was taking away the power that the commanding officer of a regiment held over the officers of his regiment, and it was at that time considered a very great grievance. It created a great deal of unpleasant feeling, and, in short, put the commandant of artillery in a position with his officers that he ought not to have been placed in.

3426. (*Colonel Burlton.*) That is the case in Bengal also, is it not ?—No, there is a difference there ; the commandant of artillery sends up three names, but here the power is taken out of the commandant of artillery altogether.

3427. (*Chairman.*) Do you think that it would be possible to introduce native officers into any of the native regiments without their going through the ranks previously ?—No ; I think that they ought all to rise.

3428. You are of opinion that no advantage would be obtained by admitting any native gentleman ?—No, except in the native irregular cavalry, because he has a great deal to learn after he gets in.

The witness withdrew.

Adjourned to to-morrow, at 12 o'clock.

Saturday, 28th August 1858.

PRESENT :

Major-General PEEL.
Duke of CAMBRIDGE.
Lord STANLEY.
Marquis of TWEEDDALE.
Viscount MELVILLE.
Lieut.-Gen. Sir HARRY G. W. SMITH.
Major-Gen. HANCOCK.
Colonel BURLTON.

Major-General PEEL in the Chair.

Major-General the Hon. T. ASHBURNHAM, C.B., examined.

Major-Gen Hon. T. Ashburnham, C.B.

28th Aug 1858.

3429. (*Chairman.*) You are a major-general in Her Majesty's service ?—I am.

3430. Have you served in India at all ?—I have served in India about twelve years.

3431. At what period ?—I went first to India in 1842, and, with the exception of ten months, served in India till 1854.

3432. In which presidency did you serve ?—Ten years in the Bengal presidency, and two years in the Bombay presidency.

3433. Of course you had many opportunities of seeing the European and native troops act together ?—I had.

3434. Have you formed any opinion as to the proportion which the Europeans should bear to the native troops in the Bengal or other presidencies ?—Supposing the native troops to be those which we have heretofore employed, namely, the Hindostanees, I should say that one-third Europeans would be sufficient.

Major-Gen. Hon. T. Ashburnham, C.B.

28th Aug 1858.

3435. That is one European to two natives ?—Yes.

3436. (*Lord Stanley.*) Why do you add the qualification, "Supposing the native troops to be those which we have heretofore employed ?"—Because if we employ Sikhs I think that the proportion should be much larger.

3437. (*Duke of Cambridge.*) You think that there should be more Europeans if you employ Sikhs ?—Yes.

3438. What is your ground for coming to that conclusion ?—I think that they are less to be depended on. They would be an infinitely more dangerous enemy than the Hindostanee soldier in a revolt.

3439. (*Lord Stanley.*) You think a larger proportion of Europeans necessary to maintain the relative superiority ?—I think so.

3440. (*Chairman.*) Have you thought at all whether it would be desirable to employ police to do any portion of the duties which are now performed by the troops ?—It frequently occurred to me that it would be well to employ police, police battalions, or what I think would be better, local battalions, something like our militia regiments, that they should have the right and time to cultivate the soil in the neighbourhood of the cantonments, where they would be situated, and that there should be a proportion always ready for duty.

3441. Would you arm the native troops in the same manner as you arm the European troops ?—Decidedly not; I would never put the Minié rifle into a native's hand.

3442. (*Duke of Cambridge.*) Would you clothe the natives differently from the manner in which they have been hitherto clothed ?—Yes, I think so.

3443. Would you assimilate their clothing more to the dress of the country ?—I would make a difference with regulars and irregulars; I would have the regulars clothed very nearly as they have been; the irregulars I should have clothed more according to their native dress.

3444. (*Chairman.*) In the proportion which you have mentioned of Europeans to natives do you include the police ?—I do not, but only the regular army; I do not include irregulars or police.

3445. Have you formed any opinion as to the amount of force which will be required in the Bengal presidency in the usual state of affairs ?—I should think that a regular army, a moveable army of 120,000 men, would be required in Bengal.

3446. That would be 40,000 Europeans and 80,000 natives, according to your proportion ?—As nearly as possible.

3447. (*Marquis of Tweeddale.*) Would that include artillery ?—Yes.

3448. And cavalry ?—Yes; I think that that is the minimum.

3449. (*Chairman.*) Do you consider that the native force of the Bengal presidency should be on the regular system or the irregular system, or both combined ?—I think combined.

3450. For what would you employ the irregulars ?—Escort duties and police duties.

3451. Would you have the cavalry regular or irregular ?—I would have all the native cavalry irregular.

3452. And the infantry ?—A portion of the infantry irregular.

3453. (*Lord Stanley.*) Do you include all those irregulars in the estimate which you have given of 80,000 natives ?—No.

3454. (*Chairman.*) I understand you to say that you would have the whole of the cavalry irregular ?—The whole of the native cavalry irregular.

3455. Therefore that would be an irregular force exclusive of the 80,000 which you have mentioned ?—Yes.

3456. Then the 80,000 which you have mentioned would be all regular native infantry ?—Yes.

3457. (*Duke of Cambridge.*) The 120,000 would be Europeans of all arms and the native infantry ?—Yes.

3458. (*Chairman.*) I understand you to say that you think that there should be 40,000 Europeans, which 40,000 would include all branches of the service, and that there ought to be 80,000 regular native infantry ?—Yes.

3459. And irregular cavalry and police besides ?—Yes.

3460. (*Duke of Cambridge.*) What amount of force would you require, then ?—I do not know what the limits of the Bengal presidency are.

3461. Take it as it stands now, including the Punjaub ?—We have had several irregular cavalry regiments; I should suppose that we should require at least as many; I should think that probably we should not be able to keep the European cavalry up to the mark if we had not native cavalry, therefore I should say that four or five regiments of irregular cavalry would be required in excess of what has heretofore been employed.

3462. (*Chairman.*) Would it not be very much diminishing the proportion of Europeans to natives which you thought necessary in the first instance, if you were to add these irregular forces ?—That might certainly be the case.

3463. (*Colonel Burlton.*) Your regular native infantry take 40,000 Europeans; you have no Europeans to match all the native cavalry ?—That is a difficulty.

3464. You must allow more ?—On consideration I think that the number I have assigned for native troops may include cavalry; say 25 regiments organized on the old irregular cavalry system, but to be called "native cavalry," and incorporated with the regular army. Each regiment to number 500 sabres.

3465. (*Chairman.*) Would you have any native artillery, or would you have them all Europeans ?—Decidedly all Europeans.

3466. Do you extend that opinion to the sappers and miners ?—I would do so, but I do not know what the substitute would be for native labour. I think it is very unadvisable that the natives of Hindoostan should be instructed in skilled military labour, but I do not see how to prevent it.

3467. You would employ them in the common labour, but not in the scientific ?—Yes.

3468. (*Duke of Cambridge.*) And I presume that you would not have any natives employed in the scientific branches in the arsenals ?—I think that you must have some, but it should be confined to the smallest limit.

3469. (*Viscount Melville.*) Half-caste natives ?—Yes.

3470. (*Chairman.*) Do you consider that the native army should be composed of different nationalities or castes, and if so, in what proportion ?—I believe that you will have to employ very much the same description of person in your army that you have hitherto employed, giving an opening to other castes. I am not conversant with all the castes of Hindoostan, but there have been some excluded who I believe would make very good soldiers; the *Aheer* caste, I think, has been excluded.

3471. (*Colonel Burlton.*) Cow men and shepherds?—Yes.

3472. (*Chairman.*) Would you preserve the castes or nationalities in the shape of regiments or companies, or would you distribute them promiscuously throughout the regiment ?—Promiscuously.

3473. (*Duke of Cambridge.*) You would not have them by companies or corps ?—No.

3474. (*Chairman.*) Did you ever experience any difficulty from caste, or did you ever know caste to interfere with the performance of military duties. Did you ever know any of the native troops object to perform any military duty, pleading caste as an excuse for doing so ?—I certainly have known it; but I do not know that I could specify instances, or that I should like to specify them. I have known difficulties accruing from caste, but it should not be so.

3475. (*Duke of Cambridge.*) You think that it is not necessary ?—I do.

Major-Gen. Hon. T. Ashburnham, C B

28th Aug 1858

3476. (*Chairman.*) Under proper regulations you do not consider that caste ought to be any objection to the performance of military duty ?—None whatever.

3477. Do you know the terms under which the native army is enlisted at present, and should you recommend any alteration in the terms of enlistment? —I am not quite sure what have been the last alterations made by Lord Dalhousie. I have had so little to do with enlistment that I am not conversant with the subject.

3478. Should you recommend that all the troops should be enlisted for general service ?—For general service, certainly.

3479. Do you think that any advantage would be obtained by dividing the Bengal army into two or more armies ?—I am inclined to think that no advantage would be gained by it.

3480. (*Duke of Cambridge.*) Do you not attach importance to the fact of the army having been divided into the three presidential armies ?—I think it is as well that it should so have been.

3481. You would like to see that continued ?—Yes.

3482. Then, if that is so, would you not like to see the Bengal army, which appears to be very large, and very extended as to the territory which it occupies, divided into two ?—I think that I would rather do it by adding to the other presidencies.

3483. Do you think that it would be an advantage to have the commander-in-chief in a more central position ?—Undoubtedly so.

3484. You think that it would obviate the necessity of dividing the Bengal army ?—I think so.

3485. (*Major-General Hancock.*) Supposing the three armies to remain, do you think that it would be advisable to increase the Madras and Bombay armies so as to diminish, in a certain proportion, the Bengal army, and to bring them more upon an equality ?—Assuredly.

3486. (*Chairman.*) Do you consider that any change is required in the system of promotion as regards the native commissioned and non-commissioned officers? —I think that decidedly a change is required; hitherto it has been almost entirely by seniority that the native officer has got his rank, and, as any one here knows, they arrive at an age when they are no longer fit for duty, and they are not respected by their men. What has happened in Bengal shows you that these people are perfectly useless. It is an anomaly, I think, in a regiment of regular infantry to have a native officer at all.

3487. (*Duke of Cambridge.*) You would not have any native officers at all ?—I would not.

3488. (*Colonel Burlton.*) Native commissioned officers ?—Just so.

3489. (*Duke of Cambridge.*) Why is that; is it not necessary to have some medium of communication between the Europeans and the natives ?—But they have never furnished that.

3490. (*Chairman.*) Do you consider the number of European officers in the native regiments sufficient. You propose to do away with native officers; would you supply their place with European officers, or would you only have the same number of European officers as there are at present ?—For all the duty which the native officers do their loss will not be felt; they have no charge of companies. I have never known a single case of a native officer in charge and payment of a company.

3491. (*Major-General Hancock.*) You mean in the regular service ?—Yes.

3492. (*Colonel Burlton.*) Do you think that it would answer to have two European serjeants attached to every company in lieu of these men ?—I think it would be a good thing.

3493. (*Chairman.*) Supposing that the native officers were selected for merit instead of being merely promoted by seniority, do you think that that would give you a superior class ?—I think so, and a useful class. I think that the Bombay native officers are a useful class of men.

3494. Therefore you do not object to the native officer, but merely to the manner in which he has been hitherto promoted in the Bengal army ?—I do not think that he fulfils all the requirements of an officer even in Bombay.

3495. I understand you to say that you thought that the native officers were useful in the Bombay army ?—As compared with the Bengal officer the Bombay native officer is a very superior officer to that of Bengal.

3496. To what do you attribute that, to his being selected by his commanding officer ?—He is a younger man; there is more discretion allowed for selection in the Bombay army.

3497. (*Duke of Cambridge.*) But even with all that superiority, and all that advantage which exists on the part of the Bombay officers, you still think that there is no necessity for the native officers ?—I think that a native officer of inferior caste is less respected in his regiment than a Brahmin recruit is; he has no weight in the regiment.

3498. (*Major-General Hancock.*) Do you think that if his position were improved in the native regiment, and he were more highly trained, he would be more respected, and become a better medium between the European and the native ?—I do not think that there should be a medium. I think that he would be a valuable man in the irregular branch of the service.

3499. Why should he be valuable there, and might not be made so in the regular service ?—I think that he is required in the one case, because you have a very small body of European officers; in the other case, you have a sufficient number.

3500. Is not the consequence of that that the native officer in the irregular service is a much more efficient officer than the native officer in the regular service ? —I think so; but I think that our system and the general treatment of native officers in the regiments is such that they are useless; they are in an anomalous position.

3501. Are you aware that in the irregular regiments of cavalry the native commissioned officers command troops and squadrons and that they do so most efficiently ?—Yes.

3502. (*Duke of Cambridge.*) Why should they not do so in the regular service ?—I really do not know; they are in a false position altogether.

3503. (*Major-General Hancock.*) Is it not because they are not intrusted with the same powers and responsibilities ? — I think very likely; but if there is no opportunity so to intrust them, what is the use of them ?

3504. Supposing the European officers in the regular native regiments were reduced to the same number as the number attached to irregular regiments, do you not think that the native officers might be made equally efficient ?—Certainly.

3505. (*Duke of Cambridge.*) Would that be a better system ?—I think that it very likely would.

3506. (*Colonel Burlton.*) Do you mean having fewer European officers and more native officers ?—I think that every officer whom you have in a regiment in excess of a good officer is a disadvantage.

3507. (*Major-General Hancock.*) Is it not also the case that in the irregular service the few officers are all selected, while in the regular service there is no selected officer from the commanding officer down to the junior ?—Just so.

3508. (*Lord Stanley.*) I understood you to say that every officer in excess of the number required for the performance of the duty was an injury to the service? —In excess of what you may regard as a good officer.

3509. That is to say, I suppose, that the number diminishes the sense of responsibility ?—Probably; and that an increase encourages idleness and slovenly habits. I do not think that those regiments are

Major-Gen. Hon. T. Ashburnham, C.B.

28th Aug 1858.

the best which have the most officers present with them.

3510. (*Major-General Hancock.*) You are of opinion, in fact, that a few selected for superior qualifications would render a regiment more efficient than a large number not so selected, and who might therefore be supposed to be not so highly qualified?—Yes.

3511. (*Sir Harry G. W. Smith.*) Does that remark apply to officers or only to non-commissioned officers?—To officers.

3512. (*Major-General Hancock.*) To European officers?—Yes.

3513. (*Lord Stanley.*) I apprehend that what you have stated is a general rule which applies to all men in all positions, whether European or native, namely, that if you have more men than are required to do the duty imposed upon them, the sense of responsibility is diminished, and their time is not filled up, and therefore habits of idleness are generated?—That I suppose to be the reason. I only talk of the effect.

3514. (*Chairman.*) Do you consider that the commanding officers of the native regiments have sufficient power given to them now to reward and punish?—No; I look upon that as one of the reasons why our difficulties have begun.

3515. (*Major-General Hancock.*) Your answer has reference to the Bengal army?—Yes; I am much more conversant with that than with the Bombay army, and I know nothing of the Madras army. Much larger powers for rewarding and for punishing should be given to commanding officers of regiments.

3516. (*Chairman.*) Do you think that any admixture of European and native forces regimentally would be beneficial?—That is a thing which I have often contemplated. I believe that it would be highly beneficial to have permanently attached to European regiments on the Indian establishment certain native companies; either a whole battalion of natives or six companies of natives would be a very great advantage.

3517. (*Major-General Hancock.*) But a whole battalion would make it a brigade?—Yes.

3518. (*Duke of Cambridge.*) Would you mix them by brigades, or would you mix them in regiments?—They might be mixed in the regiment, supposing the number to be small. If you had an equal number I should make a supplemental battalion of the natives, and they should always move about with the Europeans, but in cantonments, of course, they would never occupy the same quarters as the Europeans.

3519. Such being the case, would there not be a great inconvenience in having them in one battalion, and would it not be very deteriorating?—The locality would be the same, but the shelter afforded would be different.

3520. (*Chairman.*) What advantage do you anticipate would be derived from such an admixture?—I think that natives like it; I think that they would be proud of doing duty in European regiments, and being assimilated to them; they always try to copy regiments recently arrived from England in dress and otherwise.

3521. The advantage would be in increased communication between the native and European forces?—Yes.

3522. (*Lord Stanley.*) You do not think that the superior position and the accommodation and the general comfort afforded to the European troops, create any feeling of envy in the minds of the natives?—None.

3523. (*Viscount Melville.*) Do you mean that you would have the European companies and the native companies mixed up together in one regiment, so that every other company would be a native one?—No, I would not have them dotted about. I would have them on a flank.

3524. (*Duke of Cambridge.*) If a good brigade system were established, and if on the landing of every European regiment in India, as your proportion is one in three, two native battalions were permanently attached to that regiment throughout its whole period of duty, do you not think that that would be as good a system as any which we could establish; and would it not be perhaps preferable to having the Europeans and natives mixed in regiments?—There might be stations to which they might be sent where a brigade would not be required; therefore I think that if a permanent establishment of native troops were attached to a European regiment, it would be more handy.

3525. (*Viscount Melville.*) How are these native troops to be commanded?—They would be commanded either by a major or by a captain, who should be responsible for the interior economy and management.

3526. (*Duke of Cambridge.*) Not by the commanding officer of the European regiment?—No.

3527. (*Sir Harry G. W. Smith.*) You have stated that the proportion of natives should be as two to one British soldier. I will place you in the command of a brigade, and you shall have two battalions of native troops and one battalion of Europeans, would you go into action with the wings of your regiments dotted like a chessboard?—No.

3528. Then why do you advocate the principle of attaching six companies of natives to one regiment?—It is not so much for service in the field as for an ordinary campaign.

3529. But all armies must have ultimately the consideration of service in the field?—The army must be told off eventually into moveable columns—field forces. You would make the best arrangement according to circumstances.

3530. (*Duke of Cambridge.*) We want to know how you would carry on the discipline and organization of a corps formed as you propose, partially of Europeans and partially of natives. Is it to be a detached corps, or is to be an intrinsic part of the body?—It would be in the same way that in your Royal Highness's regiment there are two battalions—one does not interfere with the other.

3531. You would have one battalion of natives and one battalion of Europeans?—Yes.

3532. Of course you are aware that in a regiment with two battalions there is one colonel commanding the two?—Yes.

3533. Therefore, of course, the duties and routine of every day are carried on by one person. Would you wish that one individual should carry on the duties of command of both those battalions, or would you separate them?—I think that they might be on very much the same footing as the guards are. The colonel of the regiment does not interfere with the interior economy of battalions much.

3534. Does not the lieutenant-colonel of the regiment?—I think not.

3535. Does not every order which emanates for a regiment of the guards emanate from the orderly-room in London, and go equally to one battalion as to the other?—But the interior discipline and conduct of each battalion rest with the battalion commanding officer

3536. Under superior authority, surely?—Under superior authority; but I think that there is very little interference, as far as my recollection goes. I left the guards many years ago.

3537. (*Viscount Melville.*) You stated that you would not trust the natives with the Minié rifle; supposing you were on service, do you think that the natives would act as efficiently, if worse armed than the Europeans, as they would do if they were armed in the same way; that is to say, the one man having a Minié rifle carrying 800 yards, and the other having a firearm which was not effective till it came within 150 yards?—He would fire away in the same way; I do not think that it would make any difference.

3538. Is there no difference between the percussion musket and the Minié rifle?—There is a great deal of difference between the two arms, but I do not think that giving Europeans one and natives the other would be any objection. The natives have founded

Major-Gen. Hon. T. Ashburnham, C.B.

28th Aug. 1858.

their objection to our rule on a cartridge introduced for the Minié rifle which was greased; we concede to their prejudices, and we give them back the old arm which they like; they would be perfectly content with it.

3539. (*Lord Stanley.*) Then you put it as a question of conceding to their prejudices and not as indicating distrust of the natives?—I think it advisable that the Minié rifle should be reserved for the Europeans.

3540. (*Colonel Burlton.*) You wish to maintain the superiority of the European element throughout?—Yes.

3541. (*Duke of Cambridge.*). Do you wish that difference to be made because you wish to prove that the European is superior to the native, or would you do it because the native is prejudiced against the arm?—I would do it in order to give a superior equipment to the European.

3542. (*Lord Stanley.*) Could you call upon a regiment armed with an inferior weapon to go into action side by side with a European regiment armed with the Minié rifle?—I think so. When I first went to India the Queen's regiments had just got the percussion musket issued to them, and the native troops still had the flint and steel; they fought at Gwalior.

3543. (*Sir Harry G. W. Smith.*) But then they were all armed similarly. We will suppose that the Queen's troops have muskets, and that the native troops have Minié rifles, do you think that our white-faced fellows would go on half so plucky as they would if they had the arms of the others?—Probably not.

3544. (*Duke of Cambridge.*) Do you think that if two men were put next to each other, the one with a superior and the other with an inferior arm, the fact of the one having a superior arm and the other an inferior arm would not give more confidence to the one than the other?—It would if they belonged to the same class of people, certainly; but I think, that the natives of India would very soon be quite content.

3545. (*Major-General Hancock.*) What is your objection to arming the native soldier with the superior weapon?—I do not think that it is likely to be so effective a weapon in his hands as it ought to be. I do not see the necessity of it.

3546. Is that the only ground of your opinion?—I think it is just as well that natives should not be taught to fire at long distances.

3547. (*Sir Harry G. W. Smith.*) Do you not maintain soldiers for their efficiency, and is there any object in going to the great expense of maintaining soldiers armed with an inferior arm, when you have it in your power to arm them well?—I do not see any insuperable objection to giving the natives the Minié rifle; but considering that they have made this objection to it themselves, I think that it would be just as well that they should retain their old arm. I doubt very much whether a Minié rifle in the hands of an ordinary sepoy is any better than the other.

3548. (*Lord Stanley.*) That is a third objection which you raise, namely, that you doubt whether a native soldier, generally speaking, can do justice to the superior weapon?—Yes.

3549. (*Chairman.*) If you thought otherwise, and if you thought it necessary to give him the Minié rifle, would you then recognize that scruple of caste which he made in refusing to take the greased cartridge?—Certainly not. If I was commanding a regiment with natives attached to it, in the way that I have pointed out, and they made a complaint that they were not armed so well as the Europeans, I should say, "Remember that you made such and such an objection to those cartridges."

3550. If you thought it necessary for the good of the service that the native should be armed with the Minié rifle, you would not recognize the scruple which he made and give him back the old musket?—I would not do it now, certainly. In raising a native force I would give them the old musket. I believe that it is quite good enough for them. I think that native troops with an arm which they are told is effective at 1,400 yards, are very likely to keep 1,400 yards away.

3551. (*Colonel Burlton.*) You are aware that the first public reason given by the men for their discontent was the use of these cartridges, which they supposed were greased with hog's fat or cow's fat, the one being destructive of the caste of the Mahomedan, and the other of the caste of the Hindoo. Suppose you had commanded a station where that objection was made, what would you have done if the men had refused to use those cartridges?—I should have punished the man who first refused. I should have tried to limit the refusal to as few as possible, and should have punished those men.

3552. Suppose it had extended to a whole regiment?—I should have disarmed them.

3553. You would not have insisted upon their using the cartridge?—If ordered by the government of course I must have done so.

3554. But suppose it had been at your own discretion?—If it had been at my own discretion I think I should have withheld the order.

3555. (*Major-General Hancock.*) It was not to the particular weapon that the objection was made, was it, but to the particular ingredient with which the cartridge was greased?—Yes.

3556. (*Chairman.*) Was not that occasion one upon which caste interfered with the performance of military duty?—I believe that that was a fictitious objection altogether. I do not believe that they really had anything to say to it; it was used by designing people as an outcry.

3557. (*Duke of Cambridge.*) Would you have dealt with that as a common case of insubordination, or would you have admitted the objection of caste in a case of that sort?—If a whole regiment refused point blank, and I had not the means of coercing them, I should give way. I should not insist. I should refer again to head-quarters reporting matters.

The witness withdrew.

Major-General DAVID CAPON, C.B., examined.

Major-Gen. D. Capon, C.B.

3558. (*Chairman.*) You are a major-general in the Bombay army?—Yes.

3559. How long have you been in the service?—I went out in 1810, and I therefore now have been forty-eight years in the service; but I have been home eight years.

3560. How many years of that period have you served in India?—Forty years, including furloughs.

3561. (*Major-General Hancock.*) You have served in the field with Bengal troops, have you not?—Yes, and also with Madras troops.

3562. (*Chairman.*) Have you formed any opinion as to the proportion which the Europeans should bear to the native force in the Bengal or other presidencies?—If the Bengal native army is to be kept up as it has been, I should say that they require a great number of Europeans in order to keep them in check, because, instead of being of any use, I looked upon them as detrimental; they were an enemy more than a friendly army, in my opinion, from what I saw of them latterly; in that case, of course, there would be a very large proportion of European troops requisite. ~~3563.~~ I should think one half, if they were to be kept up in the same state of undiscipline as that in which I saw them; but that ought not to be so, certainly.

Major-Gen. D Capon, CB

28th Aug 1858

3564. In the other presidencies what proportion should you say ?—I should think that in the other presidencies one-fourth part would be quite sufficient.

3565. One to one in the Bengal presidency, and one to three in the others ?—I think that if the Bengal system is to be kept up as I have seen it, there ought to be one-half Europeans to keep them in check, to take care of them. In Bombay or Madras I should feel that one-fourth was quite sufficient, or perhaps less.

3566. Would you arm these native troops with the same description of weapon as you gave to the Europeans ?—Certainly not, I think. I would let the Europeans have a superior arm.

3567. (*Duke of Cambridge.*) Upon what principle would you do that ?—There is no likelihood of the native troops being confronted with a European enemy at all, therefore all that they are required to do is to act chiefly as a police, in my opinion; and I think that the European part of the force ought to have a weapon superior to the native troops, in order to be able to keep them in check, and to keep them under.

3568. Do you mean to say that you would have the whole of the native army employed as a police force ? —No.

3569. (*Chairman.*) Do you think that there are any military services now performed by the native army which might be transferred to a police force ?—I should like to see an army and a police force totally distinct, but the way in which the army has been employed has been very much as a police force.

3570. Do not you think that there are some of the duties which have been performed by the native army which might be transferred to the police ?—Yes, undoubtedly.

3571. Do you include the police in your proportion of Europeans, or do you refer to the native troops irrespective of police ?—I include the police.

3572. (*Major-General Hancock.*) Your view with regard to arming the native troops has reference to the Bengal presidency, has it not ?—Yes, and to the others also. The old musket with spherical ball is a weapon inspiring no confidence; the native has little or none in it. A lighter weapon with smaller bore and conical bullet would, I think, be a great improvement.

3573. (*Colonel Burlton.*) You think that you would require the Europeans to keep the Bengal sepoys in check ?—Yes.

3574. Would it not be better to have no sepoys at all ?—On the principle that they have been on I would rather have none at all. I look upon the police and the native troops as the same with regard to being kept in check.

3575. (*Chairman.*) Have you formed any opinion as to the total amount of force which will be required in the Bengal presidency ?—I should think very much less than they have had. The Bengal men are picked out, and are very fine-looking, able men; but then they have been indulged in having four men to mount one sentry, whereas the Madras sepoy and the Bombay sepoy, who are much smaller men, never think of asking for four men to mount one sentry; it is always three men with the corporal. Therefore the Bengal regiments have been larger than they need have been, because they have required so many more men to furnish the sentries.

3576. (*Sir Harry G. W. Smith.*) Do you mean to say that there are four men to every sentry in Bengal? —Yes; in Bombay and Madras it is only three men, like it is in the British army.

3577. (*Colonel Burlton.*) Do you mean that in consequence of that the strength of a Bengal regiment is larger than in the other presidencies ?—The establishment is the same, but they do less.

3578. The regiments never have been larger ?—I think that it is an abuse giving four men in Bengal; they have not the excuse of being weaker men; they are larger and stronger men.

3579. Do you believe that the Bengal regiments, in consequence of that circumstance, have been hitherto larger regiments ?—I suppose so. They have had more men than they need to have had; there has been a waste of numbers.

3580. (*Chairman.*) What number of European troops of all arms do you think it necessary to have in the Bengal presidency ?—I am not so well acquainted with the Bengal presidency as I am with the Bombay presidency, to which I belong. I have not the same means of forming an opinion, because I have never been in Bengal, except the upper part of it, with Lord Gough's force, and afterwards to Peshawer. I do not know much about the lower part of it.

3581. What number of European troops should you consider necessary for the Bombay presidency ? —I think a very slight increase upon what their establishment has been; it has varied a good deal; it is larger now, of course, than it has been.

3582. (*Duke of Cambridge.*) We want you to mention the number of men which you would recommend? —I should think that 12,000 men would be quite enough for the Bombay army.

3583. Europeans ?—Yes.

3584. Including artillery ?—No; I include cavalry and infantry.

3585. How many artillery would you have ?—I think that the Bombay and Madras native artillery might be kept up, if not to the full amount, to a considerable number.

3586. You would have native artillery ?—I think there is no great harm in them, to some extent; I would not have native horse artillery, but only foot artillery.

3587. (*Chairman.*) I understand that to apply to Bombay and Madras; would you have it so likewise in Bengal, or would you have all the artillery there Europeans ?—I can hardly say much about Bengal, but I should certainly not very much approve of native artillery there; I would not have them in Bengal; unless Christian half-castes, as they are called, who are in great numbers in Bengal, and cannot but increase, and for whom it may also be politic to find employment.

3588. (*Major-General Hancock.*) You gave your estimate of the proportion of European troops necessary in Bengal, with the proviso if the former system were maintained ?—Yes.

3589. Supposing that a new system were adopted and there were a well-disciplined army established, what proportion of Europeans to natives would you then think necessary in the Bengal presidency ?—I should think at least one-third instead of one-half.

3590. (*Chairman.*) What is the system which you complain of in the Bengal army ?—I think that the discipline is so lax that you cannot depend upon them; that it is not on the model of the British army at all; but they have a model of their own, which I never saw anywhere else except amongst some of the native princes, who choose to keep up what they call native soldiers.

3591. What was that laxity of discipline of which you complain ?—In the first place, the sentries often relieved each other without a corporal, and when the men went to guard only the sentry had his clothes on and that only partly, and the others took them off.

3592. (*Sir Harry G. W. Smith.*) Have you ever visited a Bengal guard ?—I have not. I never possessed the *right* to do so.

3593. Have you ever seen what you state yourself? —Yes, I have.

3594. You have seen the guard without their clothes on ?—I have seen the commanding officer of a division having his sentry at his tent with the man only half clothed and lounging about, not walking about like a soldier at all; it was at Moultan, and everything that I saw was very slack; also on the left bank of the river Jhelum, the enemy being on the opposite bank within sight, a picket conducted itself as I have said.

3595. (*Chairman.*) Do you consider that the native army in the Bengal presidency should be on the regular or the irregular system, or both combined ?—

From what I have seen of the cavalry I would have irregulars; I would not have regular cavalry; I do not think that the natives are fitted for it. Irregular cavalry like General Jacob's troopers would be far superior, in my opinion.

3596. What would you have the infantry, regular or irregular?—I do not know what is meant by irregular infantry; I never saw any.

3597. (*Major-General Hancock.*) Like the local corps, with a few European officers?—I would approve of those; I think it better than having them as the present system is; they are called regular, but in reality they are not so, because the officers are moved away for other purposes. It is called a regular regiment, but it is not one. The companies are often commanded by ensigns of six months' standing, and sometimes officers are obliged to have two or three companies given to them because the other officers are absent; so that although it is called regular it is irregular, and therefore you had better have it irregular at once. However, the large number of officers borne on the rolls enables selections of officers to be made for irregular corps, commissariat duties, &c.

3598. (*Chairman.*) Do you consider the number of European officers with the native regiments sufficient under the present system?—They would be quite sufficient if they were always with their regiments, undoubtedly, but they are not.

3599. Then you consider that great inconvenience arises from their being detached from their regiments to perform other duties?—It spoils the regiment, undoubtedly, causing a hiatus on the grades which should support the commanding officer, betwixt whom and the juniors there remains frequently *no link.*

3600. (*Duke of Cambridge.*) What have you been in the habit of commanding, a regular regiment of native infantry?—I have commanded a regular regiment of infantry, and I have commanded a brigade, and also a division.

3601. But generally a regiment of native infantry?—Yes.

3602. What has been the average number of European officers present?—It has varied very much. When I first went out in 1810, the regiment had about 26 officers; because they had no interest, or something or other, they were called Rough-and-readies, and they were always *for* duty. There were 26 there.

3603. (*Major-General Hancock.*) Do you mean present with the regiment?—Yes; and there were officers doing duty from a European regiment very often, in hopes of getting some service. After that fifteen was a very good allowance; I have often had them as low as eight or ten.

3604. (*Duke of Cambridge.*) Did you see any falling off in the interior economy of your regiment from the fact of their being fewer officers present?—Yes, undoubtedly; because the young ones were some of them perhaps not of six months' standing, and were undrilled; but in that state they were obliged to have companies given to them, nobody else could take them.

3605. (*Viscount Melville.*) Had they passed sufficiently in the colloquial language?—They had done it in some degree. It was a general rule which I made that an officer should not have a company until he had passed; but still, after having passed the examination, he was not worth much for a considerable period.

3606. (*Duke of Cambridge.*) He had no discipline?—No; he was too young a good deal.

3607. (*Chairman.*) Are regimental officers taken from the regiments for staff appointments without consulting or applying to the commanding officer of the regiment?—Yes, certainly. I do not think that commanding officers of regiments ever had anything to say to the matter. There is a general rule that a regiment shall not be reduced under a certain number, but that is not often observed, I believe. There was a government order to that effect, but it was not always observed.

Major Gen. D. Capon, C.B.

28th Aug 1858.

3608. In the Bombay army I believe that the selection of the native non-commissioned officers and commissioned officers is left to the commanding officer of the regiment?—Yes; I do not think that the commander-in-chief ever interfered with it at all.

3609. Do you approve of that system instead of the system of promotion by seniority?—Undoubtedly. I think that the seniority system is the worst which can possibly be; such promotions are non-effective, I think, altogether. I saw some of the Bengal native officers who certainly appeared to me to be non-effective, and their system is seniority.

3610. (*Duke of Cambridge.*) Then you are for selection?—Yes, but in that case I always regard to old service; I never took a young officer's selection merely because the same was a fine-looking man, or anything of that sort. It requires a great deal of discretion, and the difficulty with the commanding officer of a native regiment is to hinder those kind of promotions; if he is a weak sort of officer he very often does a good deal of injustice.

3611. (*Major-General Hancock.*) Supposing you have efficient officers at the head of companies, and an efficient commanding officer, no evil consequences will arise from the selection system?—I think that no harm at all arises from the selection principle; it makes the whole of the regiment smart and willing to be brought into notice. Under the seniority system they do not care a pin about the officers, because they know that they cannot do them good or harm.

3612. (*Sir Harry G. W. Smith.*) What is the duty which a native officer is called upon to perform in the Bombay presidency?—He is a subordinate, but he is very much consulted by the Company's officers in cases of applications for furlough and for character. It is impossible for a European officer, if he has not been a very long time in the regiment, to know the character of the men under him. If the promotion goes by seniority only, of course the company officer is removed from all trouble; he promotes the first man upon the roster. I ever looked to the native officers as responsible for the interior economy in the men's lines.

3613. You are of opinion that in the future organization the native officer should be maintained?—Yes, and I think that he should also have charge of a company. I think that there ought to be something for an energetic native officer to look up to, and that he should not be put under an ensign of six months' standing, who does not know his work, which he, the native officer, always is now.

3614. (*Duke of Cambridge.*) Would you go to the extent of putting a native officer over a European officer, if the European officer happened to be young?—No; for that reason I should say that it would be much better if it was on the irregular system in some degree. I would give three or four companies to native officers, and the rest to European officers, and have a mixture.

3615. You say that you would rather have the irregular system introduced?—There would be a medium, that is, the irregular system; there are always two or three officers, at all events, in the irregular system.

3616. (*Colonel Burlton.*) You stated that you thought that great detriment had arisen to the service in the regular regiments from so many European officers being taken away?—If they call them regular regiments; but I would have a medium, I would not exact the whole discipline so strictly from the irregulars as I would from the regulars.

3617. (*Duke of Cambridge.*) What do you mean by a medium?—As they are in the cavalry; they are not obliged to have all the strict observances which they have in European regiments; their stables and all those sort of things are different; for instance, horses frequently the property of the men.

3618. (*Chairman.*) Do you consider that the system of promotion by selection necessarily entails greater communication between the European and the

Major-Gen. D. Capon, C.B.

28th Aug. 1858.

native officers than the system of promotion by seniority?—Undoubtedly it does.

3619. Therefore in that respect it is also preferable?—I undoubtedly think so.

3620. (*Major-General Hancock.*) How many European commissioned officers do you think necessary with an irregular regiment of cavalry?—I should think that there ought to be four at least.

3621. And how many with a regiment of native infantry under the system which you would think advisable when you say that you would have a medium?—I would leave three or four companies out of the ten to be in charge of native officers, as a sort of reward for them, or something to look up to to keep up their energy.

3622. Supposing that arrangement carried out, how many European officers would you think necessary in addition for service with a native infantry regiment, supposing that four companies, or whatever proportion you fix upon, were commanded by natives?—I should think that fifteen European officers would make it efficient, certainly.

3623. Why should so many as fifteen European officers be necessary with a native infantry regiment, and four or five suffice for an irregular regiment of cavalry?—The proof has been in General Jacob's irregular horse, which I think has not above three European officers to a regiment. I have not seen the experiment of an irregular infantry regiment at all. I do not know what an irregular native regiment is.

3624. So far as the experiment has been tried in General Jacob's corps, is it not in favour of a fewer number of European officers?—Yes, according to his system. I think there is no harm, but I think that four would not be too many to guard against casualties by loss in the field or by death or accident.

3625. In the Scinde horse has not a larger number of European officers been rendered unnecessary by the very superior qualifications and training of the native commissioned officers?—Yes, I agree to that; but then in action I doubt whether, if the command were to fall upon natives only by accidents in the field, the regiment would do as it would do if led by Europeans; there must be one European officer, as I think, with it, and the liability of there being none at all from casualties ought to be guarded against.

3626. (*Duke of Cambridge.*) You say that for a native infantry regiment you would have fifteen European officers?—If a regular one.

3627. If you approve of the irregular system as established in General Jacob's regiments, why not extend that system to the infantry, and have irregular regiments of infantry, with a small number of European officers?—I should not like to see the regular regiments done away with altogether; and with only a few officers it would be impossible to have a mess, and I think that a regiment of infantry without a mess would not last very long. I think that it would degenerate.

3628. (*Major-General Hancock.*) Has that been found to be the case with General Jacob's regiment. Do you think that those officers are in any respect inferior in their morale, or in anything else, to officers in regular regiments where they are in larger number with messes?—No, but they have so much to do, and they are always so busy in active service in comparison with what an infantry regiment in cantonments has to do, that they are not kept together, they are detached.

3629. (*Duke of Cambridge.*) If you detach troops surely there is the more reason to have Europeans with the detachments. Is it not a fact that a regiment being detached requires generally more officers?—I do not think that you require a European officer with every detachment, but I say that an infantry regiment is confined in cantonments, and kept there three or four years doing nothing. If they only had three or four officers to a regiment they could have no mess, and would degenerate in consequence; moreover General Jacob's system being to "select *efficient officers*," whence could such be drafted from, were there no regular regiments with a superfluity of officers from which to select? I say superfluity, not as regards the number usually present at regimental head-quarters, but as borne on the strength of the regiment in India.

3630. (*Viscount Melville.*) Do you not know that the officers of the Scinde horse were always at the head-quarters, and that the European officers were not detached, except upon a particular occasion?—I have not seen much of General Jacob's interior quarters; all that I have seen of his troops has been in the field, and there was only one officer; and detachments, I think, are often sent by General Jacob without any European officer.

3631. (*Duke of Cambridge.*) Would you like to see any native element introduced at once into the ranks in the shape of officers without passing through the inferior grade? Would you like to see any of the native gentry introduced as officers?—No, I do not think that that would answer at all. I should not like to see it. I have not a sufficiently good opinion of the moral character of the natives to think that any native is fit to be put into such a position without the education which he gets in the European service.

3632. (*Chairman.*) Do you consider that the native army should be composed of different nationalities or castes, and if so, in what proportion?—I think that caste ought not to be acknowledged, except in one case, that is, in the embarkation of troops, where a different sort of provision is laid in for natives of a particular caste, because their religion in high caste hinders them from cooking on board, which it would be a hardship not to acknowledge. Mussulmans and low-caste Hindoos may cook on board without any detriment; a high-caste Hindoo cannot cook on board.

3633. (*Major-General Hancock.*) There is no practical difficulty in that respect; the commissariat can always lay in the necessary provisions for them?—That is all; they do not wish to cook on board, therefore there is dry provision and fruit laid in store for them, in order that they may subsist.

3634. (*Chairman.*) You would not allow the plea of caste as an excuse for the non-performance of military duty?—No, I would not, certainly.

3635. Have you ever known caste to be pleaded as an excuse for not performing military duty?—I have not in the Bombay army.

3636. You think that under proper discipline and regulations it ought not to be recognized?—It ought to be no bar to the performance of any duty, and I never heard of a Brahmin in the Bombay army making the slightest exception to stand next to the very lowest class man in the regiment. It is customary in a cantonment to apportion huts with some reference to caste in a company; such being a great convenience to the men, I would not object to it.

3637. (*Sir Harry G. W. Smith.*) Would he dig in the field, go on fatigue parties, and dig trenches when ordered?—Yes; I never knew any difference made.

3638. (*Major-General Hancock.*) Have you known any instances of its interfering with the performance of duty by the Bengal troops?—No; I have only heard reports.

3639. I refer to your personal knowledge?—I have no personal knowledge of it.

3640. (*Chairman.*) Would you make any alteration in the terms under which the native army are enlisted at present?—I do not know exactly what terms they are enlisted on. I believe that the old plan of enlisting them is done away, and that they are now enlisted for general service; they are so enlisted on the Bombay side.

3641. At all events you would recommend that they should be enlisted for general service, to go wherever they were ordered?—Undoubtedly. I would not think of allowing a soldier to say, "I will go here, and will not go there," it is out of the question.

Major-Gen. D Capon, C.B.

28th Aug 1858

3642. Are you able to form any opinion whether it would be any advantage to divide the Bengal army into two or more armies?—I think it would be an advantage to have one portion for the lower part of Bengal, and the other for the Punjaub and the upper provinces; it is an overgrown force, certainly, as it has been.

3643. (*Major-General Hancock.*) Do you think that it would be advisable to increase the Bombay and Madras armies, so that whether three or four armies are maintained they should all be made nearly of the same strength. Are you of opinion that that would be better than having one very large army, and the others of smaller proportions?—I think that the division into armies, if not very small, is beneficial, undoubtedly.

3644. Do you think that there would be an advantage in equalizing them rather than keeping one army at 100,000 men, for instance, and the other at 30,000; I mean upon military grounds?—That must depend upon the territories under the charge of the respective Governments; they vary so much.

3645. (*Duke of Cambridge.*) Would you extend the other presidencies to meet that difficulty?—If you increased your territorial extent of course you might enlarge your army also.

3646. (*Major-General Hancock.*) Would not the facilities for forming such a combination as we have lately had in Bengal be much diminished by equalizing the armies?—You could not equalize the territories; if otherwise, it might be beneficial.

3647. Assuming that it may be considered expedient nearly to equalize the territories, would it not be advisable also to equalize the armies?—Yes, I suppose you must do it then.

3648. (*Duke of Cambridge.*) Would it be an advantage to the armies to leave them as they are, or would it be an advantage to equalize the territories more or less, so as to assimilate the number of soldiers in the three separate presidencies?—That is more of a political question than anything else, I think. If they had been divided they would not have had the opportunity of combining so much, certainly.

3649. (*Chairman.*) Is that the benefit which you look to from dividing the armies?—Yes; I think that if you had half the Bengal army for the lower part, and the other half for the Punjaub and the upper provinces it would certainly be an advantage and I should think you would hardly require the same kind of troops for the lower part as for the other The police might almost do for the lower part if the upper part was well taken care of.

3650. (*Sir Harry G. W. Smith.*) Are you of opinion that it is very detrimental to discipline that regiments should remain in quarters for a period of three years?—No, I think not; I think that they might be allowed to do that, but not more than that, certainly. I have known regiments kept five years, which certainly was not correct.

3651. Are you of opinion that the concentration of a certain force in different parts would be advantageous to discipline, say 5,000 men in a division in one place, and 1,000 in another, would that be advantageous to the army?—Yes, I think so; I think that there is less risk in a large body than in small ones.

3652. My question had not reference to any sort of risk, but had reference to the discipline and the establishment of a well-organized army?—I think that a large body is certainly superior; that if they could have cantonments of 5,000 men, instead of, as now, single regiments very often, it would be better; but in the absence of military roads, small cantonments cannot be avoided, because during the monsoon, marching over black cotton soil is nearly impracticable, wherefore troops are obliged to be kept somewhat *close at hand.*

3653. (*Chairman*). Do you think that the commanding officers of regiments have sufficient powers, or that they should have more than they now have to reward and punish?—I can only speak for the Bombay army. I had sufficient power; I was never interfered with by the commander-in-chief at all. I think that it was detrimental abolishing corporal punishment, while they upheld it for the Europeans; it was degrading to the Europeans, and there is no possibility of carrying out the solitary confinement system excepting in a cantonment; I do not approve of that.

3654. (*Duke of Cambridge.*) Are you aware of any instances of petitions having been sent direct to the superior authority without passing through the commanding officer of the regiment or the company to which a native officer or man belonged?—I have heard of it in Bengal; I never heard of it in Bombay at all; a man would be put into confinement immediately if it happened.

3655. You would be very much opposed to anything of the sort?—Of course.

3656. You think that it would strike at the root of all discipline?—Certainly.

3657. (*Chairman.*) Do you think that there would be any advantage in the admixture of European and native forces, either regimentally or by brigade? Do you think that it would be advantageous to have native troops mixed up in the same regiment with European troops?—There is something of that sort now existing in the case of the European artillery; they have a body of natives attached to them called lascars, to do the dirty work, as it were, of the guns, to clean them and look after that sort of thing. I hardly think that anything of that sort would do in the infantry; I should object to it.

3658. Would there be any advantage to the native troops, supposing that they were brought into greater communication with European troops, by placing, say three or four companies of natives to each regiment of Europeans?—I should think that that would not do at all. I think that they ought to be kept separate, undoubtedly.

3659. You are of opinion that they ought to be mixed by brigades, and not by regiments?—Certainly.

3660. (*Viscount Melville.*) Will you state the system pursued in Bombay in recommending a havildar to be promoted to jemadar?—The lists are sent up to the adjutant-general's office for the commander-in-chief's approbation. I think that the recommendation of the commanding officer is always attended to. I never had any instance of its being otherwise.

3661. Did you send up the names of all the havildars, or did you select a certain number and submit them to the commander-in-chief with your recommendation of the man whom you thought the fittest for the vacancy?—I only sent up the names of the men whom I recommended for promotion, and gave extracts from their registers of their services and their character.

3662. How many havildars' names were sent up to make a choice from in order to fill up the vacancy?—I never sent up havildars' names to make a choice from at all.

3663. Merely the man whom you recommended?—Yes; I recommended so and so, and the commander-in-chief confirmed it.

3664. (*Duke of Cambridge.*) Did you find any ill effects as regarded those men who were passed over who were senior to the man promoted?—I never had any complaints made to me about them at all.

3665. Did it produce a bad feeling or an unhappy feeling to those men who were passed over?—Not at all, I think; of course no man liked to be passed over; the difficult job of the commanding officer was to see that no extravagant abuse or anything of that sort was done; for that reason it is beneficial to have officers of experience as the commanding officer and the second in command, and the adjutant and three or four captains, then anything of that sort would not occur; but if they were all boys, of course you might get extravagant recommendations, which, if the commanding officer of the regiment did not exercise consideration himself, would do harm.

Major-Gen. D. Capon, C.B.

28th Aug. 1858.

3666. Is it the system in the Bengal army that when a promotion takes place, and there is a regiment commanded by a captain, not by a field officer, the lieutenant-colonel and a major is removed to the other regiment, and that the removal would always be of the lieutenant-colonel, and not of the major?—No major is removed to a regiment commanded by a captain, but the lieutenant-colonel under whom the major is serving is removed, in order that he, the non-transferable major, may obtain command of his own regiment.

3667. Do you think that that is a good system?—I look upon it as a matter of necessity.

3668. Why?—In a seniority service like the East India Company's it must be so.

3669. Why should not the major, the junior officer, be removed in preference to the senior?—I think that it would be an improvement, and only justice to majors of European infantry regiments.

3670. Surely the command of a regiment ought to engender a feeling of pride in the officer conducting the command. If the officer conducting the command is liable to be constantly removed, it is not good?—It is bad, certainly. I have myself suffered from it. I have been sent to three or four regiments in a couple of years, because I was a lieutenant-colonel.

3671. But the major having obtained his promotion he would probably benefit by the fact of being removed?—Yes, I agree to that; I always thought so; and in the case of the European infantry, the major not being transferable is still obliged to remain serving under a lieutenant-colonel, losing thereby 400*l.* per annum, no European regiment being allowed permanently to be commanded save by a lieutenant-colonel.

3672. (*Major-General Hancock.*) Do you remember that several cases occurred in the Bombay army in which the major was transferred to command another regiment, and that an order came from the supreme government to put a stop to the system, saying that those officers belonged to their own regiments, and were not transferable?—Yes, I remember that.

3673. (*Viscount Melville.*) What was the general effect in the Bombay army of the mode of promotion to the rank of native officer, as to the style and efficiency of the native officers?—The native officers, I think, were very often superior to some of the European officers, and it often appeared to me very hard that when the native officers had made themselves more efficient than the European officers, some of the younger ones of whom were very often for a very long time unfit for anything, they should be placed so immediately under those unfit European officers.

3674. Did you ever test the qualifications of a native officer, a subahdar-major, for instance, or a subahdar, by calling upon him to manœuvre a battalion?—Undoubtedly, with every native officer of the regiment, and if he could not do it he was made to learn, or invalided, or something of that sort.

3675. Did they generally do it very well?—Yes, very well indeed, I think.

3676. At Moultan, where you saw the Bengal army, what was the opinion which you formed as regarded the native officers of the Bombay army contrasted with the native officers of the Bengal army?—I looked upon one as efficient, and upon the other as not efficient.

3677. (*Colonel Burlton.*) You attribute that in a great degree to the system which you think is adopted in the Bengal army?—Certainly.

3678. Do you know that that system does exist in the Bengal army?—I believe so.

3679. Will you read the last regulation made for the Bengal army. I think you will find that you are speaking more from hearsay than from anything else?—I have had no experience in the Bengal army; I only speak from what I have heard. I have certainly seen the native officers unfit from old age; I have had experience of the old age of the native officers, undoubtedly; they appear to be much older than they ought to be, if vigilant superintendence of the interior economy of a company is to be expected from them, as in the Bombay army.

The witness withdrew.

Colonel Edmund Wintle examined.

Colonel E Wintle.

3680. (*Chairman.*) What rank do you hold in the Indian army?—I am a brevet colonel.

3681. How long have you been in the service?—Nearly thirty-nine years.

3682. How many years of that period have been passed in India?—Thirty-four.

3683. When did you leave India?—I left in February 1856.

3684. In what presidency have you served?—In the Bengal presidency.

3685. In what branch of the service?—In the infantry.

3686. Of course you had many opportunities of seeing the European and native troops acting together?—Not very much with European troops. At three or four of the large stations I have been with Europeans; but, generally speaking, I have been more with the natives than with the Europeans.

3687. Have you formed any opinion as to the proportion which the Europeans should bear to the native force in the Bengal presidency?—Do you mean strictly with reference to what is called the line?

3688. No; in all branches of the service?—I should say about one in three.

3689. Have you formed any opinion as to the amount of force which will be required in the Bengal presidency after the country is settled?—No, I cannot say that I have.

3690. Do you consider that the native force in the Bengal presidency should be on the regular or irregular system, or both combined?—I think that it would be almost impossible to do without some natives in the regular branch of the service, but of course they might be combined with irregulars.

3691. For instance, you might have irregular cavalry and regular infantry?—Regular infantry. I would rather not say anything about the cavalry; but with regard to the infantry, I think that there should be regular and irregular infantry, in the same way that it is now.

3692. (*Duke of Cambridge.*) Why do you object to give us your opinion about the cavalry?—Because I do not think that I am competent to speak about the cavalry, whether they should be regular or irregular, having never been on service in the field with them.

3693. But you would have some irregular infantry?—Yes.

3694. (*Chairman.*) You have commanded a regular infantry regiment in the Bengal presidency?—Yes.

3695. How were the promotions made in that regiment from non-commissioned to commissioned officers?—By seniority.

3696. Strictly by seniority?—Strictly by seniority as the rule.

3697. (*Colonel Burlton.*) Without reference to character at all?—Generally speaking, I think that seniority has prevailed; if a man was very far superior to his neighbours he would be taken, but otherwise the seniority principle has been observed.

3698. (*Chairman.*) With whom does the power of selection rest, when you say that a man very superior to his neighbours would be taken?—The commanding officer has the nomination in the non-commissioned ranks, but I have known instances where the promotions have been sent up to the commander-in-chief against the seniority system with regard to commissioned officers, and the senior has been promoted by order of the commander in-chief.

3699. In opposition to the recommendation of the commanding officer?—In opposition to the recommendation of the commanding officer.

3700. (*Colonel Burlton.*) Is this regulation still in force (*handing a book to the witness*)?—Yes; I think that that is the order which is now in existence.

3701. (*Chairman.*) Do you consider that the commanding officers of native regiments in the Bengal presidency have sufficient power to punish or reward?—No, certainly not; because there is always an appeal against them upon very trifling occasions. If a man is dissatisfied he has nothing to do but to go himself, or write a letter or petition direct to the commander-in-chief.

3702. (*Viscount Melville.*) Without going through the commanding officer?—Without going through the commanding officer. If a man has felt himself aggrieved he has sometimes sent up a petition himself to the commander-in-chief.

3703. (*Duke of Cambridge.*) Has that been tolerated; has that man not been severely punished?—I cannot call to mind any punishment in such a case. Explanation has been called for and given, and there it ended.

3704. (*Major-General Hancock.*) Do the regulations allow it?—No; the regulations do not allow that a man should make any reference to the commander-in-chief, the higher authority, except through the intermediate authorities.

3705. (*Duke of Cambridge.*) And yet they do it?—Yes. I have had a man go up to Sir Charles Napier to make a complaint against me when I commanded a regiment. The man applied to me for his discharge in a pet. I let him have it, and announced it in regimental orders. On his pay being offered him he had thought better of it, and refused to take his pay and papers, and went to General Wheeler, who sent him back to me, and ordered me to try him by court-martial for leaving his regiment without leave, though I had struck him off the regiment. I remonstrated, but the order was repeated. I had nothing for it; and so the man was tried, and by the sentence of the court was dismissed the service. He went off to the commander-in-chief up at Simlah, and we got a letter from the commander-in-chief for an explanation of the subject, which I gave; but, in consequence of the man not having been of very good character, Sir Charles Napier confirmed my original order.

3706. (*Chairman.*) Do you consider that the discipline of a regiment would be much improved if the commanding officer had greater powers of punishment and reward?—Yes, I think so. We certainly felt as regimental officers that the men did not care about our authority.

3707. Would you have any native artillery in the Bengal army, or would you have them entirely European?—Judging simply by what has lately occurred in the army, I should say Europeans only; the native artillery have all turned against us, like every one else.

3708. Would you make any difference between the arms which you would give to the native troops and those which you would give to the Europeans?—I would now, certainly.

3709. (*Colonel Burlton.*) You would not give the natives the Minié rifle?—No, I would only give them the plain percussion musket; to those, I mean, in the line.

3710. (*Chairman.*) Upon what principle would you make the distinction?—Because I would not give the native the power of injuring the European as he has done; I would not give him an equal power as a soldier.

3711. At the risk of making him less efficient as a soldier you would give him an inferior arm in order to maintain the superiority of the European soldier?—I would keep the European above him in everything now.

3712. (*Duke of Cambridge.*) I suppose you take into account that the native army are not likely to meet with troops of Western Europe?—Certainly.

Colonel E. Wintle

28th Aug 1858

3713. (*Sir Harry G. W. Smith.*) Are you of opinion that the discipline of the Bengal army has deteriorated within these ten years?—Not within the last ten years; but I think that in consequence of the absence of the power which has been taken away from commanding officers the native troops have not had that respect for the authority of their commanding officers and for their officers in general which they used to have.

3714. (*Duke of Cambridge.*) Since when has that great change taken place?—For nearly twenty years, I should say, it has been gradually coming on.

3715. (*Major-General Hancock.*) What powers have been taken away from commanding officers?—Formerly we had regulations in the service which enabled us to dismiss soldiers without any reference to the commander-in-chief. We cannot now dismiss a man unless by the proceedings of a court-martial, which are sent up to head-quarters. If we had a man of bad character formerly, the commanding officer could order his dismissal by a regimental order; but now unless he goes through the intervention of a court-martial, he must retain him in the regiment.

3716. (*Chairman.*) In what manner has that power been withdrawn?—By general order; by an alteration of the regulations made by the government.

3717. Applying only to the Bengal presidency?—I cannot tell as to that.

3718. (*Viscount Melville.*) Was it by an order of the governor-general or of the commander-in-chief?—We get all our orders through the commander-in-chief.

3719. Was this regulation, depriving commanding officers of that power, an order of the commander-in-chief alone?—Most of those orders must come from the government; they are issued under the authority of the governor-general.

3720. (*Chairman.*) Does the opinion which you have expressed with regard to the artillery being entirely confined to Europeans, extend to the sappers and miners?—I have not seen much of the sappers and miners of late years; but I think not, because there would be a great deal of the manual labour of sappers and miners which Europeans could not at certain times be expected to undertake.

3721. Then you would confine the natives to the manual labour, and not teach them any of the scientific portions of that branch of the service?—Just so.

3722. Do you think that the native army should be composed of different nationalities or castes, and if so, in what proportion?—Hitherto the native army, as regards Hindoos, in Bengal has been composed of Brahmins and Rajpoots, which are high castes. We have also had Gwallahs, that is, cowherds; those three castes have formed the principal part of the army. There are other inferior castes in a trifling degree, but generally speaking those are the three castes of the army. I think that those ought to be kept up still, and we might introduce some more, some of the lower castes. I do not see why a low-caste able-bodied man should not be as good a soldier as a high-caste man under similar physical ability.

3723. Would you preserve that distinction of nationalities or castes in the shape of regiments or companies, or would you distribute them promiscuously throughout the regiments?—I would make them as promiscuous as possible.

3724. Have you ever found any inconvenience from caste, or have you ever had caste pleaded as an excuse for the non-performance of a military duty?—There are certain things which we should never dream of telling the men to do with reference to their caste, because we know their prejudices. Their caste prevails in almost everything that we do with them.

3725. Then you do find that inconvenience arises from caste in the performance of military duty?—Not with regard to the mere soldiering part of the business, but we are obliged to consult their caste in

Colonel E. Wintle.

3th Aug 1838.

all our treatment of them, especially with regard to their food; that certainly operates otherwise than beneficially for troops required on service, because every Hindoo cooks his own food individually,—they do not live in messes; the consequence is that the regiment is encumbered with pots and pans for every single Hindoo in the regiment, and he must have them.

3726. (*Viscount Melville.*) On a march or on service have you found any inconvenience from this cooking?—It stands to reason that a smaller quantity of cooking vessels for a large body of men must be better than one set for each individual man; the greater the quantity of baggage the more carriage is required for their conveyance, and more fuel too is requisite at each daily halt.

3727. If you were on a march and it was required to cook, how many hours would it occupy?—I think it generally takes about a couple of hours for a man to cook his food. The Hindoo generally eats only once in the day time, and once in the evening before he goes to sleep.

3728. (*Sir Harry G. W. Smith.*) But he only cooks once, I think?—Generally once.

3729. (*Viscount Melville.*) Have you ever known the men, from being on service or from coming in late, unable to procure wood, and not able to cook, and consequently going without their meal for that day?—Yes, but not often; but I do not think that a Hindoo cares much about that if it is merely a casual case; he can cook a few chupattees in a few minutes.

3730. (*Duke of Cambridge.*) Do you think that caste ought to interfere in any respect with the performance of military duties?—No, I do not think that it should.

3731. Do you think that you could recruit sufficiently to obviate caste being an excuse?—I think that if we enlisted men with a distinct understanding that their caste should have no influence, it would not prevent men entering the service.

3732. (*Chairman.*) Have you ever had any opportunity of judging whether caste is more considered in the Bengal army than it is in the Bombay or Madras presidency?—Only from what I have heard. I have had very little to do with the other presidencies, but I believe that the castes are not so much attended to there as with us.

3733. (*Duke of Cambridge.*) How do you account for that?—Because there is, I believe, a greater mixture of men in their regiments than we have. Still they have the brothers of our own men; men who have gone from our side have enlisted in the Bombay and Madras presidencies.

3734. How do you account for those men's not objecting to do that which your men object to do?—Simply, I believe, because it is the custom.

3735. Does not that prove that there is much more custom in caste than is generally admitted?—We have listened to caste on our side, but on the other side they have not listened to it.

3736. Does not that prove that the excuse of caste is to a great extent an absurdity?—Yes; I think that the men would be just as willing to take our service, without any reference to caste, as the Madras and Bombay troops do.

3737. Then it is, in fact, a want of discipline?—It seems to be a point of honour with our men that they shall stickle as much as they like for their caste.

3738. Do you not think that that is involved in the question of discipline?—Certainly.

3739. You commanded an infantry regiment?—Yes.

3740. Is it a fact that for a sentry you allow in the Bengal presidency four men, whereas in the Madras and Bombay presidencies there are only three?—Yes, that is our practice.

3741. Can you give any reason why there should be that difference?—I do not know why there is any difference, or any reason one way or the other, for or against.

3742. Are the guards weekly or daily?—They are now generally daily, as many as can be; those who go to a distance on Government treasures or offices, generally speaking, are weekly, but all regimental guards and station guards now are daily.

3743. Do you not think that the system of guards is one of great importance, and that nothing trenches so much on discipline as any irregularity which is allowed upon guard?—Certainly.

3744. Do you not therefore think that the very fact of weekly guards is extremely objectionable?—Yes; it was for a long time the practice in our army, but it is now going out.

3745. Was it always the practice in your army?—Formerly it was, excepting the mere regimental guards; that is to say, the quarter guard, and the rear guard, and the magazine guard; two or three small regimental guards; but all the station guards used to be weekly formerly.

3746. Do you not think that the fact of merely making that change would produce a beneficial effect in the discipline?—Certainly. A man is only twenty-four hours on duty, and he does that duty readily and properly, and there is an end of it.

3747. (*Sir Harry G. W. Smith.*) Were you ever on duty at Calcutta?—I only once went down with what is called the reserve guard to Calcutta.

3748. Are you aware whether the guards are weekly or daily in Fort William?—It is some years ago now, and I cannot recollect.

3749. (*Chairman.*) Do you think that any alteration ought to be made in the terms of enlistment in the Bengal army?—No other than that a soldier should be bound to go wherever he is ordered, whether by sea or by land, and to do whatever is required of him as a soldier.

3750. That he should be enlisted for general service?—Yes.

3751. (*Colonel Burlton.*) Has not that been the case for some year or two past?—For the last few years the enlistments have been for general service; but then they have been in regiments among the men who have been merely enlisted for service in India. We have a few strictly general service regiments.

3752. (*Major-General Hancock.*) Have the officers commanding regiments in Bengal been of late years deprived of the powers vested in them by the Articles of War with regard to minor punishments for slight offences?—We have nothing in the shape of punishments beyond what are laid down in the Articles of War, a few minor punishments, those we have not been deprived of.

3753. (*Viscount Melville.*) What are the punishments which a commanding officer usually inflicts?—Ordering a man into imprisonment for a certain number of days in the quarter guard is almost all the punishment that we have.

3754. Do you give them drill?—Yes.

3755. (*Major-General Hancock.*) Have the officers commanding regiments been deprived of the power of inflicting any of the punishments for slight offences, authorized by the 112th article of war, which I will now read to you (*reading the same*)?—No; but some of those we cannot carry out; for instance, piling shot. In many stations we have no shot to pile.

3756. (*Duke of Cambridge.*) Have you had any circular to restrict your power?—No.

3757. (*Chairman.*) Do you think that the system of promotion of native commissioned and non-commissioned officers would be better by selection or by seniority?—By selection. I think that under the old system it was right that officers should stick to the principle of seniority; it was the rule of the service, and the men understood that it was their right; but still I think that the principle of the thing was wrong in itself. I think that seniority should not be considered at all when a man's fitness comes into question.

3758. (*Major-General Hancock.*) What powers have commanding officers with regard to granting leave of absence to their native soldiers in Bengal; are they restricted?—They have very little power at all. When I wanted to give men leave between musters I had to apply to the brigadier of the station for

Colonel E. Wintle.

28th Aug 1858

it. Once, because I wanted to give a few men per company leave, the brigadier thought that I was taking too much upon me, that I was giving too much to men who wanted to go to places in order to carry out their religious prejudices. He had notions the other way, and thought that it was wrong to encourage their superstitions. I told him that the leave was a regulation of our service, and after a demur he allowed it; but I had no power to do it without his sanction. I could not detach a man from my station without the permission of the brigadier commanding it.

3759. Then, if you wished to grant leave in excess of thirty days you were obliged to apply to the brigadier?—Yes, and even for thirty days. The usual rule was, that where an officer required to give a man leave during the month between musters he should apply to the brigadier for permission to do so, because if he took so many men from his regiment, and another commanding officer took so many men from his, without the brigadier's permission, it was taking the men for the time from under the brigadier's command without his knowledge. I think it was so far right that he should know of it.

3760. Is there a regulation of the Bengal army requiring the commanding officer to grant leave according to the regimental roster?—There is as regards the annual furlough, and it is attended to as closely and fairly as possible; but this does not apply to other leaves of absence.

3761. (*Duke of Cambridge.*) Do you think that you have a sufficient number of European officers present with the regular regiments of infantry, or not?—During the exercising season I think it is very desirable that we should have the full complement of officers, at least one for a company, but in the hot season I do not think it is absolutely necessary.

3762. You think that the fact of so many officers being detached for staff duties has not worked injuriously?—Not in time of peace, when little is to be done, but in time of service of course it is otherwise.

3763. But for keeping up the discipline of a regiment?—I think not, as so little is required in a native corps. We interfere very little with their private habits, and they have none of the faults of Europeans; they do not get drunk and get into disturbances; in fact, the only disputes which the natives have among themselves in regiments are as to something connected with women; that is, I may say, almost the only cause of disputes in a native regiment. But during the hot season I have never had the smallest compunction in letting as many of my officers go as pleased; the others did the duty; they did it willingly, and it was properly done. I only refer to my regimental officers.

3764. Supposing you had a certain number of regimental officers, and a large proportion of them were taken for permanent staff employment, do you think that that would injure the discipline of your regiment?—Certainly, I must have a certain number.

3765. What is the lowest number that you ever had?—I think in the hot weather I have had my adjutant and staff and one subaltern, but then I have allowed the others to go willingly, because the adjutant and staff and one subaltern would do all that was required during the hot season. We are not required to exercise our troops in the hot season. There is little to be done beyond supervision.

3766. (*Chairman.*) Do you find that the European officers are looking out for civil employment?—No, I do not know that. A man who may be particularly qualified for it, and who qualifies himself for it by a knowledge of the languages, might try to get it, but I do not think that there is any extraordinary demand for civil appointments in preference to military.

3767. (*Colonel Burlton.*) How is it as to the military staff?—Everybody who is anxious to do something, and not to be unemployed, tries to get on the staff.

3768. (*Duke of Cambridge.*) Is not the effect of that that those officers who do not get on the staff consider themselves rather lowered or hurt?—I do not think so; I have never perceived any feeling of mortification. It must be borne in mind that when an officer holding a company leaves the regiment permanently or beyond a month, the company allowance goes to his successor. This is a pecuniary advantage, and officers are sensible of it.

3769. (*Colonel Burlton.*) What is your opinion of the native commissioned officers of the Bengal army?—I have no great opinion of the native officers. I think that their establishment was a political act on the part of the Government; a sort of reward to old officers, to give them a good pay at the end of their service; but, generally speaking, I think that there are very few native officers who are worth their salt. When they get up to the rank of native officers they get addled, and are not fit for anything; a few men here and there you can get something out of; but, generally speaking, when they get up to that rank they look to their pay, which is an immense thing to them, if you consider what they have risen from, and they accumulate money; they do as little as they possibly can, and stick on to the regiments until by dint of great exertion we get rid of them to the invalids.

3770. (*Chairman.*) You are now speaking of native officers who have been promoted by the seniority system, and not by selection?—In the Bengal army there are no young officers promoted to the commissioned ranks, or hardly any.

3771. (*Viscount Melville.*) Do you not think that if they were promoted by selection, on the recommendation of the commanding officer, it would make a change in the efficiency of the officer, and in his feeling?—It would, I think, for a short time, but not for long.

3772. (*Duke of Cambridge.*) Then is it your opinion that you would rather be without them?—My opinion is against them, certainly.

3773. (*Colonel Burlton.*) Do you think that it would answer to introduce native gentlemen at once, without their going through the ranks?—But where are you to find them?

3774. You find them in the irregular horse?—Yes; but they take the irregular horse because they do not object to the discipline. I do not think that they would take the discipline of the line.

3775. Do you think that it would answer to dispense with native commissioned officers altogether, and to appoint two smart European serjeants to every company instead?—I should have no objection to getting rid of the native officers; but I am not quite sure about getting the Europeans, for this reason, we all know the habits of the European soldiers; with a native corps we might say that we would have two serjeants to a company, we should then have twenty or twenty-two Europeans; they would have little or nothing to do, and I think it is just as likely as not that they would turn bad men and take to drinking; even now I have had to dismiss several of our serjeant-majors and our quartermaster-serjeants; they have no society and no company amongst themselves of their own sort.

3776. If there were twenty or twenty-two in every regiment that objection would be obviated, they would have some society?—They would have a little.

3777. There are at present only two?—Yes.

3778. (*Duke of Cambridge.*) Would not it rather improve than deteriorate their position?—Still twenty-two is a very small number of Europeans. They would get tired of each other. If they cannot refrain from drinking when in their barracks, twenty-two would be no company for them in a native regiment, nor would there be sufficient employment for them.

The witness withdrew.

Adjourned.

Friday, 22nd October 1858.

PRESENT :

Major-General Peel.
Duke of Cambridge.
Marquis of Tweeddale.
Viscount Melville.
Lieut.-Gen. Sir Harry G.W. Smith.
Lieut.-Gen. Sir George A. Wetherall.
Major-Gen. Hancock.
Colonel Burlton.
Colonel Forsyth Tait.

Major-General PEEL in the Chair.

Major-Gen. Sir Robert J. Hussey Vivian, K.C.B., examined.

Major-Gen Sir R J H Vivian, K C.B.

22nd Oct 1858.

3779. (*Chairman.*) Will you have the kindness to state your present rank in the service, the length of time that you have been in India, and what opportunities you have had of forming an opinion upon the questions which have been submitted to you ?—I am a major-general in the Indian army, on the Madras establishment. I went to India in 1819, and returned in 1854. During that period I was about four years altogether absent from India. I have therefore served about 30 years in India.

3780. During that period you have been adjutant-general of the troops, have you not ?—Yes. I had previously served for a considerable time in that department, and also regimentally. I was adjutant of my regiment during the first Burmese war. I was adjutant general of the army from 1849 to 1854.

3781. Have you formed any opinion as to how far the European portion of the army in India should be composed of troops of the line, taking India as part of the regular tour of service, and how far of troops raised for service in India only ?—My attention has been attracted to that particular point by the paper which was forwarded to me, and I have given it every consideration. My opinion is very decidedly in favour of a large body of troops raised for service in India alone. I think that it is very essential that there should be a considerable body of troops of the line likewise. The two establishments induce a spirit of emulation which is good for the service generally. By the presence of Her Majesty's regiments of the line all those improvements which are progressively introduced in England are imparted to the local troops; and that, of course, is of the very greatest benefit to them. My impression is decidedly that the bulk of the additional troops now required for India should be local. I should say one-third should be of the line; the remainder local. I believe the maintenance of a local force to be indispensable on certain grounds, and desirable for many reasons. I think it, in the first place, indispensable in determining this subject, that our primary consideration should be the preservation of our Indian empire; and that this can only be secured by our possessing a force raised for India only. Her Majesty's troops of the line, as a matter of course, must at all times be subject to recall from India to meet emergencies in other parts of Her Majesty's dominions, and it will never do for the future to let the European force in India fall below a certain amount. What would be the consequence were we at the present time to be plunged into a European war, and the sudden recall of troops from India be the result ? Such a weakening of the European force could not fail to be of very serious moment. My conviction, therefore, is, that the only proper means of providing for the security of India is by the maintenance of a large local force.

3782. (*Duke of Cambridge.*) The reason which you assign specially for a local force is, that you think that there ought to be a certain number of Europeans in India, and that you secure the presence of those Europeans in India by having a local force. Is it your opinion that if the state of things were such that European troops were urgently required anywhere, the government of the day would not turn its attention to the possibility of making the Indian troops useful as well as any other troops of the line ? Is it your opinion, on the other hand, that any government would ever venture to withdraw so many European troops from India, whether of the line or local, as would endanger the permanence of our rule in that empire ?—I can only submit that in great emergencies at home I should presume that troops might be withdrawn from India as they have been before; as a matter of course it would be done with all the consideration which could be given to India, but there might be paramount reasons why they should be withdrawn for the moment to meet such emergencies as might arise.

3783. Is it your opinion that they would be less withdrawn from India if they were only for Indian service than if they were ordinary regiments of the line ? Do you think that that fact would make a difference ?—Yes, certainly.

3784. Why should it make a difference ?—In the first place, if my suggestion were carried out, the troops would be raised for service in that part of the world alone, and it would be only in most extraordinary emergencies that you would venture to withdraw them; in fact, their withdrawal would be entirely dependent on the decision of the local authorities.

3785. Would any government, except under very extraordinary emergencies, ever venture to withdraw so many European troops as to endanger the state of affairs in India ?—We have seen that during the war with Russia regiments were withdrawn, notwithstanding the strongly expressed objections of the Governor General of India. Circumstances may again arise which would render such withdrawal equally necessary, and the Imperial Government might not attach the importance it deserves to the withdrawal of regiments. It should be for the local Government to decide what could be spared.

3786. The regiments you refer to were withdrawn under immense emergencies ?—Yes.

3787. And do you not think that under those emergencies, whether they had been local troops or any other description of troops, they would not equally have been withdrawn ?—I think not, as I have already stated. I do not think the same risk so likely to arise from the withdrawal of Her Majesty's regiments, if you had the two separate forces in the proportion I propose, as you would then always have a fixed proportion for service in India.

3788. (*Viscount Melville.*) Are you not aware that by the charter, and now by a recent Act of Parliament, the European force is limited and must be limited ?—Yes, I am aware that it is so.

3789. This force, I presume by your proposal, is to be larger ?—Certainly.

3790. (*Chairman.*) Do I understand you rightly that you consider the advantage of a permanent force raised for India over regiments of the line, to depend entirely upon the liability of the latter being removed from India ?—I think that a most important point, but not the only advantage of a local force.

3791. (*Duke of Cambridge.*) Do you not think that the climate of India is such that all fresh blood now and then instilled into the country is an advantage rather than a disadvantage ?—I dare say that it would be ; you mean in officers and men ?

3792. Yes ?—I consider that it would be an advantage to instil fresh blood into India ; no doubt

Major-Gen Sir R. J. H Vivian, K.C B

22nd Oct. 1858.

that is one of the advantages of the purchase over the seniority system; but I do not think that it meets the disadvantages which to my mind present themselves by troops being suddenly withdrawn on any great emergency, as might be the case with troops of the line.

3793. Do you not think that some arrangement might be made to render that perfectly impossible; and, as a military man, is it not your opinion that one united, similarly disciplined, and organized army is far superior for all purposes of defence and discipline to two armies, one naturally jealous, as it must be, of the other?—For my own part, I conceive that such portion of the European troops as we have already as local troops in India, are equal to any troops in the world. I do not see that there is any difference in their discipline or efficiency in the slightest degree. I think that the one force is quite as good as the other.

3794. Do you think that there would be no jealousy?—I believe that there has always been a certain amount of it, and that it will always continue; you have it in different arms of the service.

3795. Should there be any jealousy? Is it not the great object of all military organization to prevent jealousy?—I do not believe it can be prevented.

3796. Would you not tend to increase jealousy by establishing a local force, and having a force of the line at the same time; whereas if you had but one force you would amalgamate the army in such a manner that jealousy would disappear?—I believe a certain amount of jealousy will always exist in the different arms of the same service. I have already alluded to the spirit of emulation which I think the two forces naturally create and excite.

3797. Cannot there be a spirit of emulation in one and the same army? Is not there a sufficient spirit of emulation in different regiments?—No doubt it exists likewise in different regiments, but I think it exists to a still greater extent when the services are distinct.

3798. (*Major-General Hancock.*) Do you think, now that the whole of the European troops in India will be under Her Majesty, there will be the same ground for jealousies that there was under the previous system?—If the armies are kept up distinct, and if there is to be a purely local army, I doubt very much whether there may not still be certain grounds for jealousy.

3799. (*Duke of Cambridge.*) Without reference at all to the question of the Indian army being local or not local, as a question of discipline and of military organization, is not an army united, that is to say, organised entirely on the same footing, a more manageable and more powerful body than an army composed of two distinct descriptions of troops, to a great extent, as you yourself must admit and as we all must admit, jealous, or at all events to a certain extent jealous, of the other?—As a general principle, no doubt such an army is to be preferred; but no such disadvantage has arisen from the united action of the two armies in India as to counterbalance the advantages resulting from the maintenance of a local force.

3800. Do you not think that a regiment fresh from England is in a higher state of discipline than any regiment of any description which has been in the climate of India for a long period?—I really believe that Her Majesty's regiments in India, particularly after some years' duty there, and those which formerly belonged to the local service, are ordinarily in as fine condition as regiments in England; that is really my impression. I would beg to remark, that I have only given one reason for what I have advanced in favour of a local force, I have other reasons, of course.

3801. Will you be so kind as to let us have those reasons?—The second point to which I would principally refer, was brought to my notice through a paper which I have recently read of Mr. J. P. Grant, the Vice-President in Council in India. He very strongly presents to notice that one principal item of expenditure in India is our military establishments, and that before the mutiny we had no surplus nor any means of saving. He states, that as one of the principal items of expenditure in the military departments is the pay and pensions of European officers, and as we have a very large body of European officers in Bengal at the present moment at our disposal, in consequence of the mutiny of the native regiments of that army, our financial position will compel us to employ those officers in any future re-organization, and particularly in raising fresh European regiments; that those officers, as they are now in our pay and must eventually be pensioned, are the officers to put to any such fresh regiments. I think that is a very great point for consideration, because it touches largely on the financial question, and it is one which cannot fail to have consideration in any future re-organization of the army. I think, not only on the financial point is it deserving of consideration, but I believe that the conduct of the officers of the Bengal army during the late most trying events has been beyond all praise, and that it would be a most ungenerous return for their sacrifices and self-devotion to pass them over in any future organization which may take place. I think that they ought to be employed on those grounds alone. I of course attach very great weight to the financial considerations. I cannot fail to do so in my double capacity as a military man, and as occupying the position which I hold elsewhere. I feel that it is absolutely incumbent on us to watch vigilantly the financial bearings of any project for a future re-organization of the army. It is very important to remember that a local force officered as suggested must be so much expense spared as compared with officers of the line. Then, again, I would say that the reliefs of regiments of the line, presuming that regiments of the line are to form a great portion of the force in India, could not fail to be a very heavy burden on the Indian finances. I may state that the passage allowance of the European officers alone, of a regiment of the line to and from India, amounts to upwards of 11,000*l.* Now, assuming that your whole force is to consist of regiments of the line, I presume that hereafter you will not have in India less than from 60,000 to 70,000, men or probably more. Presuming the ordinary reliefs to take place every 10 or 12 years, you would, to effect the requisite reliefs, be required to have at least from 6,000 to 7,000 men continually upon the seas, with their officers and head-quarters of regiments. I think that that is a very important point. I would say that the cost of that, whatever it might be, must be again in excess of the cost of a local regiment, which is a point for very serious consideration.

3802. Supposing that all those officers to whom you allude were as a matter of course taken into the service and employed in the way that you propose, giving them all their rights and making such arrangements as you refer to in order to put them into the regular service, would you then object to this change?—Still I say that you could not better employ them than by putting them to new local European regiments.

3803. Supposing you do that, but appoint them to regiments of the line, what is the objection to that?—That would not at all alter the expense of the reliefs.

3804. That is another question—financially you say that the system to which you are opposed would be a great expense, because these officers would all have to be pensioned and others put into their places. Suppose that were not so, and that the existing officers were all accepted in regiments of the line upon certain terms to be fixed?—In that case, supposing the arrangement practicable, my argument on that particular point would drop.

3805. (*Chairman.*) What is the expense to the Company of one of their own European regiments compared with the expense of a regiment of the line?—The expense of one regiment is as nearly as possible equal to that of the other.

3806. (*Duke of Cambridge.*) As to the expense of sending out troops, you must send out draughts?—So

Major-Gen Sir R. J. H. Vivian, K.C.B.

22nd Oct. 1858.

you would under any circumstances. What I mentioned just now was totally irrespective of draughts—draughts must be still sent out to the same amount to keep regiments complete. In the 6,000 or 7,000 men to which I adverted, I alluded entirely to regiments which would have to proceed to India to relieve regiments coming home. Independently of those, as a matter of course the draughts which are now necessary would still be required for both services just to the same extent as now.

3807. (*Sir Harry G. W. Smith.*) As a matter of expense, have you any idea or have you made any calculation as to the excess of the expense in regular reliefs or in keeping up the efficiency of the officers of the local European troops and the men?—I have not gone into a calculation; my own impression is that the expense of the reliefs is entirely extra when the reliefs are to be for the line; that is to say, presuming that the regiments of the line are to form the European force in India, I consider that the reliefs of those corps will be an entirely extra expense to the Indian finances.

3808. (*Viscount Melville.*) Do you put all draughts in that category?—I think the draughts are the same either way.

3809. (*Major-General Hancock.*) You mean that if half the European force consists of local troops, those troops will never require any reliefs, and that to such an extent there will be an economy to the state?—Yes, I think that there would be a downright saving to that extent.

3810. (*Duke of Cambridge.*) What do you suppose roughly would be the saving?—The officers alone of a regiment cost in the transit to and from India 11,000*l.*: that is the only thing that I have calculated; the expense of the transport of troops varies very considerably: it may be from 10*l.* to 20*l.* or 30*l.* a head, it depends upon whether sailing vessels or screw steamers are used; probably many here have gone into that question more recently and fully than myself, for the transport question has been very much discussed lately. I have not gone into figures.

3811. (*Viscount Melville.*) It is stated that the expense of a field officer is 135*l.*, a captain 110*l.*, and a subaltern 95*l.* By the Cape route and steamers it is from 19*l.* to 45*l.* a man; in sailing vessels from 11*l.* to 26*l.*?—In ordinary times I believe that you get it done in sailing vessels at from 10*l.* to 12*l.* or 15*l.* a man. The figures quoted are much higher than those I have based my opinions on.

3812. (*Duke of Cambridge.*) Do you think that, on principle, a local corps is as efficient as a regiment of the line?—Yes; I think that a European local corps is quite as efficient as a regiment of the line.

3813. Do you not recollect that the Duke of Wellington and others have always given an opinion that local corps were very objectionable forces, and that they were inferior for service compared with ordinary troops?—I, of course, should always be inclined to bow to any opinion of the Duke's, but, having my own experience to guide me, I cannot admit for a moment that the local troops in India are inefficient.

3814. Not inefficient but inferior?—I do not, myself, consider them at all inferior; I have served with them; I have commanded a European regiment in India; I have never had the honor of being in regimental command of one of Her Majesty's regiments, but I have seen the two together, and they have served together under my command. I think that their being together excites emulation, and that therefore their being associated on duty is to be desired. The local troops gain much from an observance of the interior economy of Her Majesty's regiments of the line. I have stated that the presence of the latter enable us to introduce into the local corps improvements gradually introduced into the army at home; but I cannot admit, even on the high authority which your Royal Highness has placed before me, that our European local troops are in any manner inferior; I believe that there are no better troops under the sun. No better proof of efficiency can be given by a regiment than its conduct in the field. The gallant behaviour of the Company's European regiments, during the recent struggle, is universally admitted. Such as they have now proved, they have ever been, whenever employed in war.

3815. I did not say that the Duke of Wellington had stated that the local corps in India were inefficient; I said that, on principle, a local corps was an inferior corps to an ordinary regiment of the line anywhere, in the West Indies or wherever it might be?—I certainly am not of that opinion as regards our troops in India.

3816. (*Colonel Burlton.*) You have seen perhaps in the Queen's service differences in corps as to discipline and efficiency?—Yes, certainly.

3817. (*Chairman.*) When you have seen them inferior, has it been after they have been some time in India?—I do not think it is possible, that all regiments should be kept up to the same state of discipline; some are certainly inferior to others. I have known regiments in Her Majesty's service fall into indiscipline, and local regiments too, but I attach no particular importance to this. I do not ascribe this state to their having been some time in India.

3818. (*Duke of Cambridge.*) Do you not think that a climate like that of India deteriorates the European constitution to such an extent that it deteriorates a great European body such as a regiment?—I have frequently heard the same observation, but my experience does not lead to the same conclusion. I have heard that regiments on returning from India are supposed to be deteriorated. I have had no opportunities of judging of this, but many causes may contribute to make a regiment look to disadvantage on return from Indian service. For instance, the general break-up before embarkation; the volunteering of the men; the removal of numerous officers to other corps; and the long voyage home, all tend unfavourably to the appearance of a regiment on landing.

3819. (*Chairman.*) Do you think that one of Her Majesty's regiments going to India keeps up the discipline there which it takes out with it after, say, ten years?—I have been stationed with regiments that have been longer out in India, and I have never seen better regiments in any part of the world. A case is within my own knowledge of a regiment quitting India in a far higher state of discipline and efficiency than it was in on its arrival. I saw the corps I refer to shortly after its arrival—a fine body of men and officers, but under a lax system, and inexperienced in Indian requirements. I saw the same regiment within a month of its embarkation for England, after a tour of service of 15 years, and it was in excellent order. This proves what I have before said, that all corps are not brought to the same state of efficiency. So much depends on the commanding officer, and on the supervision of the brigadier and the officer commanding the division. I may notice one point. The same officers seldom remain long in the regiment in which they arrive in India. All grades change. Whether this may account for any supposed change of discipline, I have not had sufficient experience to say.

3820. A European officer who was in the Company's service, or who retired was entitled, to a retiring allowance, was he not?—Yes. A European officer, after having served 22 years in India, is allowed to retire upon the pension of whatever rank he may have attained, or he is allowed to retire after 20 years' service upon the pay of a captain, or after 24 upon the pay of a major, after 28 on the pay of a lieutenant-colonel, and after 32 on the pay of a colonel.

3821. That is an expense chargeable upon the revenues of India?—Undoubtedly.

3822. They pay nothing for the officers of Her Majesty's service who come home; they do not pay their pensions?—No, I suppose not.

3823. Therefore there would be a saving to the Indian revenues if they were relieved from the payment of that retiring allowance to the officers. You

Major-Gen. Sir R. J. H Vivian, K.C B

22nd Oct 1858

say that it would be much less expensive for the Indian revenue if there were a permanent force instead of having regiments of the line from this country. I wish to show that the officers attached to that permanent force would all be entitled to retiring allowances, therefore you must take that expense into consideration?—Undoubtedly, that is a consideration, but would that relieve the Indian finances entirely?

3824. (*Major-General Hancock.*) The meaning of the question is, that instead of the expense alluded to being defrayed from the Indian revenue, it would fall upon the English revenue?—Yes; and indisputably that in the course of time would so far relieve the Indian finances, provided no fresh demand was made for pensions of Her Majesty's officers and soldiers returning from service in India.

3825. There would be a transfer of the charge from the Indian to the English revenue?—Yes; I quite admit that I have not taken that point into consideration.

3826. Supposing the whole of the European force in India to be furnished from the regular army, would it not involve the extra expense of maintaining a sufficient additional force in England to supply the reliefs?—I should suppose so as a matter of course; you could not keep up a large army in India without increasing your army and establishments at home.

3827. (*Sir George A. Wetherall.*) Comparing the great expense of maintaining a much larger establishment at Warley with the expense of relieving regiments in India, provided they all belong to the line, would not the result be that the establishment of local corps would not much decrease the expense?—As a matter of course we should have to increase our establishments here very largely; to a certain extent this would add to the cost of the recruit. Such increase of establishment would be equally necessary for Her Majesty's service, and I presume that any extra expense incurred on account of India would be charged to India.

3828. (*Duke of Cambridge.*) Putting all these things together, do you not think that the expense would be much the same?—I do not indeed.

3829. (*Viscount Melville.*) Can you state the difference in expense between a European recruit raised for the Company's service, and one for Her Majesty's?—I cannot say that I know the difference. I have a statement which will show what the bounty for a Company's recruit has been.

3830. (*Sir George A. Wetherall.*) The recruiting officer in the Company's service of the European branch of the army recruited for India receives a fee of 21*s.* for every recruit he raises, and a daily pay of 10*s.*; I believe, therefore, the mode of recruiting for the local army of India is vastly more expensive than that of recruiting for the Queen's army, and you may set that off per contra; you must equalize them. You do not mean to continue that system, I presume?—To tell the truth I have not seen what the expenses of Warley are at the present moment. I was not aware that the expense of a recruit for the former Company's army in India was more than that of one for Her Majesty's service; it is a point which is now first brought to my attention; but if we are to continue to have our own establishments, I do not see why, if there be no impediment to our own recruiting, a recruit for Her Majesty's Indian forces should cost more than a recruit for the line. I had believed that the whole of the East India recruiting establishments were under the authority of the Horse Guards, the same bounty being given, and the standard at all times regulated in communication with the Commander-in-Chief of Her Majesty's Army.

3831. (*Chairman.*) You pay now, I believe, for every man sent out to India a certain sum upon his embarking, which is sufficient to cover the expenses of recruiting him and keeping him for a certain time in this country; that is, for the line?—Yes.

3832. What is the comparison between that sum which you so pay, and the expense of your raising a recruit here for your own service and sending him out?—I could not answer that question without referring to official records.

3833. (*Sir George A. Wetherall.*) Were you, as adjutant-general of the Madras army, cognizant of any order issued by Lord Hardinge, when he was Governor-General, as to the necessity of a more frequent relief of the royal troops in India, in consequence of their deteriorating in health, and discipline, and efficiency?—Not when I was adjutant-general of the army, but I have heard that there was some report to that effect.

3834. (*Chairman.*) Have you any other reasons to give for the opinion which you have stated?—I should consider a local force desirable on this ground, that regiments on their first arrival in India are usually subject to greater mortality than seasoned corps. I would add, that in local corps, both officers, non-commissioned officers, and men, and particularly the medical officers, gain a certain amount of experience of the requirements of the climate. This is all favourable to the local corps. New draughts for a regiment of that kind, by being at once mixed with comrades who are accustomed to the climate, and who to a certain extent know what is good for the preservation of health, are far less subject to mortality than those arriving in a body.

3835. (*Duke of Cambridge.*) We have before us a comparative statement of disease, which does not bear that out at all?—I do not go by any tables upon this matter, I go merely upon a common-sense view of the question. Here I have a valuable paper from India, which I came upon only yesterday, in reference to the number of coups-de-soleil which befel one of Her Majesty's regiments, when a regiment of infantry belonging to the Bombay establishment was perfectly free from it.

3836. (*Sir Harry G. W. Smith.*) Have you had any opportunity of forming an opinion as to whether what we call green regiments from England, arriving in India, suffer more or less than old regiments arriving from New South Wales and the Cape of Good Hope?—I do not know that my attention has been particularly attracted to that point, but I should think that any regiment which had been partially seasoned elsewhere, would suffer less on arrival in India than a fresh regiment.

3837. The fact is the contrary, that the green regiments do not suffer so much as the others; a regiment fresh from England suffers far less than old regiments from the Cape of Good Hope and New South Wales; those old regiments are the least efficient in India, compared with the young ones?—I am very much astonished to hear that statement.

3838. (*Chairman.*) Here is a "Return showing "the comparative amount of casualties amongst the "Queen's regiments of infantry on the Indian estab-"lishment and the European infantry in the service of "the East India Company, as deduced from the num-"ber of deaths, discharges in India, and men invalided "and sent to this country, during the ten years from "1843 to 1852," by which it appears that the casualties per cent. of the Queen's troops are 9·8, while those of the East India Company's European troops are 9·4, so that the difference between them is very slight, and this return would not bear out your argument?—I cannot quite agree with that; I do not know what may be the case in the long run, but indisputably regiments on first arriving in India are subject to greater mortality than they are afterwards.

3839. But this return takes the whole ten years?—It may be owing to fifty circumstances; a regiment may be badly located. I am quite impressed with the belief that regiments on first arriving have a larger amount of casualties than others, which may be attributed to their inexperience in every point of view and the inexperience of their medical officers. I do not wish to detract in the slightest degree from these officers, but a certain local experience is necessary. Will you allow me, with reference to what I have said, to read a part of a medical report:—"The attention of the superintending surgeon (Dr. "Arnott) was arrested to the somewhat remarkable

Major-Gen Sir R. J. H. Vivian, K.C.B.

22nd Oct. 1858.

“fact that of the two European regiments engaged at the affair before Koonch on the 7th May 1858, the right wing of Her Majesty's 71st regiment, about 425 strong, had 20 men attacked with sun stroke, of whom seven died, whilst the portion of the 3rd Bombay Europeans, about 330 strong, had not only no casualty from but no man attacked by this disease, although both corps were equally exposed to the same causes of disease and were under circumstances to all appearance precisely similar. The superintending surgeon proposed that the committee should inquire into the supply of drinking water to each corps during the day, the allowance of food and grog previous to going into action, their dress and equipment, and the acclimatization of the men to India. Dr. Arnott states, ‘Should the inquiry elucidate in the slightest degree what predisposes most to this formidable malady, so that the causes might be known and avoided, it would be conferring a blessing of inestimable value on armies obliged to take the field in the hot season in India with the thermometer standing as it now does on an average at upwards of 110° in our tents.’ The committee was composed of three medical officers, the surgeon of Her Majesty's 14th Dragoons, the surgeon of Her Majesty's 71st Highlanders, and the assistant surgeon of the 3rd European regiment. The prosecution of the inquiries by the committee could not, however, be regularly conducted, owing to urgent professional calls upon their time in the immediate vicinity of the enemy; nevertheless they submitted a minute and comprehensive report, of which the following is a brief summary:—Although no difference could be traced with respect to the food, rations, or grog issued to both corps, and although the men of each regiment partook of their allowances for the day at the same time (neither corps going into action under the influence of either excessive repletion or the reverse), yet the supply of drinking water before Koonch among the 71st, tolerably abundant until about 11 a.m., was by no means sufficient from that hour until 3 p.m., whilst in the 3rd European regiment the supply appears to have been scanty at first, but more plentiful from 12 o'clock onward; between the hours of 11 a.m. and 3 p.m. both corps were equally exposed to the influence of the sun, in an open plain where no shelter was obtainable. The general dress of both corps was well suited for field service in the hot months, that of the 71st admirably so, being loose, comfortable, and allowing the free unrestrained use of every limb; no stock or neckerchief was worn by either corps before Koonch, or if anything was put round the neck it was a low soft stock or neckerchief. The head dress of the 71st, consisting of the ordinary regimental Highland bonnet and peak, with a cap cover of thick cotton cloth of a grey colour, a roller stuffed with cotton, and a broad flap hanging down behind, was deemed superior to that of the 3rd Europeans, which consisted of the ordinary Kilmarnock cap, with a dark reddish orange-coloured turban folded round, with a portion of it hanging down behind. The men of the 71st regiment carried 60 rounds, whilst those of the 3rd regiment only 40 rounds of ammunition in their pouches. The committee lay considerable stress on the antecedent circumstances of the two corps, as follows:—The 3rd Europeans, of about an average service of three years in India, took the field in July and October 1857, and although employed on arduous duties, including the siege of Jhansi, enjoyed as a corps general good health. They were gradually trained to field duties during the most favourable period of the year, and were more or less enured to the climate from previous residence in the country. The 71st Highlanders arrived in Bombay at the beginning of February 1858 by the overland route, and the right wing was forwarded by bullock train to Mhow, which station it left at the end of March for Goonah and Jhansi, *i.e.* at the commencement of the hot season, and under circumstances of great disadvantage to a newly arrived corps. The marches, from being double, were sometimes very long, and the weather, particularly after leaving Goonah, became very hot (on the 22nd April the thermometer stood at 120°). The badness of the roads, breakage of carts, &c., interfered with the pitching of the camp before the sun was well up, but this was obviated after camel carriage was procured at Jhansi, a description of carriage the 3rd Europeans had not been without.” These are certainly all extraordinary circumstances; still it is a fresh corps arriving in India that suffers, and a regiment gradually acclimated that escapes.

3840. (*Sir George A. Wetherall.*) By a letter from Banda, from an officer on the staff with the 71st regiment, it appeared that they had marched 700 miles, that the thermometer was then at 135°, and that they had only three men on the sick list?—My object in bringing that paper here, which I came upon only last evening, was because I thought that to a certain extent it confirmed the views which I entertain, that an acclimated corps is less subject to disease than another; and it is pretty plain in that case, that the regiment which was acclimated did not suffer as the other, although it was at the time under precisely similar circumstances.

3841. (*Chairman.*) Have you any other reasons for the opinion you have expressed?—It occurs to me also that in local corps, by the admission of a certain class of men termed Indo-Britons, considerable relief eventually might be given to the recruiting at home. I rather think that I stand pretty nearly alone in the opinion which I maintain upon this point. There is something very much akin to the caste feeling which we so much object to in India, upon the subject of the employment of the half-caste; that is to say, the son of a European soldier by a native or a half-caste woman, but I think that the prejudice is extremely unfair. I do not think that that class of people have had at all a fair trial, and I believe that with the large accession of Europeans which is constantly taking place in India, we shall have by-and-by a very large number of that class. I think that their introduction into the ranks would not only assist in the recruiting of the army, which would be a great point gained, I should presume, but I think that it would be a means of raising that class very considerably, not only in their own but in the estimation of others. I firmly believe that if those men were fed, clothed, and paid as Europeans, they would turn out remarkably good men; and that their association with Europeans would make them all but European. I attach considerable importance to that point. Then, again, financially, I would only state that by as many recruits as you get in that way, you save the expense of sending them out from and recruiting in this country. I would introduce this class of men into the local corps in India; I would put them into the ranks with the Europeans.

3842. (*Duke of Cambridge.*) What difficulty is there in putting them into the ranks of the line?—I do not mean to say that they may not be introduced into Her Majesty's regiments of the line, but whether it would be considered suitable or not I do not know. I know that there is a very strong feeling against that class; I have stated my own views upon that point; I think that eventually as the class increases, their employment will be a matter for serious consideration. Then I would likewise mention, in favour of the local force, that when our men receive their pensions they, in very great numbers, elect India for their place of residence, and there draw their stipends. Men are ordinarily invalided home from the line, whereas those belonging to local corps are transferred, when unfit for field duty, to what are termed veteran companies. Now this, in time of emergency, is a great advantage. It so happened that in Mysore, Sir Mark Cubbon, the able commissioner of that country, embodied a number of resident pensioners at Bangalore; he armed them and made them very

Major-Gen. Sir R. J H Vivian, K C.B

22nd Oct 1858.

useful during a trying period there, and by such means he was enabled to dispense with a certain number of the troops of the line, which he could not otherwise have spared. I think that having this element is very beneficial, and that the greater the number of local troops which you have, the larger it necessarily must become.

3843. Could not you discharge the men of the line equally as well in India as at home?—The question is, will they remain; do they elect to stay there? At present they do not.

3844. Has anything ever been done for a soldier of the line in India, except just taking him out and bringing him back again?—I believe there is nothing more done for the soldier of the former Company's army.

3845. Except offering to him to remain if he likes? —You have some who do remain there from Her Majesty's service, but they are few in number; it is a matter quite optional, and I presume from its being optional, and so few remaining there belonging to the line, that the larger the number of local European troops which we have there, the larger the body that we shall have of veterans and pensioners in India.

3846. I understood you to say that these men were transferred to what you termed veteran companies? —Some of them.

3847. That has never been open to regiments of the line?—No; it is a different service.

3848. If you opened it to the line would you not get the same results?—I am doubtful whether you would. The men of the line do not mix so much with the natives; they have besides the advantage of being invalided home. There is one other point to which I would simply advert, as I think that it bears upon the question, although it is not of the same importance to my mind, namely, that a large portion of men are sent from our local European regiments to the public works department and to the staff. Now some supply of that kind is very necessary, and I conceive that a local corps is the natural source of such supply.

3849. Supposing that arrangements were made extending to regiments of the line those local regulations which have hitherto been confined to the regiments of the Company's service, would you still think that a regiment of the line is not better for service than a local regiment?—Yes; I adhere to the opinion which I have already given to your Royal Highness: I consider a local regiment quite equal to a regiment of the line.

3850. (*Colonel Burlton.*) Have you observed, during your long service in India, any particular difference in the general deportment and demeanour of a line regiment and a local regiment towards the natives—does the one fraternize more with the natives than the other, when the men know that they have a permanent home in India?—I consider that they do fraternize much more with them, and they intermarry very much more with the natives, but beyond that I have not noticed any difference in their demeanour.

3851. Do you think that that is a considerable advantage?—I think that it is a decided advantage.

3852. (*Sir George A. Wetherall.*) Do I rightly understand you to say that one of your reasons for increasing the local European force of Bengal is the great number of officers now doing nothing in Bengal, whom it would be necessary to appoint to such European regiments?—Yes; officers belonging to regiments having mutinied.

3853. Why not appoint them to the native regiments which must be raised?—Without understanding what is to be the system of organization, I am all abroad. I do not know what the system is to be. I know that you must have a large number of Europeans compared with what you have, and my observations tend to that point.

3854. You have not more officers in Bengal now, doing nothing, than would be sufficient to officer 100,000 men?—No, I think not, but it depends on what the organization is to be.

3855. (*Duke of Cambridge.*) If all those officers were employed, in whatever force you called it hereafter, supposing it was a line force, would you not get over that difficulty altogether about the officers and about the expense?—I have already stated, in reply to a similar question from your Royal Highness, that of course if they are to be employed in the way you mention, if troops of the line are to be sent out there, and these officers are to be attached to them, my argument falls to the ground on the point of expense, as regards these officers.

3856. (*Viscount Melville.*) Are you aware that for ten years, from 1843 to 1852, the local regiments in the Company's service have been invariably under the establishment, while those of the royal army have been generally rather above?—I think that that is an error. I am not aware of the fact.

3857. Will you look at that return (*handing the same to the witness*)?—I had my attention particularly attracted to the circumstance of the artillery in Bengal having been below its numbers. It was so stated in a paper received from the Governor-General of India which came before me in my official capacity in the East India House, and I was so much struck by it that I called for a return upon the subject. The result of that return is as follows:—The paper before me from the East India House says, "From " the return of military forces in India laid before " Parliament 16th April 1858, it appears that Her " Majesty's infantry which in 1853 numbered 23,049 " non-commissioned and rank and file, in 1857 were " reduced to 20,884. In the evidence given to the " Transport Committee it is stated, that early in 1857 " the number wanting to complete in Her Majesty's " infantry was 1,950. It scarcely ever happens that " Her Majesty's infantry regiments in India are com- " plete at head-quarters." That would be the same I presume in the local corps. "In the same return " as that above mentioned the European foot artillery " of the Company's service are specified as follows:"— Then come the actual strength and the establishment, but although there were, in 1852, 5,173, and in 1856 4,725, which was a decrease, and in 1857 4,390, yet these numbers are, in point of fact, in each year above the establishment. In the infantry regiments the strength was in 1852, 6,089, the establishment was 5,640. In 1853 the strength was 6,140. In 1853 the establishment was the same as in 1852, viz. 5,640; for those two years the strength is above the establishment. Then, in 1854, came an order for three new regiments, and of course in the process of filling up those three regiments there would be a falling off in the strength as compared with the establishment; I believe it is to be accounted for in that way. This is the return furnished to me by the India House upon that point. The European infantry regiments in 1852 had 449 supernumeraries; in 1853, 500. They were wanting to complete in 1854, 2,125; in 1855, 933; in 1856, 345; also in 1857, 357. "The re- " cruiting fell off during the Crimean war, but in- " creased again in 1856 and 1857, as will appear " from the annexed Return" (which with permission I will leave here) "of Recruits embarked for India " from 1851 to 1858."

The witness delivered in the same, which is as follows:—

Major-Gen. Sir R. J. H. Vivian, K.C.B.

22nd Oct. 1858.

RETURN of the number of RECRUITS embarked for India from the Year 1851 to 8th October 1858, inclusive.

Years.	Engineers.	Artillery.	Cavalry.	Infantry.	TOTAL.	REMARKS.
1851	26	606	—	232	864	31st Jan. 1851. Recruiting for infantry suspended. 20th June, Recruiting for artillery restricted to 20 per month from each district. 24th Dec. Restriction removed from enlistment of artillery.
1852	22	626	—	379	1,027	22d Mar. 1852. Recruiting limited to 8 artillery and 8 infantry from each district per month. 28th Sept. 1852. Recruiting limited to 10 artillery and 4 infantry from each district per month.
1853	27	724	—	1,522	2,273	13th Jan. 1853. Restriction removed from artillery recruiting, and infantry increased to 10 per month from district. 28th Jan. 1853. Restrictions from infantry removed. 8th Sept. 1853. Infantry standard reduced to 5 feet 5½ inches.
1854	36	516	—	1,504	2,056	1st Nov. 1854. Bounty raised to 6*l.* No restrictions.
1855	29	448	—	1,176	1,653	February 1855. Bounty raised to 7*l.* No restrictions.
1856	76	543	—	946	1,565	February 1855. Bounty raised to 8*l.* May 1856. Bounty reduced to 2*l.* and a free kit. 15th Aug. 1856. Infantry standard raised to 5ft. 6in. 20 per month from each district. 18th Sept. 1856. 10 artillery and 10 infantry per month from each district. 4th Oct. all recruiting suspended. 4th Dec. 1856. 10 artillery and 10 infantry per month from each district.
1857	89	1,294	814	1,519	3,716	13th Mar. 1857. Recruiting for artillery unlimited. 4th June 1857, Recruiting for infantry unlimited. 23rd July 1857. Standard for artillery reduced to 5ft. 7in. 15th Aug. Infantry standard reduced to 5ft. 5½in. 8th Oct. 1857. Infantry standard again reduced to 5ft. 4in. 22nd Oct. 1857. Cavalry recruiting ordered from 5ft. to 5ft. 4in. 18th Dec. Cavalry standard raised from 5ft. 2in. to 5ft. 4in. 18th Dec. 1857. Infantry standard raised to 5ft. 6in. 31st Dec. 1857. Recruiting for cavalry restricted to 60 men per month from each district.
To 8th Oct. 1858	89	712	2,515	1,833	5,149	February 1858. Bounty raised to 3*l.* and a free kit. 23d April 1858. Infantry standard reduced to 5ft. 3in. 29th April 1858. Cavalry recruiting restricted to 20 per month from each district. 11th June 1858. Artillery standard reduced to 5ft. 6in. 19th Aug. 1858. New recruiting district established at York. 27th Aug. 1858. Cavalry restricted to 5 per month for each district, and standard raised from 5ft. 3in. to 5ft. 4in. 26th July 1858. Artillery standard reduced to 5ft. 5in.
	394	5,469	3,329	9,111	18,303	

Major-Gen. Sir R. J. H. Vivian, K C B.

22nd Oct. 1858

3858. (*Chairman.*) Previously to 1853 the Company had only the power of raising 12,000 Europeans to be kept in India, and 2,000 at home ?—Prior to the year 1853 the maximum number of European troops to be kept up by the East India Company was restricted by law to 12,200 in India and 2,000 at the recruiting depôt at home.

3859. In the year 1853 the power was increased to 20,000 in India, and 4,000 at home ?—Yes.

3860. How many of those have been raised since that period; how many have you been able to raise in addition to the 12,000 which you had power to raise in 1853 ?—Will you allow me to read this part of the document, because it touches exactly upon that point: "In that year," that is, the year 1853, "it was determined to add to the establishment three "regiments of infantry of the aggregate strength of "2,772, and as this addition was in excess to the "parliamentary standard, it became necessary to apply "for a revision of the law. The minister for India "then proposed that instead of raising the maximum "number merely to that required, to include the three "regiments, application should be made to Parliament "to raise the maximum to 20,000 in India, and 4,000 "at the depôt, thus allowing a margin for future additions when required," but the establishment was not raised to this extent until the additions which were sanctioned during the last and present year were made.

3861. Although you have had the power of raising your permanent local army from 12,000 to 20,000, I believe the actual increase has been only about 1,000? —The increase is mentioned here: "Since this time an "addition of four regiments of light cavalry and three "more regiments of infantry has been sanctioned, and "recruits are being raised to complete them. No less "than 8,865 recruits have been embarked for India in "the last year and nine months, terminating the 8th "instant." This is dated in the present month.

3862. What is the total strength of the European permanent army in India now ?—I cannot accurately say. The returns are in arrear. The only numbers wanting to complete are these 357 in 1857, and we have been going on adding enormously since then.

3863. (*Duke of Cambridge.*) If you have embarked 8,000, and you had 12,000 there before, you must have 20,000 ?—Yes; we are, I suppose, very nearly up to the standard now; but a large allowance must be made for casualties.

3864. (*Chairman.*) The total increase, as stated in the return before me, is 1,210 men ?—Here is the statement of 8,000 who have gone out.

3865. How many have you lost; what is the absolute strength of your European force at this moment? —I ought to have brought the last returns, but they are much in arrear, and I cannot therefore speak positively on either question. I should think that we must now be very close upon our complement in India, allowing, however, a large margin for casualties. Recruits for the Indian service, during the last year and nine months, have come in so rapidly, that it has been frequently found necessary to restrict recruiting, owing to want of space in our barracks; and we have been compelled to hurry out recruits to India from the same cause.

3866. You say that you would add greatly to the permanent local force in India; to what extent would you add to it ? What do you think ought to be the fixed permanent force there ?—I have said that about one-third ought to be regiments of the line and the remainder local corps. I do not know what force has been determined upon; it is a very wide question; it is a point, I believe, under consideration here and in India, but I presume that in future it is quite impossible to have in India, for a very considerable time to come, less than from 60,000 to 70,000 men at the very least; according to my view it would be a simple calculation, 20,000 troops of the line would be about the allotment.

3867. (*Duke of Cambridge.*) You would have fewer regiments of the line in future than you had before ? —Yes, because of the extraordinary expense, as I believe, and the necessity for maintaining a European force not subject to removal, as I have already stated.

3868. So that the line, instead of being looked up to as heretofore by the numerically smaller force, namely, the local force, would have the local force much superior in numbers, and would therefore have rather to look up to the local force ?—I cannot admit that there is any superiority or inferiority in either service. I consider both equally efficient.

3869. (*Chairman.*) How do you propose to raise this permanent force of 40,000 Europeans; where do you propose to recruit them ?—I presume that we have already nearly 20,000 men.

3870. According to your own return you have quite the contrary, you have never been able to raise the 20,000 men that you have had power to get ?—We have never until very recently had the power to increase our force to 20,000 men. This was a limit fixed by Parliament, which we might reach but could not exceed. It must always be remembered, notwithstanding the increase of force allowed by the Act, that not a single man could be added to our establishment, even to raise it to the 20,000, without the previous sanction of Her Majesty's Government. 8,000 recruits have been sent out within the last one year and nine months, since this sanction was obtained.

3871. This return is up to the 12th of April 1858, and it is your own return ?—It is not possible that they should have given me a false return from the India House. I am quite willing to place my faith upon this document.

3872. Do you propose to enlist them in the same manner as you do now in this country ?—Yes.

3873. Have you reason to believe that you could increase your army to that amount, enlisting them in this country ?—If within the last two years we have been able to get 9,000 men, I do not see what is to prevent us.

3874. According to this return you have not added to your number 9,000 men ?—This number has been sent out, but casualties must, of course, be allowed for. It must be remembered that such casualties and such times as we have recently passed through are not to be always recurring.

3875. Then you would enlist for that force in competition with the Queen's army in this country ?—It is all one army. I attach great importance to the local army, both officers and men (the officers particularly), being accustomed to the habits of the people and knowing the language of the country, and in every respect I think it is desirable that there should be a local force. This is my firm conviction, and I am bound to give the opinions I conscientiously entertain.

3876. (*Duke of Cambridge.*) Practically, how are you to recruit for two armies, one against the other ? —I suppose your Royal Highness will give us every possible assistance.

3877. I am speaking of how, practically, it is to be done ?—We shall be obliged to increase our establishments as a matter of course. I have not worked out the details of any plan. Recruiting for a large army here and a large army in India is a very difficult thing, but supposing the additional troops to be of the line they would have to be recruited here. Why should not our establishments be able to recruit in the same manner ?

3878. But one establishment recruiting against another is a very different process from one establishment recruiting generally for all, and must be much more expensive ?—If it should prove so, and our establishments be given up, we shall be glad to depend upon you for recruits.

3879. (*Sir George A. Wetherall.*) I do not think that the fact of the 8,000 recruits which you have mentioned argues at all the facility of recruiting for the East India Company's service, because a large majority of them were intended for the new cavalry, being men of five feet two, and five feet three ?—That is true, and it undoubtedly assisted us, but we obtained what we wanted, light men for cavalry regiments.

Major-Gen Sir R. J. H Vivian, K C B.

22nd Oct. 1858.

3880. You would not consider men of five feet two and five feet three fit for the infantry service, would you ?—I prefer them higher, but the standard was recently reduced to five feet three for the infantry, to meet a pressing emergency for fresh regiments. These once complete, the standard may be raised to such extent as may be deemed necessary ; and you will obtain, I have no doubt, men amply sufficient to keep up the strength of corps. I have no objection to an infantry soldier of five feet four or five feet five. With respect to recruiting, I should be sorry to advocate anything which could be detrimental to either one force or the other, but I should hope that the local force of India, which has now become a royal force just as much as the line, would receive every attention from the authorities in this part of the world to keep it complete, and if so, I do not see what the difficulty should be.

3881. To my knowledge the recruiting for the East India Company's service increases the desertion from our army beyond conception. It was only yesterday that I had a communication from an officer of the Guards stating that some men had absented themselves and thrown their kits over the wall, and that they had traced them to the recruiting department of the East India Company at Warley, and begged permission to send an officer there. That is of almost every day occurrence. Therefore that is a great evil in recruiting for two separate services ?—I have no doubt there may be that disadvantage. I should think, however, that it might be checked. But does not this circumstance go very much against the argument just now adduced, that we could not get recruits for that part of the world ?

3882. (*Duke of Cambridge.*) They get the double bounty. Upon these returns there was a deficiency, at the breaking out of the war in the Bengal Presidency, of foot artillery of 783 men. How do you account for that ?—I endeavoured to explain that in the first part of the paper which I have read—there was no deficiency because the number was in excess of the establishment, the number was certainly less than before—they formerly kept up a greater number of supernumeraries—but still there were supernumeraries to the very last.

3883. The foot artillery was 5,173 in 1852 and only 4,390 in 1857 ?—Exactly so ; and at that time the establishment was 4,252. I stated that, notwithstanding the deficiency in number, which certainly did occur at the date referred to, in consequence of the difficulty of recruiting during the Crimean war, and the consequent reduction in the number of supernumeraries, yet still we had an excess of the establishment in 1857.

3884. Will you explain to me in what way that could happen ? You say that you had a deficiency of men and an excess of the establishment ?—No, not a deficiency of men, but a fewer number of supernumeraries compared with former years In 1852, for example, there was a larger number of supernumeraries than in 1857; but, nevertheless, in 1857 we had an excess of the establishment.

3885. (*Chairman.*) What was the establishment in 1852 ?—4,226. We had a greater number of supernumeraries; it has been the practice to keep up supernumeraries.

3886. Are half-castes now allowed to enlist in the Indian service ?—There is nothing positively against it, beyond the objection that officers in command of regiments have usually had to entertaining half-castes. It has not been the custom to enlist them.

3887. (*Duke of Cambridge.*) They are allowed in the bands ?—Yes, they are allowed in the bands ; they are allowed in the bands of the native regiments particularly.

3888. (*Colonel Burlton.*) Are you not aware that according to the charter of 1833 no man is excluded on account of his caste or colour ?—I only speak of the fact. In my own regiment I know that there were not more than two or three Indo-Britons in the ranks.

3889. (*Chairman.*) You have pointed out that you think that that would be one means of relieving the difficulty of recruiting; to what extent would it be so ?—I spoke of it as a prospective arrangement. I think that the great addition of Europeans now pouring into India will be the means of largely augmenting this class. I think that at the present moment there is a very proper feeling against enlisting these men, because generally they have not the requisite stamina; but I attribute that more to the manner in which as children they are left to their native mothers ; they are made more natives of than otherwise; I wish to see the reverse done. It is not a thing which can take place as to-morrow; I do not at all mean that, but it is as a prospective arrangement entirely that I advocate it. Even presuming that my plan with regard to the local army were adopted, I do not think for one moment that the 20,000 additional men are to be raised in a year. There are, I presume, troops enough in India at the present moment, and I hope far more than enough, for anything that will be hereafter required. The addition to the local force would be introduced gradually.

3890. (*Duke of Cambridge.*) Then would you disband line regiments in order to form this local corps ? —Certainly not. In lieu of sending out a regiment to relieve any regiment going home, I would raise a local corps in its place if required.

3891. The finances of England would never allow all the additional expenses, therefore you must disband the Queen's regiments of the line ?—That is a point which I have not considered.

3892. (*Chairman.*) Would the pensioners of the Indian army to whom you have alluded be considered as part of the force ?—No, they are quite independent of it.

3893. You stated that you thought that a very small portion of the Queen's forces were discharged in India ?—That a very small portion took up their pensions in India, and remained there.

3894. It appears by a return that one-fifth of those who obtain their discharges are discharged in India ? —Yes, but they do not remain. I have referred to a return, and I find that the number of pensioners from the line electing to reside in India is very small comparatively with the number of pensioners from the local corps, who continue to remain.

3895. Would they have been allowed to enter this corps of pensioners ?—Certainly ; and no doubt many of them are Chelsea out-pensioners. I am aware that there are several of this class in India ; but I think that from the very circumstance brought to notice just now, of the men of local corps mixing so much more with natives, they more readily desire to continue to reside in India with their families.

3896. Then I understand the result of your evidence to be, that two-thirds of any European force to be kept in India should be enlisted for local duties in India ?—Yes.

3897. That they should be there permanently ?—Yes.

3898. (*Major-General Hancock.*) Do you include all arms in that recommendation ?—Yes.

3899. (*Viscount Melville.*) You would have local artillery, and local cavalry, and local infantry ?—Yes.

3900. (*Chairman.*) I understand you to say that both these armies were to be royal armies. In what respect is this permanent force there to be a royal army ?—As it is at the present moment.

3901. Is it to be liable to be called upon, supposing Her Majesty wants troops to serve elsewhere ?—Certainly not. It is expressly to guard against the weakening of the European force in India during a European war, by the withdrawal of regiments by Her Majesty's Government that I advocate the employment of a force not liable to recal for service elsewhere ; at any rate, not without the consent of the local government. It is well known that during the Crimean war two or three regiments were brought from India in opposition to the deliberately recorded opinion of the Governor-General, "that the European "force at his disposal ought not to be weakened by the "withdrawal of a single soldier." The government of India subsequently expressed its opinion that even a

Major-Gen. Sir R. J. H Vivian, K.C.B.

22nd Oct. 1858.

partial and temporary reduction of Her Majesty's infantry might lead to serious embarrassment. To my mind, the withdrawal of three or four regiments of infantry could scarcely afford to Her Majesty's Government in time of war such assistance as to counterbalance the serious risk incurred by weakening to that extent the comparatively small and scattered force in India; while the importance of retaining two or three regiments of the line in our widely-spread territories in the East, where the great moral effect of even one regiment in a district, can be readily comprehended—

3902. (*Duke of Cambridge.*) Does not that cripple the resources of the empire for all purposes? Supposing you wanted those troops for Persia, you could not send them to Persia?—Then I would say Asia, subject to the controlling authority of the Governor-General of India.

3903. Why cripple the resources of an empire at all; why not let any great empire have all its resources available for any part of the empire?—I can only state the opinion which I have formed.

3904. (*Chairman.*) Would you enlist these men and officers upon exactly the same terms as they have been on hitherto?—Yes.

3905. In fact, the only change is to be, that it is to be called a royal army instead of being the army of the Company's service?—I do not see what further is necessary to be done; we are the servants of the Crown.

3906. Is Her Majesty to exercise the same authority over that portion of her army as she would over the other portion of her army?—Yes, through a certain instrumentality.

3907. (*Duke of Cambridge.*) Through what instrumentality?—Through the instrumentality which is provided for, I presume, in the recent Act, by the Secretary of State for India, and the Council of India, who have the command of the finances of India.

3908. Then the Queen is to be represented by two armies, one responsible to the Secretary of State for War and the Commander-in-Chief, and the other to the Secretary of State for India and the Council in India; you cannot have unity of action with two heads?—I do not see any objection to the system.

3909. (*Viscount Melville.*) Are the officers as well as the men for this local force to be local?—Certainly.

3910. Not transferrable to the moveable force?—That will come in answer to another head of the questions submitted to me.

3911. (*Duke of Cambridge.*) Have you ever in history read of any country having two armies under one head?—Our position in India is unprecedented.

3912. Have you ever heard of a state which would thrive with a double system of army?—As I said before, I do not know any case parallel to the present one.

3913. (*Chairman.*) You consider the Act of Parliament definitive as to the terms upon which the army is to be transferred to the Crown?—That is my impression; a fresh Act could alter them. My view is, that it is intended that the army is to be governed through the instrumentality I have adverted to. I see no provision for anything else; I see a distinct provision made for all the charges of that army being vested in the President in Council, and I do not myself see any other authority adverted to than that, beyond the name of Her Majesty, who has to appoint in fact every officer to the army at the present moment.

3914. My impression was that that was only introduced in order temporarily to show the manner in which the army was to be managed until this Commission had reported. The very first question submitted to us is, "What are the terms upon which the army of "the East India Company is to be transferred to the "Crown?"—It will be for Parliament to determine whether an alteration of the Act may be required in consequence of the opinion you may arrive at here. I am only alluding to the Act as it stands, according to my individual interpretation of it.

3915. (*Duke of Cambridge.*) As a military man, perfectly irrespectively of your position in the Council of India, I wish to ask you how is the discipline of those two armies to be conducted; are they to be perfectly separate and distinct, or are they to be conducted on the same principles; and if they are not to be conducted on the same principles, how are the two armies to go on together?—I can see no difficulty with regard to the discipline in carrying out the rules hitherto in practice, or rules similar to them. The local force has its distinct articles of war; there are three several Commanders-in-Chief in India at the present moment.

3916. Is not that one of the greatest inconveniences of the service, that those three systems have been going on, and that one is a very superior to another?—I am not aware of any inconvenience which has arisen from it. I think there has been this decided advantage by the different systems. Had the three armies been under one head the same system would probably have been introduced at the different Presidencies, whereas the different systems have proved of the highest importance to us during recent events.

3917. (*Sir Harry G. W. Smith.*) Are you of opinion that the local British force should report direct to the Governor-General and the Commander-in-Chief in India, without reference at all to the Commander-in-Chief in England; are they to be local troops and to report to the Commander-in-Chief in India; or are they to be organized and managed through the medium of the Commander-in-Chief in England?—My opinion is, that the local army must continue under the authority of the Governor-General of India.

3918. (*Colonel Burlton.*) Knowing so much as you do of the feelings of the natives with regard to armies, and the command of armies, and the power of managing armies, are you not of opinion that it would detract very much from the prestige of the Governor-General in Council if it were known that he had not the command of that army?—I think that would be the result were the supreme control of the army of India withdrawn from the Governor-General.

3919. (*Duke of Cambridge.*) Had he ever the command of that army during the time of the late East India Company; was not it under the authority of the East India Company that he held the control of that army?—Certainly; he held his authority under his appointment by the Company.

3920. What difference is there in its being under the authority of the Commander-in-Chief?—I think it more than probable, were the authority of the Commander-in-Chief established over the local army, there would be constantly conflicting opinions between him and the Council, which, to say the least, would prove embarrassing. It would be introducing a separate authority not provided for by the Act, and be liable to cause the same delay in the transaction of business which was so much complained of under the system of double government.

3921. How do you mean, differences of opinion?—Certain measures might be proposed which the Council of India would not consider themselves justified in carrying out.

3922. Are you aware that the Commander-in-Chief has nothing to do with finance of any kind, the Secretary of State for War has that; the Commander-in-Chief cannot spend one farthing, no more could he do so in India?—I am quite aware of that, but the measures which you might consider indispensably necessary might, perhaps, involve very serious expenses, and those expenses might not be concurred in, and I think that there would be continual collision; that is my impression.

3923. How could there be collision more with the Commander-in-Chief in conjunction with the Secretary of State for India, than there is with the Commander-in-Chief in conjunction with the Secretary of State for War; with whom would there be a collision?—The introduction of another separate and distinct authority would, I think, lead to differences of views.

3924. (*Chairman.*) The Secretary of State for India would be in exactly the same position with

Major-Gen. Sir R. J H. Vivian, K.C.B.

22nd Oct. 1858.

regard to the Indian army as the Secretary of State for War is in England?—Still I think there is the objection.

3925. (*Duke of Cambridge.*) What more risk is there of a collision with the joint action of the Commander-in-Chief and the Secretary of State for India than with the joint action of the Commander-in-Chief and the Secretary of State for War?—I have already stated what I think; namely, that it could not be expected that such an authority could be introduced without causing the differences I have alluded to.

3926. With whom? — With the Commander-in-Chief and the Council of India or the Secretary of State for India.

3927. (*Colonel Burlton.*) I suppose you think that the Council of India, being mainly composed of gentlemen of great Indian experience, would be inclined to think that measures recommended by an authority with no Indian experience would be very different from what they would recommend?—There are a vast number of improvements and matters which may be recommended by the Commander-in-Chief, which if not carried out I think would lead to the collision to which I have adverted.

3928. (*Sir G. A. Wetherall.*) Are you of opinion that the discipline of the local European army as well as of the native army should not be vested in the hands of the Commander-in-Chief of the army, but that it should be continued hereafter as it now is, in the hands of the Governor-General?—I think that while there is a vast number of native forces kept, it is indispensable for that, as for other reasons I have already stated, that the Governor-General should have the supreme authority over the army in India.

3929. (*Viscount Melville.*) Are you not aware that there is nothing which is so great an evil as the system which now prevails of Company's officers being called to do duty in the Queen's service, knowing nothing whatever of the Queen's Regulations or of the Articles of War, and *vice versâ* of Queen's officers being called upon to superintend courts-martial on native troops, who are equally ignorant; can any system be worse?—I have never known one of Her Majesty's officers appointed to superintend a court-martial on native troops in India.

3930. To superintend it—a subaltern of eleven years' standing may superintend it?—That has not come within my knowledge.

3931. (*Duke of Cambridge.*) Do you think that it would be a desirable and good arrangement, that half the army in India should look up to the authority of the Commander-in-Chief, and that half the army in India should look up to the authority of the Governor-General?—I have already stated what my opinion is on this point.

3932. (*Major-General Hancock.*) Do you not think that one great advantage of a local European force would be found in the greater local knowledge and experience acquired by the officers, and in their consequent superior efficiency for service in India?—I think that local knowledge and experience is a matter of the highest importance.

3933. (*Viscount Melville.*) How is this force to be recruited? You are aware that now there is the militia as a volunteer force as well as Her Majesty's regular forces, and that the East India Company's recruiting force forms a third competing element. Do you think that this is an advantageous thing, or that it is possible under this system to raise the number of men which would be necessary?—In regard to that point, I have already stated that I am not sufficiently informed; I take for granted what I have heard here, and I presume that it is considered (and I can very well understand it) that to any competition in recruiting there might be an objection; but, considering that it is almost one and the same force, I cannot conceive, when you must have the same number of troops, under any circumstances, whether of the line or local, raised for the service, what difference it can make if certain parties are permitted to recruit for India, still treating it as part of the same army.

3934. These men are to be recruited, you say, for India alone, still belonging to the royal army, while the officers are also to be exclusively for India, and part of the royal army for India?—Yes.

3935. (*Major-General Hancock.*) Might not the objection be obviated by recruiting for Her Majesty's service to the full extent required for the European force in India, and afterwards allow the men to volunteer for the local army?—The fourth head of inquiry submitted to me bears, I think, very much upon that point. I should think that there must be a very great objection at any time to depending entirely for keeping up your establishment upon volunteering alone, of whatever kind.

3936. (*Duke of Cambridge.*) Supposing your local force not to be so large as you have contemplated, but to be, as it is now, what do you think of a system by which, instead of direct enlistment for those corps, you would allow the whole army of the line, but particularly those men who were in India, to volunteer for those corps, and keep them up in that way?—I think that that question comes under the fourth heading. I am quite prepared to answer it. I think that the objection is very much what I have stated; namely, that it would never do to depend upon volunteering alone. I think that volunteering is a very excellent plan for filling up with occasionally, but I do not think that it would do to depend entirely upon volunteering to keep up any establishment.

3937. (*Major-General Hancock.*) Are you of opinion that the two systems might be combined with advantage, permitting volunteering from the line to a certain extent, and recruiting to a certain extent?—Certainly, if it were not considered detrimental to the regiments at home; and I think, particularly in times of emergency, it would be most useful.

3938. (*Chairman.*) In connection with the first of the questions submitted to you, will you state what you consider to be the best means of providing for the periodical relief of the troops of the line and of securing the efficiency of the local force?—The efficiency of the local force is what we have been discussing very considerably. In regard to the first part of the question, namely, the best means of providing for periodical reliefs, I should think that if the great bulk of the army of India were to be composed of regiments of the line it might become a question whether or not a regular transport service should not be established for carrying out those reliefs. But I must admit, that having myself considered so thoroughly that a local force is really necessary, it is a point to which I have not given very great attention. In the way of reliefs something might be gained, I should have thought, except for what has fallen from Sir Harry Smith, from sending out reliefs from intermediate stations; in fact, I should have thought that anything which could at all inure the people to a tropical climate would be decidedly a step in the right direction. Medical gentlemen would, however, be better judges upon this point. I should think too that regiments fully formed, as in the Mediterranean and at the Cape and elsewhere, would possibly for the moment be more efficient than a regiment from home with a large influx of recruits, young lads.

3939. Do you think that there would be any advantage if a depôt for recruits for the Indian service were established at the Cape or at any intermediate place? You have to raise 15,000 recruits; do you think that it would be an advantage if those recruits were located at the Cape and elsewhere and draughted to the regiments in India?—I am very doubtful whether it would be more advantageous, there would be the same or a heavier expense. Young recruits too are more likely to fill up and to gain strength by being kept for a time in their native country.

3940. Would there be any advantage independent of the expense?—Beyond that it might be acclimatizing troops to a certain extent, which appears to be objected to. I think that a point upon which pro-

Major-Gen Sir R. J H Vivian, K.C.B

22nd Oct. 1858.

fessional medical men would be better able to give an opinion than myself. I hesitate to give a more distinct opinion upon the suggestion, although I am not favourable to it myself. It might at times be convenient to have men from the nearest point, but in any regular system of reliefs I do not think that much is to be gained by it.

3941. Do you think it possible to consolidate the European forces so as to allow of exchange from one branch of the service to the other, and what regulations would be necessary and practicable to effect this object with perfect justice to the claims of all officers now in the service of the East India Company? Supposing that the other view of the question from yours was taken, and that it was thought preferable for it all to be the Queen's army, do you think that it would be possible, under those circumstances, to amalgamate it?—I think that, with reference to the claims and interest of the officers now in the service, the thing is quite impracticable, in consequence of the totally different systems which exist in the two armies. I am not speaking of anything for the future, as new rules may be made for fresh officers who come into the service. But with reference to the just claims of those now in the service, I look upon the thing as impracticable. Officers of the Indian service have great advantage in the shape of retiring regulations according to length of service. I presume that it is known that in the Indian service the military funds and the funds for orphans and widows and sick officers are funds to which officers have been required, since the year 1823 or 1824, to contribute. I do not myself perceive how you could carry out an exchange. If an officer quits the service he forfeits all that he has hitherto paid: this would be his own voluntary act, and therefore there can be no objection to it; but I do not see how the officer entering in his room could take up his subscriptions or come upon the same advantages. If he is not to be admitted to similar advantages there will be a loss to the funds of so many donations and so many subscriptions, and in fact the fund would eventually lapse. If the force is to become the same as the line, and exchanges generally permitted, you must eventually lose the funds altogether; possibly, if there were to be periodical reliefs, and officers were to be sent backwards and forwards within a moderate period by the State, there might not be the same necessity for the funds; but my present view is, that as regards the interest of the officers now in the service, the exchanges cannot be carried out.

3942. Suppose an officer has exchanged into a Queen's regiment, why not permit him to continue his subscriptions and retain the advantage as before? —I should very much doubt his being able to do so on his English pay. In a regiment in India he could do it.

3943. The officer who exchanged with him would begin to subscribe to that fund, and you would get an additional subscription by that means, would you not? —There are very few who would be willing to pay up the arrears which would be required; much also would depend upon his age and condition.

3944. Would it not be possible to continue that right, which of course ought to be retained to the officer in the Indian service, by allowing him to continue, after his exchange, his subscription to that fund and to receive the benefit from it?—I see no objection to its being continued. The question is, could they afford to do so on quitting India? Officers on taking their pensions are permitted to continue their subscriptions.

3945. (*Major-General Hancock.*) It would be simply the loss occasioned by fresh officers who are posted to regiments, and who are not bound to subscribe to this fund?—Just so.

3946. (*Sir G. A. Wetherall.*) But the same argument applies on the other side. The mutual advantage of any service may be calculated by an actuary or by any person. If a gentleman in the Queen's army exchanging into the local army chooses to reimburse the officer who has subscribed to those funds, and they both agree, you may admit one to the benefit of those funds and take the other off the list, may you not?—You may be admitting a man of a very different age, and with a large family, which might seriously encumber the fund.

3947. That is a matter of calculation?—I think that it would be full of difficulties.

3948. (*Chairman.*) Retaining every benefit to the officer, there would, I take for granted, be an end to any further progress of the fund if it all became the Queen's army; the fund would belong to those who had subscribed to it, and there would be an end to any fresh subscriptions, and those who would continue the subscriptions would derive all the advantage?—I think it would be a very serious consideration to do anything which would deprive the officers of that fund.

3949. (*Duke of Cambridge.*) Do you think that there would be any objection in future to an exchange being allowed between an officer of a local regiment and an officer of a regiment of the line?—I have mentioned the one difficulty about the fund.

3950. The question refers to all future appointments, and relates to men who have not yet subscribed to the fund. If the authority of the government stops any subscription to that fund, and all the young cadets coming into the local army come in exactly as they would into the Queen's army, without subscribing to anything, would you then see any difficulty or any objection to an exchange between the officers of the local army and the officers of the royal army?— There can be nothing unfair in such prospective arrangement; an objection to it which occurs to me at the present moment is, that you would be probably losing officers who had served with native troops, and receiving officers from regiments of the line who had had no experience in that way; I should think that that would be objectionable. If your force is to be eventually entirely one and the same, I do not see the same objection to it; provided it is intended that the army of India is eventually to become composed altogether of regiments of the line, I should certainly then think that the sooner that arrangement is made the better, but I have stated my objections to that arrangement.

3951. Put the other case, namely, an exchange from an officer of a regiment of European troops to an officer serving with native troops, there must always be a local native army, and that local native army must be officered, and I wish to ask you whether there would be any objection to exchanges between officers of the local native army and officers of whatever army may hereafter be required to be the European army of India?—I think, with regard to the native army, that the objection I have started is a large one. It would apply, though in a lesser degree, to exchanges from the European portion of the army of India to the native army, presuming the officers to have served only with European corps.

3952. Would the service suffer, in your opinion?— I think that the service would suffer in this way by exchanges: If this army were still to be continued a local army, and any measures were taken which would prevent the contributions to military funds, and allow those funds to drop, I think that it would be a most fatal error, and that you would be in the most serious difficulties with their widows and orphans eventually.

3953. (*Sir G. A. Wetherall.*) But is it not the case that half your army marry on account of those funds, to which they are compelled to subscribe, which they would not do if there were no funds?— I do not know that it would prevent a young man from marrying if he had nothing to look forward to; I think not, but the funds may to a certain extent encourage early marriages.

3954. (*Major-General Hancock.*) Can you see any advantage which would accrue to the public service from such exchanges?—No, I dare say that the gratifications of individuals might be promoted. I see no advantage to the public service.

Major-Gen. Sir R J H ivian, K.C.B.

2nd Oct. 1858.

3955. (*Chairman.*) Is there not this additional expense thrown upon the Indian revenues from a permanent army, namely, the guarantee which they give to secure these pensions ?—There is no doubt an expense ; the government contribute very largely to the funds.

3956. That would be one expense from which they would be relieved if the whole army was the Queen's army, and there was no further fund or subscription ?—Those now in the service must still have all the advantages for which they have contributed.

3957. One of your great arguments in favour of a permanent local force in India is that it would be less expensive, therefore I have a right to ask what would be the diminution of expense, supposing the whole to be the Queen's army ; you admit that the Indian revenues would be relieved from the guarantee which they give to secure these funds ?—I do not know that there is any particular guarantee.

3958. (*Major-General Hancock.*) There is a guarantee of 8 per cent. interest ?—Yes ; I do not know of anything beyond that; it is a contribution to the fund. I should think that that contribution to the fund would possibly amount to very considerably less than the pensions to the officers' widows, and to their children, which you would be compelled, I presume, to introduce if you abolished that military fund altogether.

3959. It would not fall upon the revenues of India ?—They would get pensions ; you would never leave your officers without something to fall back upon, I presume ; therefore there would be the cost either way ; and if these pensions were granted for service in India, the charge must sooner or later fall upon the revenues of India.

3960. (*Chairman.*) I think you have answered the last question; namely, whether the local European force should be kept up by draughts and volunteers from the line, or should be, as at present, separately recruited for in Great Britain ?—Yes.

3961. I take for granted that you would very much encourage Queen's regiments volunteering to the permanent force ?—I think that it would be a very good plan, particularly on the first formation of regiments. With regard to the efficiency of local troops thus formed, I can perceive no difficulty that may not by proper management be overcome. The formation at once of a large number of European local regiments for India would, no doubt, be attended at first with certain difficulties. I would suggest that the nucleus of each newly-raised regiment should be formed by draughts of non-commissioned and a few old soldiers from the already formed corps. Each nucleus might be attached to a disciplined regiment, whether of Her Majesty's line or the local force, till officers and men had become thoroughly acquainted with their duties. The officers of the native infantry regiments would require some such training, for the systems of the interior economy of a European and a native regiment are totally different ; and they would require some preparation before they could feel at home with Europeans. No large additions can be made other than gradually, and I feel persuaded that the authorities in India will be able to frame rules to meet any difficulties which may arise.

3962. Would you require every officer, before he was attached to a native force, to be attached, in the first instance, to a European corps ?—That plan has been already carried out in India, but I cannot say that I am favourable to it. Many people are favourable to the system ; my own idea is, that it will cause the young European officers to look down upon natives. There is not the least difficulty in regard to discipline, though I admit a young officer is more likely to be thoroughly initiated into his military duties in a European than in a native corps.

The witness withdrew.

Major-Gen. ir E. Lugard.

Major-General Sir Edward Lugard, K.C.B., examined.

3963. (*Chairman.*) Will you have the kindness to state to the Commission the length of time that you have been in India, and the opportunities which you have had of forming an opinion upon the questions which have been submitted to you ?—I have been in the army since 1828. 26 years I served in India. Until 1845 I served as a regimental officer, and as brigade-major and assistant adjutant-general to mixed forces in the field. After that I was placed upon the general staff, and I continued in that position until I left India. I also had command of a division in the army.

3964. You have also acted, I think, as adjutant-general ?—I was assistant adjutant-general in Bengal, from 1845 to 1854, nine years, and I was deputy adjutant-general in Bombay, from that period to October, 1857. I then went round to assume the office of adjutant-general in India, and remained in that appointment until I had given to me the command of a division in the field.

3965. (*Sir Harry G. W. Smith.*) Did you not act as adjutant-general of the army in Lord Gough's first campaign ?—Only as adjutant-general of Her Majesty's troops.

3966. (*Chairman.*) Have you formed any opinion as to how far the European portion of the army in India should be composed of troops of the line, taking India as parts of the regular tour of service, and how far of troops raised for service in India only ?—I am decidedly of opinion that the whole of the European troops in India should belong to the line, that they should belong to Her Majesty's service.

3967. (*Duke of Cambridge.*) On what do you found that opinion ? What are your grounds for coming to that conclusion ?—In the first place it would be very advantageous for imperial purposes that troops of the line should be employed in considerable numbers in India as the best nursery for soldiers ; and in the second place it would be highly advantageous for discipline and general efficiency that all the European troops in India should be of one army, subject to the same rules and regulations, under one and the same master, and with one common interest.

3968. Do you find that the troops in India, both those which have been hitherto called regiments of the line and the local troops, deteriorate in discipline from the effect of the climate, not from any fault of anybody but from the natural debilitating effect of that climate ? Is a seasoned regiment coming out fresh from England, in a higher state of discipline and efficiency than a regiment which has long been located in India, whether it be a local corps or a regiment of the line ?—I am certainly of opinion that it would tend to efficiency and discipline that a relief should take place, but I have seen regiments who have been their whole period in India in as high a state of discipline as a regiment first coming from England. I would mention a regiment that has been recently under my command, viz., the 10th Foot, it would be impossible for a regiment coming from England to be in a better state of discipline or in a higher state of efficiency.

3969. Of course there must be a difference in regiments ; but take ten regiments in England and ten regiments in India, do you not think that the climate of India would have a greater effect upon the discipline of ten regiments in India than it would upon that of ten regiments in Europe ?—No doubt ; there is no doubt a tendency to a looseness of discipline in India.

3970. (*Sir Harry G. W. Smith.*) You state that there is a tendency to a looseness of discipline, but is not that tendency checked by extra exertion on the part of the officers ?—It may be and it may not be, because I have seen regiments, as I mentioned before, in a very high state of discipline which had been many years in India, and again there are regiments that have deteriorated terribly.

3971. (*Major-General Hancock.*) Does not it depend upon the difference in the efficiency of the respective commanding officers and also upon the particular locality in which the troops may be stationed?—No; I think, generally speaking, that a regiment if it is too long in India deteriorates in discipline.

3972. What do you call "too long in India?"—Beyond 15 years.

3973. Up to that time you think that a regiment may remain in India without any injury to its discipline?—Yes; I should say from 12 to 15 years.

3974. (*Duke of Cambridge.*) You think that a regiment after it has been more than 12 or 15 years in India begins to suffer from the effects of the climate?—Certainly.

3975. (*Chairman.*) Speaking generally, it tends to the discipline of a regiment to be relieved instead of being permanently located in India?—Certainly.

3976. (*Viscount Melville.*) Do you not think 15 years a great deal too long a period to remain in India?—The regiment to which I belonged was there 22 years.

3977. I am aware of that, but do you not think that it is too long a period?—Perhaps it is. I said about 12 or 15.

3978. Do you not think that both officers and men become disheartened from being kept so long away?—You have not the same set of officers.

3979. (*Sir Harry G. W. Smith.*) Do you remember the fact of the Buffs going home who had been 19 years in India, and only one man and one officer went home with them?—Yes.

3980. (*Major-General Hancock.*) In what way do you consider that remaining in India for a long period tends to the indiscipline of the corps?—I speak from general experience of what I have seen.

3981. You simply rest your opinion upon what you believe to be the fact, but you are not prepared to state the particular grounds on which your opinion is formed?—Upon the climate, and other causes.

3982. (*Duke of Cambridge.*) The deteriorating effect of the climate?—Yes.

3983. (*Major-General Hancock.*) Upon the mind?—Upon the system altogether.

3984. (*Duke of Cambridge.*) I suppose there would be a greater expense in changing troops so constantly than there would be if there was a local force?—It would be a very serious addition to the expense.

3985. Do you think that that would be counterbalanced by the efficiency?—I think that it would be counterbalanced not only by the efficiency, but by the general benefit to England; as an imperial question I think that it is most important.

3986. (*Major-General Hancock.*) What would be the advantages to England from having those frequent reliefs?—In the first place, it would be necessary for England to increase her army to enable her to relieve those regiments.

3987. That would involve additional expense?—Of course it would be a matter of expense, but I am merely speaking of what I consider would tend to the efficiency of the army serving in India whatever it may be.

3988. (*Duke of Cambridge.*) Would you extend your recommendation to the artillery and all branches of the European troops?—All European troops, most decidedly.

3989. You do not feel any hesitation in giving that opinion?—Not the slightest.

3990. Would there be any disadvantage in largely increasing the local force and leaving the force of the line at the same rate as it was formerly?—I am strongly against increasing the local force to any extent.

3991. Do you think that there is now any jealousy between the forces?—Yes, there is not one common interest.

Major-Gen Sir E. Lugard, K C B

22nd Oct 1858.

3992. (*Chairman.*) Do you think that the local European force mix more with the natives than those of the line?—Not at all, in my experience.

3993. (*Major-General Hancock.*) Do you not think that regiments of Her Majesty's regular army mix much better with the natives after they have been a certain time in India than they do on their first arrival?—You can never get strangers to mix with the natives at first, but that very soon wears off. You will always find a regiment of griffs estrange themselves in a certain way from the natives, but I think that it very soon wears off.

3994. Do not the officers also of Her Majesty's regiments when they first come to India look down upon the native army very much more than those of the local troops do?—I do not think that they do.

3995. (*Sir Harry G. W. Smith.*) Upon the point of the officers learning the native language, has not the interpreter at head-quarters, generally speaking, been from one of Her Majesty's regiments and not from the Company's army?—For many years past it has been so.

3996. (*Colonel Forsyth Tait.*) The interpreter to Lord Gough, whose name was Prendergast, was an officer of the Company?—Yes, he was there for a short time, for I think a year or so, but Havelock was Lord Gough's interpreter.

3997. (*Duke of Cambridge.*) General Havelock was from the Queen's army?—Yes, and Sir William Gomm had Colonel Otter, and Lord Combermere had a Queen's officer, M'Cann. Indeed, I only remember two of the Company's officers.

3998. Do you think that the officers of the Queen's army, if they had the advantages open to them which have been hitherto open to the officers of the Company's army, would not be equally ready to learn the language of India as any of the Company's officers?—There is not the least doubt of it.

3999. Do you not think that the fact of their not having been hitherto in a position to get those advantages has acted very much against them, and has also perhaps prevented them from mixing so much with Indian life as they otherwise would have done?—I am convinced of it; I have had proof of it, and I could give it. There is one officer whom I will mention, Colonel Longden, of the 10th Foot; I know that he qualified himself; he was a first-rate Persian scholar, a first-rate colloquial scholar, and a man of the highest intellect, and he has never been able to get any appointment beyond the overseership of a canal or an appointment on the roads.

4000. (*Sir Harry G. W. Smith.*) Generally speaking, after a regiment has been in India two or three years, are there not a great many of the Queen's officers who speak the native language?—Yes.

4001. (*Duke of Cambridge.*) Would there be any reason why officers in the Queen's regiments of the line, if they were required as overseers, or for any appointment of that description, would not be available and would not learn the language sufficiently for that purpose as well as those in the local regiments, if that career was open to them?—If you opened the career you would immediately find that men would study; indeed they have done so.

4002. Do you think that there would be more difficulty in obtaining such men if the whole of the army was on the line footing than if it was partially local and partly of the line?—Certainly not, I think that you would have a larger choice.

4003. (*Colonel Forsyth Tait.*) Then do you consider than an English officer, in an English regiment, where they entirely speak English, learns the native languages just as speedily and as well, and performs as efficiently all the duties of managing a great department as an officer who is in a native regiment where there is nothing but Hindostanee spoken?—What do you mean by "a great department?"

4004. The public works department, where all their accounts must be kept every day?—Certainly. If there was a large line army in India you would find that many officers would devote their lives to India;

Major-Gen. Sir E. Lugard, K.C.B.

22nd Oct. 1858.

for myself, I have been in the service about 30 years. I served 26 in India because a field was open to me, and I am sure that many other officers would do the same.

4005. (*Duke of Cambridge.*) You are confident that officers of the army would do so ?—Yes, they would exchange into regiments as they came out.

4006. (*Sir G. A. Wetherall.*) It must be within your knowledge that a great many soldiers of the Queen's regiments speak the language colloquially as well as the natives ?—Yes ; it has been so latterly.

4007. (*Duke of Cambridge.*) In your experience, have the Company's local regiments been as efficient in point of numbers as the Queen's regiments ?—I believe that the returns will show that they have always been below their strength ; I think the India House return shows that the Queen's regiments have been above their strength, and the Company's below it.

4008. Are you aware whether there has been more difficulty in recruiting for the local service than there has been in recruiting for the Queen's service ?—I am not aware.

4009. (*Chairman.*) Have you had any opportunity of judging between the comparative state of health of one of the local regiments and one of the regiments of the line ?—I cannot speak with confidence upon that point, not having seen the returns of the Company's army ; they go into the adjutant-general's office of the Company's army, and I never see them at all, I am only able to judge from our own returns.

4010. (*Sir G. A. Wetherall.*) You have served with European regiments of the Company's army ?—Yes.

4011. Are their habits more dissipated, or do you see any difference in the habits of the soldiery, between the two services ; as applied to discipline are they more lax ?—I do not think that they are so strict as the Queen's corps certainly ; I speak particularly of Bengal, where I have seen more of them.

4012. (*Major-General Hancock.*) In what respects are they not so strict ?—In a hundred respects.

4013. Will you particularize them ?—I allude generally to their system, their canteens for instance.

4014. Do you mean that they are more addicted to drunkenness ?—I have never known a Queen's regiment come into the same cantonment with one belonging to the honourable Company that the commanding officer did not complain that his men were twice as drunk as they were before.

4015. Have you never known a Queen's regiment stationed by itself, as at Colaba, fall into a state of drunkenness quite as great as you ever saw elsewhere ?—Yes.

4016. Then that was not in consequence of associating with the other corps ?—What I mean to say is that the system of canteens is not so strict in the Company's service that I have seen, and the consequence is that our commanding officers complain that when their regiment comes into the same cantonment with a Company's regiment, the liquor is taken out from the canteen, and their men are able to get liquor which they could not procure before.

4017. (*Colonel Burlton.*) Do you not think that if two regiments came together, whether of one service or of the other, that thing would take place, that the one regiment would show a little hospitality to their friends, and that the others would return it ?—No doubt ; but I am speaking of a general rule.

4018. (*Major-General Hancock.*) How many European local corps have you seen?—All in Bengal, and at Bombay I saw two.

4019. What was the state of those regiments ?—They were not in the highest state of discipline. It is very invidious putting these questions to me ; I could give you my reasons, were we privately together, but I am now merely speaking generally.

4020. (*Viscount Melville.*) Speaking generally of discipline, have you had any opportunity of inspecting their books, particularly the defaulters' book, and the way that they keep it in those regiments ?—No.

4021. The way that they keep their ledgers, the way that the men's small books are kept, and the discipline generally ?—No, I never inspected a local European regiment.

4220. (*Major-General Hancock.*) Do you not think that one great advantage of a local European force would be found in the greater local knowledge and experience acquired by the officers, and in their consequent superior efficiency for service in India ?—I have answered a question to the same effect ; I have said, that if a large army of the line was kept in India you would still have what you may call local officers ; a large number of officers from every regiment would exchange or remain in India ; an officer whose prospects were bright in India would never come home.

4023. (*Sir Harry G. W. Smith.*) That has been your own case in a very great measure, you have exchanged from one regiment to another for the sake of remaining in India ?—Yes.

4024. (*Duke of Cambridge.*) Still you think that there is an advantage in the European discipline of a regiment coming out, into which such an officer would be exchanged ; it would be organized and conducted upon the highest principles of European discipline ?—No doubt a regiment coming out brings an improved system from England, it brings new life as it were, there is not a doubt of it. It is not with reference to the Company's service, or to the Queen's service ; I should like to see the whole Company's service, if it were possible, mixed up with the Queen's service ; that is the view which I take of it.

4025. As a soldier, are you not of opinion that it is of immense advantage that a great army should have but one sentiment, and one feeling, and one object ?—No doubt of it.

4026. And do you not think that the existence of a local army of any description and a line army must always cause and continue those feelings of jealousy, which are a disadvantage to any service ?—It is the want of a common interest.

4027. (*Sir Harry G. W. Smith.*) Are you of opinion that India could be governed without any black troops ?—No, I think not, certainly ; I do not think it could be.

4028. (*Viscount Melville.*) Have you given any consideration to what may be the effect, supposing all the European troops to be troops of the line, upon those officers who are obliged to be attached to native troops ; do you think that the officers would look upon such service as inferior or would be dissatisfied with it ?—I would make it a superior service.

4029. (*Duke of Cambridge.*) Do you think that it would make any difference ?—I would oblige it to make a difference so far. I would put native regiments upon that footing, that they should be prizes in the lottery. I would make the pay of the officers doing duty with a native corps higher than of the other, because he would have to qualify himself.

4030. (*Major-General Hancock.*) Surely merely increasing the pay would not place that officer upon an equal status with the officer of the European force ?—I have found pay go a very great way in India, as to status, &c.

4031. Still I imagine you would be of opinion that under that arrangement the native army would be looked down upon as a very inferior army to the Royal European army ?—I think not indeed.

4032. (*Duke of Cambridge.*) You would think it a very great disadvantage if it were so ?—Certainly. I think that it ought to be raised.

4033. You think that every encouragement should be given to the most able officers to go into the native army ?—Yes ; and by that means I consider that you will have an efficient native army, and will preserve it ; men will take an interest in their corps, instead of wishing to get away from it.

4034. (*Chairman.*) I understand that you consider it to be a great advantage to have one European

Major-Gen. Sir E. Lugard, K.C.B

22nd Oct. 1858.

Queen's army under the same discipline and the same control, instead of having two armies under different control and different discipline ?—Certainly.

4035. (*Major-General Hancock.*) Would you have any separate establishment for supplying officers for the native army ?—It must be a matter for after consideration what is to become of the Indian service.

4036. How would you supply officers for the native army ?—I would bring them from the European army; no officer should do duty with a native regiment who had not learned habits of discipline in the European army.

4037. (*Duke of Cambridge.*) Do you think that any officer can learn habits of discipline as he ought to learn them unless he is combined with European officers in considerable bodies, and I might almost go the length of saying with European troops; do you think that an officer for Irrregular native troops could otherwise learn such discipline as would be required ? —It would depend a great deal upon the commanding officer; as a principle I would oblige every officer to go through a course with a European regiment.

4038. Do you think that the fact of his doing so would make him look down upon the natives ?—No, because I would lead him to look up to getting an appointment in the native army.

4039. (*Sir Harry G. W. Smith.*) Are you of opinion that previously to the outbreak of the Indian mutiny the discipline of the Bengal army had deteriorated considerably ?—I have never admired the discipline of the Bengal army at all, for many years past I think that it has been very lax.

4040. (*Sir G. A. Wetherall.*) Supposing the European part of the army of Bengal was made a purely local army, do not you think that by giving it a provincial character it would be lowered in its own esteem ?—Not a doubt of it, it would become a colonial corps, and as a colonial corps it would be eventually looked down upon.

4041. (*Duke of Cambridge.*) Do you not think, on principle, without reference to this Indian local force at all, that all local forces are inferior to the forces of the line. I am talking now of the West Indian or any colonial force. On principle, is not a local force rather an inferior force, whether European or native?—Yes, particularly when they are both under the Queen.

4042. (*Major-General Hancock.*) What difficulty is there in keeping them both upon an equality; if kept upon a perfect equality, why should that be the case ?—I do not see how you can do it; you could have done it before well enough, but now that they are both under one head, under the Queen, I do not see how you can prevent the colonial corps deteriorating from the established army of the country.

4043. (*Colonel Burlton.*) Would they not be under the same Commander-in-Chief on the spot ?—No, the local army is under the Governor-General.

4044. They would be under the same military government ?—Yes, but the Governor-General has not the authority over the army of the line that he has over the local army.

4045. Do you think that his having authority over the local army deteriorates from the discipline of that army ?—It serves two masters instead of one.

4046. (*Duke of Cambridge.*) Do you not think that having two masters is a great disadvantage to an army ?—No doubt of it, I am sure that my friend General Hancock must have felt the inconvenience of having two masters more than once. He had four masters, he had the Governor of Bombay, the Commander-in-Chief of Bombay, the Governor-General of India, and the Commander-in-Chief in India.

4047. (*Major-General Hancock.*) And there was the government in England over all ?—Yes.

4048. That must always be the case ?—Yes.

4049. (*Duke of Cambridge.*) The next question is "The best means of providing for the periodical relief of the former portion, and of securing the efficiency of the latter." That, of course, would be irrespective of your opinion as to a local force; upon your view of the question, how would you provide for the relief in India ?—I do not exactly understand that question, whether it refers to the mode of transport.

4050. Do you think that it is an advantage for the regiments to go direct from England, or do you think it better that they should go from some intermediate colonial station ?—I would vary it, I would send some regiments direct from England, and let other regiments take a tour.

4051. You do not think that that would much signify ?—No, I think that that would be a matter for the consideration of the Commander-in-Chief. I have taken that question as referring to the means of transport; in that point of view, I would say, without hesitation, by a well organized effective line of large screw steamer communication round the Cape, with 80,000 or 100,000 Europeans in India, 800 to 1,000 men per month would be required to supply casualties; the Red Sea route must not be trusted to, as it might be closed any day against us, but I would strongly advocate the sending 300 or 350 soldiers per month by that route, so long as it is open, from the Mediterranean stations; these should go direct to Kurrachee and thence by rail and steam up the Indus to the depôts in the upper provinces, there to be partly acclimatized before moving down. The bulk of the draughts and all the relieving regiments should, however, go by the ocean route, which a hundred considerations determine to be our best and only reliable route to India, and which therefore ought to be made as perfect as possible by means of a subsidized steam transport service. I am of opinion that this is a matter of serious importance. It would be difficult to estimate the national losses which have resulted from the want of ready means of throwing troops into India, and who can say that another emergency may not arise, when if we still rely upon ordinary sailing vessels round the Cape, taking their 120 days, we shall deserve to lose India ? Indeed, as a political question, I imagine it would be advisable to perfect the ocean route; for by showing foreign powers that we could do without the Red Sea route, they might be less inclined to interfere with our communications on that line. It would also bring the Cape and Mauritius into the system of regular reliefs. But the benefit to the soldier would be incalculable—he would be landed in India in little more than half the time that a sailing vessel would take; his accommodation and comforts during the voyage would be very superior; his time of arrival in India would be looked for with certainty, and due preparations would be made for it; and government would be able to reckon with positive certainty on the arrival of troops at any point it might by telegraph choose to indicate, the ordinary passage being fixed at seventy days, or in case of necessity reduced to sixty. That is the view which I took of the question.

4052. (*Chairman.*) Do you think that any advantage would be obtained by having a large supply of draughts at the Cape or anywhere else ?—Sir George Grey has advocated it very strongly.

4053. What is your opinion ?—I think that the Cape would be very valuable for return soldiers, and convalescent depôts, but I doubt whether it would be for soldiers going out direct to India. I do not think that they gain any advantage by a residence at the Cape.

4054. (*Duke of Cambridge.*) Are you aware that some of the regiments which have lately gone from the Cape are some of the most unhealthy regiments that we have at the present moment in India ?—One regiment, the 6th, came up under me, but I did not attribute their condition to their having been at the Cape; they were prostrated by fever in Calcutta before they left, and I think that if the 6th and the other regiments arriving from the Cape had been sent up immediately on their arrival instead of being kept at Calcutta until they all got prostrated by fever, they would have done much better.

4055. (*Sir Harry G. W. Smith.*) Were the 73rd prostrated ?—They went to Bombay. I did not see them. I was in Bengal.

Major-Gen. Sir E. Lugard, K.C.B.

22nd Oct. 1858.

4056. (*Chairman.*) Do you consider that it would be possible to consolidate the European forces so as to allow of exchange from one branch of the service to the other, and what regulations would be necessary and practicable to effect this object with perfect justice to the claims of all officers now in the service of the East India Company?—In considering this subject I find fresh difficulties arise at every step, and I fear that whatever may be decided upon must be prospective only. There can be no doubt that an amalgamation of the two services would be of great benefit to the public interest, but I do not see how this is to be done so long as one set of officers enjoys advantages which the other does not possess; the Indian service is strictly a seniority service, and though exchanges, up to the rank of captain inclusive, might be accomplished with advantage, the difficulties that present themselves are very serious. Every Indian officer must be a member of the "Military Fund." If he were to exchange he would forfeit all his payments, and be no longer a member. The line officer will have to pay up arrears from the time he enters the service, if he is to be admitted a member. Then retiring pensions are granted to Indian officers according to length of Indian service; and this is, perhaps, the greatest boon the service possesses, as it compensates for slowness of promotion, and enables every officer to live in comparative ease and comfort after he has completed his term of service. Few captains or old subalterns of 18 or 20 years' service, would, I imagine, willingly forfeit this, by accepting an exchange into the line; and as the regulations would require a line officer to begin a fresh score of service in India to entitle him to the benefit of the retiring pension, there would be little inducement for him to exchange. As the question has reference to the claims of the Indian officers now in the service, I regret to say I cannot see any solution to the many difficulties which interfere.

4057. (*Sir Harry G. W. Smith.*) Without any reference to pay, emolument, fund, or anything of that sort, do you think it advantageous for the Company's army and the English army that both officers should dovetail and exchange?—There is not the slightest doubt of it, but I have given the subject the deepest consideration, and at every turn there is some objection.

4058. (*Major-General Hancock.*) Do you think that any benefit would accrue to the public service from it?—Certainly.

4059. In what respect?—Exactly as I stated with regard to the army generally, that there would be one common interest, there would be no little petty jealousies, there would be one service, and I think that that of itself would be sufficient to recommend it.

4060. (*Chairman.*) Supposing that there should be a local European force, should it be kept up by draughts and volunteers from the line, or should it be, as at present, separately recruited for in Great Britain?—I would encourage volunteering from the regiments about to quit India, as the best means of keeping up the local European force, in preference to recruiting separately for it in Great Britain; but if it be necessary to recruit, I consider that the men should be formed and drilled in England before they are sent to India.

4061. (*Duke of Cambridge.*) That you think important?—Of the highest importance, that they should go out as formed soldiers.

4062. That is not the case now?—No, some shiploads of young men were sent out the other day to form dragoons, and in my opinion they never will be properly formed.

4063. (*Major-General Hancock.*) As you are of opinion that by long residence in India troops deteriorate in efficiency and discipline, do you not think that that makes against your recommendation, that regiments leaving India after 10 or 15 years' service should supply the troops which are to remain behind?—You forget one point, it is not always the old soldiers that volunteer, sometimes there are draughts of recruits. I have known recruits to volunteer who have not felt the ills of India, but who have tasted some of the sweets,—a whole batch of recruits have volunteered; although it may be an old regiment in India, of some 10 or 12 years' standing, still there are annual draughts of recruits coming out to it, and you get them to volunteer.

4064. (*Sir Harry G. W. Smith.*) And you do not allow inefficient men to do so?—You do not allow men after a certain number of years' service to volunteer. There is a regulation by which there is a limit to age for volunteering, and a limit to service, so that you must get the younger portion of the regiment.

The witness withdrew.

Adjourned to to-morrow, at 12 o'clock.

Saturday, 23rd October 1858.

PRESENT:

Major-General Peel.
H.R.H. the Duke of Cambridge.
Marquis of Tweeddale.
Viscount Melville.
Lieut.-Gen. Sir Harry G. W. Smith.
Lieut.-Gen. Sir George A. Wetherall.
Major-Gen. Hancock.
Colonel Burlton.
Colonel Forsyth Tait.

Major-General PEEL in the Chair.

Colonel J. Ho nd.

23rd Oct. 1858.

Colonel James Holland examined.

4065. (*Chairman.*) Will you be so good as to state to the Commission your present rank in the army, the length of time that you have served in India, and the situation which you filled there?—I am a colonel on the retired list of the Bombay establishment. I have served thirty-two years actually in India, between 1823 and 1857. The first five years of my service was with a native regiment, the remainder was chiefly on the staff of the quartermaster-general; for the last six years I was quartermaster-general of the army, and had held the same situation temporarily at two other periods intervening.

4066. You have had some questions submitted to you, I think?—I have had some questions sent to me.

4067. Have you formed any opinion how far the European portion of the army in India should be composed of troops of the line, taking India as parts of the regular tour of service, and how far of troops raised for service in India only?—Thinking that it would save the time of the Commission I prepared answers to the questions, and with your permission I would prefer reading them. My answer to the first question is as follows: I think it desirable that a portion of the European force for India should be from the line,

Colonel
J. Holland

23rd Oct. 1858

and a portion raised for service in India only. It is very advantageous to the troops of the line to have the opportunity in time of peace in Europe of seeing some service, such as is always going on in some part of India, and it must be good for both to have a standard for comparison, and the means of imbibing new ideas. The creation of a spirit of emulation between the two is also desirable so long as it is clearly seen and felt that they are both placed on a footing of perfect equality in regard to honours and average promotion, and that no superiority be accorded to either save such as falls most naturally and justly to the most worthy.

For its own sake, however, and for the safety of India the local European army must be strong enough to be self-dependent. It is essential for its credit and character, and, as a consequence, for its efficiency, that it should be a powerful body as compared with the line. If to any great extent numerically inferior, it will be treated as subordinate, and will soon sink into a second-rate force, for the large number of officers brought out by regiments from home, comprising among the higher ranks many men of influence and aristocratic connexion, will, to use a common phrase, swamp the officers of the local army. Again, if the large addition of European troops which will, without doubt, be henceforward required in India, be wholly or mainly supplied from the line, the first European crisis will strip India to a dangerous extent of European soldiers, for the immediate safety of the nation may, on the breaking out of war, demand every soldier who can be procured from any quarter, at whatever eventual sacrifice; and when the small standing army of England is taken into consideration, an efficient army of 50,000 seasoned troops of the line summoned by electric telegraph, and hurrying home by steam, would be a temptation few statesmen would be able to resist, in such a contingency, were they at the disposal of the minister.

The troops of the line generally have an advantage over the local European forces in India, in their more complete establishment of officers with which to maintain discipline. Beyond this difference, which is easily remediable and should be remedied, I have failed, after many years of observation, to detect any superiority in the former; on the other hand the officers of the local force have the advantage of local information and experience, one often of incalculable importance.

Were a considerable addition of European troops made to the Indian establishment, the much larger body of officers available for detached employment would increase the number present with all regiments by reducing the number of staff absentees from each, while on the other hand the importation into India of a large number of officers of the line would throw far too great a proportion of superior commands into the hands of officers ignorant of the customs and inexperienced in the ways of the country, and were such officers to feel themselves supported by an overwhelming body of their own service, they would naturally in very many cases set aside the advice and opinions of men of local experience, and, acting on their own judgment, formed under very different circumstances, would incur risks and prejudices to an extent it would be prudent to avoid. Even now the march of a regiment but newly arrived from England through the country is invariably a matter of anxiety, both as concerns the health of the men and collision with the people of the country, and it is necessary to send one or more local officers literally to take care of it. No European regiment can be considered morally and physically acclimatized until after some two or three years residence, a serious bar to their usefulness, and a strong argument against employing more than a moderate proportion of troops of the line. I may add that the moral acclimatizing to which I refer, involving an acquaintance with the habits and peculiarities of the people, invaluable in war, is frequently never attained by very many officers of the line, who, feeling themselves, as it were, mere birds of passage, take no interest in their place of temporary residence, and fix all their thoughts, views, and aspirations on home. Marked and distinguished instances to the contrary may no doubt be pointed out, but I speak of the general effect.

With these views I should recommend that a portion only of the European cavalry and infantry for India, certainly not more than half, after the present exceptional demand for them be passed, be troops of the line; and that European sappers, being quite out of place in India, save as instructors, be entirely furnished from the local army.

In regard to artillery, I am of opinion that the entire regular establishment should, as at present, be supplied by the local army. It is no argument to state, that notwithstanding the very insufficient establishment of officers the local artillery have long laboured under, they have nothing to learn from the English artillery, although the converse, could it have been justly asserted, might have been a strong reason for recommending that a body of the latter should take a tour of Indian service; but being the most powerful arm in war, it will be ever the first to be drawn upon in case of need in Europe; while it would, of all arms, be that which we could least afford at such a time to spare from India, for it seems to be certain that henceforward no native artillery will be allowed, save such small portion as may be found indispensable; and we should, therefore, not have the resource which to some extent would always be available in case of the sudden withdrawal of European cavalry and infantry to Europe, the replacing them for a time by native troops.

4068. What portion of the European troops do you propose should be formed for the line, and what portion should be permanent?—I have already given an answer to that question. I say about one-half of the cavalry and infantry.

4069. What number of Europeans do you suppose it would be necessary to keep up in India?—I have endeavoured to form a general idea of what the total force should be, but I think that that question can hardly be answered without reference to the amount of native force that is to be kept up. I have suggested a scheme for the re-organization of the native army, which I put in the hands of my friend General Hancock, and which I believe he has appended to a memorandum of his own. In that paper I have stated that 60,000 European troops of all arms, after the present emergency is over, would, I consider, be sufficient for the European garrison of India.

4070. Then you would propose that there should be a permanent body of 30,000 men recruited for service in India?—Not exactly so. I have said that the whole of the artillery should be, in my opinion, local; that would take about 12,000 men; the estimate which I formed of the number of European artillery required for India. That would leave 48,000 cavalry and infantry to be divided equally among the two services, that is to say, about 24,000 men would be required for the line, and about the same number for the cavalry and infantry for the local army.

4071. (*Duke of Cambridge.*) In fact it would be a smaller army than before? — Somewhat about the same. It should unquestionably not be larger.

4072. The argument, as it appears to me, which is used in the paper you have read as your opinion, is, that in case of emergency there would be great risk if the Europeans were of the line, that the government of the country would withdraw those Europeans and leave India denuded of them?—Yes.

4073. Do you really think that any government would risk such a thing as the safety of a great empire like India, or if they did so, do you not think that they would equally do so whether the force were local or not, seeing that it is now all a royal force? —I hardly think that they would. I think that the mere fact of the main body being specially enlisted for the local service would tie them so completely to the country that it would not enter into the head of a minister to withdraw them; whereas, the troops of the line being part of the general forces composing

Colonel J. Holland.

23rd Oct. 1858.

the army of the country, and immediately under the military authorities at home, it would be much more likely that they would draw upon those troops than that they would draw upon the local army. I have strong support in my views on this subject in the opinion of Lord Dalhousie, who, in February 1853, urged an increase to the Company's European infantry specially on this ground; he stated on that occasion, “ the addition of three more European regiments to “ the Company's force will not avert the risk to which “ we have adverted, but it will lessen that risk by the “ full amount of the addition made, and it will ensure “ the government of India having always 3,000 more “ European troops at its command than it can now “ count on with certainty.” On the breaking out of the Crimean war in 1854, the ministry, with these remarks before them, and in disregard of an urgent remonstrance from Lord Dalhousie's government, who considered it their “ duty to deprecate in the most “ earnest manner the diminution, for how ever short “ a period, of the British force at our disposal ” directed the return to Europe of a portion of the Royal troops. Before leaving India, Lord Dalhousie, in 1856, recorded his opinion on this subject in these words: “ At this time the only portion of the European “ infantry whose services the Governor-General in “ council can reckon on without fail, are the nine “ battalions in the Honourable Company's service. “ There is no fixed establishment of Royal infantry; “ any portion of it might be at any moment re-called; “ and although the government of India can feel no “ reasonable apprehension that Her Majesty's government would ever act on the published suggestion “ of a distinguished officer, lately deceased, and would “ suddenly withdraw the Royal infantry in India, to “ meet troubles and dangers which might have “ arisen in Europe ; yet serious dangers may readily “ be seen in the uncertainty of the hold which the “ Indian government has upon Royal troops, without “ supposing any resort to so extreme a measure as “ that to which I have just referred. For since the “ establishment of European infantry in India is, in “ its normal condition, kept down at a minimum, even “ partial and temporary reduction of it by the orders “ of Her Majesty's government must always, cause “ great and well founded anxiety to the Indian government, and might lead to very serious embarrassment. “ The supposition is by no means an imaginary one. “ The government of India has already been placed “ in the very position I have represented.”

4074. As an imperial question, do you not think that an army altogether composed of one material and upon one principle and one organization, is a superior arm for the state to a double army?—Not in the circumstances of India. I consider that there it is absolutely essential for government that the army should be mainly at the disposal of the local authorities, and that the Governor-General should have at his disposal a large body of officers trained from their youth in India, and with no views beyond India ; men who, like those at present in the local armies, concentrate all their hopes and wishes in India alone. I think that if the Governor-General had not such a body at his disposal it would cripple his hands to a lamentable extent.

4075. (*Chairman.*) How do you propose to raise this additional permanent force for India?—That point refers, I think, to the last question regarding enlisting. The whole of these questions appear to me so much interlaced one with the other, that if you will permit me to read the remainder of this paper you will find that I have endeavoured to give an answer to some of the questions which you and his Royal Highness have already asked. The second question is, “ The best means of providing for the periodical relief of the former portion and of securing the efficiency of the latter.” Were the number of the troops of the line restricted, as above suggested, about 23,000 or 24,000 men would, in my view, be the number required, and their periodical relief would be effected much as at present. Even now, however, it is found impracticable, with the actual strength of the British army, to carry out relief so frequently as is desirable.

4076. (*Duke of Cambridge.*) Why desirable?—From the mere fact that if you wish to keep your British army for general service in England and the colonies, and to make it fully efficient for all these purposes, you should not localize it ; you should not, as it were, bring it up for continual service in India. A regiment that has been (taking an extreme case) 25 years in India, has become, as a matter of fact, a local regiment ; very good for service in India, but not so efficient for service elsewhere.

4077. Why not?—Because the officers have to a great extent become local officers. The officers may be more efficient for their peculiar duties in India, but I conceive not so efficient elsewhere ; their ideas have become warped ; while as regards the men, the longer they remain in India the more do they intermarry with native and half-caste women, so that they are unwilling to return to England.

4078. Do you think it an advantage for India that such should be the case?—Certainly, for the local service. I think that no one who has not been for many years in India and had experience of the extraordinary peculiarities of the country, the people, the climate, and the mode of service, can form a correct idea of the absolute necessity of having a large body of experienced men. For instance, if you will allow me, I will take a recent case, namely, Sir Henry Lawrence : he would always have been a man of ability and energy wherever he was ; but had he been in the British army serving as a major or a colonel coming out to India merely for a usual tour, he would not have been the useful public servant he was on the late and on former occasions. He would not have had that extensive local knowledge which he possessed, which added infinitely to his general ability.

4079. Are you not aware that Sir Sydney Cotton and Sir Edward Lugard are very highly-qualified officers, and, I believe, have a very high reputation in India itself. They are Queen's officers ; they have exchanged from regiment to regiment because they were able men, and had a career in India which they saw open to them. Why, therefore, would there be any difficulty in other officers doing likewise?—There are always exceptions to every rule, and I may mention a still more illustrious example, a friend of my own—Sir Henry Havelock—he was a marked instance ; but Sir Henry Havelock himself, I am perfectly certain, would have said, that he was not equal to Sir Henry Lawrence for the peculiar duties of Sir Henry Lawrence.

4080. In any arrangement which was made, supposing the whole army was of the line, of course there would be every facility given to officers of the line doing that which officers of the Company's army have hitherto done, namely, taking civil appointments that they were capable of holding?—I think you overlook the circumstance that if they were not tied to the service, they would not become as a rule so well qualified for them. I have seen vast numbers of officers of the line in India, field officers who have been many years there ; some of whom have been men of very excellent abilities, and some men of very fair average abilities ; but many of these officers, after having been several years in India, leave the country with little more knowledge of it than if they had never left Hyde Park.

4081. Do you not think that that arises from the fact that hitherto, with the exception of certain military staff employments, they have been debarred from holding any high position, whether military or civil, in India?—Not altogether. You take an officer of the line, and say to him “ Go to India, there “ is a fine field open to you there ;” but if there is also a field in Europe, he considers which is the most agreeable to him, and which offers the best prospect of distinction. If any war is going on in Europe, the probability is that he will fling up his appointment in India, however lucrative and honourable it may be, in order to join his comrades in

Colonel J. Holland.

23rd Oct. 1858.

Europe. You must not give officers the chance of doing that, if you wish them to devote their energies to India.

4082. (*Colonel Burlton.*) You would not give them the option of coming away *ad libitum*?—No.

4083. (*Duke of Cambridge.*) Do you not think that if there was a great war in Europe they would come away, and, have we not seen it ourselves, that every Indian officer who could get away from Indian service came home and tried to get employed in the army of the line, in the Crimea for instance?—No doubt some did, and many will desire to do so on all occasions when there is war; but you must not open the door too freely. In the Turkish contingent the main body of officers of the Company's service were those who were at home, on leave, and retired officers.

4084. (*Sir Harry G. W. Smith.*) You think that the officers must adopt India as their country?—Yes, that is my view.

4085. (*Colonel Forsyth Tait.*) That is the great hold which we have upon India?—Yes.

4086. (*Chairman.*) Will you proceed to read your paper?—Even now it is found impracticable, with the actual strength of the British army, to carry out reliefs so frequently as is desirable, and were large additions to be made to the force to be permanently furnished to India from home, their relief would be altogether impracticable without permanent and large additions to the army in England. In order to secure the most complete efficiency in the local European army, that army must, as above remarked, be strong in numbers and there must be more officers for duty. The mere increase of regiments would, as I have pointed out, of itself effect this object to some extent; and, were a rule adopted such as was, I believe, proposed by General Hancock, when adjutant-general at Bombay, viz., to fix the minimum number of officers to be at all times present with regiments, instead of the maximum allowed to be withdrawn, sufficient would be done to meet this want; but the quality of officers is of far more importance than their number, and to improve this no pains must be spared. With this view a fair proportion of staff and detached employment must be open to officers of the European local force as compared with those of the native army, and the highest commands and a liberal share of honours must be as freely bestowed on both as on their brethren of the line; and the appointments in India, which their local experience renders them the most competent men to fill, must be mainly reserved for the local officers, both for the public good and as some compensation for their life servitude in a foreign and ungenial country.

The plans which I have proposed in the paper to which I before alluded for improving the character of the native army, should, so far as is practicable, be applied to those of the European force. Field officers should be selected men, and commanders of regiments especially so, with large powers and handsome pay, and all useless and incompetent men passed over in promotion, and compelled, when entitled to pension, to retire on it. In our service every officer is entitled to a pension according to length of service as well as according to rank. They begin at 20 years, and at the periods of 24, 28, and 32 years the pension increases. At present an officer may quit the service if he likes when he is entitled to a pension; I desire that the Government may have the power of dispensing with his services when he is entitled to a pension.

4087. (*Duke of Cambridge.*) Do you mean that a man may now claim his pension at a certain time?—Yes.

4088. And do you mean that according to your plan when the time came, that the Government should have the power to say "You must take it"?—Yes.

4089. They have not that power?—No. The Court of Directors, I believe, had that power, but the local government has not got it, and in my opinion it should be possessed.

4090. (*Chairman.*) Am I correct in understanding you to say that you consider that useless and incompetent officers should be passed over until entitled to a pension?—That they should be passed over in promotion, and that also when a pension came to them they should be told to take it and to leave the service.

4091. You would still retain them in the service until they were entitled to a pension?—Yes; so long as they were respectable, but incompetent.

4092. Do you think that a man would be of any use in the service who had been constantly passed over in consequence of incompetency?—I mean this case, I will suppose that there is a senior captain in his regiment and that a vacancy occurs, he is not a fit man and has served only 16 or 18 years; he may be a very respectable man, but many causes may make him a very incompetent officer; I should say to him, "You do not get your promotion, but at the end of 20 years you will get your pension."

4093. What do you suppose will be his position in that regiment in the intermediate time?—Not a very pleasant one, I admit.

4094. (*Colonel Burlton.*) Would you promote the second captain to be a major?—Not necessarily, for I have an idea that all field officers should be selected from the line.

4095. That is opposed to the Act of Parliament, which says that there shall be no interference?—But I consider that one Act of Parliament can annul another.

4096. (*Chairman.*) Will you proceed with your paper?—The position of captains and subalterns would not, in some respects, be so eligible as that of similar grades in the native army, supposing the plan I have proposed for its re-organization to be adopted, but they would serve with troops more congenial to them, and in time of war would have the post of honour and the best opportunities of distinction. And to prevent any just cause for dissatisfaction or jealousy, cadets might be appointed in England to the European and native branches according to qualifications or choice, as they now are to the engineers, artillery, and infantry, or to the different Presidencies. They should, as at present, be equally eligible for all staff and detached employ, an arrangement I consider indispensible for the efficiency of an Indian government and of the individual officers.

The commanders-in-chief of the armies of the three presidencies should, I conceive, be independent of each other in every respect, and to a great extent uncontrolled from home as regards the troops of the line. There will always be one general code of army regulations to regulate the more important matters of pay and discipline, but within those regulations there are many minor points of difference suggested by climate and service, in which it may be well to admit of latitude and discretion. Above all, no commander-in-chief or divisional-general should be named to an Indian command who has not, in addition to general fitness, had many years actual local experience, and those appointments, should as a rule, in proportion to numbers, be shared equally among the two services.

The third question is, "Whether it be possible to " consolidate the European forces so as to allow of " exchange from one branch of the service to the " other, and what regulations would be necessary and " practicable to effect this object with perfect justice " to the claims of all officers now in the service of " the East India Company?"—In the foregoing remarks there are various reasons advanced why the main European force of India should be a local service. I believe that the consolidation of the European forces and the power of exchange would be a double injury to India; it would deprive it of the efficient service it now receives from vast numbers of men whose natural abilities are devoted from their youth to the service and country, which they look upon as their life inheritance; while, were the armies consolidated, they would, as a general rule, feel no abiding interest in an uncongenial climate and people, but would turn their thoughts, wishes, and studies to the more agreeable prospect of home. I should fear further, that the power of exchange

Colonel J. Holland.

23rd Oct. 1858.

might be not unfrequently abused, and that men of influence would exchange into the Indian army for the special purpose of holding some influential command or lucrative appointment. Under any such system the officers of the native army would sink into an inferior caste, with no power to make their voice heard, and it cannot be too strongly urged that no army can have a high tone or be thoroughly efficient unless the officers learn to take a pride in it; nor can the Government of India be efficiently carried on unless the Governor-General has at all times a large body of thoroughly-trained officers at his entire disposal, and who look to him and him alone for honour and advancement. I think, therefore, an amalgamation of the two services most undesirable; and I am further of opinion, could the contrary be shown, that it could not be effected without seriously compromising the prospects and fair claims of the present officers of the Indian army.

Upon the last question, "Whether the local Euro-" pean force should be kept up by drafts and volunteers " from the line or should be as at present separately " recruited for in Great Britain?" I am inclined to think that both methods will be found expedient, but I should prefer not entering at length on a subject I have not sufficiently considered.

4097. You propose that for the future there should be only 23,000 or 24,000 British troops of the line in India?—Yes; that is supposing that 60,000 be fixed as about the whole European force to be kept up.

4098. Are you aware of the present number of British troops in India and upon the Indian establishment?—I believe, there are between 80,000 and 100,000.

4099. There are 103,000?—My computation is entirely as regards India when the present affairs are settled.

4100. Then you propose that 80,000 of the troops now paid by the East India Company should be withdrawn from that country, and that their places should be supplied by new regiments to be raised for the country?—Not to the extent of 100,000. I propose that all the excess above 60,000, which I look upon as the permanent establishment hereafter to be kept up, should be as at present from the line. I look upon the present as a special establishment for the suppression of the mutiny; I am supposing the mutiny to be suppressed and India to be restored to a state of tranquillity. I think that 60,000 European troops in all, will then be sufficient for all three presidencies.

4101. Of which 23,000 or 24,000 are to be from the regiments and the others are to be permanent?—Yes.

4102. You are perfectly aware that we have been raising new regiments in order to supply the wants of India in the late important crisis?—Yes.

4103. Do you propose that those regiments should be brought home and disbanded in order to give the local government an opportunity of raising new regiments?—It would be by a gradual process of reduction; a large portion would be transferred by volunteering.

4104. And the officers are to be placed upon half-pay in order to make room for officers for the Indian army?—Yes, I presume that that would follow; and as they have been augmented on the clear understanding that they are liable to be placed on half pay whenever no longer required, and as large numbers had in the meanwhile benefited greatly and permanently by increased promotion consequent on the augmentation, I see no hardship in placing the excess on the half-pay list, as it is always done in similar cases.

4105. What was the object in previous Acts of Parliament for limiting the number of Europeans to be raised by the East India Company?—That is more than I am able to state. I do not know what was or what could have been the object. I can only say that I think it is a great pity that it has been so limited. I never could see any good reason for it.

4106. Do you not think that one reason would be that if you were to raise a large army for permanent service in India you would interfere with the recruiting for the British army in this country?—I think not materially.

4107. What is the number of the permanent local European force in India at the present moment?—There are, I suppose, about 8,000 infantry and about 6,500 artillery; I should say in round numbers 15,000 men.

4108. You have had, since the year 1853, the power of raising 24,000?—Yes.

4109. How does it happen that you have not been able to raise that number during that period?—It was regarded too much as a matter of expense. They were greatly wanted; and had they been there, either the mutiny would not have broken out, or it would have been earlier suppressed. India was very much in want of European soldiers when the mutiny broke out. I believe that it was simply a matter of finance, but I am not able to speak with certainty on the subject.

4110. (*Duke of Cambridge.*) Why did not the East India Company in those days have those European troops; I presume it was because they did not like to pay for them in addition to the royal troops?—I am not able to answer the question, as I am not positive upon all the facts; I know that the East India Company, on more than one occasion, would have been glad to have increased their European forces, but the Queen's Government preferred employing the troops of the line.

4111. Could not they have had the troops of the line?—That would have doubled the expense; they would have had to pay for the troops of the line and for the local army too; and, as I said before, the not recruiting to the full extent of their power was simply a question of finance; they wished to keep down the expenditure of India, which was very heavy.

4112. I thought that the cost of a Company's European regiment was just the same as of a regiment of the line. Is not the actual cost of the establishment the same?—It must be pretty nearly the same in India; but you cannot divest it of the question of the cost of relief. A regiment of the line actually costs more to India than a local regiment, because of the cost of the relief.

4113. (*Viscount Melville.*) What was the cost to the local force of the men invalided and sent home and the draughts sent out?—I am not prepared to answer those questions of finance because I am not thoroughly conversant with them. I merely state what I know upon general grounds.

4114. (*Chairman.*) I believe you stated that you considered that no regiment would be useful in India until after having been for two or three years accustomed to the climate?—The present service shows that the regiments which have been just landed are very useful, but with a qualification. A regiment newly landed and sent into the field, loses men from their not being sufficiently acclimatized.

4115. (*Duke of Cambridge.*) Have you any reason to believe that that has been the case in the recent operations?—I have not seen the returns; but I speak from long experience in the quartermaster-general's department, where I had to regulate the march of great numbers of European troops and newly-arrived troops for very many years; we always considered it necessary in Bombay to acclimatize our newly-arrived regiments by sending them to one of the healthy stations near the Presidency, keeping them there two or three years to acclimatize them—and that acclimatizing is more than as regards the health of the men, though there is a great deal in that—it is that officers and men may learn the precautions to be taken as to health and something of the native language, customs, and character. When a regiment newly arrives, if it has to be marched only fifty miles it must have a local officer with it. One of the arguments against employing an overwhelming force of the line is, that you will always have a certain

Colonel J. Holland.

23rd Oct. 1858.

proportion of regiments who are unacclimatized, and therefore, to a certain extent, not available for service. If you had the larger proportion of the troops local they would all be acclimatized; whereas if you had the larger proportion of them line regiments there would at all times be a considerable number not acclimatized; and although in any emergency we never hesitated to send a regiment landed today into the field to-morrow, yet we always endeavoured to keep back a regiment two or three years.

4116. (*Chairman.*) You say that you consider that a permanent European force in India would be more useful than one landed from this country; is there any reason to believe that that has been the case hitherto?—I think that as regards the service of the men, with the exception of the mere fact of acclimatizing, they are very much the same. Whether the Indian artillery or the royal artillery are in India, they are equally good.

4117. You have never had an opportunity of seeing the royal artillery in India?—I never had an opportunity. I speak only from hearsay.

4118. Take the regiments of the line who were out there when you were there?—I saw no superiority of the one over the other in any respect, beyond this, that the royal regiments had most officers, and that the local officers had the advantage of local experience.

4119. Was the discipline better in local regiments than in regiments of the line?—No.

4120. Was it as good?—I think so, taking one with the other. I have seen regiments of the line in first-rate order, and some in very bad order; I have seen the same in the local infantry.

4121. How long had the regiments of the line that you saw in bad order been in India?—Various periods. I do not think that that has anything to do with the state of a regiment. I think that its state depends mainly upon the commanding officer.

4122. (*Duke of Cambridge.*) Inasmuch as you say, very justly in my opinion, that it would be a great advantage to the army of the line to have a field open to them in India, why would you exclude the royal artillery from that field? Admitting your argument that there should be a local force, should not a portion of the entire force be artillery of the line?—The special reason which I gave against that was, that as in case of a war in Europe there would be a recal of many troops of the line from India, the artillery would be the first to be recalled, and they are the last that could be spared, because we have to some extent a resource in India as regards cavalry and infantry; we can afford to raise more natives in both branches to fill up a temporary deficiency, but it would not be prudent to employ additional native artillery.

4123. Putting that consideration on one side, and assuming that the government would not do such a thing, do you not think that it would be an advantage to have some of the royal artillery in India for the sake of the service?—For the sake of the royal service I have no doubt it would be useful.

4124. (*Major-General Hancock.*) Do you mean that the advantage to the public service of having a portion of the royal artillery in India would not be equal to the disadvantage of having both royal and local artillery in that country?—I think it would be an advantage to the royal artillery to have a portion of them in India; but I think it would be a disadvantage to the public service to have any considerable portion of them there.

4125. (*Duke of Cambridge.*) Why?—One of the reasons which I have mentioned is the liability of their being withdrawn. Another reason is that in all probability if the royal artillery were sent to India, they being formed under a peculiar constitution, would be sent with their own staff, and that is rather a hampering arrangement. The quartermaster-general of the Queen's army in India, for instance, is a gentleman of handsome pay and very considerable leisure, and I think that if you sent out the royal artillery you would probably send out an adjutant-general and certain other staff officers, which would encumber the Government.

4126. Those are departmental matters which could be got over?—They are minor difficulties, certainly.

4127. Is there any other reason for your objections?—I am not aware of any other reason beyond what I have stated.

4128. You stated that the interference of the military authority at home was very undesirable. In what respect does that military authority interfere in anything except in the ordinary routine of discipline, which I apprehend you do not intend to take out of the hands of the military authority?—I think your Royal Highness has put rather a stronger term than I made use of. I said that I proposed that the interference of the home authorities, even with the troops of the line, should not be so great as it is at present.

4129. In what way is it so now?—I think that under the present arrangement orders are occasionally sent out from home, and arrangements are made from home with reference to the well-being of the soldier as he is in Europe, without sufficient consideration of local peculiarities.

4130. What orders?—Matters, for instance, connected with dress. As I have happened to mention dress, I will continue that point in illustration. The British soldiers are dressed according to certain regulations which emanate from the highest military authorities in England; no authority in India ventures to interfere with them. That may have been changed within a recent period; I speak of about two years ago when I was last in India. They were on the whole dressed very much the same as they are in Europe, and in many respects I think that alterations, had they been within the power of the local commanders to execute, would have been very beneficial for the health of the men.

4131. (*Chairman.*) Is not every regiment on its arrival in India furnished with light clothing?—I believe it is furnished with what is called light clothing in England.

4132. Does not that description of clothing depend entirely upon the Indian government, without any "interference" in this country at all?—I have always been under the impression that the uniform furnished to the British soldier in India is under regulation from the Horse Guards.

4133. (*Viscount Melville.*) I believe you were in the quartermaster-general's department. Can you produce any order either from the commander-in-chief in Bombay or from the commander-in-chief in India, that in any way regulated the white clothing which you may recollect the British soldier wore, and which he paid for out of his own pocket?—I do not understand the question; will you be kind enough to put it again?

4134. Can you produce any order from the commander-in-chief in India, or from the commander-in-chief of the presidency which emanated from the home authorities, in respect to the white clothing to be worn by the British soldier; and do you not know that the white clothing worn by the British soldier, was supplied under the control of the commanding officer, and paid for by the soldier himself, and not by the Company?—I do not think the question bears reference to the position which I have advanced. It is not with regard to the white trousers of the men, or what may be called their white clothing; I simply say that in my view the uniform of the British soldier in India, as regulated in England, according to what I have always been given to understand, is not suitable to the climate of India generally. I will mention, for instance, the Highlanders; I have seen the Highlanders in India, going on guard with their bare legs, exposed to the heat of the sun by day, and the chilly dews at night, and to the mosquitos and other insect plagues; that is a dress totally unsuited to India; but I believe no commander-in-chief in India ever had it in his power to alter it; it was ordered from home.

Colonel J. Holland.

23rd Oct. 1858.

4135. (*Sir Harry G. W. Smith.*) Are not the Company's European troops similarly clothed and equipped to the royal troops?—They are so.

4136. (*Duke of Cambridge.*) Why are they so?—With the object of assimilation, that there may be no distinction between the two. If, as your Royal Highness has stated, it is in the power of the commander-in-chief in India to dress the soldier in any way he pleases, then whatever I may have said with regard to the interference of the home authorities in that respect is inapplicable; but I have always been under the impression, and it is a common one in India (I believe there are other Indian officers present who will bear me out), that the dress of the British soldier is regulated from home.

4137. (*Major-General Hancock.*) Do you remember a letter coming from the Horse Guards during the time that General Auchmuty was in temporary command of the Bombay army, severely censuring the commander-in-chief, Sir John Grey, for having issued an order authorizing mustachios to be worn by all European commissioned and non-commissioned officers of that army, serving with native corps, or on detached employ, and directing him, if the order applied to Her Majesty's troops, immediately to cancel it?—Yes; I was going to mention that case myself as an illustration. I perfectly recollect General Auchmuty, showing me the letter which arrived in India just after Sir John Grey had left; General Auchmuty showed me the letter, and certainly could not help smiling himself at such an instance of the interference of the authorities at home. It was certainly a trifling case, but if the Horse Guards can interfere in a matter like that, I should think that I was borne out in my impression that they had also the power of interfering with the dress. I have also heard the late Lord Frederick Fitzclarence lament his inability to take the stocks off the necks of the Queen's soldiers under his command, as he had done off those of the Company's.

4138. (*Chairman.*) In what year was that?—I am not certain about the year, but it was just after Sir John Grey left India, only a few years ago.

4139. (*Viscount Melville.*) Can you produce any order either from the commander-in-chief in Bombay, or from the commander-in-chief in India, which emanated from the home authorities, regulating the white clothing to be worn by the British soldier?—I have it not in my power, I have no papers here. His Royal Highness has already stated that it is not a fact, that the dress of the soldier in India is regulated from home, that is quite sufficient to correct my impression.

4140. Do you think that it is possible to do away with the cloth clothing which the British soldier wears in India?—I think that it would be very injudicious to do away with cloth clothing undoubtedly. I beg to mention that I have been a great deal at head-quarters in the presidency of Bombay, and with many commanders-in-chief, and I have heard several of them complain of the dress, and lament their inability to alter it. They have made representations, I believe, upon the subject; the representations have most probably come through the Governor-General, and probably through the Court of Directors; how far they have gone I cannot say, but of this I am certain that I have often myself heard commanders-in-chief lamenting their inability to dress the soldier in a manner more consistent with the nature of the service to be performed.

4141. (*Duke of Cambridge.*) As a military man surely you will admit that every commander-in-chief is not to change the clothing of the army to suit his own fancy?—Certainly not.

4142. (*Viscount Melville.*) Since you say that cloth clothing in India cannot be dispensed with, in what respect would you alter that clothing, and what arrangements would you make when troops go on service for the carriage of both the cloth clothing and the light clothing?—I would alter, for instance, the dress of the Highlanders, to whose case I have alluded, for service in India; they are, I think, very injudiciously dressed; their full-dress caps are exceedingly heavy and burdensome, and their kilts are very inappropriate also.

4143. (*Chairman.*) You admit that the troops in India wear light clothing?—Yes; light clothing in hot weather to a certain extent, but not sufficient.

4144. There is no pattern of light clothing here, and we do not even know here what is the light clothing worn by the troops in India; therefore the nature of the light clothing given to the troops in India must depend upon the authorities there and not here?—All I can say is that there is a misunderstanding.

4145. (*Duke of Cambridge*). Would not that modify your ideas very much?—No doubt what your Royal Highness has said modifies my ideas considerably, because you have said that there is no interference at the Horse Guards with the clothing of the troops in India. I was always under the impression that there was a very considerable interference, that a rigid law was laid down which no commander-in-chief in India dared interfere with. General Hancock has also alluded to the stock, and which, I believe, Lord Frederick Fitzclarence tried to do away with; he took it from the local army, but not from the troops of the line, feeling that he had no authority to do so.

4146. (*Viscount Melville.*) Since you say that cloth clothing in India cannot be dispensed with, in what respect would you alter that clothing, and what arrangements would you make when troops go on service for the carriage of both the cloth clothing and the light clothing?—I think that with regard to the first part of the question, it is sufficient to give a general answer, that the cloth clothing should be made as easy and suitable to a climate like that of India as possible. With regard to the second part of the question, when troops go on service in the cold weather, they would naturally wear their warm clothing, and their light clothing would be in depôt, and would be forwarded to them afterwards; when they go on service in the hot weather, they would wear their light clothing, and their warm clothing would be placed in depôt and forwarded to them afterwards, should the carriage of the army be insufficient for both.

4147. Are you not aware that even in the cold season, as it is called, in the day time it is excessively hot, and at night when lying out it is absolutely necessary to have cloth clothing?—I am perfectly aware that that very frequently is so; and I think it highly advisable that European soldiers in the field should be provided with warm and with light clothing, and that additional carriage should be furnished, if necessary, by the government of India for the carriage of whatever additional clothing was requisite.

4148. (*Duke of Cambridge.*) You have said that your impression had been that no commander-in-chief would venture to make any alteration in the clothing in India that did not emanate from home. As it is a fact that there is no pattern of summer clothing for India, and as it is also a fact that every regiment in India, both the Queen's regiments and the former Company's regiments, have had summer clothing, is not there in those two facts alone a deviation from what you have stated, namely, that the commanders-in-chief could not act upon their own responsibility; How was the summer clothing introduced, as it is not in the regulations?—I stated before that it was entirely a matter of impression on my part; General Hancock has confirmed me that I was right so far as the impression went. There are other Indian officers, I believe, present, who I dare say will bear me out in the same impression. Your Royal Highness has stated that the impression is based upon an error, and therefore I admit the correction; but I beg leave to refer to the illustration which has been mentioned as a proof that I was not altogether wrong in supposing that the Horse Guards did interfere in the details of the army in India, namely, the illustration of the cutting off of the mustachios, and the giving a severe reprimand

Colonel J. Holland.

23rd Oct. 1858.

(for the letter was a very rough one) for permitting the officers of the Queen's army in India to wear that irregular appendage.

4149. (*Viscount Melville.*) Do you not know that in Scinde neither the Queen's nor Company's troops ever wear, from the 1st of March to the 1st of November, anything else but white jacket and trousers?—I am aware that light clothing is frequently worn by troops in India, but I also know that the regulation cloth clothing is often worn when it is injurious.

4150. (*Sir Harry G. W. Smith.*) What is the composition of the red jacket of the sepoy?—It is made of an inferior kind of cloth to that of the European soldier.

4151. But it is still cloth?—Yes.

4152. (*Marquis of Tweeddale.*) In consequence of an allusion having been made by Colonel Holland, to an interference with the dress having taken place at the Horse Guards, I am in duty bound, having seen it happen while I was in India, to state a case. The 15th hussars wore a foraging cap, which they had been allowed to wear in consequence of having overcome a regiment in the German service who wore a foraging cap, and that regiment since they had fought that action in Germany had always worn a light foraging cap without a peak. The surgeon reported, and the report came to the commander-in-chief, as well as to the military board, that it was a very inconvenient dress, that the men walked about and got ophthalmia in consequence of it. I said "Why cannot we order another cap?" It was said by my adjutant-general of the Queen's service, "We cannot do it without the order of the commander-in-chief at home." I could see no regulation to justify it. The circumstance was reported home to the Duke of Wellington, who was commander-in-chief at the time, and he ordered the cap to be discontinued.

4153. (*Sir George A. Wetherall.*) You know the enormous amount of carriage required in India?—Yes.

4154. The 43rd regiment moved the other day, having all their light clothing in possession. They were ordered to move one wing from Madras and the other from Bangalore, and they are now at Calpee; they marched 2,000 miles. You admit, as every officer who has served in India admits, that cloth clothing is indispensable in some part of every day?—Not to that full extent.

4155. The 43rd regiment have now been some years in India, and they had to choose the alternative which suit they should leave behind them, taking the opinion of the general officers and of everybody else of experience. They marched to Calpee without being able to carry their light clothing, taking their cloth clothing in preference. From my own knowledge we have illustrations and proofs that the two healthiest regiments who have served with Sir Hugh Rose are two regiments who have worn their cloth clothing throughout, namely, the 14th dragoons and the 86th; they wore their shakos and cloth clothes and they had no light clothing?—If I had to choose between warm clothing and light clothing I would certainly give the preference to the warm; but I see no difficulty, as a general rule, in giving them both.

4156. I have given you a practical difficulty?—In a case like that there is no help for it. With regard to the 86th, I happened to know that regiment; I have seen a great deal of it, and I think I can give one clue to its extraordinary healthiness. For some years, when I knew it, it was, I believe, one of the most sober regiment in India. It stood pre-eminent as a sober regiment.

4157. You have stated as a reason for having the European force local to a very large extent, the incalculable advantage which the officers of such local corps would have in commanding, whether in the field or at stations, over officers without experience?—Yes.

4158. Has any evil arisen to your knowledge from the inexperience of officers who have had less local experience than those officers belonging to native corps. Various officers have been sent out lately, for example, to India who have never before been in India; have they failed in anything from the want of local experience?—I merely stand upon the general ground which I think every one will admit, that local experience is of very considerable advantage to any man. Supposing you take two officers of equal natural abilities, and equal in every other respect, but the one having considerable local experience and the other not, which of the two would you select for duty in a particular country? I put it entirely upon that ground.

4159. For example, take Rose and Michel, and various others, who were never in India before?—I knew General Michel in India myself.

4160. (*Duke of Cambridge.*) Take Rose?—I am far from saying that because a man has never served in India therefore he is not fit to command an army there; any such proposition would be absurd on the very face of it, when we have eminent men in command who were never in the country before. I merely say, that of the two the man with the local experience has a very great advantage over the other.

4161. (*Major-General Hancock.*) All other things being equal?—All other things being equal.

4162. (*Due of Cambridge.*) You said that it was a great object that the Governor-General should have a body of officers at his disposal. I presume that if the regiments were regiments of the line, those regiments would be quite as much at his disposal as any others in India?—I think I said, officers with local experience at his disposal.

4163. (*Major-General Hancock.*) You said at his entire disposal?—At his entire disposal.

4164. (*Duke of Cambridge.*) What do you mean by "at his entire disposal?"—I do not consider that officers of the line would be at the entire disposal of the Governor-General.

4165. Why not?—I think they are always liable, in the first place, to recal by order, and in the second, to recal by their own choice. Supposing a war to occur in Europe, the Governor-General would very probably lose half of his best officers; they would take the first opportunity of availing themselves of any possible means of getting to Europe, in order to have a share in the war. In a local army they cannot do that; I think in that way you would deprive the government of many of its very best officers.

4166. (*Sir G. A. Wetherall.*) You said that no officer should be placed in command of a division of the army who had not served in India and had local experience?—I think as a general rule that is a very sound and proper one.

4167. That debars everybody from going?—No. If a number of officers of the line serve in India, they must serve in all grades; there must be subalterns, captains, and field officers; and if some 24,000 troops of the line are always serving in India, it will be very hard if you cannot pick out a certain number of qualified men for the divisional commands.

4168. You said that no officer should be placed in the command of a division who had not had local experience and served in India?—Certainly; I think so, as a general rule.

4169. You also said that the officers of the local European corps had a great advantage, because they were better acquainted with the customs of the natives. Do officers of European corps in the East India Company's service associate more with the natives and know more of them, in your opinion, than officers of Queen's regiments?—Yes; and I can give a reason.

4170. Some of them have been in native regiments?—Yes; and not only that. When officers rise to be lieutenant-colonels in the Indian army they are available for general service. It is all considered as one service, and although, no doubt, they look most after their own immediate corps; yet, by doing field duty, and duty with native irregular corps, and in civil and miscellaneous appointments, they are constantly brought in contact with the natives; and, therefore, you will find that the officers of a local European

Colonel J. Holland.

23rd Oct. 1858.

corps, on the whole, have a very much greater acquaintance with the natives, and with everything connected with India, than those of a regiment of the line.

4171. (*Duke of Cambridge.*) Supposing you were to open to the officers of the line the same advantages that you have hitherto opened merely to the officers of the former Company's service, would not the same result follow ?—I think not, because they would not have what may be called the abiding interest which the officers of the local service have. An officer who goes to India at the age of 16 or 18 says, "Here is the "place where I am to pass my life. I look to the "governor and commander-in chief above me as the "only authorities I know, and the service in India is "everything to me." If he has anything in him he devotes all his thoughts, views, and acquirements to the study of and acquaintance with India and everything connected with it. An officer of the line, a man equal to him in every other respect, goes to India under a different view. He says, "I am here only "for a short time; it is an exceedingly disagreeable "country with a bad climate, bad eating and drinking, "bad for health, everything almost that is disagreeable; either my regiment will go home soon, or I "have friends at home who can manage to make an "exchange for me, or I have money and I will purchase into another regiment." All these causes are operating constantly; that there are exceptions there is no doubt. Your Royal Highness has mentioned one or two very eminent exceptions, and one must always be prepared for them; but my argument is, that if you wish to get for the Indian service the greatest number of efficient men you must always make the main body a local force.

4172. (*Viscount Melville.*) Do you mean European as well as native ?—Yes.

4173. In native regiments the European officers do not associate with the men or with the native officers particularly ?—They did when I was a regimental officer.

4174. They do not now, do they ?—I am not qualified to say from actual knowledge. I believe that they do not to the same extent as they did, but when I was a regimental officer we did to a great extent. We used to take out the men of our companies in hunting parties and shooting expeditions. The native officers were always welcomed, and received with respect when they went to call upon their European commanders. The officers would attend at some of the native ceremonies and festivals of the men, and give money to assist in them, and there was a great feeling of kindness and brotherhood between them.

4175. (*Chairman.*) Your view of the future organization of the Indian army is influenced a great deal by a regard to Indian interests, without any reference to what the effect would be upon the British army. You look at it as an Indian, and not as an imperial question ?—My opinions have been given entirely in regard to the public interests of the Indian service, and not in the slightest degree, so far as I am able to divest myself of it, with any care or thought for any private interest, but I have stated what I consider to be the best for the Indian service. I view it mainly in that light, undoubtedly.

4176. (*Duke of Cambridge.*) Supposing that there would be no great difficulty in producing an amalgamation of the services, do you think that there would be any difficulty or any objection in maintaining the present European force in India recruited generally by volunteering from the line, leaving that portion local, but not adding to it ?—I should object to leaving the local European force of India at its present relative strength. I think that it tends to keep them down, and to lower them somewhat in their self-esteem, finding that they are only a very small body, and that they do not carry much weight.

4177. As a military man do you think it a good thing to have two coequal armies one against the other? —I think so; they would all be equally under the same commander-in-chief, and equally amenable to the same Articles of War; I see no objection to their being mixed together in certain proportions, provided they are on a footing of equality. I may say that I see no particular benefit, as respects India, from having troops of the line there. I think it is a very great advantage to the English army.

4178. (*Chairman.*) Latterly has it not been of advantage to India ?—Latterly it has, of course; but if you had had 100,000 local European soldiers they would have been just as good as 100,000 soldiers of the line.

4179. (*Duke of Cambridge.*) On military principles, do you not think that an army which can go anywhere and do anything is better than one which can only be employed in one place ?—Not for Indian service.

4180. But on military principles ?—That is a matter which I think does not come exactly within the scope of the questions; I am here to be examined upon the question of India.

4181. (*Viscount Melville.*) The local force which you propose to maintain in India is to be recruited in this country ?—Of course it must be.

4182. That necessarily is a competing force with Her Majesty's army, and the expense is exactly double for each recruit to what it is for one in Her Majesty's service, are you aware of that ?—I have seen a statement signed by the military secretary at the India House, dated in April last, that "the bounty and levy "money is the same in both services."

4183. And the expense ?—I consider that those are matters which might be very easily arranged. It is all henceforward Her Majesty's army, and if the army in India is to be an efficient one there should be no difference, beyond name, between the two portions; they should be simply the army of the East, and the army of the West, and there should be nothing like competition; recruits should be supplied equally for one as for the other, according to the wants of the public service. I cannot see why it should be looked upon as a foreign or antagonistic service in any respect.

4184. (*Duke of Cambridge.*) Is it not human nature, that if there is a great distinction in two services there cannot be unity of action, and will not it produce natural jealousies and honourable jealousies— not emulation, but honourable jealousies ?—I think that those jealousies exist at present to a very considerable extent in India, but I think that they would be greatly obviated by the system being altered. I think they exist, because the officers of the line have many advantages over those of the local army. With one rare exception, if I am not mistaken, there has never yet been a commander-in-chief selected from the local forces for any one of the presidencies, although forming the bulk of the army. There is also a much larger proportion of the divisional commands given to officers of the line, so that in time of war the main commands and the chief honours fall to the officers of the line. That has created a feeling of jealousy, and that, I think, should be obviated. When I left India there were eighteen divisions of the army, and a rule had been laid down, that thirteen of those were to be held by Company's officers for one tour, and twelve for another tour. If you had taken the number of officers of the two services you would have found that the officers of the Company's service bore the proportion of nearly six to one, while the troops were more than ten to one; whereas the divisions were given in the proportion of about two to one. The commands should be given in an equal proportion.

4185. Would you not get rid of the whole difficulty by having but one army ?—You would get rid of that difficulty no doubt; but then I think there are other difficulties.

4186. You said that the distribution of honours was not fairly proportioned ;—Yes.

4187. In what respect ?—In consequence of that very fact which I have just pointed out, if the superior commands are given in what I consider they have been, an undue proportion to the officers of the line, especially on field service; the chief honours fall of

Colonel J. Holland

23rd Oct. 1858

course upon the chief officers—they are the persons who come in for the highest rewards and the highest honours, and it is very proper they should do so; therefore the officers of the line get by that very means what I consider an undue proportion of the honours.

4188. (*Sir Harry G. W. Smith.*) You have stated, and very justly so, that when a young cadet goes to India, his sole thoughts are upon India, and he looks up to the Indian authorities; what will be the feeling now that the whole army has become royal?—I do not think it will make the slightest difference provided you make the royal army of India a local army mainly; they will still be attached to India in the same way.

4189. (*Major-General Hancock.*) You mean that, provided both be placed upon a perfect equality in every respect, there will be no ill-feeling, but only a proper and good spirit of emulation between the two services?—Precisely so.

4190. (*Viscount Melville.*) Are those 60,000 Europeans to be commanded there totally irrespectively of the authority of the commander-in-chief in this country?—Those of the local army I should undoubtedly say should be so, and those of the line army should be so merely so far as regards matters of interior economy.

4191. Do you think that you will get Parliament to sanction that principle?—Upon that I am not able to give an opinion.

4192. (*Sir Harry G. W. Smith.*) Admitting that any interference on the part of the commander-in-chief in England has occurred to the army in India, are you aware whether any injury has occurred to the army in India in consequence thereof?—If I am correct in supposing that the commanders-in-chief in India have been deprived of power, which very often they might have exercised but for the controlling power at the Horse Guards, and which I conceive with their local experience they could have exercised beneficially, then I think it is self evident that injury must have occurred.

4193. (*Major-General Hancock.*) Are you of opinion that the native army of India could be as efficiently officered by officers from Her Majesty's regular army as by officers enlisted for service in India and belonging to the local army?—Certainly not.

4194. (*Viscount Melville.*) Do you think not, if they learnt the language?—Certainly not. I think I have answered that question already, and given the reason for it, that it is requisite that you should have officers who are devoted to the particular service to induce them to look to India as their home.

4195. (*Major-General Hancock.*) Are you not of opinion that if the whole European army for India were furnished from Her Majesty's regular army, the native army would be so looked down upon as to make it a service which no British officer would feel himself honoured in belonging to?—Certainly. I think that no man of spirit could wish to continue in such a service.

4196. (*Duke of Cambridge.*) For what reason?—It would be looked upon altogether (to use an Indian phrase) as a low caste service—as a subordinate service; it would be looked upon as something in the light of the Sierra Leone corps.

4197. Suppose very high rewards, distinctions, and honours, are specially given to officers in the native regiments, and that arrangements are made holding up the native regiments as an inducement for a spirit of emulation to acquire positions in them, instead of the reverse?—You may give high pay, you may make the service, to a certain extent, desirable in point of emolument; but if you officer it in the way that General Hancock supposes you never can have men who will take a real interest in it; it will be looked upon as an inferior service.

4198. Why?—The natives of India are in themselves an inferior stamp of men to the Europeans; the service is not so congenial to European soldiers; and if you cut it off altogether from the European local army, I conceive that there will be at once a line of distinction drawn between the two.

4199. Why should not that distinction have existed between officers in the European regiments of the former company and officers in the native regiments?—Because they were always interchangeable, and did interchange.

4200. Why should they not be interchangeable now?—What I stated was in reply to General Hancock's question, supposing the native army to be officered from the royal army, and not being an army of itself.

4201. Supposing that the European army of the line and the native army form one army, what difference will there be, they being on a perfect equality, or, on the contrary, rather raising the position of the officers of the native army, those officers being selected for merit, and talent and acquirement?—There would then be no local service; and then, for the reason which I have already repeated three or four times, the officers not being enlisted as it were specially for local service in India, would have their thoughts centred elsewhere; they would not give that attention to the service in India which they do at present.

4202. (*Major-General Hancock.*) Their only tie to the native army would in that case be the superior emoluments which would fall to them?—That would be all.

4203. (*Sir Harry G. W. Smith.*) With regard to the remark as to the distribution of honours to the Company's army, are you aware that there are now four officers of the Company's army aides-de-camp to the Queen?—I think it is very possible that there may be that number, but I do not think that it alters the fact, seeing that there are fully thirty officers selected from the line and militia for that honour. The special fact which I mentioned was this, that the commanders-in-chief in India are selected from the line; there has only been one exception.

4204. My question had reference to honorary distinctions?—Even with regard to honorary distinctions, I suppose, if you took a numerical estimate of the Queen's officers and the Company's officers, you would find that the latter had not a full proportion of honours. My statement referred especially to the fact, that the Queen's officers take the largest proportion of the highest commands, and with those the greatest opportunities for distinction.

4205. (*Duke of Cambridge.*) With all deference, I cannot quite agree to that?—I mean in proportion. If you will be good enough to take the number of Queen's officers serving in India and the number of Company's officers serving in India, and also the number of divisions at any time before the mutiny occurred, you will find that a much larger proportion of Queen's officers held divisional commands than of Company's.

4206. There are only five officers by regulation?—The number of divisions held by line officers is alternately five and six; that of local officers twelve and thirteen. In Bombay the line officers hold two and one alternately; and the local officers three and two.

4207. In alternate years two, and otherwise one?—That is merely number and not proportion; it is the proportion which the Queen's troops bear to the Company's troops that I apprehend should make the rule.

4208. Then the result would be that the Queen's troops would be merely auxiliary to the troops in India?—I would have it so, unquestionably.

4209. (*Viscount Melville.*) The proportion which the Queen's troops in Bombay bore to the Company's troops, was as 10,000 to 30,000; there was one divisional command for the Queen's officers, with an alternate second one, and the rest for the Bombay officers?—Your Lordship will pardon me, when I left Bombay, and for some time before, there were only five Queen's regiments, including the dragoons. There were three regiments of European infantry of the Company's

Colonel J. Holland.

23rd Oct 1858.

service, five battalions of artillery, three battalions of engineers, three regiments of cavalry, and twenty-nine battalions of native infantry regulars, besides a large number of irregulars. There were five regiments in the Queen's service against more than forty of the Company's regiments, yet, at the very lowest, the Queen's officers had one-fourth of the divisional commands, and every alternate season one-half.

4210. Are you aware that some officers have recommended the abolition of the native officers; are you of opinion that it would be an advantage to retain them or to get rid of them?—Certainly to retain them.

The witness withdrew.

Major-Gen. Sir T. H. Franks, K.C.B.

Major-General Sir THOMAS HARTE FRANKS, K.C.B., examined.

4211. (*Chairman.*) You are now a major-general in the Queen's service?—I am.

4212. How long have you served in India?—15 years.

4213. During which time I believe you recently commanded a division in the field?—Yes.

4214. You have had some questions put into your hands. Have you formed any opinion as to how far the European portion of the army in India should be composed of troops of the line, taking India as parts of the regular tour of service, and how far of troops raised for service in India only?—I am in favour of the whole being troops of the line.

4215. Upon what grounds do you form that opinion?—The advantages of having an army recruited, drilled, organized, and regularly relieved from England at stated periods, and all acting under the same system of command, are obvious; besides, to carry out a regular system of relief to a force so constituted it would be necessary to have a large reserve in England, which would be available for the defence of the United Kingdom, or for other purposes if required.

4216. With reference to India, looking to India alone, what is your opinion?—That a force so constituted would be more efficient.

4217. (*Duke of Cambridge.*) In what respect will you have a more efficient army?—In respect to the points which I have already named.

4218. Do you consider it an advantage that regiments should come fresh from England or not?—I do.

4219. Why, because of the climate?—Because of the climate.

4220. Do you think that the discipline deteriorates in India?—Certainly, after a lengthened period of service in that country. I should say after 12 or 13 years.

4221. (*Chairman.*) You think 12 or 13 years in India quite long enough for an European?—Yes.

4222. (*Major-General Hancock.*) Do you think that the local European force of artillery and infantry hitherto serving in India has been in any respect inferior, as regards efficiency for service in the field, to any of Her Majesty's regiments in the same branches?—I have served in the field with portions of the local European forces of artillery and infantry of the three presidencies, and nothing could surpass their gallantry, efficiency, and intelligence; but from what I have heard, and from my own experience, they were not equal in discipline to Her Majesty's regiments when in quarters.

4223. (*Duke of Cambridge.*) That want of discipline to which you allude I presume you attribute to climate?—Partly the climate, and partly to other causes; for instance, they generally had too few officers attached to each corps.

4224. (*Major-General Hancock.*) With regard to discipline in quarters, upon what do you consider that the discipline of a regiment principally depends?—A great deal depends on the commanding officer.

4225. Principally?—Certainly, provided he is properly supported by his officers.

4226. Are you of opinion that if a regiment be commanded by an officer perfectly well qualified for the command; and if there be a sufficient number of officers under his command, the regiment ought to be perfectly well disciplined?—Generally speaking it ought to be.

4227. (*Duke of Cambridge.*) Do you think that climate has nothing to do with the want of discipline?—Of course after a long service in India both officers and men in a certain degree lose their energies, but I have known exceptions.

4228. The climate is enervating?—Of course.

4229. (*Sir Harry G. W. Smith.*)—Your regiment, the 10th, was in the finest order of any regiment in the British army when I left India; has it deteriorated in its discipline?—I never saw Her Majesty's 10th foot in finer or more efficient order than when it served in my division in the field within the last few months, although it never had the advantage of being cantoned in a hill climate, which by the bye I consider it ought to have had in turn with other corps. I could also mention instances of other regiments being in first-rate order, after having served even longer than the 10th in India, viz., the 16th lancers and the 40th foot, but I consider these were rare exceptions.

4230. (*Chairman.*) It has been stated that there is a great superiority on the part of officers permanently attached to corps in India, have you observed that superiority; do you consider the permanent European force superior to the British force sent out there?—I do not.

4231. (*Sir Harry G. W. Smith.*) Although you state that your regiment is in that high order, in the period to which that refers how many officers and men have renovated that regiment from your depôt at home?—About 1,200.

4232.—(*Viscount Melville.*) Do you mean that they have been buried?—No, I mean casualties of all sorts, viz., men killed in action, died of wounds, and other causes, invalided and discharged.

4233. Dead?—No, casualties of various kinds.

4234. (*Sir Geo. A. Wetherall.*) How long has the regiment been in India?—16 years.

4235. (*Duke of Cambridge.*) Still the question is, whether that local experience would not be acquired in about five or six years?—Certainly it would.

4236. You are of that opinion?—Yes; I am of opinion that local knowledge is of the greatest advantage to all ranks, but more particularly to the superior officers who are likely to be placed in commands; but it does not require an officer or soldier to serve his whole life in India to acquire this experience, five years ought to be amply sufficient.

4237. Therefore as regards maintaining a local force, upon that ground you do not see any great necessity for it?—Certainly not.

4238. (*Major-General Hancock.*) Are you aware that the local troops, the artillery especially, have been always much under officered as compared with Her Majesty's regiments?—Yes; and I have considered this as one of the causes of their not being equal in discipline to Her Majesty's troops in quarters, but long residence in the country I consider the chief cause.

4239. Do you think that the officers on the staff of the army in India, furnished from the local troops, have been found in any respect inferior to the officers of Her Majesty's service on the staff of the army?—Certainly not.

4240. (*Duke of Cambridge.*) Have they been found superior?—I have already given an opinion on this subject before another Commission, that I considered officers of the Company's service generally made more efficient staff officers than those of Her Majesty's service, but I am glad to have an opportunity of here explaining what I considered to have been the cause. Until recently, the latter have had no encouragement to qualify themselves, as they were almost entirely debarred from staff employment of every sort, but

Major Gen Sir T H. Franks, K.C.B.

23rd Oct. 1858.

matters have greatly changed of late, and particularly during the last campaign, when the field was thrown open to all, and Her Majesty's service produced numbers of first-rate staff officers.

4241. Do you attribute that to the fact of there being fewer opportunities of employing officers of the line as staff officers ?—Of course.

4242. Do you think that if that restriction were removed it would make any difference ?—Of course ; it has made a difference.

4243. I believe your experience has been confined to the Bengal presidency ?—Yes.

4244. Is it within your experience that the officers of the Queen's army have been largely in excess in staff appointments to the officers in the Company's army ?—On the contrary, until recently, there were very few staff appointments open to Her Majesty's service.

4245. We have it in evidence that the Company's officers have not been equally favoured with the Queen's officers in the command of divisions ; is that your opinion ?—Until lately there were only two divisional and three brigade commands allotted to officers of Her Majesty's service in the Bengal presidency.

4246. Was the number allowed to the Queen's in undue proportion ?—I do not think so.

4247. (*Major-General Hancock.*) How do you calculate the proportion ; do you take the proportion to the number of officers ?—I am not prepared at this moment to calculate the proportion, but I am under the impression that there was no favoritism towards the officers of the Queen's service in regard to commands.

4248. (*Viscount Melville.*) Will you have the goodness to state what Queen's officers were on the staff, for I have never heard of them ?—I am speaking of the divisional commands.

4249. (*Duke of Cambridge.*) How many divisional commands were there in Bengal ?—I believe eight formerly, two of which were held by Queen's officers.

4250. What approximately was the force of the army of Bengal before the war ?—I cannot exactly recollect at this moment.

4251. Was it about 200,000 men, natives and Europeans ?—I should think so.

4252. And there were two divisional commands out of that number ?—Only two held by Queen's officers in the Bengal presidency.

4253. From your regimental experience, is it your opinion that you would find plenty of officers in the regiments of the line who would be very willing to prepare themselves for any high employments in India if they had an opening ?—Undoubtedly.

4254. (*Major-General Hancock.*) Looking at the very different circumstances under which the officers of Her Majesty's armies and of the Company's army were serving in India, the former possessing the power of exchanging into regiments at home, and having staff and other appointments open to them in England, in the Mediterranean, in Canada, and elsewhere, from which advantages the latter were altogether excluded, do you think that the officers of the two services in India had equal claims to the staff and other appointments there ?—I do not think so.

4255. Do you think that under those very different circumstances it would be just that the officers of both services should have an equal proportion of the appointments in India to which the Company's officers were altogether restricted ?—No.

4256. My question refers to the state of things which has existed hitherto, and not to that which may be supposed to exist prospectively. Do you think that, under the very different circumstances which have existed hitherto, it would have been just to open to Her Majesty's officers an equal share of all the appointments civil and military in India ?—I am not prepared at present to give a decided opinion on that subject.

4257. Are you unable to form an opinion ?—I am quite satisfied that the arrangements made at the time were intended to be very just ones, but not the best to bring forth the talents of the officers of Her Majesty's service.

4258. (*Chairman.*) You are merely giving an opinion as to the effect of the arrangement, and not as to the system ?—Yes.

4259. How were the troops in India supplied with light clothing during your experience ?—Latterly the men themselves generally purchased in India a kind of white cotton stuff, which was made up by the regimental tailors at the lowest price.

4260. Who regulated the nature and description of the light clothing ?—It was regulated by a general order.

4261. From whom ?—From the Commander-in-chief.

4262. From the Commander-in-chief, where ?—In India.

4263. The description of light clothing worn by the troops in India was regulated by the authorities out there ?—Yes.

4264. (*Duke of Cambridge.*) It did not emanate from the Horse Guards ?—No ; I do not think there was ever the slightest interference by the Horse Guards with the authorities in India, as to the description of light clothing to be worn by Her Majesty's troops there.

4265. (*Viscount Melville.*) Was not the order about white clothing the regular order, that a man was to have so many white jackets, so many pairs of white trowsers, so many white shirts, and so many check shirts, all of which he had to pay for himself out of his own pay ?—Yes.

4266. The government giving no assistance whatever ?—None.

4267. (*Duke of Cambridge.*) There has never been the slightest interference from the authorities here ?—Never.

4268. (*Major-General Hancock.*) What authority has regulated the uniform worn by Her Majesty's troops in India—the red coat, schako, Highland bonnet, and all the rest of it ?—The authority of Her Majesty's warrant, but that clothing was only intended to be worn during the cold season in India, when it was as much required for the health and comfort of the soldier as in England.

4269. (*Chairman.*) That species of clothing is as necessary in India as here ?—Yes, during the cold season.

4270. As you state that you think that there ought to be only the Queen's army in India, perhaps you have considered the best means of providing for the periodical relief of the Queen's army ?—If the question refers to the most reliable route for conveying troops to India, I am in favour of their being sent round the Cape of Good Hope, as political circumstances might at any time interfere with their transit overland.

4271. (*Colonel Forsyth Tait.*) It would be a question of expense also ?—Yes ; but in case of emergency we should also be prepared, if possible, to send them by Egypt.

4272. But as a general relief you should choose the most certain and the cheapest route ?—Yes.

4273. (*Chairman.*) What is the longest period that you think a regiment ought to be kept in India without being relieved ?—Twelve or thirteen years, provided they could be cantoned for three years in the hills during that period.

4274. Do you consider it possible to consolidate the European forces so as to allow of exchange from one branch of the service to the other, and what regulations would be necessary and practicable to effect this object with perfect justice to the claims of all officers now in the service of the East India Company ?—I am not prepared to give an opinion as to how it should be effected ; but I conceive the advantages would be great if it could be so arranged, as I think you can never have an efficient army under the present system.

Major-Gen. Sir T H. Franks, K.C.B

23rd Oct. 1858.

4275. You think, then, that it is very objectionable to have two separate armies with different discipline?—Yes.

4276. (*Duke of Cambridge.*) Do you not think that it produces feelings of great jealousy?—Yes; I think you will never have such an army as you should have, until you have the whole of your European force, troops of the line and your native troops, the same as your colonial regiments; such as, for instance, the Ceylon rifles. How it can be done, I have not thought of sufficiently; but my opinion is very strong upon that point.

4277. Is it your opinion that the officers in the native regiments would be looked down upon on account of being in native regiments?—Certainly not, under proper arrangements.

4278. Do you think that the line officers would come forward and go into native regiments?—I think they would.

4279. You think that there would be no difficulty?—Not the slightest.

4280. (*Chairman.*) Do you think that they would rather look up to service in the native regiments than down upon it?—It would be respected according to the advantages derived from serving in such corps. In our service we do not look down upon the officers in colonial regiments.

4281. (*Duke of Cambridge.*) They are all allowed to exchange?—Yes.

4282. That would be complete equality, except the advantages arising from being in the native corps?—Yes.

4283. (*Major-General Hancock.*) Are the only advantages to which you allude pecuniary?—Pecuniary advantages would be a great inducement.

4284. Would you make pecuniary advantages the chief incentive to an officer going into the native army?—As I said before, it would be a great inducement to enter any branch of the service.

4285. Are you of opinion that officers taken from European regiments and put into native corps would draw with the native ranks equally as well as those trained to it from their youth?—Provided they have a proper knowledge of the language, and from a few years' residence in the country have a general knowledge of the native character.

4286. (*Colonel Forsyth Tait.*) Do you think that an officer could command a native regiment without speaking the language?—Certainly not.

4287. (*Duke of Cambridge.*) You would not allow a man to go into a native regiment who had not passed a certain examination in languages?—Of course not.

4288. As a superior officer you managed natives without speaking the language?—I spoke the language very imperfectly, but I never had the slightest difficulty in managing native troops under my command.

4289. (*Colonel Burlton.*) You have stated that you think that there is no objection to a system of exchange among the officers?—I think it would be most desirable if it could be effected.

4290. Does that apply to the present officers, or hereafter?—I think it must apply to hereafter, as if you interfered with previous arrangements it would be considered an injustice; but I am strongly of opinion that the interests of the state should always be considered paramount to the interests of any body of individuals.

4291. Are you aware that in the Act just passed, abolishing the government of the East India Company, there is a clause which says that no alteration whatsoever shall take place which in any way affects the faith which has been pledged to the officers in the Indian army: that their prospects, their advantages, their pensions, and everything else, are secured to them upon the faith of the British government? Would you break through that?—I should be very averse to recommend anything of the kind.

4292. (*Duke of Cambridge.*) Admitting that you are bound to consider the claims of these officers, and that by arrangement you can do it, is not the question a simple one?—Yes, of course it is.

4293. (*Colonel Burlton.*) Can it be good for the state to break faith?—I consider that I have already given an opinion on that subject.

4294. As you know that the Company's service is a seniority service, and that all the privileges of that service have been pledged to those in it on the faith of the British government, you must be aware that the British government cannot break faith; is there any mode in which the exchange can be effected without breaking faith?—I am not prepared at present to suggest any plan to effect that purpose.

4295. (*Major-General Hancock.*) Do you not think that the withdrawal of any considerable part of the army in India, in case of an European war breaking out, would occasion very great inconvenience, to say the least of it, to the government of India in the number of officers holding staff and other employment, who would return to their regiments?—I do not think it would.

4296. The government of India must part with the services of those officers, whether they thought it beneficial or not?—The Commander-in-Chief would have to arrange that; and I think there would be no difficulty in doing so.

4297. (*Chairman.*) You are against a local force; but supposing that there is a local European force, do you consider that it should be kept up by draughts and volunteers from the line, or should be, as at present, separately recruited for in Great Britain?—I strongly recommend that the strength be kept up by recruits from England in preference to volunteers from regiments returning home, as I consider the system of volunteering, which has hitherto been adopted to fill up vacancies in regiments of the line in India, has been most injurious to the discipline of corps remaining in that country, as well as to those returning to England.

4298. Do you not think that there is a great disadvantage in having two separate armies recruiting one against the other?—I most sincerely hope that that disadvantage, as well as many others, will be obviated by having one united army in India, and without which I am of opinion we shall never succeed in having a properly effective one.

4299. Do you not think that there is a great disadvantage in recruiting for two separate armies, one competing against the other?—Most certainly.

4300. Was the permission to volunteer confined to regiments in Her Majesty's service, or were the men allowed to volunteer into the Company's service?—To Her Majesty's service only.

4301. (*Duke of Cambridge.*) Supposing you only allowed them to volunteer into the local service in India, and not into regiments of the line, do you see any objection to that?—I am strongly opposed to filling up vacancies in any regiments in India by volunteering.

The witness withdrew.

C Renny, Esq., C B

CHARLES RENNY, Esq., C.B., examined.

4302. (*Chairman.*) Will you have the goodness to state to the Commission the position which you have held in the Indian army, the length of time that you have been in India, and the opportunities which you have had of forming an opinion upon the questions which have been submitted to you?—The last position which I held was as surgeon-general and a member of the medical board in Bengal.

4303. How many years were you in Bengal?—I was there 44½ years.

4304. You have been furnished with some questions which the Commission wish to inquire upon?—I have a printed paper which includes four questions.

4305. Have you had any opportunity of forming an opinion how far the European portion of the army in India should be composed of troops of the line, taking India as parts of the regular tour of service, and how far of troops raised for service in India only?—The Commission, I suppose, will wish me to confine myself to medical views of the question.

4306. Yes.—As I am of opinion that the most efficient services would be obtained from European troops formed on the plan of a local army I think that the troops should be raised for service in India only.

4307. Upon what ground do you form that opinion. I understand you to confine yourself entirely to medical views?—Yes. The health and the efficiency of the Company's European troops have been as good as of those of the line, under considerable disadvantages I may state.

4308. (*Duke of Cambridge.*) What disadvantages?—One disadvantage is that they have had to receive into their body volunteers from the line, men of a more advanced age than recruits, men probably acclimated but adding to the average of age in European regiments.

4309. I thought that the rule in India was, that no men from Her Majesty's regiments were allowed to volunteer into the Company's European troops?—I have frequently had to examine Queen's volunteers; up to a very late period of my service I have had to examine them.

4310. (*Viscount Melville.*) But to go into the Queen's regiments, not into the Company's regiments?—Some into the Company's; that is a military point on which I may be mistaken as to the present understanding of the rule; but a reference to the India House will show that volunteering into the Company's regiments from corps of the line on being relieved was always permitted, that it was suspended for a short period, was again authorized, and continues so to the present time. The Company's troops are at any rate not a well selected body of men originally; they are not a very select body of men, I believe.

4311. (*Chairman.*) Are they not recruited here exactly in the same way as the Queen's troops?—But it is generally supposed that they are not such good recruits. I would leave that question aside; putting that aside, a great disadvantage to the European troops there is that the non-commissioned staff of all the numerous establishments, military and civil, of the State, are withdrawn from them—their steady men.

4312. (*Colonel Forsyth Tait.*) The best men are withdrawn from the Company's European troops for general staff appointments throughout the country?—Yes.

4313. And therefore you consider that the men are not so efficient as they otherwise would be?—That is a disadvantage. I am away at present from all papers and documents that I have formerly had access to, and I cannot speak so fully as I might otherwise have done, and therefore I cannot state all the reasons why I think the European troops labour under a disadvantage; but I think they have laboured under a disadvantage.

4314. (*Chairman.*) You think that the troops of what was the Company's service have laboured under a disadvantage compared with the troops of the line?—Yes, and yet have maintained their health and efficiency.

4315. Will you have the goodness to state wha you consider is the effect of the climate of India upon a European on his first coming out? How long do you consider that a European would remain in India without the climate at all interfering with his efficiency or power of service?—They reckon that a European soldier should be efficient at least for 15 years.

4316. Do you consider 15 years about the limit of the efficiency of a European soldier?—Yes.

4317. (*Marquis of Tweeddale.*) How soon do they become acclimatized?—No exact period, I think, can be assigned.

4318. (*Major-General Hancock.*) Generally speaking?—Some suffer earlier and some later.

4319. (*Marquis of Tweeddale.*) Has the colour of their complexion or of their hair anything to do with those who become earliest acclimatized?—It has, so far as the European constitution is not able to bear the climate so well as the native.

4320. (*Chairman.*) Will you have the kindness to proceed, and give any evidence which you wish referring to any of the questions?—I should merely limit myself to these four questions. I have said that I think that the troops ought to be raised for service in India only. I have therefore, with regard to the second question, to consider only the efficiency of the troops raised for India, not with reference to the troops of the line.

4321. The efficiency of all European troops in India, whether belonging to the permanent force or the Queen's regiments, going out there?—I consider it of great importance for the efficiency of the European troops that they should be located in favourable stations, as elevated as possible, and well and carefully selected.

4322. At what season of the year do you think it most advisable for the reliefs to arrive in India?—In the month of October or November, and I think that they should be sent *viâ* the Cape in steamers, or in the best vessels that could be obtained.

4323. You prefer that to the overland route?—I would adopt the overland route only on an emergency.

4324. Do you think that the effect of the passage tends at all to prepare the men for Indian service?—I think that the loss of men by the overland passage would be much greater than by the Cape.

4325. (*Duke of Cambridge.*) Have you any grounds for giving that opinion. Are you aware whether there has been any mortality in consequence of the troops proceeding by the overland route?—I am perfectly aware that there has been great mortality from troops arriving in the rainy season in India.

4326. I mean so far as the passage goes. I understood you to say that you thought the passage by the Cape to be very preferable?—I have some knowledge of the overland passage, having twice passed it; still I think the Cape passage to be preferable.

4327. Take the result of the experience which we have had in the last two years?—I have not the means of knowing. I only speak from former experience and observation.

4328. You only speak from the experience of having made the passage, but not from the result of the passage?—Just so. I do not speak from recent trials, having little or no information regarding them.

4329. (*Chairman.*) What is your experience with respect to the clothing of the troops in India, with regard to its effect upon their health?—The clothing has been much too thick and too warm for the climate.

4330. Is not warm clothing required there at different periods of the year?—Two kinds of clothing are required; the lightest for the hot season, and the thick clothing for the cold season.

4331. (*Duke of Cambridge.*) Have not the troops got the lightest clothing for the hot season, and the thick clothing for the cold season?—They have got them, I believe; but it is generally said that they are not permitted to wear such light clothing as they ought to wear.

4332. Is that your experience in India?—My experience goes to convince me that they have worn too much clothing in the hot weather.

4333. To what do you attribute that; I understood you before to say that they had light clothing?—They have light clothing.

4334. Why, then, have they worn the other?—It has been understood to be partly owing to the regulations.

C Renny, Esq., C B.

23rd Oct. 1858.

4335. (*Chairman.*) Are you speaking now of the European portion of the Company's service ?—Generally of the service.

4336. (*Duke of Cambridge.*) To what regulations do you refer ?—Regimental regulations; I should be entering into military points if I discussed that question. It has been very much according to the pleasure of commanding officers.

4337. (*Chairman.*) Would you, as medical officer, have an opportunity of giving any opinion about the dress of the men ?—It was open to the medical officer to give an opinion; but I imagine that it would not have been attended to.

4338. (*Viscount Melville.*) Can you state whether the troops wore the warm clothing in the hot season ? —It is the impression generally that such is the custom.

4339. (*Duke of Cambridge.*) Can you give any instance of it ?—My belief is that they might have worn much lighter clothing.

4340. When ?—In the hottest weather.

4341. (*Viscount Melville.*) Will you name the months ?—Say from April to September.

4342. Did they not always wear white clothing then ?—I have seen troops in warm clothing, in red clothing.

4343. In the rains ?—Even in the hot weather.

4344. (*Marquis of Tweeddale.*) Is not there a day fixed for the European troops to put on their warm clothing ?—Generally from the equinox, I think.

4345. And generally for putting on the light clothing ?—Yes, from the vernal equinox.

4346. (*Major-General Hancock.*) That is merely a general regulation ?—It is a general regulation, but it is not generally adhered to, I believe.

4347. (*Chairman.*) Will you have the kindness to proceed with any statement which you have to make ? —In regard to the third question, which relates to the claims of all officers now in the service of the East India Company, the first part of that question it is not my province to speak of, it is more a military question; I would wish to point out to the Commission only what affects the medical service. The Indian medical service is strictly a military branch, but it has also a great portion of it employed on civil duties; any amalgamation of the officers would require this to be provided for, and that there should be a separate branch for the civil departments; and it appears to me that that would be a question for the Indian government to settle. Rules applicable to military officers would not do for the entire service, and the Indian government would have to prepare fresh rules for the civil department which would be necessary. The form of a permanent local body of professional men, experienced in the diseases of the climate and the means of preventing them, not interchangeable, is more required for the medical than for the purely military department.

4348. Have you any other remarks to make upon the fourth question. Do you consider that the local European force should be kept up by draughts and volunteers from the line or should be, as at present, separately recruited for in Great Britain ?—I remarked before that volunteering is to a certain extent at present allowed in the Company's European troops.

4349. (*Duke of Cambridge.*) That is a mistake ? —I think that it would be impossible to keep up the force of any European army there merely by volunteers; that it will always be necessary to recruit from Great Britain.

4350. I think you said that you considered that the stamp of recruits for the Company's service was inferior ?—That is a general belief in India; it may be a mistake.

4351. Is that your own experience ?—I should say that they were rather inferior.

4352. In what respect ?—Perhaps a little in height. I believe, however, that there is a regular standard for hat; but in general conformation they are inferior.

4353. (*Colonel Forsyth Tait.*) Do you think that the European recruits are inferior who are enlisted for the Company's army. Have you had an opportunity of judging of them ?—I have had considerable opportunities.

4354. I was only talking the other day with Dr. Dempster, who has been a great many years in the Company's European artillery, and he told me that he thought they were the finest recruits that he had ever seen in his life, that he did not think there was any army in the world which could get finer men ?—That may be so as far as the artillery is concerned; but for the European troops generally, it is held that they are inferior.

4355. (*Viscount Melville.*) With regard to the sanitary state of the troops in India, do you consider that the barracks in India were properly constructed, and were adapted for sanitary purposes ?—The new barracks have been made much better than the old ones; certainly improvements were necessary in the old ones, but the most recent barracks have been constructed in a very improved manner.

4356. Were they on a level with the ground or raised from it, and were they under-drained ?—They were generally somewhat raised; the most recent ones have been made what they call upper-room barracks.

4357. Can you name any station ?—In Fort William the newest ones are made upper-roomed, which they were not before.

4358. You are aware that on a regiment first arriving at Calcutta it is usual to send it up to Chinsurah ?—Yes.

4359. Can you explain the reason why a regiment on first going out suffers so much from cholera ?—It is known to be so, but no sufficient grounds have been found to account for it, more than the susceptibility of the newcomer to local causes of acute disease.

4360. Do you consider that the ration of arrack which is given to the European soldiers, and the strength at which it is made, is a good thing for their health ?—I consider that arrack is most detrimental to the health. I should say that the use of any spirituous liquors or the distribution of any spirituous liquors to the soldier is very detrimental.

4361. (*Sir Harry G. W. Smith.*) What would you substitute in the place of spirit ?—I am not prepared to offer a substitute; beer is a favourite substitute with them, but it cannot be entirely a substitute for it.

4362. (*Major-General Hancock.*) Do you consider that beer has any injurious effect upon the constitution of a European soldier in India ?—I have not observed that it has any injurious effect.

4363. Do you consider that it has a beneficial effect ?—It has a beneficial effect.

4364. (*Marquis of Tweeddale.*) Do you consider that the hospitals are built upon a proper principle in India ?—They have been gradually improving the construction of hospitals in India, and the latter ones have been built in a very superior style, and with more cubical space to numbers.

4365. Do you think that that applies to the whole of India; can you speak to that ?—I speak of Bengal, and it may not apply to the whole of Bengal, but it is very general, especially in the North-west.

4366. But you cannot speak to the other presidencies ?—I cannot.

4367. (*Viscount Melville.*) Have you had any means of knowing the difference of mortality among the European troops stationed in the hills and among those in the plains ?—There is not sufficient experience yet of whole regiments stationed for lengthened periods in the hills; I cannot speak to that in the Neilgherries, not having been there. As far as my observation goes, it has only been upon convalescent and sick detachments sent to the hill sanataria from Landour eastward to Cherra Poongee. There is in Bengal no experience of a whole regiment having been sent up to the hills.

4368. Of what period are you speaking; the present hill stations are at Kussowlie and Dugshai and

C. Renny, Esq., C.B.

23rd Oct. 1858

Subathoo; there are three stations?—I wish to make a correction; there are no hill stations for complete regiments in Bengal Proper, where the mortality is greatest.

4369. (*Sir Geo. A. Wetherall.*) Do you not consider that it is the abuse of spirits more than their moderate use which is injurious?—Of course, it is the abuse.

4370. (*Marquis of Tweeddale.*) Supposing that a regiment was of 800 men, and you wanted to keep it up an effective regiment, how many men would you require in the depôt to keep it up to the efficiency of 800?—These are military points, on which I cannot exactly answer at this moment, being without the documents which I have hitherto had at my command.

4371. I should say the contrary; I should say that it was a doctor's business to answer that question, and not the business of a military man; it is a question of health?—I can speak to the mortality, but I cannot speak to the general complement of a regiment.

4372. If a regiment was 1000 strong, cannot you say how many on an average there ought to be in hospital or sick?—I cannot speak from recollection, not having the documents before me; my regimental experience is so old, that I cannot speak distinctly upon that point. I have seen it put at six and a fraction per cent. per annum upon strength for ordinary mortality and invaliding. It may be stated that the calculations from the proper returns for long periods have not been published in England. The materials are ample; and, in my opinion, they should be examined and collected by competent persons, and the results laid open for general information.

4373. (*Viscount Melville.*) Did you ever find the ratio of mortality diminished or increased in proportion to whether the regiment had been a long or a short time in India? What do you take to be the per-centage in Bengal?—The per-centage on an average is about five per annum on strength.

4374. I have always heard it put at ten?—That is the highest; I speak of the average. Here is a document from which I speak, which states that it has been five per cent. during ten years for the Bengal presidency; in the Bombay presidency it is about the same, and at Madras it is three per cent. per annum on strength.

4375. Do you or do you not think that the mortality increases as the European is longer in the country?—That would require many points of consideration, because you have to take into view that the regiment is recruited during that period.

4376. (*Sir Geo. A. Wetherall.*) But the recruiting depends upon the casualties?—Some regiments have the casualties increased by the residence, but in other regiments I have known it otherwise.

4377. (*Viscount Melville.*) Do you think that in general the barracks for European troops in India are sufficiently high in the rooms, and that there is sufficient ventilation, and that they are well adapted to the climate?—Generally I should say that they are very well adapted; they have been more improved of late years; but I believe that they are generally well adapted.

The witness withdrew.

Adjourned to Monday next, at twelve o'clock.

Monday, 25th October 1858.

PRESENT:

Major-General Peel.	Lieut.-Gen. Sir Harry G. W. Smith.
H.R.H. the Duke of Cambridge.	Lieut.-Gen. Sir George A. Wetherall.
Lord Stanley.	Major-Gen. Hancock.
Marquis of Tweeddale.	Colonel Burlton.
Viscount Melville.	Colonel Forsyth Tait.

Major-General PEEL in the Chair.

James Ranald Martin, Esq., F.R.S., examined.

J. R. Martin, Esq., F.R.S.

25th Oct. 1858.

4378. (*Chairman.*) You belong, I believe, to the medical staff of the Bengal army?—I was 22 years in Bengal.

4379. From the year 1820 to the year 1842?—Yes, about those years.

4380. And you are the author of works on diseases from the climates of India?—I am the author of the work on the table on the influence of tropical climates upon European constitutions, and of various reports upon the sanitary condition of the army of India, European and native, during the whole course of my service, and since my return home also.

4381. You have been furnished with some questions, I believe, by the secretary of the Commission?—I have been furnished with two series of questions; one of them relating to the sanitary condition of the European army in India.

4382. Will you have the kindness to state to the Commission anything which you wish to bring before them upon this subject?—I have brought written and detailed replies on both the series of questions. My replies upon the sanitary branch of the subject contain some tables illustrative of the influence of tropical climates on European constitutions, the influence of age, and length of residence in India, and various other points, such as the influence of locality, to which I request to direct particular attention.

4383. Will you have the kindness to read the paper which you have prepared?—This letter is addressed to Colonel Wood, the secretary of the Commission:—"I have the honour to acknowledge the receipt of your letter of the 18th instant, requiring me to furnish to the Royal Commission appointed to inquire into the organization of the Indian army, information on the effect of tropical climates on the European constitution, on the best means of securing the efficiency of European troops serving in India, and on the fixing the period at which they should be relieved.

"I. As to the effect of tropical climates on the European constitution."

"1. This may be very satisfactorily determined for all the great military stations throughout India by an enumeration of the ratio per thousand admitted annually into the hospitals suffering under tropical diseases, together with the ratio of deaths. These ratios will vary somewhat, according to the nature of the soil and water constituting the local climate, the structural arrangements of barracks and hospitals, the interior discipline and economy of regiments, the character and conduct of commanding officers. The sickness and mortality thus estimated will be found to have been very great at all stations, and even in times of peace, when compared with what occurs in temperate climates, if the range of observation as to numbers of men and of years be sufficiently extended.

J R Martin, Esq., F.R.S.

25th Oct. 1858.

"2. For example, it appears that out of an aggregate force of 25,431 British soldiers stationed during ten, eight, and ten years respectively, between the years 1823 and 1836 at, Calcutta, Chinsurah, and Berhampore, all in Bengal proper, there occurred of sickness as follows:—

Fevers, remittent, intermittent, and continued	13,596
Dysentery and diarrhœa	8,499
Hepatitis	1,354
Cholera	1,117
Total cases from acute tropical diseases	24,566

"3. There was a total of admissions into hospital on account of all diseases of 45,170 cases, and a total of deaths from all causes of 1,588 soldiers.

"At the depôt of Chinsurah, 28 miles from Calcutta, the annual ratio of admissions into hospital during 12 years, ranged from 755 to 4,325 per thousand. To determine the truth respecting the influence of climate two elements are necessary, a wide range of observation in years and large masses of men. Observations referring only to a few years and to a small body of men may be all in excess one way or the other, and they may thus mislead.

"4. The official results in respect to the mortality at each age among the military officers and the civil servants of the Bengal presidency afford a convincing proof that in the East Indies no advantage in the way of acclimation has hitherto been derived from length of residence. As those individuals are never employed out of India, and generally arrive there about the age of 18 or 20, their respective ages and ranks may be assumed as a criterion for estimating their length of residence in the country. On that principle then we find that, taking equal numbers of each rank, the annual mortality among the ensigns, for the most part youths but recently arrived, amounts only to - - - 23 per thousand.

Ditto lieutenants of about 3 years more of residence	27 " "
Ditto captains of 12 or 13 more years of residence	34 " "

Amongst the civil servants of Bengal the rates of mortality are as follows:—

First year of his residence	19·5 per thousand.
Second	23·5 " "
Third	20·0 " "
Fourth	22·0 " "*

"This law, which is of universal application to the better-classes of Europeans in India, will be found to operate *a fortiori* on the condition of the British soldier there.

"5. The acute diseases of India may be ranked as remittent (jungle) fever, dysentery, inflammation and abscess of the liver, and epidemic cholera. They are terms which have at all times expressed the more or less speedy destruction of the European forces located over the various provinces of Hindostan, even in times of profound peace.

"6. The whole range of service in the plains of India is to the British soldier one unbroken course of physical degradation. Every function of his body has been unnaturally excited or disturbed from the first to the last day of his residence, ending too often in a serious organic disease and degradation of the very blood. It is important here to observe that this last-mentioned degradation of the circulating fluid is surely brought about by mere residence in a hot or malarious district, even without the occurrence of any of the formidable diseases enumerated; a few years of residence in the hot and pestilential plains of India being of itself sufficient to spoil the blood and tissues of the European.

"7. The returns which you mention, as showing more deaths in regiments on their first arrival in India, speak to a state of things requiring careful explanation, and such explanation may perhaps be found in the following circumstances."

I mention them at hazard, not being acquainted with the actual facts; these are general reasons.

"The landing of European troops at an improper season, as the hot weather and rains; their too early or unseasonable exposure on active service, the being stationed in open cantonments, giving ready access to the bad liquors of the bazaars, the use of which tells most upon the newly arrived; exposure to epidemics, neglect of inspection parades, and the consequent non-detection of the silent earlier invasions of disease, differences in the character and conduct of commanding officers, and the absence in Her Majesty's regiments of certain traditional local experiences possessed by the old soldiers of the Company's European battalions, and which, to a certain extent, shielded the younger men on their first arrival from the consequences of their ignorance and recklessness.

"8. Where the enforcement of sanitary duties is discretionary, the character of the officer in command becomes a concern of the highest importance, and I apprehend that the greater losses in certain newly-arrived regiments as compared to those of older standing in India are not necessary to the climate, and that they may be entirely prevented."

The second question stated in Colonel Wood's letter is, "On the best means of securing the efficiency of European troops serving in India."

"1. On this subject I beg leave to refer to my addresses to the Chairman of the Court of Directors of the East India Company, of dates the 12th August and 1st December 1857. In the first of these statements the urgency of having the European troops removed to the mountain ranges everywhere to be found throughout India is represented; in the second the course of investigation for determining the best mountain climates, and the elevations most suitable to European residence is set forth in detail.

"2. It is impossible to overrate the importance of this measure, whether we regard the health and efficiency of the British army in India, its power to garrison and maintain that empire, or the capability of England by voluntary enlistment to fill up the muster rolls. The study and careful consideration of this subject for more than 20 years has brought to my mind the settled conviction that all this may easily be done; and further that the eventual saving in men and money will be enormous.

"3. The astounding sacrifices in men and money consequent on the locating the British troops in the plains of India, in ill selected stations, and worse barracks and hospitals, have been referred to in my official addresses already mentioned. The statements of the medical officers on these heads, extending over many years, and referring to almost every British cantonment in India, are such as almost to stagger belief; yet do they appear to be essentially well founded. They suggest the necessity of an inquiry into the conditions affecting health in the various climates, stations, camps, cantonments, barracks, and hospitals throughout India, and into the best means of applying sanitary experiences in improving their condition.

"4. I would here beg leave to express my strong conviction, founded on experience, that no amount of attention to structural arrangement, no perfection of barrack and hospital accommodation, can ever secure health to the British soldier serving in the hot and malarious plains of India, and that while such positions as it may be absolutely necessary to occupy on the level grounds, whether open or fortified, should be most carefully selected, the structural arrangements being made as perfect as sanitary science can dictate; yet, even from such well selected and well constructed stations, the European soldier on duty should be frequently removed into the mountains, so as to refresh and invigorate him.

"5. The formidable diseases of India which afflict and eventually destroy the European serving there are, as already stated, fever, dysentery, hepatitis, and epidemic cholera. Their fatal character is well known, and need not here be dwelt upon. They are essentially diseases of the plains." That is the important question, they are every one of them diseases of the plains.

---

* Influence of Tropical Climates, and Colonel Sir Alexander Tulloch's reports.

"6. But it is not with deaths exclusively that we have to deal, for the man who has suffered severely or who has had relapses of remittent fever, dysentery, or hepatitis is generally injured for service in tropical climates and he ought at once to be sent home. It is here as with the sufferers from the Walcheren fever, the soldier could never afterwards be counted on for effective service in the warm and malarious climates of Portugal and Spain. A severe attack of cholera is also very damaging to the constitution, and many men are never well thereafter. When we read of 70 or 80 deaths per 1,000 annually, we see immediately a high rate of mortality of soldiers. But who shall detail the numbers of broken constitutions meanwhile amongst the survivors? This is a kind of information which no statistics can furnish to us.

"7. All cases of severe relapsing tropical disease, and all cases of chronic organic disease the results of previous acute attacks ought to be sent to England; for it has generally been found that the benefits derivable from a removal to the hill ranges have been but temporary, the invalids relapsing into their diseases on their return to the plains. How far a protracted or permanent residence in the mountain climates of India may tend to the maturing and confirming of health once seriously injured in the plains, our experiences do not as yet demonstrate. Meanwhile it is most satisfactory and important to know that in the hill ranges throughout India we may find the ready means for the more or less complete prevention of those endemic diseases which have in all times and under all circumstances of service, proved the bane of the British soldier."

The third point is, "On fixing the period at which British soldiers should be relieved."

"1. One of the great results to be derived from the removal of the European troops from the plains to the mountains of the East will be, the diminished occasion for general reliefs to Europe, a measure otherwise frequently necessary, and the consequent saving of enormous costs, not to speak of the obvious military and political inconveniences attendant on such frequent interchanges in the positions of large bodies of men.

"2. Formerly, and in respect of the great body of the Europeans serving in India, there could hardly be said to have been any reliefs. Of the old soldiers who originally mustered around the colours, few or none came home excepting the maimed and the incurable sufferers from tropical diseases. When a British regiment was eventually and after 15 or 20 years' service ordered home from India, the few who remained of the original corps, and those of more recent enlistment, were encouraged to volunteer into battalions stationed in the country; so that in fact, very few soldiers of Her Majesty's regiments returned from India. For the European battalions of artillery and infantry of the Company's army, there was no system of reliefs contemplated, the soldiers having enlisted for life to serve in India.

"3. Referring to the great benefits to be anticipated from a residence in the mountains throughout India, I am of opinion, that the questions of the nature, extent, and the times proper for the periodical reliefs, may be postponed or left to be determined, so far as health is concerned, by the event; that is, by the state of health and constitution of the soldiers, after a ten years' service in the East. But there can be no question as to the necessity for sending home annually the class of invalids mentioned in paragraph 7 of Article II. of this address. The treatment of the sufferers on their arrival in England should be of a special and most careful nature."

J. R. Martin, Esq., F.R.S.

25th Oct. 1858.

To that letter I added the following postscript:

"While touching upon the subject of the sanitary condition of Her Majesty's and the Honourable the East India Company's regiments in India, I would beg leave to say that a special and searching inquiry of a statistical nature is, in my opinion, necessary to the elucidation of the subject. To the regret of all scientific men connected with the army, the statistical reports of the sickness, mortality, and invaliding prepared by Sir Alexander Tulloch and Dr. Balfour have not comprised the sanitary history of the European army in India, I would therefore beg leave to urge such an examination of that subject as may be made of immediate avail. The surprising discrepancies that we hear of in estimates of the influence of general climate, of particular stations and other localities, of the influence of length of residence in India, and of age, all point to the necessity of a special inquiry into the whole question of the sanitary condition, past and present, of the European forces in India, including of course that of the officers of the two services. This is a subject of peculiar interest, owing to the vast difference stated by Mr. Neison to exist in the mortality of officers in each army."

(*The witness delivered in the following documents.*)

SUGGESTIONS for PROMOTING the HEALTH and EFFICIENCY of the BRITISH TROOPS serving in the EAST INDIES.—By *James Ranald Martin, Esq., F.R.S.*

To the Chairman of the Honourable the Court of Directors, East India House.

1. IT is stated by Colonel Sir Alexander Tulloch as the result of investigations in the War Office, made by desire of Mr. Sidney Herbert, that amongst British officers and soldiers of the Queen's and Company's armies serving in the East Indies, there occurred, from 1815 to 1855 inclusive, a total mortality, exclusive of casualties, of about 100,000 men, "the greater portion of whose lives might have been saved had better localities been selected for military occupation in that country."

2. Dr. Burke, late inspector-general of hospitals in Bengal, has stated that in the station of Secunderabad alone, during thirty years of its occupancy by British soldiers, the cost to the state on account of loss of life amounted to 150,000*l*., estimating each soldier as worth 100*l*. But estimating the loss of life mentioned by Sir A. Tulloch at the same valuation of 100*l*. each man, we arrive at a loss in money of 10,000,000*l*. sterling.

3. Then there has been enormous waste of the public funds on account of barracks and hospitals, placed in stations so unhealthy that they were subsequently abandoned. The buildings for the European troops at Berhampore, Bengal, abandoned since 1835 on account of its unhealthiness, are stated by the finance authorities of Calcutta to have cost since 1757 nearly 17,000,000*l*. sterling.* Tennant declares that, up to his time, the sums expended by the East India Company for the accommodation of their European troops, "if laid out at the compound interest of the country, would, at a determinate period not very remote, have equalled the national debt."

4. Looking to these enormous sums, often absolutely worse than wasted, of what account in the comparison has been the cost of the medical establishments of India? how truly saving of the public revenues must be a well-ordered and well-directed and a well-contented medical corps! In truth, the importance of an efficient medical establishment is so great that we cannot put a money value on it.

5. As regards the preservation of European health in India, and indeed in all tropical climates, the due selection of locality is the first consideration; and next in importance stands the structural arrangements in barracks and hospitals.

---

* Influence of Tropical Climates, p 424.

J R. Martin, Esq., F R.S.

25th Oct. 1858.

6. As to barracks, provided the site be of sufficient elevation, well cleared, drained, and levelled, with a good water supply, the material need not, I think, be of a costly character—well constructed huts for the accommodation of ten or twelve men forming a good protection against the inclemencies of weather. Such simple and cheap structures will, I believe, prove more conducive to the health of the European soldier in the mountain ranges of India than the most costly barrack, and the same may be said of hospital huts for the reception of the same number of men—viz., ten or twelve. In stations on the arid, hot plains of India, the same structures would answer well; but if large brick-built barracks and hospitals be preferred, they should be very spacious, double-roofed, and raised on arches.

7. The considerations involved in the subject of the last paragraph are of the utmost importance, whether viewed in a sanitary or financial light; and the subject has hitherto been altogether neglected in locating troops in most of our foreign possessions; although our experiences in all our European campaigns have demonstrated that the soldiers who were hutted fared well, while such as were massed in barracks and general hospitals perished at enormous rates.

8. This experience has been uniformly accordant, whether the climate was hot or cold, whether our men were serving in Holland or in the Crimea.

9. The Irish sufferers from typhus, during the famine, who were massed in workhouses and hospitals, perished in enormous numbers, whereas those who were thrown along the roads and under the hedges recovered in goodly proportions;—of so much more avail is pure air towards the restoration of health than a fine building. The thorough ventilation through the openings and crevices of huts supplies the sick with what they don't obtain in our ill-constructed barracks and hospitals—namely, pure air.

10. They were not palaces that were constructed by order of Sir Charles Metcalfe on the mountains of Jamaica, but a substantial form of hut, which, on a pure and elevated soil, was all that was required. Buildings such as those just referred to, constructed of the most ordinary materials, have been found to assure health, while Indian experiences prove that costliness of material and splendour of structure, apart from a good locality, will not prevent disease.

11. The importance of determining the true physical characters, and the exact medical topography of all the mountain ranges throughout India—especially of those situated in provinces in which it is desirable that British troops may reside—has now become imperative. European soldiers cannot maintain health or vigour in the plains, and the selection of suitable mountain stations has become more than ever a state necessity.

12. The experiences of the Himalayah positions, of those of the Neilgherry mountains, and of those of Ceylon, as sanitary stations, prove that by residence on their respective elevations the European is removed greatly above the range of the malarious fevers of India. But while this great and valuable fact is admitted, it is undoubtedly true that he is, in too many instances, carried into the range of another class of diseases—namely, that of bowel complaints. This circumstance has been found in various of our mountain positions to constitute a serious drawback from the otherwise great benefits derived from a residence in them.

13. Another disadvantage of the hill stations hitherto occupied by us in the East Indies was noticed by me when serving in Bengal—namely, that while the hill climates are permanently serviceable against the malarious fevers of the country, their influences in conducing to the cure of these and other diseases is limited in extent; the soldier being troubled with relapses of his disorders on descending into the plains, unless kept in the hills for a long time. The mountain ranges, therefore, which have hitherto been occupied by Europeans stand forth as possessing climates *preservative against fevers*, and as such we must improve them, and use them wherever required.

14. When, on the other hand, we find the British soldier lingering under chronic or structural diseases contracted on the plains, a removal to the seaboard, or to an insular sanitarium, or, still better, to England, will be found the only effective means of restoration; and this last resource of medicine should never be denied to him, for the climate of the mountains, invaluable in prevention, will not cure disease.

15. Referring to what has been stated in paragraph 12, how are we to escape from the admitted evils hitherto experienced in the very high positions occupied by us? Where and how are we to obtain that amount of elevation which, while it removes the European from out of the range of malarious fevers, may not place him in that of an exhausting and dangerous diarrhœa? This is the great desideratum—one hitherto unascertained because unsought for; yet no examinations which may fall short of ascertaining this desired medium elevation can be deemed satisfactory of our sanitary wants.

16. In the climates of yellow fever, an elevation of two thousand five hundred feet is found sufficient to remove the European from the locality of pestilence, without placing him in that of bowel disorders; and in the mountain stations of Jamaica the mortality amongst British soldiers is found to exceed but little, if at all, that of the same class of men in the United Kingdom.

17. Let us then have a series of careful and scientific examinations, by competent persons, of the lower and medium ranges of hills throughout India, in order that the great sanitary problem may be solved in a conclusive manner—namely, the providing a place of resort for our European troops which shall be alike free from malarious fevers and from disorders of the bowels. That such procurable localities are to be found in the East, as they have been in the West, is my firm belief, and let them be perseveringly sought for.

18. Let the solitary hills—those islands on the plains—be sought for, and carefully examined; they give sanitary excellences peculiar to themselves.

Lastly. Let there be appointed for the sanitary duties of the army, at each of the Indian presidencies, a medical officer of health—an officer of scientific attainments and of rank, who shall be attached to the quartermasters-general's department; we shall thus add to the department of military topography that of medical topography. The medical officer of health should preserve in his office, for the use of the scientific persons concerned, plans and models of the best barracks and hospitals which may be from time to time approved by the military powers of Europe, in order that the most recent improvements may be rendered available wherever buildings of the nature indicated may be found necessary.

The duties of the medical officer of health should be, in peace, to examine and report on all sites and on the condition of camps, temporary military stations and cantonments, on convalescent stations and sanitaria, on mountain ranges suitable for troops, and on solitary mountains and their capabilities, on the plans and structure of barracks and hospitals, and on everything relating to the health and comfort of the soldier.

In war, he should be attached to the quartermaster-general in the field, and be always in advance with this officer, so as to master the medical topography of the scene of action; and, where military reasons of imperative necessity do not overrule sanitary considerations, the advice and opinion of the medical officer of health should be received on the sites of camps, whether temporary or permanent, and on all matters having reference to the sanitary condition of the camp.

In a recent report to Her Majesty by a Royal Commission, of which I was a member, and which was ordered to inquire into the organization, government, and direction of the medical department of the British army, the appointment of a medical officer of health, as long previously recommended by me for the service of the Indian army, was strongly urged upon Her Majesty's attention, with a view to the great benefits to be expected from the services of such an officer.

J. R. MARTIN.

Grosvenor-street, London,
August 12, 1857.

SIR, Grosvenor-street, Dec. 1, 1857.

Having recently submitted to the consideration of the Chairman of the Hon. the Court of Directors certain suggestions for the selection of localities for the European troops in the East Indies, and feeling assured that the mountain climates to be found throughout our possessions in the East must be largely used for the purpose stated, I beg leave to submit further suggestions which may prove of use to such officers as the Governor-General of India may appoint to examine and report on the important subject in question.

I do not mean that these are all the questions which may be examined; but I trust they will be found to comprehend the most useful subjects to be investigated and ascertained previously to fixing on permanent stations in the mountain climates of the East.

I have, &c.
(Signed) J. R. MARTIN.

To Sir James Cosmo Melvill, K.C.B.,
Secretary, East India House.

Suggestions for the Investigation of Mountain Climates in the East Indies.

1st. The medical history of mountain climates, noting the physical character and state of health of the inhabitants at different elevations.
2nd. Climates of elevated valleys as compared to those of plains.
3rd. Climates at different degrees of mountain elevation.
4th. Differences produced by the different aspects—N., S., E., W.
5th. Differences produced by disposition of surrounding hills.
6th. Climates of solitary mountains.
7th. Meteorology of mountain climates:—
  a. Temperature at different elevations.
  b. Range of diurnal variations at different elevations.
  c. Range of annual variations at different elevations.
  d. Atmospheric pressure at different elevations.
  e. Humidity at different elevations.
  f. Rain and snow at different elevations.
  g. State of the sky at different elevations. Electricity.
  h. Relative dryness of the air of mountains as compared to plains.
  i. Rate of evaporation at different heights.
  j. Frequency and intensity of aërial currents at different heights.
  k. Power of the solar rays at different heights.
  l. Relative moisture of the soil at high and low elevations.
  m. Relative amount of dew at high and low elevations.
  n. Relative frequency of atmospheric renewal at high and low elevations.
8th. Physiological influences of mountain climates of the medium elevations of from 2000 to 4000 feet:—

(Signed) J. R. MARTIN.

SIR, *East India House, Dec. 24, 1857.*

I have had the honour to receive your letter of the 1st inst., with its enclosed paper of suggestions for the investigation of mountain climates in the East Indies.

In reply, I have received the commands of the Court of Directors to convey to you their best thanks for this document, and to state that a copy of it will be forwarded for the observation and notice of the government in India.

I am, &c.

J. R. Martin, Esq. (Signed) JAMES M. MELVILL.

4384. I understand that you consider that the ratio of mortality increases in proportion to the length of residence in India?—Steadily and certainly.

4385. And that lengthened residence leads to physical degradation?—Almost without an exception, the exceptions being so rare as hardly to come into the account.

4386. Would not this prove the advantage of a regular system of relief?—Assuredly, if troops are to be relieved and to be maintained in vigour with any reference to European service after their return, the reliefs should be very frequent. The other view would be the following out the suggestion which I made to the Court of Directors, to have the main portion of the European garrison of India permanently located in the hills, and that no European corps should, under any circumstances, serve in the plains longer than one year, after which they should go to the hills for invigoration and refreshment.

4387. I understood you to say that removal to the hill ranges afforded only a temporary relief?—In cases of disease hardly so much as that, very often. The real benefit of the mountain ranges, as it appears to me, must always be the prevention of disease, the preservation of the European soldier in health and vigour. For the cure of disease they have been found very imperfect indeed. I found in Calcutta that an officer, whom I sent to the hills for the cure of the mildest form of disease which we have in India, which is intermittent fever, was very well while he remained there, but that even from so mild a disease he did not permanently recover. He relapsed when he came into the plains. That is the uniform result regarding the soldier also of course.

J. R Martin, Esq, F.R S.

25th Oct. 1858.

4388. (*Duke of Cambridge.*)—Then, in fact, you mean that the climate of the hills operates as a prevention of disease, but not as a cure of disease?—Quite so.

4389. (*Chairman.*) I understood you to say that under any circumstances there was a certain class of invalids who ought to be sent home annually?—Those who have once contracted severe tropical disease, any one of the four diseases which I have mentioned. Experience shows that such men cannot be counted upon for effective service in the plains of India without some radical change, some better change than the mountain ranges afford; that change I conceive ought to be to Europe. Then the cases of organic disease, the result of previous acute tropical disease, should be sent home also for the recovery of their health.

4390. You think that men so sent home might recover so as to be able to do effective service in another climate?—Quite so, as occurs every day in my practice here in the return of an officer. He comes in often on crutches, unable to stand, and in 18 months or two years he looks in point of health like a farmer, and is fit to go back.

4391. (*Major-General Hancock.*) He would be fit to return to serve in a tropical climate as before after about two years?—Assuredly.

4392. (*Sir Harry G. W. Smith.*) You impute the cause of sickness to a neglect of inspection parades?—That is one out of several causes which I have enumerated.

4393. Does that affect inspection parades for an unfortunate disease?—I am speaking of young soldiers who arrive in India as detachments, very often with inexperienced and young officers. It has sometimes happened that the recruits for the Company's army have had only one subaltern. I have seen them left in Calcutta with only very inexperienced non-commissioned officers. The sanitary results were terrible. In those days the Company used to send out the troops so as to arrive in the month of May. They arrived in Fort William in the month of May. There were no inspection parades because there were no officers to order them.

4394. The reason why I ask as to inspection parades is, that we have a parade in the army for the inspection of an unfortunate disease, and certain hospitals in India, which you are well aware of, called lock hospitals, were done away with by the Government to the great injury of our service, and to the increase of the sick on that account beyond measure?—Just so.

4395. Do you allude to that?—No; I allude to the inspection parades for the detection of tropical disease.

4396. Ordinary inspection parades?—Yes; particularly among young soldiers who do not know anything about their condition. The parades are most influential to the saving of their health.

4397. (*Viscount Melville.*) Are you not aware that in many cases, and, in fact, in very frequent cases, the cause of soldiers not acknowledging that they are unwell is the very high hospital stoppages to which they are subject?—I have no doubt that does influence the old soldiers. I do not know that it influences the inconsiderate and reckless recruit so much; the old soldier will think of it doubtless, and those stoppages are very heavy.

4398. (*Major-General Hancock.*) Hitherto the great mass of the European force in India has been located in the plains, has it not, and location on the hills has formed the exception?—Until recently the entire European force has been on the plains throughout all India; it is only within very recent times that stations have been selected in the mountains, and even there I conceive that a great error has been committed. It has been found that in the West Indies the raising of the soldier 2,500 feet above the level of the plains, in Jamaica for instance, has raised him out of the range of yellow fever, and of course out of the range of remittent fever, and dysentery also. In the East Indies, overlooking that fact, we have carried the troops to very great elevations, 7,000 and 8,000 feet and upwards, and assuredly it has so far succeeded as that we have raised the soldier out of the fever range, but unhappily we have carried him into the range of another series of diseases which was not contemplated, namely, bowel complaints, and they are very intractable. I see officers every day who go up to the mountain ranges simply for the cure of that mild disease which I mentioned, the intermittent fever; there they contract a very intractable form of disease in the shape of chronic diarrhœa, which is very difficult and troublesome of cure in this country. In my letter to the Court of the Directors, of which I have submitted a copy of the Commissioners, I suggested that a commission should be appointed in India to determine those elevations which, while they are high enough to carry the soldier out of the fever range, shall not be so high as to carry him into the range of bowel complaint; that suggestion was sent to the Governor-General, and I believe is in course of being acted upon.

4399. (*Sir Harry G. W. Smith.*) Are you not aware that it is the received medical opinion that 5,000 feet must be attained before fever is defeated, that is laid down in all medical books which I have read?—There is no fact which has ever come to my knowledge which goes to show that; on the contrary, in the West Indies 2,500 feet have been found sufficient to raise the soldier, as I have mentioned, out of all fever range.

4400. (*Duke of Cambridge.*) Of course your opinion, although a very valuable one, is a mere medical one. I suppose you will admit from your residence in India that it would be very difficult so to adjust the occupation of the country by Europeans as always to give them that due proportion of hill stations which you think so very desirable and necessary?—I am not a soldier by profession; and the proportion which is to occupy selected points upon the plains must of course be determined by the political and military authorities; but what I would beg to suggest is, that the soldier who shall perform duty on the plains, no matter where it be, shall have the benefit of an annual return to the mountain ranges to refresh and invigorate him, and that a fresh man shall come down to take his place, that is, when railroads and roads shall admit of such an arrangement in the East Indies.

4401. (*Major-General Hancock.*) But you are of opinion that by locating the mass of the European force on the mountains at the most desirable elevation, the endemic diseases of India would be in a great measure prevented?—Almost entirely. I would here beg leave to mention to the Commission a remarkable circumstance regarding the climate of India, and the opinions entertained by great philosophers respecting it in Europe; it has reference to the total absence in any part of Asia, and very especially in our British possessions in the East, of any temperate zone, of any temperate climate whatsoever. Montesquieu says, "The astonishing rapidity of "political revolutions in Asia arises out of one fact "which is really dependent on its physical geography; "in that part of the world weak nations are opposed "to strong; people warlike, brave and active, border "on those who are effeminate, idle, and timid; the "one must necessarily be conquerors, the others conquered. Here we have the principal reason of the "liberty of Europe, and the slavery of Asia." Malte-Brun, the great geographer, commenting on this observation, says, "It is necessary to combine this just remark "with another truth proved by physical geography, "namely, that Asia has no temperate zone, no intermediate region between very cold and very hot "climates. The slaves inhabit the hot, and the conquerors the elevated and cold regions." The suggestion derived from that remarkable expression is of a sanitary nature; we should strive to place our troops in the region of the conquerors of India, and I believe there is not a province within our dominions that does not contain elevations, many of them so low that we have not condescended to look at them, but which would be of extreme value. I refer particularly to

J. R. Martin, Esq, F R S.

25th Oct. 1858.

great table lands, such as occur in Central India, which might by military authorities, perhaps, be found extremely advantageous for great bodies of cavalry, European cavalry particularly; they contain a fine soil, forage, and water, such as Googoondah, a table land on the Aravelli range, about 150 miles west of Neemuch. Then there is another, Goonah, which has been lately occupied by irregular cavalry, and found a healthy fine table land. I mention this upon little information of my own, but upon hearsay; but I am satisfied from what I have seen throughout India in my various services there, and in Burmah, in which I served in the first Burmese war, that there is no country throughout our possessions which does not contain the soil, water, and elevation which we require.

4402. (*Colonel Burlton.*) The places which you have just mentioned are not in our territory?—No, I believe Mount Abo is not in our actual possession, but we purchased it, or we secured it from some of the native chiefs.

4403. (*Sir Harry G. W. Smith.*) Surely there are no tracts of country of the elevation which you speak of from Calcutta to Lahore excepting the Rajmahal hills?—Along the valley of the Ganges generally there are not; but where it becomes necessary to garrison European troops there are mountain ranges of considerable elevation near Bhagulpore and Rajmahal. They are said to be unhealthy, but the facts ought to be well ascertained.

4404. (*Colonel Burlton.*) The elevation of Hazareebaugh is considerable?—Yes, sufficient to be to some degree salubrious. It is a table land.

4405. (*Viscount Melville.*) Are you aware that some military officers have recommended that the European force should be permanently settled in the hills, and only brought down to the plains for service. Do you think that if that could be done it would be advisable?—I have mentioned in my note to the second question put by Colonel Wood that I conceive the European army should be brought down to the plains every cold season to be exercised for the purposes of the march and the fire, which are not only necessary to military excellence, which does not belong to my profession, but for the perfection of health. Those are the two grand essentials; the one to perfect the action of the lower extremities, and the other of the upper extremities.

4406. Then you would bring them down from the hills from November to March?—Yes, returning to the mountain ranges every month of March.

4407. (*Lord Stanley.*) Assuming that European troops were placed habitually in residence upon the hills, and that an occasion arose which required them to be marched down into the plains in the middle of the hot weather, would they not suffer more from the sudden change of the climate than if they had been removed from a station in the plains?—On such occasions no doubt they would suffer in some degree; but in my experience the sufferings of European troops from sudden exposures during the excessive heats of India are more connected with a state of repletion of the system, too high feeding, and especially the spirit ration, than with any other circumstance. I have myself been on a march of forty miles with the Governor-General's body guard in Burmah on the 12th of May, and a remarkable circumstance occurred there to show how Europeans may stand the sun if they are temperate and abstemious, even where the natives are knocked down by it. In that march some twelve or fourteen native officers and troopers fell off their saddles, and not one of us Europeans did so. We were young and temperate, and I believe that was the reason; and if there be such a thing as acclimation we had it. We had been some years in the country; it was forced temperance to a certain degree.

4408. (*Duke of Cambridge.*) Does not the necessity during the hot months in the plain of not moving at all, and of remaining in-doors, but still feeding highly, as you say the troops do, make them more subject to disease than if they were moving about in a hot climate?—Very much.

4409. Has it not rather come out recently that some of the troops on service in all this heat have suffered less actually in disease than the troops in quarters?—It is quite so. Exercise itself is a great preservative against such injuries, and when exercise is associated with abstemiousness, it goes almost to an immunity. I believe that British soldiers in a proper sanitary condition will make extraordinary exertions under the hottest sun of India, as they did in the army of Sir David Baird when crossing from Cosseir to Cairo in the first campaigns in Egypt.

4410. (*Sir Harry G. W. Smith.*) Are you or not of opinion that the result of the reaction after excessive exertion in hot weather is one of extraordinary sickness, and which we may expect to hear of now at the end of October?—That has happened in the most disastrous measure on some occasions. There was an instance of one of Her Majesty's regiments, the 69th regiment, which made a march in the Madras presidency of 150 miles in a very few days. The men went through it apparently without injury, but the subsequent result was excessive sickness and mortality. Something of the same kind happened after a long march by Her Majesty's 62d regiment.

4411. (*Duke of Cambridge.*) Would not that result very likely be caused in a great measure by the natural irregularity of troops getting into quarters after a long and fatiguing march?—I have no doubt that if that very case were carefully investigated it would be found that the sanitary condition of that force before it marched was unfavourable; they were not hardened by exercise or by temperance; and they were most probably intemperate on getting into quarters.

4412. (*Chairman.*) I think you said that the proportion of deaths was in the ensigns, 23 per 1,000; in the lieutenants higher, and in the captains still higher; what was the general average percentage of sickness in the whole troops during the years to which you refer?—The sickness is stated in that paper to have been immense.

4413. It does not state the exact percentage, does it?—I think it will be found there.

4414. Have you had any opportunity of seeing the returns of the percentage of sickness which has taken place during the late campaign?—I have not.

4415. (*Major-General Hancock.*) Does not a greater mortality prevail among young officers and soldiers than among those who have been eight, ten, or twelve years in India?—Yes, always; the mortality is greater among the young, the improvident, and, if I may so call it, the unseasoned. I am afraid to say anything which should lead to the conclusion that there is such a thing as acclimation; but that kind of accommodation of the habit and constitution occurs in every country in the world, not in India alone. The army of Napoleon broke ground from Boulogne in 1805; he marched 400 French leagues to the battle of Austerlitz; they were all old soldiers, they were exercised; no room was left for idleness, and there were hardly any sick on the roads. When he went again, in 1809, to the battle of Wagram, the roads were lined with youths, who perished.

4416. (*Duke of Cambridge.*) In every army before the army goes upon field service there must be a great many weedy men; these do not appear till they go to hard work, they must then be got rid of; and when they are got rid of the sickness is gone. More or less that will happen to any army in any climate?—It will; but from amongst old soldiers there will be but little weeding.

4417. (*Sir Harry G. W. Smith.*) From your experience in India what is usually the ultimatum of service of a British soldier, how long will he serve in India?—I do not know that that average has ever been struck, but of course it will depend upon the nature of the service in which he has been employed, the stations in which he has been resident, and his sanitary condition.

J. R. Martin, Esq., F.R.S.

25th Oct. 1858.

4418. (*Major-General Hancock.*) Has it not been found to be the fact, that in all exposed and fatiguing services, the middle aged officers and soldiers have always far outworked the younger?—That is the case in all countries; it only goes to show this, that the moral qualities of the old soldier are not the only qualities for which he is superexcellent, but that he is superior in his physical qualities also.

4419. A resident of a few years in India you consider has no advantage over a young soldier on his first arrival in India?—Under the most carefully regulated sanitary measure I think that a few years residence in India might be called favourable in reference to your question, but anything like a protracted service or residence in the plains must always be pernicious to European health.

4420. (*Duke of Cambridge.*) I suppose we may put it in this way, that although a certain amount of experience is gained by men from residence, which would be an advantage to them, yet physically you think that there is no advantage?—Local experiences have their various uses, besides affording some protection against disease.

4421. Physically it is not an advantage, but there is the experience obtained by seeing what the climate demands?—What I meant by saying that there were in the old battalions of the East India Company traditionary habits was this, that the experiences of the old soldiers proved a kind of protection to the young recruits.

4422. (*Sir George A. Wetherall.*) But there is no such thing as acclimation?—No, I believe not.

4423. (*Duke of Cambridge.*) Physically you do not think that acclimation exists?—I think it does not.

4424. (*Viscount Melville.*) With reference to sanitary measures, do you think that the barracks in India erected for the Europeans are of a proper construction as regards elevation, ventilation and site, and that they are such buildings as European soldiers ought to occupy?—I have never seen a good barrack in India in any station in which I have been, or in which I have served, and I do not know that there is any good barrack in India, except that which was erected by Sir Charles Napier in Scinde. I am told that that is very fine. A very fine barrack has often been erected in India in stations which from their insalubrity are uninhabitable by British soldiers, which is the case with the station at Berhampore, in which Lord Clive built a noble barrack for that age, and which is rather a fine barrack now. But to show how important it is to attend to locality as well as structural arrangements, I am told that one of the latest structures was a fine barrack at Cawnpore. The survey was made by persons who did not consider the question; it was made in the cold weather when the soil was dry; they never took the levels, and they never looked even at that point; they took a bird's-eye view of the ground, and when the rains came the hospital was found to be built in a saucer, from which draining was next to impossible. But generally the barracks and the hospitals throughout India are alike bad.

4425. Are you aware, with reference to the barrack which you have just mentioned, built by Sir Charles Napier, at Hyderabad, that it was built upon limestone rock, on which in the hot season, at 12 o'clock at night, you cannot bear your hand, and that the expression which the natives made use of was, "The Englishmen make their houses where we make our graveyards"?—That is another example of what I have stated. I did not know of this error in the site.

4426. (*Sir Harry G. W. Smith.*) Are you not aware that in many of the cantonments out of a number of buildings one or two send a great many men to hospital, and other buildings none at all, and that the cause has never yet been traced?—In all cases of that kind I should think the cause not so difficult to be divined by persons experienced in sanitary science. In respect to buildings, both as to locality and structural arrangement, I cannot myself perceive any very great difficulty in finding it out.

4427. You are aware that in the case of regiments going in boats up the Ganges which anchor every night, one boat will have several cases of cholera, some boats a considerable number of cholera, and many of them none at all, and that the surgeon attending them can give no reason why that should be the case?—That, I believe, applies to all epidemics, to plagues, yellow fever, and cholera.

4428. (*Major-General Hancock.*) Is it not found that cholera attacks especially men who have been weakened by intemperance or other causes?—Cholera has been found invariably to visit the worst class, the depraved and the dissipated among the soldiers in India, and it has been found to be most severe upon those who have marched the longest. In the great outbreak in Scinde it could be determined in ratio,—according to the number of miles that the regiment had marched so was the severity of the cholera, the regiment which had marched the longest suffered the worst. I may instance Her Majesty's 86th and others, but the scale could be determined.

4429. Surely that is not always the case, sometimes it is merely endemic. On the return march of the Bombay division from Affghanistan, every regiment in succession got the cholera at a particular station, and lost it at another?—That sort of caprice applies, as I have said, to all epidemic diseases, it is in a measure inscrutable.

4430. (*Sir Harry G. W. Smith.*) I dare say you are aware that in many of the soldiers' barracks one corner of the room will yield sick men invariably, and in another corner of the room there are no sick men at all. Do you think that circular barrack rooms would not be better than square rooms, where there is no circulation of air in the square corners?—I don't think that the exact figure of the room can signify; the amount of freedom of ventilation and elevation from the soil are the two important ingredients. It has been found in almost all countries that soldiers inhabiting the lower ranges have suffered more than in the upper ranges.

4431. (*Marquis of Tweeddale.*) Are you acquainted with the Madras presidency with regard to the barracks?—I have only been in the very presidency of Madras. I have never passed through any part of it, except in going from Masulipatam to Hyderabad to see Sir Charles Metcalfe. I was sent by the government of Bengal to see him; that is all that I ever saw of Madras from being a week at the presidency itself.

4432. Are you aware that a very great change took place in consequence of the formation of the barracks at Cannanore in the Madras presidency?—I am not acquainted with the sanitary history of Cannanore, but I am very well acquainted with the sanitary history of the very worst cantonment in the Madras presidency, which is that of Secunderabad, in which the losses of upwards of thirty years are something enormous.

4433. The reason why I asked you the question was simply this, that I understood you to say that there was a barrack which you thought was a perfect barrack for the preservation of the health of the soldier. Was that at Berhampore?—No; the one erected by Sir Charles Napier in Scinde I have understood to be a perfect barrack, but the site of it, I am sorry to hear, has neutralized the excellence of the structure.

4434. The barrack of which I speak was a very low barrack, where a great sickness prevailed—a barrack with no ceiling, but a very high roof was then built, and since then it has been one of the healthiest places which there are?—I should account for that change by the greater freedom of ventilation and the elevation of the roof giving necessarily a comparatively large amount of coolness.

4435. (*Sir Harry G. W. Smith.*) Do you recommend that all barracks should be built with a current of air underneath them, that after the foundation is laid there should be a regular current of air underneath, and three or four feet elevation?—All barracks I think erected in tropical climates, especially with

J R Martin Esq, F R S.

25th Oct 1858.

reference to the rainy seasons of tropical climates, should be raised upon arches; they should be of two stories high, and the roof should be double; then they would be as perfect as structural arrangement could make them.

4436. (*Viscount Melville.*) I believe that there is not a single barrack occupied by European troops in India which is not built on the ground, and no attention whatever is paid to drainage?—That is the general rule.

4437. (*Major-General Hancock.*) You have stated, I think, that one great cause of mortality among European troops is the too early employment of regiments on active service after their first arrival from England?—That had sole reference to the sickness of corps just arrived in the country.

4438. As you are of opinion that there is no such thing as acclimation, to what do you attribute the greater mortality in such regiments?—Youth, a more impressible state of the system, a greater irregularity of habit of life, a greater disregard to sanitary arrangements, and a total unacquaintance with the habits of the country.

4439. As the regiments arriving from England are not formed of mere recruits, but of old and middle aged as well as young soldiers, in the usual proportions, and as they are usually commanded by officers of experience, why should that state of things exist which you have described?—There may be old soldiers coming to India, but I believe that the average age of a British regiment of 1,000 men may be taken at 26 years; it results, therefore, that the great majority are youths, and I saw very recently an estimate of the age of the troops now serving in India, and the age was very young indeed, very little above 20 or 21.

4440. Are you able to state what is about the average age of one of the Honourable Company's European regiments?—I should think that taking service on the plain with its consequences into account, and the annual admission of recruits, it would be much the same age as one of Her Majesty's regiments; that is, 26 years being the average age of 1,000 men.

4441. (*Duke of Cambridge.*) Do you not think that the fact of a long sea voyage would on first landing have an effect upon a regiment and upon anybody.—That has always been found to favour so much of acclimation as may exist—very much so.

4442. (*Major-General Hancock.*) Taking regiments generally, are you of opinion that there is no difference between one of Her Majesty's and one of the Honourable Company's regiments with regard to age and the length of service?—Serving in the same country, I should apprehend that there is no difference.

4443. (*Chairman.*) According to the per-centage given in the table which you have laid before the Commission, it would appear, taking the civil service, that in the first year of residence the deaths are only 19 with a decimal per thousand. In the second year they increase to 23 and a decimal; they then fall down in the third year to 20; and in the fourth year they come up again to 22?—Yes; that is from a return of Sir Alexander Tulloch's. I have never heard it accounted for, but he says that in the documents submitted to him that is the actual fact.

4444. (*Major-General Hancock.*) In your opinion has the adoption of a suitable clothing for the European troops in India any effect upon their general health?—I regard that as one of the most important of the sanitary improvements which may be effected for the benefit of soldiers.

4445. Are you of opinion that the present uniform, for instance, Highland bonnets, kilts, schakos, and double-breasted coats, forms a suitable clothing for European soldiers?—Only for service in the cold season. It is not suitable to the hot weather and the plains. It may answer very well for campaigning in the cold season, when European cloth is found to be a great comfort to the men in Upper India.

4446. What do you think would be the most suitable head-dress for European troops when employed in the field on the plains?—The proper head-dress for a soldier with regard to health should be such as is planned by Dr. Jeffreys; it would secure two requisites: the one is, that it should be made of material of slow conducting power, so as to be very slow in transmitting the rays of the sun. There is no such thing as a non-conductor, it is a misnomer; but some articles are of a more slow conducting power than others. It should be made of that material, whatever it be; and then it should have ventilating means so as to admit of a free current around the man's head. With those two requisites the head-dress may be made of whatever the authorities may think proper.

4447. You have made no allusion, I think, to weight; do you attach any importance to that?—I do not attach so much importance to weight as may appear; the soldier himself does not care much about a little more weight, provided his head be kept cool.

4448. (*Colonel Burlton.*) Colour would be of some importance I presume: a non-absorbing colour would be preferable to one which absorbs?—It should be white of course.

4449. (*Viscount Melville.*) Do you not think that in any head-dress which you have, it is advisable that it should be elevated from the head, and not low down like the foraging cap?—Certainly; ventilation cannot be secured without a sufficient space.

4450. (*Chairman.*) I suppose you are aware that the light clothing worn by the troops in India is furnished and regulated by the authorities there?—Yes.

4451. (*Colonel Forsyth Tait.*) After first arrival in India, how soon do you think that Europeans may be considered as most efficient for service in India?—Considering the extreme youth of the great majority, they should not be called upon to make the utmost exertion before two or three years; that is to say, a soldier should be 23 years of age before he is called upon for his utmost exertion; and that applies to all countries.

4452. Up to what number of years do you consider that a European soldier, with proper care and occasional location during the hot weather in the hills, ought to be expected to do good service to the state in India?—Upon such a question we have as yet no data. I have stated with reference to the removal of the European troops to the mountain ranges, that in respect to reliefs that question may be deferred pending our better experience; I should apply the same observation to that question. My individual impression is, that properly guarded against the influences of climate, and protected as far as can be against the influences of his own recklessness, and ignorance, and ill treatment of himself, the soldier may serve many years in India, and render good and effective service.

4453. (*Major-General Hancock.*) Will you have the goodness to state your opinion as to the effect of the existing system of issuing spirit rations upon the health of the European troops in India?—I regard the spirit ration as an injury to the young soldier. I think that it would be a benefit in India if he were to have beer instead of the spirit ration, and that the spirit ration should await his more advanced age and experience. I do not attach any harm to a dram given to the soldier after his dinner.

4454. (*Duke of Cambridge.*) But in the morning?—In the morning it is deleterious.

4455. (*Chairman.*) I suppose the ration is the same to all troops in India, whether the former Company's troops or the Queen's?—The same.

4456. (*Major-General Hancock.*) What limit would you place upon the allowance of spirit rations to European troops?—As far as regards health, I should say that the one dram per day is quite as much as is good for them.

4457. They now get two?—Yes. I think one better.

4458. What allowance of porter would you recommend?—The soldier should have an equivalent.

J R. Martin, Esq, F R.S.

25th Oct. 1858.

4459. What do you consider an equivalent?—A pint or more. I do not know what the equivalent in beer to the rum ration should be; he should have that equivalent.

4460. Will you state the quantity which you consider would not be injurious to health?—A quart of ale a day, I think, could not injure a healthy soldier, particularly if on work.

4461. (*Sir Harry G. W. Smith.*) Have you ever seen at any cantonment the establishment of a convalescent hospital for the admission of a soldier who is dismissed by the medical gentleman as cured; he is sent back to his regiment, he is exposed to the sun, he takes the ordinary ration, he comes back to the hospital and dies. I have seen it practised in the West Indies with the greatest possible benefit, that alongside of the hospital there has been a convalescent hospital, and the man has been treated with nurses and cooks until he has perfectly recovered and joined his regiment?—Speaking of the general European hospital in Calcutta, of which I was first assistant, and I was afterwards surgeon of that large institution for the treatment of European soldiers, we often had occasion to lament the absence of a convalescent hospital. The soldier, when discharged the hospital, was convalescent; he demanded his discharge being convalescent, and we could not refuse him. The first use which he made of his liberty on going into his detachment, was, perhaps, to get drunk, and relapses occurred continually. That has been found a great evil in all our foreign possessions, and the establishment of convalescent hospitals would be a great desideratum. But again, if by removing the troops to the mountain ranges we diminished sickness we should diminish the occasion for those large expenditures.

4462. (*Chairman.*) Will you be so good as to proceed to the second series of questions submitted to you?—In the second paper sent me by Colonel Wood the first question was, "How far the European portion of the army in India should be composed of troops of the line, taking India as part of the regular tour of service; and how far of troops raised for service in India only?"

1. With the advantages of a mountain climate in India, troops of the line may in future be enabled to garrison our Eastern possessions in tolerable health and vigour; but as even then a given number of regiments must always be employed in the plains, with the certainty of injury to health, and consequent diminution of the physical force, I do not consider it desirable that the army of India should be composed exclusively of troops of the line, taking that country as a part of the regular tour of service.

2. British soldiers who are debilitated by service in India, or who have contracted the severer diseases of that country, are found to suffer from the cold of Europe on their return, and the mortality amongst them during the first three years after their return is in excess to that of regiments on home service; indeed, the men returned from the East dislike both the climate and the duties of home service; when invalided they give a preference to settling in the Australian colonies, on account of the warmth. All the circumstances here stated will prove of diminished force when once the greater part of the Indian army shall be located in the hill ranges, but years must pass it is feared before that desideratum can be accomplished.

3. I am of opinion that soldiers should be raised as heretofore within the United Kingdom for service in India only. Entering on the duty with free will, well treated by the State, and tutored into the better traditional habits of the country by the old soldiers of the Indian regiments, and under direction of their officers, the position of the men would at once become one of comfort and contentment; and when partially worn out they may be employed in garrison and police duties, with enhanced pay, or be encouraged to settle with their families on the mountain table-lands of the country, should colonization be determined upon in the East Indies.

4. I apprehend that the army of India should be composed principally of British troops raised for service in the East only, having a certain proportion of model battalions of the line at each presidency, all to be light infantry. These model battalions interspersed throughout the great military stations of the East, would form examples of the best interior economy and military discipline of Europe, and form the patterns upon which all field movements and musketry exercises should be framed. The Indian army proper would thus be kept at all times in the highest state of discipline and efficiency; the great bulk of the Indian force, which I will presume to be eventually cantoned in the mountain ranges all over the East, should descend into the under lying plains every cold season, so as to be practised and perfected in the march and the fire; returning to the hills by the beginning of the month of March following.

5. The British army and the army of India ought, I think, as now constituted, to be kept separate and distinct; each army has its constitutional character, its habitudes, its traditions, its prestige, all tending to promote that honourable rivalry, that salutary competition for fame, which has hitherto proved so beneficial to the State. I look upon competition to be as necessary to the perfection of the military machine as it is to the advancement and perfection of the mechanical arts in civil life, and that all possible encouragement should be given to so great a moral power. On every ground therefore which has presented itself to my mind, I think that the two armies, the royal and that of India, should be maintained as separate and distinct bodies. There might indeed be reason to apprehend that one and the same army if scattered over the immense superficies of Hindostan, might in time relax in its discipline, and become listless if competition were withdrawn from it.

6. The presence of such a number of regiments of the line in India as military authority might deem fitting, would keep up a high order of competition, such as is here contemplated, amongst the infantry branch of the service. It may be found unnecessary to establish there a like competition in respect to the mounted branch and the scientific corps of the Indian army.

The second proposition is, "In connection with this question the best means of providing for the periodical relief of the former portion, and of securing the efficiency of the latter."

1. I recently had the honour to submit for the consideration of the Royal Commission certain replies to questions sent to me by the Secretary to the Commission, and bearing on the suggested head number 2, I have here only to add my opinion that if stationed in the mountains during the hot and rainy seasons, the pattern regiments of the line need not be relieved frequently on the score of health; but it may become a question for military authority to determine how often they should enjoy relief on purely military grounds.

2. Referring to the paper already submitted by me, I would beg leave to suggest that the determination of the proper periods for reliefs be deferred until experience shall have proved the actual influence of a residence in the mountains of India on the European constitution. Where it is not a purely military question, the reliefs of troops must be determined on considerations of health only; and as regards the hill ranges of the East, we do not as yet possess the local and special experience necessary to guide us aright, and no amount of theoretical reasoning could on such a question be accepted as just.

3. On the question of securing the health and efficiency of the troops raised for the service of India only, I would again refer to my previous communication wherein the subject is briefly sketched forth. It is a question which resolves itself into securing to the soldier the best climates to be found within the boundaries of our eastern empire.

J R Martin, Esq, F R S

25th Oct. 1858.

The third question is, "Whether it be possible to consolidate the European forces so as to allow of exchange from one branch of the service to the other, and what regulations would be necessary and practicable to effect this object with perfect justice to the claims of all officers now in the service of the East India Company."

1. I have not been able on reflection to arrive at any scheme of exchange from one branch of the service to the other, which should either prove of justice to the public interests or to the claims of officers now in the service of the East India Company. Exchanges might indeed be brought about so as to inflict great injury on regiments and departments.

2. The two armies are so essentially different in their mode of nomination of officers, in the manner of promotion, and in their habits, that interchanges could only be very rare, even if sanctioned by authority. The Indian officer is seldom possessed of wealth or property, a circumstance almost amounting to a prohibition of any reasonable expectation of rise in the British army.

3. It is of course open at all times to the governing authorities of the State to employ in Europe officers of the Indian army for commands, for staff duties, and for scientific purposes, such as was, I believe, contemplated by the Duke of Wellington so far back as 1812, in such manner as have been recently employed in England Colonels Irwin, Forbes, and Green, of the Bengal Engineers, and as Sir Robert Vivian, and many other Indian officers were employed in the late war with Russia.

4. But in exchanging from the one service to the other, each officer would lose at once his distinctiveness, as well as his identity, and with it, it is feared, much of his *esprit de corps*, while his character and merits would merge into the general mass of the army into which he would necessarily enter as a stranger.

5. The Duke of Wellington, writing in 1812, says, "that the three armies ought to continue separate and distinct," meaning I presume the Royal army and the European and native forces of the East India Company. Again he adds, "I do think it would be a very beneficial arrangement to allow officers in the service of the Company to exchange into the service of the king, and for the Company's service, as well as for the public, that His Majesty might be enabled to avail himself of the services in Europe of officers who had served the East India Company in India." The author of the life of Sir John Malcolm says, "The Duke of Wellington had at one time a very strong opinion that the officers of the Company's army ought to be available for service in Europe, and he would fain have had Munro and Malcolm with him in the Peninsula."

The fourth question is, "Whether the local European force should be kept up by drafts and volunteers from the line, or should be, as at present, separately recruited for in Great Britain."

1. Referring to what has been already stated, I am of opinion that the local European force should, as at present, be separately recruited for in Great Britain.

2. I think that men so recruited, and stationed in India, will take more naturally to the habits and customs of the country than other soldiers, and that by being recruited for the local force, and by serving only in India, they will readily acquire a salutary *esprit de corps* connected with the particular service and country.

4463. (*Duke of Cambridge.*) Though not a soldier by profession, of course you have had a good deal of experience in military matters, having served in the medical portion of the army. Is it not your opinion that as a principle one and a united army is a more manageable and more powerful body than a double army, not in allusion to India alone, but to any country?—In regard to that question, I think that competition is more important than unity. Even in the British army the competition of national regiments, or even county regiments, has been found most effective in keeping up the high tone of that army, and I have a strong impression that the competition which would arise from the presence of pattern regiments, if I may so call them, in a service where all are pattern, but I mean choice regiments of light infantry, would keep up that competition which I have seen in India to be so salutary in maintaining the high spirit of our Indian officers. In the campaign there is, in fact, but one action, with two armies in powerful competition.

4464. Admitting as I do to the fullest extent the principle of competition, do you not think that in all armies the competition of corps or regiments, as you yourself describe, is the thing to be looked to and to be desired, but that the unity of feeling of an army should exist, with that competition existing in it regimentally?—Surely, and I believe that that unity of feeling may be well exemplified in what is said to have been the competitive feeling between Her Majesty's 78th and the Madras Fusiliers under General Havelock.

4465. Could you not obtain that feeling quite as much and more usefully for the State, regimentally, than by having it in two separate armies, producing perhaps feelings of jealousy as well as competition. Is not the one a feeling of real competition, and the other an individual feeling of one army as against the other?—If any feeling of jealousy, or any other than the feeling which I have ventured to contemplate, should arise, then at once I should say that it should be one army. The benefit which I contemplated from the competition was the benefit of the highest feeling which could actuate a soldier.

4466. (*Major-General Hancock.*) Provided that both armies be placed upon a perfect equality with regard to honours and emoluments, and in every other respect, why should any other feeling exist than that of generous emulation between the two?—I can only speak from the period during which I served myself, and my first service was with two of Her Majesty's regiments, and afterwards with many of Her Majesty's regiments in the Burmese war, where there was a large force of the Indian army also. I never saw or heard anything but what was of the most salutary kind, namely, a good feeling of emulation.

4467. Whatever other feeling may have existed between the two services, is it not attributable to the supposed or real unfair advantages enjoyed by one as compared with the other?—Personally I have never seen any difference of feeling, or anything approaching to it; on the contrary, hearty co-operation and good feeling is all that I have ever seen.

4468. (*Duke of Cambridge.*) Do you not agree, to a great extent, with the opinion expressed by the Duke of Wellington, of the immense advantage which there must be, *vice versâ*, both for Europe and for India, from the interchange of eminent officers when their services are required?—Certainly.

4469. Would you not produce that result if you were enabled to interchange and deal with the army as the State required, and not as any particular portion of that State required?—It would work best, I conceive, among the higher class of officers, both for command and for the staff, that the experiences of both countries might be interchanged. Regimentally I question whether it would be worth much.

4470. (*Major General Hancock.*) Had not the opinion of the Duke of Wellington, which you have quoted, exclusive reference to the employment of the officers of the East India Company's army in Europe?—That was all that the Duke of Wellington contemplated at the moment; but his Grace must have well known that India was full, at the very moment when he was writing, of officers in Her Majesty's army in every situation; there was no occasion to refer to that point.

4471. (*Viscount Melville.*) With reference to what you have stated as to keeping up a double army, are you not aware that under the present system it is necessary to have double arrangements for the supervision of the Company's European force and of the

J. R. Martin, Esq., F.R.S.

25th Oct. 1858.

Queen's, and that an additional expense is thereby entailed ?—I am not aware that there is anything in the supervision and control of the European force of the East India Company at all separate and distinct from Her Majesty's regiments.

4472. There is a distinct supervision for the Queen's army ?—I see that both are supervised and controlled in common by one commander-in-chief at each presidency, and by generals of division.

4473. (*Duke of Cambridge.*) There is a double staff, is there not ?—Yes.

4474. Surely that is not an advantage, is it ?—On the plea of competition it may be an advantage. If I am right in my view of the advantages of competition, even that kind of competition may be beneficial; staff competition is beneficial as well as regimental.

4775. (*Major-General Hancock.*) Is there any disadvantage beyond that of the expense ?—I am not aware of any but the expense.

4476. (*Chairman.*) I understand you to say that you consider that for the future the Europeans to be employed in India should be enlisted partly for permanent service there, and partly for regiments to be relieved from regiments at home ?—Yes.

4477. What proportion would you have of the permanent character, and what to be relieved ?—I should venture to say more than a moiety for permanent service.

4478. How do you reconcile that with the answer which you have given before ; that you consider that the rate of mortality increases in proportion to the length of residence there ; that the length of residence leads to physical degradation; that you consider a system of regular reliefs absolutely necessary, and that there is a certain class of invalids which should be sent home annually ?—My answer to the previous questions contemplated a residence in the healthy mountain climates of India. I am well aware that if Europeans are to be retained on the pestilential plains, then very frequent reliefs indeed will be required if they are ever expected to be efficient soldiers in Europe. That I look upon as a separate and distinct question. All my previous reasoning has had in contemplation the ultimate removal of the great body of the European troops to the mountain ranges, and that no British soldiers should, under any circumstances, serve in the plains longer than twelve months.

4479. I understood you to say that the mortality was greater in a regiment returning from India to Europe than in those regiments which had not been there ?—So I am informed by Sir Alexander Tulloch.

4480. Did not you say that the men returning from India were generally old and worn-out before they came home ?—No. It is a remarkable thing that I believe even soldiers who have only served five, six, and seven years in India are still averse from European service ; that they find the climate of Europe very cold and very uncongenial to them, and that they dislike service in Europe ; with the old soldier it would be *a fortiori* greatly more so.

4481. I understood you to say that the regiments which came home generally consisted of old and worn-out soldiers ?—No, they have a few old, but not worn-out men, and the great majority of them are middle-aged soldiers, and it is necessarily so. The encouragement to soldiers volunteering into regiments remaining in India will be available most to the old soldiers who have domesticated in India, who have married there and got into the habits of the country. I believe that most of Her Majesty's regiments which return are composed of men of a very few years service in India.

4482. (*Duke of Cambridge.*) Are you aware that only effective men have been allowed to volunteer according to the system hitherto adopted ?—Yes.

4483. Does not it therefore follow that all the broken-down men in regiments come home, and therefore make a regiment so very inefficient on its return ?—I am aware that that is the case ; but the very broken-down men of course have been invalided.

4484. (*Major-General Hancock.*) Do you know what limitation, if any, is placed upon the age of men allowed to volunteer ?—I am not aware of the limitation as to age.

4485. (*Sir Geo. A. Wetherall.*) Have you ever seen a statement, or are you aware of the relative sickness between European regiments in the Company's service and those in the Queen's ?—I have very recently seen some statement.

4486. Can you state it ?—The conclusions to be drawn from it are not very obvious, for the range of observation in years is brief, and the numbers of men are not great ; those are two great defects, but so far as I have seen, the difference is little or nothing.

4487. (*Sir Harry G. W. Smith.*) You have advocated that the European troops should be located as much as possible in the mountains, and you have also advocated that one-half of the European force should be enlisted exclusively for Indian service. You are aware that the Himalayah range, which is the only range that we have in Bengal to locate troops upon, is far distant from Calcutta, and if half that army was to be a local army and constantly in the country, where would you locate it ; it could not be located in the hills because the hills are too far distant ?—The hill ranges have not been sufficiently examined so as to determine at all what can be done and what cannot be done. Kumaon is unexamined; the province of Kumaon contains, I am told, some magnificent positions, but it is unascertained, in the strictly medical sense.

4488. (*Colonel Burlton.*) Taking into your consideration the fact that the present service of the Indian army is a seniority service, and that all the officers are most deeply interested in many ways, not only pecuniarily, but in their best feelings of sympathy, do you think it would be at all possible to introduce any system of exchange between the two armies, namely, the British and the Indian, at the present moment, with the present incumbrance, without infringing upon the just rights and claims of the officers of the Indian army ?—As to their just rights and claims, I should be disposed, in the case of any exchange, to leave that to be determined by the individual himself. I have stated in my replies that I have not myself been able to arrive at any calculation which should lead to such a result.

4489. We will suppose the case of an old lieutenant in the Indian service ; he may have been twenty-five years in the service, and he is, perhaps, senior lieutenant of his regiment; if the system of exchange were permitted, might it not happen that one or two of the old captains of his regiment, who must necessarily be old men if he is so old a subaltern, might exchange, and is it not almost certain that any exchange of a captain of that regiment would be introducing a young man above the lieutenant's head, which would be a most serious hardship ?—I look upon it that any plan of exchanges which should leave out the relative condition of age between officers, might prove very prejudicial.

4490. (*Chairman.*) Is it true that all the captains are old men ?—Not all.

4491. I understood you to say that you considered that there was an advantage in regiments coming out, because they served as pattern regiments ?—Picked regiments of light infantry are what I contemplate, such as those trained by Sir John Moore.

4492. Why are they pattern regiments ; is their discipline better than that of the others ?—They would be patterns to the regiments of India.

4493. Because their discipline would be superior ? —Because they are fresh and vigorous from Europe.

4494. (*Duke of Cambridge.*) Then you think that there is a difference in the discipline of a regiment from Europe and of a regiment stationed in India ? —Regiments long stationed in India, particularly regiments in the Company's army, had not the smart appearance that regiments of Her Majesty's army, particularly those recently arrived, had. It may have been that certain small matters were for the convenience and perhaps for the good of the men relaxed from by their officers for the sake of their health, but I do not think that any relaxation has ever been made

J R. Martin, Esq., F.R.S

25th Oct. 1858.

which tended to detract from the efficiency in the field of the Indian regiments.

4495. (*Chairman.*) Did not that loss of smartness apply also to Her Majesty's regiments which had been out there equally long ?—Hardly so much ; I have myself served with the 17th and the 59th of Her Majesty's regiments. It so happens that the colonel is almost always a smart, clever man, and many of them are young men, on coming out from England, though the regiment may have been many years in India. I believe that there was always some degree of superior smartness in going through evolutions.

4496. (*Duke of Cambridge.*) Would you not apprehend some difficulty in the larger body of Europeans looking up to the smaller body as an example. Would it not be rather the other way, that the smaller body would quickly accept the deficiencies, more or less, whatever they might be, of the larger body ?—No.

4497. Do you not think that it is rather the tendency of bodies that the smaller generally adopts the principles of the greater ?—I think that the general impression throughout the Indian army was to defer to those more vigorous conditions which appertained to regiments recently arrived from Europe.

4498. Was not that probably caused by the fact that the regiments coming from Europe were very much at that time in the ascendant, that is to say, that there were 24,000 men from Europe as against 12,000 stationed permanently in India ?—I think that referring to the necessary influence of a tropical climate on European constitutions, there will be always in the regiments permanently stationed in India an amount of what, in a military sense, I suppose, may be called relaxation, and that the example of the regiments coming from home, however few they may be, will always be held up as a pattern for example.

4499. (*Sir Harry G. W. Smith.*) Have you turned your attention at all to the recruiting of the army for India ? — During my service in India I was both garrison surgeon of Fort William, and surgeon of the European general hospital in Calcutta. In both situations I had an opportunity of seeing what were called the batches of recruits, arriving generally in the month of May, the most improper month that could be for their arrival. In Fort William I had the opportunity of seeing them in their barracks, in the general hospital I saw them as patients.

4500. I rather allude to the physical character of the recruits on their arrival in India ; at what age would you enlist them ?—Their physical characteristics varied with the season ; they were sometimes fine fellows, and at other seasons they were not so good. I presume that those differences arose from differences in the agricultural and manufacturing prosperity of the county from which the recruit came.

4501. (*Duke of Cambridge.*) I suppose you are aware that of late years no recruits have arrived in India in the month of May ?—Quite.

4502. You are aware that of late years the regular drafts for India have never embarked till June or July ?—I am aware of that, at the time I have mentioned the East India Company used to send them out at the time of year I have mentioned.

4503. (*Sir Harry G. W. Smith.*) If half of the European force in India are to be local and recruited from the same source as the troops of the line, do you not think that the recruiting for the supply of both armies, the army of Great Britain and the local army in India, will clash considerably ?—I do not see how it should, except by competition on the part of the recruiting officers, to see who should strive to get the best men.

4504. (*Duke of Cambridge.*) You did not see any difference in the men ? — I have not seen any; the only remark that I recollect ever to have been made by the medical officer was this, we often had occasion to remark upon the fine appearance of the drafts for the artillery.

4505. (*Chairman.*) What is the time of year which you think most advisable for the drafts to arrive in India ?—I think the proper time to arrive in India is the very commencement of the cold season, the first or second week in November.

4506. (*Major-General Hancock.*) You are aware I suppose that invalided men of the Company's service, who come to Europe and are discharged, occasionally return to India, that they re-enlist, being allowed their former service, and return to India to serve there ?—Yes.

4507. (*Viscount Melville.*) I suppose you have had no opportunity of knowing the antecedents of recruits before they have come to you ?—No, excepting this, that in the regiment of Bengal artillery, with which I came in contact when I went to India first, there was a great number of broken down gentlemen amongst them.

4508. Did it ever happen to you to discover men who had been dismissed from the Queen's service, afterwards enlisting in the Company's, and going out to India ?—No, I never served with any of the Company's European regiments. I only had an opportunity of seeing them in the manner that I have stated as garrison surgeon of Fort William, and as surgeon of the European general hospital.

4509. (*Sir Geo. A. Wetherall.*) Are you not aware that soldiers invalided from the East India Company's service and sent to England are never sent back to India ?—They return on regaining their health.

4510. (*Sir Harry G. W. Smith.*) Have you ever been president of a board or on a board to examine invalids coming down from the country to Calcutta, and has it occurred upon the examination of some man who had passed the medical board on the frontier to say, " Oh ! no, you are fit for service," and to send the man back up the country ?—I have served as the garrison surgeon of Fort William repeatedly upon such committees, and committees for the transfer of of volunteers from one regiment to another, but what you mention has never occurred within my recollection. The invalids were, on the contrary, so battered by length of service and disease that in 19 cases out 20 there could be no question about them whatsoever.

4511. (*Major-General Hancock.*) You have stated, I think, that the sickness and mortality in an European regiment depend in some measure upon the character and ability of the officer commanding. In what respect does the officer commanding interfere with the medical practice or the medical arrangements of a regiment ?—Not in any way whatsoever, but he can, and he ought to interfere in a far more important direction ; that is, in the sanitary regulation of his men, in their supply of food, barrack and hospital accommodation, the selection of the station, and the improvement of it, and in every way that he can. It is in those matters that I think the functions of a commanding officer and of all his officers are very important.

4512. (*Duke of Cambridge.*) Is it not your opinion that the discipline of a regiment itself adds very much to the sanitary condition of the regiment, that is to say, that a regiment in good discipline will probably be in better health than a regiment in bad discipline ? —Yes, assuredly ; the interior economy and discipline of a regiment is a most powerful element in the health of a regiment.

4513. (*Major-General Hancock.*) In fact your opinion is that the sickness and mortality depend in a great measure upon the officer at the head of the regiment being in every way well qualified for his command ?—Assuredly, he is the father of the regiment.

4514. (*Duke of Cambridge.*) Therefore, the higher the state of discipline of a corps, unless there is some exceptional reason for the contrary, the higher the

J R. Martin, Esq, F R S.

25th Oct. 1858.

health of the troops, every little matter connected with the regiment having been thoroughly and well considered ?—Yes, assuredly ; all other matters being equal.

4515. (*Colonel Burlton.*) Are you of opinion that a local army such as you recommend, knowing that its officers and men are to reside in India, and to make it a sort of abiding place for their lives, would be likely to become more intimately associated with the natives, more acquainted with their customs and manners, and more agreeable to them, than regiments constantly relieved backwards and forwards from England ?—Yes, permanence of residence would assuredly have that influence.

4516. And do you think that that would be advantageous ?—I do.

The witness withdrew.

Colonel Sir A M. Tulloch, K C B.

Colonel Sir ALEX. MURRAY TULLOCH, K.C.B., examined.

4517. (*Chairman.*) You are a colonel in the army ?—I am.

4518. You are at present attached to the War Department ?—Yes.

4519. Will you have the kindness to tell the Commissioners what length of time you served in India ?—I served in India for about four years, from 1826 to 1830.

4520. (*Major-General Hancock.*) In which presidency ?—Principally in Burmah.

4521. (*Chairman.*) You are attached to the statistical department at the War Office ?—I have been in the habit of discussing all statistical questions which have arisen there.

4522. Your attention has been drawn to some questions which have been submitted to you by the secretary of this Commission, and you are, I believe, prepared to give some information upon them ?—Yes, I shall be happy to read a Memorandum upon the subject.

"MEMORANDUM in reply to Heads of Inquiry suggested by Commission for Re-organization of the Indian Army.

"As regards the first head of the proposed inquiry, I should be disposed to ask what object can be obtained by the employment of troops raised for service in India alone, which cannot be gained as well by the employment of troops of the line ? It rests apparently with those who advocate the former description of force to point out its supposed advantages,—I am aware of none.

"There is no duty that European troops raised for service in India alone can perform which could not be done as well or better by troops of the line, because as a body they are likely to be less debilitated by long residence in India, and consequently more efficient. If the proposition of having European troops raised for service in India alone be founded on the idea that many of those who enlist may, from family connexions and other causes, wish to remain continuously there, that object can be accomplished just as well by allowing them to volunteer from a regiment of the line going home, to another coming to India, till the usual period of 21 years service has been completed, when the soldier could have the option of being pensioned there if he wished to remain permanently.

"Such volunteering should, however, be entirely irrespective of bounty, for as the practice of frequent reliefs is founded on the supposition that, morally and physically, it is for the advantage of the soldier that he should not remain too long in India, it would exhibit a great perversion of reasoning to be contending for that principle on the one hand, and on the other inducing the old soldier to remain by holding out any pecuniary consideration.

"The facility for volunteering, if it suit his views, gives all the advantages to the soldier which he could obtain in a local European force without its disadvantages; one of which obviously is, that as no soldier can, till he has tried it, tell whether India will agree with his constitution, or if he will like the country, it is better by entering a regiment of the line to be saved from the necessity of binding himself to perpetual service, where he never can be a willing and efficient soldier.

"The whole tenor of military legislation for the last 20 years has been most decidedly opposed to prolonged tropical service, both on moral and physical grounds, and the change has been attended with the happiest results. In the year 1837 a great alteration was brought about in the duration of service in the West Indies, through some suggestions made by me while conducting an inquiry for Parliament into the enormous loss sustained by our troops in the West Indies and Jamaica, which led to the period of their service being reduced to three or four years instead of extending to 11 or 12 as formerly. This measure was at first strongly opposed, owing to the apprehension of a greater loss among the men in consequence of want of acclimatization ; but it having been established, by a long course of investigation, that as a general rule, the mortality increased quite as rapidly with the advance of age in a tropical climate as in any other, the change was at length made, and the loss among the European troops under what is termed the 'rotation system' of reliefs has fallen in consequence within the last twenty years from 81 to 62 per 1,000 annually in the West Indies, and from 128 to 60 per 1,000 in Jamaica.

"That the increase of mortality with the advance of age is just as manifest in the East as in the West, may be seen by reference to Return A. annexed, which contains a statement of the mortality at different ages among troops, for a period of seven years, and in every climate ; the regiments in India run thus :—In the Bombay presidency, soldiers between 18 and 25 die at the rate of 18 per 1,000 annually ; between 25 and 33 at the rate of 34 per 1,000 annually; at the age of 33 to 40 at the rate of 46 per 1,000 annually; and at the age of from 40 to 50 at the rate of 71 per 1,000 annually."

4523. Those are taken from actual returns ?—"In Madras, soldiers between 18 and 25 die at the rate of 26 per 1,000 annually ; between 25 and 33 at the rate of 59 per 1,000 annually ; between 33 and 40 at the rate of 70 per 1,000 annually ; and between 40 and 50 at the rate of 86 per 1,000 annually."

4524. (*Duke of Cambridge.*) They are much higher than in Bombay ?—Yes. "In Bengal men die at the rate of 23 per 1,000 annually between 18 and 25 ; 50 per 1,000 between 25 and 33 ; 50 per 1,000 between 33 and 40 ; and 83 per 1,000 between 40 and 50."

4525. That makes Bombay much the healthiest ?—It was so at that time. The results will always vary whenever you take them over a different period, but the general features will be the same.

The witness delivered in the following paper, illustrative of the influence of age in the following climates.

(*Sir Alexander Tulloch.*) The same result applies to officers as well as men, civil as well as military, as will be seen from the *following* calculations.

" Out of 1,184 deaths among officers in the Bengal " presidency, the proportion occurring annually in each " rank and at each age has been as under:—

—	Colonels, average Age 61.	Lieut.-Cols., average Age 51.	Majors, average Age 40.	Captains, average Age 36.	Lieutenants, average Age 18 to 33	Cornets and Ensigns, average Age 18 to 33	General Average at all Ages.
Died annually per 1,000 of each rank -	59·4	48·4	41·0	34·5	27·5	23·4	31·2

" This extends also to the civil servants, the mortality among whom for a period of forty-six years " from 1790 to 1836 exhibits a modification of the " same results, viz.:—

—	Above 50 Years of Age and 30 of Service	Age 45 to 50, Service 25 to 30	Age 40 to 45, Service 20 to	Age 35 to 40, Service 15 to 20.	Age 30 to 35, Service, 10 to 15.	Age 25 to 30, Service 5 to 10.	Age 20 to 25, Service 1 to 5.
Died annually per 1,000 of each rank -	48·6	33·4	35·4	23·4	16·6	20·8	19·9

Colonel Sir A. M. Tulloch, K C B

25th Oct. 1858.

" Thus there can be no question that the longer " any one stays in India the more likely is his health " to be deteriorated."

4526. In whatever class of life, whether military or civil?—Yes.

4527. (*Sir Harry G. W. Smith.*) Is war included at all in this estimate?—It is not. In fact, I have endeavoured as much as possible to keep war out of view.

" It follows, as a natural consequence of these results, that if regiments of the line serving in India " are relieved at proper intervals, say every ten years, " their loss while serving there must generally be less " than that of any European corps permanently resident, because they will, as a body, be younger men " —hence a strong reason for the employment of the " former force in preference to the latter.

" Those who contend for a local European army in " preference to troops of the line, probably do so on " the supposition that it would materially reduce the " expense of reliefs, forgetting the important change " which has been brought about by the Limited Enlistment Act now coming into operation in the Indian " army.

" If the men thus enlisted wish to come home they " must be discharged at the end of ten years, being " the same period I propose for the relief of regiments " of the line. If they do not wish to come home they " would be just as likely to continue in the service by " the *facility of volunteering into* a newly arrived regiment of the line, to complete their second period of " service, as if they had originally enlisted into a " local European force. Besides, it appears very questionable whether, during the excitement of a war " in Europe, young men would be disposed to enlist to " the required extent in any local corps for remote " service, and still more questionable whether it would " be good policy on the part of the Government at " such a time to encourage their doing so; but if the " whole European force in India were composed of " corps of the line, second battalions could be raised " without reference to their ultimate destination; some " of these might then be sent to India to replace the " first battalions, which could be brought to the theatre " of war, with all the experience acquired by their " previous service, while the newly raised men would " do just as well in India, where the "white face" is " all that is wanted.

" By this arrangement, in the event of war, India " would add to our military strength, whereas any " local European army would tend seriously to reduce it, by keeping back so large a proportion " of our trained soldiers, whose services could not " be made available elsewhere without a new engagement.

" It forms another weighty consideration, militating " against the employment of any such force distinct " from our troops of the line, *that soldiers not returning* home periodically, and serving under different " conditions from the rest of the army, must always, " to a certain extent, have local interests, and be subject to local influence. Some question of pay, allowances, or coveted advantages, granted to one branch " of the service but denied to another, may with such " a force some day create another mutiny. On such " questions both officers and men of the Indian army " have before now been nearly, if not altogether, in " that state; but were any such feeling ever to arise " among regiments of the line, the very first suspicion " of its existence would lead to immediate removal to " some other foreign *station*—a *remedy* which would " be impracticable with any localized force. This " danger becomes, of course, the greater the larger the " army, as it must necessarily give confidence to the " disaffected to know that they may make their own " terms, *from the utter impossibility* of sending any " adequate force against them.

" Whatever the force employed may be, it would, " however, I apprehend, be impossible to keep up the

Colonel Sir A. M Tulloch, K C B.

25th Oct. 1858.

" large European establishment likely to be required " in India otherwise than by a much greater economy " of life than has hitherto been practised ; say, that " 80,000 men were to be the minimum (which is less " by upwards of 20,000 than what we have at present), " the mortality among these, based on the long average " of our experience for 39 years, would amount, " according to the following table, to about 70 per " 1,000 annually."

" TABLE showing the MORTALITY in each of the " Presidencies for a Period of 39 Years, as ex- " tracted from the War Office Returns.

YEAR.	Bengal.		Madras.		Bombay.

SUMMARY of the above. Per 1,000.

Bengal	- Strength 377,980	- Deaths 29,970	- Ratio 79·2
Madras	" 249,012	- " 15,462	- " 62·9
Bombay -	" 165,947	- " 10,152	- " 61·1
Total	" 792,939	- " 55,584	- " 70·0

" These losses include some 200 or 300 men killed " or dead of their wounds during the Mahratta, Pindaree, and other campaigns prior to 1824 ; also " 3,750 who perished in the first, and about 1,000 " in the second Burmese war, chiefly from sickness ; " also nearly a whole regiment lost at Cabul ; likewise the casualties during the campaigns of Scinde, " of the Sutledge, and the Punjaub, about 2,000 in " all ; and nearly 1,200 who died in the first Chinese " war, all from sickness with very few exceptions. " The loss arising from the climate of stations now " usually occupied on the continent of India may " therefore be reduced by about 8,000 or 9,000 men, " or to an average of 60 per thousand annually, though " the total loss from all causes has been at least 70 " per thousand.

" In addition to the latter rate, which must of " course form our estimate of the number to be replaced, the proportion invalided annually may be " taken at about 25 per thousand more, and of time-" expired men not renewing their engagement nearly " the same proportion (the last of course is alto-" gether conjectural, as the effect of limited enlistment is only coming into operation). These " totals would make, in all, a decrement of 120 per " thousand, or 9,600 annually ; whereas the average " number of recruits raised by all the recruiting " districts throughout the United Kingdom from 1845 " to 1849 inclusive, which may be fairly assumed as " an average for a period of peace, amounted to " rather less than 12,000 annually ; so that, unless " means can be adopted to reduce the mortality and " invaliding, the force in India alone would absorb " nearly all the recruits raised under ordinary cir-" cumstances for the whole army, of which the re-" quirements are not now likely to be less than " 20,000 men a year,—probably more.

" It must not be assumed that in consequence of " the successful exertions made in recruiting during " the Russian war and since the outbreak of the " mutiny in India, we can rely on the like numbers " for the ordinary recruiting of peace. To say " nothing of the military spirit which is excited by " such events, our former practice of limiting the " standard age during peace to the period between " 18 and 25, and the standard height to five feet " five or six inches, necessarily left in our popu-" lation a vast mass who could not previously be " received in o' the army, however willing they " might be, but who readily availed themselves of " the opportunity when the age was extended to 35, " and the height reduced to five feet three or four " inches. But after that surplus stock on which we " have been drawing during the late pressure is " exhausted, the same difficulty will arise regarding " recruiting as before; and, owing to the facilities " afforded for desertion since the introduction of " railways, additional bounty cannot be relied on for " a remedy, because as you add to that, so also do " you increase the desertions, and lose large sums " without getting men in return.

" The extensive recruiting since 1854 has also been " largely aided by the militia being kept up and " volunteering in great numbers. The recruiting on " the outbreak of the mutiny in India was also greatly " assisted by the large numbers who had been dis-" charged a few months before, at the reductions con-" sequent on the termination of the Crimean war, " neither of which sources could be relied on under " ordinary circumstances.

" I am thus particular on this head for the purpose " of impressing the conviction that the selection of " healthier stations for our troops than they have " hitherto occupied is no longer a matter of choice but " one of necessity, as we cannot hope to keep up " the large European army required to hold India " without the strictest attention to this important " measure.

" It has been ascertained by experience that in all " tropical climates, whether in the East or West, locali-" ties may be found where the mortality to which " European troops are exposed does not very much " exceed that which takes place in their native country. " Returns extending over a great number of years " show that at Bangalore, or in the Neilgherry hills " in the Madras presidency, and at Poonah, or the " Mahableshwar hills in the Bombay presidency, Euro-" pean troops may be located without sustaining a " greater loss than about 3 per cent. annually, a con-" siderable portion of which arises from disease con-" tracted at other stations more unfavourable to " health. There can be little doubt that in the upper " provinces of the Bengal presidency, at elevations of " from 3,000 to 4,000 feet, situations of equal salu-" brity might be found adapted for large bodies of " troops, but, judging from the results given in the " following abstracts and summary, which extend over " a period of many years, the selection of stations " there does not appear to have as yet been fortunate, " probably because strategetic may have hitherto over-" come sanitary considerations.

Colonel Sir A. M. Tulloch, K C B.

25th Oct. 1858.

" These results do not exhibit the loss at all the " Indian stations during the 39 years included in the " first Table, but at those only where regiments have " been stationed for the whole or the greater part of " a year; they are also exclusive of the loss on long " marches, which is often very heavy; but it has been " considered more advisable thus to found the results " on incomplete data, than to incur the risk of adopt- " ing what might prove to be incorrect.

4528. (*Chairman.*) On what are those averages founded; is it upon all Europeans?—It is upon Her Majesty's European forces only. The Europeans of the East India Company's army are not included in the sanitary returns which come home to us.

4529. (*Duke of Cambridge.*) All this information is obtained from official documents?—Yes.

" Not merely this difficulty of recruiting, but the cost " of replacing those who die or become invalided, affords also a financial reason of the utmost moment for finding some healthier stations for the largely increased " force of Europeans to be kept in India in future, as " well as some cheaper mode of effecting the necessary " reliefs. On this subject the following rough calcu- " lations may not be inappropriate, as connected with " the latter part of the second head of the inquiry.

" Assuming that one-tenth of the troops must be re- " lieved every year, and less it cannot be, consistently " with the maintenance of efficiency, there would have " to be provided the following passages annually:

8,000 men of relieving regiments.
8,000 „ relieved regiments.
5,600 recruits to replace deaths.
4,000 invalids and time-expired men coming home.
4,000 recruits going out to replace them.

29,600 annual passages.

" There are at present two ways of providing these " passages, the one by the Cape, the other through " Egypt. I shall in the first instance calculate what is " apparently the cheapest of these, viz., by the Cape, " and suppose that the cost, including provisions, is " even as low as 12*l.* per man, the total expense thus " involved would be 355,200*l.* annually.

" To this has to be added the cost of passages for " the officers of the regiments coming home and " going out, say,—

	£
40 for each of the eight regiments, or 320 out and home annually, being 640 in all, at an average cost of 90*l.* -	57,600
And for officers invalided or coming home on duty or to join other battalions, say two per regiment annually from 70 regiments, would be 140 officers each way, or in all 280, at 90*l.* each - - - - - -	25,200
Total for officers - -	£82,800

" But as the average passage of sailing vessels " (unless they be of a very superior description, which " would add to the expense,) may be taken at about " 4 months; these men, though paid, would be during " all this time available neither for the army in the " East nor the army at home; indeed they might, so " far as regards any military purpose, be just as well " in a state of non-existence.

" The loss sustained in consequence by adopting " this mode of transit is equivalent to a third part of " the whole number on the passage, or 9,866 men for " one year; the pay of whom, including officers, " would, according to the army estimates, be about " 282,410*l.* to be added to the annual expense of " passage by this route—indeed it must be consider- " ably more, taking into account that a large part of " the force would be cavalry and artillery, with in- " creased pay, and that there are women and children " to be taken out and brought home also.

" But as the passage by the Red Sea might be made " in a month, the probable loss from this source would, " in the event of that route being adopted, be reduced " to one-fourth of the above amount, or 70,602*l.* In " that case, however, there would have to be added " the increased expense of transit. It is doubtful " whether, even when subject to the average charge " for that service, that increase would be equivalent " to the loss of the pay for so many months without " any duty being rendered in return, but in the " event of a regular system of reliefs through Egypt " being adopted, the expense might, it is submitted, " be so far reduced by the following arrangement as " to make that route unquestionably the cheapest.

" Let six ships of the line, of a class no longer " available for warlike purposes, but capable of con- " veying about 700 soldiers in addition to a com- " plement of 150 sailors each, be fitted up as screw " steamers under a commander or lieutenant, and " three placed as troop-ships on the route between

Colonel Sir
A M Tulloch,
K C B

25th Oct 1858

“ Southampton and Alexandria, and a like number on that between Suez and India.

“ This number of vessels would ensure the troops reaching India or coming home in about one month, and it can be shown that their employment for this purpose, including the cost of fitting out, is not likely to involve even half the expenditure which would ultimately be incurred by sending the reliefs round the Cape.

“ By a properly arranged system of this kind, the employment of the vessels both out and home would be secured, and an establishment of troop ships kept up, which, on the breaking out of a war, might be of the greatest possible utility.

“ The accompanying estimate (*see* Appendix, p) of the cost of converting an 80-gun ship on this principle, shows that it can be done for 53,000*l.* each vessel. For six such vessels it would be 318,000*l.*, the interest on which, say at 10 per cent. annually, would have to be added to the sailing expenses. These are stated in the estimate at 16,331*l.* per annum, exclusive of coals, for which add 3,670*l.*, reckoning half speed throughout, and an average cost of 30*s.* a ton, and the total would be in round numbers 20,000*l.* each vessel, or 120,000*l.* a year. This, with 31,800*l.* for interest on the alteration and equipment of the vessels, would raise the whole expense to about 151,800*l.* per annum; whereas, going round by the Cape, the cost would be 438,000*l.*, besides a loss of 212,000*l.* or thereabouts by the men being on board the vessel three months longer, and doing nothing, while their pay was running on.

“ It might be possible to combine this arrangement with a system of reliefs for the Mediterranean stations, so that the men might have the experience of a year at least in a warm climate before proceeding to India. This would add in no respect to the expense, and might be useful as what is termed ‘a seasoning,’ by accustoming the troops to the precautions necessary for health in a warm climate.

“ In making this suggestion for a continuous current of reliefs by the Red Sea, I am aware that all seasons are not alike in respect of health for troops arriving in India; but as they can soon be sent from the presidencies by rail beyond the most unhealthy localities, that need create no obstacle. I am also aware that the passage through Egypt and the Red Sea must at certain seasons be attended with exposure for a few days to a high temperature, but as no particular loss of life has arisen hitherto from this cause, I think the passage not likely to be attended with any serious risk, even at the hottest season. It is difficult to say what degree of heat Europeans cannot stand with impunity, provided they have free ventilation, and are not long exposed.

“ I am thus particular in urging the employment of regular troop ships as part of the system of reliefs for India, because I feel confident that the rotation of reliefs for the Mediterranean, West Indies, and America, would never have been effected or kept up sufficiently long to give the measure a fair trial, but for the circumstance of troop ships having at first been especially devoted to that object. The desire or the supposed necessity for saving an immediate outlay for freight would, I am confident, have caused a temporary postponement of the relief at some period; and the same reason would probably have operated from year to year till the whole arrangement was ultimately broken up, and the troops left to perish in the West Indies as before; but the vessels being prepared, no difficulties of this kind occurred, and the rotation was kept up regularly with the best effect on the men, both morally and physically, and at less expense, ultimately, than would have been incurred for freight ships.

“ As regards the third head of the inquiry, I am of opinion that it might be practicable to consolidate the European force, whether of the line or permanent corps, so as to admit of exchanges from one branch of the service to the other; but it appears to me that the officers of the Bengal presidency stand in a different position from the others as to their *liability* to any such change. There, the original native army exists only on paper; the men are gone, and it may be considered inexpedient to employ many of that class in future, thus leaving the mass of officers disposable. If these officers will not go voluntarily into line regiments if wanted, then I apprehend they, as in all cases of reduction, *from whatever cause*, can only claim their half or full pay retirement according to their periods of service. Few legislators are likely to entertain an opinion that the government must re-form regiments which they do not want, merely in order to keep these officers in possession of their Indian allowances. The great check on mutiny or misconduct in every corps is that the officers know they will suffer in their professional prospects by any laxity of discipline which may give rise to such an event; remove that wholesome apprehension, and, except as regards his own personal safety, it might become a matter of indifference to an officer whether his men mutinied or not.

“ I think, therefore, that all grades of officers in the Bengal army under the rank of field officer, who are not required for the native force by the new arrangements, should be liable to be transferred, according to their standing, into the new European corps or regiments of the line to be formed, and if they decline the position allotted to them, or make any difficulties, that they should then have the option of retirement on half or full pay, according to their service.

“ With regard to the Bombay and Madras armies, however, in which there has been no mutiny of any extent, the officers under the rank of major should only be transferred at their own request to the European force or the regiments of the line to be raised for India, as nothing has occurred in these armies to invalidate the contract or understanding under which the officers were originally engaged, and consequently there is no necessity for remodelling their force except what has arisen from the occurrences in the other presidency, for which they should not suffer.

“ This distinction will suit the case of the different presidencies. In Bengal, for instance, where the changes and reductions must necessarily be numerous, it would, perhaps, be difficult otherwise to obtain a sufficient number of officers for the intended European force, while in Madras and Bombay the number of officers not required in the native army will probably be so few, that the necessary reductions may be practicable without any compulsory removals.

“ A number of the officers, more especially in the junior ranks, will, I apprehend, think it no hardship to serve in the regiments of the line proposed to be formed, but rather the reverse, and when once the change has been authorized I see nothing to prevent officers of the line and of the native army, under the rank of major, exchanging, provided they enter junior of their respective grades, and that the former possess the requisite qualifications with respect to languages.

“ The value of the contributions to the military and retiring fund by each of the officers going into the line could be calculated by an actuary, according to the respective ages and ranks of the parties, and whether they were married or single; so much thereof as corresponded to the advantages which the military retiring fund and widows fund gave to the Indian officer in excess of what he would receive under Her Majesty's regulations for himself in case of returning home, or for his wife and family in the event of death, should then be repaid to any who left the native army. These officers would afterwards be disposable wherever their services were required, as in any line regiment, and all the benefit of the funds should then be confined to the officers of the native corps permanently resident in India, *Colonel Sir A. M Tulloch, K C B.*

25th Oct. 1858.

"whose rate of India pay would admit of keeping up their subscriptions.

"Into the cases of the field officers I scarcely think it necessary to enter; many of them would probably be disposed to retire under the change of system; and every encouragement should be given to facilitate their doing so. The numerous appointments existing on the staff, and in the commissariat, political, and revenue departments, would, I apprehend, find ample employment for all disposed to remain, and who were not wanted for the command of native or irregular corps, without moving them into regiments of the line.

"I can see great advantages to both armies by the facility of interchanging officers. The health, inclination, or prospects of many in the Indian army may induce them to prefer the very moderate pay in the British line regiments, with the chance of spending a portion of their service at home, or in healthy colonies. And as retired full pay has now been established for line regiments, as well as those of India, no difficulty need arise on that account, provided it were arranged, as ought in justice to be the case, when so many are in India, that in calculating the thirty years required for full-pay retirement, two years' service there should be allowed to reckon for three. The extra boon now granted, of an increased rank with corresponding retirement according to the period served in India, might then very fairly be reserved exclusively for the officers with native corps.

"In order to prevent the injury which might arise to the prospects of officers of the Indian army who are without the means of purchase, it would be necessary, should any transfer be made otherwise than voluntarily to the regiments of the line raised for India, that all that force should be, like the artillery and marines, non-purchasing corps, but if the change be voluntary in every case, I see no reason even for that distinction, as each officer would, or ought, in making the application for removal, to consider his prospects and how far he had the means of advancing himself by purchase when opportunities offered, as well as whether he had the means of supporting himself out of India on the limited amount of his pay.

"The change on the whole I conceive by no means impracticable at such a moment as the present, and one well calculated to make the officers of both services better satisfied with their position. It may, perhaps, also induce the Indian officers to serve more willingly under the new system when they find they have such an option within their reach, provided circumstances will admit of their availing themselves of it. In the event of any such change, however, the corps formed must be regiments, not battalions of the line.

"In regard to the mode of keeping up the local European force, which forms the fourth question, should these arrangements be carried through, that would of course be done, both by volunteering in India and separate recruiting in the United Kingdom, as is the case now with regiments of the line in India.

4530. (*Sir George A. Wetherall.*) In your calculations of transport have you taken the expense of feeding the troops into both calculations?—I have not taken the expense of feeding the troops into the calculation for the Red Sea voyage.

4531. 12*l.* includes feeding?—Yes, the soldier you are aware pays 6*d.*, there is 6*d.* stopped from his pay which goes to the account of the feeding; the difference, therefore, upon a month's passage cannot be very much.

4532. The 12*l.* in going round the Cape includes the feeding?—Yes, but it is a very low estimate; I think it is the lowest estimate which has ever been taken.

4533. (*Sir Harry G. W. Smith.*) Do you give the passage money as 12*l.*?—Yes.

4534. It is always 13*l.* 10*s.*?—Even that is very low; and the reason why I did not take into account either the feeding of the men or officers by the Red Sea route is, that the cost would be very small indeed, the men being only a month at sea, and 6*d.* a day stopped from their pay. According to a calculation which I made some years ago of the cost of the soldier's ration on shipboard, I find that it is only 8½*d.* to the Admiralty, so that the difference is but 2½*d.*, which is not worth going into. I have made no calculation for the officer's expenses by the Red Sea route, because he would walk on board his vessel and find every accommodation provided for him there. I see no reason why he should not have a mess on board.

4535. (*Viscount Melville.*) The regulated passage money will not bring a subaltern home?—He would only have to walk on board a troop ship; everything would be provided for him. If an officer got the advantage of having a good cabin coming home in one of these ships, a very small addition given by the Government would cover the expense of messing. I believe at present he gets 4*s.* a day, and contributes 3*s.* 6*d.* This would be no great additional charge to the public, and it appeared to me that as we were dealing with a question of several hundreds of thousands of pounds, the calculation would be sufficiently near as I had taken it; but I will hereafter submit further particulars on the subject.

4536. (*Duke of Cambridge.*) You have given your opinion very decidedly that you are in favour of regiments of the line, is it your opinion that in the organization and treatment of great armies it is of immense importance that there should be one general system and not a double system, causing jealousies and other undesirable results?—Most unquestionably; I think it would be one of the greatest recommendations of the change, and throughout the whole of this paper I have been actuated by the consideration, that having the whole under one head would add to the strength of the nation instead of diminishing it.

4537. It is of course your opinion that emulation is a very desirable thing in the army as in every other profession?—Most unquestionably.

4538. Do not you think that the emulation of corps and regiments in an army is the thing to keep up the whole managability and efficiency of an army?—It is certainly most important.

4539. And do you not think that that emulation is very different from the emulation of two distinct armies standing in the same country, one quite separate from the other?—Yes, and there is another advantage. You have an immense army out in India; if that is to be kept a separate army, when officers come home there is nothing for them to do; whereas in the other case, they could join their regiments here and go out to India again when their health was recovered.

4540. They are available in both countries?—Yes, whenever they are wanted. I think that is most important; you have not less than 500 officers always in this country belonging to the Indian army whom you could attach to any regiment or send to their own regiments as might be required.

4541. Emulation of corps in one army is a very different thing from the emulation of two armies?—Most unquestionably.

4542. I apprehend you would think that the one would be likely to lead to difficulties of treatment, and even jealousies, and the other not?—Yes, and of all the jealousies I think the question of pay is the most serious one; one army being paid at a different rate from the other.

4543. (*Viscount Melville.*) That does not now exist?—No, you have the same rate of pay.

4544. (*Major-General Hancock.*) Provided that the two armies be put on a perfect equality as regards honours and emoluments, and in every other respect, why should any other than a generous feeling of emulation exist between them?—Just for the reason that what ought to be does not always exist.

Colonel Sir A. M. Tulloch, K.C.B.

25th Oct. 1858.

4545. I ask you why the contrary should necessarily exist ?—I do not say it is necessary, but we do not always find those effects produced which ought to be produced.

4546. Do you see any reason why a feeling other than a generous spirit of emulation would necessarily exist ?—I would not say "necessarily," but many circumstances might call a different feeling into operation ; as, for instance, if it were found that one army was more favoured in getting good stations or lucrative appointments than the other.

4547. Why should you assume the possibility of such a thing ?—Simply, because some people suppose it to be so ; that is the only reason why I say so.

4548. Why should that apply more to one army than to the other ?—The same thing might apply to both. I have heard the question discussed in India over and over again,—See how fortunate such a regiment is, it is always at a healthy station. This may have been mere chance, but people will say so, and I think it is a great matter to avoid it.

4549. (*Duke of Cambridge.*) In a double army there must be a difference of feeling between the two bodies ?—Yes, and I am anxious to see the same laws and rules extended to both, and the whole made available in every possible way as one army.

4550. Do you not think that if two bodies of troops are in a country, the one the smaller, and the other the greater, the smaller body is much more likely to adopt the rules and the system of the greater, than the greater those of the smaller ?—That is a very natural consequence.

4551. Therefore is it not likely that the fact, as stated in evidence, of the European Company's troops having hitherto always looked up as a model to some extent to the troops of the line, has in a great measure been caused by the fact of the troops of the line preponderating in numbers ?—Yes, and also by their coming out more frequently. For instance, a regiment arrives fresh from England, bringing with it all its new ideas, a new mode of drill, and new habits on the part of the officers ; I think that a very great advantage.

4552. Supposing that you reversed the order of things, and that there was a local army, and that the local army was the preponderating army, is it likely that that local preponderating army of Europeans would look up to the inferior army of Europeans of the line ?—No ; in fact I contemplate that if you are going to have a large European army, you must have it entirely a local army, and withdraw all regiments of the line. I do not think that the two combined would then be good.

4553. (*Major-General Hancock.*) Do you think that no advantage accrues to Her Majesty's regular army from a certain portion of it having opportunities of service in India during peace in Europe ?—Yes.

4554. (*Colonel Forsyth Tait.*) Hitherto it has answered well, having a large portion of the Queen's troops in India serving in that country, and what is the particular reason why the same system should not go on. In what way will it deteriorate Her Majesty's service by the same system being continued that has hitherto gone on ?—I understood it not to be the same system which was proposed. The question put to me was on the assumption of there being a large local European army ; if it was the same system, and the same proportion of line and Indian European force respectively as now, I have no objections.

4555. Partly European ?—I understood that you were going to have, and I have assumed that you must have 80,000 Europeans, and that it was proposed by some to have this chiefly a local army, and all my observations have been founded upon that assumption. I do not see that any harm has arisen from the arrangement hitherto adopted of having a portion of Her Majesty's army in India; it has had its good effects.

4556. (*Major-General Hancock.*) Upon what grounds then do you rest your opinion, that if there is to be any local European army it should be entirely a local army ?—I have stated many reasons. One is the risk that if any circumstances arose to create a mutiny, or to raise any question connected with local interests, or anything of that sort, it would be a very serious matter to have a large European army there which you could not remove.

4557. Surely that goes against what you have recommended, namely, that if there is to be any local European army, it should be entirely a local army ; surely upon the other supposition, if any mutiny takes place in the local army, there would be the regular army to put it down ?—That, of course, supposes the regular army to be the largest, and the possibility of this not being the case, will serve to illustrate the risk to which I have referred in the immediately preceding answers. It is obvious that so long as the local European army consisted of a few battalions merely, as hitherto, while there were twenty or thirty battalions of the line, any mutiny in the former could readily be put down; but let the conditions be reversed, and the local European army be raised to 50,000 or 60,000 men, we should be certain, in the event of any mutiny among them, to lose our regiments of the line altogether, as they could never be withdrawn in the face of so overwhelming a force.

4558. Have you not stated that if there is to be any local European army, it should be altogether a local army ?—Yes, and I have just given my reasons for it.

4559. Still, if there is to be any local European army, you recommend that it should be entirely a local army ?—I think that would be the safest, if you must have a preponderating force of that description; but I would prefer 60,000 or 70,000 of the line, and a few battalions of the other, if you must have them.

4560. (*Viscount Melville.*) With reference to what you have stated, I presume you are unquestionably of opinion that the whole European force, infantry, cavalry, and artillery, should be decidedly European—that it should be part of the Bengal army ?—Yes ; every one of them, I think, with the exception of such native troops as may be necessary.

4561. Regarding the differences in the circumstances of the three presidencies, and the present European force existing in Bengal, and that in Madras and Bombay, how do you propose to absorb the present local regiments and the officers belonging to them ?—With regard to the European regiments already formed, I should number them just as regiments of the line. Supposing that you required to add 20 or 30 more regiments, those should be numbered in succession as regiments of the line also ; the officers who wished to be removed (and I think you will find a sufficient number who wish it, to fill the whole of those vacancies,) should be removed according to their respective standing. Of course that would require to be adjusted; but you can have no more difficulty in doing so, than in the cavalry arrangements. I understand that some regiments of cavalry have lately been raised in India, and they have absorbed a number of officers ; and I think the same principle should be followed in the absorption of the present officers into these new regiments of the line.

4562. (*Colonel Burlton.*) One of the objections which you have started to the employment of a local European force in India, is the probability of their being mutinous ?—Such an event is possible.

4563. Is there not a possibility that if they were all royal they might be mutinous also ?—They might be mutinous ; but it would be merely in one or two regiments, and it would be checked in time, because you could move those men immediately. The first order would be,—Remove such and such regiment to the Mauritius or Ceylon.

4564. Why should a local European regiment be more likely to be mutinous than a royal regiment ?—I am not assuming such a thing.

4565. I suppose you have heard of an instance of one of the Company's regiments being mutinous in India ?—We are told in history of the officers being so on different occasions ; and I recollect once sitting at

Colonel Sir A. M. Tulloch, K.C.B.

25th Oct. 1858.

table with an officer who had long been a prisoner for joining in the mutiny of the Madras army, and leading his men into action against His Majesty's 25th Light Dragoons.

4566. That is as regards a native regiment. I am speaking of a European regiment. I presume it is within your knowledge that a European regiment has mutinied?—I do not recollect any case of the kind. I refer at present to the officers.

4567. Would it not be in the case of mutiny an advantage to bring one force against the other?—No; I think the great advantage which you have by having them all regiments of the line is, that the moment you see a regiment getting into a bad state or exhibiting the smallest tendency to mutiny, you could immediately send that regiment away. You cannot do that with a local force.

4568. (*Viscount Melville.*) Putting mutiny and other considerations out of the question, do you not think that there is something more involved than mere numbers in allowing 80,000 men or 60,000 men of the European force to be stationed in India, altogether out of the control of the commander-in-chief in this country?—I have started with this principle, that I hold it absolutely necessary we should have one army, and I think it rests with the parties who say that there should be two armies to show the reasons for it.

4569. You are aware that the principle is contended for of a part being a local force, and a part the Queen's. Supposing that the whole European force be a local army, do you not consider that it involves a serious question independent of numbers?—I think it might do so; I think it might involve a serious question respecting discipline.

4570. Those troops being totally withdrawn from the control of the commander-in-chief?—Yes. I do not know whether a separate commander-in-chief is proposed as the head in India, therefore I am anxious for the parties who advocate a local army to state their reasons. I cannot combat them without knowing the advantage which it is supposed there would be in having a partly European army and partly troops of the line. The only advantage which I have heard quoted is that they might fight one against the other.

4571. (*Duke of Cambridge.*) On military principles I suppose, as a military man, you would give a very decided opinion that a united army is a great advantage to a country of any description?—Most unquestionably; and I might add, from what I have known of the East India Company's officers, that I believe most, the junior ones at any rate, would prefer being under one head.

4572. (*Chairman.*) Can you, on some future occasion, give a calculation of what would be the difference of expense to the Indian revenue between a regiment raised for permanent service in India, including the expense of retiring allowances to the officers and a regiment relieved at the end of ten years?—Yes. There is, however, an element which requires to be taken into consideration upon which we can get no data at present, namely, how many of those men will avail themselves of the privilege of coming home after ten years' service. In consequence of that great change, which I expect has not been adverted to, the expense of reliefs will be very nearly the same in the one case as in the other, because a man can now say, "I do not wish to remain in India; if you say I am to remain, I shall claim my discharge and go home."

4573. Then there would be an additional expense and the reliefs would be about the same?—Yes; if a soldier is not sent home in a regiment he is entitled to claim his discharge after serving ten years.

4574. (*Duke of Cambridge.*) One is a set off against the other?—Yes.

4575. (*Viscount Melville.*) Does the Ten Years Act apply to the East India Company?—Yes.

4576. (*Colonel Burlton.*) I think you estimated the expense of passages to and fro round the Cape, in order to keep up a regular series of reliefs of the army of the line, at 450,000*l.*?—I think it would not be much less.

4577. Would not that expenditure be very considerably reduced if one half of that Indian force was local—sent out there not to return?—If they wanted to come back they would come back—that is to say, they would claim their discharges after ten years; and if they wanted to stay they could transfer themselves into regiments of the line and continue to serve until their twenty-one years were out, just as well as with any local European force.

4578. Your estimate is based upon a regular relief?—Yes; but it would come to the same thing. If at the end of ten years a man says "I will come home," you must bring him home.

4579. (*Chairman.*) If you do not relieve him at the end of ten years he will come at your expense?—Yes.

4580. (*Colonel Burlton.*) Are you not of opinion that when men recruit here and are enlisted for service in an Indian local corps, they go out with the full understanding of spending the remainder of their lives in India?—I do not think they always do; that does not always follow. They enlist now for ten years; they do not go out intending to remain there any more than the others.

4581. The soldiers in the East India Company's army never dream of coming home?—On the contrary, I have, in my capacity of military superintendent of pensioners, to pay in this country about 2,800 of them. Comparatively very few, of course, come home, because the mortality is so high that few live to return. I only reckon upon 2½ per cent. coming home annually.

4582. (*Viscount Melville.*) You state that you see no difficulty in the officers exchanging one with the other. Who do you propose is to repay the sum which an officer has been paying to the Indian fund. Is the Indian government to pay it to the officer, or the officer who exchanges. If a Company's officer has been paying for ten years to the retiring fund and to the widows' fund, and he wishes to exchange with an officer of Her Majesty's service, is the officer of Her Majesty's service to repay him the sum which he has contributed to those funds, or is the government to pay it?—Not the officer who is going in, for he cannot assume the other officer's place, therefore he cannot pay; he may be of a different age, and may have a greater number of children, and other circumstances may make a difference; but the party to pay it, I think, should be the Indian government, who are relieved from the obligation which otherwise they would be under. I believe they are bound to guarantee those pensions. Before giving a precise answer to the question it would be necessary, however, to look into the exact constitution of the fund.

The witness withdrew.

Adjourned to Tuesday, November 9, at 12 o'clock.

Tuesday, 23rd November 1858.

PRESENT:

Major-General PEEL.	Lieut.-Gen. Sir GEORGE A. WETHERALL.
H.R.H. the Duke of CAMBRIDGE.	Major-Gen. MONTGOMERIE.
Marquis of TWEEDDALE.	Major-Gen. HANCOCK.
Viscount MELVILLE.	Colonel BURLTON.
Lieut.-Gen. Sir HARRY G. W. SMITH.	Colonel FORSYTH TAIT.

MAJOR-GENERAL PEEL IN THE CHAIR.

General Sir WILLOUGHBY COTTON, G.C.B. examined.

Gen. Sir W. Cotton, G.C.B.
23rd Nov. 1858.

4583. (*Chairman.*) You are a general in the army?—I am.

4584. Will you have the kindness to state to the Commission what length of time you have served in India, and the different commands and situations in which you were there?—I went to India with the rank of full-colonel in the year 1821, and on my arrival there was appointed to the command of the troops and station at Poonah. On the 47th regiment to which I belonged, being ordered to Ava, I was desired by the Commander-in-chief and Governor-general to proceed immediately to Calcutta, and when I got there I was appointed brigadier-general with a commission on the staff, and ordered to go immediately to Rangoon, and report myself to Brigadier-general Campbell, who commanded the troops in Ava. On my arrival at Rangoon I was appointed by Sir Archibald Campbell to command the Madras troops, vice Major-general Fraser, who was ill and obliged to quit that place, and I held that command until the peace, and afterwards until the embarkation of the whole of the Madras troops to return to their presidency. On my return to Calcutta after the Ava war, I was appointed by Lord Combermere, who was Commander-in-chief in India, to act as quartermaster-general to the Queen's army, in the room of Sir Stamford Whittingham who had just got his promotion of major-general. I held that appointment for one year. But on the death of Colonel Macdonald, the adjutant-general of the Queen's army serving in India I was transferred from the quartermaster-general's department to that of the adjutant-general, and held the acting appointment of adjutant-general until I got my promotion and came home. In the year 1837 I was again ordered to India as major-general on the Bengal staff. I was appointed to the command of the provinces in Lower Bengal, and on the formation of the army of the Indus I was appointed to the command of the first division of that army, and ordered to proceed to Ferozepore. On my arrival at Ferozepore, Sir Henry Fane, who was to have taken charge of the whole of the Bengal troops and to have proceeded with those of Bombay to Affghanistan, declined the command of the army, and I was ordered to take the command of the Bengal troops proceeding down the Indus, and to put myself under the orders of Lieut.-general Sir John Keane, at Shekapore, with directions to serve under him in the whole of the operations which he might think proper to order in that country. I did so, and on Sir John Keane leaving the army, with the troops of the Bombay army which he took with him, I retained the command of the Bengal troops in that country, until I was relieved by Major-general Elphinstone, having been obliged to quit that force from ill health. I then proceeded immediately to England, and remained there until 1847, when I was appointed Commander-in-chief of the Bombay army, and I held that appointment until the year 1851, when I returned to England.

4585. You were in India the first time, from 1821 till when?—I went to India in 1821, and I remained there until, I think, three years after the Ava war, until 1829 or 1830.

4586. Then you went again in 1837?—In the year 1837 I was appointed to India as major-general on the Bengal staff, and then I was ordered up to command the first division of the army of the Indus.

4587. And then you came home?—Yes.

4588. In what year did you come home?—In 1841, the year before the catastrophe.

4589. Then you were four years there on the last occasion, four years there the time before that, and eight years the first time, making altogether 16 years in India?—Yes.

4590. You have been furnished with some questions by the Commissioners?—Yes.

4591. Will you have the goodness to state what opinion you have formed as to how far the European portion of the army in India should be composed of troops of the line, taking India as part of the regular tour of service, and how far of troops raised for service in India only?—I conceive that as India is now under Her Majesty's Government, there ought to be but one European army, and that that should be called the royal army, to be recruited wholly in England, but that all regiments ordered home should be encouraged to give volunteers to the regiments remaining in India. I conceive that the period of service in India for a Queen's regiment should not exceed, at the maximum, 14 years.

4592. As I understood you, you would have but one army, and not any portion of that army recruited for local service in India alone?—Our general Queen's army. I am quite aware of the numerous difficulties which will arise with regard to making a fair and just arrangement between the officers of the Company's army, now with the European regiments, and those in the Queen's service. I am aware that great difficulty will arise; but still I do not think that it is insurmountable; that must be argued with the *joint opinions* of the most experienced officers that you have appertaining to the Company's and to the Queen's service, in order *to form* what would be a just thing to those officers who are now there.

4593. Still you must be aware that it would be perfectly impossible not to keep faith with those officers who have lately been in the Company's service, and who have entered that service subject to certain regulations with regard to pay and allowances, and regarding which, of course, faith must be kept with those officers,—that of course you anticipate doing?—Exactly so. I would blend them with our army until the whole thing is made one system.

4594. That is what you propose?—Yes.

4595. You think that there would be some difficulty, but not an insurmountable difficulty?—I think that there would be a difficulty, but not insurmountable.

4596. (*Col. Burlton.*) How can you get rid of the difficulty arising from the fact that the one is a seniority service, and that every officer entering it has the pledge of the Government that it shall be so? How can you reconcile that difficulty with the system of exchanges in the other service where purchase is allowed?—You have another very serious thing, namely, your military fund.

4597. Do you see any way of getting over the difficulty of the one being a seniority service and the other a purchase service?—The only thing is, when you mix them together to permit exchanges till the

Gen Sir W. Cotton, G.C.B.

23rd Nov. 1858.

two are perfectly amalgamated; ten or twelve years would do for that purpose.

4598. How can you do it without injustice to those who have entered the service on the faith of its being a seniority service, without the chance of supercession by purchase?—By exchanges.

4599. Can you regulate or graduate those exchanges so that they shall not be unjust to the officers of the seniority service?—That requires great consideration, and it is a question to which I cannot give an off-hand answer.

4600. We will suppose that we have an old lieutenant, say, of 20 years' standing; he is, perhaps, senior lieutenant in his regiment; if he has been 20 years in arriving at that point in his regiment, the captains of his corps must necessarily be old men. If, then, one of those old men to whom he has been looking forward as a bad life, and who would certainly give him a step very soon, should exchange with a young man from the horse guards here who purchases in as junior captain, would not that be an act of injustice to the senior lieutenant, whose promotion would be so much the more protracted thereby? How can you get over that difficulty?—I have not considered the question.

4601. You do not see perhaps any way in which that difficulty could be got over?—I have not considered the question.

4602. (*Major-Gen. Hancock.*) If the entire European force in India be composed in future of troops furnished from Her Majesty's army in England, would there not be much greater risk of their being withdrawn to a dangerous extent in the event of an European war than if composed of troops enlisted for service in India only, and therefore under the entire control of the Government of India?—No, I do not think so; it does not strike me in that point of view.

4603. You are not aware perhaps that they were withdrawn during the war in the Crimea, notwithstanding the protest of the Governor-General of India?—I was not aware of it.

4604. Do you not think that the authority of the Governments of India and of the several presidencies would be lowered, and their power abridged to a very injurious extent, if thus made dependent upon the pleasure of the several Indian commanders-in-chief, and of the Commander-in-chief in England, for obtaining and retaining the services of every officer without exception, whether on regimental, staff, or other detached employment?—No, I do not think so.

4605. You would have the whole European force in India composed of troops of the line from England?—The whole.

4606. Would you have the European troops in each presidency formed into a separate command, or place the whole under one head in India?—I conceive that the whole of the European troops in India should be called the royal army; there should be but one army, and that army should be under the Commander-in-chief in England. Of course it is understood that if circumstances should arise in India, which would call for the employment of any regiment, the Commander-in-chief in India or the Governor-General should have the power of moving them.

4607. My question has reference to the commands in India. As there are three separate presidencies, would you have your one army divided into three, and each placed under a separate commander-in-chief, as the East India Company's European army has been hitherto divided and placed, or would you have only one commander-in-chief for all India, and place the whole European army under his command?—I would have the whole army under one commander-in-chief, namely, Commander-in-chief in England; but as I have said just now, if circumstances should arise in Madras or Bombay to render the employment of the troops in India requisite at any particular point, the Commander-in-chief and the Governor of Bombay or Madras, independently of Bengal, should have the power of moving the troops to that point.

4608. Am I to understand that you would still retain the separate commanders-in-chief at Madras and Bombay?—Certainly; but I should conceive that that would not interfere at all with the efficiency of the Queen's troops which were out there.

4609. As I understand you the whole of the troops would be Queen's troops?—Yes, the whole of the Europeans. It should of course be understood that either in Bengal or Madras or Bombay, if it was required to move those troops in consequence of any insurrection, they would be ordered as they would be at this instant from Bombay to Hyderabad, or in any direction which the other presidencies required.

4610. (*Duke of Cambridge.*) That is to say that you would have the arrangement just as it stands now as far as command goes; each presidency should have a separate commander-in-chief, but the Commander-in-chief in India should have supreme power over all in emergencies?—Clearly; I would have it go on as it is now, and the promotions and vacancies and all that sort of thing filled up and returned home, of course for approval, as at this moment, or as it was before the transfer of the territory.

4611. (*Viscount Melville.*) Has it not hitherto been the case that the Commander-in-chief in India has commanded all the Queen's troops?—Yes.

4612. (*Major-Gen. Hancock.*) It has not been the case, has it, that the Commander-in-chief in India has commanded all the Company's troops?—No, that has been under the Governor-General.

4613. Hitherto the European as well as native troops of the East India Company in each presidency have been formed into separate commands under presidential commanders-in-chief, but according to your plan the commanders-in-chief at Madras and Bombay would cease to have the powers of a commander-in-chief over any portion of the European troops in those presidencies; they should only have subordinate commands under the Commander-in-chief in India; they would not have the same power over troops of the line from England which they have had hitherto over the Company's European troops under their respective commands?—I beg your pardon; I have clearly stated twice that the commanders-in-chief in Bombay and Madras should have the power, in case necessity required it, in case (using a military term which you will understand) there was an insurrection, of moving any troops in their presidencies as they have at this moment.

4614. I understand you as regards the movement of troops, but with respect to the general powers to be vested in them as commanders-in-chief, what powers would you give them over the European troops under their respective command, supposing the whole to be furnished from the regular army in England?—That is a question which I am not prepared to answer.

4615. Hitherto the commanders-in-chief at Madras and Bombay have held independent commands, as regards the Company's European troops; they have not been in any respect under the Commander-in-chief in India, except when he might be personally present within those presidencies. Would you have that system continued in the event of the whole European force in India being composed in future of troops of the line from England, or would you have them cease to be commanders-in-chief, and make them merely local commanders of divisions, under the Commander-in-chief in India?—I never contemplated the question in the point of view in which you put it.

4616. (*Duke of Cambridge.*) The difference is this, that up to this moment the Company's troops, even including the Company's European troops, have been under the authority and command of the different presidential commanders-in-chief; and the Commander-in-chief in Bengal, though exercising supreme authority over the two other presidencies as regards the Queen's troops, has had no power whatever over the troops of the Company's army. What General Hancock, I understand, wishes to know is whether you would increase the power of the Commander-in-

Gen Sir W Cotton, G C B.

23rd Nov 1858

chief of Bengal to that extent, or whether you would leave it as it was before, or how you would arrange it ?—I have said that the presidential Commander-in-chief ought to have the power, if necessity required it, of moving the Queen's troops on any emergency; in his own presidency he should have the power of moving the troops whenever he thought proper.

4617. (*Major-Gen. Hancock.*) My question had reference to ordinary matters of military discipline and the command of an army generally, and not at all to the movement of troops ?—I am not able to answer the question.

4618. Have the European artillery and infantry of the East India Company's army been found in any respect inferior, as regards efficiency for service in the field, to the artillery and infantry of the royal army ?—No, I have never found them so; but I am perfectly well aware that there are four different systems at this moment in practice with regard to the artillery in India. There is the Bengal artillery; there is the Bombay artillery; there is the Madras artillery; and there is the royal artillery; and their materiel differs. But in the field I do not think it is possible that there should be a more efficient force than the Indian artillery.

4619. Have the officers on the staff of the army in India, and belonging to the East India Company's forces, been found in any respect inferior, as regards efficiency for service in the field, to the officers on the staff of Her Majesty's army, whether in Europe or in India ?—Certainly not; I do not think it is possible to have better staff officers than the Indian army had.

4620. Have the European officers and soldiers of the East India Company's army ever failed to uphold, equally with those of the royal army, the honour of their Queen and country whenever employed in the field ?—In every action in which I have been connected with the Honourable Company's troops, I never found either Europeans or natives behave in any way but in the most gallant manner.

4621. (*Viscount Melville.*) Do you think that any advantage arises to the public service from the Europeans in India being a distinct force under the Company as they have hitherto been, instead of being under the Crown ?—I have before stated that as India is annexed now to the Queen's raj, I conceive that there ought to be but one army, and that army called the royal army.

4622. (*Marquess of Tweeddale.*) Do you think it is necessary that the discipline of the royal army, now that the three bodies are made into one, should be the same ?—The European discipline, of course, will be the same, because they will be under one head, and called the Queen's army.

4623. Would you not have the natives under the same discipline ?—The power of punishment of the native is very different, as you know, from ours.

4624. I am not talking of punishment, but of discipline ?—Discipline is connected with punishment.

4625. (*Duke of Cambridge.*) Is there not a difference between the native armies of the three presidencies in that respect ?—No.

4626. Is there the same code for all three ?—I do not believe that there is the same code.

4627. Do you think that the code should be or should not be the same ?—I should think, of course, that you had better have one code if you can amalgamate the thing, but that is a question of detail with regard to the native army, as to which officers who have served in Madras and Bombay, and Bengal, would be able to say how far it could be arranged.

4628. (*Marquess of Tweeddale.*)—If all the armies are to be under the Queen and all made one, would you not have the discipline of the army placed under the direction of the Commander-in-chief in England? —The crimes which will be committed will be committed in Asia, and not in England; consequently the courts-martial must take place in that country, and not here; but you should so regulate your Mutiny Act as to meet the discipline of the European army, which is there.

4629. Then, in forming your Mutiny Act, you would place the whole under one head, and that of course would be the Commander-in-chief in England ?—The Commander-in-chief in England cannot regulate the discipline of the troops serving in Asia; your Mutiny Act must lay down a certain code, and you would try offenders by court-martial according to that code. But with all commissioned officers who are cashiered, it always has been the case that the sentence has been sent home to the Commander-in-chief. The commanders-in-chief in India have the power, I believe, of confirming, but the mode of proceeding in filling up, was always that there was a schedule sent home every month or two months by the military secretary of the Commander-in-chief in India for the approval by the Commander-in-chief in England, of the names which were sent. I know that when Lord Combermere was Commander-in-chief of Bengal, Colonel Finch, who was his military secretary, always sent home the promotions which were proposed by Lord Combermere for approval and confirmation here.

4630. (*Duke of Cambridge.*) The question that Lord Tweeddale asked, is whether the European armies in India should be under the same Mutiny Act as the armies at home, and if they are under the same Mutiny Act, whether they should be under the general control of the Commander-in-chief ? — The Mutiny Act must be regulated and looked into, I conceive, by the Judge Advocate General of India, who knows what the crimes of India are better than we do here.

4631. (*Sir H. G. W. Smith.*) There are certain exceptions in the Mutiny Act at this moment, excepting the East Indies, and excepting Ceylon, and so on ?—Yes.

4632. (*Major-Gen. Hancock.*) To what extent do you think it would be expedient to place the power of supervision and control over the European army in India in the Horse Guards ?—I should conceive that the Commander-in-chief, of course, would have the supreme control — the word itself conveys that meaning.

4633. Do you mean in all minute matters of discipline ?—He would have the command of the army.

4634. (*Sir H. G. W. Smith.*) As he has now ?—As he has now.

4635. (*Col. Burlton.*) Under what authority would you place the large native army which must necessarily be kept up ?—That is a point which I have not considered.

4636. You would not have it placed under the Horse Guards, I suppose ?—I have not considered the question.

4637. Cannot you form an opinion upon it ?—I do not think it is a point which can be answered offhand at all; I think that it requires the most mature deliberation of the best officers which you have in the Company's and the Queen's army.

4638. (*Major-Gen. Hancock.*) Upon what do you consider that the discipline of a regiment principally depends ?—Upon the commanding officer and the adjutants and the field officers, and the degree of attention which is paid by the officers to it.

4639. But principally on the commanding officer ? —He is seconded by the field officers, and by the adjutants; he cannot do it all with his own bat.

4640. If the officer at the head of a regiment is fully qualified for the command, has the full complement of officers under him, and is invested with sufficient power to maintain his own authority over all ranks, do you not think that a regiment might and ought to be kept in a state of as perfect discipline in India as in England, or anywhere else ?—Yes; and the regiments are so kept, I think.

4641. Is it not the fact, that, under the existing system of succession by seniority to the command of regiments, many incompetent officers succeed to these commands, both in the Queen's and Company's armies; and have you not found it to be so in

Gen. Sir W. Cotton, G.C.B.

23rd Nov. 1858.

your own experience during your service in India, as well as elsewhere ?—That question is rather an invidious one to answer.

4642. It is general, merely as regards the general system, have you not found that to be the fact ?—I have found officers in the Honourable Company's service who have been a long while holding civil situations, and who have been ordered to join and take command of their regiments, and not having been in the habit of manœuvring those men for years, I have found that they wanted practice as anybody would do in the world, and I have certainly seen in our service many men that I should much rather not see in command of a regiment.

4643. Would not the discipline of regiments in your opinion be better secured were officers appointed to these commands by selection for superior qualifications ?—I think that the present system works remarkably well, and I would make no alteration in it ; I have served since the year 1798, I have been nearly 58 years in the service ; I have seen a great many regiments that have been commanded by men whom I would much rather not see commanding them, and of course that must take place.

4644. Do you remember when you were commander-in-chief at Bombay, communicating to the Government through the adjutant-general, in reply to a reference from the Government of India, your opinion that the seniority system of appointment to brigade and divisional commands was injurious to the interests of the public service, and strongly recommending the substitution of the system of selection for superior qualifications ?—Without reference to the memoranda of what took place when I was there, I cannot answer the question off-hand, but I dare say you are right in what you state, that it was so.

4645. (*Marquess of Tweeddale.*) I understood you to say that you wished to see the discipline of the European army in India alike ; there are three commanders-in-chief, and there are three codes of regulation ; how can you assure the Secretary of State that the army will be in that state of discipline until there is one to whom the others shall report, and until he shall see that the others carry on the discipline according to the regulation ?—If you have the Mutiny Act clearly drawn out for all troops in India, it will apply to the whole of the Queen's troops serving in the three presidencies.

4646. You suppose that the generals will carry it out in the same way ?—Exactly.

4647. Then there is no occasion to have a commander-in-chief to superintend them ?—You must have a commander-in-chief, but the commander-in-chief I should think would work better under one Mutiny Act than under three.

4648. (*Major-Gen. Hancock.*) There never has been but one Mutiny Act ?—Never, that I have heard of.

4649. (*Duke of Cambridge.*) Do you think that in quarters the discipline of the local European troops is equal to that of the ordinary troops of the line ?—Yes, I have always found them behave remarkably well in quarters.

4650. You see no difference between them ?—No. I answer the question generally ; I never had any difference reported to me, and I think that they have behaved equally well.

4651. (*Major-Gen. Hancock.*) Have not the East India Company's European regiments, artillery and infantry, been kept hitherto under great disadvantage as compared with Her Majesty's artillery and infantry regiments, in the much smaller number of officers allowed to the former to assist in maintaining their efficiency and discipline ?—No, I do not think there has been any disadvantage; I think that very often the Company's regiments have had much too few officers with them, because they have been allowed to be drawn upon by the civil service to so great a degree that they have crippled the efficiency of the Company's army by it, and so much so that there is a regulation of the Court of Directors that only certain officers should be taken from each corps, and the adjutant-general of the Bombay army must be perfectly well aware that when I was Commander-in-chief of that army, I never in one single instance where the complement of officers was given which the regulations specified, allowed the Governor to draw upon me without remonstrance, and I requested and begged that he would not urge it, telling him that if he did I would not be answerable for the discipline of the regiment.

4652. (*Chairman.*) Then there is a power of withdrawing officers irrespective of the power of the Commander-in-chief ?—I must explain myself. The Court of Directors specified the number of officers that should be deducted from each corps, or rather that should be allowed to take civil employment. From my memory at this moment, I cannot state it exactly, although I think I can very nearly, but whenever I found that the Governor of Bombay through his military secretary, Colonel Melvill, asked me to give an officer from a regiment, that regiment having found the quota required, and whenever in my own opinion it would deteriorate the discipline of that corps, if any more were given, I always pointed out that the quota had been given, and never allowed that officer to go without a remonstrance on my part, and stating to the Government through the military secretary that I would not be answerable for the discipline of the regiment if they took him.

4653. Notwithstanding that remonstrance the governor has the power of withdrawing the officers ?—I must say that I do not recollect (I may be wrong as it is so long a period ago) after that strong remonstrance, Lord Falkland ever pushing the thing.

4654. General Hancock asked you whether you were not aware that the Governor-General had remonstrated upon the withdrawal of European troops from India during the time of the Crimean war, and you stated, I think, that you were not aware of any such remonstrance ?—Yes.

4655. (*Col. Burlton.*) I think you stated that you were not aware that troops had been withdrawn from India for that purpose ?—I was not.

4656. (*Chairman.*) If there was such a protest on the part of the Governor-General, would not it be upon record ?—I was not in India at the time; I never heard of any troops being withdrawn.

4657. (*Viscount Melville.*) The 10th Hussars ?—Yes, from the Bombay presidency. I knew that they were moved, but I never knew that there was any remonstrance.

4658. (*Chairman.*) You never heard of the Governor-General having protested ; and, if he did protest, that protest would be upon record, I suppose ?—Certainly. I never heard that he had protested.

4659. In connection with the first question, what do you consider to be the best means of providing for the periodical relief of the former portion, and of securing the efficiency of the latter ?—I do not conceive that there will be any great difficulty in relieving the British regiments in India, after the system is arranged which, with every deference, I should propose. I think that the thing is perfectly feasible.

4660. What is the system which you would recommend ?—I should recommend that, in the first instance, it should be perfectly understood that the given route should be round the Cape, because, although the route by Alexandria, Egypt, and the Red Sea may be the shortest, yet it must be obvious to everybody that circumstances might arise to interrupt that route. If you make your arrangements for a periodical relief round the Cape, you have now in the Queen's service two or three of the finest steamers ; but, if you choose, you have the finest fleet lying in Hamoaze and Portsmouth harbour of seventy-fours which will never go to sea, each of which, if they were cut down, would make a steam-vessel to hold 1,000 men, and consequently you would make yourself in a year, although the expense would be heavy, totally independent of what they call the various steam companies, and you would have ten or twelve of the finest steamers in the world, which might be employed in various ways. I am

Gen. Sir W. Cotton, G.C.B.

23rd Nov. 1858.

talking of the reliefs. The periods, of course, would be specified and laid down, and the route, as I say, should be round the Cape only, for the ports of Kurrachee, Bombay, and our ports there. I would do away with the route by the Red Sea—that is my idea of the thing. Of course the expense would be very heavy at first of transforming these seven or eight sail-of-the-line into screw steamers; but that would pay itself as a state question in five or six years, and make you totally independent of the various steam companies. If you do not choose to take the men-of-war, build seven steamers of the same calibre and tonnage as the Himalaya and Pera; but have it in your own power; do not be dependent upon a steam company.

4661. (*Duke of Cambridge.*) I imagine that you would suppose that irrespectively even of the Indian reliefs, the advantage of such steamers to England as an empire would be very great, and that therefore they would never be useless?—Never useless, but of the greatest moment; and permit me to add that the sending of troops round the Cape, and taking them to these various ports, would be conducive not only to their health, but to their discipline, and in every way; having 1,000 men on board a ship, a whole regiment, in my opinion there are a great many objections to the Egypt route; I have gone it myself three or four times backwards and forwards; if troops go from here to Alexandria they are obliged to be disembarked and put upon the canal to get upon the Nile; they then go along the line and get to Cairo; from Cairo the railroad is not opened, at this moment they have to march over the desert to go to Suez, then they have to re-embark at Suez, and go down the Red Sea, and the steamers cannot take more than 200 or 300 men each.

4662. Could not you have large steamers on the other side, the very steamers to which you have alluded, and if the railroad were finished, would not it simplify matters very much?—I do not think that you could have them in the Red Sea; I think the navigation of the Red Sea is so exceedingly dangerous and difficult that it would not be safe to work those large seventy-fours if they were cut down to screws; I should recommend the route round the Cape decidedly, and not through the Red Sea, for I conceive it to be a very dangerous sea to navigate with very large vessels.

4663. (*Col. Burlton.*) And besides that, it is only three months in the year that you could send troops with safety, in consequence of the extreme heat?—Yes.

4664. (*Chairman.*) Do you consider it possible to consolidate the European forces, so as to allow of exchange from one branch of the service to the other, and what regulations would be necessary and practicable to effect this object with perfect justice to the claims of all officers lately in the service of the East India Company?—I am perfectly well aware that it would require the greatest possible consideration so as to arrange any system which would give perfect justice (which they ought to have) to the officers who constitute the European force of the Company's army. It is a question whether, by allowing exchanges, it could be effected. But obstacles meet you there directly, because the rate of pension in the Honourable Company's service is much greater than the rate of pension in our service. Then they have funds in each presidency, I believe, called the military fund and the orphan fund, which we have not. Therefore it is a Gordian knot; it is the most difficult thing to answer in the world.

4665. (*Duke of Cambridge.*) Irrespectively of that, on principle, do you think that it would be desirable; supposing that you could get over those difficulties to which you are alluding, would it, in a military point of view, be desirable that exchanges should take place?—Yes, I should think very desirable.

4666. Would it be an advantage to both services, both local and of the line?—Yes, I should think so. I should think that it would be an advantage to the whole army.

4667. (*Col. Burlton.*) But perhaps those officers may be allowed to be the best judges of what is to their own advantage?—Certainly.

4668. If I state that it is the almost unanimous opinion of every one in the Bengal army that I have ever spoken to on the subject that they would not like to exchange, what would you say?—It depends totally upon themselves whether they choose it or not.

4669. (*Major-Gen. Hancock.*) If you open to officers in India the prospects of advancement in England, will it not detract from their usefulness in India, and indispose them to continue in India?—At this very moment our own officers in India in the Queen's army have the power of exchange.

The witness withdrew.

Sir George Clerk, K.C.B., further examined.

Sir G Clerk, K.C.B

4670. (*Chairman.*) You have been furnished, I think, with four additional questions to those upon which you were so kind as to give us evidence before; will you have the goodness to state your opinion upon them? Have you formed an opinion how far the European portion of the army in India should be composed of troops of the line, taking India as part of the regular tour of service, and how far of troops raised for service in India only?—We have a very extensive empire in India, and therefore we must have the people with us, and therefore have a considerable native army; that army should be a local army. If the Act which was lately passed would admit of it, I should think there would be great advantages in making the European portion of the army a general army, and not local. I am not aware of any advantages there would be in making the European portion local, confined solely to India. In fact, I think, that the State would then lose a most important advantage, which it derives from the possession of India, and one of the few advantages, namely, as a field of exercise for our European army.

4671. (*Duke of Cambridge.*) That is to say, that you look at the question in an imperial point of view, and as such you think that it is of great advantage to the empire that there should be one army, and that it should be a united army, and what we should call an army of the line?—Yes, one European army, all having the advantage of employment in India.

4672. I suppose your opinion is founded upon this, that you look at it as an imperial question, and you see no disadvantages which will arise to India from it?—None whatever. I imagine that there would be many great advantages to India from it; and India is now brought so near that I see no reason for perpetuating the defects of the other course.

4673. (*Sir H. G. W. Smith.*) Do you recommend that the native armies of the three presidencies should be separate armies, each exclusively belonging to its own presidency?—Yes.

4674. (*Col. Burlton.*) You suppose that the whole of the European army in India is to be furnished from the line in England?—Yes.

4675. Would you have the whole of that army under the command of the English Commander-in-chief?—Yes, under the Crown.

4676. Under what authority would you place the native army?—Under the authority of the Government of India, as now.

4677. Do you think that there would be no inconvenience in having the army half under one command and half under another?—Not so great an inconvenience as having an army with its European portion under divided authority.

Sir G. Clerk, K.C.B.

23rd Nov. 1858.

4678. You stated, that if the Act permitted, you would recommend this European portion of the army being made general ?—Yes.

4679. Do you consider the difficulties opposed to that measure by the Act of Parliament to be insuperable ?—As I read it, there are points on which I have great doubt; the Act guarantees to officers belonging to the army of India their promotion as now. The pay, I suppose, could be adjusted; but whether the promotion, as affected by the alteration, could be legally adjusted I am not aware. The 56th clause is intended to secure it. Then the subsequent clause vests authority in Her Majesty to make alterations hereafter. But the army, as it is at present, has by the Act all its privileges guaranteed.

4680. (*Duke of Cambridge.*) But I apprehend from that, that prospectively the Crown, at the recommendation of the Government, could make any alterations it chose ?—Yes.

4681. Even under the present Act of Parliament ?—Yes; the Act apparently, in the next clause, provides so for the future.

4682. Therefore it would only affect the army as it stands at present ?—Those who now are in it.

4683. It would affect the European regiments in the late Company's service ?—It might.

4684. (*Major-Gen. Hancock.*) In the event of the entire European force in India being furnished from the regular army in England, would you retain the separate commands at Madras and Bombay under separate commanders-in-chief, or would you place the whole force under one commander-in-chief only, namely, the Commander-in chief in India ?—Under separate commanders-in-chief, as now.

4685. With what authority would you invest the commanders-in-chief at Madras and Bombay; would you give them any authority independent of the Commander-in-chief in India. Would you give them the same authority over the troops of the line within those presidencies which they have exercised hitherto over the Company's European troops ?—Yes.

4686. Then they would exercise their commands altogether independently of the Commander-in-chief in India ?—No.

4687. It has been so hitherto, has it not ? No reports have been made to the Commander-in-chief in India by the commanders-in-chief at Madras and Bombay relative to the Company's European troops ?—But that I am supposing henceforth should be limited to the native troops. If there was one royal army, that independent control should extend to the native army only.

4688. Then, in fact, there would be no such thing at Madras and Bombay as a Commander-in-chief of the regular troops within those presidencies ?—Not necessarily independent of the Commander-in-chief in India.

4689. Would it not be impossible that there should be ?—No, I think not. I am supposing, if the European portion of the royal army becomes one, that the authority of a local Commander-in-chief would extend to the native army, and that his authority over the royal troops there would be whatever the highest military authorities here should delegate to him.

4690. Still the commanders-in-chief at Madras and Bombay would not exercise the same authority over the troops of the line which they have hitherto exercised over the Company's European troops ?—They might not exercise the same authority as they now exercise over the Company's Europeans. That would depend entirely upon the authorities here. They might invest them with an equal degree of authority as they formerly exercised over the Company's European troops, or more or less; that is, more or less independent of the Commander-in-chief in India. Facilities of communication between them now exist which did not formerly.

4691. Is not a certain degree of independent authority necessarily implied in the very term "Commander-in-chief" ?—A certain degree; still he is subordinate to the Commander-in-chief in India, and that Commander-in-chief is again subordinate to the head-quarters of the army here.

4692. (*Sir. H. G. W. Smith.*) Can you tax your memory with the proportion of the Company's European force, and of royal troops in the presidency of Bombay or any presidency; can you state how many local European regiments there were and how many Queen's regiments ?—They varied occasionally in the several presidencies; the Company's line European troops were three regiments at each presidency.

4693. But can you state the proportion as to numbers ?—I cannot say with any precision, not having seen any late returns.

4694. (*Col. Forsyth Tait.*) You have stated that there would be a great advantage in having one European army, in what would the peculiar advantage consist ?—Whatever European forces you have, are then available for all the purposes of your country.

4695. Are they not equally available supposing they are local to India; supposing it is an Indian-European army, the same as the native army of India?—Certainly not, if you cannot readily employ them out of India.

4696. You can employ them out of India; they have been employed in Persia, and they have been employed elsewhere, whenever they have been required ?—And the position becomes a very embarrassing one in various ways.

4697. (*Chairman.*) Are they not enlisted only to serve in India ?—No, not in India only.

4698. (*Col. Burlton.*) It has been stated here by one or two witnesses that the great objection to having all the forces from the royal line is that the Government might withdraw the troops from India ?—Yes, that is assuming that the authorities here are very supine, and very indifferent as to the possession of India. If the necessity arose for employing troops in Europe which had been seasoned and acclimatized in India, which, I believe, is excellent soldiering for troops, if properly cared for, their place there would, of course, be promptly supplied by the means which the efficiency of an united system would create.

4699. (*Duke of Cambridge.*) Is it not your opinion that if any Government saw the necessity, for the welfare of the empire, of withdrawing troops, they would endeavour, at all events, to get over the difficulty even of local troops, and would withdraw them should such an emergency arise ?—No doubt they would.

4700. And is it not your opinion, on the other hand, that no Government would presume to divest India of troops to such an extent as to endanger it, if that Government thought, as we do, that the possession of India was of great value to the empire ?—I feel perfectly satisfied that they never would jeopardize the security of India under any circumstances of the kind. And one consequence arising from having an increased royal European army to that extent would be that you would have many more troops available. Besides that, you would mature your system of periodical relief and transport in such a way, that you could with great facility then do what you cannot do now, excepting by the most haphazard and scrambling sort of means; you would be in the course of periodically relieving troops from India, and troops which I believe, for service in Europe generally, would be found highly useful, in consequence of their having been nine or ten years in India; that applies to both officers and soldiers.

4701. Is it not your opinion therefore that a great deal of the extra expense incurred might be obviated by judicious and wise measures, for the transport of troops ?—There is not a doubt about it in my mind; a part of that arrangement should be, I think, acclimatizing troops for India half-way at the Cape of Good Hope. My service in South Africa has confirmed me in the opinion that we are losing a great opportunity of benefiting our soldiers in every way, by not stationing them at the Cape on their way to India, and in this case I think that we should be losing a great opportunity of qualifying our soldiers for general service if we neglect the Cape route and station.

4702. (*Marquess of Tweeddale.*) Would you allow the Governor-General to have any voice in the withdrawing of troops from India by the Government at home ?—Certainly, I take it for granted that he would always be consulted.

4703. But not to have a veto ?—I should be inclined to let it rest very much with the Governor-General. You would scarcely withdraw a portion of the army from Ireland without asking the opinion of the viceroy of Ireland.

4704. Do you think that Ireland and India can be compared in that respect ?—I think they are both possessions which you would be careful to retain.

4705. (*Col. Burlton.*) Upon the supposition that the whole European army of India is composed of troops of the line sent from England, would you have them entirely under the Horse Guards, and entirely free from all control of the Council of India ?—No ; the Governor-General of course would have a voice.

4706. Would you have the references of the Governor-General coming home regarding the military command of the European troops referred to the Horse Guards alone, or to the Secretary of State and Council for India, as they used to be referred to the Board of Control and the Court of Directors ?—I take it for granted that in references on army matters to the head-quarters of the army in England on important points affecting India, the general commanding Her Majesty's forces in England would always consult with the Secretary of State for India. In some matters it would rest with that Secretary of State to consult his Council or not as he pleased.

4707. (*Major-Gen. Hancock.*) In dispensing honours for services in the field would you have the recommendations forwarded by the Commander-in-chief in India through the Horse Guards or through the Governor-General of India to the Secretary of State for India ?—I think they should come of course from the Commander-in-chief of the army in India, and sanctioned by the Governor-General in India, to the Secretary of State for India in the first instance.

4708. (*Col. Burlton.*) The Secretary of State for India and his Council are the responsible parties, I believe, for the charge and the management of the finances of India ?—Yes.

4709. Do you not think that there might be some difficulties if the European army of India were entirely under the authority of the Horse Guards here, that expenses might be called for which the Council for India might refuse to allow ?—Seeing that you have provided for concord between the head-quarters of the army in England and your Governor-General in India, through the Secretary of State for India, as to any organic changes or reinforcements for India, I do not apprehend any difficulty of the kind.

4710. (*Chairman.*) Are you not aware that the Commander-in-chief has no power to order anything which will cause expense, without a reference to the Secretary of State ?—He never thinks of doing so.

4711. Therefore, the Secretary of State would always have a complete control over anything which involved expense ?—Entirely.

4712. (*Col. Burlton.*) If the Commander-in-chief here cannot order expenses, supposing he applies for the sanction of a measure involving a large expense, and the Secretary of State for India and his Council may refuse it, may not that produce unpleasant collision ?—It occurs every day without any unpleasant collision.

4713. (*Major-Gen. Hancock.*) In the event of the whole European force in India being furnished from the regular army, from what source do you contemplate supplying the large body of officers required for the native army, and for the numerous staff and detached employments in India ?—I conceive that the native army in India would still be provided as it is now.

Sir G Clerk, K C B

23rd Nov 1858

4714. By officers specially appointed from England? —Yes.

4715. How would you provide for the numerous staff and detached appointments, civil and military ?—That is a difficulty which no one has yet solved. I have always thought it would end best in the officers, who are employed in some military and all civil staff, being placed on a staff corps.

4716. Do you then mean that they would be supplied from the regiments of the line in India in the same way as they have been supplied from the Company's regiments ?—Equally, if qualified. Of course no officer should be appointed to the staff in India who is not qualified for the office, whatever it may be.

4717. You do not apprehend that the withdrawal of so many officers would materially detract from the efficiency of the line regiments in India ?—No, I think not.

4718. (*Duke of Cambridge.*) I apprehend you mean that if you were to withdraw officers from the Queen's regiments, and to put them into a staff corps, you would supply their places in those regiments ?—Yes, of course.

4719. You would have a staff corps for those purposes especially ?—Yes, which would permit of promotion going on in the regiments, so that the employment of some on staff would not reduce the number of officers required to be with a regiment.

4720. (*Major-Gen. Hancock.*) Do you mean that all officers holding staff and detached appointments would be supernumerary to the regiments in India ? —That after a certain period, if they elected not to return to their regiments, they should be on a permanent staff corps, and promotion would go on in the regiments.

4721. (*Col. Burlton.*) If every European regiment out in India is a line regiment, how can you manage that ; how can you take their officers and transfer them to a staff corps in India, striking them off the strength of the regiment ?—If promotion goes on in the regiment their places are filled up.

4722. You are giving the Governor-General of India, or the Government of India, power to withdraw officers from Her Majesty's line regiments, and to put them on the permanent staff corps of India, do you think that that would answer ?—I suppose so, it has been done already.

4723. (*Col. Forsyth Tait.*) The Governor-General can take from the whole army indiscriminately, and of course he has a great selection, but when it comes to a small number of native regiments and a local service, will not it be very different ?—I am supposing that also, from the European regiments, some must be taken ; I do not contemplate that such a system would deprive the regiments of the line of many officers, and if it temporarily deprived them of some, they would be men qualified for those staff appointments, and their rank in the regiments would soon be filled by others.

4724. (*Duke of Cambridge.*) And the corps which you contemplate would be a local corps in which you could exchange with officers of the line at any time. I apprehend therefore it would not debar a man, supposing he was put into that corps, from coming back into the army at some future period if the good of the public service or his own inclinations required it ?—It would only debar his coming back to his own regiment, to the prejudice of those who remained in it.

4725. (*Viscount Melville.*) Why should it debar a man from coming back to his own regiment if he was what is called "seconded," that is to say, if his name was kept in italics in the list, he rising to his promotion when it came to his turn ?—Because if he continued to rise in that regiment, such a system carried out to the extent contemplated, would prove a hardship on the officers who remain.

4726. (*Col. Burlton.*) Take the case of officers. Suppose one set of officers goes out there with the full understanding and knowledge that they are going to India for their lives, as the officers did under the Company's service, and suppose that another regiment goes out with a set of officers who know that they are to

Sir G Clerk, K C B.

23rd Nov. 1858.

be relieved in a few years, and that it is only a temporary service, do you not think that the former are more inclined to mix and associate with the natives, and make themselves better acquainted with their customs and their prejudices than the latter ?—Instead of the officers now going out to the army of India to serve for their lives, the whole tendency of your measures with regard to officers, with regard to magistrates, with regard to public works officers, has been to bring them home to England as often as you can (the term is, "every few years"), in order, as it is called, to Europeanise them, to improve them, and to invigorate them. It appears to me therefore that a system which is intended to fix your men in India is wholly opposed to that, and if it is good for Mr. A. of the civil service, or Captain B. of the army, to come to Europe every few years, it must be equally good for Sergeant O. and Corporal H., and for privates too. The last and most popular measure now proposed is Colonel Jacob's, which is to give to every officer what he calls a sabbatical year—that is to say, after seven years a year's leave at home, on full pay, or, if he abstains from his year after seven years, then after twelve years, two years in England on full pay. That is the last proposition of the kind which I have met with, and I believe it is one which some of the authorities think rather highly of, and it certainly goes a great length to bring officers home more frequently.

4727. (*Major-Gen. Montgomerie.*) Do you contemplate the engineers and artillery being local, or forming also part of the royal artillery and engineers ?—If the Act of Parliament permits it, the scientific corps would be none the worse for being amalgamated, so far as I can judge.

4728. (*Chairman.*) Would it not be easier to amalgamate the artillery in which there is no purchase, than the line ?—I should think so on that account. The engineers and artillery are neither of them purchasing corps, and in that respect they ear on a footing with the others. Then, again, the artillery and engineers, I think, as organized in the royal army are in the higher ranks on rather a superior footing ; that is to say, the higher ranks are more extensive. It is therefore so far preferable.

4729. (*Major-Gen. Montgomerie.*) As regards the education of the young officers, there would be but one seminary, you conceive ?—It might be advisable to have more than one. Addiscombe is now going to be assimilated, as you are aware, to the standard of the Woolwich education.

4730. (*Col. Forsyth Tait.*) An engineer officer in India, unless he understood the native languages of India, it strikes me would be utterly useless in the department in which he is chiefly employed, which is the executive and barrack department. How could an English engineer officer, who could not speak one word of the language, (and hardly one of them can speak it so as to make himself properly understood,) take charge of a large department, and control the expenditure of lacs and lacs of rupees every month ?—They have had no inducement hitherto to qualify themselves to speak the language.

4731. It takes a man years of his life before he learns the language to be able to speak it properly?—Officers qualify themselves in less time when desirous of undertaking the duties of such appointments.

4732. (*Marquess of Tweeddale.*) I understand that a protest has been made by the Governor-general against troops being removed from India without his sanction. Would you have it inserted in the Act of Parliament that a certain number of the European troops should be considered not moveable from India without the sanction of the Governor-general ?—I would not specify the amount of those which were to remain, but I would make it dependent upon the approval of the Governor-general of India how many troops you were to withdraw.

4733. (*Duke of Cambridge.*) Would you not do it by minute instead of by Act of Parliament ; could not there be a minute laid down by the Secretary of State ?—I would merely provide that the Secretary of State for India and the head quarters of the army in England should consult and agree upon the subject.

4734. (*Chairman.*) The Secretary of State being a member of the cabinet must surely be the best judge ?—I should say so.

4735. (*Major-Gen. Hancock.*) Supposing that a portion of the European troops in India were enlisted for service in India only, could the Home Government withdraw those troops without their consent for service in Europe or the Colonies ?—Certainly not ; but I am not aware that any troops have been so enlisted.

4736. Without reference to what has been the case, supposing an army were enlisted to serve in India only, would not that army be secure from being removed from India by the Home Government to serve elsewhere ?—Certainly.

4737. (*Chairman.*) Would it not be a very great inconvenience that a large proportion of the British army should be placed in that position, that it could not be made use of wherever it might be wanted ?—Certainly.

4738. (*Major-Gen. Hancock.*) Would it be a disadvantage to the State to have a body of European troops, sufficient to maintain a secure hold of India, made irremovable from the country, by being a local force ; would it not greatly strengthen the hands of the Governor-general to have such a force at his entire disposal, and beyond the power of the Home Government to withdraw ?—I should not feel it so, if responsible for the government of India, provided I could rely upon having a sufficiency of European troops in periodical relief, with their transport service properly organized. That would be quite sufficient for the purpose, and I should recognise no advantage in their being enlisted exclusively for India.

4739. (*Duke of Cambridge.*) Do you consider that this question should be entirely decided upon Indian grounds, and do you think that we should be justified in not looking to the interests of the empire as well as of India ; and in looking to the interests of the empire do we not at the same time look to the interests of India ?—Of course you do, and I think that you are losing an advantage which the army might possess by excluding any portion of the Europeans that you can afford to raise from the general field of service, especially men who have acquired experience in India, officers and soldiers.

4740. (*Major-Gen. Hancock.*) Do you not think that all the higher offices of the state in India, would be more efficiently filled from a body of officers trained from their youth in India, and with no views beyond it, than from one sent to India only for a ten years' tour, free to leave it at any time by exchanging, having no abiding interest in the country, and whose hopes and aspirations would naturally turn rather to the prospects of professional honour and advancement open to them in Europe ?—I may have thought that, and I might think so now, if it were possible, but you have cut at the root of the whole of that ; there is no such thing, I believe, now as that feeling of having no views beyond India, or that officers are to turn their attention solely to India, and are to serve there continuously.

4741. Still you think that it would be an advantage to the government of India, regarding it rather as an Indian than as an imperial question, to have a body of officers at its disposal, with no views beyond India, such as would be secured to it by having a large local army ?—Regarding it as an Indian question, I think it would be an advantage to India, to the people of India, and to the welfare of India,—but you must go further than that ; you must annihilate your furlough system, your privilege leave system, and many other measures which you have lately introduced, as it is supposed, for the benefit of the public officers there ; men must work continuously, and never think of coming home for many years, in order to obtain those advantages you allude to as esulting from the services of men who have no iews beyond India.

4742. Will you explain what objection there can e to officers who may be enlisted as the Company's fficers have been for the local service in India, eing allowed occasional furloughs to Europe ?—I would not interfere with their furlough. As they had it formerly, there were certain disadvantages attending a furlough. Many men waived their opportunities of coming home on furlough ; staff officers thought twice before they sacrificed a staff appointment to come home. Now, when a man has a staff appointment, he very soon begins to calculate when he can get his leave to come with his India staff appointment to England. It may be a great advantage to him, and an admirable measure as affects the individual. Treating it as an Indian question, I go quite with you that the continuous service of the officer is of advantage to India ; but that continuous service you can no longer command.

4743. Why not ?—Unless you were greatly to modify those regulations.

4744. And why should regulations which interfere with the efficiency of officers in the Indian service not be altered ?—Because I do not think that your officers now would submit to it. The whole tenor of late measures towards the military and civil services in India, and every other class of European servants of our Government there, has been such that I do not think you could safely rescind those privileges.

4745. (*Sir George A. Wetherall.*) If the European part of the army were made entirely local, the officers of course would be for service in India only ?—Yes.

4746. Would not their going out there for their life engender a wish to accumulate wealth, with the very laudable desire of returning afterwards to their native country ; and would not that desire perhaps predominate and militate against the discipline so necessary to European troops ?—That is a wish which never can be realized in India now, namely, the accumulation of wealth by public servants ; but I think that the objection really is, and it is a serious one, that the state loses the advantage of the employment of experienced Indian officers in the military field of Europe, and unless you have them serving at home in junior grades, you will never seek to employ them here in senior grades, and I do think that the state loses much when put to it in a European war, by not being able to call out those officers to commands who have been seasoned and experienced in the field of India, having served from the age of 15 to 30, 40, or 50. They learn early to look after their men's transport and commissariat ; they are never at a loss in such matters ; they distinguish between dry ground and swampy ground, and that kind of thing, and you would not find an Indian officer putting down his men where their health would be risked if it could be helped. Those are advantages which are so far lost to the state, in my humble opinion, if you have exclusive local armies.

4747. (*Duke of Cambridge.*) You think that it would be of immense advantage to the army of the line that they should have those opportunities in India which otherwise would not be afforded ?—Yes.

4748. (*Major-Gen. Hancock.*) If instead of being composed entirely of troops of the line, or entirely of local troops, the European force in India were composed partly of one and partly of the other, would not the army of the line have sufficient opportunities for acquiring that experience in the field of India which is considered desirable ; and the Government of India retain also the great advantage derived from a local army, of having a body of officers at its entire disposal who would have no views beyond India ?—As long as rebellion and insurrection endure there, of course our European army must be so numerous that it would amply provide for both, but looking forward, and supposing that the authorities are on the alert there, and bring the people round to help them and to serve them, to restore order, of course there will be a considerable reduction of the European army. I do not think that you would find them in such numbers then as to be available for an efficient and well regulated attainment of both purposes.

Sir G. Clerk
K C B

23rd Nov 1858

4749. (*Chairman.*) What is the amount of the native force now employed in India including the police ?—The native Bengal army are about 30,000 more than they were before the rebellion, and the others are about what they were, with the addition of something to the strength of regiments, and a few local corps.

4750. (*Col. Burlton.*) Do you include police battalions in that estimate ?—A new police, called military police, which, if so called, will resemble the regular sepoy regiment.

4751. (*Chairman.*) Do you know the total number of native troops employed now in India ?—I do not know precisely. My estimate is 300,000 ; that is a rough estimate founded on general information, as all the returns from India which I have seen are incomplete.

4752. That amount, I suppose, would require at least 100,000 European troops ?—During rebellion.

4753. During the time that that native force was employed ?—No, I think not always, provided your native army and civil administration are what they ought to be.

4754. (*Col. Burlton.*) Do you not think that the native troops require watching over ?—It depends entirely upon the discretion of those who enlist them and those who govern the country. Lord Canning writes during an insurrection, and in the heart of an insurrection, and he, being in it, is a better judge of it than I can be. I am looking forward to a time when there may be no rebellion, and then I think, if the authorities exercise an ordinary degree of prudence in the selection of the materiel and other matters, there will not require to be any such proportion of Europeans as that. We should of course in so very extensive a dominion have a considerable force of Europeans, and be guarded as to certain posts entrusted to natives, But if we go on as now, for instance, raising an army of Sikhs, there is in that greater danger than before.

4755. (*Duke of Cambridge.*) In giving your opinion as to there being but one army, no doubt you have taken into account that it is very disadvantageous that there should be two armies, from the fact that jealousies must arise between two distinct bodies, which would all disappear if there were but one army?—It would allay a great deal of it, I think. One great advantage, in my opinion, of having a regular rotation of relief for the European troops is that of confining them more to the plains of India it will do away with the idea of putting troops upon the mountains of India, which I look upon as a false measure, excepting for invalid detachments, or now and then a shattered regiment to remain there for health, and not counted on to come down for active service on the plains in hot weather. Looking at it from a rebel's point of view, if the Nena or any other arch rebel were asked by one who was in his confidence, " To what measure shall I persuade the British Government ?" he would say, " Persuade " them, if you can, to put all their European troops " upon the mountains, and to leave the plains of " India open to us." Formerly European troops were placed at certain commanding points upon the plains of India. Barracks ought, of course, to be of the very best that can be ; and I believe that, generally speaking, the men will be more healthy than they are in the West Indies, or in many other colonies.

4756. (*Sir H. G. W. Smith.*) Troops returning from the hills into the plains have suffered a great deal more than if they had not gone up into the hills ? —When brought down in regiments, during the rains or the hot weather, no doubt they have. Whenever your measures excite rebellion, it will not display itself until the season when every European functionary gets to the mountains, if he can, but no native, high or low, if he can help it. It was lately seriously proposed to construct barracks for 40,000 Europeans

Sir G Clerk, K C.B

23rd Nov 1858

in the mountains; if that is sanctioned, there should be added to the force remaining on the plains, 20,000 more than would be required, if the 40,000 were not out of the way aloft in the mountains. There is nothing so enervating and so liable to produce illness and inactivity, either to the individual or in regiments. But if you were to relieve regiments periodically from England, or from other parts of Europe, or other British possessions, they would all move in regular rotation through India. A great deal has to be done in India, in improving the health of the troops. They were formerly sent the wrong way into India—into the swamps of Bengal. They should be disembarked, and move on from the westward, and work their way up gradually, until as time expired regiments embarking from Bengal.

4757. (*Viscount Melville.*) Do you say that the present strength of the Bengal native army is 300,000 men?—No; the whole native army of India—that is a rough estimate.

4758. Does that include police?—Yes, the new military police.

4759. (*Major-Gen. Hancock.*) With regard to the supposed necessary existence of jealousies between a line and a local army in India, do you see any reason, if both be placed upon a perfect equality in every respect, why any other than a feeling of generous emulation should exist between them?—It might be unreasonable, but I apprehend it would exist. One reason is, that the field of Europe would not be open to Indian officers; they would feel that; superior officers—officers who had been in positions of command.

4760. Do you consider that the two armies have hitherto been placed upon a perfect equality? Do you think that they have been treated with equal favor by the authorities in England?—Not in that respect, certainly, because they would not be known. For instance, take the case of General Roberts, now in the field. I do not suppose that anybody had before heard of him in Europe; but still there was a locally known active and experienced soldier, who would have been very useful in campaigns in Europe It was impossible he should be known in Europe, short of his having been engaged in a war in India, disastrous enough to excite some attention to it in England.

4761. Still, if the army of the line have the field of Europe, and the local army of India the field of India, although it might be of advantage to the state to have the two armies available for both fields, the officers of the local army would have no ground of complaint in being restricted to appointments in the actual field of their employments?—I do not consider it as a ground of complaint, but I look at the service to the state generally.

4762. (*Duke of Cambridge.*) Is not the field of India a much more constant field than the field of Europe; at any rate, has it not been so of later years?—Yes, for many years, almost the only field.

4763. Therefore it would tell the other way?—The European regiments serving exclusively in India were admirable, the Bengal Fusiliers, the Madras regiments and the Bombay regiments; but still we cannot say that they were better than any other troops. You would not in preference make use of a local European regiment. If you had a local European regiment and the 93rd or the 88th in your brigade, and had to call out one regiment, you would not in preference, I think, take the local European regiment, though you might just as soon take one as the other. Therefore, if a royal regiment is as good for India, why not make them all royals in India. I do not see any objection.

4764. (*Sir H. G. W. Smith.*) Do you advocate the maintenance of the 80,000 Punjaubees whom we have in our pay now?—No; I am the last person who should advocate our raising a Sikh army. I have seen a Sikh army in rebellion, not only killing their European officers, but killing their own native officers. I know well what they are. One of the most difficult problems the Government in India will have to solve will be how to reduce that enormous and extended provincial force within reasonable compass.

4765. (*Major-Gen. Hancock.*) You have given it as your opinion that the native army should be officered in future by cadets to be appointed specially to that branch of the service. Do you not think that the station of the native army would be thereby lowered, and that it would be generally regarded as an inferior service?—I would not allow it to be lowered.

4766. If you enlisted officers exclusively for the native army, do you think that they would feel the same pride in belonging to it as officers would feel in belonging to the European army?—I would let them exchange.

4767. (*Duke of Cambridge.*) You think that the power of exchanging, as is done with colonial regiments, would take away the possibility of any such feeling?—They cannot feel it after that is once permitted. I believe that exchanges would be few, but still it would tend to neutralise that feeling.

4768. (*Major-Gen. Hancock.*) Why should you not officer the native army from regiments of the line?—As far as I am concerned I should do so, but I have no patronage to sacrifice; those who have would probably object.

4769. Are you of opinion that the native army would be as efficiently officered by transfers from regiments of the line as it has been hitherto by officers trained from their youth with native regiments, and having no views beyond India?—I am of opinion that it might be as well officered, supposing that those officers were passed through a military college. Some of the cadets now go through a military college training, and in my opinion all ought to be so prepared.

4770. (*Duke of Cambridge.*) You mean the Addiscombe cadets only?—Yes; we have had excellent officers who have not been there, but still, as a rule, I think that they should all be passed into the army through a military college.

4771. (*Major-Gen. Hancock.*) Do you not think that it would detract from the usefulness of officers belonging to native regiments were they to possess the power of leaving them at any time by exchanging into European corps, and that continual changes in native regiments would be the consequence?—I do not think exchanges would be frequent; but still the very existence of the power of exchanging would put an end to a great deal of the feeling of inferiority in the service, without really injuring any.

4772. (*Duke of Cambridge.*) The very fact of being able to exchange places them upon a perfect equality?—Yes. I should not apprehend that the discipline of the regiment would suffer. The intercourse between the officers of that regiment and the natives of the country would not suffer, because no officer in a royal regiment would be allowed to exchange unless qualified for a position in a native regiment; he must have served for instance a certain number of years in India in a royal regiment; he should also be required to pass an examination in the languages of the country. Those two things being given, if a man brings his money and exchanges, what is the harm?

4773. (*Major-Gen. Hancock.*) Are you of opinion that it is of no advantage to a native regiment to have the same officers continue to serve in it for a long course of years, to have the officers and men thoroughly acquainted with one another, and to have an officer in the command who has served with them in the junior grades?—Yes; if that officer is serving with a good will; and if he is serving with a good will he will not be willing to exchange, you will not lose him, but there are some men who might wish to leave the country. I should not apprehend any mischief from it, if such a one could be gratified, and his place taken by one desirous of serving in India.

4774. (*Chairman.*) The second question is, in connexion with the former one, the best means of providing for the periodical relief of the former portion, and of securing the efficiency of the latter?—My idea with regard to the relief of troops in India, even now, but still more so then, would be to make use of the Cape as a depôt. I suppose hereafter there must be a periodical supply of troops for India. I do not estimate it so high as some people do, but whatever it is, the greater portion might be supplied I should think from thence.

4775. Do you mean that the depôts of the regiments in India should be located at the Cape?—That regiments should be sent in rotation from the West Indies, or from Gibraltar, or elsewhere, to the Cape, and there acclimatized for three or four years.

4776. (*Duke of Cambridge.*) You mean by regiments?—Yes; I would also have a depôt for invalids from India at the Cape. It would have the double advantage of acclimatizing soldiers for India, and it would answer the purpose of securing the Cape colony, and for that purpose, of course, the colonists would be willing to pay something.

4777. (*Chairman.*) At all events, they would never be chargeable to the Indian revenue till they arrived in India?—Just so; South Africa is hot, and soldiers there are much exposed to the bright sun. Still it is very healthy. Therefore service there is a good preparation for service in India.

4778. (*Duke of Cambridge.*) From your experience of the climate, do you think that the men would not suffer more from going from the Cape to India, than from going from Europe?—Not so much; I consider that a regiment which has been three or four years in British Caffraria is in the best possible condition for service anywhere.

4779. (*Major-Gen. Hancock.*) Do you contemplate maintaining a larger European force in India than may be deemed necessary for the secure hold of the country, with the view of having troops there available for service in Europe in the event of a European war?—No; only as many as are necessary for the security of India.

4780. Would not the Secretary of State take very good care that there were not more troops chargeable to the Indian revenue than necessary?—Certainly.

4781. (*Duke of Cambridge.*) Would you advocate the Cape route, or would you advocate a route partially by the Cape and partially through Egypt?—I would have nothing to do with Egypt, except during an emergency like this, when it is necessary to push more expeditiously through the Red Sea on to India, and when you are permitted to use it; because if things are as they should be, I think the transport round the Cape to the West side of India, which is the proper side on which to land troops, would be expeditious, and regular, and secure.

4782. Do you not think that that service might be very greatly improved and benefited hereafter if it were conducted by the Government in the shape of large steamers, or if old men-of-war were prepared for troops; would not that be preferable to going into the market and taking contracts from various steam packet companies, and would not that measure, though it might in the first instance be a greater expense, yet in the long run be much the cheapest?—I would first inquire what propositions are before the Government, or might come before the Government on the part of private companies, and compare them with the means which the Government may have of providing a transport service; but I have not a doubt that something ought to be done, and nothing whatever has yet been done towards it, not even to the establishment of a coal station.

4783. (*Major-Gen. Hancock.*) If the amount of European force in India be limited to the strength required for its secure hold, in what way will any troops there become available for service in Europe, unless you relieve them?—I am assuming that you relieve them in the ordinary course of relief, without reference to emergent wants in India. That would rest with the head-quarters of the army here; they would relieve them as they relieve regiments now in the colonies.

Sir G. Clark,
G C B

23rd Nov. 1858

4784. Do you contemplate diminishing the established force in India for the purpose of making troops available for service in Europe?—Whenever troops are wanted for a special purpose in Europe, I would bring some from India, and supply their place in India with other troops.

4785. With what troops?—Newly raised English troops, if necessary.

4786. European troops?—Yes.

4787. From whence?—From any part.

4788. Then, in fact, there would be no actual increase to the troops available in the event of a war breaking out in Europe?—Not unless you had added to your number, as has been done; and I assume besides that a regiment from the field of India, if not kept too long there, will be more efficient in any field in Europe than a regiment which is lying in barracks in England.

4789. Then you contemplate simply the exchange of a regiment in England, which you consider would be less efficient, for one in India, which in your opinion would be more efficient for service in the field?—Yes, generally speaking.

4790. (*Duke of Cambridge.*) You must have a larger number of reliefs in hand, in order to give the ordinary rotation system to the regiments in India?—Of course, as the increasing strength of the army will now admit of, if rebellion is suppressed.

4791. Therefore that fact would oblige you to have more regiments at home than you otherwise would have?—More regiments on account of Indian service.

4792. (*Viscount Melville.*) I presume that in contemplating a large increase in European troops in India, in proportion to the increase so must the establishment of the army generally be increased, in order to afford a sufficient number for the periodical reliefs?—Just in proportion to that increase required in India, which I do not estimate so largely as some do.

4793. (*Chairman.*) Do you consider that it would be impossible to consolidate the European forces so as to allow of exchange from one branch of the service to the other, and what regulations would be necessary and practicable to effect this object with perfect justice to the claims of all officers lately in the service of the East India Company?—I do not think that you could combine the two armies in a satisfactory manner unless you permitted exchange to take place.

4794. (*Duke of Cambridge.*) You would permit it then?—I would.

4795. (*Viscount Melville.*) How would you regulate the rate of retirement and the allowances to which an officer is entitled from the various funds to which the Company's officers have been in the habit of subscribing?—Exchange of course is a voluntary measure on the part of both officers; an officer exchanging into the local army of India would take the advantages of that army if he considered them so, and the retiring pension.

4796. Then the officer of the Indian army who exchanged would exchange at a great loss?—That would be his look out. It can only occur when he desires to exchange, and knows into what he exchanges.

4797. (*Major-Gen. Hancock.*) Might it not also involve great loss to other officers in the corps; for instance, a young captain comes into a regiment in which there are many old lieutenants, in the place of a very old man?—The latter would probably come in to serve and to obtain rank.

4798. (*Col. Burlton.*) Does he not inflict an injury upon every officer below him in that regiment, if they are all older than himself?—His means of purchasing might indirectly benefit promotion generally.

4799. He cannot purchase a higher rank than he held in his other regiment?—No; but, for instance, coming in as a captain, he might bring means which would facilitate the purchasing out of old officers in higher ranks less tardily than that process now takes effect.

4800. (*Chairman.*) Do you consider that the local European force should be kept up by drafts and vo-

Sir G. Clerk, K.C.B.

23rd Nov. 1858.

lunteers from the line, or should be as at present separately recruited for in Great Britain ?—I think that for the present they had better be recruited as now ; that is a change which had better be gradually introduced. Ultimately, supposing there is only one European army, I suppose they would be recruited as the royal army is now, by drafts and by volunteers from regiments early relieved in India. The existing establishments are very effective, and it would probably create embarrassment if they were now interfered with.

4801. (*Major-Gen. Hancock.*) Supposing there should be a local as well as a line army in India, what arrangement would you make ?—I should leave it just as it is now.

4802. (*Duke of Cambridge.*) Supposing your views were not carried out, but that a portion of the army were local and a portion of it of the line, would you have the local portion recruited directly from England, or would you let it be by volunteers from the regiments of the line ?—By both means, by recruiting and by volunteers from relieved regiments.

4803. (*Viscount Melville.*) You say that you would recruit the local army in the same way as you do now. Would you do so at the present expense ? Are you aware what the present expense of a recruit for the local army in India is ?—I am not aware precisely of the difference of expense. But on the India recruiting establishment, the officer is, I believe, paid a guinea a man, the sergeant five shillings. Supposing the armies kept separate, it might be convenient still to recruit separately.

4804. (*Major-Gen. Hancock.*) Do you see any reason why there should be a difference in the expense of recruiting for the line and for the local army ?—No.

4805. (*Duke of Cambridge.*) I suppose you are aware that there is a difference ?—Yes.

The witness withdrew.

Colonel G. Campbell.

Colonel George Campbell examined.

4806. (*Duke of Cambridge.*) I believe you command the 52nd regiment ?—Yes.

4807. How long have you been in India ?—I was in India from the 1st of October 1853 to the 6th of August of this year, about 4½ years.

4808. During that period I believe you have seen a good deal of service ?—Yes.

4809. And you have been latterly on field service at Delhi ?—Yes.

4810. You were also, I believe, for a short time in the command of a brigade at Lucknow ?—Yes.

4811. So that you have been much mixed up with the European troops, both of the royal army and the local army ?—Certainly.

4812. In your opinion how far should the European portion of the army in India be composed of troops of the line, taking India as parts of the regular tour of service, and how far of troops raised for service in India only ?—I am of opinion that the local force, if it is found necessary to have one, on the score of expense, should not exceed one-fourth of the number of troops in the country.

4813. Would you rather have a local force or not ?—I would rather see the whole European force a royal one, undoubtedly.

4814. Will you state your reasons for giving that answer ?—In the first place I think it is the only way to secure a proper system of discipline in the local force.

4815. Is that the only reason which you would mention ?—That is the principal reason.

4816. Do you consider that there is a difference of discipline between the local force and the other ?—Undoubtedly.

4817. In what respect do you think that there is a difference of discipline ?—That it is not so severe.

4818. In what way ?—I do not think that the officers know their duty so well ; I do not think it is possible that they can.

4819. Why do you think so ?—Because they have hitherto been drawn from the sepoy army, and the system in a sepoy regiment is so totally different from what it is in European regiments, that they have not the means of learning how to deal with European troops.

4820. (*Major-Gen. Hancock.*) With respect to that reason, the officers of European corps are originally posted to them as ensigns, and continue in them throughout their service, until promoted to lieutenant-colonels ?—I was not aware of that.

4821. That being so, the reason which you have given is without foundation ?—Of course it is if that is the case ; but I do not think that they could ever have had any means of learning a proper state of discipline of a regiment before they arrived in the country.

4822. Do you form your opinion from one particular regiment which you saw ?—No, I do not indeed.

4823. (*Duke of Cambridge.*) You think it is of great importance that they should go out as formed officers ?—Yes.

4824. Which they would be if they belonged to regiments of the line, and had served in other parts of the world ?—Yes.

4825. (*Major-Gen. Hancock.*) Do you see any reason why a young officer should not be as well trained with a regiment in India as with a regiment in England ?—Yes ; in the first place, in England, there are several very strict garrisons, and there is no such thing in India that I know of.

4826. (*Col. Burlton.*) Is there no such thing in England as an ensign newly going out with a Queen's regiment and learning his first step in India ?—Yes, but that does not matter because the officers generally are well up to their work, and are able to teach this youngster how to do his.

4827. Why should not the experienced officers of a local European regiment be able to teach a young cadet as well ?—I do not know why it is, but I only judge from the facts, from what I have seen.

4828. (*Major-Gen. Hancock.*) Are you aware that in opposition to that opinion, the regiments of the local army have been constantly reported by the brigadiers, generals, and commanders-in-chief in Her Majesty's service, as being in the best order and state of discipline, and equal in efficiency to the regiments of the line ?—I do not know what general officers may have reported.

4829. Are you aware that until recently no Company's officer has ever held the command in chief of the army of either presidency, so that the responsibility of whatever may have been defective in their system of discipline pertains therefore solely to the officers of Her Majesty's service, who have held those commands ?—Those are questions which I cannot answer.

4830. Is it not the case that neither of the armies of India has ever been commanded by any but an officer of Her Majesty's service ?—I believe that to have been the case until latterly.

4831. How do you account for the European regiments of the local service not being in the same state of good discipline with those of the line ?—It is impossible that they can always be under the eye of the commander of the forces. The commander of the forces may not see a particular regiment for years.

4832. (*Duke of Cambridge.*) Do you not think that the climate itself would deteriorate discipline unless it was strictly kept up ?—I do not think that it would deteriorate it at all if it was properly looked after,

Colonel
G. Campbell

23rd Nov. 1858

4833. (*Major-Gen. Hancock.*) Do you think that if a regiment is commanded by an officer fully qualified for the command, any reason exists why it should not be in as perfect a state of discipline in India as anywhere else ?—I know no reason why it should not, certainly.

4534. (*Viscount Melville.*) But do not you think, and have you not seen it, that the reason why these regiments are not in the same order is that the officers do not do their duty in the same way, that they are not trained in the same way, that the interior economy is very inferior, and that they go upon the Indian system and not the European ?—I perfectly agree with all that your lordship has asked me, except that I do not know their interior economy. I have never had an opportunity of looking into it, but if I may judge from outward appearances, I should say so, decidedly.

4835. (*Sir H. G. W. Smith.*) Did you arrive in India subsequently or previously to the outbreak of the native troops ?—Previously ; I arrived in India in 1853.

4836. (*Duke of Cambridge.*) Did you ever see the European troops of the late Company's army before the mutiny broke out ; were you mixed up with them at all ?—Not very long before.

4837. You are decidedly of opinion that there should be no larger proportion than one-fourth, if it is a double army ?—Yes.

4838. But you would prefer its being but one army ?—Yes.

4839. (*Marquis of Tweeddale.*) Have you ever seen regiments in the Queen's service in a low state of discipline in India ?—Not regiments ; I have seen one regiment.

4840. Has that regiment remained in the same state, or has it improved ?—When I saw it in that state it was a very short time ago, and it had fallen off ; it was a very good regiment, and it fell off.

4841. (*Major-Gen. Hancock.*) To what cause do you attribute its being in that state ?—To the superior officers not being well fitted for their work.

4842. What superior officers ?—Field officers.

4843. Was that regiment commanded by an efficient commanding officer ?—He was supposed to be so.

4844. (*Col. Burlton.*) Did you ever see any other local European regiment in a bad state of discipline except the one to which you have alluded ?—Yes, I have seen two others.

4845. (*Duke of Cambridge.*) In connection with the first question, what do you consider to be the best means of providing for the periodical relief of the former portion, and of securing the efficiency of the latter ?—I can see no other way of relieving troops in India, except from England.

4846. Do you think that a certain service at the Cape first would be an advantage ?—I think that the reliefs would be too numerous for the force which you have at the Cape.

4847. Otherwise do you think it would acclimatize the men ?—No, I do not think that it would do any good at all.

4848. You think that the regiments going out from England are as good ?—I am quite sure of it ; I think that perhaps it would be advantageous to form a depôt at the Cape for invalids of a certain class instead of their coming home.

4849. Have you ever considered which route is the best, the Egypt route or the Cape route ?—No, I cannot say that I have, but I should think that in ordinary times the Cape route would be the best.

4850. How often do you think that the regiments of the line in India should be relieved ; how long a tour of service do you think it would be desirable to give them ?—Twelve years, I should think, at the outside.

4851. You think that after that they would rather be disposed to deteriorate ?—It is not that exactly, but I think that the spirit of the corps altogether would be refreshed by relief.

4852. Do you think that the climate has anything to do with it ?—No, I do not think so.

4853. What then has ?—It is like all other service in the colonies. Regiments look forward to going home after a certain period abroad.

4854. And you think that the fact of being retained longer than a certain period acts rather disadvantageously upon a corps ?—Yes, I think so.

4855. (*Major-Gen. Hancock.*) Do you think that it is partly attributable to the large number of officers who usually exchange when a regiment is ordered to India, and the number who afterwards leave it and return to England?—I cannot speak upon that, because in my own regiment I had only one exchange.

4856. Is it not very much the practice in the royal army for officers, when their regiments are sent to India, to exchange and return to England ?—Yes.

4857. (*Viscount Melville.*) Did you find that, as the regiment remained longer in India, applications from the men for discharge increased, or that there was any desire on the part of the men to get to Australia or elsewhere ?—No, I cannot say that ; I think that the men disliked India very much more the first two or three years than they did afterwards.

4858. (*Duke of Cambridge.*) But you think that afterwards they get to like it ?—I think that those who do dislike it so very much manage to get away, a great many of them.

4859. And the rest are more disposed to exchange into regiments which remain there ?—Yes, they get more reconciled.

4860. Would you object to their so exchanging into regiments ?—No.

4861. You think that there would be no advantage in preventing exchange ?—Not at all.

4862. Do you think that it would be possible to consolidate the European forces, so as to allow of exchange from one branch of the service to the other, and what regulations would be necessary and practicable to effect this object, with perfect justice to the claims of all officers lately in the service of the East India Company ?—That is a question which it is rather difficult to answer, I think ; I do not know of any claim, in fact, that an Indian officer would have.

4863. The whole system of promotion is different in the two services, and you are aware that there are funds and pensions ?—I am aware of that ; and again there is the purchase money.

4864. (*Major-Gen. Montgomerie.*) And the right of retiring after a certain period of service on full pay?—Yes.

4865. (*Duke of Cambridge.*) Taking all those things into account, do you think such a plan desirable ?—I do not think it would be a desirable thing for the local force, if there was one, to be permitted to exchange. I think it would be the worst thing possible for it.

4866. Why ?—Because I think that the exchanges from the Queen's service would be principally made by men in embarrassed circumstances, and who were obliged to remain in the country on that account ; and I do not think that those are desirable individuals to have in a regiment.

4867. Would it not amalgamate the feelings of the two services very much more if they were known to be exactly on a footing of equality one with the other, and were allowed to exchange, than if that was not permitted ?—It might have that effect.

4868. Do you think that the local force would not be rather looked down upon if exchanges were not permitted ?—I do not see that at all, they are not looked down upon now, I should not look down upon any.

4869. As it is all now a royal army, supposing portions were local, would there not be a tendency to look down upon officers who were never allowed to serve out of India ?—The other plan would be better if it could be managed, certainly.

4870. Take the West Indian regiments, would they not be looked down if an officer could not exchange

Colonel G. Campbell.

3rd Nov. 1858.

from a West Indian regiment to a regiment of the line? —I think very likely.

4871. Would not that same result take place in India?—I suppose they would all come under the same head, under the Horse Guards.

4872. In your opinion, should the local European force be kept up by drafts and volunteers from the line, or should it be, as at present, separately recruited for in Great Britain?—I think that at first it would be quite impossible to recruit it in any other way except from Great Britain.

4873. But afterwards?—If you increased that local force and wanted to recruit it up to its establishment, I do not think you could do it except from Great Britain.

4874. Supposing you had the present force local and the rest of the line, would you recruit the local force by volunteers?—I would certainly, as far as men did volunteer.

The witness withdrew.

Adjourned to to-morrow at 11 o'clock.

Wednesday, 24th November 1858.

PRESENT:

Major-General Peel.
H.R.H. the Duke of Cambridge.
Marquis of Tweeddale.
Viscount Melville.
Lieut.-Gen. Sir Harry G. W. Smith.
Lieut.-Gen. Sir George A. Wetherall.
Major-Gen. Montgomerie.
Major-Gen. Hancock.
Colonel Burlton.
Colonel Forsyth Tait.

Major-General PEEL in the Chair.

Major-General Thomas Simson Pratt, C.B., examined.

Major-Gen. T S. Pratt, C.B.

24th Nov. 1858.

4875. (*Chairman.*) Will you be so good as to state to the Commission your rank in the army, the length of time which you have served in India, at what dates, and the different positions which you have held in India?—My present rank is that of major-general. I went to India in 1828 as a captain in the 26th regiment, I remained with that corps until I became a lieutenant-colonel, commanding officer of the regiment. I then returned to England.

4876. In what year?—In 1843, at the end of the Chinese war. Having been six weeks in England, the Duke of Wellington sent me back to India as deputy-adjutant-general of Her Majesty's troops at Madras.

4877. (*Duke of Cambridge.*) How many years were you in India?—I went there in 1828 and returned in 1856.

4878. (*Chairman.*) You returned for a short time in 1843?—Yes, for six weeks, and I was at one time 2½ years on sick leave at home previously to 1843, so that I consider that I was 25 years in India.

4879. (*Duke of Cambridge.*) You were adjutant-general, I think?—I was deputy-adjutant-general of Her Majesty's forces at Madras, from January 1844 to January 1856.

4880. (*Marquess of Tweeddale.*) In what presidencies have you served?—I have served in the Bengal presidency for nine years, and in the Madras presidency for the remainder of the time.

4881. And in China?—Three years in China. I have served with native troops and forces of all kinds.

4882. (*Major-Gen. Hancock.*) Have you ever served with Bombay troops?—Never.

4883. (*Chairman.*) You have been furnished with some questions upon which the Commission requested your opinion?—I have had four questions sent to me, and I have put down the answers to them, which, if the Commissioners will allow me, I will read, and I will answer any question after reading them.

The first question is, How far the European portion of the army in India should be composed of troops of the line, taking India as parts of the regular tour of service, and how far of troops raised for service in India only? In my opinion the European portion of the army in India should be, if not altogether, at least the greater part composed of troops of the line, taking India as parts of the regular tour of service, and relieved as far as practicable every ten years.

The second question is in connexion with this question, the best means of providing for the periodical relief of the former portion, and of securing the efficiency of the latter. The answer to that which I have written down is this,—There will be required for the military occupation of India a European force of between 55,000 and 60,000 men, the greater portion, if not all, requiring to be regularly relieved from England, say every ten years, with large annual drafts of recruits to keep up the numbers deficient from deaths, invaliding, and soldiers seeking their discharge, so that large bodies of European soldiery will be constantly *en route* between India and England, either in the shape of regiments or drafts of recruits. The expense will be very great, but I think might be much diminished. I never could understand why Government should let themselves be so much dependant on the merchant shipping for the transport of their troops and military stores. I would suggest that the royal navy should equip a sufficient number of troop-ships regularly fitted up for the express purpose of transporting troops and military stores of all kinds; these to be kept constantly employed, a portion of them in the Mediterranean and Red Sea for the overland route, and when the heat in the Red Sea, or the emergencies of the service, did not require troops to be sent by Egypt, then another portion of the troop-ships would convey their freight of troops and stores round the Cape. I think, under this arrangement, the charge for the conveyance of troops would be very greatly diminished, whilst the comfort of the soldiery would be much increased, and without doubt their discipline and efficiency better preserved. The victualling of the troops under naval arrangement would be very trifling, as I know by practical experience that merchant vessels contract for the victualling of soldiers both out and home for a voyage of 120 days, *viâ* the Cape, at about 6*l.* a head. As far as the very important subject of the health of the soldier is concerned, it would seem most desirable that when the exigencies of the service did not render it necessary to land troops at Calcutta, the troops for Bengal and the Upper Provinces being the greater portion of the European force in India, should proceed from England by the overland route, and landing at Currachee, proceed at once up the Indus to the Punjaub, Peshawur, and the north-west provinces, taking their first tour of service there, and getting acclimatized, proceed gradually down to the more unhealthy stations in the lower provinces, and finally embark for England at Calcutta.

The next question is, Whether it would be possible to consolidate the European forces so as to allow of

Major-Gen. T. S. Pratt, C.B.

24th Nov. 1858.

change from one branch of the service to the other, d what regulations would be necessary and practible to effect this object, with perfect justice to the aims of all officers lately in the service of the East dia Company ?—With respect to the consolidation the European force and exchange from one branch the service to the other, I have to offer the following marks :—No person who has served a quarter of a ntury in India, as I have done, can have failed to mark that the division of the troops in India into ree distinct armies for local service in India, with fourth body of Her Majesty's troops, has a most jurious effect. The officers of the army of each esidency are jealous and unjust to each other; all ree have somewhat similar feelings to Her Majesty's oops, and, in my opinion, good feeling and harmony ill never be perfect until the armies serving in India all cease to be separate bodies, but shall feel themlves a decided integral portion of Her Majesty's my, with the European portion of it liable to serve all parts of the world, and I think much should be crificed to obtain this end. I do not think the stem of local European forces should be perpetuated; would not increase it now, but make all future Euroean troops for service in India, (officered by whom ey may,) be regular troops of the line, relievable from ngland, as before proposed. The only obstacles that can see to the exchange from one branch of the rvice to the other are two:—First, the funds, to hich the officers of the Indian army have subscribed ery largely; secondly, that there is a purchase ystem in one branch, whilst in the local service romotion is purely by seniority. This latter obstacle ould not exist in the exchange between the scientific ranch of either service, and is applicable only to the mall local European force now in India. The first bstacle is difficult to deal with, and premising that vith regard to it all vested rights should be rigidly reserved at whatever cost, it may be useful to enter omewhat into the general history of these funds, vithout pretending to critical accuracy. As far as can learn, there was originally in each presidency fund for widows and children kept up by subscripions of the officers of the Indian army, but to which dhesion was optional. The Court of Directors had requent applications for assistance from the relicts f non-subscribers, and in 1826 the Court induced the ubscribers to the voluntary fund, to merge their ssets into a general military fund for each presidency, he Court holding out as the inducement on their part large rate of interest for all deposits (8 per cent.), a ery favourable rate of exchange for remittances to England, and a very small annual donation, about 50*l.*, at the same time making subscription and donaion to the funds compulsory on all their new nomiations; and this was agreed to on the proposed onditions. The funds of the respective presidencies re now supposed to stand thus; the Madras and Bombay funds are perfectly solvent, with large capials, and able to meet all claims. I am not so sure bout Bombay, because I have never served there. The Bengal fund from some management is not at resent very solvent, but has (as stated by the subscribers) just claims upon the Indian Government for nearly 500,000*l.*, the receipt of which would make them perfectly solvent, and able to meet all claims. These funds have been raised to a very great extent by the subscriptions and donations of the officers themselves, and the advantages of interest, remittance, and donation from the Government, although very great, are not equal to what Her Majesty's Government grant in the shape of pensions to officers in Her Majesty's service, without any pecuniary sacrifice on their part whatever. If these statements are correct as far as it can be judged, it would appear that had the officers of the Indian army received such pensions as are granted by Her Majesty without a pecuniary charge, and had they placed the subscriptions and donations they now give to their military funds to any insurance office, they would be fully in as good circumstances as under the present arrangements. There is another fund called Lord Clive's fund, for the benefit of those not having a certain amount of means, which is legally and exclusively the property of the old Indian armies. The Court of Directors had a perfect right to make what conditions they pleased with those gentlemen accepting appointments in their service, but it will now be for consideration whether these funds are to be perpetuated, or whether (perfect faith being kept with present subscribers) the new appointments shall hereafter be compelled to give donations and subscriptions as heretofore, or be placed with regard to pensions as Her Majesty's officers are in all parts of the world, leaving it of course in their power to make such other arrangements for the benefit of their families as each individual may think fit. The exchange between the officers of the line and the present European local force would of course be only permissible, each officer would consult his personal interest. The officer of the Indian service would consider whether he would keep up his subscriptions and donations to the military fund, and retain the benefit of it. The officer of the line would receive the Indian increased rate of pay, have no claim upon the fund, and rest satisfied with the pension allowed by Her Majesty. I feel assured that many an officer of the European local force, whose health had failed, or from other personal reasons, would feel it a great boon to be permitted to enchange to a more genial climate, and would give up much to effect it; whilst on the other hand, the greater emoluments in the Indian service would induce many an officer of the line to exchange. I cannot see that the obstacle caused by the fund is insurmountable, and I would permit exchange in all ranks between the scientific branches of both services, the line and the European local force. With respect to the officers with native regiments, it is evident that exchange between them and the line would only be admissible in the very junior ranks. With respect to the difference between a purchase and a seniority service, I cannot see much difficulty in the way of exchange; each officer would abide by the regulations of the service into which he had exchanged, and would have made his previous calculations. And with regard to the question of purchase generally, I have the most perfect persuasion that its days are numbered, and that it will ere long cease to exist in the army, and seeing the amazing number of officers who, during the late war in the Crimea and the present war in India, have obtained commissions without purchase, there possibly never was a more favourable time for effecting the alteration, should it be decided on.

The fourth question is, Whether the local European force should be kept up by drafts and volunteers from the line, or should be, as at present, separately recruited for in Great Britain ? The answer to this is this,—I should hope that ere long there would be no local European force existing, but as regards either that force or the relievable force being kept up by drafts or volunteers from the line, I have a most decided opinion, which is, that the force in India should be kept up by recruits from England, regularly drilled at the depôts to the use of arms, &c., before they embark. I saw a great deal of the system of volunteering when in India; the Government there was desirous of saving the expense of the passage home of soldiers by inducing them to volunteer to regiments remaining in India, when their own corps was returning home, and I presume they also wished to retain trained and acclimatized soldiers. For this purpose they gave a bounty of 3*l.* to every soldier not beyond a certain age (40, I think), and who was of good character. The soldiers are shrewd calculators of their own interests. With the exception of a few men, who had married native women, and were thus somewhat tied to the country, those who volunteered were men who had but a short period to serve before, under the various provisions of the royal warrants, they could claim their discharge, and they did so, and their passage had also then to be provided, so that the saving was altogether fallacious. In many instances,

Major-Gen. T. S. Pratt, C.B.

24th Nov 1858.

when the regiment to which they had volunteered was in another presidency, the difficulties of transit being great in India, they had scarcely joined their new regiments before they could claim to leave them. In spite of all precautions, men of not very good character did volunteer; they brought with them the vices of the old regiment to engraft upon that which they joined, or if not up to the extent of vices, the different habits and customs of their old regiments. Soldiers desirous of leaving the regiments in which they have long served, are not generally the best soldiers. Good soldiers are generally proud of their old corps, and are desirous to abide by it, and it is a feeling that ought to be fostered. Speaking practically as an officer commanding a regiment, I would never wish to see it joined by bodies of volunteers from other corps; but isolated cases of exchange are always admissible.

4884. Those answers I take for granted contemplate and are applicable only to the restoration of perfect tranquillity in India?—To a great extent necessarily, for the future of India.

4885. When you fix the number of 55,000 or 60,000 men, that is in contemplation of the restoration of tranquillity?—I contemplated that number very much after reading a set of remarks drawn up by a most intelligent officer, Lieut.-General Shaw Kennedy, in which he put down seriatim the manner in which he proposed to locate bodies of troops in India for the future military occupation of it, and keeping it in order, and his calculation was that 55,000 European troops would be ample for the three presidencies.

4886. His calculation, I suppose, was founded upon the assumption that there was tranquillity in India at the time when these 55,000 men were to be placed there?—His calculation was, that with the force located as he proposed, in separate divisions of 8,100 men, each capable of joining each other when occasion required, they would be enabled to put down any insurrection whatever, and to keep the country in order.

4887. Are you aware of the number of European troops at the present moment in India?—I fancy that at this present moment there are about 80,000.

4888. There are 93,000 of Her Majesty's army, besides the European force of the late company?—The country is in a state of disorder to a great extent.

4889. (*Col. Forsyth Tait.*) I presume that General Kennedy's statement was with regard to the state of things after the mutiny was put down?—His statement was for the future military occupation of India. I do not mean to say that you do not require a very large body of troops in the country when in a state of insurrection, but for the future military occupation of India, that was his calculation, and it appeared very fairly drawn up.

4890. (*Chairman.*) Your opinion is formed more upon General Kennedy's views than on your own experience?—My opinion is formed upon General Kennedy's proposition, with my own experience added to it. I am glad to have the opinion of an experienced officer.

4891. (*Major-Gen. Hancock.*) Your opinion is, that after tranquillity shall be restored in India, about 55,000 European troops will suffice for maintaining the country?—Yes, if General Kennedy's other propositions are carried out.

4892. Does that estimate include troops of all arms?—European troops of all arms, engineers, artillery, cavalry, and infantry.

4893. (*Duke of Cambridge.*) Would you hold India with 55,000 European troops of all arms?—That was General Shaw Kennedy's proposition, with other arrangements.

4894. General Shaw Kennedy was never in India, was he?—Never.

4895. (*Chairman.*) We would much rather have your own opinion, founded on service in India, than that of a general, however distinguished, who was never in India at all?—He proposed to have forts at different stations.

4896. Did he give any estimate as to the proportion which was required of European troops to native troops?—He wanted to have a somewhat limited proportion of native troops, and a considerable proportion of armed police.

4897. Did he give any proportion of the Europeans to be employed to both the police and native troops employed?—I think the proportion of armed police was about 50,000. It is a great pity that I have not brought the memorandum.

4898. Are you aware of the number of native troops and police at this instant employed in India?—I am aware that it is fearfully large.

4899. Do you not consider, from your own knowledge and experience in India, that it will always require a certain number of European troops in proportion to the number of native troops employed?—I should say that you must now depend very much, if not altogether, upon your European troops.

4900. (*Duke of Cambridge.*) And yet, though you depend entirely upon European troops, you are of opinion that 55,000 Europeans would hold the whole of India?—With those forts and defensible positions which General Kennedy proposed.

4901. (*Sir Harry G. W. Smith.*) What forts did he propose?—He proposed for the Bengal side, between Calcutta and Peshawur, ten forts, with defensible barracks in their vicinity, five of these forts being already built, a corps of 8,000 troops of all arms at each; a small portion of the troops holding the fort, the rest in the barracks. The ten forts and positions were Calcutta, Dinapore, Benares, Allahabad, Agra, Lucknow, Meerut, Loodianah, Lahore, Peshawur, with a double tête de pont at Attock.

4902. (*Duke of Cambridge.*) How can a man propose to occupy a country which he has never seen; has such a thing ever been heard of?—He asked for information from every officer who had served in India; he made inquiry and took their opinions.

4903. (*Viscount Melville.*) In what proportions do you propose to distribute these 60,000 men in the different presidencies?—The vast proportion would be in Bengal and the upper provinces.

4904. (*Duke of Cambridge.*) How many?—I should say 35,000 in Bengal, and the others between the two presidencies.

4905. Then that would be about the same number as was in Bengal before the mutiny, because, with the Queen's troops and the Europeans of the Company, I suppose there were very nearly 35,000 in Bengal?—In the Madras presidency, when I left it, they had so denuded the army of troops that there were only three regiments altogether of the Queen's troops, and one of them was in Burmah.

4906. (*Sir H. G. W. Smith.*) That was rather an error than a piece of judgment?—It was a great error. I feel that it is not just to Lieut-General Shaw Kennedy to have his plan for the future military occupation of India judged by the meagre replies I have made when unprepared to give evidence upon it; his plan must be judged as a whole, and I am authorized to state that it will be forwarded to the Royal Commissioners, if they see fit to call for it. I consider the plan founded on sound stratagetical principles, and one of its great merits is, that by the proposed combinations India may be maintained in order from all internal attacks, and be able to hold out until reinforced from England against all attacks from without by a moderate European force and native army. Certainly most desirable if practicable, for England cannot afford the drain of a huge European force for India, and there are few who do not feel that at any hour she may find herself engaged in a conflict in Europe which will require all her strength to meet; and farther, as regards finance, a moderate European and native army would be most advantageous to the Government of England, as rendering the revenues of India more equal to the expenditure. I use the term Government of England advisedly, for

Major-Gen. T. S. Pratt, C.B.

24th Nov. 1858.

from the moment the British Government took the actual government of India into its own hands, and wielded their power over its resources, which might be for good or evil, there was not a holder of Indian loans who did not feel that the English Government had become virtually responsible for the Indian debt, in spite of any repudiation.

4907. (*Major-Gen. Hancock.*) In the event of the European force in India being henceforth composed exclusively of troops of the line, would you keep those in each presidency under the command of a separate Commander-in-chief, as the local European troops have hitherto been kept, and if so would you leave the Commanders-in-chief at Madras and Bombay to the same extent, or to what extent, free to exercise their authority independently of the Commander-in-chief in India?—As I have before stated, I have the greatest objection to the division of armies for the different presidencies. I should like to see one distinct and positive army under one Commander-in-chief, with deputies of whatever name you please to call them in the other presidencies, and with one set of pay and audit regulations.

4908. With what powers would you invest the Commanders-in-chief at Madras and Bombay?—They would have the same power as they have now. The Commanders-in-chief have the powers of courts-martial to the extent of all but cashiering and death. The Commanders-in-chief in the respective presidencies for the local force have absolute power, but not for the Queen's troops. They have to refer to the general commanding in India.

4909. Then you would limit the powers of the Commanders-in-chief at Madras and Bombay to those which they have hitherto exercised over the Queen's troops?—I think so.

4910. Are you not mistaken with respect to the powers vested in the Commanders-in-chief at Madras and Bombay, in stating that they have not authority to confirm sentences of death?—Not for the Queen's troops.

4911. (*Marquess of Tweeddale.*) Will you be good enough to explain a case which took place at Madras upon that subject, with regard to a man of the 4th Queen's regiment?—It is a considerable number of years since that transaction took place, but my recollection of it is this:—A soldier of the 4th deliberately, in the middle of the night, loaded his musket, and went up to the bedside of a sergeant who had annoyed him in some way or other, and shot him. Death did not ensue, but death was intended to ensue. The man was tried, and sentenced to be hanged. Lord Tweeddale, who was both Governor and Commander-in-chief sent to me to ask this question,—"Does the discipline of the Queen's troops in Madras "require an example of death, seeing that death has "not ensued?" At that time the discipline of the Queen's troops in Madras was perfect, and my answer was:—"The man is a deliberate murderer, he deserves 'death; but if you put the question whether the "service requires an example, I have the power of "saying that there is no example required." Upon this the matter was sent up to Lord Gough. I think it was because it was an independent territory. It was in the Nagpore presidency, and not immediately under the Madras Government. Lord Tweeddale wished the sentence to be commuted to transportation for life. Lord Gough, to whom it was referred, took a different view of it, and wished the sentence of death to be carried out. It then became necessary for Lord Tweeddale in a very extraordinary manner to decide, as Governor, his signature being required as Governor, whether he would act as Governor in a different position from that to which he had occupied as Commander-in-chief, and considerable difficulty arose upon the matter. I do not know what communications took place between the Government and Lord Gough, but the result was that death was not inflicted, and the man was transported for life. It is fully twelve years ago, and I just repeat what I know: but it was necessary to refer the matter to the Commander-in-chief in India.

(*Chairman to the Marquess of Tweeddale.*) Is that a correct statement?

(*Marquess of Tweeddale.*) It is not according to my recollection. I was commander-in-chief at the time, and the question was this—there was a soldier of the 4th regiment who loaded his musket and shot a person. He was sentenced to death for that crime. The question in my mind arose, as commander-in-chief alone (for it could be treated in no other way), whether it was necessary for me to send that sentence to be confirmed up to Lord Gough, as the commander-in-chief in India. I always understood, and I believe it is the case, that the commander-in-chief of either Bombay or Madras, in all cases where there is a question of life and death of a soldier of Her Majesty's line regiments, must send up the sentence to the commander-in-chief for his confirmation. Lord Gough took a different view from me, and sent it back again to me, and I refused to sign it. He said that I ought to have carried it out. I took as far as I could the advice of those who could give it, at Madras, namely, the judge advocate general and the advocate general, and I was told that I was right, and that Lord Gough was wrong according to law.

(*Duke of Cambridge.*) In consequence you did not carry the sentence out.

(*Marquess of Tweeddale.*) The man was not shot. Lord Gough would not sign it, and I would not sign it.

(*Major-Gen. Pratt.*) As far as the Queen's troops are concerned, the commanders-in-chief at Bombay and Madras are not commanders-in-chief, they are lieutenant-generals commanding, and always sign every document, both those relating to courts-martial and others, not as commanders-in-chief, but as lieutenant-generals commanding.

4912. (*Major-Gen. Hancock.*) And that is the arrangement which you would maintain in future, namely, not to allow commanders-in-chief over any part of the European army, but simply lieutenant-generals commanding?—Yes; and for the whole of the troops. I want but one army in India in order to do away with the jealousies otherwise subsisting.

4913. Would you unite the native armies of the three presidencies also under one command?—The general recommendation was that there should be but one army in India.

4914. One native army as well as one European army?—One native army serving in the respective presidencies, but under one command and regulation.

4915. Do you think, considering the great extent of India, that it would be possible for the commander-in-chief in Bengal to exercise an efficient personal supervision and control over the whole European and native force?—I consider that he would delegate his power to the commanders-in-chief and the general officers in the respective presidencies. I suppose that the commander-in-chief in England has to exercise a general supervision over the troops to a great extent where he has no personal power of visitation.

4916. Do you think that during his five years' tenure of command the commander-in-chief in India would see one-tenth part of the European or native corps there?—It depends entirely on his power of locomotion. I should say in that case it must depend very much upon the individual. One man would make a point of seeing a great portion; another man would not.

4917. (*Duke of Cambridge.*) I suppose you would make the generals at Madras and Bombay responsible for their presidencies, but would still place the army under one head, viz., the commander-in-chief in India?—Yes, and any person who has had the working of an office where they are under different heads, with the different pay and audit regulations, will know that a great portion of an officer's time in office in India is occupied in appeals to Government regarding the retrenchments in consequence of the difference,

Major-Gen. T. S. Pratt, C.B.

24th Nov. 1858.

4918. (*Major-Gen. Montgomerie.*) You have stated that you consider the fact of the armies being separate in India a great evil ?—I do.

4919. Do you not think that late events have shown that the circumstance of the armies being in three presidencies has been the safety of India ?—I am quite aware that that is an opinion which has been expressed, and expressed long ago, that in dividing the army into three, if one portion became rebellious or mutinous, the others might not do so. I do not think that the fact of some of the troops not being mutinous was caused by their being divided into three armies. I think it was caused by the different composition of the troops in the respective armies, and not by their mere division into three armies. That might be retained though there were but one army.

4920. (*Major-Gen. Hancock.*) Do you think that no advantage accrues to the State from having a considerable diversity of system, in the several native armies of India ?—I do not quite understand the question. If you mean by diversity of system being under different local pay and allowances, I cannot see any advantage.

4921. Would not one consequence of their being all united under one commander-in-chief be that one system would pervade the armies of the three presidencies ?—One general system would pervade the armies of the three presidencies as matter of necessity ; but questions of caste or questions of food would be altogether local.

4922. Have there not been very great differences of system with respect to discipline in the Bengal native army and in the Madras and Bombay armies ? —I am not sufficiently conversant with what has been the fact beyond hearsay to speak upon that. I do not like to speak of things that I do not know personally. I do not see why there should be such differences. I think that good officers would make the one set of troops just as good as the other if they had one system.

4923. Is it not very probable that had the armies of the three presidencies been under the Commander-in-chief in India, the system of organization and discipline which had been adopted in the Bengal army would have been introduced into the other two armies ?—That is to say, that the bad system which has produced rebellion would have extended. I cannot say that.

4924. (*Col. Burlton.*) The natural inference I suppose would be, that the army under the immediate personal supervision of the Commander-in-chief of all India, would be more likely to be in a high state of discipline than those armies away from his personal supervision ?—If he has good lieutenants I do not see why it should be so, and I do not think it was so. I think the Madras army was in an admirable state of discipline. I can speak more, of course, to the troops that I knew. I think that the discipline and interior economy of Her Majesty's troops in Madras was nearly perfect. I should like to give an instance of it. In one case there were seven regiments at Madras within a short period ; three of them came from actual service at the Cape, one was going to Burmah, and three were going to England. They were encamped on the beach at Madras. There was no power of keeping them within walls of any description, and the chief of police at Madras, Mr. Elliot, came to me, and told me that he could not have believed it possible that discipline could have been carried to so excellent an extent, for that he as police magistrate had not had a single individual during the time that they were there brought before him.

4925. (*Major-Gen. Montgomerie.*) That relates to the European troops of Her Majesty's army. As I understood the question, it was addressed to the army in general, including the native army ?—I am telling you what happened, and what I know.

4926. (*Viscount Melville.*) Do not you think that it would have been far better that instead of having had, as has hitherto prevailed, three different systems in the different presidencies, there should have been one rule and one system throughout the whole of India ?—I have already stated that.

4927. I do not mean as regards the Europeans, but the native force ?—I think that the division into three armies has led to a most injurious result. I do not mean to say that there may not be local matters to which you ought to attend, such as you would when you send troops to Canada—you would supply them with fur cloaks, and would make a different arrangement, but the general system should be one—the general pay and allowances should be one.

4928. (*Major-Gen. Hancock.*) Upon what do you consider that the discipline of a regiment principally depends ?—A good commanding officer.

4929. If the officer at the head of a regiment is well qualified for his command, if he has the full complement of officers under him, and is invested with sufficient power to maintain his own authority over all ranks, do you not think that it might and ought to be kept in a state of as perfect discipline in India as in England or any other country ?—I have not the most distant doubt that with a good commanding officer and good officers, it ought to be and is kept, as far as Her Majesty's troops are concerned, in as good order in India as in any part of the world. I should like to see the same number of troops coming from active service put upon the beach anywhere here, and to see whether they would behave as well as they did in India.

4930. Do not the interests of the public service imperatively require that none but fully qualified officers should ever be placed in the command either of a regiment, brigade, division, or army ?—It is a perfect truism.

4931. Is it not the fact that under the existing system of succession by seniority to the command of regiments many incompetent officers succeed to these commands both in the Queen's and Company's armies, and have you not known it to be so in your own experience during your service in India and elsewhere ?—With regard to Her Majesty's troops, with which I am more conversant, the half yearly confidential reports state distinctly whether the officer in command of a regiment is qualified for his command or not. If the general officer does his duty he will report an officer either whether he is from age or from other infirmity disqualified ; it is done every day. If that recommendation is not attended to, it is the authorities to whom the report is made who are in fault.

4932. My question has simply reference to the matter of fact, and not to the failure or otherwise of general or other officers to report inefficient officers. Is it not the case that many incompetent officers do succeed under the existing system to the command of regiments ?—It is not the case that many inefficient officers succeed and remain in command of regiments. There may be isolated cases. I have known one case where an officer required to be reported two or three times, but who ultimately was removed.

4933. Have you not occasionally found it to be the case also with respect to the brigade and divisional commands in India ?—I know no case in which an officer utterly incompetent has been retained either in divisional or in brigade command. I know cases where indifferent officers have been retained, but none to such an extent as to require imperatively to be removed.

4934. From what source do you contemplate that officers shall be supplied in future for the native army, and for the numerous detached appointments in India ?—I do not know why they should be taken from a different source than that from which they are now, namely, the young gentlemen of England.

4935. Do you mean that you would supply the officers by appointing cadets in England specially to the native army, or would you furnish officers from the regiments of the line serving in India ?—I think they are persons who could only be allowed to exchange in

Major-Gen. T. S. Pratt, C.B

24th Nov 1858

the very junior ranks. It would be better to have appointments made direct for the purpose of serving in the native infantry regiments, and for the officers to abide with them; it would never do to have an exchange higher than the subaltern ranks, for you cannot expect that a man would go and command a sepoy regiment from a European corps who knew nothing of the language and the customs. A lieutenant-colonel who had only commanded Europeans would be totally astray when he went to command a sepoy corps; even commanding detachments as high as captains, I think, would be objectionable.

4936. (*Col. Burlton.*) Does it not occur to you that the variety of the system now prevailing, namely, the seniority system in one service, and promotion by purchase in the other, renders it utterly impossible to admit of exchanges between those two services without the liability or almost certainty of great injustice to one of them, where there may be an old man exchanging with a young one from a line regiment ?—I have already stated that the question of exchange is simply permissive; if the two officers choose so to make their calculations as that one of them chooses to go into the seniority service, and the other to come into the purchase service, I can see no possible objection.

4937. Suppose that Mr. A. is a lieutenant of 20 years standing, and senior lieutenant of his regiment, the five captains above him are necessarily men of old standing also, they all having advanced by seniority as he has done; if one of those old captains, who Mr. A. expects is about to die or to retire home to spend his latter days here, should exchange with a young captain from a line regiment, is not it a hardship to every one below him ? does not Mr. A. and all the lieutenants below him suffer by having a young and good life put above their heads instead of an old one ?—It would necessarily retard promotion, but it is a matter of every day's occurrence in the Queen's service.

4938. In the Queen's service every officer enters it upon the perfect understanding that that is the case, while in the Company's service every officer enters it upon a perfect understanding the contrary way ?—He has so entered it; but I think that that will soon die away. You are now about organizing an army for the future. I see perfectly that it has the effect of retarding that officer's promotion; at the same time I beg to say that I think that an officer at the top of his list would be the very last person who would attempt to exchange.

4939. It is not only the one at the top of the list who suffers, but every ensign and lieutenant below this senior lieutenant, every officer in the regiment must suffer by having young lives put in instead of old ones ?—Yes.

4940. (*Duke of Cambridge.*) Is not your experience of exchange in the Queen's army that of retarding promotion when it is permitted ?—I have seen instances occasionally where it has retarded promotion. I recollect an instance in which I suffered; one always feels a matter when it is personal. I perfectly recollect myself being very much annoyed at an exchange which took place in the 26th Cameronians, when an officer, who was an old man, and had been seven years in the regiment without ever having joined it, which was a very extraordinary thing, instead of selling out, which we had arranged that he should do, exchanged all at once with a young officer, a lieutenant-colonel. I then felt that we were all pulled back.

4941. (*Col. Burlton.*) Then it is your opinion, I suppose, that exchanges cannot be carried out between the two armies as long as the present incumbrance of the Bengal army remains ?—I think that the great mass of exchanges might be effected without injury.

4942. With the junior grades ?—Yes; I may also say that you see every day that a man whose life is apparently better than that of another dies first.

4943. (*Major-Gen. Hancock.*) If the native army be officered, as you recommend, by the appointment of cadets specially to that branch of the service, will it not be regarded generally as an inferior service to that of the European army ?—The officers who take the appointments in that army well know what they have to expect,—that they will remain in India. I presume that officers who remain in India and abide by it are more likely to be employed in situations of emolument and situations leading to honours than those who come away, and I think that they would have an advantage in that way. I do not see why they should consider themselves inferior.

4944. Still do you consider that the native army so constituted would be looked upon with the same respect and regard by the country generally and by the officers of the European branch of the service as the European army ?—I do not see why there should be any difference; I do not find it so in our local service; I do not find that an officer in the Ceylon rifle corps is looked upon as at all inferior to an officer in a regiment of the line.

4945. Do you contemplate the native army maintaining the same high status which has hitherto been accorded to it in relation to the European troops, being armed with the same description of weapons, and having the same high military training?—I think no person could have foreseen that 72 regiments of natives and a variety of irregulars would have gone into a state of mutiny; otherwise, if that could have been foreseen, I do not believe that such a weapon as the Enfield rifle would ever have been put into the hands of the natives at all. The power that the European has over the natives is his physical strength, and his being able to come in contact with the native. If you put into the hands of the natives a weapon which keeps you at 1,200 yards distance, the native is possibly the more efficient of the two; he is as good a shot, if not better, his nerves are cool. I think it was a great mistake arming the natives with the Enfield rifle, but nobody could have foreseen that what has taken place would have occurred.

4946. Then do you recommend that for the future the native army should be armed with an inferior weapon and inferior ammunition, and should have a lower degree of training than the European troops of the same arm ?—No, I would have the native army in so small a proportion, and so located with the European troops, that you might arm them well, because you would always have a superiority over them.

4947. How do you recommend that the native infantry should be armed ?—With the best piece that you can get for them.

4948. (*Col. Tait.*) With the Enfield rifle ?—With the Enfield rifle. If you put, as I propose, the troops with a large comparative proportion of Europeans to a small proportion of natives, and these natives enlisted from a trustworthy source, you may arm them in the best possible manner that you please.

4949. (*Duke of Cambridge.*) You say that there should be as small a proportion of natives as possible to the Europeans ?—Yes.

4950. You said that you thought the Europeans ought to be from 55,000 to 60,000 ?—Yes.

4951. You are aware, probably, that at this moment there are in India no less than 300,000 native troops, what number of native troops do you propose for the permanent army of India ?—Whatever may be the case at the present moment, the army of India was nothing like 300,000 native troops; every man in a difficult position has been raising native troops till they have got up to an extent which was never contemplated before. The native troops in the Madras presidency were 52 regiments; the native troops in the Bombay presidency, I think, were 26; I mean of the regular line.

4952. (*Viscount Melville.*) Twenty-nine?—In Bengal they were 74. Supposing that each of those regiments comprised 800 men, you can calculate what the total number was; it was nothing like the number mentioned.

4953. (*Duke of Cambridge.*) Still you say that there is to be a very superior number of Europeans to natives, and you give us the Europeans at 55,000

Major-Gen T S Pratt, CB.

24th Nov 1858.

to 60,000—what number of natives would you give us for those 60,000 Europeans ?—I may have spoken confusedly, but I said that there was to be a comparatively small number of regularly organized native troops, and that the other portion was to be organized police, not armed as the regular native troops are, but with swords and shields or whatever is the usual method.

4954. I want to know whether it is your opinion that, say, at the extreme, 120,000 troops, native and European, are sufficient for India. If you doubled your number of 60,000 Europeans as you say that the Europeans are to predominate, you would only have 60,000 natives; do you mean to say that 120,000 troops are sufficient for the whole of India ?—Of regularly armed troops, I should say that 120,000 natives to 60,000 Europeans would be ample, thus making two-thirds of the whole number of natives.

4955. I understood you to say that you would have the Europeans predominate ?—Not in numbers. I hold that 2,000 Europeans predominate over 6,000 natives.

4956. (*Col. Burlton.*) You take into calculation also, I imagine, a very large proportion of organized police ?—Yes, and the regularly organized disciplined native army reduced.

4957. (*Chairman.*) Would you arm your police in the same way as you would the native force ?—Certainly not.

4958. (*Duke of Cambridge.*) And you would take no account of them as regards the number of Europeans to be employed in India ?—They would be employed in aid.

4959. I am talking now of the proportion of Europeans to natives ?—You would reduce your regularly organized native troops very considerably, in consequence of having these organized police.

4960. What would you state as the proportion of Europeans to native troops and police ?—I have said 60,000, in round numbers.

4961. (*Viscount Melville.*) Would you have one European to three natives or four natives ?—To three natives, I should say.

4962. (*Duke of Cambridge.*) Including police ?—No, not including police. I would have one European to three drilled and organized soldiers, and then the police would depend entirely upon the exigencies of the service, and the particular place at which they were.

4963. If you have your police regularly drilled, organized, disciplined, and armed, how is it that you will not take them into account at all ?—I do not arm the police, except with shields and tulwars; it is quite a different thing.

4964. You said that they were to be organized ?—Regularly organized; a portion cavalry and a portion infantry.

4965. (*Major-Gen. Hancock.*) Would you give the soldiers of the native army equally good weapons and as high a degree of military training as you would give the European soldiers of corresponding arms in the service ?—I would place them in regular organized divisions of the army; there could then be no harm in giving a small number of natives, that is to say, small, not in numbers, but in physical strength, just as good an arm as you would give, to the European soldiers, whether the Enfield rifle or a superior weapon to the Enfield rifle.

4966. You would give them as good arms in their several branches as you would give to the Europeans ?—Yes.

4967. (*Chairman.*) Your proposed establishment is 55,000 Europeans ?—I have merely mentioned that incidentally, as having read the matter. The statement that I saw for the military occupation in India was from 55,000 to 60,000.

4968. That would give you 165,000 native troops, being three to one, the and police force besides ?—Yes; and police up to the extent of the exigency that might exist.

4969. You imagine that there should be but one army, namely, the Queen's army, in India altogether ?—I think that it would tend most particularly to the harmony and good effect of the service if there were but one army. No person who has not served in India can understand it. It is not easy to give isolated instances of this feeling, but there is no person who has served in India but must feel very greatly that the separation is most injurious. The common conversation of those in the different services to each other is something most extraordinary.

4970. Even if it should be necessary, now that the Indian army has been transferred to the Queen, that a portion of that army should be enlisted for local service in India, still you would have the discipline and the system the same for that portion so recruited for India as for the remainder ?—Necessarily the highest possible discipline. There is no use in having soldiers if you do not give them the highest discipline.

4971. (*Duke of Cambridge.*) And you would have them under one authority ?—Yes.

4972. (*Chairman.*) Supposing a portion of this European army to be recruited in future for service in India alone, you say that there would be some difficulty in the system of exchanging with those officers who at present exist in what has been the local army in India. In order to remedy that difficulty for the future, would you make all those officers for the future entering that local force enter it with the perfect understanding that they were to be upon the same footing as the moveable force ?—I have already stated in my answer that I think the system of a local force should not be perpetuated. I am quite sure that if an offer was made to the soldiery, for instance, of the local service in India, whether they would change their state of enlistment from a perpetuation of service in India to a removable force, you would find that the great mass of them would agree to it at once. Their enlistment being, I think, only for 10 years, you can easily understand that a very short time would elapse before their numbers would be exhausted. If you enlisted all the new men under the provision of not being for a local service, but for service in all parts of the world, the others would die out very rapidly with the invaliding, and discharging, and deaths.

4973. Then your idea is that though it may be necessary to keep faith with those officers lately in the service of the East India Company, yet that hereafter a different system may be adopted ?—It would be utterly shameful to break faith with them, in my opinion.

4974. (*Duke of Cambridge.*) It is your opinion that the bond of unity which an army feels under one great control is of immense advantage ?—Yes.

4975. And that cutting it up into different portions must encourage and continue jealousies and heartburnings ?—Yes, it does in every direction. You find an officer of one army, instead of being proud of an action in the other, trying how to decry it, because it has been done by a portion of another army. That feeling never should be perpetuated.

4976. (*Major-Gen. Hancock.*) Provided the two armies be placed upon a perfect equality in all respects, do you think that those jealousies can exist to the extent to which they have hitherto existed between the Queen's and the Company's armies, which have been so differently circumstanced in many respects ?—I think that if you have any division at all, those jealousies will exist.

4977. (*Col. Burlton.*) You appear to have paid a great deal of attention to our funds in India ?—Merely within these last two or three days.

4978. Can you see any way by which the interests and rights of the officers of the Indian army, in connection with its funds, can be adjusted, if exchanges are permitted ?—It would be utterly impossible for a young officer of our service, for instance, to exchange into yours, and to take the place in the fund of a very old officer; you would not receive him.

Major-Gen. T. S Pratt, C.B

24th Nov 1858.

4979. There is the difficulty?—Yes.

4980. Do you see any way out of that difficulty?—The way out of it is simply not to perpetuate the fund.

4981. If the Government would take upon themselves all the present liabilities of those funds, and all their capital, both the military fund in Bengal, and the orphan fund, which is separate in Bengal. Do you think that that would adjust the question?—In Madras, I understand the capital is 700,000*l.*, that is quite equal to meeting all its liabilities without any assistance. I do not know what it is in Bombay, because I have never served there. I am quite aware that the Bengal fund is insolvent.

4982. The Bengal fund at the present moment is in possession of a capital of upwards of half a million of money?—Does that include the claim which you make?

4983. No, that is Company's paper. The Government owe that money, we have their promissory notes for it. In addition that, we have a claim upon them of about 300,000*l.* If the Government would agree to take all our liabilities, that is to say, the liabilities of all present widows or prospective widows, all present incumbrances, and all liabilities in every possible way, and to take over our capital and our claims upon them, do you think that that would settle the thing?—That would settle the thing, and I think without any very great expense, as far as the funds are concerned, provided you get your 500,000*l*, for Bengal, I mean that you have a claim on the Bengal Government for nearly 500,000*l.* for things which they have withheld from you, to which you think that you are entitled.

4984. It is not quite 300,000*l.*?—It was given to me at the sum I name. If you get that you will be perfectly solvent to meet all your claims.

4985. (*Chairman.*) I understand that for the future you would put an end to making it compulsory on all officers entering the army to subscribe to the military fund?—Yes, distinctly so; I think that all should go on the perfect understanding that they would be entitled to Her Majesty's pension, whatever it may be, and not be compelled to subscribe to anything. They have always the power of subscribing to any insurance office if they please.

4986. (*Major-Gen. Hancock.*) With respect to the comparative expense of a line and a local army in India, assuming the casualties amongst the line and local troops in India to be equal in proportion to numbers, and the rates of bounty and levy money to the recruit to be the same in both services, the expense to the Government of the drafts sent to India to supply casualties would be the same, would it not, whether for the line or the local army?—I cannot conceive why there should be any difference.

4987. Does it not follow that if relieved periodically as you have recommended, the Government would incur, on the completion by each line regiment of its 10 years' tour the additional expense of the passage of a relieving regiment to India, and of the relieved regiment to England, minus only the men permitted to volunteer from the latter into the regiments in India, and that the whole of this expense would be saved by having local instead of line regiments?—I do not think that there would be much expense saved; there might be a trifling expense saved. All men for local service being enlisted for 10 years' service, would come home as individuals at the end of their 10 years' service if they so pleased.

4988. Has that any reference whatever to reliefs of regiments? It is just the same in the Queen's regiments: they enlist also for 10 years, do they not?—Then what advantage is there in a local European force, if the individuals of that force are to come back at the end of 10 years as individuals instead of a body?

4989. Both come back in 10 years?—Yes. Upon the question of expense, I cannot conceive where the expense is to be different. Your men go out there as 10 years' service men; they have the power of taking their discharge at the end of the 10 years' service there, or of being banished for life by taking 10 years more; they come back piecemeal; of the others, some come back piecemeal and some in a body. I know of no difference of expense.

4990. Is not it the fact that the Government of India incur the expense of the passage of a complete regiment from England to India for every regiment relieved, and the expense of a complete regiment from India to England minus only the men who volunteer?—The expense of a regiment going to India and the expense of a regiment coming back has necessarily to be defrayed.

4991. That expense is not incurred at all with respect to local regiments?—It is incurred in the shape of individuals, and not in a body.

4992. Is not the expense on account of individual soldiers, incurred also in respect to line troops, irrespective of that occasioned by the reliefs of entire regiments?—Yes, and there is no additional expense; the soldiers who choose to come back, come back, and their passage is equally paid.

4993. (*Chairman.*) The officers of a local regiment stationed in India, and enlisted for service in India only, become entitled to a retiring pension, do they not?—The officers have a large retiring pension, whether they belong to the European local force or belong to the native force.

4994. If it is a regiment of the line from England relieved at the end of ten years, the Government of India are saved that expense?—Altogether, it is a new system for the future.

4995. Therefore you would put that off against the expense of relief?—Yes.

4996. (*Major-Gen. Hancock.*) As line regiments on embarking for India are composed of men whose periods of service vary from one to eighteen years, and those embarked for the local army are all recruits, does it not follow that by having line regiments the Government would incur a considerable additional expense during their ten years' tour in having to send home and to supply the places of numerous time-expired soldiers after very short periods of service in India, and that this additional expense would also be saved by having local instead of line regiments?—As far as I understand the question, it is that line regiments going out would have men in all periods of service from one up to ten years' service, and that the local European corps having gone out for ten years to remain there, would be in a different position.

4997. I ask you whether an extra expense would not be incurred by the Government of India in respect to line regiments, from having to replace time-expired men after short periods of service in India?—The drafts of recruits would go out, I suppose, every year or twice a year; they would go out to serve their ten years, and after their period of service they would be, of course, entitled to come home again the same as the others. I do not know where the great difference would be in that respect.

4998. A line regiment we will suppose embarks this year for India; is it not the case that it has some men whose contracted period of service will expire after two years, others after three, four, five, and so on; and that the Government of India will have to pay the passage home of those men, and the passage to India of men to supply their places; whereas this expense is incurred with respect to local regiments only for men who have completed the full periods of 10 or 21 years service in India?—Every regiment has a depôt of two companies, and I do not know how it can be possibly supposed that people who are near their discharge would not be kept at the depôt instead of being sent out to India.

4999. (*Chairman.*) Have you anything to suggest which would obviate any hardships which you consider have hitherto existed in the mode of regulating the promotion between the two armies, the regular army and the local army?—I can add but little to the statement made in my letters of the 1st September and 6th of November, but I may state the numbers of

Major-Gen. T S Pratt, C.B.

24th Nov. 1858

the colonels of the East India service who have superseded their seniors in the royal army. In the Gazette of the 6th of February, 1855, ninety-five colonels of the East India Company's service were made major-generals, their rank of colonel commencing in 1847, and ending in February, 1854, thus superseding all the colonels of the royal army for seven years and two months, and giving the rank of major-general to some colonels of only ten months standing, whilst the Queen's officers were of ten years. The supersession did not stop there, for whilst in the royal army one step of major-general was given to the senior colonels after three death vacancies amongst the generals, and after six vacancies when an officer obtained rank for service in the field, the promotion in the Company's service (they having few supernumeraries) has been continued and regular, and in addition to the ninety-five colonels promoted in the brevet of November, 1854, not less than fifty more junior colonels have obtained the rank of major-general, and the colonels of 1851 who were promoted on the 26th of October last, stand superseded by not less than 127 junior colonels, individually I have been superseded by eighty-six. There were several more, but deaths have occurred amongst them within the four years. By this enormous supersession the vested rights of all colonels of the royal army who held that rank from January, 1847, to the 20th of June, 1854, under the warrants then in force, have been infringed. The commission granted to such of them as were serving in India in order to keep their rightful position (here is mine given by order of Her Majesty) has been made waste paper. The desire expressed by the royal commissioners in making the alterations carried out in the warrant of the 6th of October, 1854, to the effect that it was not their intention to recommend any interference with vested rights has been set aside, and the condition upon which Lord Hill granted the rank of colonel to the officers of the East India Company's service, reserving the right of keeping their position in the rank of colonel and of major-general to the officers of the royal army, has been distinctly violated. In conclusion I beg to state that I know that the supersession complained of had not been foreseen by the home authorities, for General Anson, Commander-in-chief at Madras, when the supersession appeared, told me that he wrote to Lord Panmure, then Secretary or War and to Lord Hardinge, urging that the Queen's colonels who had been superseded should be given rank so as to keep the position they had previously held; and the reply of Lord Panmure was that he was afraid many deserving officers had suffered by the application of the royal warrant of the 6th of October, 1854, and that he would call Lord Hardinge's attention to the subject, and I have reason to know that Lord Hardinge was thwarted by ministers in his efforts to repair the injury done, I presume on the score of expense. Reparation can now be made without expense to the State, and in common justice it ought to be made. I say reparation can be made, but even if back rank is given, the injury will not then be altogether repaired; the loss of four years to old officers, such as I am, is irreparable, and the heart sickness endured during them by this grievous supersession no after act can fully recompense.

5000. I understand you to complain of the operation of the warrant of 1854?—Yes, as having taken away from me that which I was entitled to have under all existing warrants, and by which this commission given to me by order of Her Majesty has just been made a piece of waste paper.

5001. That is merely for local rank in India, I suppose?—Yes, and since then rank has been given to the Indian officers who held the same commissions in all parts of the world.

5002. Did you make any application to the commissioners appointed to take into consideration the effects of the warrant of 1854, to be heard upon that subject?—I did not, because I never understood that I was to make application; if I had been the least aware of it, or if any circular had been sent, I should at once have stated it.

5003. I believe it was stated by me in my place in Parliament that every one would have an opportunity of representing his case?—I could show, but I do not wish to show, that I perfectly understood that you would take care that the case was brought into notice.

5004. If it is in a private letter of mine you are perfectly at liberty to show it?—I was not aware, or I would certainly have brought the matter forward before.

5005. (*Viscount Melville.*) Were you in India when the results of that warrant took effect?—I was.

5006. Was it not the case that Queen's officers actually in command when that brevet took effect were superseded, and that company's officers were put into the commands which Queen's officers had formerly held?—I do not know of any case of actual displacement, but I know that it had a most injurious effect.

5007. (*Major-Gen. Hancock.*) Are you not aware that the several Governments in India have always been required by the home authorities to take care that the commands allotted to the officers of the Queen's and Company's services respectively should not be interfered with to the disadvantage of either?—I am quite aware of that, and the proportion was given in a regulated scale; one Queen's officer got a brigade in proportion to four Company's officers; the proportion of divisions was different.

5008. Whatever may have been the proportion, it was fixed by the authorities in England, and every care was taken by them to preserve to the officers of both services the proportion of the commands respectively allotted to them?—I only know that it was interfered with by the local government.

5009. (*Chairman.*) A proportionate number of general officers were given to what was then the East India Company's service?—Yes, under the operation of the new warrant; what I complain of is, that the position which I held under the former warrant has been violated.

5010. Do you consider that by making the whole one army you will get rid of the objection which you have now mentioned?—I consider that you would not do justice to the Queen's troops by sending them to serve under junior officers. We had majors serving under my actual command who have been made major-generals four years ago, and if I was going out again, or another officer, we should find ourselves under people eight years our junior.

5011. Then I understand you to say, that you consider that making it one army would be a great advantage, that it would do away with several inconveniences and hardships which have arisen from the former system?—Yes, and jealousies in every possible way

5012. You have given an instance of it in your own case?—Yes, it is exceedingly hard, and no person can tell the heartburning which there was at finding persons whom Queen's officers were commanding, made major-generals the next morning over their heads.

5013. Is there any other point which you wish to bring before the Commission?—No, I have no more to say upon the matter.

The witness withdrew.

Brevet-Major B. D. W. Ramsay.

Brevet-Major Balcarres Dalrymple Wardlaw Ramsay examined.

5014. (*Chairman.*) Will you be so good as to state to the Commission the rank which you hold in the army, the length of time you have served in India, and the different positions you have held there?—With respect to my rank in the army, I am brevet-major of the 75th regiment; I have served in India

Brevet-Major
B D. W
Ramsay

24thNov 1858

n three different occasions: firstly, in the years 1845 nd 1846. In 1845 I was aide-de-camp to Sir George rthur, governor of Bombay. In 1846 I proceeded the head-quarters camp at Lahore, served on the aff of Lord Hardinge; at the end of 1846 I returned England invalided. On the second occasion I served India as a captain in the 75th regiment from August 849 to the commencement of 1851, when I proceeded ome on leave of absence. On the third occasion, from ne year 1854 to 1858, I served as brigade-major of er Majesty's forces at Calcutta, and returned home n sick certificate last June.

5015. (*Marquess of Tweeddale.*) Did not you serve in ome other situation during that time. Were not you cting adjutant-general?—Yes, upon two different ccasions I had charge of the adjutant-general's office, nd of the quartermaster-general's office, first, when eneral Anson arrived in the country, for about six veeks, and secondly, before Sir Patrick Grant arrived, nd while Sir Colin Campbell was there, for a short eriod.

5016. (*Chairman.*) Have you formed an opinion ow far the European portion of the army in India hould be composed of troops of the line, taking India s parts of the regular tour of service, and how far f troops raised for service in India only?—I have. The European portion of the army in India should, in ny opinion, be composed entirely of troops of the line, aking India as part of the regular tour of service. To have a local force serving in India along with roops of the line, appears to me an objectionable plan. The existing evils would, I consider, be perpetuated; he uncomfortable feeling, if I may so term it, which often existed between officers of Her Majesty's and he Honorable Company's forces when thrown together n duty, though personally, perhaps, great friends, would, I conceive, still exist, and probably in a eightened form between the officers of the troops of he line and those of a local force. I will take the iberty of here remarking, that having, during my service in India, associated much with officers of the Company's service, and numbering in its ranks many ntimate and valued friends; in any remarks which I am constrained to make, I speak entirely free from any bias, or, perhaps I should say, prejudice, in favor of the service to which I have the honor to belong. Under the government of the Honourable East India Company's service, although there were often mutual jealousies, perhaps unconsciously, existing between the two services, still they were so distinctly separate in their whole constitution and bearing that unpleasant results only occasionally occurred; but this I apprehend would not be the case with a local European force brought into daily or hourly contact with troops of the line. With a local European force in India, and troops of the line, it would probably be found necessary to have, as now, a separate staff establishment. That this is most objectionable I think will be admitted by most officers of both services. The local Government would naturally, as now give their conntenance more epecially to the staff establishments connected with their own local force, and it would be impossible to prevent misunderstandings occurring between officers serving to a certain extent under different commands. I am supposing that the local European force proposed to be raised would be solely under the orders of the local Government, whereas the troops of the line would in all matters of discipline be under the control of the commander-in-chief at home, subject of course, as now, to local orders. Her Majesty's staff officers were certainly under the old system not placed in a proper position. I use the words "old system" advisedly, for since the rebellion, and the consequent vast accession of British troops the staff officers of Her Majesty's service have become of unexpected, and perhaps, in some instances, of unwelcome importance; but prior to this they had very far from exclusive charge of their own troops. In some cases they had absolutely nothing to do but to draw very handsome salaries, paid by a liberal government. I would instance the quartermaster-general of Her Majesty's forces. This officer had not the power to arrange the movement of a single regiment, or even to order the embarkation of a single soldier. All he could do was to present his compliments to the quartermaster-general of the army, and request that he would cause the matter to be effected. There existed, I conceive, a desire amongst the departmental officers of the staff of the army in India to retain in their own hands, as much as possible, power with reference to troops of Her Majesty's service. With reference to this point, the late commander-in-chief, General Anson, when, on his first arrival in Bengal, I had temporary charge of the adjutant-general and quartermaster-general's departments, expressed his intention, if possible, of arranging so that the quartermaster-general of Her Majesty's forces should perform exclusively the duties connected with his own service, but he was unable to carry his intention into effect. I can, if required, produce proofs that this state of things has acted prejudicially to the interests of Her Majesty's service.

5017. (*Major-General Hancock.*) The quartermaster-general of the Queen's troops in India had full opportunities of communicating his views regarding the movement of any of Her Majesty's troops to the commander-in-chief in India, had he not, equally with the quartermaster-general of the army?—Yes.

5018. Then in what respect did the Queen's troops suffer from the quartermaster-general of the army, who received his orders from the commander-in-chief in India, arranging for the general reliefs of the two services?—The quartermaster-general of Her Majesty's forces was unable to carry into effect himself the orders which he received. He was obliged to communicate with the quartermaster-general of the army, and to request him to carry them into effect.

5019. He had the power of submitting to the commander-in-chief his own views with respect to the advisability of all the arrangements proposed, and the commander-in-chief, after being made acquainted with those views, communicated his orders through the quartermaster-general of the army?—Yes.

5020. And it was only in carrying the orders of the commander-in-chief into effect that the quartermaster-general of the Queen's troops was not employed equally with the quartermaster-general of the army in the matter of the reliefs?—Yes.

5021. (*Col. Burlton.*) You think that there has been considerable jealousy between the two services in India?—Yes. There is an uncomfortable feeling even with friends. I can perhaps speak better than most officers on that point. My friends are officers of the Company's service.

5022. Do you not consider that from the fact of the whole army now being under one head, our gracious Sovereign, that feeling of jealousy can no longer exist, whether it be called a local army or a line army in India?—I do not think so. I think that it will be rather heightened, and that the evils will be perpetuated.

5023. (*Duke of Cambridge.*) In what respect do you think that that feeling will be increased by Her Majesty's army being partially local and partially the line or moveable?—I think that the officers in a local force would not feel themselves *bonâ fide* officers of Her Majesty's service, and in all respects and particulars placed in the same position.

5024. (*Major-Gen. Hancock.*) Why should they not be placed in the same position?—I think that some point of disagreement would occur, and they would not feel themselves in the position of being *bonâ fide* officers of Her Majesty's service.

5025. Surely they would be in a more favourable position than when the royal army was kept distinct from the local army, when, although serving together, the two armies were under different masters, the one under the immediate authority of the Crown, and the other under that of the East India Company?—I consider that in a certain respect they would serve two masters with a local force in India. If they were in regiments numbered from 100 upwards, they

Brevet-Major B D W. Ramsay.

24th Nov 1852.

would consider themselves *bonâ fide* in Her Majesty's service, and I think would consider themselves in a better position.

5026. (*Duke of Cambridge.*) Do you mean to say that from the fact of those officers being in a local force you think that the rest of the army would not think so highly of them ?—I consider so.

5027. (*Marquess of Tweeddale.*) Suppose the discipline of the local army was placed under Her Majesty's commander-in-chief at home, in the same way as with the regiments of the line, would not that remove the jealousy of which you have spoken ?—Yes, I think that it would ; but I have been supposing that they receive their orders from the local government.

5028. (*Duke of Cambridge.*) You have been taking for granted that if they were localized they would not be under the commander-in-chief at all?—Yes.

5029. Supposing the army was under the commander-in-chief, and still partially local and partially moveable, do you think that that would make any difference?—Yes, I think that it would make a difference.

5030. (*Chairman.*) Do you not think that if there was a power of exchange from the local force to the general army it would also do away with any feeling of inferiority?—I think it would, in a certain measure.

5031. You think that the power of exchange, combined with their being under the commander-in-chief, would tend to do away with that feeling?—Very greatly.

5032. You think that in all armies there is a great advantage in having a uniformity of feeling?—Decidedly.

5033. And that anything which would counteract that would be, in a military point of view, objectionable?—I think so.

5034. (*Sir H. G. W. Smith.*) Are you not of opinion that it will add considerably to the feeling of inferiority on the part of a local European force, when they are constantly in the habit of seeing Her Majesty's regiments go to that country covered with medals of European fights, and all that sort of thing, and an officer says, "You fellows were never out of India, "look at us."—I think it might do so. I have a strong feeling on the point. I think the whole system is objectionable. From the feeling amongst junior officers of the Indian army, I think most of them would be inclined to be incorporated entirely, *bonâ fide*, in Her Majesty's service. I am far from taking upon myself to state that such a plan would be congenial to the feelings of the older officers of the Indian service; many of them have gained high distinctions and are much attached to the service in which they were raised to such high rank and distinction; but I think that the desire of all the junior officers would be to serve in Her Majesty's army. I have associated so much with them that I may say I know that to be their feeling.

5035. (*Marquess of Tweeddale.*) Have you seen any inferiority in the local regiments to the Queen's, or in the Queen's to the local regiments ?—Yes, most decidedly so ; an inferiority in the Company's European corps.

5036. (*Duke of Cambridge.*) In what respect ?—As far as discipline is concerned. There is no doubt about it. Any officer who has commanded mixed bodies of the two troops will state that the discipline of the Company's European corps is, from what cause we can hardly say, far inferior. That comes under my own observation.

5037. In what respect under your own observation ?—As regards the invalids coming home, of whom I had the charge at Fort William. The invalids of our service and of the Company's Europeans came generally together. The officers had always complaints to make of the extreme want of discipline of the Company's Europeans on their way down. Their want of discipline rose to such a height in Fort William that I was obliged to request General Anson, on his first arrival there, to remove our invalids who were there to Chinsurah, about 30 miles off. The Company's European soldiers who came there had thrown off every species of discipline, and it was impossible to guide or restrain them in any way. They were generally in Fort William under no officers of their own. The officers left them there, and they were under the town major, whose town sergeants endeavoured, as much as possible, to keep them in order, but it was impossible, and the embarking was a scene of riot and drunkenness.

5038. (*Col. Forsyth Tait.*) They were just brought down to Fort William and left ?—Yes, and they were often without uniform.

5039. (*Marquess of Tweeddale.*) To what do you attribute the want of discipline ?—I should say that it arises mostly from the paucity of officers amongst them.

5040. (*Duke of Cambridge.*) As you have seen a good deal of the two, what are comparatively the number of officers doing duty with a Queen's regiment and a number with a regiment of the local force ?—There is hardly a comparison at all; the Company's Europeans have very few officers indeed.

5041. That of itself would account for a great want of discipline ?—Yes ; I apprehend that it principally arises from the paucity of the officers. A great proportion of the senior officers are absent on staff employment. An officer for years employed in a civil capacity rising by seniority in his regiment, suddenly finds himself called upon to command a thousand European soldiers. How can he be expected to keep his regiment in a proper state of discipline? The behaviour of the Company's European soldiers when proceeding home to England invalided was invariably, year after year, so disgracefully bad that I was obliged to represent the matter most forcibly to General Anson, and to request that the invalids and recruits of Her Majesty's service might be sent to Chinsurah, so as not to suffer from the deteriorating influence of the Company's invalids. Any officer who has commanded a mixed body of Her Majesty's and the Honourable Company's invalids, of whom there are several now at home, will speak as to the relative discipline of the two. The result of the absence on staff employment of so many officers is that the work falls heavily on those who remain, consequently the service becomes distasteful to them. I have frequently heard officers congratulate themselves on not serving in the Europeans. On the other hand cadets, on first arrival, are almost invariably ambitious of being posted to a European corps, and during the progress of the rebellion, when there were no native regiments to post the cadets to, I can bear testimony to the pride and satisfaction with which they joined the regiments of Her Majesty's service to which they were temporarily attached. I argue from this, and generally from the feeling which I know to exist amongst the junior portion of the Indian army, that the most popular measure would be to raise so many more regiments in Her Majesty's service, numbering upwards from the 100th regiment for general service, incorporating in them the officers of the Company's service. Those officers would then feel themselves *bonâ fide* officers of Her Majesty's service in all respects, and in all particulars placed in the same position ; then hearty good will and unanimity would prevail, whereas with a local force there would always be some point of disagreement, some comparisons instituted, some jealousy of peculiar privileges, in short, as I before remarked, the old evils would be perpetuated.

5042. (*Marquess of Tweeddale.*) The grounds, I understand, for your stating that you have seen the Europeans of the local army in that state which you describe, proceed from your having been in that particular position of receiving them when they came down to be invalided to go home ?—Yes.

5043. Have you ever made any observation when you have seen them in the field, when they have been in cantonments, and so on, have you then observed a difference between the two ?—I have not myself made any observation upon that, but I have frequently ieard statements from officers who have commanded nixed bodies of the troops.

5044. (*Chairman.*) Your experience is entirely onfined to invalids, who have come down and have een left without an officer ?—Yes, without an officer, xcept being under the town major.

5045. (*Major-Gen. Montgomerie.*) As I understand hose were men no longer in the service ?—To a cerain extent no longer in the service.

5046. (*Chairman.*) Were they discharged men ?—They were to be discharged when they got to the India house, but not until they got there.

5047. (*Col. Burlton.*) Have you served in cantonments with any of these regiments ?—No.

5048. Then you have not seen any of these regiments embodied ?—At the hill stations I have seen them quartered, but I was merely on leave at the time.

5049. (*Duke of Cambridge.*) Were you not with Lord Hardinge on the Sutlej ?—Yes, but I only arrived on the 10th of March, after the campaign was ended.

5050. (*Chairman.*) In connection with the first question, have you formed any opinion as to the best means of providing for the periodical relief of the former portion, and of securing the efficiency of the latter ?—No ; I do not feel myself competent to give any opinion upon that. The point upon which I felt most and wished to give my evidence most, was the position in which staff officers were placed, and the want of unanimity, which I consider has acted prejudicially in several instances to the service.

5051. Do you think that that would be obviated by making the whole one army, there being no distinction between the two ?—I think so.

5052. Have you formed any opinion whether it is possible to consolidate the European forces, so as to allow of exchange from one branch of the service to the other, and what regulations would be necessary and practicable to effect the object with perfect justice to the claims of all officers lately in the service of the East India Company ?—In a financial point of view I have not formed any opinion upon that subject. I do not feel myself qualified to do so.

5053. (*Duke of Cambridge.*) As far as the principle of the thing goes, what is your opinion ?—I think it would be very desirable to allow exchanges throughout. I adhere to my original opinion which I have stated, that I consider it best to have the whole Her Majesty's service : but if there is to be a local force, I consider that the best plan next to that would be to admit of exchanges.

5054. And that they should be under one code ?—Entirely.

5055. And under the commander-in-chief at home as respects discipline?—Yes.

5056. Subject to local orders of course ? — Yes ; subject to local orders as now.

5057. Of course a great proportion of the army must be a native army. Would you allow of exchanges between European officers of native regiments and officers of regiments of Europeans?—Yes, I think so, I would hold it out as an inducement to the officers of native regiments to learn the language, and I would give them extra pay.

5058. (*Major-Gen. Hancock.*) From what source do you propose to officer the native army ?—I would officer it from the whole body of officers, from the entire of Her Majesty's regiments. I would accept those wishing to remain in the country, there being an inducement to them to learn the language, but with a local force I would admit of exchange.

5059. Would you give the soldiers of the native army an equally good arm, and the same high military training as you would give to European soldiers of the corresponding branch of the service ? — I think experience has shown that a knowledge of artillery has proved very detrimental to the interests of the country.

5060. I allude to the arms of the individual soldier, infantry and cavalry ?—Yes, I certainly would.

Brevet-Major B. D. W. Ramsay

24th Nov. 1858.

5061. You would make no difference ?—I would make no difference.

5062. Would you give him the same high degree of military training ?—Decidedly so.

5063. (*Marquess of Tweeddale.*) Do you think that there would be any difficulty in exchanges taking place between the officers of Her Majesty's regiments of the line and the officers of the native service ?—No, I do not think there would. I think there would be a sufficient number of officers on either hand who would be anxious to exchange.

5064. Are you prepared with any financial view as how they could do it ?—No.

5065. (*Duke of Cambridge.*) Do you think that it would act detrimentally to either service if it were done ?—I think not. Anything which would tend to bring the services entirely together, so that there should be no point of disagreement in any possible way is the great end which I should look to.

5066. Your experience, which has been considerable in that respect, tends to the conclusion that there has been a good deal of feeling, which I would not characterize as bad feeling, but feeling of distinction and jealousy ?—Yes ; I could instance it in my own career, and no man more so, because my personal friends were some of the very officers that I speak about. In the Queen's service the regiments live entirely by themselves ; they have their own circle, and an officer in the position of a staff officer of Her Majesty's service finds his friends amongst the officers of the Company's service, at least, that is my impression, and yet I say that there is that feeling which I have mentioned, and I can instance it from my own career. I am prepared to bring forward an instance of it.

5067. (*Marquess of Tweeddale.*) Had the number of staff appointments that the Company's officers had in comparison to those which the officers of the troops of the line, had anything to do with the jealousy?—Yes, I think it had to a certain extent, because they found that the appointments were not thrown open to them ; and since the appointments have been thrown open, which, until very lately, were only on "the "roads," i.e., minor engineer service, very many officers have studied and got them.

5068. (*Duke of Cambridge.*) If the appointments were thrown open, do you think that the officers of the army in general would study the languages and prepare themselves for the appointments?—Decidedly.

5069. And you think that the service of India would not be unpopular amongst a certain class of officers ?—Very far from it. I know that since the very limited number of appointments has been thrown open to the officers of Her Majesty's service, it has acted as a bond of union between the two services. I have particularly observed this within the last few years.

5070. (*Major-Gen. Hancock.*) Of course, if all the appointments in India be thrown open to both services, you would also throw open to both all the appointments in England and the colonies ?—Decidedly.

5071. You would not consider it just to give the officers of the line army a full share of the appointments in India, and to exclude those of the local army from appointments in England and the colonies ?—Certainly not. I wish to remove every boundary.

5072. Do you think that officers who have been accustomed to serve with European troops before going to India, would take as kindly to the native soldiers, would conciliate to some extent their confidence, and would take the same pride in serving with them in the field, as they would with Europeans ?—I think they would. I think, perhaps, more so, because being older and more experienced, they would be more likely to be careful and cautious in their dealings with the native soldiers, unless they have very strong prejudices.

5073. Do you not think that officers who go out to India in their youth, and serve from the first with native soldiers, would be more efficient in native regiments than officers who join them later in life, and

Brevet-Major B. D. W. Ramsay.

24th Nov. 1858

after having served with European corps ?—I should say so, speaking of 25 or 30 years ago, but not as respects those who have lately come into the service; from my experience there has been a careless feeling among them, as far as the native soldiers are concerned.

5074. Regarded as an Indian question, do you not think that the various appointments in India, the higher offices of the state especially, would be more efficiently filled by officers who, from belonging to a local army, would have an abiding interest in the country, than by officers who, from having prospects of advancement open to them in England and elsewhere, would naturally turn their hopes and aspirations more towards Europe ?—To a certain extent it might be so, but at the same time I think that it is very useful to bring European feelings and ideas into the country. I think that a man who has stayed a long time there, is almost certain unconsciously to imbibe very strong local prejudices, which I think often prove very embarrassing.

5075. Are you not of opinion that an occasional furlough to Europe would have the effect of removing such prejudices ?—The old officers often go home, and then come back still more prejudiced.

5076. *Sir H. G. W. Smith.*) Are you not aware that the greatest harmony and unanimity existed between Her Majesty's regiments of the line and the native troops before the revolt ?—Decidedly, the greatest. I have seen it since the mutiny, with the new regiments which have arrived. There has been the same feeling as if they knew nothing about it. They have walked about and talked to each other in Fort William constantly, with the utmost unanimity, saying one to the other :—"Jack, what have you " heard ? Let us have the news :" and so on.

5077. (*Col. Burlton.*) Have you ever heard the mutiny of the Bengal sepoys in some measure attributed to the fact, that the young officers of the present day, or of the last ten or twelve years, have not entered so intimately into association with their sepoys as was done in former days ?—Most decidedly.

5078. I understood you to say just now that you considered that intimacy a disadvantage ?—No, I cannot remember that I stated so.

5079. I thought you said that it was better to have fresh officers from India to command the sepoys ?—I was talking of officers of some standing, holding appointments in the country.

5080. (*Col. Forsyth Tait.*) With reference to the want of discipline which you have stated that you have observed in the European troops of the Company's service arriving in Calcutta, invalided to England, from the state of drunkenness in which they used frequently to be while in Fort William, preparatory to sailing for Europe, can you state under whose care those men were supposed to be placed on their arrival in Fort William, and how it happened that such men were seemingly left without any control ?—They were placed under the care of the town-major in Fort William.

5081. Would not almost any European soldiers under such circumstances have become nearly as much demoralized as you have described such men to have been, whether of Her Majesty's or the Company's service, and do not you think that the blame exists, not in the men, but in the authorities, who appear to have permitted those men to be put into such a situation when about to embark for Europe after becoming entitled to their pensions ?—Her Majesty's troops were placed in precisely the same position. The officers, unless specially ordered by the general, did not remain with them.

5082. (*Major-Gen. Hancock.*) Was there no difference of system in respect to keeping efficient non-commissioned officers with them ?—In each service the non-commissioned officers who accompanied the men were only those invalided or about to be discharged.

5083. Had the Company's European invalids the same advantage as regards having efficient non-commissioned officers over them as the Queen's invalids had ?—There were double the number of non-commissioned officers of the staff of the Company's service in Fort William appointed to look after the invalids; there was only one non-commissioned officer attached to the brigade office of Her Majesty's service.

5084. (*Chairman.*) Do you think that there would be any difficulty in finding employment for the European officers of the late Company's service advantageously in India ?—I think not, because when large numbers of them were in Calcutta without being posted to regiments, they found employment for every one. Sir Colin Campbell said, that if he had double the number he could find employment for them. They were employed in every possible capacity; officers were in all the stations on the roads, and in the Commissariat, affording assistance in every way. I remember hearing Sir Colin make that remark.

5085. (*Col. Burlton.*) That was only under a temporary emergency, it was an exceptional case ?—Perhaps so.

5086. (*Duke of Cambridge.*) But every officer was employed ?—Yes.

5087. (*Major-Gen. Hancock.*) With reference to your statement that the discipline of the East India Company's European corps is far inferior to that of regiments of the line, I think you said that you made that statement from your own knowledge and experience only as regards the invalided soldiers of the Company's service whilst at Calcutta previously to their embarkation for England ?—Just so.

5088. You have not served either in garrison or in field with the Company's European regiments ?—No.

5089. (*Sir H. G. W. Smith*). Do you feel yourself authorised to give an opinion as to the discipline of a corps because you saw the invalids of that corps behave ill under neglected circumstances ?—I should hardly call them neglected circumstances; they were placed in the same position as Her Majesty's troops were, and Her Majesty's troops behaved well.

5090. They had officers with them ?—No, the officers leave them when they came into the fort, and they are placed under the brigade-major there; all allowances cease for officers on entering Fort William.

5091. Do you feel yourself authorised to give an opinion as to the discipline of the head-quarters of a regiment, because the invalids behaved ill ?—I think it is a very good criterion.

5092. (*Viscount Melville.*) When did you come home ?—About the commencement of last June.

5093. Did you serve in India during the revolt ?—The whole time. I had charge of the adjutant-general's office, and the quartermaster-general's office for three months.

5094. Had you any means of forming an opinion of the native feeling in India towards the British rule in the present state of the country ?—I observed a marked change in the manner and demeanour of the natives (those with whom I was brought in contact) from the time that I had been previously in India.

5095. From what source do you suppose that it would be possible to enlist men to reorganize the native army, on whom you could depend ?—The only safe plan that I could imagine would be raising and employing men such as the Sikhs in the lower parts of Madras and Bengal, and away from their homes. As I suppose that India cannot be governed without native levies, and those men raised in various parts of the country, I would employ them away from any local influence.

5096. Do you think that the Sikhs and the Punjaub levies are men that you can depend upon for their loyalty and fidelity ?—I think, as long as they are paid well, and kept away from local influence, we can depend upon them, but not more than any other mercenaries, and certainly we can depend upon them as long as there is a Hindoo or a Mussulman against whom they can be brought.

5097. (*Marquess of Tweeddale.*) What was the particular class of natives in which you found the great change take place of which you have spoken ?—

Brevet-Major B. D. W Ramsay.

24th Nov. 1858

It was amongst those in Calcutta, amongst servants more especially, and decidedly in the bearing or demeanour of the sepoys.

5098. You had not made observation in the interior ?—No.

5099. (*Sir H. G. W. Smith.*) What was the conduct of Her Majesty's regiments upon their arrival in Calcutta, generally speaking, as to discipline and behaviour. I speak of recent reinforcements ?—It was very exemplary, except as far as drunkenness was concerned, there was the usual amount of drunkenness.

5100. (*Duke of Cambridge.*) Was their discipline bad or good ?—Very good indeed.

5101. (*Marquess of Tweeddale.*) Was there any difference between them and the Madras European regiments which came ? — The Madras European regiments went up the country immediately, and I saw nothing of them.

5102. (*Major-Gen. Hancock.*) Was their conduct bad as regards drunkenness ?—There was the usual amount. In only one regiment do I remember its occurring to a great extent. There was a want of unanimity in the staff at Calcutta.

5103. (*Duke of Cambridge.*) In what respect ?—I mean that I, in the position in which I was placed as brigade-major, the sole officer on Her Majesty's staff, was not at first in a position to carry out the requirements and secure the comfort of the regiments which arrived; and I consider that the drunkenness in the particular regiment I allude to, arose in a great measure from the absence of proper arrangements for its reception, and from the consequent discomfort the men suffered.

5104. (*Viscount Melville.*) Was there no officer of the quartermaster-general's department to superintend the disembarkation ? — There were officers of the quartermaster-general's department.

The witness withdrew.

Adjourned to to-morrow at 11 o'clock.

Thursday, 25th November 1858.

PRESENT :

Major-General PEEL.	Lieut-Gen. Sir HARRY G. W. SMITH.
H.R.H. the Duke of CAMBRIDGE.	Major-Gen. MONTGOMERIE.
Lord STANLEY.	Major-Gen. HANCOCK.
Marquis of TWEEDDALE.	Colonel BURLTON.
Viscount MELVILLE.	Colonel FORSYTH TAIT.

MAJOR-GENERAL PEEL IN THE CHAIR.

Colonel HENRY MARION DURAND, C.B., examined.

Colonel H. M Durand, C B.

25th Nov. 1858

5105. (*Chairman.*) You are a colonel in the Bengal engineers ?—Yes.

5106. Will you state to the Commission the length of your service in India ?—I landed in India in May 1830. My service in the army counts a year and a half longer than that.

5107. You have served in India 28 years ?—Yes.

5108. What appointments have you filled in India ? —I have filled a great variety of appointments, but I commenced with being employed in the barrack department in the department of public works. I was then several years in the canal department, and from the canal department I was sent upon service into Affghanistan. I returned on furlough to England after the campaign in Affghanistan, and went out with Lord Ellenborough to India, and was with him as private secretary in India; upon his going away I was sent as commissioner to the Moulmain coast, and was two and a half years commissioner on the Moulmain coast; after that I returned to England, and returned afterwards to India in time for the last campaign in the Punjaub; I served in that, and was afterwards sent as political agent to Gwalior, and after that as political agent to Bhopal, also as resident at Nagpore for a short time. I then again returned to England, and afterwards went back to India, and was employed for some time in the engineer department as the superintending engineer in Bengal, and then was deputed to officiate as agent for the Governor-general in Central India, and was there during the time of the insurrection. I subsequently went round to Calcutta, and was sent for by Lord Canning, in connexion with the re-organization of the army, and have latterly been employed, in that capacity, in collecting information with reference to it.

5109. (*Col. Burlton.*) You have had two furloughs to England during the 28 years ?—Yes. I have had in fact three, because when I first came home, as I went back with Lord Ellenborough after being four months in England, I had only one year, and I returned to England for the remaining two years of furlough; and I a third time came upon private affairs.

5110. (*Chairman.*) You are now specially deputed by the Governor-general of India and the Secretary of State for India to lay before the Commission the opinions collected upon the questions issued by Lord Canning's instructions and Lord Canning's own views on some of the principal heads under the consideration of the Commission ?—Yes; the views of the Governor-general have already been put into the hands of the Secretary of State, and he, I believe, has laid them before the Commission. I was directed to deliver to the Secretary of State the general views of the Governor-general, which appear in the memorandum that he put into my charge to deliver to Lord Stanley.

5111. (*Duke of Cambridge.*) Would you wish anything that you state to be considered as your own opinion, or to be considered as the opinions of the Governor-general ?—I have been so much in actual confidential communication with the Governor-general, that my own opinions coincide very much with the memorandum which has been already laid before the Secretary of State. Where my own opinions at all differ I can distinguish, but I do not think that they differ in any material degree.

5112. (*Chairman.*) Will you make a general statement of what your opinions and views are upon the subjects which have been submitted to the Commission ?—They in fact coincide very much with those of the Governor-General, in all the points which enter into that memorandum of Lord Canning's, which was put before the Secretary of State. I have been in constant communication and intercourse with Lord Canning, and there really is little difference between our opinions.

The witness read a memorandum explanatory of Lord Canning's views; the same being as follows:—

"MEMORANDUM by VISCOUNT CANNING.

"The appointment of a Royal Commission in England to consider the question of the reorganization of the Indian

Colonel H M Durand, C.B.

5th Nov 1858.

army, induces me to send to England immediately the officer who for some time past has been specially employed in obtaining and collating the opinions of the governors and commanders-in-chief of Madras and Bombay, of the commanders-in-chief in India, and of officers of rank and recent experience in the civil and military services of the East India Company.

"2. In doing so, I consider it advisable to enable Lieutenant-Colonel Durand to lay before Her Majesty's Secretary of State for India, not only the opinions which have been given in India in answer to the questions circulated under my instructions, but also my own views on some of the principal heads of inquiry which will be submitted to the Royal Commissioners. For this last purpose this memorandum is placed in Lieutenant-Colonel Durand's hands.

"3. In expressing these views, however, I must, for the present, abstain from entering into details. Time will not admit of this. Moreover, I have not yet been placed in possession of the opinions of some of those to whom the questions were referred; and the views and suggestions of others of high authority have been received too recently to allow of my giving to them the consideration which they deserve.

"4. I should have been glad that my own general opinions as now expressed should have been accompanied by those of my honourable colleagues in the council; but it has not yet been possible to submit to the consideration of the president in council at Calcutta the papers which have been laid before me, and which, though still incomplete, are very voluminous. This will, however, be done as quickly as circumstances will admit, and I trust that before long I shall be enabled both to place it in the power of the members of council to express their opinion on the several points involved in the reorganization of the army in India, and to transmit to Her Majesty's Secretary of State my own views in regard to them in fuller detail."

[I should state that at Allahabad there was very great difficulty in the mere amanuensis part of the business, the mere copying, and we really could not get the number of duplicates which were requisite in order to send them. Lord Canning was exceedingly anxious that the Secretary of State here should know what was doing, and that copies should be sent to him, and there was necessarily a copy to be kept there, and if it had not been for the politeness of Brigadier Wood of the Royal Horse Artillery who lent me two or three clerks, and so forth, we thould not have been able to do even what was done, and as it was Lord Canning could not send his memorandum down to the Council.]

"5. I understand that the Commission will be instructed to inquire into the following points:—

"(1.) The terms on which the army of the East India Company is to be transferred to the Crown.

"(2.) The permanent force necessary to be maintained in the Indian provinces respectively, after the restoration of tranquillity.

"(3.) The proportion which Europeans should bear to native troops, in infantry, cavalry, and artillery, respectively.

"(4.) How far the European portion of the army should be composed of troops of the line, taking India as parts of the regular tour of service, and how far of troops raised for service in India only.

"(5.) In connexion with this question, the best means of providing for the periodical relief of the former portion, and of securing the efficiency of the latter.

"(6.) Whether it be possible to consolidate the European forces, so as to allow of exchange from one branch of the service to the other; and what regulations would be necessary and practicable to effect this object, with perfect justice to the claims of all officers now in the service of the East India Company.

"(7.) Whether there should be any admixture of European and native forces, either regimentally or by brigade?

"(8.) Whether the local European force should be kept up by draughts and volunteers from the line, or should be, as at present, separately recruited for in Great Britain?

"(9.) Whether it would be possible to raise any regiments in the colonies, either for temporary or permanent service in India?

"(10.) Whether the native troops should be regular or irregular, or both, and if so, in what proportions?

"(11.) Whether any native artillery corps should be sanctioned?

"(12.) Whether cadets sent out for service with native troops should, in the first instance, be attached to European regiments, to secure uniformity of drill and discipline?

"6. It appears to me that these points of inquiry are divisible into two branches, those which should be decided by Her Majesty's Government directly and absolutely, and those which the Government of India should be empowered to decide on, in accordance, of course, with any general instructions which may be issued by Her Majesty's Government, and subject to its approval, but with liberty to the Government of India to act upon its own decision, where early action may be necessary.

"7. On the first point of the inquiry to be instituted by the Commission,—'The terms on which the army of the 'East India Company is to be transferred to the Crown,' I consider it unnecessary that I should offer any opinion. It refers, as I understand it, to terms which must be adjusted between Her Majesty's Government and the East India Company, and is one on which Her Majesty's Government can alone decide.

"8. For the same reason I do not propose to offer any opinion on the fifth and eighth points; the fifth, relating to 'the best means of providing for the periodical relief of the 'portion of the European army which is to be composed of 'troops of the line, and of securing the efficiency of that 'portion which is to consist of troops raised for the service in 'India only;' the eighth, relating to the 'keeping up the 'local European force, whether by draughts and volunteers 'from the line, or by separate recruiting in Great Britain, 'as at present.'

"9. The remaining points appear either to require an expression of my views, or to embrace subjects which might be most conveniently committed to the discretion of the Government of India.

"10. And first, in regard to the second point,—'The 'permanent force necessary to be maintained in the Indian 'provinces respectively after the restoration of tranquillity.'

"11. At the time of the outbreak at Meerut, the Bengal army numbered about 119,000 native troops of all arms; that of Madras 50,000, and that of Bombay 31,000. The aggregate of the Madras and Bombay armies was therefore less than that of the Bengal army by 38,000 men.

"12. We are now emerging from the state of anarchy consequent on the revolt of the Bengal army, mainly through the strength and exertions of our British forces, but partly by the aid of the Punjaub troops.

"13. Exclusive of the disarmed corps, the Bengal army now amounts to about 80,000 men, and if the militarily organized police be included, it amounts to about 130,000 men; that is, some 11,000 men more than at the time of the outbreak at Meerut; of these 130,000 men, about 75,000 are Punjabees; and of these Punjabees probably 23,000 are Sikhs. The difference, therefore, between our position in 1858 and our position in 1857 is, that there is now a larger native force, and that the bulk of it, instead of being drawn from Oude, is drawn from the Punjab.

"14. When the police of Madras is complete, there will be in all India about 300,000 native troops, regular, irregular, and police militarily organized.

"15. In this state of things, the demands for European troops put forward by the various Governments, as at present necessary, are not excessive. The whole number does not much exceed the number which will be in the country when the draughts and reinforcements of the season arrive, viz., about 100,000 men.

"16. I consider that the force of European infantry ultimately requisite for the permanent occupation of the Bengal presidency, may be estimated at forty-five regiments. I do not think it possible that the ground which the Bengal army will have to hold, can be sufficiently covered by less than that number. I should wish to see this force composed of thirty local regiments, and fifteen regiments of the line; the local regiments would be strong enough, if of the strength of 800 rank and file.

"17. There are now in the Bengal army three European regiments of the Company's service, and three are in course of formation, being officered by European officers of six native infantry battalions. Therefore, for the other 24 regiments of local European infantry to be raised for service in Bengal, there remain available 68 cadres of battalion officers. If two of these cadres are taken for each European regiment, 48 cadres will be absorbed, and a surplus of 20 cadres will be left, after the European infantry shall have been provided for.

"I propose that upon these 20 cadres there should be formed 20 regiments of regular native infantry; and further, that the 30 regiments of local European infantry should furnish the officers required to officer on the irregular system 30 regiments of irregular native infantry.

"18. In time of peace, it will, I believe, be found sufficient if these regiments are limited to a strength of about 700 each. This would give 50 native battalions for purely military service, and it would leave the 30 local European regiments, and the 20 regular native regiments, well able to supply officers for the command of the military police battalions, which have already been largely raised, and which, when once fully organized, will relieve the native troops of many of the non-military duties hitherto imposed upon them.

"The same regiments will also be able to supply officers for general staff purposes.

"19. In regard to native cavalry for Bengal, none but irregular corps are to be desired, and this arm of the service must be kept up on its present scale. It will be necessary that with each of the European regiments of local cavalry a corps of irregulars shall at all times be quartered, to relieve the European regiments of some of those duties which press heavily upon a small European corps.

"20. In regard to European cavalry for Bengal, I have already represented to the Home Government, in a despatch of the 8th July last, that it is very desirable that the cavalry regiments of the local army should be ten of 440 sabres each, rather than five of 818 sabres each, as originally ordered by the Honourable Court of Directors. Should this proposal be complied with, it will still be necessary that not less than three regiments of cavalry from the English army should be retained in Bengal for the present.

"21. In regard to artillery, I have given my opinion fully in a minute of the 9th of August last. I wish to see 78 batteries allotted to the local army.

"22. Passing to Madras, and including with that presidency the province of Pegu and the Straits, I believe that 12 regiments of European infantry will suffice for its service.

"23. Of European cavalry, I am of opinion that Madras requires for the present three regiments from the English army; but I recommend that eventually the eight native regiments of light cavalry be converted into three regiments of European cavalry, raised for the local army of Madras, of about the same strength as has been already recommended for Bengal, and that from the officers of the light cavalry remaining undisposed of, five regiments of irregular cavalry be officered. I say eventually, because, before this or any other change which will raise discontent, and which is not immediately urgent, is attempted in the native armies of Madras or of Bombay, the new Bengal army ought to be well in hand. This caution applies to all changes which will entail the disbandment of any large number of native troops in those presidencies. It will be better to incur for a year or two the expense of maintaining an extra European force drawn from the English army than to run the risk of the results which dissatisfaction and excitement may produce if we disturb the soldiery of Madras or Bombay before the great army of Bengal is reconstructed on safe principles. It would be a great error to suppose that we have now throughout India a tabula-rasa, upon which we can build up any new military establishment which may be deemed proper, and to forget that, in prudence as well as in justice, the native armies of Madras and Bombay, which are still standing at their full numbers, and have shown themselves on the whole loyal, must be treated cautiously and considerately in the introduction of changes.

"24. I have given my opinion respecting the artillery of Madras and Bombay in separate minutes, and I would not recommend that the changes to be made in this arm should be deferred.

"25. In the matter of the European force to be allotted to Bombay, I am not in possession of the views of Lord Elphinstone; I therefore abstain from giving any positive opinion upon it. His Excellency the Commander-in-Chief of Bombay, Sir H Somerset, estimates the required number of regiments at fifteen of infantry, and three of cavalry; the former at the full complement of 1,077 rank and file each, and the latter at 748 sabres each. I believe this requirement to be unnecessarily large, even though Rajpootana should be held by the Bombay army.

"26. In regard to the 3rd point of inquiry, viz., 'the 'proportion which European should bear to native troops 'in infantry, cavalry, and artillery respectively,' I am of opinion that, as a general rule, the proportion should not be less than that of two to five, reckoning the military police as troops. It does not seem necessary to lay down any particular rule as to the proportion to be observed between Europeans and natives in each particular arm of the service, especially as, in the case of the artillery, the arm of paramount importance, it has been determined that in Bengal no appreciable strength of native artillery should be maintained.

Colonel H M Durand, C B

25th Nov 1858

"27. The 4th point has already been noticed, so far as regards the army of Bengal.

"28. The 6th point is this, 'whether it be possible to consolidate the European forces so as to allow of exchange 'from one branch of the service to the other, and what 'regulations would be necessary and practicable to effect 'this object, with perfect justice to the claims of all officers 'now in the service of the East India Company.'

"29. The difficulties of amalgamation, arising out of the two distinct systems of promotion, by purchase and by seniority, obtaining respectively in Her Majesty's army and in that of the East India Company, are very great. I can suggest no satisfactory solution of them. But it appears to me to be most important that, in the event of an amalgamation of the local army with the line being found to be too difficult for adjustment or too expensive, or, for other reasons, not advisable, some arrangement should still be provided, by which the local European army should be made to feel that it is composed of the same stuff, and is in all respects in an equally honorable position with the line. I think it very desirable that officers should be enabled to pass from the one into the other, though here also difficulties are not slight; that there should be a clear understanding that the senior officers whose service and ability may render them fit for such marks of Her Majesty's confidence shall be permitted to serve Her Majesty out of India as well as in this country, and that divisional and brigade commands should be distributed between the two armies in a fair proportion. On the other hand, the officers of the line should have a larger share of staff employment than they have hitherto had.

"30. On the subject of staff and civil employment I would here say a few words.

"31. I think that in order to remedy the chief evil resulting from the Indian system of staff and civil employment, it will be found necessary to adopt the plan of *seconding*, as followed in Her Majesty's service. It would probably suffice to adopt it in regard to officers taken from their regiments for civil employ alone, and not in the case of those taken for the staff departments connected with the army. I doubt whether a staff list would work so well as *seconding*. The latter is equally encouraging to the regimental officer. It preserves to Government the advantages of the present system, and is more in accordance with the organization of the Indian service.

"32 I do not share all the objections which have been very generally made to the withdrawal of officers from regiments for staff employ. I think that the disadvantages of the system are counterbalanced by great advantages which it would be unwise to sacrifice; and that the former admit of much mitigation, without departure from the system.

"33. Considering the frequency and suddenness of calls for active operations in India, it is convenient to be able to strengthen a regiment with officers at short notice. At the same time it is desirable that officers whose presence with their corps is not required in time of peace, should be saved from the many evils attending an idle garrison life. Both these objects will be most cheaply and better accomplished by retaining with proper checks the system of civil employment for military officers.

"34. Civil employment, and the prospect of it, give to officers a much greater interest in and knowledge of the country than they would otherwise acquire.

"It places an officer in situations of responsibility and trial, of which he would otherwise have no experience; it sharpens his intelligence and makes him readier, handier, and more self-reliant, and therefore eventually a better soldier, than he would otherwise be. Some of the ablest and most distinguished men of the Indian service are those who have had the benefit of this system. Of those of the present day it suffices to name Outram, Nicholson, and Edwardes; other names of more or less note might be added. Looking to the Queen's army, the mention of Sir Hugh Rose and Sir W. Mansfield is enough to show that military ability is in no way impaired by a course of civil service.

"35. And it is further to be recollected, that if the system of placing military officers in civil situations be discontinued, the inevitable consequence will be that the civil service must be largely increased, and considerable additional expenditure be occasioned thereby.

"36. The 7th question, 'whether there should be any 'admixture of European forces, whether regimentally or by 'brigade,' may with advantage be left for experiment and decision in India. Admixture in brigades seems scarcely avoidable—in regiments it does not appear to me desirable; and in proposing, as I have already done, that a body of irregular cavalry should invariably be associated with each European cavalry regiment, I do not contemplate that the connexion should be permanent, but that the body of irregulars should be changed from time to time as may be most convenient.

Colonel H. M. Durand, C.B.

25th Nov 1858.

"37. In the evidence will be found a suggestion from Colonel Keith Young, for attaching to each European regiment a company of native infantry, selected from the cook boy class Such a body would no doubt be useful in relieving the European soldiers of some duties which are wearing to the men, not beneficial to their discipline or health, and equally well performed by a native The experiment is worth trial; but I think it would be found that nearly the same convenience could be obtained by a less close association, and that it is not an advantage to either party that the European and the native soldier should be forced into habitual juxtaposition.

"38. In regard to the 9th head of inquiry, viz., 'whether 'it would be possible to raise any regiments in the colonies 'either for temporary or permanent service in India,' the possibility of raising these troops can be satisfactorily considered by Her Majesty's Government alone; but I earnestly hope that, even if the facility should prove greater than it has yet been found to be, no systematic introduction into India of African, West Indian, or foreign Asiatic troops, may take place.

"39. Fifteen months ago a West Indian or an African brigade would have been of great service, morally as well as physically. Our native regiments were turning against us daily. The natives in general were incredulous of our ability to supply their places, and to hold our own, with Englishmen. Any manifest proof that we had resources hitherto unknown to them, from which we could draw soldiers as impenetrable by the climate as themselves, and equal to them in bodily strength and discipline, would have operated very usefully. But the case is altered now. It has now become at least as necessary to inspire confidence and goodwill, as fear. Few measures could be more destructive of the first-named feelings than the suspicion that that which they consider the most honourable employment which we can offer them is, under a new order of things, to be put in other hands.

"I quite concur in the objections which are urged by most of the witnesses to the adoption of this measure.

"40. The tenth point has already been answered, so far as I am able to do so at present.

"41. The eleventh is to this effect, 'whether any native ' artillery corps should be sanctioned.' I understand this to have been ruled generally in the negative. As regards Bengal, it will be easy to make the change, and I am of opinion that it will not be wise to make any exceptions to it unless in one or two outlying districts, such as the Trans-Indus frontier, Assam, and Arracan.

"42. In Madras and Bombay the transition from native to European artillery must be made gradually; but I would begin to make it with as little delay as possible. The Scinde frontier, like that of the Punjab, would furnish an exception; but of the soundness of the policy which shall make the native army feel that nearly every piece of ordnance in the British territory is in our keeping, I have no doubt whatever. No change that we can make will be a surer source of security.

"43. The twelfth point of inquiry is, 'whether cadets sent out for service with native troops should in the first ' instance be attached to European regiments, to secure ' uniformity of drill and discipline.'

"44. It has been already ordered, that cadets for the native infantry are to be attached for the first six months to European corps. The rule is an excellent one, though I doubt whether the term is long enough. But I am strongly of opinion that some measure more effective than this is necessary to make our young officers what they ought to be.

"45. Cadets have hitherto joined their corps as half-educated youths; and it is more surprising that many have turned out well than that many early acquire indolent habits, which unfit them for an active career, and for posts of responsibility. It would be a great improvement if a higher scale of education were exacted from candidates or nominees, and if it were further required that, before a young officer came out to India, he should qualify himself by being attached for a time to a Queen's regiment in England, in all the professional knowledge expected from an efficient subaltern.

"46. I have now touched briefly upon the points of inquiry which I understand to have been submitted to the royal commission; but many collateral questions spring out of these: the castes and races from which the native army shall be mainly recruited; the proportion to be observed between them; the extent to which the recruiting for each regiment should be confined to a particular district, so as to give a local character to the corps; the grouping of different castes and races in the same regiment, or in the same company; the retention of native commissioned officers; the enlargement of the powers of commanding officers; the changes desirable in the system of courts martial; the continuance or modification of the pension system.

"47. Upon all these heads much valuable information will be found in the evidence which Lieutenant-Colonel Durand carries to England, although it is in many respects incomplete; and I am of opinion that upon nearly all of them a large discretion and the power of final action should be placed in the hands of the Government of India, subject to any guiding principles which Her Majesty's Government may think fit to prescribe.

"48. Meanwhile the raising of troops mainly Hindostanee must continue, if only to provide a counterpoise to the present preponderance of the Punjabee and Sikh soldiers, upon whom during the disquietude of Hindostan we have been compelled to draw so largely, and whose number cannot be reduced until others are ready to take their place.

"This is being done in such a manner as to avoid as much as possible any prejudgment on important points in the general reorganization.

"CANNING."

5113. I understand you generally to concur with Lord Canning in the opinions expressed in that paper?—Yes.

5114. Therefore it is your own opinion that is now asked. I see that the first answer which is given to any of the questions which have been submitted, is to the second question, and that it is proposed that in the Bengal presidency there should be 45 European battalions?—Yes.

5115. Can you state the number of battalions proposed in the other two presidencies?—Lord Canning in this memorandum mentions that Sir Henry Somerset asks for 15. In the 22nd paragraph, Lord Canning states "Passing to Madras, and including with that " presidency the province of Pegu, and the Straits, I " believe that 12 regiments of European infantry will " suffice for its service."

5116. That would make 72 European regiments altogether for service in India, 45, 15, and 12?—But then Lord Canning remarks that he thinks the 15 required for Bombay more than would be necessary.

5117. (*Duke of Cambridge.*) Have you any idea what he thinks would be necessary for Bombay?—Yes; I think he said 12, exclusive of Rajpootana.

5118. (*Chairman.*) How many European regiments do you think will be eventually required for service in India?—That is a very difficult question to answer, because it depends so much upon the settlement which is made, upon how the present revolt is got over, and in what state the country is left. I think that for Bengal, after putting down this revolt, there may be from 50 to 45 regiments requisite; I think that ultimately 45 will be sufficient for Bengal, and that 12 will be requisite for Madras, and about the same number for Bombay; but it is a question which cannot be answered with absolute decision, because it depends so much upon the way in which this revolt is stamped out everywhere.

5119. I see that the only answer which has been given to the fourth point has been mixed up with the answers given to this point, and that it is there recommended by Lord Canning that of the force of European regiments, whatever it may be, two-thirds should be local, and one-third of the line?—Yes.

5120. Upon what principle is it that this great change is proposed to be made in the increase of local regiments in comparison with those of Her Majesty's service?—It appears to me that there is a necessity for employing them. In the first place, we have a large number of officers, who are a great expense to the Government, and who have at present no corps whatever. You are, in fact, spending about 1,000,000*l.* upon cadres of battalions which have no regiments at all; therefore there is, in the first place, the difficulty how to dispose of these officers, and how to get rid of this useless expenditure. And at the present time the military expenditure in India is so enormous, that already, according to a sketch estimate which I have here from the military auditor, it is some 4,000,000*l.* over what it was before. The charges for 1856-7 the military auditor gave me as 7 crores, 2 lacs, 96,921 rupees, you may say 7,000,000*l.* The sketch estimate for 1858-9 is 11 crores, 23 lacs, 48,975 rupees; that is to say, a differ-

Colonel H M Durand, C B

25th Nov 1858

ence of upwards of 4,000,000*l.* These sketch estimates are usually under the mark, therefore I think that in all probability the military expenditure will be much greater, and the financial question is really a very essential part of the consideration at present. That is one point which makes it important that employment should be found for the officers of the Bengal army; and I do not think that they could be disposed of in any other way without exciting very great discontent among the officers themselves, and also great apprehension in the other two armies, and perhaps a good deal of discontent too. Therefore, upon the principle of economy, and also upon the principle of not having a discontented body of officers, which is really a very important thing, considering the present state of India, and the present state of the other two armies which have remained loyal, it is advisable to officer the local corps of Europeans in that way. But there is a further point, which is that a local army is really essential. It appears to me, if I may be allowed to state my own opinion, that it involves the question whether we shall keep or lose India, because you require in India a body of officers who shall not be liable to be estranged from the country, whose regiments in India they look upon, in fact, for the greater part of their lives as their homes; they become acquainted with the country, and they become acquainted with the people, and you can obtain in no other way a set of gentlemen who are thoroughly fit for the work which they have to perform in that country, work of a very varied character. You draw large numbers of them for all kinds of employments, and they are always available for military service.

5121. You have stated that one of the reasons for your opinion is, that there are at present a large number of officers who have no employment; I believe that the native army now is 30,000 in excess of what it was previously to the mutiny ?—Yes.

5122. How is it officered ?—It is officered by these officers.

5123. Therefore at present they are in employment ?—A great number of them are in temporary employment at present, drawn to officer police corps, and employed in various ways; in any and every way, but it is not regular employment.

5124. Are you aware of the number of regiments belonging to Her Majesty's service that are now in India ?—I have not the return here.

5125. It is 75; therefore if this proportion was to be maintained there would be only 24 regiments of Her Majesty's general service kept in India, and 51 must be returned to this country. What would become of the 51 Queen's regiments who have been raised for this purpose for service in India if they were to be returned according to your plan ?—In the first place I do not think that you can withdraw 51 regiments rapidly; I think that it will be a very slow operation. The raising of these local corps will take time; and again the first army which is to be dealt with and reconstructed is that of Bengal, in which, out of 45, it is proposed that there shall be 30 local regiments. Therefore, Bombay and Madras would have to remain unaltered for the present. Whatever proportion of European troops is requisite there over and above those where they already have local troops, would have to remain for the present, the first thing being to get up the Bengal army to its proper strength, to the strength proposed by the Governor-general. Therefore, I look upon it that it would be a slow process raising a local army, and that there would be no difficulty of the kind which you are at present suggesting with the royal army.

5126. Why not ? Eventually, by your plan, there are to be 51 regiments returned upon this country, the officers of which must be reduced, and therefore it would be a great additional burthen thrown upon the revenue of this country ?—It appears to me, that in the time which it would require to raise the local army with the calls which would most likely be made for service in this country or elsewhere, there would not be that question. It is one reason, and a very main reason, with myself why I advocate a local army in India, that I look upon it as absolutely necessary that India should be free from the danger of a sudden recal of a large body of European troops from India. It is, therefore, that I say that I look upon it as a question whether we are to keep or whether we are to lose India, because the moment a pressure comes upon this country, in consequence of a European war, which may happen at any time, there would be a number of troops withdrawn from India, and possibly withdrawn in too great a quantity. We had an instance of that not long ago in the case of Lord Dalhousie. During his administration there was a Governor-general, a man of great authority, whose opinions had the greatest possible weight; then came the Crimean war, which was a war at some distance from England: there was no immediate danger, if one may so speak, to England itself, and yet that Governor-general, with all his power and influence and name, was forced at last to say that if more troops were withdrawn from India, he could not answer for India.

5127. (*Viscount Melville.*) But in that case there were only two cavalry regiments withdrawn, and Lord Dalhousie had been urging upon the Home Government to withdraw those regiments before they were withdrawn ?—Yes; but they wanted to withdraw more infantry than he could spare, because he himself has said so.

5128. (*Chairman.*) Must not the withdrawal of regiments from India depend upon the Secretary of State for India and the Government at home ? Is it not on the responsibility of the Government ?—It is upon the responsibility of the Government, no doubt, but my argument is that the home pressure will not be withstood.

5129. The Secretary of State for India being a member of the Government, surely would take that matter into consideration ?—I only judge by results when the pressure comes. India viewed from home is a secondary matter altogether, and the troops are removed.

5130. (*Lord Stanley.*) The question of removing or keeping the troops would be decided by the Government here ?—Yes.

5131. In the event of a European war, public opinion, which influences every Government here, would be concentrated upon the European difficulty, and the risk to India, if it were not very imminent, would probably be overlooked altogether ?—Quite so.

5132. (*Duke of Cambridge.*) Do you not think that in the event of a great pressure, the Government of the day, if the pressure was put upon them, would attempt to get these troops, whether they were local troops or not, and would make arrangements to do so ?—I think they would; but I think it would take time, because when you recruit men for a local service, and when you have officers whose condition of service is a local service, it takes some time to get over the mere technical difficulties which all that creates, and it takes some time for a Government to consider the matter, and to arrange before they strip the Indian empire, in fact, of those troops.

5133. (*Major-Gen. Hancock.*) Is there not something beyond that ? Were the local troops enlisted for service in India only, would not the circumstance of their not being liable to serve elsewhere put it beyond the power of the Home Government to make them available to meet a European emergency, and thereby secure to India the permanent retention of that portion of its European force ?—I look upon it that of course Parliament would have the power to do anything; therefore, however, the men had been enlisted, the Government could by Act of Parliament or by other means ultimately arrange to draw whatever body of troops was wanted, but it takes time. The statesmen of England and the

Colonel H. M. Durand, C.B.

25th Nov 1858.

commanders of England must then think before they act.

5134. (*Duke of Cambridge.*) Would not the statesmen and commanders of England think before they denuded such an empire as India, valuable as it is to this country, of troops as you think they might do?—No doubt they would think, but at the same time I merely judge by results, and although they would think to a certain extent I do not think that they would realise to themselves the danger of stripping troops to the extent to which they would be inclined to do it.

5135. (*Chairman.*) You consider that it would be a great advantage to India to have a body of European troops raised in this country which the Government here would not have the power of withdrawing from India in case of a war in Europe?—Not suddenly.

5136. Do you not think on the other hand that it would be a great disadvantage to the empire to have a large body of men raised in this country who could not be employed in a European war if necessity arose for it?—No.

5137. You can only raise a certain number of men in this country by voluntary enlistment. If a large proportion of that number is to be tied up for local service in India, and not to be removed under any circumstances, will not it create great danger to the empire in general?—But can you withdraw those men? The question as it is at present put to me appears to involve this, that it takes for granted that you can withdraw the men from India. Now I argue that you cannot withdraw the men from India; that for the future, after what has happened, you must hold India upon a different footing from that on which you have hitherto held it; you must have a larger European force, and wherever you have troops in India, those troops must be well balanced forces. You can no longer have what we used to have; for instance, I recollect that in 1844, in Rajpootana and the whole of Central India, there were some 30,000 native troops, and there were two European batteries of artillery or something of that sort, that was all. On looking at papers, perhaps many other instances might be given, but you will be no longer able to do that in India; wherever you have troops they must be well balanced forces, and you will require a large permanent garrison of European troops, you will never be able to do without it; it may change, it may be a little more, and a little less. When your railway communications are all complete, it may perhaps be brought down a little lower even than the 45 regiments. But taking the question as it is put to me, it appears to me to involve that which will be in future impracticable, namely, holding India with very few European troops.

5138. (*Duke of Cambridge.*) The question as it appears to me is a double question, there is a question as regards the interests of India, and the question as regards the interests of the empire, should not the interests of the empire, which include the interests of India, be considered as the primary ones and is it not the case that you should not regard the Indian advantages or necessities only?—I am quite of opinion that the object of paramount importance is necessarily England itself; but I am inclined to maintain that you peril that paramount importance by endangering India, that if you leave it open to a sudden stripping of India of troops, and if you lose India, you peril the position and the importance of this country more in that way than in any other.

5139. Do you think that any government would risk such a position?—That I can only judge of by results so far as I have seen; I have now served in India from 1830 up to the present time. It has appeared to me that on the one or two occasions when there has been any pressure, but chiefly the last one, the danger of India being suddenly stripped of troops has been very great.

5140. Excepting the Crimean war, which is an exceptional case, do you not think that on former occasions if there has been a reduction of troops in India, it has been on Indian financial grounds, and not because there has been any pressure upon the Government to withdraw troops?—It may have been on both accounts; the financial consideration may have entered as much as others.

5141. (*Viscount Melville.*) Are you not aware that years ago the Court of Directors forced upon the British Government a reduction of the number of troops on financial grounds?—Yes.

5142. (*Chairman.*) You assume that the European force to be maintained in India, whether local or movable, is to be raised in this country?—Yes.

5143. Would it not be a great disadvantage to this country if there was not the power of removing a large proportion of that European force in case of great danger in Europe?—I look upon it that there would be the power of removing it after going through certain measures, which would necessarily force upon the Government a consideration of the matter.

5144. But you assume that which I believe to be perfectly incorrect, namely, that if a man was enlisted under certain conditions, Parliament would have the power to waive those conditions; you would then have a mutiny in your army at once?—I suppose it would have the power of allowing men to volunteer from that army; I do not mean to say that it would have the power to cancel the obligations entered into, but it certainly would have the power to say that that local army might volunteer.

5145. (*Lord Stanley.*) That is to say, that you consider that a force raised for local service in India, and having its head quarters in India, would be available for service in Europe, or that a great part of it would be so available in case of extreme emergency?—Yes.

5146. But you think at the same time that there would be a check, and that that check would be a necessary and useful check upon its employment in Europe to the danger of India, without any mature consideration?—Yes.

5147. (*Chairman.*) Therefore although the necessity might be immediate, that force could not be made use of without time being taken, in order to carry the measure into operation?—I consider that the distance from India from this country quite puts that position out of the question, because anything immediate you cannot meet by sending to India for troops. I mean to say, for instance, taking an extreme case, that if there were landed upon any part of your coast 40,000 or 50,000 French troops, you could not send to India for troops.

5148. (*Duke of Cambridge.*) Supposing that the local Indian army is to be raised by recruits from this country, which recruits would not be available for service in this country, and that, on the other hand, you have a large number of regiments of the line in India, which must be relieved, and consequently you will require a larger proportion of line regiments at home to afford those reliefs, will not that very fact alone, if it is a line army, in contradistinction to a local army, give more military power to this country at home?—It might give more military power to this country at home with respect to European powers, but I do not think that it would give such stability to our Indian empire, and that I look upon as a very important consideration for this country. For instance, what natives usually advance against our Indian administration is, that almost everything is shifting, that very little is stable; the one thing which they see that is stable is these three Indian armies. If they find one of the few elements of stability which there are in our administration of India removed, it will have a great political bearing upon them; they would see first of all that the artillery is perpetually shifting and changing. If all the troops are to be line troops and not local troops, there must be perpetual reliefs. In fact Lord Elphinstone in his paper, which of course will come before the Commission, advocates that no troops should be more than ten years in the country. Putting aside the enormous expenditure which that involves of reliefs, the people in India itself will see that there is a perpetual changing of troops and

Colonel H M. Durand, C.B

25th Nov 1858

officers, and that element of stability which they saw and which they understood will be gone. They will argue, they have not enough men to have the old arrangement of having local corps of artillery and infantry, and that these are liable to be withdrawn at any time.

5149. (*Viscount Melville.*) Has not the very reverse been the fact lately, from the people of India seeing the large number of troops which you can pour into the country upon an emergency ?—They know quite well that it has been an extreme exertion, they know just as well as any one sitting at this table that the country was taxed to the utmost to do it. Every one of the chiefs (I have been in a great many of their courts) take in the English papers ; they have men who translate them, so that those who cannot read your English papers have them translated to them. There is not one chief, nor one man of any intelligence amongst the natives of India, who are likely to be motive powers, and to be in any way dangerous, who does not know, as well as any one here that it was an extreme exertion, and that this country was dangerously stripped of troops in order to meet our Indian emergency.

5150. (*Duke of Cambridge.*) That is an emergency, if that emergency is over, which it will be, and you have the permanent means of keeping up that force which you proposed, by troops of the line, what difference can it possibly make ?—I think it makes a great difference upon those points which I have mentioned, one of which is that you will necessarily not have the officers accustomed to the country, and knowing the country ; you will necessarily have the natives of India regarding them as a transient body, as another element of instability in the mode of administering the country, and you will open India to the danger of being suddenly stripped of troops whenever there is a pressure.

5151. (*Chairman.*) Do you think that the discipline of the troops permanently located in India is equal to the discipline of those who are relieved occasionally ?—Some persons argue that there is a difference in the discipline ; for instance, Sir William Mansfield in his paper expresses that opinion ; several opinions are given, in which it is said that an advantage arises from the emulation created by the comparisons between the discipline of the line regiments and that of the local regiments ; but I cannot say myself (having been on service with them) that I ever observed that difference between a local European regiment and a line regiment ; and I cannot say myself that I ever observed anything that I could wish altered ; for instance as regards the artillery, I have happened to see Bengal artillery and Bombay artillery, I have been on service with them both, I have never seen anything that I could wish changed in them. I have seen Bengal local European infantry ; I cannot say that I have ever seen a difference at all.

5152. Do you consider the discipline of the Bengal army generally to have been equal to that of the armies of the other two presidencies previously to the mutiny ?—That is a question which is perhaps rather a difficult one to answer, because there was a good deal of difference in their modes of discipline, and difference arising from the difference of material with which they had to deal. I have had the troops of all three presidencies under me, and I have seen the discipline of all three of them, and I really do not think that there was much to choose between one and the other in matter of discipline.

5153. (*Major-Gen. Hancock.*) As it may be assumed that the amount of permanent European force to be maintained in India will be fixed at the minimum necessary for the secure hold of the country, how could any part of that force be withdrawn to meet an emergency in Europe without endangering the loss of India ?—That is exactly why I wish to throw a check to that action taking place, that is the very object in view, namely, to prevent anything of that sort.

5154. Do you think that the Government could rightly maintain European troops in India with the view of training them there, and bringing them home when required to meet a European emergency. Do you think it would be just towards India to throw upon its revenue the expense of maintaining a larger European force than may be deemed necessary for the secure hold of the country, for the purpose of having an available force there to meet a European emergency ?—Certainly not, it could not afford it.

5155. Then, if the whole European force were enlisted for service in India only, no part of it would be available to meet a European emergency, would it, except by volunteering ?—Except by volunteering ; but, as the question was put to me, I understood that it was meant, to refer to cases of such extreme emergency, that the absolute life of this country, if I may so call it, the vitality of England as a state, was brought in fact *in extremis.*

5156. Still the Government could not break faith with the soldiers who had enlisted for service in India only, and it could only make those troops available by inviting volunteers. Of course, there can be no doubt that the whole force in India would volunteer in a case of that sort ; but at the same time it would be necessary to obtain it by volunteering ?—Of course.

5157. (*Viscount Melville.*) Do you think it advisable that the Government of this country should be hampered to the extent which it will be if 60,000 men are to be enlisted for service only in India, making a competing force against Her Majesty's ?—I do not admit that it will be hampered, nor do I regard it as a competing force. It appears to me that where some are inclined to take the line of advocating a complete amalgamation, either the term "competing" or "jealousy" is used ; it is to get rid of jealousy.

5158. I refer to competing for recruiting in this country ?—Sometimes where persons advocate amalgamation the jealousy between the two services is objected to, and at other times when they advocate the employment of a portion of the troops from the line and a portion as a local army, the advantage of the emulation is advanced, so that really I do not look upon it as competing. It is all now under the Crown; it is no longer a company's service ; it is, to all intents and purposes, a royal army. I do not look upon it as competing in any way.

5159. But still it is as regards enlisting at this moment a competing force, and the men enlisted for India are withdrawn from any other service ?—But it is necessary, you cannot avoid it.

5160. (*Duke of Cambridge.*) If you can obtain the same results by having but one army, is it not an advantage to have one united body rather than having an army separated into two distinct bodies with different interests and views, which must be the case if one is local and the other is not ?—With great deference, I should say that they ought not to have different views or different interests.

5161. How would you prevent that ?—They are both in reality serving the Crown and serving the same Government ; they are under the officers of the Crown. I do not see that there should be any difference of interest.

5162. Have you not found that where men are enlisted on a different principle and are employed entirely in a varied service, there is not that feeling of jealousy which otherwise exists, and which it is not desirable to maintain in a great army ?—I am quite aware that there are a great many advantages to be adduced in favour of the other system, but at the same time it appears to me that the disadvantages greatly counterbalance them. I can quite understand that in the case of a country like France, which has got Algeria close to it, it can manage in the way that it manages, though even there they are forced to have local corps, but the present case is quite different; there is no analogy between a country like France with Algeria close to it, and a country like England with India at a distance of a quarter of the circumference of the globe from it.

Colonel H. M. Durand, C B

25th Nov 1858.

5163. (*Viscount Melville.*) Under whose control is this local army to be placed?—Under the direct control of the Government of India and the Secretary of State.

5164. Distinct from the Commander-in-chief at home?—No; I suppose that the Secretary of State and the Government of India, but certainly the Secretary of State in everything connected with the armies of India, always act with the advice of the Commander-in-chief in this country.

5165. With whom is the discipline of that army and its organization to rest?—The discipline of the line troops would necessarily rest with the Commander-in-chief in India under the Government of India as he now is, and the discipline of the armies of India is all under the local Commanders-in-chief, they being necessarily under the Government of India.

5166. You are aware that the Queen's regiments, though locally of course under the command of the Commander-in-chief in India, are actually under the Commander-in-chief at home?—They are.

5167?—The local army will not be so?—No, nor do I think it should be, because I look upon it as a thing of very great importance that the Governor-general of India and the Secretary of State for India should have very great powers for India; that you cannot manage that country otherwise.

5168. (*Sir H. G. W. Smith.*) It appears to me that you advocate a system under which the Government of India should be almost independent of the Government of England, and by which India should be under its own sovereignty, as it were, rather than as it is now made by the Government, part and parcel of Great Britain?—No, with deference; nor do I think that you are putting the case as the Act of Parliament puts it. I was only looking at it the other day. The marginal note of the 56th section is "Indian military "and naval forces to remain under existing con- "ditions of service;" and it says, "The military and "naval forces of the East India Company shall be "deemed to be the Indian military and naval forces "of Her Majesty, and shall be under the same obli- "gations to serve Her Majesty as they would have "been under to serve the said Company, and shall "be liable to serve within the same territorial limits "only, for the same terms only, and be entitled to "the like pay, pensions, allowances, and privileges." I need not read it through. It appears to me that it makes no real difference. The question which you have now put, in fact, involves an assumption which does not exist, because I propose no change in that respect. The armies of India, according to this Act, are directed to continue in their actual position.

5169. (*Viscount Melville.*) But you quadruple the European local army of India from what it is at present?—I increase the number very considerably.

5170. (*Major-Gen. Hancock.*) You increase the number, but you do not alter its actual position nor the relative powers of the Commanders-in-chief?—It does not appear to me to alter at all the position of the Secretary of State or of the Commanders-in-chief in India, whether the principal Commanders-in-chief, or the local Commanders-in-chief, things would be managed exactly as they are and have been.

5171. (*Viscount Melville.*) Do you not see that it does alter the position so far as that the local army is most materially increased from what it is at present, thereby obliging England to recruit for the service in India alone a much larger force than it does now?—You increase the force, but you do not do what I understood Sir Harry Smith to assume by his question, you do not alter the principle upon which the government of India has been conducted, and is conducted at the present moment under this Act.

5172. Is it advisable that the local force should be increased in this manner to the detriment of the permanent force of Great Britain?—With deference, I do not think that it would be to the detriment of the force of Great Britain.

5173. (*Major-Gen. Hancock.*) Is it not the fact that hitherto, when employed in the field, the two armies have always acted most cordially together, and that no injury has ever resulted to the public service from there being two armies?—That is an historical question of such magnitude that I really cannot answer it, for it would require a much more attentive consideration than I have given to the great variety of instances in which all the different armies of India have been employed, and if I were to reply to the question I should be giving a very sweeping answer to a sweeping question.

5174. Speaking generally, has any injury resulted to the public service when the troops have been employed together from there being two armies, one under Her Majesty, and the other under the East India Company?—I am not aware of any.

5175. (*Chairman.*) You are assuming that that Act of Parliament was the final decision of Parliament with regard to the conditions upon which the army should be transferred?—This Act purports to be an Act upon which, as I understand it, things are now proceeding.

5176. (*Lord Stanley.*) It is at least an expression of the mind of Parliament until or unless it be altered by any future Act?—Yes; I observe that the note to the next section is "provision for persons hereafter "entering Her Majesty's Indian forces;" and the section itself states, "Provided that it shall be lawful for "Her Majesty from time to time, by order in Council, "to alter or regulate the terms and conditions of ser- "vice under which persons hereafter entering Her Ma- "jesty's Indian forces shall be commissioned, enlisted, "or entered to serve, and the forms of attestation "and of the oath or declaration to be used and taken "or made respectively on attesting persons to serve "in Her Majesty's Indian forces, shall be such as "Her Majesty, with regard to the European forces, "and the Governor-general of India in Council with "regard to the native forces, shall from time to time "direct." That appears to me to have reference to the future, whatever alterations are made, and I take it that with reference to the present this Act is in force, and that it covers the ground which I was supposing it to cover.

5177. Of course the duration of every Act of Parliament is uncertain, depending upon the future will of Parliament?—Yes.

5178. But as you understand it that Act does for the time being limit and define the status of the local Indian army?—I understand it so.

5179. (*Chairman.*) This Commission has been appointed, and the very first question submitted to this Commission is, "The terms on which the army of "the East India Company is to be transferred to "the Crown?" What do you understand to be the object of that question, if the Act of Parliament is to be final?—I do not understand that question.

5180. (*Duke of Cambridge.*) Irrespectively of the Indian question, as a soldier, can you quote any instance in history, going back to any distance, where you have read of two armies serving one country under two different heads?—I do not suppose that if one searches through history there is a parallel instance with our Indian empire, and therefore it is entirely an exceptional instance, that a small state like England (and after all viewed with reference to great continental military nations this is a small military state) at one side of the globe, should hold an enormous empire at the other side of the globe. Those conditions are not paralleled anywhere that I am aware of, nor the rise and the establishment and the maintenance of that empire. It appears to me an entirely exceptional case, and that the whole system has been exceptional, and that it would have been very different if we had lain close to her shores, for instance, as Algeria lies close to the shores of France. Therefore I cannot adduce any instance of the kind.

5181. You have said, I think, that you regard it as very desirable that there should be a uniformity of feeling, that there should be one sentiment pervading both forces, and that feeling should be kept up?—Yes.

Colonel H. M Durand, C B

25th Nov. 1858

5182. Do you not admit that the fact of having two distinct armies with two distinct heads will prevent uch a unanimity of feeling. How can there be a unanimity of feeling with two forces differently contituted under two distinct heads ?—They are both erving the same Government ; they are both serving Her Majesty. I am using the word "Government" n its general sense.

5183. (*Major-Gen. Hancock.*) Provided both be placed upon a perfect equality in every respect, why hould any other than a generous feeling of emulation animate the two services ?—I do not myself see that t involves a difference of interest or any of those disadvantages which would arise from two wholly distinct armies ; they are serving under the same executive entirely.

5184. (*Col. Burlton.*) Going back to the question of the probable withdrawal of troops from India by the Ministry, do you think it possible, or at all events probable, that any immediate or pressing emergency could arise in Europe calling for reinforcements from India to an amount exceeding that of the aggregate of those line regiments which it is proposed in Lord Canning's minute should be continually kept up by the three presidencies. In other words, if the Government here were determined to withdraw European troops from India, they would have the option of withdrawing a certain number of line regiments; do you not think that that would be equal to any sudden demand made upon a sudden emergency in Europe without interfering with the local troops ?—In ordinary emergencies I should certainly think it would.

5185. Supposing the emergency was so great as to require more troops, do you think that it would be possible to withdraw a greater number of troops, speaking with reference to the transport of troops, in so short a period as to enable the Government to bring more than that number at once to meet any pressing emergency, such as an invasion of this country ?—Not well.

5186. (*Chairman.*) Would not your argument go to the extent that it would be desirable to have the whole European force a local force in India; why do you propose that there should be any force of the line ?—For this reason, I look upon India as one of the best fields that England has for the formation of its officers. I look upon it that there is no finer field, and that therefore it is very desirable that Her Majesty's army should have a considerable proportion of officers accustomed to commands in India ; it prepares them for service in Europe ; they have the advantage of seeing large armies moved, and therefore of seeing large operations there ; and I think that it would be very impolitic that that field should be lost to the British army. Instead of diminishing it I would keep it at what Lord Canning proposes.

5187. But you propose to reduce it ?—No ; I look upon the number of troops now in India as an exceptional case altogether.

5188. (*Duke of Cambridge.*) Upon the proportions given of 30 to 15, you reduce the line troops and raise the local troops ?—I do not think that it diminishes the number of troops before the outbreak, for instance, take the time of Lord Dalhousie, it leaves them as they were before. The question put to me was, whether the argument did not amount to its being better to have the whole of the European troops local in India, and I have replied to that in the way which I have mentioned, namely, that I think it is extremely important to this country and to the British army that a proportion of Her Majesty's officers should have the advantage of serving in India ; they there have large commands, and see large bodies of troops put in motion, and it is a very good field.

5189. (*Chairman.*) Would they be in an equal position if they only formed the proportion of one-third of the European army in India, instead of being as before at least one-half of it, if not the majority ?—I think that if you take the proportion of the officers you will find that what Lord Canning proposes in that memorandum reduces the number ; for instance, the number of colonels of the local forces would be considerably reduced, and therefore a fair proportion of commands would fall more in favour of the royal army than was the case anterior to the insurrection.

5190. (*Viscount Melville.*) How are the colonels to be reduced if you increase the regiments?—Because in doubling up two cadres of battalions for officering one regiment, you necessarily get rid of one colonel in every case.

5191. (*Duke of Cambridge.*) Do you not think that the native and European troops are very different, and though, perhaps, the native troops would not have such an influence as regards the regiments of the line, would not a very large proportion of local European troops have a preponderating influence ?—The proportion of commands had reference to the officers of all arms and all services ; it was not limited to the officers attached to European troops ; otherwise, the three Indian armies would have had a very small proportion of commands, as there were very few European regiments ; and what is now proposed by Lord Canning does not increase the officers, but it diminishes them.

5192. There is a wide difference, as you will admit, between the native portion of the army, and the European portion of the army as a body of troops?—Yes.

5193. I grant that you diminish the number of officers in the aggregate, but you increase the number of European regiments?—Yes.

5194. Therefore the European element as an element is much increased in the local force?—Yes.

5195. It is nearly doubled in the local force as regards the line to what it was before?—Yes.

5196. Do you not think that that fact would have an injurious effect upon the feeling and position of the regiments of the line as regards the local European regiments?—No, I do not think so at all, and in fact the apprehension as one may see from Lord Canning's memorandum on his part, is, that the local troops would run a risk of being rather looked down upon by the line, and he wishes to remedy that by some arrangement which should admit of exchanges, where officers of one service or the other wish to exchange into the other.

5197. (*Chairman.*) How can that system of exchange be effected unless you make all officers entering the local force, enter for the future upon the same terms with regard to pensions as in Her Majesty's army?—I think that that question of exchange is to be regarded from two points of view, one from which Lord Canning regards it, which you may call the politic view, and the other a purely personal point of view. Now I suppose that no one objects to the view which Lord Canning has of the desirableness if there is a local army that there should be the power of exchange. Upon the second point of view, namely, the purely personal one, I really regard it as more a personal thing than anything else ; and if two officers want to exchange, and can satisfy their own executives that the exchange is proper with reference to the individuals, it must be a question between them, they taking up what may be called the money obligations.

5198. If there is a different system of pension and retirement, surely it creates great difficulty ?—There would be very great difficulty if it was attempted to rule the whole thing *ab initio* from beginning to end, so that all the different grades should have the power of exchange by clearly defined rules, one man to pay this and another man to pay that, and so forth ; but it appears to me to be a purely personal matter ; and that if two officers wanted to exchange, it would rest with them whether they chose to take up the obligations.

5199. You could not put a young life who wished to exchange in the same position with regard to the pension list as the old life with whom he exchanged ?—No ; that is why I think it a purely personal question, the different people who are involved must satisfy the different funds that the exchange is fair and equal.

Colonel H. M. Durand, C.B

25th Nov. 1858.

5200. Supposing there to be a local army for the future, would it not greatly facilitate the means of exchanging, if those officers who entered, for the future, that local army were placed upon the same footing with regard to retiring allowance, and were not called upon to subscribe to these funds ?—I do not think that it could be carried into effect without dislocating the present system of the three armies; for instance, the funds to which you are alluding depend upon the subscriptions not only of the seniors, but of the younger officers also ; so that if those who entered the service were to be exempt from all these sort of things, the fund must necessarily go, or the Government must meet the expenditure.

5201. Would it not go to those now entitled to it ?—The fund must break, because these funds are supported not alone by the subscriptions of the seniors, but by the subscriptions of every grade from the time that the officers enter the service.

5202. (*Col. Burlton.*) It is a compulsory subscription ?—It is a compulsory subscription.

5203. (*Chairman.*) I propose gradually to abolish the funds ?—You cannot abolish them gradually by exempting those who enter, unless the Government takes upon itself the expense; because in the case of a young man coming into the army, payment becomes compulsory from the moment he enters the service.

5204. What was the number of native company's artillery in the Bengal army at the time when the mutiny broke out. According to the return laid before Parliament by the East India Company, the number of officers attached to the native portion of the Bengal artillery was 76 ?—I have a note of my own, which is as follows :—Before the revolt of 1857, the Bengal artillery consisted of 13 batteries of horse artillery, 21 light field batteries (horsed), 1 light field battery (bullocks), 1 mountain train battery, making a total of 36 batteries. For the service of these batteries and the general duties of the artillery branch, there were, the first brigade of horse artillery, 3 European and 2 native troops; the second brigade of horse artillery, 3 European and 1 native troops; the third brigade of horse artillery, 3 European and 1 native troops; making a total of three brigades of horse artillery, of 9 European and 4 native troops. There were six battalions of foot artillery of 24 European companies, 3 battalions of foot artillery of 8 native companies; total, 9 battalions of foot artillery of 32 companies, making a grand total of 55 troops and companies of artillery. Besides the European artillerymen and golundaz, there were details of gun lascars to each company, and drivers to each battery of foot artillery, so that the European and native artillery stood as follows :—

Horse Artillery.

1,034 European, 548 golundaz and lascars.

Foot Artillery.

2,034 Europeans, 864 gun lascars.
„ 1,518 drivers.
„ 1,902 golundaz.

Total 3,068 Europeans 4,832 natives.

The grand total of all was 7,900 Europeans and natives. In addition to the foregoing was the artillery of contingents, as follows :—

Oude	4	Companies	Mutinied
Gwalior	5	„	
Malwa	1	„	
Bhopal	1	„	
Kotah	½	„	
Joudpore	½	„	
Punjab	5	„	Stood.
Nagpore	2	„	
Hyderabad	4	„	
Total	23	Companies.	

The regular and irregular artillery numbered therefore altogether 78 companies, and troops of European and native artillery.

5205. How would that correspond with this return made by the India House on the 12th April of last year, which states that the number of European officers employed with the native artillery in Bengal was 76 previously to the breaking out of the mutiny ?—I do not know how that is; they must have left out a good many of the contingents, I should think.

5206. (*Major-Gen. Hancock.*) Probably it means the regular artillery ?—It may do so.

5207. (*Chairman.*) 76 European officers were employed with the Bengal native artillery previously to the mutiny, of whom there are 25 now. Those are the only officers who would be thrown out of employment by the mutiny ?—That is under the mark. I cannot help thinking that there must be an error of some sort there; it would require looking into. Of course I cannot speak with any certainty upon it; all the contingents I suspect are left out.

5208. (*Lord Stanley.*) The contingents are 23 out of 78 ?—And there was also the artillery reserve, for instance, to each of the Oude batteries, and there was the artillery reserve to each of the Gwalior batteries. I am not prepared to enter into the statement now referred to, because I do not know it.

5209. (*Chairman.*) The mutiny could only affect those European officers attached to the native regular or irregular artillery in Bengal ?—It affected all the officers who were attached to native artillery. I am not prepared to say what number. The returns ought to be correct. I have not any exact return of them here.

5210. Supposing that a great number of artillery officers were thrown out of employment in consequence of the mutiny, would it not be extraordinary that additional artillery officers should go on being appointed to that very Bengal artillery when so many were out of employment ?—No; because the object was to bring up the artillery to the point which Lord Canning thinks necessary.

5211. You say that a great proportion of these officers attached to the Bengal artillery were thrown out of employment by the mutiny ?—I did not mention the artillery especially.

5212. I find that the return tallies exactly with what you stated ?—There is a minute of Lord Canning's upon the artillery; there you have it exactly.

5213. Then I may assume that the only proportion of those officers thrown out of employment would be those attached to the native artillery who revolted ?—Yes, of the artillery.

5214. Do you think that there would be any difficulty in finding employment in Bengal for those artillery officers ?—There is a great deal of employment in India. I do not know exactly in what way you propose to employ them.

5215. Have not a great number of them been absorbed by placing the local European artillery upon the same footing as the royal artillery ?—Not exactly upon the same footing, because they have not colonels-commandants, otherwise they are assimilated, but are not exactly on the same footing.

5216. How many of those officers would it absorb ? I think Lord Canning states, that out of the 76 who were employed, 25 are left; that would leave 51 ?—Yes.

5217. How many of those 51 will have been absorbed by the increase to the European portion of the artillery ?—There has been no absorption; there has been a promotion of a certain number of second lieutenants; they are all first lieutenants, and a certain number of first lieutenants have been made captains. I am not aware that there has been any addition to the actual number of officers.

5218. You had only three officers, and we have five ?—If you take the assimilation which has been carried out by the general order in India; the assimilation is not an increase.

5219. You increase the number of officers to each company ?—You merely alter the grades of the officers.

5220. (*Duke of Cambridge.*) Then you have not increased the number ?—No; there is a recommendation of the Governor-general which proposes a large increase.

5221. What has been the establishment of officers per company before this change in the armies of India ?—It varied with the battalions.

5222. (*Chairman to Major-Gen. Montgomerie.*) You are perfectly well acquainted with the formation of the Bengal artillery, I presume ?—Generally. I do not belong to the Bengal artillery.

5223. Do you think that there would be any difficulty in finding beneficial employment for the number of artillery officers supposed to be thrown out by the mutiny ?—I should say, certainly not. They could have been employed even in the other European companies, or in duties connected with the artillery service in arsenals and elsewhere.

5224. (*Duke of Cambridge.*) Were not you very much under officered in the artillery ?—Very much so.

5225. And the cry was always for more ?—Yes.

5226. And that was in all the presidencies ?—Yes, you may say in all. I know that it was in all.

5227. The establishment of officers per company was smaller than for the royal artillery, it was a lower establishment of officers ?—Yes.

(*Lieut.-Col. Durand.*) The first battalion of foot artillery had one colonel, one lieutenant-colonel, one major, five captains, ten first lieutenants, and four second lieutenants. There were only four companies to a battalion. Then the native battalions were on a different footing. The native battalion had six companies, and it had the same number of officers, one colonel, one lieutenant-colonel, one major, and five captains.

(*Major-Gen. Montgomerie.*) At Madras for 12 companies they had only an establishment the same as a European battalion of four companies.

5228. (*Chairman.*) Then your opinion is that they might very beneficially have employed any of the officers of artillery ?

(*Major-Gen. Montgomerie.*) Speaking from my knowledge of the service, I should say, certainly they might have been employed.

5229. (*Major-Gen. Hancock to Lieut.-Col. Durand.*) With respect to the supposed hardship to those officers of the line army who might be placed upon the half-pay list, in the event of the local army being increased to the extent recommended by Lord Canning, considering that the augmentation of line regiments to meet the Indian emergency was made, as in all similar cases, with a distinct understanding on the part of the officers, that they would be liable to be placed upon half-pay when their services might be no longer required, and that the officers of the local army have not had the advantage of any augmentation whatever since the mutiny, where would be the injustice to the officers of the line army who might be placed upon half-pay, in carrying out a reduction of that army, according to the established regulations of the service ?—I am not acquainted with the rules of Her Majesty's service.

5230. (*Chairman.*) Would there not be this injustice to the revenues of this country that you would place upon the half-pay list a very great number of officers ?—I before met that question, I think, by saying that the raising a local army would take time, and therefore that number which is stated would not be thrown back at once upon the country, very far from it ; it would be done gradually, and therefore I do not myself see that it would be necessarily unjustly done in any way. It would not do to charge the Indian Government with more troops and officers than were requisite, or to throw a greater expenditure upon the Indian Government than was requisite.

5231. What appears objectionable is this, that you propose that new regiments should be raised for India, and that the old regiments which had been raised in this country for service in India should be disbanded ; surely it would be a great disadvantage to be obliged to raise new regiments, and in order to make room for them to disembody the regiments which have been raised for that purpose ?—I am not aware exactly what number has been raised. It does not appear to me that the disembodiment will be so rapid as to throw upon the country the number, whatever that may be, at once. You must raise the local army very gradually. You cannot form 30 corps rapidly. If it was necessary to disband some of these regiments, admitting that there might be disadvantages such as you advance, still I think that the advantages from a local army quite overbalance the temporary disadvantages in the other respect.

5232. That is looking at it in an Indian point of view ?—Yes.

5233. (*Duke of Cambridge.*) But in an imperial point of view, what would be the effect ?—It appears to me that it is an imperial point of view holding India, and holding it safely.

5234. (*Lord Stanley.*) The one you regard as, at the utmost, a temporary inconvenience, and the other is a very serious permanent evil ?—The other I look upon as really a question whether you are to keep or to lose India.

5235. (*Duke of Cambridge.*) In what respect do you think that we should risk the loss of India by such an arrangement ?—Because, as I have mentioned, I look upon it as almost amounting to a certainty that whenever there was a great pressure upon this country, there would be a sudden and a very large withdrawal of troops from India, and if there was no check upon such withdrawal from the fact of a local army existing, it would be very likely to cause the loss of India.

5236. Is that the only reason ?—There are other reasons which I mentioned, such as that you require to have a body of officers accustomed to the country, and not perpetually in course of being relieved and removed from the country, that you cannot administer the country satisfactorily with the perpetual reliefs of the officers, because a large proportion of your officers are employed in a great variety of ways ; there are a number employed in the commissariat, a number employed in the ordnance commissariat, and a number employed in the different departments of the state, some of them are in political and some of them in civil employment, and so forth ; and if the whole army is to be in a perpetual course of relief, and you are to be perpetually changing these men, you naturally lose an element of stability, which is, I think, essential to the administration of the country.

5237. (*Viscount Melville.*) Did not the Government, notwithstanding the pressure for troops in this country during the whole of the Peninsular war, maintain the European force in India up to its full strength, and why should it not do so now ?—Then the circumstances of India were in a very different state, and I do not think that the cases are parallel.

5238. In what way ?—It depends so much upon the particular period. During the heat of the Peninsular war, what was considered the crisis at that time had been got over. The Duke had, in fact, fought and won his battles, and Lake, too, before we got in to the Peninsular war.

5239. (*Major-Gen. Hancock.*) In the event of the local European army being increased to the extent recommended by Lord Canning, do you not think that a great part of the line regiments raised to meet the Indian emergency might be absorbed in all probability by permitting the men to volunteer into the local army to form the new local regiments ?—If volunteering were allowed, I have no doubt that a great portion of them would be.

5240. And with respect to the officers, assuming that I am correct in supposing that it is in accordance with the established system in Her Majesty's service that they should go upon half-pay, when their services are no longer required, and considering the great and permanent advantages in promotion which those officers have received by the augmentation, do you see that there would be any hardship in their being placed upon half-pay, in accordance with the regulations of the service ?—As you have put it, as it

Colonel H M Durand, C B.

25th Nov. 1858.

would be gradually done, I do not see that there would be any injustice in it.

5241. (*Chairman.*) Would it not be an equal hardship to them to be placed out of employment, as it is upon the Indian officers who are thrown out of employment, for whom it is proposed that these regiments should be raised in order to find employment for them? —No, I do not think that; I do not think that you could do it. These officers are entitled by their engagements and by the Act of Parliament.

5242. (*Major-Gen. Hancock.*) And by the established system?—And by the established system; and I do not think that the two cases are parallel.

5243. (*Chairman.*) You do not think that it is an equal hardship to the officers of Her Majesty's service to be unemployed, as it is to the officers in the local service?—It is not exactly the same hardship, because the one officer enters knowing that that is the condition of his service, the other enters upon a service which is really banishment, and he enters under certain conditions of service which are assured to him, and are just assured to him, it appears to me, by this Act of Parliament; therefore, I do not see that you can draw a parallel. In the one case, the conditions of the man's service are defined, he enters knowing that those are the conditions of his service, and it is legal and customary to put him upon half-pay when required. In the other case he enters under certain conditions; those conditions are assured to him, they are just here again assured to him in the Act, if I understand the case, and really the two cases do not appear to me to be parallel.

5244. (*Major-Gen. Hancock.*) Do you not think that the officers of each service have a just claim upon the Government for the fulfilment of the conditions upon which they entered it, and that those conditions being fulfilled, there is no undue hardship incurred by the officers of either service, and no advantage gained?—Exactly.

5245. (*Viscount Melville.*) It appear to me by the measure which you are advocating that regiments must be made for officers, instead of officers being made for the service?—Not at all; you will see the opinion recorded of Sir John Lawrence and other officers; all those officers have served their country very well, I am merely speaking with reference to India. I think that nothing too much can be said of the services of Her Majesty's officers upon this occasion; I am now merely speaking of the Company's officers. I look upon it that those officers really deserve great consideration at the hands of the Government, for they maintained a struggle and maintained it well, at a time when in fact everything was against them. Many lost their families and all that was dear to them, but fought desperately, and did their duty.

5246. But the Government ought to compensate them for their losses, and not to make regiments for officers?—But I look upon it that it is to the advantage of the Government to employ those officers, they are accustomed to the country, they know it, they have experience of the people, and are valuable to the Government in a great many ways, in which new officers are not and cannot be.

5247. (*Chairman.*) They are employed now as I understand you?—They are employed to a certain extent, merely temporarily.

5248-9. (*Duke of Cambridge.*) Has it not always been felt to be of great importance to have a body of regiments of the line to counterbalance any local prejudices and feelings which Europeans would imbibe if resident in India in very large bodies. Has not that been the feeling of the Duke of Wellington and many other eminent men expressed on various sions?—I think that that is secured by the proportion which is recommended by Lord Canning. I think that the danger generally apprehended is that a local force would be rather looked down upon, and therefore in so far as its strength, has the effect of giving it weight, I do not think that that is a disadvantage, and when you keep the proportion which is recommended by Lord Canning of one-third from the line, you have a very strong counterpoise in the event of your anticipating that that feeling will be at all carried too far.

5250. But not half so strong as it was before when the tendency was the other way, and the Queen's European regiments of the line very considerably out numbered the European troops of the Company's service?—I say it with great deference, for I see entirely the way in which the question is put; but the question appears to me to assume that there would be almost an opposition of interest. Now, I regard the services according to this Act as royal services; the Indian armies as royal armies; and I do not see why there should be that feeling of several interests; they are both serving the same Government; they are all Englishmen, all English officers. I do not understand why there should be that feeling.

5251. Because they have separate interests; the one local, and the other general?—The one being local, and its system of promotion entirely distinct and different, and therefore not in any way mixed up with the purchase promotion.

5252. Is not that the very fact which engenders difference of feeling and jealousy of feeling, and perhaps even upon no grounds whatever, but merely the fact of their being distinct services?—At the present time in Her Majesty's army there are engineers, and there are artillery, and under the Admiralty there are marine corps in which the promotion is entirely by seniority, and I believe there are colonial corps. They may or may not be by seniority, I suppose not, they are by purchase. However, the coexistence of those two systems of promotion, that by seniority and that by purchase, does not appear to work in the royal army any particular opposition between the two, and I do not see why that which coexists in the royal army without any inconvenience should not coexist with the royal Indian armies, which would be exactly similarly circumstanced. They would have their own system of seniority promotion just the same as the marine corps, or the royal artillery, or the royal engineers.

5253. Only with this difference that they would not look to the same head as all the other corps look to one and the same head, and no distinction is made between them; but in the way proposed these two corps would look to quite different heads?—I think that practically they all look to the same head, inasmuch as all honours and all distinctions flow from Her Majesty. Therefore I take it that they all look to the same head, and that they all serve the same executive government. At the same time, with respect to India, I do not think that you can strip the government of India and the local governments of their position without great detriment and danger to our rule in India. There is also another thing which I have omitted mentioning, which I intended to mention before, which is that I think that it is of immense importance to India to keep the presidential armies separate, and that this amalgamation would inevitably lead to fuse those three armies together, which ought to be avoided as much as possible. It is rather a delicate point, but in future we cannot be too careful in keeping the three armies separate, and in fact it would be better if we divided the native portion of the Bengal army into two armies; but merely looking with reference to the three presidencies, I look upon it as exceedingly important not to take any measures which shall fuse those three armies.

5254. (*Major-Gen. Hancock.*) Do you refer to the European armies?—The whole. I do not think that you can amalgamate the local European forces of the three armies with the line without practically fusing all those three armies into one.

5255. (*Duke of Cambridge.*) What has that to do with the native army; why should that not be kept quite distinct, being quite a different element?—Those three armies are accustomed to see their local troops, and to act with their local battalions and so forth.

Colonel H M Durand, C B

25th Nov. 1858.

5256. (*Major-Gen. Hancock.*) Is it not very necessary in order to preserve the high status of the native army that it should be combined, as it has hitherto been, with a considerable European force?—I think it is very necessary to maintain well balanced forces.

5257. (*Chairman.*) The officers of the local force and those of the great native army have all the same interest have they not? I am talking of the European officers in the Indian service.—The European officers have the same interest. The European officers of Madras, for instance, have the same interest; the European officers of Bombay have the same interest, and the European officers of Bengal have the same interest.

5258. Have there been occasions on which they have shown a disposition to defend their own interests rather than do their duty to the Government?—There is an instance a long time back in which they have.

5259. Instances have occurred?—Instances have occurred.

5260. And they were balanced by the Queen's army?—Yes.

5261. Would not there be great danger, if you had a great preponderance of the local force, of that occurring again? Would it not be necessary for safety to keep up a Queen's army there for the very purpose of balancing that interest?—Not if you treated them all alike. I do not think there would be the slightest danger.

5262. You admit that their interests are separate, and you wish to keep them separate?—I wish to keep the armies distinct.

5263. Is it not necessary for the safety of both, that there should be a power, the one to counterbalance the other?—I think that you do so by having the proportion which is proposed. If you mean that the 30 regiments are stronger than the 15 regiments, that is of course.

5264. (*Major-Gen. Hancock.*) Does not that form a very strong argument for having both line and local troops in India?—Certainly; it appears to me that that is foreseen and provided for in this memorandum of Lord Canning's. I did not touch upon the point, because it is a delicate point; I was nearly approaching it, and then I did not touch upon it. Of course, wherever you have at a great distance from the mother country large bodies of troops there is always danger, and must be danger.

5265. (*Duke of Cambridge.*) You said that you would not strip the Governor-general or the Governors of any authority. In what way would they be stripped of any authority?—I think that the local armies ceasing to look up to them it would very much diminish their power, influence, and authority.

5266. In what way would they cease to look up to them?—For instance, if I understand the advocacy of amalgamation, it would introduce into the local service exactly the same system as exists in the royal army, namely, that the greater proportion of them would come under the purchase promotion system. It would come into that system which would be in no respect under the local governments at all; it would be no longer what it is now, namely, that the whole of the promotion and everything else passes necessarily through the local government, that is to say, that the officers have their promotion from the Governor-general if they are in Bengal, or from the Governors of Madras and Bombay.

5267. Upon certain regulations laid down?—Upon certain regulations laid down, but those regulations would not be departed from in the present instance.

5268. Supposing that certain regulations are laid down, whether it is for the royal army or for the local army, those regulations are acted upon. Whatever regulations are laid down may be laid down, of course, with the entire concurrence of the Secretary of State here, and his views may be embodied with those of the Governor-general or in any mode you like, but surely there would always be regulations, and they would not be departed from?—It appears to me practically to remove the control of the army, and the authority which the Governor-general, for instance, and the local governors have over the army.

5269. Was not that authority formerly vested in them under the Court of Directors?—It was formerly vested in them under the Court of Directors; it was always exercised in connection with the advice of Her Majesty's Commander-in-chief and the local Commanders-in-chief, but still it was under the government of India.

5270. The government of India could not remove an officer, nor do any act without the concurrence and sanction of the Court of Directors?—They could do it temporarily, but still it does not appear to me that that power should in any degree be diminished.

5271. In what way would it be diminished?—I think that if the local armies ceased to be under the local governments, it will practically be diminished, and necessarily be diminished.

5272. In what way would it cease at all, more in one way than the other?—I could bring forward an instance which happened lately, although it is perhaps of no great moment. Our own officers, those under the government of India, were precluded from leaving the country whilst service was going on; acccording to the Governor-general's orders, no officer could even retire from the service pending those operations. It was not the same thing with respect to the line.

5273. Why not?—There were officers who were exchanging and going home.

5274. By whose authority was that?—I really do not know. That has merely occurred to me as an instance. There are 50 others if I went into them.

5275. (*Lord Stanley.*) You consider that a local army established for service in India alone, and looking to the Governor-general and to the local Commander-in-chief as its immediate superiors, is far more closely connected with India than any portion of the general service army which is sent there to be renewed after a certain time?—Certainly, the general service army being subject to continual reliefs.

5276. The one class of officers are comparatively strangers in the country, and the others come there to pass their lives?—The latter are comparatively permanent. If you will allow me, I will read the opinion of Lord Elphinstone, which bears upon this point. He takes a different view upon the question of amalgamation from myself, but he says, "If there " is one thing which must be laid down as a prin- " ciple not to be departed from in our military " arrangements in India, it is the entire subordi- " nation of the army, both European and native, to the " Government of India. The troops of the Queen's " regular army while serving in India must be wholly " subject to the authority of the Queen's government " in India. Regimental promotion indeed may be " left entirely to the Horse Guards, but the patronage " of every staff appointment in India, should be " as, with very few exceptions, it now is, entirely in " the hands of the supreme and local Governments, " and of the supreme and local Commanders-in- " chief."

5277. (*Sir H. G. W. Smith.*) Are you not of opinion that previously to the revolt and to the alteration of the constitution of the government of India, the British army was auxiliary to the Indian army. Whereas now the thing is materially changed; India has become a royal possession with a royal government, and the local army must be the auxiliary, and the Queen's army the principal. Hence the armies of the three presidencies may be continued precisely as they are, and form the auxiliary of Her Majesty's army in the respective presidencies?—I never regarded the European armies as the auxiliaries. Our whole empire in India has necessarily been won by European troops, and therefore I for one always regarded the European troops as the main thing, and the native troops as the auxiliary; I therefore, start from rather a different point of view from that which you put in the question. I look upon it that the

Colonel H. M. Durand, C.B.

25th Nov. 1858.

native troops now, as heretofore, are merely the auxiliaries of the European troops. I suppose there is no English officer who would not very much sooner command in action a regiment of his own countrymen than he would one, or two, or three regiments who were not his own countrymen.

5278. The British army were 26,000 men in all India, the native army were 280,000, I believe; hence, the British army were the auxiliary?—But it must be recollected that now you have an army of about 100,000 European troops in round numbers, and you have 300,000 armed natives; therefore, you have not altered the proportions as much as you appear to suppose. But I have never looked upon the native part of our forces in India as anything else but secondary, necessarily, to that element which forms the strength of our power in India, namely, the European troops.

5279. Still you can hardly regard it in that light, because the native army was the army of the country, and it possessed all the advantages which an army can possess; it had every staff situation. Her Majesty's regiments came there for certain periods of service, and they were kept exclusively as auxiliaries to the great army of India?—I can only answer of course for the Governors with whom I had the honour of serving. There was every desire, for instance, on the part of Lord Ellenborough that all commands should be fairly distributed. There was a class of minor appointments, of staff appointments, which were for some time confined to the local armies, but Lord Hardinge first altered that; and it has been very considerably altered since; and now it is very much altered altogether; and, in fact, does not exist.

5280. (*Duke of Cambridge.*) Supposing that the Governor-general and the Governors retain all the power which they have hitherto held, and that the power exercised independently of them is merely for the general military control of the army without any reference to local circumstances whatever, which would be entirely provided for in India, do you not think that if those details could be worked out it would be of great advantage to the army to be altogether under one military head as regards general organization and discipline?—If you can strike off all consideration of the political questions which I think so seriously affect the case, there cannot be a doubt that putting it in the light in which it is at present put, namely, one army under one control, which is what is stated by the question, will be advantageous; but the political bearings of the subjects appear to me in this case to be so great, that you cannot put them aside.

5281. Admitting, for the sake of argument, that there should be a local army as well as an army of the line, even in that case, with all the provisoes which I have already stated as regards the power remaining in India, would it not be a great advantage even for that local army and for the army of the line to be, as regards discipline and general organization, under the supervision and control of one Commander-in-chief?—I think that it necessarily is that; it always has been that, and must continue to be that. So far as I am aware, every Governor-general in all that he does with reference to the Indian armies constantly either consults and acts upon the advice of the Commander-in-chief in India, who is in communication with the Commander-in-chief in this country, or he acts in communication with the Secretary of State, who is in communication with the authorities here. I was with Lord Ellenborough, and he was in constant communication with the Duke of Wellington about different things, and it appeared to me that, practically, the whole bearing of the discipline of the armies was brought through the Government of India, and through the Board of Control before the Government here, who consulted the Commander-in-chief.

5282. Supposing that such is not the case; supposing that there is no official, but only a private intercourse between the Commander-in-chief at home and the authorities out there, would not you call that a disadvantage?—I should think that in a matter of such great importance there ought to be more than a private communication, and that there would be.

5283. You think that it would be an advantage?—That there should be communication. I am not aware how business is conducted, but I suppose that the Cabinet in matters affecting the armies in India would certainly consult the Commander-in-chief.

5284. Would you not have any official communication between the Commander-in-chief in England and the Commander-in-chief in India, irrespective of any great Cabinet question; ordinary official communication?—Not for direct action upon the armies of India. If the question involves that the Commander-in-chief in this country could write to the Commander-in-chief in Bengal, or the local Commanders-in-chief of Bombay and Madras, so as to have a direct action upon the local armies there without reference to the local governments, then I say that there should not be, because I think it throws out of gear the Governor-general and the local governors.

5285. Do you mean as regards the movements of troops?—I mean with regard to every thing, because the organization, the regulations, and everything connected with these services are so complex, and often involve such dangerous questions, that really none but the local governments are necessarily competent to deal with them. I use the word "competent" merely in a lawyers way of using it. It is only the local governments who have all these regulations and things at their fingers ends, and are really competent to deal with these cases. Your Royal Highness will allow me to give you an instance of how far that goes. The other day, when I was coming to England upon this duty, I was anxious to bring home the various regulations of the different services, which are usually in one or two volumes, or whatever the number may be; I found that in Calcutta I could not get those of Madras; when I landed at Madras, I applied to get those of the Madras army; they were sent to me with a note from the officer who sent them, saying, that this was the only printed set which they had got, that it was old, and that a great many of the regulations were obsolete, and that therefore I might be misled if I trusted to this edition. I instance this to show how very difficult it would have been for any one, even in Calcutta, had he taken up this book to give any instructions, or to do anything with reference to Madras without referring to Madras; how very easily he might have gone wrong.

5286. Do you think that that is an advantage?—I think that it is unavoidable where you have three armies and where you must maintain a distinction, for I look upon it as of most primary importance to our hold of India that these three armies should be distinct and separate.

5287. (*Major-Gen. Hancock.*) Both European and native?—Both European and native.

5288. (*Chairman.*) What is the advantage of having three distinct systems?—The differences between the European branches are very small; there is no very great difference, I apprehend, but I have not gone into it; there are differences. There are differences, for instance, in the Bengal artillery and the Bombay artillery, and the Madras artillery. There are very likely minor differences in the local European artillery, but I am not perfectly aware of that; I am aware of differences in the organization of the artillery and things of that sort, but there are very great differences in the general regulations; for instance, there are differences with reference to pay, with reference to allowances for this, that, and the other; all these things in the course of a century, or whatever may have been the duration of our rule there, have arisen gradually, and the whole of this military legislation for these three armies has gradually arisen, being suitable to the necessities of those three armies within their several beats; and according as circumstances have arisen, these regulations have been altered. It is almost impossible for one of the three governments exactly to be able to write to another to give them instructions upon anything which involves these sort of rules and regulations which have risen gradually. I dare say the Marquess of Tweeddale, who was Governor of Madras, would understand what I mean.

5289. (*Duke of Cambridge.*) But is that an advantage as far as Europeans are concerned; I admit that it is an advantage as far as regards the natives?—I think it is no disadvantage with respect to the Europeans; I look upon it that the amalgamation of the European branches would lead almost necessarily to the fusion of the three armies of native troops, and I think that there can be nothing more dangerous to our hold of India than anything which tends to break down the demarcations between those three armies. I would maintain those three armies as distinct as I possibly could.

5290. (*Viscount Melville.*) Can anything be more inconvenient (for I have experienced it) than having these differences existing in the presidencies where the troops of two presidencies have to act together?—These are minor inconveniencies; but I was in service in Affghanistan with Sir John Keane, who had two armies, he had the Bombay and the Bengal troops together, and we were acting up in that country for a long time. I was aware of no great inconvenience at all, nor in Lord Gough's army in the last Punjaub campaign.

5291. What is the reason that one system cannot be established for the whole army of India?—Since you have put the question, I really regret very much the tendency to assimilate and to centralize, which has gone on already, and I look upon it that we have just stopped in time from carrying it further, and that if it is carried further, it will only endanger us still more.

5292. The centralization which has taken place is not to be attributed to system, but the centralization is from the Government taking away the powers of commanding officers and doing that as a Government which ought to be left to generals of divisions and commanding officers. That is the centralization which has taken place, and which has done the mischief, but there would be no danger from having the same system throughout the three presidencies?—I quite agree with you in part of the question; and you will find if you go through the papers which I shall hand over to the Secretary of State that there is a very strong and universal opinion as to the necessity of increasing the powers of commanding officers of native regiments especially; that is a point on which there is great unanimity.

5293. (*Major-Gen. Hancock.*) Surely it has not been the Government but the Commander-in-chief who has adopted this centralizing system, and taken away the powers of commanding officers, because the local governments have never interfered in any way with respect to the discipline of regiments?—According to the general opinions which have been laid before the Government of India it has been mainly the Commanders-in-chief.

5294. (*Sir H. G. W. Smith.*) You cited an instance in which the separate armies agreed most particularly well together, and in which you served yourself?—Yes.

5295. Are you not aware that there was considerable jealousy, if I may so call it, between the commanders of those separate armies; one belonged to Bombay, and he said that he would command, and the other belonged to Bengal, and he said that he had no right to be commanded by a Bombay officer. I was not present myself, but I have heard accounts of such dissensions?—I do not recollect any more jealousies than what you mention; I think that in all armies which I have ever met with there are always minor jealousies; I have known as great jealousies in other armies.

5296. (*Duke of Cambridge.*) I do not think I have yet had an answer as to the result of direct official intercourse between the Commanders-in-chief in India and here, provided that that intercourse is so guarded and so arranged by rules and regulations that you cannot in any way interfere with local arrangements or detract from the power or authority of the Governor-general or the governors of the presidencies?—May I ask whether the question is restricted to communications here with the Secretary of State or whether it refers to direct communication with India?

5297. I meant direct communication with India?—I think that it should all be through the Secretary of State and through the Governor-general and Governors in India. It is a difficult thing perhaps to convey my meaning, but the importance of maintaining the power and position of the Governors and the local Commanders-in-chief, but of the Governors in India especially, I think is paramount; I think it of the greatest possible importance, and that nothing should be done to diminish that power if it can be avoided.

5298. In what way would the actual intercourse between the two Commanders-in-chief take away from the powers of the Governors or the Governor-general?—I am supposing that there is direct action from the highest military authorities at home through the local Commanders-in-chief in India upon the armies of India. That would necessarily lead to those armies looking up directly to the authorities at home and rather putting aside, if I may use the expression, the power of all immediately over them; that is the danger.

(*Lord Stanley.*) I assume that by direct intercourse between the Commander-in-chief here and the local Commander-in-chief, what is meant is, that instructions shall be given by the one to the other.

5299. (*Duke of Cambridge.*) Merely as regards the existing regulations?—There would come into play these regulations of the different services. The regulations and the practice of these different armies and services have grown up with the growth of those armies, and are not well understood even by those who are in India, that is to say, a Governor-general will always refer to a governor at Madras. He will not act directly himself for the simple reason that he is afraid to act; he knows how dangerous it is. Therefore, what with the extreme advisability of maintaining the separation of those armies (I would keep them distinct and separate, for the great political advantage of it we saw in 1857), and what with the danger of direct action, I should certainly strongly advocate everything being done through the Secretary of State and the governments.

5300. (*Chairman.*) Although the Indian army is nominally transferred to the Queen, you would wish it still to remain the army of the Governor-general?—But I look upon the Secretary of State, and I look upon the Governor-general, and I look upon the Governors of the presidencies, and I look upon the Commanders-in-chief, as all of them Her Majesty's officers; I do not see a distinction or a difference.

5301. (*Lord Stanley.*) You consider that all executive authority in this country necessarily emanates from the Crown?—Yes; and what is more I look upon this that every officer in the Company's army at the present time, and even during the Company's rule, knew perfectly well that all honours and distinctions emanated from the Crown, and looked to that source for all. Therefore I do not see the distinction.

5302. (*Chairman.*) Are you not aware that it is the prerogative of the Crown to communicate with the army through the Commander-in-chief, independently of the executive government?—I am quite aware of that.

5303. The Crown would have no such power in India?—That was for Parliament to have taken into consideration when they passed this Act. I think the Act wise with reference to the political position of India, and looking to the present difficulties of India I think this Act perfectly right and wise. I suppose that the Cabinet conveys the orders of the Government in connection with anything so important as the discipline of the armies of India. I suppose that it would consult the military authorities which were in connection with the executive.

Colonel H M. Durand, C.B.

25th Nov. 1858.

5304. (*Duke of Cambridge.*) Then you would not object to have a direct connexion at home; you would think it desirable?—At home I suppose that it exists, but I am speaking in entire darkness. I do not, of course, know the working of the Cabinet.

5304. (*Major-Gen. Hancock.*) There is another point which I think should be considered in fixing the proportion between the local European force and the line force; it is this, that the local force represents an entire army, whereas the line force is part of a large army in England, and, of course, participates in the dignity which belongs to that army. Do you not think that that is a reason why the local force might be increased to the extent recommended by Lord Canning, without in any way deteriorating the position of the line force?—I do not think that it can deteriorate the position of the line force. I look upon Her Majesty's line as the finest body of troops, perhaps, that exists anywhere, therefore I do not see how it is to deteriorate it in any way.

5305. (*Lord Stanley.*) I understand the question to mean this; we do not allow that an opposition of interests will exist between the local army and the army for general service, but assuming that any such opposition of interests could be supposed to exist, and any consequent jealousy to arise, would not the importance of that portion of the general service army which is quartered in India be preserved, not by the comparatively small number of troops in India, but by the general importance and numerical strength of that army which is scattered over the whole empire?—Certainly; and the general apprehension seems to be that the local army would be the one which would be deteriorated. For instance, Lord Elphinstone in his opinion says, "it is impossible that any local troops " can be really equal to the British line." He thinks that "they must always be conscious of a species of " inferiority," because " they do not fight the battles " of England on the battle fields of Europe." That is his opinion, and it goes on further, so that the general impression is rather the other way, namely, that the danger would be that the local army would be looked down upon.

5306. The summary of your view then upon this point is this, that there is no danger whatever of even a small numerical force of the general service army in India being looked down upon by reason of its smallness, whereas there is very great danger that a small local army in the presence of a preponderent general service army might be looked down upon, and regarded as an inferior service?—Most certainly.

5307. (*Duke of Cambridge.*) Do you think that that has been the case hitherto? Do you think that the army of the East India Company has been looked down upon by the regiments of the line? Have you had any reason to suppose so?—Personally I have never seen any misunderstandings or disagreements between the two services. I have seen them go on upon service and off service with a very good understanding between them. How far here in England the one service may be looked down upon, and the other considered the superior, is of course a sort of social question, which I do not suppose your question intends me to deal with; I limit it simply to India. So far as regards the services getting on well together, I have not seen any difference.

5308. Then practically you have not seen that which has just been suggested, namely, that the smaller numerical force has been looked down upon, that has not been the practical result?—That has not been the practical result, but it was a very large army existing at that time. The local European part of the army of Bengal formed a very small portion; one was not separated from the other. The army was looked upon as a whole, and the service was looked upon as a whole. I mean that the local European and the local native was one great army, the Company's Bengal army; and any great army has a weight of its own, therefore, that weight was acknowledged and felt, and all the practice of the service and the rules of the service had reference to the officers having a fair proportion of commands, and so forth. They got on very well together; I never saw any disagreement.

5309. (*Major-Gen. Hancock.*) Has it not been the case, that since the year 1788, when King's commissions were first granted to the Company's officers, they have not held the same high status which the Queen's officers have held, in many respects. I will particularise some of them, to enable you to understand what I mean; for instance, the Order of the Bath was extended to the Company's officers actually only in 1826. Brevets for service were first granted in 1828. The rank of general was first given to the Company's service in 1837. The nomination to be Queen's aide-de-camp was first introduced in 1842. Rank in Europe of the Company's officers was first acknowledged in 1855. The first Commander-in-chief ever appointed from the Company's officers in India was appointed in 1856?—Yes.

5310. Do not those instances show that hitherto the officers of the two armies have not been placed upon exactly an equal footing?—They have not been placed upon exactly an equal footing, according to the instances which you have brought forward, that is very clear; but my reply had more reference to this: I understood the question to be with regard to what I had myself seen as to the two services out in India, and the way in which they got on with each other, and not with reference to the treatment of the service by the home authorities at all.

5311. (*Viscount Melville*). If there is any chance of these jealousies existing between the two portions of the European force, is not that a reason for having one European force, instead of two?—I do not see why these distinctions and differences should exist, or why these jealousies should exist, and I look upon it that the political advantages so overbalance the minor disadvantage, that I do not think that they are to be put into the balance.

5312. (*Duke of Cambridge*). Do you think that it is a political advantage to the empire to tie up a large proportion of Her Majesty's troops in India alone, and to withdraw them from the direct action of their own Commander-in-chief?—I think that you cannot hold that country without a large body of European troops in it, and that a considerable proportion of the number of European troops which must be kept in that country ought to be as permanent as you can well make them, with reference to the variety of advantages connected with that permanence of employment there. Therefore, although it involves the necessity of their being under the direct control of the Government of India, and the Secretary of State for India, I think that it is preferable to a system which involves rapid changes, and also which involves direct action upon armies, the regulations and the system of which cannot be so well understood here as they are out there, and cannot be tampered with without great danger; it is the danger of the thing which presses upon my mind.

5313. It appears to me that all regulations cannot be laid down here, but they must be laid down in connection with the authorities out there. If the regulations are laid down, and the only thing is to work those regulations out strictly, I cannot see what danger there can be in that respect. No regulations can be made or altered without the authorities on the spot being a party to it?—I think that practically the direct action from England would be full of danger.

5314. (*Col. Burlton.*) Do you not think it likely that, if there was that direct action from the authorities at home, putting aside as it were the Governor-general and the governors of the presidencies, it would have a great effect upon the natives in diminishing the high prestige of the Governor-general and the presidential governors?—I have all along agreed that there must be no diminution of the power and position of the Governor-general, and necessarily when the natives saw that his control over the armies was not what it was before, as soon as that became known the idea of his power

Colonel H. M. Durand, C B

25th Nov. 1858.

would be diminished; there cannot be a doubt about it.

5315. (*Viscount Melville.*) In what way will the natives see the power of the Governor-general diminished in that respect, seeing that hitherto a large proportion of the European force has been of Queen's troops, and not of Company's troops, over which he would have the supreme control?—It never has been so yet; you would take away the artillery and all the European troops, and that would be at once seen, the Bengal army would be diminished to nothing at all. There is not any native prince who does not read and hear what is going on. It would spread amongst them that the control of the army was taken away.

5316. The local control would not be out of the power of the Governor-general at all?—They do not draw such nice distinctions; they do not understand nice distinctions, and nothing could be more prejudicial in my opinion to the power of the Governor-general than a thing of that kind. Nothing could be more prejudicial to the influence of the Governor-general in India than that his power and control over the local army should be at all diminished, and put upon a different footing from what it has been hitherto.

5317. (*Lord Stanley.*) The result of what you have been saying on this head is that you are in favor of giving a consultative power, as indeed is now possessed by him, to the Commander-in-chief in this country, that influence to be exercised over the Indian army through the Secretary of State and the local Government of India, but that you are not in favour of giving him any direct authority or control over the local Commander-in-chief?—Yes.

5318. (*Duke of Cambridge.*) You stated as a reason for thinking it desirable that a portion of the regiments of the line should be in India, that it was a great field for the officers of Her Majesty's service, and would be a great advantage. I fully agree with that view; but I see in the minute of the Governor-general that he objects to having any royal artillery in India. Surely the same rule that holds good as regards the army of the line holds good as regards the artillery; why should they be excluded from that field?—I think that there is a difference. The royal artillery going out to India must be equipped entirely in India. Its system is peculiar; and I am not aware that it is necessary as a point of emulation or example, or anything of that sort, that it should go out there.

5319. Do you hold that opinion with respect to so important a branch of the service as that?—If it is merely wished that they should have the value of the experience in India, I fully admit that it is of value to a royal artillery officer to have the experience which he will acquire in India, and if you could give it to him without great extra cost to the Government of India, then I should see no sort of objection to a portion being of the royal artillery; but the fact is that the employment of the royal artillery does occasion a great extra expense.

5320. Why?—You have a separate staff.

5321. All those are matters of regulation that could be reduced?—When they come out of course they have to be equipped, and everything has to be found in India.

5322. There would not be any extra expense in equipping them any more than other troops.—For instance, they do not bring out their horses with them; you have to find them horses, you have to find them followers, you have to find them interpreters for each battery, in fact there are a great many points.

5323. You have to find followers for the regiments of the line, you have to find horses for the cavalry. The materiel of the battery coming home would be made over to the one which goes out; what would be the extra expense?—The extra expense is what I have mentioned, you necessarily have a separate staff, there are also the reliefs, which are expensive.

5324. (*Viscount Melville.*) You must have followers for the European artillery now?—There is not that necessity nor that advantage in the royal artillery going there which there is as regards the line.

5325. (*Duke of Cambridge.*) Why is there not that advantage?—I suppose that the artillery of this country is as good as the artillery in India.

5326. But all artillery taking the field has always the advantage of service, which it has not in garrison?—I admit the advantage to the royal artillery officer of his practice in India, but I think that the Government in India would pay very dearly for it.

5327. It cannot cost more?—I think, if looked into, it would be seen that it did cost more.

5328. Suppose that it did not, what would be your opinion then?—In so far as regards the advantage to the royal artillery in having some officers who have had experience in India, it is an advantage, but simply upon that point, I do not think that it is any advantage to our artillery in any way.

5329. (*Major-Gen. Hancock.*) There would always be the extra expense falling upon the revenue of India of the reliefs backwards and forwards?—Yes; I think, if you look into it, you will find that the expense incurred is heavy.

5330. (*Col. Burlton.*) If all the European troops in India were of the line, would it not greatly curtail the field of selection open to governors in selecting for appointments competent officers acquainted with the customs and habits of the people of the country?—With the first reliefs I think it would almost necessarily entail a very large increase to the civil service of India, because men who are relieved every eight or ten years, require some time before they become acquainted with the country; and you could not employ them in the same way as you can employ officers who are more permanently stationed in the country; therefore I look upon it that it is one of the disadvantages of that system that it would lead almost necessarily to a very large increase in the civil service, because a great many officers in a time of peace are occupied in civil employments.

5331. (*Duke of Cambridge.*) Supposing the officers of the regiments of the line were to hold these appointments, if they were competent to fill them, do you not think that they would all exchange and remain in India, where their regiments were removed to another station, and that it would be to their interest and advantage to do so?—I am not sufficiently acquainted with the system of exchange in the royal army to be able to answer that question thoroughly; I really do not know how far the rules admit of officers exchanging; for instance, if war broke out in Europe and regiments were withdrawn, I suppose all the officers belonging to those regiments would have to accompany their regiments.

5332. (*Col. Burlton.*) At all events, under any circumstances, if the army was all of the line, some of the best officers in the political line or filling staff appointments, or anything else, would be liable constantly to be recalled by an order from home, and to be taken out of the hands of the Government, without a moment's notice?—I suppose so.

5333. (*Lord Stanley.*) Have you any means of ascertaining what the difference of cost is for an equal number of general service artillery serving in India, and of local artillery?—No, I have not; the sketch estimate would not give it. I have not the means of exactly stating.

5334. The experiment has never been tried, I believe, since the outbreak of the insurrection?—No.

5335. (*Viscount Melville.*) Is it proposed to maintain the horse artillery in Bengal upon the same footing as they are now, supposing they are continued?—I do not think that that subject has been touched upon.

5336. (*Duke of Cambridge.*) It is admitted by all that the Bengal artillery, and generally the artillery in India, are remarkable good; nothing could be better, I admit; but upon the same principle that you think it is an advantage to have certain regiments of the line to go to India as an example to the local corps to keep up their general efficiency, however good they

Colonel H. M. Durand, C.B.

25th Nov. 1858.

may be, do you not think that there is the same advantage, or perhaps to a greater extent, as regards the scientific corps, in a portion of the European force coming fresh from Europe?—I do not think that it is so necessary with them; so far as regards scientific acquirements, and their *status* as a scientific body, I look upon the Indian artillery as unequalled anywhere. I do not think that there is any body of artillery that I have seen which is better than the artillery of the three services in India. Of course my own experience in the field has been limited to seeing the artillery of the three armies. I have not had the advantage of seeing the royal artillery, or the artillery of any European power in the field, but merely judging from what one reads, there is no artillery in the world, I think, which has shown itself in any way superior for service to that of the three armies in India. I would instance it in this way, every officer who has turned his attention at all to his profession is aware that in a very short campaign amongst European powers, one reads of the carriages of the artillery suffering, and being ruinously shaken from their having to go over a bad country, with bad roads. I can speak for the Bengal artillery, which went through Affghanistan, for I happened out of curiosity to inspect the whole of the carriages of the park and batteries that were with us at different points. I had been reading at the time about the artillery of European powers and their failures, and I inspected the artillery carriages at Candahar, again when they got up to Ghuzni, again at Cabul, and again when they descended the passes (those of them which did descend), and came back to Delhi. I could not have conceived it possible that any artillery in the world could have made that circuit, and gone over that line of country, really having suffered nothing at all. The carriages appeared just as good as when they left the arsenals.

5337. (*Sir H. G. W. Smith.*) The carriages were built in India?—They were. I instance that as one of the things which show the excellence of the Indian artillery. I hope I am speaking most impartially, for I am not an artillery officer myself. It was from mere curiosity that I watched the effect of that campaign upon the carriages of our artillery; and I certainly cannot conceive anything which is such a test, and I cannot conceive any artillery coming out of such a trial better than they did.

5338. (*Viscount Melville.*) What wood were the carriages built of?—The various parts of the carriages I think were built of different woods, but the main part was of Saul.

5339. (*Duke of Cambridge.*) In what manner are the local European troops more under the control of the Governor-general than the troops of the line?—In the first place, as to all the officers their promotion, and everything of that sort, passes through the local governments; any promotion which is made is made by the local government.

5340. Subject to regulation?—Yes. A late order has gone out to India which imposes upon the Government the necessity of the selection of officers for the command of regiments. Now, of course, that involves entirely looking up to the Governor-general, to the Commander-in-chief, of course under the Governor-general; but I mean to the Government there.

5341. Do you think that the experience which the European officers have had of command in native regiments would justify the supposition that they would be all of them very well qualified to command regiments of Europeans?—The experience which officers acquire in the command of native regiments, is of course different from that which is acquired in the command of European regiments, but it is one which requires a great deal of tact and management, therefore I think that a man who is a good commanding officer of a native regiment, will most likely make a good commanding officer of a European regiment, but I think that a man who is a bad commanding officer of a native regiment will most likely make an indifferent and bad commanding officer of an European regiment.

5342. Taking the generality of officers who have served with native troops, do you think that they are very well qualified to take the charge of and to command European troops?—I think that there is nothing to prevent their being very good officers with European troops, and that if there is a difference of treatment and management required, which there no doubt is, they will acquire it very rapidly if they have not got it. In the artillery, we shift a man from the Europeans to natives.

5343. (*Major-Gen. Hancock.*) Among the field officers available for appointment to regimental commands, there is always a certain proportion of officers who have been trained from their youth in European corps, and are available for the command of such corps, is there not?—Yes.

5344. They are all in one line?—Yes; but his Royal Highness's question rather referred, it appeared to me, to the application of two battalion cadres, and therefore I answered it with reference to that. I think that, although those officers may have been accustomed to native troops and dealing with natives, there is nothing in that habit which should preclude them doing very well with European troops; it might take a little time.

5345. (*Duke of Cambridge.*) You are aware that new regiments require particularly good officers, and if the local force is to be increased there would be virtually new regiments formed. Do you think that in spite of all that, the officers of these cadres would be fully qualified to make good officers for those regiments?—I think that many of them are very good officers, and that you would get a proportion of very excellent officers. The difficulty which I should apprehend would be more in the case of the non-commissioned officers. It appears to me always that the difficulty in forming new corps is in getting good non-commissioned officers.

5346. (*Major-Gen. Hancock.*) In the event of additional regiments being raised for local service, of course non-commissioned officers might be received from the regiments of the line; they would be, according to my proposition, absorbed by volunteering into the new corps?—But you require them in the beginning.

5347. You would have them in the beginning?—I think that Her Majesty's regiments, if applied to, might afford a proportion of non-commissioned officers. You cannot begin absorbing at present. From your question, you appear to contemplate immediate absorption or reduction; now, I do not think that is possible.

5348. Supposing the Government of India were to raise half a dozen local regiments, upon the understanding that some of the regiments of the line in India should be simultaneously reduced in strength, I imagine it might be arranged by the authorities for a certain number of volunteers from the line to be received into the local army to form the nucleus of the new regiments; would there be any difficulty in effecting that arrangement?—I suppose it would depend upon the Commander-in-chief in India, whether he thought that corps could spare non-commissioned officers for the new corps to be formed.

5349. Of course it would be upon the understanding that each corps should only furnish a certain number?—I suppose it could be done.

5350. (*Sir H. G. W. Smith.*) Is the service generally speaking of officers with the European force in India a popular service?—At present most popular.

5351. (*Duke of Cambridge.*) Was it popular before the mutiny?—It depended upon officers. I have known officers who infinitely preferred serving with Europeans, and I have known others who preferred serving with natives. I saw it more amongst artillery officers, because they had more latitude and choice, inasmuch as part of the artillery being native and part being European, there was to a certain extent more opportunity of choice, and there you would see one man prefer serving with the Europeans, and one man prefer serving with the natives in peace.

Colonel H M Durand, C B.

25th Nov. 1858.

5352. (*Major-Gen. Hancock.*) In an army comprising so large a proportion of native troops, is it not a great advantage to the State to have officers who have been trained to serve both with European and native troops, and are qualified to command either a European or native corps ?—I look upon it that, of course, whenever you can train either officers or men to more things than one, it is an advantage. Therefore, putting it upon the general question, I should say it is an advantage to train them to both.

5353. (*Duke of Cambridge.*) You are, I think, anxious to see exchanges permitted ?—Lord Canning is very anxious to see it.

5354. Is it your opinion also that it would be desirable ?—I think that if it could be so arranged as that it could take place, it would be an advantage. At the same time I think that exchanges would very seldom take place.

5355. Do you think that it would assimilate the feelings and general habits of the officers of the army if they knew that they would be permitted to exchange ?—I think that it would give a satisfactory feeling to both. If there were officers in the local army, who by coming into property or anything else, wished to change and to come into those regiments which were more likely to serve in Europe, I think that it would be a satisfaction to them to be able to do that; and it might be a satisfaction to officers in the line who thought that they could get on in India, who had shown that they were good linguists, or had got their foot in the stirrup in some way or other with the people in India. I think that they would like it, and I think that it is very desirable, if it can be done.

5356. (*Major-Gen. Hancock.*) Do you think that any advantage would accrue to the public service from such exchanges ?—I think that from the point of view from which Lord Canning puts it, there would be an advantage to the public service, inasmuch as it would be one mode of putting them on a sort of equality.

5357. (*Duke of Cambridge.*) Amalgamating them ? —Amalgamating them.

5358. (*Major-Gen. Hancock.*) Would not one evil result to the local army too probably be that officers in embarrassed circumstances would not unfrequently exchange into it on their regiments being recalled to England?—But I look upon it that it would be the duty of the Commander-in-chief on the side of the British Government, and the duty of the governments of India upon the side of India, to see that the exchanges were fair and reasonable and equitable. For instance, it would not do that a person who was in any way noted as inefficient should be able to change into Her Majesty's line; and so it would not do that an officer from the line to whom there was any objection should be able to change into the other service; therefore it would necessarily be with the sanction and approval both of the Commander-in-chief and also of the Government of India.

5359. (*Lord Stanley.*) You would trust the respective heads of the two armies to protect the forces which they represented against bad bargains ?—Exactly; and I would trust to the personal interest of the two individuals to arrange with reference to the exchange, as to what either of them should pay.

5360. (*Major-Gen. Hancock.*) As a preliminary to introducing the system of exchanges between the officers of the line and local armies, it would be necessary, I imagine, to assimilate their systems of promotion; you could not carry out the system of exchanges between a service in which promotion by purchase and a service in which promotion by seniority are the established systems ?—I do not see that. I look upon it as a purely personal question between the two individuals subject to the approval or the disapproval of the two Commanders-in-chief, who are to look after the interests entrusted to them.

5361. Would not the exchange of a young captain from the Queen's service into a regiment of the local service in which there was a much older officer, say 20 years his senior, very much injure the prospects of all the officers below him ?—I guard the system of exchange by saying that the Commanders-in-chief and the Governments must see that the thing is fair and equitable, and not open to these sorts of objections.

5362. (*Lord Stanley.*) In reference to that part of the subjects, assuming that no local European army existed, or a very small one, and consequently that the defence of India were mainly carried on by the general service army, do you not think that that would greatly affect the class of men who would enter the army here, that is to say, will not there be many men who will enter the general service army under the existing conditions of service, men of independent fortune and social position, who would be very reluctant to enter it if they knew that very probably one-half or even more of their service must necessarily be passed in India ?—I think that it would go far to alter the character of Her Majesty's general army. I do not know whether I may be right or not in the view which I take, but I think that it would, have the effect of diminishing the number of men of means and rank entering the army. I think that the chance and the very great chance of long service in India and frequent service in India would have a tendency to diminish the number of men of rank and wealth entering the army, but I may be quite wrong in my view.

5363. (*Col. Burlton.*) Have you ever turned your attention to the circumstances connected with our funds with regard to exchanging, and how it could be managed ?—It could only be managed, I think, in the way I mention, by its being made a purely personal question between the two officers who wish to exchange. For instance, if there are any funds or money obligations on the part of an officer of the line which he has to meet, he must arrange and see that he can transfer those obligations to the other man, and in the same way a man from the local army who is subject to the obligations connected with all these funds must ascertain that there is no objection on the part of the managers of those funds to the exchange being made, because it necessarily involves that class of actuary questions connected with life insurance, relating to age and family, and whether a man is married or single, and all those sorts of things; but those I consider personal questions which the man who wishes to make the exchange must himself arrange.

5364. It appears to me, that you do not take into your consideration that these arrangements, although they are personal to the two parties, yet in every possible way must involve the interests of other officers in the fund; one life may be a better life than the other, and the manager of the fund may object and say, I will not have that man. The wife of one man may be younger than the wife of the other. What are you to do in cases of that kind ?—If they do not satisfy those objections, the officers wishing to make the exchange cannot make it.

5365. (*Lord Stanley.*) You would therefore limit the power of exchange to the case where the value of the two lives was equal or nearly equal, and where the security for the parties being able to pay the relative obligations must be held to be equally good ? —Yes; wherever the exchange was equitable to the public service with reference to the individuals viewed as public servants, and wherever it was equitable to the money obligations on both sides.

5366. (*Major-Gen. Hancock.*) Would you have exchanges made without the consent of the officers below the officers exchanging ?—I think that there would be a pretty good security where a man had to satisfy the different interests which were at stake; for instance, a man wishing to exchange from the local service must satisfy the funds and his own Government, and the other man must satisfy his. I think that there is a very good security there. The managers of these funds would watch with jealousy exchanges which they thought in any way unfair to the funds.

Colonel H. M. Durand, C.B.

25th Nov. 1858.

5367. Still you would have the exchange made without the consent of the officers below the officer exchanging ?—Yes, with the approval of the superior authorities.

5368. Do you think that this would be just on the part of the Government towards those officers who have entered the service under the pledge afforded by the regulations in force at the time, that their regimental promotion should continue to be made in entire accordance with the system therein laid down ?—I think it would not be unfair, if the exchange were equitable.

5369. Who is to be the judge of that ?—The two Commanders-in-chief for the several parties, or the Government of India and the Commander-in-chief.

5370. (*Col. Burlton.*) How can the Governor-general or the Commander-in-chief ascertain the value of lives ? I see a man coming, and I know that he is a very good hard life, and I see an old man with a diseased liver going out of my regiment ; no Commander-in-chief ban settle that question ?—But I should think that the managers of the funds would settle it.

The witness withdrew.

Adjourned to to-morrow, at 11 o'clock.

Friday, 26th November 1858.

PRESENT :

Major-General PEEL.
H. R. H. the Duke of CAMBRIDGE.
Lord STANLEY.
Marquis of TWEEDDALE.
Viscount MELVILLE.
Lieut.-Gen. Sir HARRY G. W. SMITH.
Major-Gen. MONTGOMERIE.
Major-Gen. HANCOCK.
Colonel BURLTON.
Colonel FORSYTH TAIT.

MAJOR-GENERAL PEEL IN THE Chair.

Colonel H. M. Durand, C B.

Colonel HENRY MARION DURAND, C. B., further examined.

5371. (*Col. Burlton*). With respect to exchanges, how would you dispose of the difficulty with regard to the orphan fund ; supposing, for instance, you have a number of children, and exchange with an officer who has none, how would you carry out that exchange ?—My idea is, that it is a personal thing between the officers; that they have to satisfy these funds, that it is a fair equivalent in every sense of the word ; I mean, that the people who are wishing to effect the exchange are fair equivalents, everything considered ; it falls upon the private individuals to satisfy the different interests concerned that they are fair equivalents.

5372. In the case of the orphan fund, the Government insist upon every officer being a subscriber to it as they do at present with the other fund. Supposing that by exchanges these funds lose a large number of subscribers, would it not be detrimental to the fund ?—In the first place I consider that it would be the object of the Government and the Commanders-in-chief to see that they were fair equivalents as regards the public service, and I assume that the different interests concerned, before whom these private individuals must make good their arrangements, would see that the thing was fair and just ; therefore I do not anticipate that there would be a loss.

5373. You are then speaking of the interest of the individuals only, I am speaking of the interest of the fund itself. If the fund loses its subscribers, if many subscribers to the orphan or widows' fund leave the service, and are replaced in the service by officers in the line who are not subscribers either to one or the other, those funds will become insolvent, even more so than they are at present ?—But I premise that they have to satisfy the different parties concerned as to their taking up the different obligations.

5374. You could not call upon an officer from the line, a captain or a major in Her Majesty's service, on coming into our service to join those funds at an advanced period of life ?—I start with the proviso that they are fair equivalents.

5375. Your equivalents are only between the two individuals, but the question involves a much greater matter than that, namely, the stability of these funds ?—The proviso is that they establish before the different interests concerned, that they are fair equivalents in every way, because, after all, it is only a question of money.

5376. In another point of view, if these two officers exchanged, would you have an officer who comes in and makes that exchange pay up the value of his life interest in the fund which he is about to enter ?—I think that he must do whatever is found necessary, in order that he may be a just equivalent for the man whom he replaces. I know of no better description of it.

5377. That is not the question. It involves the interests of the complete body ?—I am speaking with reference to the interests of that complete body. They say we do not approve of the exchange, unless such and such things are done or paid, or whatever it may be. If the private individuals agree to that, I do not see that there is any difference.

5378. If that were the case, and if a captain in the army, for instance, coming into our service had to make good the subscription of the person with whom he exchanged, both to the orphan fund and to the military fund, it would put an end to all possibility of exchange ; it would take some 5,000*l.* or 6,000*l.* in addition to what he would pay for the exchange, and I apprehend that it would be impossible to do it ?—I think that it would be very seldom done. I do not say that it would be impossible ;—you are taking an extreme case, you are supposing an officer of long service exchanging; now I think that it would not be usually among the officers of long standing, it would be usually on the part of lieutenants or captains, seldom among the field officers ; it might happen with them occasionally, but very rarely I think, and I do not think that it would frequently be done even among the captains and lieutenants.

5379. With regard to the military fund, in a case of that kind you would have the process to go through of getting an actuary to value the life of the man, to value the life of the wife, and to estimate the difference of value between the husband's age and the wife's age ; it would be a process of very great complication and difficulty ?—That I admit fully.

5380. But you think that it would be possible to do it ?—I do not see that it is impossible, I regard it from that point of view as a personal thing.

5381. Do you think that that difficulty regarding the fund, the military fund in particular, could be got over on this principle, that we make over to the Government of India the whole of the debt which they owe us, for which we hold Company's paper to the extent of about half a million of money, besides a claim which we have (and a just and equitable claim as I conceive) to the extent of about 300,000*l.*,

Colonel H. M. Durand, C B

26th Nov. 1858

making altogether a claim against them of about 800,000*l.* If we were to cancel all claims upon the State to that amount, and the State were then to take to itself the whole of our liabilities and responsibilities, both present and prospective, do you not think that that would be a better mode of adjusting the matter, securing to all present and future widows the pensions to which they are entitled, and all other things?—On the first view of the thing, I think that it would facilitate the matter very much; this is the first time that I have heard it suggested, therefore I have not considered the proposal; but upon the first blush I think that it would facilitate the object very much.

5382. You are aware that the military fund is, in point of fact, speaking as an actuary would speak, altogether insolvent?—So I have heard.

5383. That is, that its prospective liabilities, taking the value of each annuity, prospective and present, are about 200,000*l.* beyond the value of its assets?—I have heard that, but not with reference to Madras or Bombay. I was informed at the same time that the Government had taken upon themselves the payment of all widows consequent upon the late insurrection; that they had taken all such payments, and that therefore that had restored the solvency of the fund

5384. (*Viscount Melville.*) As you have been in India during the whole of the time of this revolt, and are aware of the native feeling at present existing, will you have the goodness to offer your opinion as to what you consider that the native feeling at present is, and whether you regard this outbreak really as a sepoy revolt, or as a general national rising?—I look upon the feeling as varying very much in different parts of the country, and therefore I cannot reply generally to the question. I should have to take different parts of India, and to give an estimate, so far as I could, of the state of feeling in those parts in India. I think that where the main military operations are now being carried on, the sympathy of the people is rather with the insurgents and the mutineers than with the Government, and my reason for thinking that is, that every officer who has been in command, with whom I have had an opportunity of speaking, always makes one remark, which is, that they have had extreme difficulty in getting information. Now, so far as I have seen upon service, wherever I have been upon service in India, and to the west of the Indus, where the feeling of the people was with you, there was comparatively less difficulty or no difficulty in getting information of the movements of the enemy. Where the feeling of the people was hostile to you, there was always difficulty, and often very great difficulty, in obtaining information with respect to the movements, or the position, or the force, or anything else concerning the enemy; and so far as I have had an opportunity of speaking with those actually in command on the present field of action in the north of India, there has always been the same remark, that they found considerable difficulty in obtaining information. I am speaking generally; there were instances where they got information.

5385. Taking that to be the case, I see that in Lord Canning's minute, he states that "the raising of troops "mainly Hindostanee must continue." Seeing that these are the very men who have revolted, how do you propose to raise men in whom you can have confidence?—The word "Hindostanee" covers a very large extent of country, and the mutineering sepoys were chiefly taken from two parts of the country, mainly from Oude, and some from the districts of one portion of Bahar. We left untouched, I may so say, a very large portion of the population, a great many strata, if you may so call them, of castes and people were left nearly wholly untouched; so that the recruiting may in a great measure avoid, if the Government so direct, those tracts of country where there is the greatest animosity shown or supposed to exist; they may avoid the dangerous parts of the country, and they may enlist in other parts of the country where there has been no exhibition of feeling to that amount, and where there is a reasonable prospect of getting men who would be as faithful as you can expect Easterns to be.

5386. Is it not the case that a feeling now exists on the part of the Punjaub Government, that the Sikhs and the Punjaubese are not to be particularly relied upon, and are a source of uneasiness at this moment?—I look upon the preponderance of the Punjaubee element as a very great danger, (you may observe in Lord Canning's memorandum that it is looked upon in that view,) and that is to be dealt with as soon as possible; it cannot be dealt with too soon, that is one reason why Lord Canning presses much for the settlement in England of these questions, and that the views of the Government should be sent to him with as great expedition as possible; he carries it to that degree that in a letter which I received from him lately, and of which, with the permission of the Commission, I will mention one portion, (it is a private instruction to myself,) he says, speaking of amalgamation which has been advocated by some of the officers and authorities, whose replies have been received by the Government of India, "Even if it be granted that amalgamation is possible "and desirable, the working of it out will be "tedious, and the first steps in reconstruction ought "not to be hampered by the consideration of it. If the "Commissioners do not dismiss it at once you cannot "urge too strongly that it should be the last point to "be taken up, and that the formation of a European "army, local to begin with, should not be delayed for "it. The real difficulties of amalgamating will not be "increased by creating a new army first." The subject upon which your last question touches is one which presses upon the Government, and to the importance of which that Government is very fully alive, and is extremely anxious, so soon as it is possible to begin reducing the preponderance of the Punjaubee element, which is really a danger, because as mentioned in the memorandum of Lord Canning there are about 75,000 Punjaubee troops, about 50,000 of these are irregulars as they are called, but still they are troops, and the others are spread through the police. Therefore on anything taking place in the Punjaub, under the supposition that such a thing occurred, a chord would be struck, not only in the Punjaub, but throughout every police battalion in which there were any Sikhs, and consequently at is of extreme importance that the local army of Bengal should be placed as soon as possible upon a footing which will permit the Government at once to proceed to reduce the preponderance of the Punjaubee element, which is not all Sikh. I beg to guard the Commission upon this point, about one-third of it is Sikh, and the other part is Mussulman, and from the Punjaub.

5387. (*Duke of Cambridge*). How does Lord Canning propose to meet that difficulty?—By forming some of the battalions which he proposes to form, and also if the Bengal artillery is brought up to the mark, which is recommended by Lord Canning;—the mere fact of our preponderance in that arm would go far to keep down and quiet everything.

5388. Supposing that to-morrow the Government ordered eight or nine additional companies of royal artillery to go out, what would be the difference; they would be much quicker in the field than any new artillery raised; the new artillery companies raised could not be in the field under a year or 18 months?—I think the royal artillery would cost more.

5389. Why?—Because the system is different.

5390. In what respect is the system different?—If you take the constitution of a battery, the number of gunners is much larger.

5391. What is the number of guns in an Indian battery?—Six.

5392. That is the same as ours?—But they have a larger number of gunners. The difference of system mainly arises, I take it, in this way. In England everything of the grooming sort necessarily falls upon the men attached to the battery, who all form part of the battery; in India that is not so. If your Royal Highness were to take the minute of Lord Canning,

Colonel H. M. Durand, C.B.

26th Nov 1858.

and the strength which he proposes for the companies of artillery and the reserve companies, and were then to compare that with the strength of gunners attached to a royal battery of artillery, you would see that there is a large difference, the fact being that in India, where you are forced to have grass cutters and sciees, part of the work, namely, the work of looking after the horses, and that sort of thing, falls upon them. Therefore, you are enabled to have your artillery at a much cheaper rate than according to the royal artillery system, because it requires, according to that system, more Europeans.

5393. That is a matter of detail. Suppose you arranged that the batteries of royal artillery did not go out stronger than the batteries of artillery in India, and that immediately on arrival these sciees and people were attached to them, what difference of expense could there be?—Perhaps there might be no difference of expense upon that point, if they were put exactly upon the same organization that our batteries are; but then you have the disadvantage of men who are wholly unaccustomed to the country, who cannot speak to these sciees, who cannot give them an order or do anything with them.

5394. How are the newly raised companies to be managed?—In the newly raised companies the men are mixed, you form new batteries, partly of old men and partly of new men, and therefore you have a mixture.

5395. You have not the means of doing that when a battery is in the field. How can you put recruits into a battery in the field?—It is constantly done. They are first of all trained. There is a reserve company or two. There is a battery, not in the field, where they are kept for some time, and they are sent to the other batteries; there is no difficulty in that way. Tombs's battery, I suspect, has very few men remaining in it who were in it a few years ago.

5396. What facility have you of forming the men out there rapidly?—You always have a proportion of old men remaining who understand the country, and have got into the ways of the people, and the ways of the service, and the new men join them and learn very rapidly.

5397. (*Major-Gen. Hancock.*) Is it not the case in Bengal as in Bombay, that the men of the European regiments of infantry are trained to and practised with the guns?—I cannot speak with certainty upon that point, for I really do not know.

5398. (*Duke of Cambridge.*) As a soldier, do you mean to say that if you had a battery formed of soldiers fully trained, you do not conceive that a battery so formed is a much more efficient battery than one formed of 30 old men and 50, 60, or 100 boys, recruits, fresh from England, and untrained?—If it was a question of bringing these batteries in front of a European enemy at home, I should say that necessarily the battery which was formed wholly of trained men was the better of the two; but where it is a question of taking them to a country like India, and where there are the mixed considerations of your having to deal with those men, and the other men, namely, grass cutters and sciees, and all that sort of thing, it requires some knowledge of the country and the climate for them to keep their health properly; and there really is a very great difference, then, for the old men indoctrinate the young men, and the young men, in fact, become experienced men far more rapidly than they otherwise would be.

5399. In what respect is the royal artillery, which went out to India, inferior in the field to the Bengal artillery?—I am not aware that I ever hinted that it was inferior.

5400. I do not mean inferior on general principles, but inferior through local circumstances, caused by what you state?—I would instance the things which I have just been mentioning, that a battery of men arriving wholly ignorant of the country, and having to be fitted out directly they land, are under very great disadvantages as compared with the battery which has been in the country for some time, which is all equipped, which knows its people, and has the habits of the people at its fingers' ends. The one necessarily comes under a very great disadvantage in comparison with the other. I do not mean that there is any inferiority in the men. I look upon the royal artillery as being just as fine troops as any others.

5401. Has it been found in practice that they have been inferior, not from any inferiority of arm or service, but from the circumstance of arriving in India, and having been suddenly sent into the field?—I think it has. I think it has been found that a great deal has had to be done in order to provide them with servants, to find them sciees, and find them grass cutters, and all those sorts of things.

5402. Was not that the result of a very great increase of artillery generally, which would have taken place whether it was royal artillery or Bengal artillery, or any other; was not it merely the result of adding so many troops and batteries to the force which was already existing there?—It comes in a very much more difficult shape when you land whole companies of artillery, and have to equip them wholly *de novo*. It is a very different thing when you send a detachment of recruits to a battery which is already existing, and which, wherever it is, has facilities of getting the people and things which are requisite. A commissariat officer would be able at once to explain the great difference which there is, because in the one case it is spread over a considerable surface, and in the other case you plump down a certain number of batteries and men; you have to fit those up and to provide them with everything.

5403. Granting, as I do at once, that that is a perfectly military and correct view of the case, supposing that you have to add companies to that force, is it not the same thing whether that force is royal, or Bengal, or Madras, or Bombay, or any other force; and must not the new formation always, for a time, somewhat retard the efficiency of the battery?—But the new formation is in the one case gradual; you send out the men, and they are diffused amongst the old batteries to bring up the old batteries to the proper strength. Drafts from the old batteries are taken to join on to the new men to form new batteries, so that the whole thing is, comparatively speaking, a gradual formation; it is not as if you plumped down so many hundred new artillery men.

5404. But for the time you make all the batteries in the field inefficient; you must take from them?—You take a certain number, but I do not think you make them inefficient; you make all these men from the moment you get them.

5405. (*Major-Gen. Hancock.*) As a matter of course, you would keep the batteries in the field efficient by supplying them with men from batteries at garrison stations, but without rendering the latter inefficient further than in having a few untrained men in the place of the trained ones?—My meaning is simply this, that you diffuse the new recruits amongst the old men, and that they are formed very rapidly, and acquire the habits much more rapidly than perfectly new men.

5406. It would be done according to the system now uniformly adopted in India, under which batteries ordered on field service are always weeded of their inefficient men, and completed with efficient men from batteries at garrison stations which are not expected to be employed in the field; is it not so?—Yes.

5407. (*Col. Burlton.*) Do you know how the royal artillery were sent up to the upper provinces when they landed; were they sent by steam, by rail, or did they march?—Some were sent by steam; it depended somewhat upon the time at which they landed; I think D'Aguilar's batteries, for instance, went up the river, and I think some were sent by land, for I think I remember their arriving by waggon train.

5408. Do you know whether any officers of the native Bengal army happened to be sent in charge of them, or with them upon those occasions?—I am not clear as to any particular occasion, but I know that

Colonel H M Durand, C B

26th Nov 1858.

with troops and batteries they have to give interpreters, because they are new to the country, and they require an officer to interpret.

5409. (*Duke of Cambridge.*) That is the case with a regiment of the line or any other regiment ?—Yes.

5410. Do you not think that, financially speaking, without reference to the other points to which you have alluded, it would be quite as easy to put the detail of a company of royal artillery on the exact footing of a company of Bengal artillery, as any other portion of the troops that may be sent out ?—If you alter their organization and assimilate it to that of the Bengal artillery, necessarily it can be done.

5411. (*Chairman.*) Can you state the number of officers who have been added to the Bengal artillery since the breaking out of the mutiny ? How many officers have obtained commissions in the Bengal artillery since that event ?—I am not able to answer that question, for I have not any data.

5412. (*Major-Gen. Hancock.*) There has been no augmentation of the Indian artillery, has there ?—There has been no augmentation, there has been an assimilation, but it was no augmentation. When the question was put to me yesterday with reference to the employment of some 36 or 46 officers, I was thinking that the question rather referred to an increase ; there has been no increase, but merely an assimilation ; an increase is required and recommended. There is a minute by Lord Canning, in which he strongly urges that there should be an increase.

5413. (*Duke of Cambridge.*) There has been an increase of officers already by the very assimilation to which you allude, has there not ?—I think your Royal Highness will find that there has been no absolute increase of officers ; that the actual number of officers remained exactly the same. There was an assimilation of grades, but it went no further than an assimilation of grades ; there was a difference made necessarily, but the establishment was not officially increased. There is a requisition for its increase.

5414. In the royal artillery it stands thus : a first captain, a second captain, and three subalterns. As I understand it, the establishment of the Bengal artillery was one captain, and, as far as the European part of the artillery went, there were three lieutenants, but not so for the native batteries ; they had much fewer. There are now two captains and two subalterns, according to the establishment of a Bengal European battery ?—Up to the time when I left India there had been no definite order, saying that the strength of a battery should be so and so, therefore I cannot answer the question positively.

5415. (*Chairman.*) My question applied to the original system, the ordinary cadets ?—I cannot answer the question, because I do not know the exact number sent out, any army list will show it.

5416. I understood you that the great difference in the Bengal presidency is the number of artillery officers who are left unemployed ?—I never said that ; instead of their being unemployed we want more officers of artillery. If you understood me to say that, I never intended to say it at all, however I may have expressed myself.

5417. There is no want of employment for the artillery officers in the Bengal presidency at the present moment ?—No, we want more.

5418. (*Lord Stanley.*) Is their present employment permanent or temporary ?—The present employment of some of the artillery officers is temporary, with a great many of them who are with the troops and batteries it is permanent ; then those with the ordnance commissariat are on staff employment, those with contingents or employed politically are of course employed temporarily.

5419. (*Duke of Cambridge.*) But that will always be the case, there is nothing special in that ; you always take officers from the artillery as from the rest of the service for staff employment, and also for civil staff employment ?—They have a share ; they have been generally taken in rather fewer numbers than the others from there being a deficiency of artillery officers, from our not having so many artillery officers as we ought to have.

5420. How is that now ; is there a larger proportion than there otherwise would be, I mean on staff and civil employments ?—No ; what with the casualties and what with the requirements of the service during the last year, we are short-handed in officers ; we want more artillery officers.

5421. (*Viscount Melville.*) I think you said in answer to one of the questions, that the reason for having a local artillery instead of the royal artillery was a question of economy, inasmuch as there were fewer men, and that the syces took charge of the horses ?—I did not say that they took charge of them, they do a great deal of work.

5422. You are aware that that is merely a Bengal system, that it does not exist at Bombay, nor I believe at Madras, where the men clean and take charge of their own horses ?—The difference is, that they are much stronger both at Madras and at Bombay, where the horse artillery are nearer the royal establishment. In Bengal the gunners see to the grooming of the horses, the syces do not take care of the horses. If you walk down to one of our batteries you will see the officer on duty, and you will see the men seeing to the grooming of the horses themselves, and superintending the thing.

5423. I have seen the syce doing that instead of the man ?—That is not what I say ; my own experience is, that there is always an officer of the battery on the day duty, or whatever it is termed, that he attends stable duty regularly, it is part of his duty ; very often the captain of the battery is down himself to look after it, but always the officer of the day ; he attends the stable duty regularly, and the men overlook the grooming of their own horses.

5424. You say that the Bombay and the Madras system approaches more to that of the royal artillery. Do not you consider that the Madras and the Bombay horse artillery are consequently much more efficient than the Bengal ?—As to number of men they are stronger, and therefore as to number of men they are more efficient ; but yet it is a question of finance, and where you have a large body of artillery to maintain, I would not advocate changing the system, because it is more economical. We can do the work at a cheaper rate, and we are pressed by our finances.

5425. In the Bengal presidency you have 13 troops of horse artillery on the system on which they are organized. I should like to know your opinion, whether if those 13 troops had been made into 6 or 7, they would not have been a great deal more efficient than with their present organization ?—I should say, that in some respects necessarily, whenever you double the strength of a battery with Europeans, you make it more efficient in this way, that under the supposition that you come in for two or three sharp actions, and that you lose a proportion of men in each action ; necessarily the battery which has most men, under the supposition that two batteries are equally exposed in action, will stand most actions, and will come out with more guns ; but, taking the requirements of the country, the usual requirements of the military service, and the usual amount of casualty upon service, I do not think that it would be to the advantage of the Government to make that change.

5426. Are you not aware that the horse artillery in Bengal cannot move without a troop of dragoons to attend them ?—But I consider that no horse artillery should ever be unsupported by cavalry.

5427. They should be supported to a certain extent. The royal artillery and the Bombay artillery have detachments, but they are more efficient ?—I consider that no battery of horse artillery, even with a royal complement of men, should, excepting under very peculiar circumstances, be left without the support of cavalry.

5428. (*Duke of Cambridge.*) They cannot be considered as a really efficient body without they have some cavalry with them ; I mean, even stationed with

Colonel H M. Durand, C.B.

26th Nov 1858.

them, wherever they may be?—I think they may be regarded as perfectly efficient without it, putting it in the way in which your Royal Highness is putting it, but at the same time I consider that, wherever you have got artillery henceforward in India, in fact, wherever you have got troops at all, those troops must be a well balanced force. Your artillery must feel that it has European horse and foot to support it, and I think that it is not advisable ever to have any forces in India in future where they are not well balanced.

5429. (*Viscount Melville.*) In the organization of the Bengal horse artillery, you are aware that the men who work the guns drive the horses; consequently, when they have to dismount, their horses are left without drivers, and the system is to leave the leading driver and the wheel driver with no centre driver at all; you must bring the waggon into action, because without doing so you have not the men to work the gun?—It is a minor difference; their system is always found to work perfectly well, inasmuch as no difficulty has arisen from it at all.

5430. (*Sir H. G. W. Smith.*) The point appears to me to be this: I had some experience with the horse artillery of India, and nothing can possibly be more efficient; but I think you were about Lord Ellenborough when representations were made of the want of detachments, as it is called, to the artillery gun. It is not in action that the gun is not worked well for a moment, but where there is a considerable loss of artillerymen the gun becomes deficient because it does not enter the field with a sufficient number of gunners?—The complement of men is a very moderate one with a Bengal battery, and the way in which you are putting it appears to me to be very much the same as the way in which I replied to the question that was put to me just now, namely, that if two batteries were going into action, the one with double the number of men of the other, and if they each underwent a certain loss in the first action, and afterwards a certain loss in another action, and so on, there being, perhaps, three or four actions, in coming out of the contest the battery which had originally the greatest number of men would necessarily come out the most efficient, because as you lose men you are forced to knock off one or two guns and send them into park. Therefore, merely putting it upon the question of actual service in the field under the supposition that you are to go through four or five sharp engagements, and that you have not the time or means to repair your casualties, then necessarily the battery which has gone in with the largest number of men will come out of the contest able, perhaps, to work five guns, when the other is working four or may be three. But to revert to what I said before, I do not think that it would be advantageous to the Government, taking the general run of the service and the requirements of that service, to put the whole of their artillery upon that footing in Bengal.

5431. I think you would have taken a different view of the case upon the outbreak of the revolt, when all the native artillery had gone against us; you would have been very glad to have had all the battalions as efficient as possible, would you not?—Every man would then have wished instead of native gunners to have European gunners, but I do not think that that touches the point.

5432. (*Duke of Cambridge.*) Do you think that it is an advantage in the field to bring the waggons into action?—I suppose there is always a certain portion of the battery waggons brought into the field.

5433. Not to the front?—And there is always a reserve of waggons which are kept under cover.

5434. The difference is that the gunners sit on the waggons; therefore, the waggons must actually go into action under fire, or the drivers cannot bring up their guns?—The waggons are never kept so near to the guns as that they are under fire at the same time. The artillery is an arm to which I do not belong, but I know that as an officer I should be extremely sorry if I were commanding a battery of horse artillery, and were going into action to be sharply engaged, to have my waggons not pretty close up. I should prefer keeping the battery together.

5435. (*Sir H. G. W. Smith.*) The point is whether there are a sufficient number of men to the batteries of horse artillery in Bengal, or whether there are not. I think you were about Lord Ellenborough at a period when a representation was made that the Bengal artillery would be more efficient if they had detachments like the royal artillery. Were you about Lord Ellenborough then or not?—I do not recollect the reference, it may have been made, but I do not recollect it. It is a subject which has been very much discussed, and it is merely a financial one, because when it comes to be debated whether a battery is more efficient for continued service, and when exposed to repeated casualties with a couple of hundred men, or with one hundred and twenty, there cannot be much doubt about the matter.

5436. (*Duke of Cambridge.*) As far as the interests of Government are concerned, do you not think that the more efficient you can make your army the better for the Government. That the Government is better served, and that a battery even of six guns thoroughly efficient, is more valuable than two batteries of 12 guns which becomes very shortly inefficient?—That depends very much upon the casualties which they are likely to go through upon the service.

5437. (*Chairman.*) I understand you to say that in a military point of view, you consider an increased establishment advantageous, but not in a financial point of view?—Exactly so.

5438. (*Major-Gen. Hancock.*) With respect to the comparative establishments of officers in the royal and Indian artillery, is not it the case that in the latter the establishment was fixed with a view to provide officers for the ordnance, as well as other regimental requirements, and also to leave a sufficient margin for securing to that corps its fair proportionate share of the various army staff and other detached appointments, in common with the officers of the other branches of the service?—I suppose so; whether it was originally contemplated or not I really cannot tell, but I suppose that that is the object kept in view, that it should meet the general requirements of the service in India, which comprise what you state.

5439. Are you aware that the Court of Directors many years ago fixed the complement of officers for a battery at a captain and three subalterns, but have never maintained the establishment of their artillery regiments at a strength sufficient to provide the batteries with that number; that on the contrary in the Bombay presidency, with which alone I am acquainted, there have always been many batteries with only two or three officers; some occasionally with only one, and some under the command of subalterns?—I believe that that has been pretty general all over India.

5440. Are you aware that about the year 1850, the Commander-in-chief at Bombay in reply to a reference from the Government of India, represented the urgent want of officers in the Bombay artillery, and stated that he could not be responsible for the discipline of the corps unless his urgent representations were attended to; that he asked for an increase, to the extent of one battalion of officers, as being required to make up the complement which the Court of Directors had laid down as requisite to secure efficiency, but that notwithstanding repeated subsequent representation, no augmentation has been made since, with the exception of the addition of a captain to each battalion, in view to equalise the chances of promotion with the other branches of the service?—I am not officially aware of the fact; I have heard that it was the case. I have also heard several things with respect to Madras. I have heard more with respect to Madras than with respect to Bombay.

Colonel H M Durand C B

26th Nov 1858

5441. (*Chairman.*) Then you are officially aware of a great want of artillery officers in India ?—I think I may safely say, as I said before, that our artillery generally is under officered ; it wants more officers.

5442. (*Duke of Cambridge.*) Do you think that there is an advantage in there being a different system of artillery for the three presidencies, a different system of equipment and organization ?—I think there would be an advantage by the whole of the artillery, so far as the material went, being organized similarly.

5443. That is not the case at present ; they are all three different to some extent ?—It is not the case at present.

5444. (*Viscount Melville.*) Will you state the length of time which you think it would take to re-organize the native Bengal army to the strength which you propose, and the districts in which you think men might be raised in whom you could place confidence ?—I can neither say the time, nor can I enter into the detail of the districts ; I think that it should be left to the local government.

5445. Do you know in what way the Madras and Bombay armies have kept up their recruiting during this outbreak, or from what districts they have drawn their men ?—I only know it from the replies which they have given to the questions sent from the Governor-general, one of which questions is asking where their men are drawn from ; and when the papers are put before the Commission, you will find full replies upon that point from the various officers who were referred to, both for Bombay, for Madras, and for Bengal.

5446. (*Duke of Cambridge.*) In contemplating a reduction of the Sikh or Punjaubee element in the army, did I rightly understand you that you would wish for a time to have a still further increase of Europeans than there are in India at this moment ; did your answer imply that ?—I forget the question exactly to which your Royal Highness refers.

5447. Lord Melville put a question as to the danger of the Punjaubee and Sikh element in the army, and you said that the Governor-general felt that so forcibly that he could not too strongly urge the propriety of at once coming to some resolution as to the European portion of the armies of India, and you said that that was a principal reason why he pressed for a decision ; does that imply that he required a further European force in India, in order to meet that difficulty which Lord Melville started ?—The stronger we are in India the more easily that object will be effected. The forming of these local European corps is necessarily a work of some little time, and as men come out for these corps they for the time being strengthen the hands of the Government ; although, when these corps were formed, it might be possible to recal some of the general service regiments from India, yet for a time there would be an additional force of the men who were actually forming or formed as new regiments in the country, as well as those regiments which might be relieved in course of time, in consequence of the new regiments and the new local corps being formed. I mean that whenever you are making reliefs, there is temporarily an additional strength, but I do not think that Lord Canning's memorandum had reference to that. I think that his desire is that no time should be lost in the formation of the local army, with a view to the general fact that until that local army is formed the Government is exposed in India to the chance of troops being recalled from emergency at home, and that it is essential and very requisite from many points of view, that there should be no time lost in bringing up the artillery to the mark, and in forming the local European corps.

5448. As regards efficiency of arm, do you not think that the regiments (whether they are to be continued there or not) which exist in Her Majesty's service in India, being old corps, are more efficient regiments than any which you can send out ?—For the time being old corps are more efficient than new corps.

5449. Then, surely, the Governor-general has more European power in the regiments which he has now than if some of them came home and were to be replaced by raw levies, which certainly for some period could not be considered as efficient troops ?—I think that some of the regiments have suffered so much that either they must be quite renewed, or they must be sent home ; and that, therefore, even upon the point upon which your Royal Highness puts it, the forming of new regiments would be a very great advantage.

5450. As an experienced officer, which you are, how long do you think that a regiment will take before it really is fit to take the field. I refer to an entirely new regiment such as is now contemplated ?—That, I think, varies so much, and depends so much upon how it is formed, and where it is formed, that I feel that I should be giving a very wild answer.

5451. Do you think that an entirely new regiment or battalion is fit to take the field under a year or a year and a half ?—I should say that a regiment of European infantry would require about a year to be brought up to a desirable state of efficiency to bring it up to anything like good order.

5452. (*Major-Gen. Hancock.*) It would be composed not exclusively of recruits of course, but of drafts taken from other regiments, and probably of volunteers from regiments of the line ?—Yes ; but it depends so much upon where you form it, and how you form it, that I really cannot answer the question with anything like correctness. But there is another object in pressing for the formation of a local army ; Lord Canning attaches considerable political importance to the fact of the inhabitants seeing Europeans. For instance, I forget the exact strength of the cavalry which was sent out, but for the formation of our European cavalry there was a certain body of men sent out, and Lord Canning considers that the mere effect of seeing a number of European recruits sent out and seeing that there is a large supply coming out, is good upon the country and upon the people.

5453. (*Duke of Cambridge.*) If that is the case would it not be very valuable if eight or ten regiments of Her Majesty's service were withdrawn this year, and eight or ten other regiments sent out to replace them ; would not the effect of their coming as a trained body, actually new regiments, both officers and men, and ready on the day of landing to take the field, be far greater than with a new body of recruits sent out to be formed there ?—I suppose that no one would for a moment say that eight or ten fresh full-formed regiments coming out in that way were not more efficient, and would not have a greater effect than a body of raw recruits landing ; I do not suppose that any one would argue against that, but the political object of having the local army kept up with its Europeans, both for the artillery and for the European infantry, is the point upon which I was.

5454. That is a purely political question, but I think you must admit that the pressure for troops would be met in the way I have put it more efficiently by sending out a fresh body of Queen's troops and withdrawing regiments which were much cut up, than by sending out recruits to be formed there ?—Certainly, so far as the military efficiency in the field goes.

5455. And the moral effect ?—There again you must take into consideration that it involves the question not only of the number of men, but also of the stability of the system. For instance, if you see 1,200 or 1,400 men sent out to bring up the local artillery to the mark, and if the natives see that that is never allowed to go down, that is a stable element which they see is not allowed to shift or change. With the 1,400 or 1,500 men which you might land as regular artillery, the moral effect in one sense would be rather less than it would be in the other, because the people would say, these are new troops sent out for a pinch, and they may be recalled again just as

Colonel H M. Durand, C B

26th Nov. 1358.

quickly as they have been sent out. In a military point of view, in the way your Royal Highness puts it as matters of efficiency for the field, I do not for a moment mean to say that 8,000 or 10,000 men, old formed soldiers, would not be much more efficient than if there were 8,000 or 10,000 men who were recruits.

5456. I do not see how you should put it that the moral effect of 1,200 recruits should be greater than the moral effect of two or three regiments of 1,000 men fully effective in every respect ?—The instance which I put was with respect to the artillery. The way that the natives, looking at the thing, would see it, would be that the batteries of artillery which had been diminished, and which had lost in casualties, and in one way or another, a certain number of men, were not allowed to go down at all, but that, on the contrary, 1,200 or 1,400 men were sent out to form new batteries, and so forth, those new batteries being formed partly with the old troops.

5457. Admitting that it is of importance merely as regards the natives, that they should see that what has existed is kept efficient and complete, what has that to do with raising new companies and new batteries for the local force, supposing you could send complete batteries of royal artillery fit to take the field at once ?—Because a new class of considerations comes into play, namely, the necessity which there is for having in India a body of officers and a body of troops which shall belong to the country, become acquainted with the habits of the people and of the country, and also become acclimated. I look upon it that there is really less loss of life amongst the old regiments. I would instance it: there were serving with myself in Western Malwa this time last year four troops, or two squadrons of Her Majesty's 14th dragoons, under Colonel Gall; these were old troops, acclimated troops in India, and they had just returned from Persia; they were under a most admirable officer. Those men were worked and did the work as if they were natives; that is to say, they were exposed and worked incessantly just as hard as the Nizam's cavalry, who were alongside of them. But I am perfectly convinced that if you had attempted that with any new regiment, you would have foundered, and destroyed the regiment in the course of the first fortnight.

5458. Do you not think that that is the case with every regiment which takes the field. From the very fact of that regiment having been to Persia, has it not been weeded of all the men unfit for the service, and brought up to the highest pitch of efficiency, and therefore would it not be more fit for service in any climate and any country ?—It is therefore that I argue in favour of a local army; those men were acclimated and fitted for the work, and all the officers accustomed to the country, but that is not the case with new troops.

5459. If, statistically, it is found that it is not so, but, on the contrary, that the local regiments are less healthy than the ordinary regiments of the line, what would you say to that ?—That would depend very much on where they were located, and how they were used.

5460. (*Major-Gen. Hancock.*) If, on the other hand, the statistical tables show that the actual mortality in the Queen's regiments has been greater during a long period of years than in the Company's, does not that lead to an opposite conclusion ?—I should answer that question subject to the same proviso, namely, that a great deal depends upon where the corps are put. If you put a European corps in an unhealthy climate and keep it there, and then compare that corps with a corps which is in the hills, or anywhere else, in a very healthy place, the comparison is not fair.

5461. (*Duke of Cambridge.*) I refer to the aggregate, because I suppose that no particular localities are told off to the local regiments or for the line regiments. I suppose that they all take their tour of duty, wherever it may be. I am talking of the whole troops, local and Queen's, throughout India ?—It would depend very much, of course, upon the time which that aggregate covered.

5462. Say, ten years ?—Some corps I have known kept a pretty good time at an unhealthy station, and then, instead of being removed to a very good one, perhaps removed not to a very good one. If you get two or three cases of that sort it affects your averages very much.

5463. (*Viscount Melville.*) Does not it happen in India just as it does in every other country, that on the breaking out of a campaign, for instance, this very outbreak, no matter how long the regiments have been in the country, do you not have, on a regiment first taking the field, a great many casualties until it has been out some time, and the men have become accustomed to the duty ?—My own experience is rather that your loss is at the end, when you come in. There is a loss during the campaign, of course. The more acclimated harder troops go through it better than the other; and there is a difference during the campaign in the actual endurance of acclimated men and of men who are new to the climate. But the thing which shows the stamina of the corps is at the close of the campaign after you come in, after the excitement and everything is over, and you come again into quarters.

5464. (*Duke of Cambridge.*) That would not be the case as regards the 14th dragoons which you quoted, because they were actually at work all the time ?—I quoted them as an instance of an acclimated regiment. No body of men could have done higher and better service than that small body of Her Majesty's 14th dragoons.

5465. Did you see anything of the 71st, or had you left Central India before they came up ?—I handed over the charge before the 71st joined. I saw nothing of them at all.

5466. I think I asked a question yesterday as to the formation of these new regiments, and whether you thought that the officers who had been in the habit of serving exclusively with native troops who would now have to be employed with Europeans, were qualified to form new regiments, to which, I think, your answer was yes, but especially as there had been an order sent out recently to select commanding officers. Am I correct in that ?—The two matters were not put in that connection, they were put separately. With respect to the first question as to the efficiency of the officers to be employed with European troops, my reply was that you would find I thought a proportion of good officers and a proportion of indifferent officers, but that I thought, taking the question generally, you would find very good officers and officers perfectly fit to raise and form the regiments. With reference to the second question, I brought it forward in connection with the authority of the Governor-general; it was as to touching in any way or diminishing in any way the authority and influence of the Governor-general, that I brought forward that instance that the orders of the Secretary of State to the Government of India are that the Government is to select officers for the command of regiments.

5467. That is a new principle ?—That is a new principle.

5468. When was that introduced ?—The order reached Allahabad before I left Allahabad. I speak with deference to the presence of the Secretary of State; he can correct me if I am wrong; but that was the order.

5469. Was that an order which emanated from the Home Government or from the Governor-general ?—It came from the Home Government to the Governor-general in India.

5470. Does not that strike at the root of the system of seniority which has existed in India ?—No, it affects it necessarily, but it does not strike at the root of it. Upon this subject I may be allowed perhaps to add a few words;—when the papers which I have brought home come before the Commission it will be seen that very great stress is laid by a large number of those who give their replies upon the necessity of increasing the powers of commanding officers. There is a great unanimity on that point, and the Commission have already the memorandum of Lord Canning before them, in which he touches upon the necessity of young officers, before they join, having higher qualifications. Now, where you are to put great powers into the hands of commanding officers, it certainly is a matter of very great moment that the officers who join the army should be officers of higher attainments than mere youths of 16 usually are. Where those officers are to rise, as a proportion of them will rise to the command of regiments, and are to be entrusted with these very great powers which it is proposed to entrust to them, it is in every way important both to the Government and to the army, the fate of which, in fact, is to be entrusted to these men, that the officers who join the army in India should in the first instance be brought up to as high a mark in qualification as you can secure, because, as regards the working of that principle which I have just mentioned, that the Government are to select officers for command, and also the practice that they are to remove them if they are unfit to command it, very greatly affects the Government, that they should have as many officers as possible who are fit to command, and that there should be as little necessity as possible for removing men unfit to command; that they should have as few men as possible lumbering the lists, and whom they cannot employ. Therefore, if I may be permitted, I would press upon the Commission the very great importance of that point upon which Lord Canning has touched

5471. If that is the case in the local army, do you not think that it should be so in the royal army too, and do you think that you can make any difference between the two?—As the question is asked me, of course I will reply to it with great deference, for I do not know the system well of the royal army, further than what I have seen in India, but I think it would be no disadvantage at all to the royal army if the officers, when first entering that army, were of higher qualifications; I never could understand why the military profession was not to require much higher qualifications at starting than it does.

5472. All that has been very much increased of late years?—I was going to make that remark. All I know of what is doing in the royal army is what I see by the papers, and I have seen, I believe, under your own orders and instructions, that there are a great many rules and regulations which have lately been issued upon that very point; therefore, it entirely tallies with what I have been saying, that so far as I have seen, I do not think that the royal army would at all suffer by higher qualifications being required from officers.

5473. If you make a great change such as that of selection for the command of regiments in the local army of India, how can you do that without making some great change in the same direction in the royal moveable army of the line?—I think that it is essential that you must do it in India, it is necessary and must be done. With reference to the general service of Her Majesty, I suppose that practically the Horse Guards have the power of selection, that is to say, that from the knowledge of the men and from the purchase system, and in a variety of ways, and from the great power of the Horse Guards, I have always supposed that practically they have had the power of selection, and that upon a general officer, for instance, reporting upon the inefficiency of a colonel or a lieutenant-colonel, there would be no hesitation at the Horse Guards in removing him; that has been my idea.

5474. That is as to the power of removal, but that is a different power from the power of selection. Of course an inefficient officer may be removed, but that is a different thing from the power of selection, which is putting a junior officer over the heads of senior officers, which I understood you to mean?—The power of selection is enjoined; of course the working of the selection would depend upon the Government of India; I suppose that they would avoid, where it was possible, putting very young men over the heads of older men, but that they have orders to select for the commands of regiments I know, and the action of that principle I think necessary for India; it must, however, be exercised with wisdom and discretion of course.

5475. (*Major-Gen. Hancock.*) Has the principle been extended also to the commands of brigades and divisions in India?—It always has existed; I can only say that, so far as my experience goes, the appointment for brigade commands and divisional commands was always a matter of selection.

5476. (*Viscount Melville.*) Is it intended that the commanding officers of European regiments are to have these extraordinary powers as well as the commanding officers of native regiments?—No, not that I am aware of.

5477. (*Duke of Cambridge.*) If this power of selection is given, will it not very considerably affect the position of the senior officers of the moveable army?—Whether it would affect, and to what extent it might affect, the officers of the general service army, I really have not traced out; it depends entirely upon the mode in which the discretion which is vested in the Government of India is exercised.

5478. (*Chairman.*) I understood you to say yesterday that no great change was made in the organization of the Indian army without consulting the military authorities at home?—I said that I was ignorant of the working of Cabinets, but that I supposed that a Cabinet which was sending out orders affecting the formation of the three great armies of India would in all probability make a point of consulting Her Majesty's Commander-in-chief; I think that that was the way in which I put it.

5479. Has it ever occurred that under the old system in India, officers have been transferred from native corps to the command of European corps?—I believe that it has occurred repeatedly that officers have been transferred from the command of native corps to the command of European corps, and *vice versâ*, that officers from European corps have been put in command of native corps.

5480. Do you think that an officer who had been accustomed only to a native corps would be competent to command Europeans?—Quite so. I recollect an instance of a Madras officer to whom had been intrusted the formation of a new corps; one of the regiments added to the Madras establishment, a European regiment. That officer was employed in raising and forming that regiment, and for some time I believe commanded that regiment. When I met him he was in command of a native regiment, and shortly afterwards he was in command of a brigade, so that I speak with certainty as to the fact; and although I cannot give instances, I know that it has been done in all three armies.

5481. Upon what conditions have the late additions to the native army been made, upon what conditions have the men been recruited?—That is a point which I think you will find very fully put before the Commissioners in the papers which I have now brought. The mass of the Punjaubee levies are almost absolutely under the command of the commanding officers of corps; there is no oath; they are not under the articles of war. In fact we have now an army which is really not under the articles of war, that is to say, it is not governed by the articles of war in any way, but it is governed by the discretion left under general rules given by the Punjaub administration, that is to say, by the chief commissioner of the Punjaub to the officers in command of those corps.

5482. Are they enlisted for any particular length of service, or may you dismiss them all to-morrow morning if you please?—I think that it is entirely at the discretion of the commanding officers to dismiss them; they can dismiss them for misconduct, and it is entirely at the discretion of the board of administration of the Punjaub to increase or to diminish the corps.

Colonel H M Durand, C B

26th Nov 1858

Colonel H. M. Durand, C.B.

26th Nov 1858.

5483. You have made no conditions with these men to retain them for any given time?—Not that I am aware of; but I do not speak with absolute certainty.

5484. When you say that they are entirely under the direction of the commanding officer, that commanding officer is a European, I suppose?—Always.

5485. (*Duke of Cambridge.*) Has he arbitrary power, even to the extent of life and death?—No.

5486. Everything short of that? — Not exactly everything short of it, there are some things short of that, but there is very little reference. In the replies of Sir John Lawrence, Brigadier-general Chamberlain, and Colonel Edwardes, there is very clearly and fully given the state in which that force exists and is ruled. In the evidence given by Colonel Coke and one or two others it is also touched upon.

5487. Of course in these exceptional cases every one was justified in doing the best he could under the circumstances; but as a rule do you think that it is a good thing that an army should be so constituted?—As a rule with respect to easterns and to mercenaries, raised as we raised them in India, I think the necessity of putting into the hands of commanding officers of regiments almost absolute power is very great. I concur with the generality of opinions which are advanced by the officers whose evidence has been written in reply to the questions put to them in India, that it is very requisite that the commanding officer of a native regiment should have very great power.

5488. Still should not they be under certain regulations laid down by the supreme government?—I think that there are a few regulations which it would be advisable to lay down, and some such as are laid down in the replies by the Punjaub committee, by Sir John Lawrence.

5489. (*Viscount Melville.*) Are not these levies which you have got to be regarded more in the view in which you would regard a police corps, and do not the officers act magisterially rather than militarily?—It cannot be said that they exactly act magisterially, though in some, for instance, the police corps at present being raised in the north-west provinces, the commanding officers have magisterial powers.

5490. I refer to these Sikh and Punjaub levies; are not the commanding officers magistrates, and if they order a man to be flogged, do not they do it?—No, I am not aware that they are made magistrates. With some of the police they are magistrates. There are two bodies in the Punjaub, the police and the regular corps.

5491. (*Marquess of Tweeddale.*) Will you be good enough to say from what source you contemplate that the Commander-in-chief in India should be selected?—I have never given the subject any consideration, but I suppose that he should be selected from any and every force. I do not see that there should be any limitation put to the discretion of the Crown in choosing its Commander-in-chief wherever it pleased.

5492. But you contemplate now instead of the local force being the minor force, its being one-third more than the auxiliary force, which is the Queen's; therefore, I suppose there is a chance of the Commander-in-chief in India being selected from the local force?—I do not quite accede to the mode of putting the question, because I look upon the army of England as being so large and so important, that one cannot look upon it exactly in the sense in which you put it as an auxiliary one, and therefore if I may be allowed the expression, correcting so far as I am concerned that point, I do not contemplate any particular necessity for drawing the Commander-in-chief from the local army which happens to be serving there.

5493. But it is possible?—I should think it is possible, because I would put no limitation to the selection of the Crown. Wherever it chose to appoint a Commander-in-chief, and thought a man fit, I suppose it might be done.

5494. At present the discipline which is followed in India is the discipline of the army under the Commander-in-chief in England. Supposing that any one of these three officers were to do what I understand you to say might happen, namely, that in the event of an officer of one of Her Majesty's line regiments being incompetent, the officer commanding the army in India should recommend that that officer should be removed, does not that take the discipline of the Queen's regiments of the line out of the hands of the Commander-in-chief, and place it in the hands of a person over whom he has no control?—In the way in which it is put, it does not appear to me to take it out of his control, because with respect to Her Majesty's general service regiments, and to all questions affecting the discipline of those regiments, I suppose the same system would be pursued as is pursued now, which is that reference is made to the Commander-in-chief. I do not see that it necessitates any difference or alters the position at all. If an officer were found fault with, and it were thought advisable to remove him, and he belonged to one of the general service corps, I suppose that the reference would be made by the Commander-in-chief, whoever he was, exactly in the same manner in which the reference would be made now.

5495. (*Duke of Cambridge.*) But how would you manage the intercourse of the Commander-in-chief in India, supposing him to be selected from the local force, with the Commander-in-chief in England, as regards the Queen's troops, the Commander-in-chief in England having no power over the officer who is the Commander-in-chief in India, if he is a local officer?—The commission which constituted him Commander-in-chief would necessarily, I take it, (the very brevet of his commission) put him in connection with the Commander-in-chief in this country.

5496. But he would not be under the authority of the Commander-in-chief?—But the brevet of Her Majesty would put him in connection and under the authority of the Commander-in-chief in so far as regarded that portion of Her troops which was employed in India. I do not see that there is any difficulty in that at all.

5497. I do not see how he could be under that authority. There is a great military functionary, the Commander-in-chief in India, the highest military functionary in the land, even in some respects with higher powers than the Commander-in-chief in England, for he has the power of confirming courts-martial, which the Commander-in-chief in England has not; that officer is not under the authority of the Commander-in-chief in England, and yet he is to command the troops of the moveable army in India?—He bears Her Majesty's commission, and it is perfectly in the power of Her Majesty in giving him his brevet of command with reference to that point, to put him in connection with the Commander-in-chief in this country. It does not appear to me to be a practical difficulty. I speak with deference to those who know better.

5498. (*Major-Gen. Hancock.*) I understood you yesterday to give your opinion that the Commander-in-chief at the Horse Guards ought not to have the power of giving instructions to the Commander-in-chief in India, with reference to the troops serving in India?—The question put, I think, had reference to the local army to which my reply was given.

5499. Supposing that in future the European force in India be composed entirely of troops of the line, would you in that case have the Commander-in-chief at the Horse Guards empowered to give instructions to the Commander-in-chief in India with respect to matters pertaining to the troops of the line in India, or would you have instructions relative to those troops sent through the Secretary of State for India, and the Governor-general?—I concur entirely with the view which Lord Elphinstone has given. I have before quoted the words of Lord Elphinstone, and I think that they afford the best reply which I can give to your question; he says, "If "there is one thing which must be laid down as "a principle not to be departed from in our mili-"tary arrangements in India, it is the entire sub-

Colonel H M. Durand, C.B.

26th Nov. 1858.

" ordination of the army, both European and native, " to the government of India. The troops of the " Queen's regular army while serving in India must " be wholly subject to the authority of the Queen's " government in India; regimental promotion indeed " may be left entirely to the Horse Guards, but the " patronage of every staff appointment in India should " be vested, as with very few exceptions it now is, " entirely in the hands of the supreme and local " governments, and of the supreme and local Com- " manders-in-chief." I think that that is so well worded and so well put that I cannot answer your question in a better way.

5500. Do you understand from that opinion of Lord Elphinstone that he considers the Commander-in-chief in England should have no further power of interference than in the matter of regimental promotion, which is the only thing that he particularises to be left to the Horse Guards ?—I understand it according to the bearing of the words which prescribe the limitation that you mention.

5501. (*Viscount Melville.*) Have you formed any opinion as to the propriety, or otherwise, of retaining the native commissioned officers ?—It is a subject which I have thought about, and I wrote a memorandum upon it, which, if the Commissioners had the time, I would read, but I am afraid they have not the time. But the question which you put is one which has met with a good deal of consideration. It must be remembered that we have not only the Bombay and the Madras armies with native officers, but also that we have got a very large force of irregular troops, both infantry and cavalry, which are necessarily officered with native officers, and that therefore that question, with reference to regular native troops, becomes hampered by the consideration of the effect of withholding native officers from the regular native troops upon the rest, that is to say, it might excite a little feeling of apprehension either in Bombay or Madras, if it was found that in regular native troops in Bengal there was a discontinuance of having native officers. It is a subject upon which you will find a variety of opinions given in the papers which I am going to send in. I think that the general feeling is, that you cannot discontinue having native officers. In the first place, where you have got irregular corps with few European officers, they are an absolute necessity, you cannot do without them; and moreover, where you are having them in irregular corps, you necessarily must select by merit, and merit alone; because they are really of importance in the discipline and the working of the irregular corps. It becomes another question where it is a regular corps with a full complement of European officers. There the absolute selection by merit, and putting aside all considerations of seniority, is more a matter of doubt; and for this reason, that you may select by merit up to the point of the commission grade, and then after that, as you go on promoting men in the commission grades of native officers, if you throw out seniority altogether, and promote alone by merit, you cause a good deal of discontent. And there is the political bearing of the subject, which was shown very much in this last insurrection, which is that really we should have found that we had much more difficulty in dealing with our mutineer army, if it had not been that that army, with its old habits of discipline, stuck to its old native officers, a proportion of whom had been appointed by seniority, for it had never been the absolute rule in the Bengal army; but the general rule had been, that where you could do it fairly and properly, and a man was fit, and so forth, he should be promoted by seniority. The working of that during the insurrection was, that with their old habits of discipline clinging to them, they did not put aside their old officers; they stuck to their old officers; they did not raise young men, and men with energy and talent. That had a very great effect upon the contest between us and the mutineers. Had those men not stuck to their old officers, many of whom were elderly men, and some of them very old men; but had they put aside all their old men, and picked out smart young men to lead them, or had we originally provided them with smart young men, pushed up to be subahdars when they were quite young men, we might have found the contest quite a different thing.

5502. (*Major-Gen. Hancock.*) How do you mean that we might have found the contest quite a different thing ?—Simply by the mutineer sepoys, who held to their discipline for a long time, being much better commanded.

5503. Then do you argue that it would be wiser for the Government to have inefficient native officers with the view of guarding against such a danger ?—No; that is going to another extreme altogether.

5504. (*Duke of Cambridge.*) You would have the two combined ?—I would have the two combined; they were combined in the Bengal army. It is a mistake to suppose that in the Bengal army promotion was entirely by seniority; it was not entirely by seniority; there was a certain discretion exercised. Sometimes a man was promoted, as was thought fit, even after he got into the commissioned grades, whether it was for distinguished service, or whether it was for this, that, or the other. Sometimes a man was promoted (I am speaking of the regulars) out of his seniority turn. I know that the promotion was not at all absolute.

5505. (*Major-Gen. Hancock.*) Is it not the fact that by the regulations of the Bengal army, published in 1855 with the sanction of the Government of India, seniority is made the general rule of promotion, and supersession allowed only in cases in which the senior on the list is found unfit for the promotion ?—That rule was no doubt issued as you state. There was also another regulation, which was that the promotion was to be partly by merit; but the practice was what I state.

5506. We have it in evidence from several Bengal officers that the average age at which men in the Bengal army obtain promotion to naik is about 40 years, and the average age at which they obtain promotion to the commissioned grades is about three score. Do you consider that under a system which fills the commissioned and non-commissioned grades with men of such advanced ages it is possible to have an efficient or trustworthy native army ?—I have not looked into the point as to the ages at which men got their promotions. Of course I do not know to whose evidence you allude; but I should have a little doubt of the correctness of that evidence. So far as my own recollection of a great many men whom I have met, and had to deal with and to do with in a thousand ways, native commissioned and non-commissioned officers, I should very much doubt what you have adduced as having been put in evidence.

5507. I think I have made a mistake in saying the average age, I should have said the age at which they generally obtained the promotion specified ?—I should very much doubt the correctness of that. I have seen a great deal of it in one way or another.

5508. (*Duke of Cambridge.*) In Lord Canning's memorandum I see it is stated that the rank and file of a cavalry regiment should be 440 instead of 700, as had been originally intended. What is the advantage of so very small an establishment ? In taking the field, do you think that that is an advantage to a force ?—The advantage of the proposition made by Lord Canning appears to me to be this :—Henceforward in India, as I have before said, wherever you have got forces they must be well balanced forces. The field is so great in India, there are so many points to be occupied, and those points are often at such great distances that it is much more convenient to the Government to have two corps of the strength which Lord Canning proposes, than to have one corps of large strength, one wing of which would be at one place and one wing at another place far away from it, because it has been found by experience in India (and I am speaking to a military authority far more com-

Colonel H M Durand, C B

16th Nov 1858

petent to judge than myself upon that point,) that the discipline of a regiment suffers where one wing is separated from head quarters and kept away from it, and that is one of the main reasons.

5509. Otherwise for service you will admit that a very weak corps like that would very soon dwindle to nothing ?—A weak corps like that for service is of course not so advantageous as a larger corps when you are coming to a shock of cavalry.

5510. I mean in the casualties and the wear and tear of service without the mere action, it would dwindle down to very small numbers ?—It would dwindle down to something small; but still the proposition is a thing of very great importance. The enormous area of that empire is scarcely ever kept clearly in view, and really it often appears to me that the simple fact of the sort of way in which maps of India are usually made, in which India is made to look about the size of Yorkshire, or something of that kind, gives a wrong impression as to the immense extent of that empire. That is an important proposition of Lord Canning's.

5511. (*Col. Burlton.*) Do you think that in a financial point of view it would be advantageous. Two small regiments would cost very much more than one large one ?—Not much.

5512. (*Major-Gen. Hancock.*) You stated yesterday, I think, that in your opinion it would be advisable to divide the Bengal native army into two; upon what ground do you rest that opinion ?—Upon the ground which I hold, and which a good many others hold, that in future it would be very desirable (I dwelt upon it incidentally in other parts of my evidence) and necessary to keep the presidential armies separate; so likewise with that great army, which belongs to the Bengal presidency. That presidency may be divided into two or three great areas, in which the people are very distinct, and in which there is a very considerable degree of that sort of jealousy and animosity which always exists between conterminous people. It is advisable for us to take advantage of that sort of feeling. The feeling of the Punjaubese, and the heart with which they served us, was partly owing to this sort of national or *quasi* national feeling on the part of the Punjaubese against the Hindostanee people; they had no compunction in plundering their cities, and working against them. It was just the same, and would have been much more the same, with the Hindostanese when we went into the Punjaub if it had not been for preliminary tampering between the Punjaub army and the Hindostanee. A part of the Punjaub army under Runjeet Sing was formed of Hindostanese, because he knew the Sikhs perfectly well, and he took good care to have a portion of his force Hindostanee, in order to qualify the preponderance of the Sikh element there We must take advantage of that, practically, I would divide that great army into two.

5513. Would you place the two under separate commanders ?—No.

5514 What is the advantage of keeping them under one command ?—There is a financial advantage about it; there is also a practical advantage, that that great presidency and that great frontier must be looked upon as a whole, and that the working of the machinery will be easier and better if it is under one head. At the same time, financially, it would entail much greater expense to have separate heads.

5515 Do you not think that all those advantages might be gained and some others also by equalizing the armies of the three Presidencies, and transferring portions of the present Bengal Presidency to the Madras and Bombay armies ?—No, decidedly not; because I think that it is of paramount importance to India to keep those Presidencies separate If I had my own way, I would not move the Bombay troops further north than Mhow, and I would not move the Madras troops further north than Jubulpore.

5516. For what reason ?—For the reasons which I have already stated, that I think it extremely necessary to keep the Presidential armies separate and distinct, and the great advantage of that has been shewn during 1857.

5517. In the question which I put to you, there was no suggestion for amalgamating the three armies, on the contrary, it was put upon the assumption that they would be kept separate, as they have hitherto been and are now ?—Yes, but you bring them into contact with the nationalities, from which I wish to keep them distinct.

5518. Is it not the case that the Madras and Bombay armies generally are composed of men enlisted in the southern provinces of India, who have no sympathies in common with the Punjaubees and Hindustanees in the northern provinces, and would it not, for that very reason, greatly strengthen the hands of the Government of India to have considerable bodies of Madras and Bombay troops located on the frontier and in those districts where danger is at present apprehended from the large number of Punjaubees and Hindustanees in the Bengal regiments ?—No; and for this reason, in the first place, I think that you are incorrect in stating that the Bombay and Madras armies are recruited chiefly from the southward. To my knowledge a very large proportion (and in the evidence of Lord Elphinstone and also of others it is given) of the Bombay army was drawn from our northern provinces, and that was a dangerous element in the Bombay army during the late insurrection. Therefore upon that point I think it inadvisable to bring them up, because I wish to keep clear of the northern nationality, and so far from its strengthening the hands of the Government, I think that you run a great chance, if you bring up those southern armies and mix them with northern nationalities (if one may use the term), of endangering the state of feeling in those armies which I wish to keep perfectly distinct.

5519. You have made no reference in your answer to the Madras army ?—I would do the same with the Madras army for the same reason. In the first place, there are peculiar difficulties about moving that army to any distance; they always rise the moment you move them north of the Nerbuddah. I have necessarily had to pay great attention to many things connected with the Madras army; I have had some Madras troops in connection with myself, and I certainly think that for a great variety of reasons, which would perhaps take the Commission too much time if I went into them, it is very important to keep these two Presidencies distinct.

5520. Have we not had two divisions, one of the Madras, and the other of the Bombay army, doing good service against the mutineers in the northern provinces ?—I think that the Bombay army have done admirably, and I think that the Madras army, so far as I know, have done very good service where they were put, but that does not alter the question, it is an exceptional case, and it is for these exceptional instances that I wish to keep them distinct and separate. They have acted well, partly in consequence of having been kept distinct and separate, but if you were in the habit of moving these troops up into these districts, and they got accustomed to and into communication with these people, you would run imminent risk of causing the very thing which you wish to avoid.

5521. (*Marquess of Tweeddale.*) Is it not upon these occasions when the regiments go up there that they get some of the men who are so objectionable in the Bengal army, namely the high caste Mussulmans and Brahmins ?—I have heard of one or two regiments even of the Madras army, who have recruited when they were stationed north much too largely in those districts I think that our object should be to keep these armies as distinct and separate as we possibly can.

5522. Have you not known it inconvenient to the government of India that a Madras regiment should be sent beyond Calpee ?—Yes that was the reason why I put the Narbuddah as the northern limit, and I only carry it to that point because militarily and

Colonel H M Durand, C B

26th Nov 1858

strategically speaking, I think it no disadvantage that what may be called the key points of the plateau of Malwa should be held, the one by the Madras army, and the other by the Bombay army. but I would not push them further north than that.

5523. Are there not interior arrangements between the government and the sepoys which make it objectionable that they should be sent so far away from the Presidency, namely, as to the reliefs, the sending of recruits to make up the deficiencies, and as to the invalids Then again, you know that most of the sepoys in the Madras army are married, if they move you must give them batta ?—I fully admit every one of those reasons which you have adduced

5524. (*Major-Gen Hancock.*) Are not those simple difficulties which it would be quite possible for the government prospectively to remove entirely ?—I do not call them simple difficulties. If you had as much to do with it as I have had, and saw what great difficulties it entailed both upon the local government, and also upon the government of India, I think you would not call them simple difficulties, but very complex difficulties, out of which it is very desirable that the government of India, both the governor-general and the local government should keep as clear as possible.

5525. Still if prospectively enlistments be made under new rules, so framed as to obviate the objections alluded to, would the Government have any difficulty in obtaining men for the Madras army ?—But I think that involves a departure from what I would lay down as the broad principle of policy, for the reasons which I have already stated, namely keeping wholly distinct those three presidencies.

5526. From your answer to one of my questions, it would appear you are not aware that in the Bombay Presidency the regulations required the recruiting of the native army to be confined within the limits of the presidency and the neighbouring states tributary to or in alliance with it, and that the present large proportion of Hindustanees in its ranks has been the consequence of that rule having been practically set aside for 20 or 30 years previously to 1848, when measures were adopted for gradually reducing them to a minimum ?—I only spoke from the knowledge of the fact, and without reference to any particular regulations. I know the fact in a variety of ways I know the fact from the evidencies of officers, from the evidencies of authorities such as Lord Elphinstone and Sir Henry Somerset, and from my own acquaintance with the troops. What you state as to the regulation may be perfectly true

5527 Supposing the Madras and Bombay armies to be recruited henceforth almost entirely within the limits of their respective presidencies, would your objections still exist to the territory occupied by them being extended to the Punjaub and borders of Hindustan ?—Yes

5528. On what ground ?—On the grounds which I have already stated very fully.

5529. (*Col. Burlton*) You apprehend that they might coalesce and become more intimately associated with the Hindustanees of the Bengal army ?—Yes; and you would lose the very thing which you want, namely, that when exceptional instances arise you can call out those troops with comparative certainty that they will act.

5530. (*Viscount Melville*) Is it not a question at present pending whether the Bombay army is to occupy Rajpootana or not ?—I believe the question is pending, but practically I believe they are holding it

5531. If they hold it permanently will not it require an increase to the Bombay army ?—I am not sure that it is at all decided whether they are to hold it or not

5532 Supposing they do hold it, will not it require an increase to the Bombay army ?—I do not think that the Bombay army should be increased more than is recommended. In fact, I think that the view taken by Sir Henry Somerset, with respect to the Bombay native army, is a very good one as to the strength requisite, and he does not propose any great increase of that army.

5533 But he proposes a very large increase of the Europeans ?—He has proposed a larger increase of Europeans than Lord Elphinstone has proposed, and than Lord Canning has proposed.

5534. (*Major-Gen Hancock.*) I think neither Lord Elphinstone nor Sir Henry Somerset raised any objections to extending the limits of the Bombay Presidency ?—You will see the whole of the papers

5535 You stated, in answer to a question with respect to the principle of selection, that you believed it always to have been the rule in appointing officers to the command of brigades and divisions in the Bengal presidency ?—As far as my own knowledge went only.

5536 I think you will perceive by the orders laid down by the Court of Directors in that respect, that it has not been the rule, but the exception. Their order is dated 23rd June 1835, "We have no hesitation in "expressing our opinion that officers have no strict "right to succeed to the appointments of brigadier "or brigadier-general on the ground of mere seniority, these being staff appointments, involving both "confidence and responsibility, but we must express "our firm reliance on the discretion and good feelings of our several governments that the claims of "officers to these or any other appointments arising "out of length of service, will never be set aside "except on public grounds"—I was speaking from the practice which I had myself seen when I was in connection as private secretary with Lord Ellenborough, at a time of very great danger in India, when a great variety of military operations were going on, and when references were made by the Commander-in chief in usual course to the Governor-general, and it became a question as to who should have command. With every disposition to give the utmost attention to the claims of senior officers, Lord Ellenborough made it a rule that the claims of the public service were paramount to every thing else, and that the thing which must be done upon these occasions was to secure the services of a competent officer, the officer who he thought was the fittest for the command Therefore, the practice of selection was carried into effect for commands.

5537. I understand you to mean, at all events, that now the Government of India fully admits the principle of appointing to the command of regiments, brigades, and divisions upon the system of selection for efficiency ?—Yes, certainly In making that answer I do not mean to say that there is no consideration given to the claims of officers

5538. (*Lord Stanley*) I understand that the practical state of things is this, that the rule is one of selection, but with a strong preference to the claims of the senior officer, if not unfit ?—Yes, with every consideration to the claims of the officers, if not unfit

5539 (*Major-Gen Hancock*) Do you know from whence Sir John Lawrence and the officers composing the Punjaub Committee, obtained the following story, which I find inserted in their report "We have "heard of a small guard of the Bombay army on "detached duty making their own jemadar, a man of "low caste, carry on his head the bundle of their "clothes, &c, to which the jemadar, away from his "European friends, submitted as a matter of course," for although confessedly given only upon hearsay, it is certain that Sir John Lawrence believed it to be true, or he would not have allowed it a place in his official report ?—I am quite unable to say how they got the story at all.

5540. Is the Government of India in possession of a single authenticated case in which a native commissioned or non-commissioned officer of low caste, either in the Madras or Bombay army failed duly to maintain his authority when on duty, or was induced by caste influence to perform any menial office for his caste superior ?—I really do not know what the Government of India may be in possession of upon

Colonel H. M. Durand, C.B.

26th Nov 1858.

a point of that sort. It is so very large and general a question that I really do not know what they are in possession of.

5541. Do you know upon what ground the Government of India continues to ignore the fact established by the experience of so many years in the Madras and Bombay armies that men of all castes, from the highest to the lowest, have been brought by discipline to make the pride of good soldiership rather than the pride of high caste their ruling principle, and is still maintaining caste distinction in the Bengal army by now raising regiments composed exclusively of sweepers?—I am not aware that they ignore anything of the sort.

5542. Do you not know that they are raising regiments of sweepers?—I do not know that they are sweepers. There are several regiments of mixed castes and low castes.

5543. I observe this in the report of the Punjaub Committee. "For these reasons our advice would be "that we introduce the new system gradually, by "having separate regiments for the low castes." There is then an asterisk, and there is this note, "In the "newly raised Punjaub regiments there are two "entirely composed of Muzzubees, *i.e.* sweepers, "of the Sikh religion. They are pioneers, and are "doing well?"—What is the question to which you wish me to reply?

5544. Do you know upon what ground the Government of India continues to ignore the fact established by the experience of so many years in the Madras and Bombay armies that men of all castes, from the highest to the lowest, have been brought by discipline to make the pride of good soldiership rather than the pride of high caste their ruling principle, and is still maintaining caste distinction in the Bengal army by now raising regiments composed exclusively of sweepers?—It appears to me that the question assumes that the Government of India ignore facts which I am not aware that they ignore one way or the other; and also I am not aware that the Government have come to any decision as to the constitution of the Bengal army; it appears to me that that is under discussion, and that nothing definite has been settled at all.

5545. You do not think, then, that the fact of two regiments of sweepers having been raised in the Punjaub indicates such an intention?—I cannot answer the question.

The witness withdrew.

Major-General Sir A. Wilson, Bart., K.C.B.

Major-General Sir ARCHDALE WILSON, Bart, K.C.B., examined.

5546. (*Chairman.*) Will you be so good as to state to the Commission what rank you hold in the army?—Full colonel in the Company's army, and major-general in the Queen's army.

5547. Will you state what the length of your service in India has been, and what positions you have held there?—I have been thirty-nine years in India.

5548. What are the commands which you have held there?—I have been in the Bengal artillery the whole of my time. I have held the command of battalions, and I have held the command of my regiment; for the last two years it was joined with the command of the station at Meerut as a brigadier. I also commanded the artillery with Brigadier Wheeler's field force in 1849, and the force before Delhi in 1857.

5549. You have been furnished with some questions from the Commissioners; will you have the goodness to favour them with the opinion which you have formed upon any of those points. The first question is, how far the European portion of the army in India should be composed of troops of the line, taking India as parts of the regular tour of service, and how far of troops raised for service in India only? Have you formed any opinion upon that point?—I think that the whole of the European portion should be composed of troops of the line.

5550. Will you be so good as to state to the Commission the grounds upon which you form that opinion?—I think that unless the whole of the European portion was a colonial force, which I think is hardly possible, there would be great jealousies between the two services, so long as the royal army and the local army were serving together; that is one chief reason for my opinion. Another is, that from the system of purchase in the Queen's army, there would be constant supercession of the colonial corps.

5551. Do you think that there would also be an advantage in having but one system of discipline?—Decidedly; there should be one discipline under one head. In the scientific branches the materiel and equipment, would be all assimilated, which I think would be of great importance in a country like India, where the royal army come with one equipment and the colonial army with another; I think it very necessary that they should be assimilated, and it would be a great thing for the scientific branches of the service to have the power of coming home occasionally to study and learn the different new improvements which are constantly taking place in their profession in England.

5552. You think that a system of relief for the scientific branches of the army in India would be of great advantage, by giving an opportunity to the officers of those branches in the service, on coming home, of seeing the various improvements?—Yes, those improvements being so very constant in the present days.

5553. Do you find that that is the case upon regiments arriving in India fresh from Europe, that they bring with them new improvements which have taken place?—A great number, and particularly the royal artillery, brought a great number of improvements, which we had not in India.

5554. (*Duke of Cambridge.*) Then you think that the fact of the royal artillery having been sent there has been rather an advantage than otherwise?—There is no doubt that it has been a very great advantage to both services; they had a good deal to learn, and we had as much to learn.

5555. (*Chairman.*) What is the difference in the organization of the Bengal artillery and of the royal artillery?—In the Bengal artillery, the horse artillery particularly, every horse is mounted; they have no outriders as the royal artillery have. It is a much cheaper system than the royal, but it is done very well; I think everybody will allow that the Bengal artillery have done their duty wherever they have been called out, but I do not say that the system is so good as that of the royal artillery. In the Madras and Bombay artillery I believe they have introduced the royal system of detachments.

5556. Was the system in the presidencies similar previously to the arrival of the royal artillery, or was there any difference?—We have always had a system without detachments in Bengal.

5557. Was the system the same in the three presidencies?—No, it has been different: Bombay and Madras have had the detached system; Bengal alone has had the other.

5558. (*Duke of Cambridge.*) Although the Bengal artillery, as I fully admit, has done admirably, so far as the corps is concerned, still you think that the system upon which it is organized is not the best?—I have no doubt that it would be more perfect on the other system.

5559. (*Chairman.*) Do you know how that system of putting every man upon a horse originated in Bengal?—The first troop of Bengal artillery was raised, I believe, to go to Egypt during the French war; and whether it was from want of men or not I do not know. Colonel Pennington raised it.

Major-General Sir A. Wilson, Bart, K C B.

26th Nov 1858

5560. They went, I believe, without horses ?—No; they took their horses: merely one troop went; one troop was first raised.

5561. Was every man there mounted ?—Yes. I cannot say whether they did or not take their horses. I believe they did. They could not have got horses in Egypt.

5562. That has always been the system in the Bengal presidency ?—Yes ; it was found to answer well and cheaply, and it was kept to.

5563. What are the number of officers attached to each troop or battery ?—A captain and three subalterns ought to be the number, but it has been a captain and two subalterns. We have never had sufficient officers to furnish the full number, so many have been taken away for staff appointments and political and civil employments.

5564. You think that that has been a disadvantage? —A great disadvantage, no doubt of it.

5565. (*Major-Gen. Hancock.*) Have the officers of the Bengal artillery had a full share according to their strength in the general staff appointments of the army?—I should say so, particularly in the surveying department.

5566. You do not include Ordnance appointments, of course ?—No ; those I look upon as regimental appointments.

5567. (*Duke of Cambridge.*) You think that the establishment of officers is not sufficient ?—It is not sufficient, and never has been sufficient. We had at one time eighteen European companies and only four officers to them, the reserve companies. Many of the companies for years never saw an officer ; there were two or three companies under one officer at Peshawur constantly, and the same at Lahore. All the officers were taken away to complete the troops and batteries, and to make them as complete as possible. A captain has hardly ever been seen with a reserve company since I have been in the service ; generally a young lieutenant was posted, and he was removed as soon as he was wanted for anything else. I have known four and five officers sent to one company during the year, each never remaining more than two months ; the men never knew their officer, and the officer never knew his men.

5568. (*Chairman.*) What was the cause of their being removed ?—Because we had not officers enough ; we never had even a proper number of officers with the troops and batteries.

5569. Were the officers generally looking out for civil employment ?—I am sorry to say that a good many were.

5570. Are non-commissioned officers ever taken from the troops for civil employment ?—They are taken very much for all the police and other purposes, and a great number for the ordnance.

5571. (*Major-Gen. Hancock.*) Does the commander-in-chief in Bengal usually allow men to be taken from the horse artillery for police purposes ?—Yes ; both from the horse and foot : all the bazaar serjeants, all the commissariat serjeants and barrack serjeants, and those sort of people.

5572. If confined within moderate limits, of course it is beneficial that such appointments should be open to them ?—I do not know of any benefit to be derived from it.

5573. (*Col. Forsyth Tait.*) They must be had ?—They must be had, of course, but they ought to supply their place. They take all our best men.

5574. But they fill up the vacancies ?—I am sorry to say that our vacancies never were filled up. Our troops and companies have been always short of men.

5575. (*Duke of Cambridge.*) Putting the financial question on one side, admitting that financially the arrangement is cheaper, do you think that the Bengal artillery would be improved by having the system of detachments introduced ?—Most decidedly.

5576. (*Major-Gen. Montgomerie.*) Are you not aware that that was recommended so far back as Sir Henry Fane's time ; that a committee of artillery officers from the three presidencies assembled at Calcutta to consult upon those very points, and that it was there recommended by that committee that they should follow the detachment system ?—Yes.

5577. (*Duke of Cambridge.*) Do you think that it would be an advantage if all the artillery of the different presidencies were put on the same footing so far as concerned the materiel and organization ?—They should all be assimilated. The Indian artillery has been ordered years ago to be assimilated with the royal artillery as nearly as Indian warfare would permit, but I am sorry to say that it has never been carried out.

5578. (*Col. Forsyth Tait.*) Merely on account of the expense ?—No ; it has been because the officers of the three presidencies could not agree ; one liked this plan, and the other that plan. They would not agree upon what it should be.

5579. (*Duke of Cambridge.*) They each had their peculiarities, and they valued them ?—Yes ; one preferred shafts, another preferred poles, another preferred metal wheels, and another wooden naves to the wheels.

5580. (*Chairman.*) Do you think that the effect of having three separate armies is to prevent agreement ?—It prevents that assimilation which I think is very necessary, particularly in an arm like the artillery.

5581. (*Col. Forsyth Tait.*) Surely it depended upon the Commander-in-chief and the Government? If they heard what the officers of each presidency had to say for their own particular service, it was for them to decide what was the best ?—The Supreme Government, I know, ordered it ; but the governments of the other presidencies did not carry it out.

5582. (*Major-Gen. Montgomerie.*) I believe it was the other way: that the Supreme Government did order it in the first instance, and that it was afterwards set aside by the Supreme Government. The minor governments cannot set aside what the Supreme Government orders ?—They cannot ; but they did not carry it out.

5583. It was ordered to be carried out, and a line of the pen of the Supreme Government set it aside ? —I never heard that.

5584. (*Duke of Cambridge.*) In the event of the army being partially local and partially of the line, would you still wish to see a portion of the royal artillery in India ?—You must increase the local artillery very largely unless you do have royal artillery.

5585. Do you think it is an advantage to have some of the royal artillery ?—I think that it is an advantage to both services.

5586. (*Chairman.*) In connexion with the question which has been put to you, have you formed any opinion as to the best means of providing for the periodical relief of the former portion, and of securing the efficiency of the latter ?—If the whole of the European troops are royal, you can easily manage the relief by taking a portion every year, say one-twelfth.

5587. I am assuming that a portion of them should be local, and a portion of the line ?—The local, of course, would never be relieved.

5588. Would you send the troops round by the Cape, or in the other way ?—I would send them round by the Cape.

5589. How long do you consider that a European will serve with advantage in India ?—I think that he ought not to serve more than twelve years.

5590. Therefore, to keep up the efficiency of the latter portion, it would be necessary to afford such relief to them ?—Yes ; taking a twelfth every year, it would give a relief once in twelve years to the whole.

5591. Supposing there to be partly a local and partly a moveable army, do you think that it would be possible to consolidate the European forces so as to allow of exchange from one branch of the service to the other ; and what regulations would be necessary and practicable to effect this object with perfect justice to the claims of all officers now in the service of the East India Company ?—The officers now in the service are entitled, I should say, to their pension on

Major-General Sir A. Wilson, Bart, K.C.B.

26th Nov. 1858

retirement, with the understanding of which they entered the Company's service. If that is the case, I do not think that any officer would wish to exchange; if he did so, he should be bound to give up what he is entitled to from his status as an Indian officer.

5592. (*Duke of Cambridge.*) Do you think that there would be any difficulty in that?—No, I do not think that there would be.

5593. (*Chairman.*) How would you propose to effect it?—The pensions of officers in the Indian service are guaranteed to them as well as their promotion by seniority. This could be provided for by retaining the regiments and battalions as they now are until the present generation are absorbed. Those who entered hereafter should obtain their commission by purchase, and be amenable to all the rules now in force in Her Majesty's service. Exchanges would seldom be wished for by those now in the Indian service. Should they wish to exchange, it should only be in the same way as I understand is now done in the Royal artillery (I do not know whether I am correct in that or not), namely, that the step should go by seniority in the regiment from which the officer exchanged. I would keep these corps on the same footing until the present generation is absorbed. I think that if a man chooses to exchange (very few would exchange), he should forfeit his advantages from his status in the Indian army.

5594. (*Colonel Burlton.*) Would you have him forfeit all that he has contributed to the military fund and the orphan fund?—He gets these benefits from having entered a service which is local; if he chooses to enter another service, I think he should forfeit them all.

5595. (*Lord Stanley.*) Would not that practically be to impose a prohibitory tax upon exchanges?—No doubt; I do not think that any would wish to exchange.

5596. (*Chairman.*) But you anticipate that those entering the service should enter upon the same terms as those entering the Queen's service?—Yes.

5597. (*Lord Stanley.*) That is to say, you would introduce the system of purchase which exists in the general service army into the Indian army?—It would gradually come in; all those now coming in should come in by purchase.

5598. (*Chairman.*) Would it necessarily follow that the system of purchase should be introduced; many officers in our service have come in without purchase?—I do not mean to say that it is absolutely necessary.

5599. (*Duke of Cambridge.*) Could not you alter the system without introducing the system of purchase?—If you give the first commission, you cannot well ask people to purchase; I am talking of the army in general.

5600. (*Chairman.*) It does not necessarily follow that a man in the Queen's service should purchase; many officers pass through the Queen's service without ever purchasing or intending to purchase; it is not necessary?—It is not necessary, but I would put it on the same footing as the present royal army.

5601. You would not call upon an officer to subscribe to the funds?—Decidedly not.

5602. (*Lord Stanley.*) As I understand it, your proposal for exchanging is this,—that officers from the general service army exchanging into the local army should obtain all the benefit of funds to which they have never contributed, and, on the other hand, that officers exchanging from the local army into the general service army should forfeit all benefit accruing from funds to which they have contributed?—Yes; as respects the latter portion, there can be no exchange of the former kind. A man may exchange from the local into the general service, but you cannot exchange from the general service into the local without interfering with the seniority system.

5603. Then it is no exchange?—It is on the same footing as it is in the royal artillery. An infantry officer cannot exchange into the royal artillery, but a royal artillery officer can exchange into the infantry.

5604. (*Chairman.*) If the officer came in junior of the rank into which he exchanged, there could be no objection?—No.

5605. (*Major-Gen. Hancock.*) Supposing his age to be thirty, and that he comes into a regiment in the place of an officer of forty, with a number of officers in the rank below him, older in the service, would it not injuriously affect those officers, and lessen their chance of promotion by a death casualty?—I say that it should not interfere with the promotion by seniority.

5606. (*Col. Burlton.*) How is it possible to work it without that?—The only way is for a man to come in the junior of the rank.

5607. Suppose I am the senior lieutenant, he comes in instead of an old grey-headed captain who is going to die, and I thus have a young captain above me: does not that affect me and every man below me in the regiment?—My principle is, that it should be just on the same footing as the royal artillery now is, that you can exchange out of it, but not into it, until the present generation have had their promotion to the top of the tree.

5608. Then you would allow the local army officers to remove out, but you would not take in anybody in their place?—Yes.

5609. You would not bring into the local regiments any officer from the general service regiments?—You could not do so, I think, without interfering with the pensions and funds, and the advantages which the officers now derive.

5610. (*Viscount Melville.*) When you say that you would have all the European force troops of the line, do you contemplate in that amalgamating the artillery with the royal artillery?—Yes: and amalgamating the infantry and European cavalry also with the royal army.

5611. (*Major-Gen. Hancock.*) And also the engineers?—Yes.

5612. (*Col. Burlton.*) Supposing this is done, how do you dispose of the officers of the Bengal army, or of the other armies?—I propose to keep the battalions as they are now, in fact.

5613. The native battalions?—No; the native battalions I suppose to be done up.

5614. Not those of Madras and Bombay?—I should be sorry to see another native artilleryman in the service.

5615. I am not referring to the native artillerymen, but to the officers of the line; you say that you would propose the whole European force of India to be composed of troops of the line; in what way would you then dispose of the officers now remaining in Bengal without any regiments at all, and of the officers in the Madras and Bombay armies now attached to native regiments? Would you leave them as they are?—I do not know how you would dispose of them; they must get their seniority according as the regiments now stand.

5616. What would you do with the Bengal officers who have no regiments at all?—I do not know what is intended to be done; they are employed in different ways.

5617. That is temporary; what would you do with them permanently?—The regiment might be kept up in name, and you might employ those officers as you like.

5618. (*Duke of Cambridge.*) Which are most important, the interests of the officers or the interests of the public and of the empire?—No doubt, the interests of the public.

5619. You would not raise regiments in order to employ the officers, would you, if you thought that the system was not good?—No. I think that the public have a right to employ those officers in any way they like.

5620. Provided their interests are always guarded?—Provided their vested interests are guarded, decidedly.

5621. (*Lord Stanley.*) Do you contemplate, under the name of "vested interests," that a large number

Major-General Sir A. Wilson, Bart, K C B.

26th Nov 1858.

of officers, whether employment should be found for them or not, should go on receiving their pay ?—I should think that employment might be easily found for them ; you must have some native army in India, there is no doubt of it.

5622. (*Duke of Cambridge.*) You do not contemplate any difficulty in employing the superabundance of officers at present without regiments ?—I do not.

5623. (*Chairman.*) The great point has been the deficiency of officers hitherto ?—We have had a tremendous deficiency.

5624. (*Major-Gen. Montgomerie.*) Then you must make some provision for promotion ?—For promotion you must keep the regiments nominally.

5625. (*Col. Burlton.*) What number of Europeans do you think that it will be necessary to maintain in India hereafter, take Bengal ?—I think that if you disarm the whole population, which should be done at once, or as soon as possible, you will not require more than 25,000 Europeans.

5626. What number of native troops would you have ?—Exclusive of police battalions, I would not have more native troops than I would have Europeans.

5627. (*Col. Forsyth Tait.*) 25,000 natives and 25,000 Europeans ?—Yes.

5628. (*Duke of Cambridge.*) For the whole of Bengal ?—Yes.

5629. (*Viscount Melville.*) Including the Punjaub ?—Yes ; but then I would have police battalions besides.

5630. (*Col. Burlton.*) Do you think that we have had that number of Europeans hitherto in Bengal, before the mutiny ?—There have been 20,000. If you disarm the country, and have regular police battalions, properly organized, I do not think you will require more. I think that with the assistance of police battalions, 25,000 Europeans and 25,000 natives would be sufficient. You may have as many police battalions as you like.

5631. (*Major-Gen. Hancock.*) Would you arm the police battalions and the regiments of the line in the same way ?—No ; I would not allow any native to have the Enfield rifle or the Minié rifle.

5632. How would you arm the police ?—With the common percussion musket.

5633. (*Duke of Cambridge.*) The whole force of Bengal, including the Punjaub, taking the European and native regiments and the police, would only be 75,000 men ?—50,000, exclusive of police.

5634. Do you think that that is enough ?—Yes ; if you disarm the country perfectly.

5635. (*Col. Forsyth Tait.*) I suppose the police now in the Bengal presidency is upwards of 75,000 men, if it is not 100,000 ?—I am not talking of the civil police, the ordinary police of towns and villages.

5636. The police are civil and military combined ?—Yes ; but you have police for towns and police for villages, which are quite distinct from military police; they are only armed with sticks, bludgeons.

5637. (*Marquess of Tweeddale.*) You seem to lay great stress upon the natives being disarmed ?—I do ; very great stress. I think that if you had disarmed the whole population, as has been done in the Punjaub, you would not have required half the men that you have. I would have no native attached to the artillery.

5638. (*Viscount Melville.*) In the amalgamation which you propose of the cavalry, infantry, and artillery, now called the Company's force, with the Queen's army, how do you propose that it should be done ?—By numbering the present battalions in India as Queen's regiments.

5639. What would you do with the officers ?—I think I have answered that question. I would keep them with their present regiments and battalions until the present generation died out

5640. What would you do with the artillery officers: would you put them with their rank in the royal artillery, according to the date of their commissions, and to rise in the royal artillery as the other officers do, retaining their Indian allowances while serving ?—I do not see why they should not be kept in the same brigades as they now are.

5641. They would be liable to serve anywhere ?—Yes.

5642. Wherever they go they must retain their Indian pay, and of course be entitled to their retirement whenever they quit the service ?—The present generation.

5643. (*Major-Gen. Montgomerie.*) Would they not retain their pay ?—Not Indian pay.

5644. (*Viscount Melville.*) Supposing they were withdrawn from India along with some detachment coming home, and they came to England, or were serving at Corfu or any where, would you have them then retain their Indian pay ?—No, they would have the pay of the country in which they were serving.

5645. Do you not consider that would be a hardship upon those officers ?—I do not know why it should be. The additional pay is given under the head of batta, and gratuity for peculiar service in India, where you are obliged to keep up so many more servants, and you have so much more expense than you have in this country. The pay proper is the same. I believe the pay of an Indian officer is actually less.

5646. Supposing an officer to rise to a command—commands are much better in India than anywhere else—a lieutenant-colonel in India would receive a much higher command than he could do if he was in the royal artillery ?—I do not know the system of the royal artillery sufficiently to answer that question. I do not know what the emoluments are for the commander of a regiment or of a battalion.

5647. (*Duke of Cambridge.*) Could not an arrangement be made by which the officers now in India should remain in India until their service expired, and could not that be done irrespectively of any other amalgamation of the force ?—That you might do ; you might keep them for Indian service.

5648. Unless they voluntarily preferred to take their share of the other duties ; would there be any difficulty in that ?—I do not think there would be any difficulty ; I think the officers would be glad to come home for a tour of duty.

5649. You think that it would not be an unpopular movement as regards the officers if they were amalgamated in that way ?—I think that generally the wish of the Bengal artillery is that they should be amalgamated with the royal artillery ; but how it should be carried out regarding pay is a question which I have not thought of.

5650. You put forward the principle ?—I think the principle is good, decidedly, both for the public and for themselves, that they should be amalgamated.

5651. (*Chairman.*) You saw the royal artillery and the Indian artillery serving together ?—Yes ; they were both under my command.

5652. Did they serve together with perfect cordiality ?—With very great cordiality ; and each was materially benefited by working with the other, there is no doubt of it.

5653. (*Lord Stanley.*) Then you have not found that the carrying on of that service by two different armies leads to any jealousy between the two ?—They met there under peculiar circumstances, at a time of very great difficulty, and both of them were only anxious which should do their duty best. But in peace time I should doubt very much whether very great jealousies would not arise.

5654. (*Duke of Cambridge.*) Have you seen any instances of jealousy at all ; not specially as regards the artillery, but generally as regards the two services ?—There is, no doubt, a great feeling of jealousy between the Company's troops and the Queen's, and it has existed ever since I have been in the service. We have had no royal artillery till lately.

5655. (*Chairman.*) Does that jealousy exist in any degree between the armies of the different presidencies ?—I think it does.

Major-General Sir A. Wilson, Bart, K.C B.

26th Nov. 1858.

5656. (*Major-Gen. Hancock.*) Provided all be placed upon a perfect equality in every respect, why should any feeling beyond a generous emulation exist either between the armies of the three presidencies, or between the army of the line and the local army? —From one service being called the royal army and the other a colonial army.

5657. (*Col. Forsyth Tait.*) Is it called a colonial army, or is it called the royal army?—I do not know.

5658. (*Chairman.*) Any distinction would give rise to that feeling?—I think any distinction would do so.

5659. (*Duke of Cambridge.*) That would not be confined to India; it would extend to any double army in the world, would it not? That there would be a jealousy of feeling between two distinct bodies?—I should say that it always would do so wherever the armies were.

5660. It is human nature?—It is.

5661. A feeling of jealous emulation, as far as good feeling exists, would always exist in all armies with reference to different regiments and different companies of troops, but being one army there would not be the jealousy which is engendered by two distinct bodies. Is that your opinion?—Decidedly. If the two armies are to be kept distinct, although they are perfectly assimilated to one another, there will still be that slight jealousy which you talk of inherent to human nature, but otherwise they will get on very well together, no doubt.

5662. (*Lord Stanley.*) But, assuming that there is no invidious distinction, either in point of name, both being now called the Royal Army, or in point of eligibility for promotion to the highest commands, or in any other respect; do you think that there need necessarily be more jealousy between the two than such as is calculated to produce a healthy competition?—I believe that the West Indian colonial army is very much looked down upon by the royal army.

5663. You are speaking of colonial regiments?—Yes.

5664. That is to say, the force which you speak of as being looked down upon is a force extremely limited in number, and confined to service within a very restricted area, is it not?—It is confined to the West Indies. I am supposing that the troops in India are confined to the three presidencies.

5665. Is there not a considerable difference between the opportunities of service afforded and the extent of area to be protected in India, and in the West Indies? —With regard to area, that is of course so, and there is a larger army so far, but I do not think that that would make any difference.

5666. Was it not of the very essence of your reply, that that which created a feeling of inferiority in a colonial army was, that it belonged a very small force as opposed to a large one?—No, merely because it is confined to one peculiar portion of the globe, while the other is employed every where; I think it more likely to be the case. The colonial army never feels that it is under the same protection that the royal army is, and that it is cared for so much.

5667. When you speak of a colonial army, what experience have we of a colonial army upon anything like the scale of the army of India?—The Indian army has been a colonial army, as it has been under the East India Company instead of under the Crown.

5668. (*Duke of Cambridge.*) I suppose you are aware that in the West Indian regiments there is the power of exchange, and that the officers of those regiments are exactly on the same footing as those of any other regiments in Her Majesty's service?—I know that they can exchange.

5669. So that the officers are not confined to the West Indies?—No.

5670. Their service can be transferred to other portions of the globe?—Yes.

5671. That in itself would rather raise the character of those corps than otherwise, would it not?—I expect that they have to pay for it if they exchange.

5672. Have you found any bar in the fact of troops and batteries having recently landed, and being, to a certain extent, new on taking the field; did you find any want of efficiency in the royal artillery which landed in India, and which seemed newer than the other?—No, there was no want of efficiency. There was a want of practice in the field; that was the only thing. They picked up everything as fast as they possibly could.

5673. They soon picked it up?—Immediately.

5674. And you did not find that after a short period the arm suffered from that fact?—No; I should say that it did not suffer at all.

5675. (*Marquess of Tweeddale.*) What do you allude to when you say that they picked up?—I mean that there were many things quite strange to them in the Indian service. Their equipments were different from what they had been accustomed to. They had native workmen instead of Europeans attached to them, and several other things, and they had not been in the habit of using their artillery in the way that we do in India.

5676. But so far as their efficiency went they were perfect?—Their efficiency was as perfect as one would wish to see it.

5677. (*Sir Harry G. W. Smith.*) Did they suffer any inconvenience from a want of knowledge of the natives?—They had, generally speaking, an officer of our service attached to them as an interpreter to assist them, and they sought information from us in every way, which was readily given.

5678. (*Duke of Cambridge.*) That would soon be picked up?—That would soon be picked up, no doubt.

5679. If you wanted a large increase of artillery to-morrow in India, would you object to see eight or ten companies or troops of royal artillery come out; would you be afraid of their efficiency?—I never wish to see better troops or batteries anywhere than those which came out.

5680. (*Viscount Melville.*) You are aware that the royal artillery drive with shafts, and that they do so in Bombay, but that in Bengal and Madras it is with the pole?—Yes.

5681. With regard to the Arab and the horse which you get in the East, which do you think the best system?—We do not use Arabs; we use what are called stud horses. I believe in Bombay they have Arabs.

5682. Your horses are not much larger, are they? —Yes, they are much larger. They are 15-2, 15-3, and frequently more, and 16 hands the pole horses.

5683. Supposing you had the Arabs, what do you think should be the mode of equipment?—I think the Arabs are too small for pole horses, or shaft horses either; they do very well for leaders.

5684. (*Duke of Cambridge.*) How do you train your artillery recruits which come out?—We have a school of instruction at the head quarters, where all the recruits first go. They come to us from the plough; they get no training in this country. They go through their infantry drill first of all; they then learn the gun drill, and they go through the laboratory course.

5685. Do you think that it would be an advantage if they were trained in England before going out?—No; I think they would lose a great deal on the voyage.

5686. (*Chairman.*) Do they enlist for particular services?—Yes; they enlist for particular presidencies.

5687. (*Duke of Cambridge.*) How long do you consider an ordinary recruit to take before he is fit for service?—He ought to be fit in a twelvemonth after his arrival there. I do not think you can do it in less.

5688. Supposing a very large increase were made to the local force as the force stands at present, would not there be a very great difficulty in raising 20 or 30 companies at once to make them efficient for the field?—I think you would hardly be able to get, men to enlist in sufficient quantity to make the whole perfect.

5689. Would not the effect be to make inefficient what you have at present efficient in the field?—You must transfer some old soldiers to each company as non-commissioned officers and to teach them their duty, and you would be weakening the present troops and companies by taking men for that purpose, and it would be a full twelvemonth before the fresh company were fit for any duties in the field.

5690. I believe it is the system in the Bengal artillery to employ a good number of syces, and men of that description?—We have a syce to each horse.

5691. That system has not been introduced, I believe, into the royal artillery?—Yes; they have each got their syce. They have syces and grass-cutters.

5692. Has a battery of the royal artillery the same number of natives of that description attached to it as a battery of the Bengal artillery has?—Just the same.

5693. Therefore, there is no difficulty in assimilating one service to the other in that respect?—In India you must have them; you cannot get grass as you can in this country, and you cannot expose your Europeans to take their horses to water under a hot sun as you do in this country.

5694. Consequently the expense of one service in contradistinction to the other is a mere matter of detail, depending upon the numbers of officers and men whom you settle to attach to each battery or troop?—Yes.

5695. There is no difference of expense in one from the other?—There ought not to be. India would be more expensive than England for this reason, that you have to attach these natives to your horses.

5696. But it is a mere question of detail?—It is a mere question of detail.

5697. (*Viscount Melville.*) How did you manage with the native syces and servants during the late revolt?—Generally speaking, they stuck remarkably well to us; some few deserted, but others took their duty.

5698. They did not participate in the disaffection, or show any bad feeling?—No, not generally.

5699. I heard some report that they had deserted?—In some regiments I heard so, too. I heard that they had deserted from some of the cavalry regiments of the royal service.

5700. How did your followers behave at Delhi?—Very well.

Major-General Sir A. Wilson, Bart., K.C.B.

26th Nov. 1858.

5701. (*Duke of Cambridge.*) Do you think that it is any inconvenience to the service of India generally that the materiel of the three presidencies is different?—It has been the cause of a very great deal of trouble: whenever one has taken the place of another the whole equipment has had to be changed. The magazines of one presidency are useless for the other, on account of the want of assimilation in a great measure.

5702. So that the one presidency in cases of emergency can hardly draw upon the magazines of the other?—A Madras battery coming to Bengal cannot get the wheels which they use for their guns, and there are several other little bits of equipment which we cannot furnish them with, but which they are accustomed to have. Every gun in each presidency ought to have exactly the same materiel in every way, so that one could take the place of another.

5703. In fact it is the life and soul of an army?—Yes; when the Madras troops took our place in Burmah, our magazines were quite useless.

5704. (*Major-Gen. Montgomerie.*) In what respect, what part of the magazine, do you mean the wheels?—Not only the wheels, but several other things; different portions of equipment, such as implements, half-wroughts, &c.

5705. (*Duke of Cambridge.*) Many minor details?—Yes.

5706. Harness?—Yes.

5707. But not the ammunition?—No, because the calibre is the same.

5708. You mean the stores?—Yes.

5709. Is it not a fact that according to the Bengal system, the waggons must go into action with the battery?—Yes.

5710. Do you think that a good system?—You can always keep them behind a little, while under fire. I think that is a good system. I prefer it to having your waggons away from the guns.

5711. Do you prefer the detachment system or not?—I prefer the detachment system. I think it more perfect than the other.

5712. Do you think that there is any difference as to the rapidity of motion?—No; I think it is about the same. I have seen a royal troop and a Bengal troop go into action together, and I saw very little difference. You get quicker into action by the detachment system, no doubt.

5713. In that respect it is militarily an advantage?—Yes.

5714. Is there any other statement which you would wish to make?—No.

The witness withdrew.

Adjourned to Monday next, at 11 o'clock.

Monday, 29th November 1858.

PRESENT:

Major-General Peel.	Major-Gen. Montgomerie.
H.R.H. the Duke of Cambridge.	Major-Gen. Hancock.
Lord Stanley.	Colonel Burlton.
Viscount Melville.	Colonel Forsyth Tait.
Lieut.-Gen. Sir Harry G. W. Smith.	

Major-General PEEL in the Chair.

Major-Gen. Sir Frederick Abbott, C.B., examined.

Major-General Sir F. Abbott, C.B.

29th Nov. 1858.

5715. (*Chairman*). You are a major-general in the Indian service?—Yes.

5716. You belong to the Bengal engineers?—I do.

5717. Will you have the goodness to state how long you have served in India?—From 1822. I returned in 1847.

5718. You were the whole of that time in the engineers?—Yes.

5719. You have been furnished by the Commission with some questions?—Yes.

5720. Will you have the goodness to state to the Commission any opinion which you may have formed upon those various questions. The first question is, how far the European portion of the army in India should be composed of troops of the line, taking India as parts of the regular tour of service, *Major-General Sir F Abbott, C.B.*

29th Nov 1858.

and how far of troops raised for service in India only?—I think that it would be better for the service in India generally that the whole of the European corps there should be a special service, and that it should be enlisted for local service in India.

5721. Do you think that no portion of it should be a moveable force sent out from this country?—I think that for some reasons a portion might be sent out occasionally, but not so much for the purposes of India as for taking advantage of the different battle fields of India for learning duties which are required of soldiers.

5722. Will you state the reasons which induce you to believe that it would be better for India to have the whole a local force?—Because I think it should be quite independent of the fluctuations of European contingencies; in my opinion there should be a minimum amount of force established in India, which could not be altered by any requisition from Europe, otherwise India might be denuded at some particular moment when it would give great advantage to the disaffected to unite against us.

5723. Have you formed any opinion as to what that minimum amount of force should be?—That is a very difficult question, and everybody would have a different view upon the subject. I have taken peculiar views upon it myself, and I think the minimum force required is very much smaller than that usually considered necessary. I have had the honour of laying before the minister for India a statement of my views regarding the amount of force requisite, and I think that by the introduction of engines for locomotion, for moving the troops about rapidly with the introduction of very light cavalry, and so on, we might reduce the total amount of force to somewhere between 40,000 and 50,000 Europeans.

5724. Must not the amount of European force depend upon the amount of the native force which is raised in India? Do you not consider that it is necessary to keep a given proportion between the European force and the native force?—Certainly; you must not overtax the Europeans by having too many natives attached to the force; but as I think that one European to two natives would be a very fair proportion, between 40,000 and 50,000 Europeans might be enough.

5725. Where would you propose that they should be recruited?—There is only one recruiting ground that I am aware of, namely, Great Britain.

5726. I believe there is nothing to prevent our recruiting foreigners for service in India?—I have not considered the question much of enlisting foreigners. I have no great affection for them myself.

5727. Do you anticipate that 40,000 or 50,000 men should be recruited from this country for local service in India, and not be removable from India?—Yes, that is my opinion.

5728. Do you not think that it would be a great disadvantage to this country to have so large a proportion of the force which you can raise by voluntary enlistment tied up and not allowed to be removed in case of emergency?—I was speaking merely as to India; I would have the minimum amount as a force specially attached to India.

5729. You consider the question as entirely an Indian one?—Certainly, on that part of the subject; I think it is very difficult exactly to assimilate the two, but taking the minimum force to be established in India, then it would be very useful indeed to have a certain number of Her Majesty's regiments paraded; the very appearance of them would show that we still had a connection with the mother country, and that we could have assistance whenever we wanted it.

5730. Would it not also have the effect of bringing out any improvements in discipline?—Certainly; bringing out the latest improvements, and I think the communication of ideas between military men is very useful. Those coming out would learn the art of war in India, to a certain extent, and they would communicate to us the improvements lately made in Europe.

5731. Would you have one a moveable army, and the other confined entirely to service in India?—As the regiments on proceeding to India are always paid by the Indian government and by the Indian funds, they should be made over, I imagine, to the Commander-in-chief in India, whoever he might be.

5732. Would you place that portion of the moveable army sent to India under a different discipline and command from the portion of the moveable army remaining in this country?—For the time being they are lent as it were; they are not paid by the country.

5733. (*Duke of Cambridge.*) Lent to whom?—To the local government in India.

5734. It is now all under the Crown?—It is.

5735. Therefore, how can any portion of the troops be lent?—I am not aware of what arrangements will be made regarding the commands in India, but if an officer is posted there with powers plenipotentiary as regards military affairs, I should say that those regiments which are lent to India should be placed immediately under his command, they being severed for a time from the mother country.

5736. Does not the fact of their being but lent to India, imply that India is altogether a separate country from the mother country?—I do not know how it will be arranged.

5737. (*Lord Stanley.*) You regard the government of India as a department of the public service of the empire with a separate system and with a separate revenue, and therefore you speak of the troops being lent by one department to the other?—Certainly.

5738. (*Chairman.*) Do you consider that the troops sent to the different colonies and supported by a part of the moveable force are lent to the colonies?—A vast difference is caused by the position of India with regard to the mother country; I do not know of a parallel case with India, where there is a large force 30,000 or 40,000 men.

5739. Upon what ground do you think that the restriction as to the amount of force in India has been founded in previous local Acts of Parliament?—I have not the slightest idea.

5740. (*Major-Gen. Hancock.*) Are you of opinion that the portion of troops to be sent from this country should form part of what you have called the minimum European force in India, or an additional force?—An additional force.

5741. Then, as regards that additional force, you view it as an imperial question, and consider that it would be sent for the benefit of Great Britain?—Chiefly for the benefit of Great Britain, and partly of India.

5742. Do you think that the expense of that extra force should fall upon the Indian or the English revenue?—If the men are entirely made over to the officer commanding in India, then, I think, that the Indian revenues should bear the expense. I think it would an advantage to India to parade a force of that sort occasionally.

5743. Perhaps then you think that the expense should be borne partly by India and partly by England, inasmuch as both would derive advantage from it?—Yes.

5744. In so far as the additional force might enable the Government of India to reduce the native force to that extent you would probably think it just that the expense should fall upon the Indian revenue?—Certainly.

5745. (*Duke of Cambridge.*) In what respect have the European troops of Her Majesty's army of the line been found not to answer in India. In what respect have they not been efficient in India, which I presume is the reason why you wish for a local army?—That is not what I stated. I did not put it upon that view at all. I am aware of no deficiency or inefficiency in Her Majesty's officers in India.

5746. Then seeing that we have acquired the possession of India through Her Majesty's troops of the line, why should we suddenly make this great change?—It has not been entirely through Her Majesty's

Major-General Sir F. Abbott, C.B.

29th Nov. 1858.

troops of the line in India; it has been chiefly done by the aid of the sepoys.

5747. As far as Europeans are concerned, it was done by the troops of the line?—I stated in the first instance that my proposal was for the special purpose of avoiding a fluctuation of the force in India.

5748. (*Major-Gen. Hancock.*) Has not the Company's army furnished the most important arm of all, namely, the whole of the artillery and the engineers? —Entirely.

5749. Does not the circumstance of the whole of the engineers and artillery having been furnished by the local army in your opinion weigh to make the services rendered by it at least equal to those rendered by the troops of the line in the conquest and maintenance of India?—That is a great historical question, to which I feel myself incompetent to reply. I could hardly presume to adjudicate upon the exact part which one or the other has taken in the conquest of India.

5750. (*Lord Stanley.*) If I understand your view, it is this, that the existence of a local force and the defence of India mainly by such a force is a guarantee against India being used as a convenience to the mother country for receiving and paying for troops which we do not want at home, though they may not be required in India; and on the other hand, against India being stripped of troops which may be wanted in India, because they are required at home?—My view was not exactly what your lordship states in the first part of your question. I had no anticipation that the mother country would make use of India in an improper way, but it was what your lordship states in the second instance; it was merely for the safety of India. Her Majesty's forces in India, we know, in times of peace are always reduced to their minimum amount, and below a proper efficiency. If a war breaks out, as in Persia or China, India is indented upon for the best of her troops, as was the case in the last Persian war, and she is denuded; it is to guard against this being done that I make the proposition that a certain number of troops shall be attached to the soil.

5751. (*Chairman.*) Have not all the requisitions for the Queen's troops come from the Indian Government? Has it not been impossible to send out troops to India without a requisition being made for them by the East India Company?—That is a point with which I am not at all conversant, but I think it does not affect the prospective question.

5752. No troops could be sent to India without a requisition from the Secretary of State for India now, or previously from the East India Company?—I believe not, but I speak with no authority.

5753. The officers of the local force which you propose to raise for service in India only, and the European officers attached to the native force, would, of course, all have the same interest, would they not? Yes.

5754. Have occasions never arisen on which the presence of the Queen's army to check that feeling, would have been very beneficial? Have occasions never arisen on which the local forces have shown a disposition to defend their own interests rather than to do their duty to the Government of India?—Yes; there is one historical case of mutiny.

5755. Would it not be a very great advantage to have a certain portion of the troops in different interests, and depending upon this country alone?—After the late occurrences in India, I should think it very unlikely that there would be any disposition to mutiny, inasmuch as the Europeans see that it is only by supporting the Government that they can keep their place in the country.

5756. You admit that such cases have arisen?—There was one case, I believe; I do not know that it was stopped by any overpowering force of Her Majesty's troops.

5757. (*Lord Stanley.*) You do not consider that the possibility of mutiny or discontent among the Europeans of a local force, either officers or men, is a contingency which deserves to be taken into account?—Certainly not; I think that after the trial which the army had of the half batta question, there is no fear that they will ever set themselves against the Government in any improper way.

5758. And especially in a country like India, where they are a small garrison amongst an immense population, many of whom are hostile?—I should think it almost impossible.

5759. (*Major-Gen. Hancock.*) In your opinion the force of from 40,000 to 50,000 men which you consider would form a sufficient minimum force for India in future should not be liable to be employed in Persia or Burmah, or any other part of Asia?—They should certainly not be removed beyond what we call the present Indian territories.

5760. (*Chairman.*) You propose that they should be enlisted upon those terms?—Yes.

5761. And therefore it would not be in the power of the Government to remove them?—Just so.

5762. (*Duke of Cambridge.*) Do you think it a desirable thing that the hands of the imperial government should be crippled to that extent, that 50,000 Europeans should be actually shut up for the Indian service only?—If India is worth keeping it must be so.

5763. Do you think that that would be an advantage to the mother country?—I think it would in this respect; I think that the authorities of the War Department would be able to get their estimates passed for a greater amount of force than is now allowed.

5764. (*Viscount Melville.*) What amount of force do you expect to keep up in order to secure 50,000 men permanently in India, and how do you expect to recruit them?—I do not know why any particular force should be kept up, except in the recruiting depôts.

5765. To have an efficient army of 50,000 men you will want 100,000 at least?—That is a matter of detail, I consider.

5766. (*Duke of Cambridge.*) How would you manage that?—Speaking generally, I can only say, that I would have recruiting depôts established on a sufficient scale to enlist the men.

5767. (*Chairman.*) Where would you have the recruiting depôts established?—In Ireland, Scotland, and England.

5768. In this country?—There is no other recruiting field.

5769. Do you not think that it would be a great advantage to this country to have those large depôts of men consisting of at least 20,000 men in depôt here, under the direct discipline and control of the Commander-in-chief in England?—They might be entirely under the control of the Commander-in-chief as well as the troops in England. I should think that every man is under the control of the Commander-in-chief as long as he remains on the British shores.

5770. (*Major-Gen. Hancock.*) Do you not think it would be advisable that the Government of India should have a body of European troops at its disposal for employment in Burmah or China, and in repelling aggression upon the Indian frontier?—Burmah is part of the Indian territory, China is not; I look upon China and Persia as quite a European question.

5771. (*Sir H. G. W. Smith.*) Do you not view India as part and parcel of the British empire?—It is a colony.

5772. Then why should it have an independent army?—Because as I have stated before, if it has not an independent army it is sure some day to be denuded of troops, and then the natives will rise as they did on the last occasion, and we shall lose probably the whole of the territory.

5773. (*Duke of Cambridge.*) What reason have you for saying that it is sure to be denuded of troops?—Because it always has been.

5774. When has it been?—When the Persian war broke out the troops were taken from India.

Major-General Sir F. Abbott, C.B.

29th Nov. 1858.

5775. Was that a European or an Indian question?—A European question entirely.

5776. (*Sir H. G. W. Smith.*) Are you not fully aware that when India has ever been in any danger whatever, troops have been rushed from Great Britain to India with the greatest possible rapidity?—Yes, and with great danger to Great Britain; the country has been denuded to supply India, and the troops have not generally arrived in time; but I would avoid the necessity of having that great rush of troops across the peninsula.

5777. But at the same time you would avoid the possibility of England making use of troops which were located in India?—That is my great purpose.

5778. You would have 50 or 60 regiments tied up in India, and belonging exclusively to that country, which you call a colony of Great Britain?—They could not be removed with safety to the empire.

5779. (*Duke of Cambridge.*) Supposing the empire is threatened to such a degree that it is shaken to its foundation, do you think it a wise arrangement to tie up 50,000 men in India whom you might otherwise make available; which of the two methods would be the most dangerous?—I do not see any necessity whatever for the mother country being in such danger; she ought never to fall into such danger as that; she has her own men, she has millions to recruit from, and why should she be in danger? Can you suppose it possible that the ministers of England should ever allow the safety of England to depend upon troops serving 10,000 miles off? it seems to me to be impossible.

5780. Can you on the other hand suppose that the ministers of England could ever endanger the possession of so vast and important an empire as India by removing troops, which could only be done upon their responsibility?—We have so many instances in history and in human nature that what is far away is always less thought of than what is near at hand, that I think the ministers would take care of Britain with much more energy than they would take care of her colony in India.

5781. Will you give me an instance in which India has been denuded, on the responsibility of Government, unnecessarily of troops?—I say that it might be.

5782. I want to know whether it has been?—It has been in the case of the Persian war.

5783. Can you give me any other instance?—We have sent troops to China before now.

5784. Has not that been done by the directions of the Government of India?—That I am not able to speak of.

5785. Do you mean to say, that even with the concurrence of the Government of India you would not allow troops to go out of India?—The Government of India must, of course, be left entirely to their own arrangements; if they sanction it there is no help for it. There is no power on earth which can bind them but their own discretion.

5786. Would you prevent their using their discretion?—I would if I could.

5787. (*Viscount Melville.*) If you call India a colony, which is considered a term of reproach, it always having been looked upon as our Indian empire, why should you suppose that the Government of Great Britain would endanger the safety of India any more than they do that of the other colonies. Australia is as distant, is that neglected? Are the West Indies neglected?—They are not placed in the same circumstances at all.

5788. They must be defended, whether it is by ships or by troops. It is the duty of the Government to have the necessary force?—In each of those cases there is a very small portion of European troops established, and they can be easily spared; but if you send troops to India, you can hardly spare 50,000.

5789. (*Duke of Cambridge.*) Do you mean that you cannot spare them; in what respect?—I think that the Government of England would count upon having so many troops, say 50,000, available in case of need, and, therefore, they would, generally speaking, reduce the estimates for available men elsewhere.

5790. (*Chairman.*) Do you think there is no limit to the power of recruiting men in this country by voluntary enlistment. We have had a pretty good example during the last two years, when a certain number of men have been voted which we have never been able to raise?—I think if you increase the bounty you will find plenty of men.

5791. (*Viscount Melville.*) Are you aware that that is about the very worst thing which you can do, and that it is only a premium to desertion?—I was not aware of it.

5792. (*Major-Gen. Hancock.*) Still is it not the case that of whatsoever troops the European force in India may be composed, the same number of men will be required, whether enlisted for general service, or for service in India only?—Certainly.

5793. (*Chairman.*) But you propose that at least one-third should be withdrawn from the power of this country, to make use of them in case of emergency?—But I imagine that there will always be plenty left. Under any circumstances, you cannot with safety withdraw them from India, so that it comes to the same thing in the end.

5794. (*Duke of Cambridge.*) But in one case you cripple the hands of the Imperial Government, and in the other you leave the Government free to act upon its own responsibility, for which that Government is responsible to Parliament and the country; and I ask whether you do not think that, guarded as that power of withdrawal is, you may safely leave in the hands of the Government the responsibility of losing India through the withdrawal of troops?—I would not trust the safety of India to Parliament under those circumstances.

5795. (*Col. Burlton.*) Supposing any very pressing emergency arose, such as the invasion of England, what length of time do you suppose would elapse before troops could be sent for from India and brought here to assist in that emergency?—I think that question would be answered by stating the time that we took to send out troops to India. I think it was some six or seven months.

5796. If the emergency was so pressing as I have imagined, would it be of any use to send for those troops?—Not the slightest.

5797. (*Major-Gen. Hancock.*) If the whole European force in India were composed of troops of the line, would not the difficulty of recruiting for the army of the line be increased in proportion to the number of additional troops which it would be necessary to maintain in England to furnish reliefs to the force in India?—Certainly.

5798. (*Duke of Cambridge.*) Why should that be so?—On account of the reliefs of the regiments. You must have a much larger number of Europeans if you relieve the troops in India, because there will be always one set in transit.

5799. (*Major-Gen. Hancock.*) Supposing the whole European force in India to consist of 80,000 men, and that about one-tenth of that number of troops would be required for annual reliefs, on the assumption that the Indian term of service would be limited to ten years, would not the consequence of that arrangement be that about 8,000 men would be constantly on the seas, and therefore not available for service in either country?—Certainly.

5800. (*Chairman.*) How long do you consider that a European can serve with advantage in India without affecting his health?—I am not, I think, competent to give a very fair opinion upon that point. I have never been much with European troops, having been a departmental officer, but I think all these things are recorded in tabular statements which could be easily referred to, and much more effectively than if I were to give a mere opinion.

5801. Does not that affect the question altogether. If you are obliged at the end of 12 or 14 years, to remove the European soldiers, it amounts to reliefs?—But they go out by driblets; it is not sending out large masses at a time. If the troops of the line served in India, they would require their reliefs every 10 years. You would be taking out at once 1,000 men, and sending home 800, and so on. By my proposition those that went out would remain.

5802. I think it is admitted that the arrival of English troops and regiments is a necessity ?—Unquestionably; but not such an influx as that. And besides that, I think it detrimental to India to have so many troops arriving; for so many officers and troops arriving with European prejudices, is a great shock to the natives.

5803. (*Duke of Cambridge.*) Do you think that the native feeling has suffered in consequence ?—Yes.

5804. In what respect ?—Because those going out are not aware of the native prejudices, and do not consult or respect them.

5805. Can you give any instance of that ?—No.

5806. (*Lord Stanley.*) Is it not a notorious fact that men and officers arriving fresh in the country are often unable to take care of themselves in regard of health, and are more likely to come into collisions with the people than officers and men who have resided there for some years ?—No doubt.

5807. (*Duke of Cambridge.*) Cannot you make such regulations by superior authority as to prevent any mischief arising from that fact ?—I think it is almost impossible.

5808. Why ?—You can hardly break in 1,000 men at once to a totally new system of proceeding. The men will think that they are in Europe for a long time after they are in India.

5809. Has it been found so practically ; can you give any instance of it ?—I cannot.

5810. (*Col. Burlton.*) Have you never heard of instances of newly arrived regiments in Calcutta getting into collision with the natives on account of interfering with their peculiar prejudices ?—I have heard a great many stories, but I merely wish to speak of what I know personally.

5811. (*Duke of Cambridge.*) Does not that apply to the discipline of the regiment, and would not such a thing be a disgrace to that corps ?—I think that all irregularities if carried to excess show some laxity of discipline in the regiment.

5812. (*Col. Burlton.*) But there is no irregularity or laxity of discipline in the fact of a European soldier, in walking to his cantonment, putting his foot within the circle where a man is going to cook his dinner ?—No ; every European soldier going out from England whether he be in the Company's service, or whether he be in Her Majesty's service, is new to the country, and he may often, and must often, shock the feelings of the natives, they being so full of prejudices. All this, of course, becomes a much more serious consideration when there is 1,000 or 1,200 men coming at once into the country. That is what I meant to state. I do not mean to say that the discipline of Her Majesty's regiments is in the least degree relaxed. I should be very sorry to say a word against them. I have known them, and have served with them, and have the highest respect for them, and the greatest affection for many of them.

5813. (*Lord Stanley.*) You are merely speaking of the sort of offence which any person, whether a soldier or not, coming fresh from Europe, and being unacquainted with the natives, would be liable to give perhaps 20 times in a week without being aware that he did it ?—Certainly.

5814. (*Major-Gen. Hancock.*) Regarding the matter as one of comparative expense, in the event of the whole European force in India being a local one, would not the Indian revenues be saved the entire expense which, if the force be composed of troops of the line, would necessarily be incurred for the periodical reliefs of regiments ?—Half the relief would be saved; the return regiments, I suppose, would be saved.

5815. In the event of its being a local army only, there would be no return regiments ?—No; of course the same number must go out to India.

Major-General Sir F. Abbott, C.B.

29th Nov 1858

5816. If the rule be that every line regiment shall be relieved after ten years' service in India, will not the Indian revenue incur for each relief the expense of conveying a relieving regiment from England to India, and the relieved regiment from India to England, in excess of the expense that would be incurred in maintaining a local regiment ?—Yes, excepting that when a relieved regiment goes home, it throws off many as volunteers into the service of India.

5817. (*Chairman.*) In the case of local regiments serving in India, the officers upon retirement are entitled to great retiring allowances, are they not ?—There is a scale of allowances. I do not know that I should call it very great. It is greater than in Her Majesty's service.

5818. The Indian Government would be relieved of that in the case of the regiment being a moveable one ?—I suppose it would.

5819. That of course is a set-off against the expense of the relief ?—I should think so.

5820. How do you propose to raise the native portion of the Indian army ?—I should take much more the fashion of the Madras army at present, which is to consider men of low caste as efficient in the army.

5821. I refer to the terms of the service, what length of time would you enlist them for ?—I have not paid a very great deal of attention to that particular point. It is of no use enlisting a native for any length of time, for as soon as he is tired of the service he bolts, and you cannot catch him again, so that it is of no use making the term of service long.

5822. I believe there are now 300,000 native troops and police ?—Yes.

5823. Would there not be very great danger in discharging any large portion of them ?—When they are disbanded I think they are harmless, especially when they retire from the service unarmed.

5824. Have you not taught them all the habits of a soldier ?—Yes.

5825. Is there not the danger of having a discontented population which has been trained to military habits ?—I do not think it is the case generally. We have not found it so in the late mutiny. It has been chiefly amongst the native troops that the mutiny has taken place, but those are men with arms in their hands. We have not found that the men who had retired and gone to cultivate the soil in the villages have turned against us.

5826. Is not there always danger of their going off with their arms ?—I cannot speak positively, but I believe it is very seldom the case that they carry their arms. When they bolt they strip themselves, and go as natives of the country, and not as soldiers, and they do not carry their arms with them.

5827. May not the same danger of mutiny arise upon any future occasion ?—Yes, if you have so large a force of natives as to overpower the European force, which I would not do. I do not think we want such a very large force of natives as we have.

5828. We have at this instant 300,000 natives ?—We have too many. That is under peculiar circumstances ; that is not the normal state of our native army. We have enlisted 80,000 Sikhs to put down a certain insurrection ; when that is put down I imagine that we shall disband them and reduce them to a proper number.

5829. Is there no danger in discharging a great number of men whom you have trained to the habits of soldiers ?—Under ordinary circumstances there would be no such disbanding of troops.

5830. What proportion of Europeans to natives would you keep up ?—Two natives to one European, independently of the police. My idea is, that we should not have the police armed with fire-arms.

5831. (*Col. Forsyth Tait.*) Are not the police exactly the same as the native soldiers ?—Yes.

5832. Armed in the same way ?—Yes.

5833. (*Duke of Cambridge.*) Therefore they are just as dangerous as the native soldiers ?—I would not have them so ; I would draw their teeth.

Major-General Sir F. Abbott, C.B.

29th Nov 1858.

5834. (*Viscount Melville.*) How would you arm the police ?—With swords and spears.

5835. (*Col. Burlton.*) With no fire-arms at all ?—No.

5836. Not a musket ?—No.

5837. (*Col. Forsyth Tait.*) For the treasuries you must have men armed with muskets ?—My views are that we should have the treasuries at large stations.

5838. (*Chairman.*) How many officers would you attach to each of the local regiments ?—I think about the strength of one of our native regiments; but I would have the European regiments of only 500 men each.

5839. (*Duke of Cambridge.*) What is your reason for having so small a number of men ?—I think they are very handy. I think as the native mind always counts by regiments, they have very nearly the moral effect of larger regiments; at the same time they will be more easily disposed of and brigaded about the country.

5840. Is it not much more expensive to have small regiments than large ones ?—Not much more.

5841. Is not there the whole difference of the officers and the staff ?—There is a little greater expense.

5842. Suppose a small regiment went into the field, how soon would it be wasted to nothing ?—But then you have more of them.

5843. Are you not aware that the strongest regiments dwindle down to nothing in a very short time ?—I think most of the regiments during the late war were very little more than 500 or 600 men.

5844. If with an establishment of 1,000 it is so, what will a regiment be with an establishment of 500 men ?—They ought to be kept up if you have proper recruiting depôts.

5845. Supposing that all the regiments in India were of an establishment of 500 men, and that they took the field and went on service, the natural result would be that a very large per-centage would be knocked off duty ?—Yes.

5846. How would you fill them up ?—You could not fill them up more than you do the present regiments.

5847. A regiment at present is double that establishment. How do you propose to keep a weak regiment efficient in the field, when you have such great difficulty in keeping a strong regiment efficient in the field ?—It is quite impossible to recruit while you are in the field.

5848. How is it to be done ?—I only multiply the number of the regiments instead of strengthening each regiment individually, for general purposes.

5849. The result would be that after not a very lengthened period you would have a great many regiments quite skeletons, would it not ?—It might be so.

5850. (*Viscount Melville.*) Suppose one of these small regiments of yours to be stationed at Poonah, or anywhere you like, in time of peace, and field duty is ordered, your establishment being 500 men, how many men do you suppose, on an ordinary field day, you would muster for parade out of the 500 men ? Do you know what the casualties are before you ever get the men into the ranks ?—I am not prepared to speak upon that point.

5851. What is the reason which you give for proposing a regiment with an establishment of 500 ?—Because I think they are more handy; they have the moral effect of stronger regiments certainly; the native mind always calculates by regiments. They say, "there are so many regiments there," they do not say, "there are so many thousand men;" wherever they are they say, "there are so many regiments."

5852. (*Col. Forsyth Tait.*) Probably you said 500 without considering the thing; there might be 600 ?—500 or 600; I mean that I should make smaller regiments.

5853. (*Viscount Melville.*) Before you had been in a campaign six weeks you would have to put two or three of these small regiments together to make one regiment and a provisional battalion ?—In Indian warfare it is very advantageous to mix up a smaller number of Europeans with a larger body of natives; the Europeans act as the point of the wedge, therefore if you have a dozen regiments of 500 men, in my opinion, it is better than having six regiments of 1,000 men, because you can mix them up; you can brigade them more easily with the natives, and they are the cutting points which you use with them.

5854. What is the difficulty in brigading 1,000 men any more than 500 ?—We have instances in India where it is requisite to have a wing, and we now detach a wing; but I think that a perfect regiment of small force is better than the wing of a stronger regiment; it is more complete in itself.

5855. (*Sir H. G. W. Smith.*) Are you not of opinion that such a system would have been a very injudicious one in the late revolt, if small regiments had been detached with large bodies of insurgents ?—I do not propose to detach them in actual warfare; my idea is quite the contrary, namely, to mass them. I gave in a little memorandum to the minister of the way in which I would do it generally. I would have no small detachments anywhere about India. Each of these head quarters, in my opinion, should constitute the collectorate of the country roundabout, and it should always be well garrisoned and well attended to.

5856. What I advert to is not the country, because the country has not revolutionized itself, but it is the army which has revolutionized itself; therefore European troops detached in small bodies would be prospectively in danger ?—If you keep them in the same proportion to the natives you are safe.

5857. (*Viscount Melville.*) As we know that a regiment with an establishment of 1,000 men dwindles down in no time to perhaps 600 or 700, how do you propose to keep up these regiments of 500 efficient, so as to have the regiments always of that strength ?—I think that a means might be devised, and ought to be devised, for keeping the regiments in cantonments up to their proper strength, and then you would have only the usual casualties on going into the field; but at present, generally speaking, (I do not know how it arises,) the regiments are very deficient; they do not get the proper number of recruits out to India.

5858. (*Chairman.*) You have stated your opinion that you would have the whole a local force, I therefore confine myself to the latter part of the second question, how would you propose to secure the efficiency of that force ?—If it would answer the purpose, I would rather be asked in detail; it seems to me that the efficiency of the whole European force in India is a very broad question.

5859. If you propose the whole to be a local force enlisted for service in India only, is it not very important for you to give us some idea of the mode in which you propose to keep it up ?—I have already stated that I would have them formed into regiments of 500 men, officered by about the same number of officers as are now attached to native regiments in India.

5860. What is the number ?—About twenty-seven officers; namely, three field officers, seven captains, and I think there are seventeen subalterns to a native infantry regiment.

5861. Would you allow those officers to be withdrawn for civil service ?—Yes, you must.

5862. Why must you ?—Because you have no means of filling up the civil service otherwise, and they are the most efficient men you can get. India could not get on if you stopped the recruiting of the civil appointments from the army.

5863. Would it not be possible to establish a civil service which should furnish all the requirements of the country ?—I think not; there is not the experience. You send men from England who are perfectly untried; they may be very clever and pass a good examination, but be quite unfit for India; whereas when recruiting is allowed from the army, you get a better class of men for the civil service. I would keep a sufficient number of officers to allow of a certain proportion being always drafted away.

5864. Then according to your account you would always withdraw the best officers ?—Not the best regimental officers, but those best fitted for civil duties.

5865. Do you not think the effect of that is to make men always look out for those civil appointments ?—Yes, if not properly guarded, but I think it might be so regulated as that officers performing civil duties in India should be struck off their regiment; they might take their rank, but not be allowed to join after a certain number of years of civil service, and then the others would be very glad to stay.

5866. (*Duke of Cambridge.*) Which would you prefer, a staff corps, or the system of *seconding* ?—The system of *seconding*.

5867. (*Chairman.*) Would you apply the same proposition to the non-commissioned officers of the regiment ? Would you allow them to withdraw for civil service?—You must, for all the departments of public works you must do so, I think, for many years to come.

5868. You anticipate of course that the class of recruits which you would gain for these local regiments would be about the same on the average as those now enlisting in Her Majesty's service ?—Yes.

5869. As we find great difficulty in getting a sufficient number of good non-commissioned officers, do you not think that the same difficulty would apply there ?—Then you must put the screw upon them. If you cannot spare them from the regiment, you must try and find them somewhere else.

5870. Do you think that a regiment enlisted for local service alone, from which the best officers and non-commissioned officers are withdrawn, can be upon the same footing as a regiment in the Queen's service ?—Not if you withdraw all the best officers and non-commissioned officers; it is impossible.

5871. (*Lord Stanley.*) Does not the knowledge that they have civil occupation as well as military occupation open to them act as a very powerful incentive to men of ability to enter the local service ?—I imagine that it does; but I do not speak from any personal knowledge.

5872. Though a regiment may suffer to some extent by having good officers withdrawn from it, does it not gain in the increased stimulus to exertion which is thereby given to other officers ?—No doubt. I think there would be very little study of the languages if the civil appointments were not open to the officers of the army.

5873. Men are induced to study and to exert themselves, and become acquainted with the native habits and characters, and otherwise to educate themselves, in the hope of obtaining something besides regimental occupation ?—Certainly; it has been a very great stimulus to our army.

5874. (*Chairman.*) Then it must tell in the first instance upon the recruit who is first enlisted ?—I do not think that a recruit thinks much about it. He generally gets rather tipsy, and takes the shilling.

5875. Do you think the fact of appointments being open to officers in the local army would give rise to your having a higher class of men originally entering the local army than the Queen's army ?—No, I think not. I think his lordship referred to the stimulus afforded after entering the service.

5876. (*Duke of Cambridge.*) You do not think it would be an inducement to men to go into the local army rather than the army of the line ?—No, I think young men get where they can. If they have interest at the Horse Guards they get into the Queen's army; if they have interest at the India House, they get into the Company's army.

5877. (*Lord Stanley.*) If by any regulation passed to that effect it were made known to every officer entering from henceforth the local army of India, that he was incapable of holding any employment except strictly military employment, would not that act as a great discouragement to young men of ability in the first instance to enter the army, and would it not also tend very much to lower the character of those actually serving in it by taking away from them all stimulus and all encouragement to educate themselves ?—As to a portion of the question I think it is perfectly certain that it would take away the stimulus to those in the service. With regard to those about to enter the service, I think it is difficult to answer the question exactly. Were all promotion of that sort withdrawn from the army in India, and all appointments thrown open, as they are very much now to competition, people would rather prefer entering the Queen's service than they would going to India, I think.

Major-General Sir F Abbott, C B.

29th Nov 1858

5878. If it were not for the prospect of civil employment ?—I think so.

5879. (*Chairman.*) But that prospect of civil employment does not appear to have acted upon the lower classes, namely, the recruits ?—I should say not.

5880. Doctor Renny was asked whether they were not recruited exactly in the same way as the Queen's troops, and his answer was, " It is generally supposed that they are not such good recruits ?"—I am not a regimental officer, and I can hardly speak to that point.

5881. (*Major-Gen. Hancock.*) If I understood you correctly, you did not give it as your opinion that opening the civil appointments to the officers of the army would have the effect of withdrawing the best officers from regiments ?—No.

5882. But simply that of withdrawing officers who might be the best suited by their particular qualifications for that branch of the service ?—I meant to state that.

5883. (*Duke of Cambridge.*) In practice is it not found that they generally are the best officers—the most intelligent officers ?—Not the best regimental officers, I think; from my knowledge of the service, I should say not.

5884. Do you think that a less clever man is as good a regimental officer ?—No, I would not say that. I think that there is a military disposition in one man, and that there is a civil disposition in another. One man likes surveying, another man likes studying the native languages, and entering into the political department; another man likes handling his regiment. I think that every man should have his choice in a great measure.

5885. (*Viscount Melville.*) Has not the extent to which officers have been withdrawn from their regiments hitherto detracted most seriously from the efficiency of those regiments ?—That has been, I think, because they have been rather under-officered; the number of officers has not been sufficient to supply this great demand.

5886. (*Duke of Cambridge.*) You propose that the door for entering the civil service should be opened quite as wide as it has been heretofore, but that after a certain period of absence the places in the regiment of those holding civil appointments should be filled up ?—Certainly.

5887. Do you think that that would be a great advantage ?—Yes.

5888. (*Lord Stanley.*) You would compel a man after a certain time to make his option between civil and military employment ?—Yes.

5889. You would not allow him to go on calling himself an officer in the army, and to be capable of returning to military duty, though practically he had lost all military experience from a want of familiarity with the life of the army ?—I would allow him to carry on his rank in the army to a certain point; but would not allow him to return to command or to military duty after a certain number of years' civil service.

5890. (*Duke of Cambridge.*) During which period he would be *seconded* ?—Yes.

5891. (*Major-Gen. Hancock.*) Are there not instances of very eminent men having served in civil employment, who have proved themselves first-rate officers in very high command on returning to military duty ?—Yes.

Major-General Sir F Abbott, C.B.

29th Nov 1858.

5892. I refer to such men as Sir Henry Lawrence, Sir James Outram, and others of that type?—I think there must be exceptions to every rule; but what I mean is that I think that we might allow the officers of the army to fill up vacancies in the civil service, and at the same time maintain the full establishments of the native army. By my proposition, when a man is *seconded*, his place is immediately filled up.

5893. Still you understand that under the system of *seconding*, officers of the line are not put upon the shelf and excluded from army employment. They continue on the returns of the army; their promotion goes on in their regiment, and they continue eligible for high commands?—I do not think that that would be objectionable if a man was fit for it.

5894. (*Chairman.*) Will you proceed with the statement of your views?—I have stated that regiments might be formed smaller than they generally have been, and these regiments to be officered by the same number of officers as are attached to the native regiments; those officers to have the privilege of serving in the civil service on a sort of *seconding* regulation, their places being filled up.

5895. And the recruiting and enlistment for the service to take place here?—Yes.

5896. Would you recruit exactly upon the same terms as for the Queen's army, otherwise would there not be the objection of having one service bidding against the other for the troops? Would it not be a great disadvantage in the recruiting market to have two contending parties, one against the other? Would it not give rise to the necessity of always raising the bounty, first on the one side and then on the other?—I do not know that a little rivalry might not do good. We have already a large recruiting depôt. I do not think that it at all affects the recruiting for Her Majesty's service.

5897. Do you know how the Indian troops are recruited now?—I am not acquainted with the full details.

5898. You do not recruit at all, we recruit for you; any person offering himself to the recruiting sergeant may say, "I am for the portion of that army now in "India," and he may enlist for it, but you have no recruiting establishment separate from the other?—If that works well I do not see why it should not be continued.

5899. (*Duke of Cambridge*). Do you not think that for a great empire it is an advantage to have one united army instead of a double army?—I think it is too far separated to be united.

5900. Do you not think that there is more hold upon the mother country if the distant army is part and parcel of the army of the mother country than if it is isolated for local service only?—What we want chiefly there is that the men should feel themselves attached to India.

5901. Do you not think that the fact of a double army would rather lead to jealousies and heartburnings between the two services than the reverse, however much they might be placed upon an equality?—Where there are two services there always will be heartburnings to a certain extent, but I have never seen any inconvenience. I have often been serving with Queen's troops in India, and I have never seen anything like heartburnings to any disagreeable extent.

5902. Do you think that there is no jealousy at all between the two services. Do you think that they feel exactly as if they were one?—No, they cannot.

5903. Is not that felt constantly?—I do not think that it is inconveniently felt; I have never observed it.

5904. Do you not think that if it exists at all it is a great misfortune. What is the advantage of it?—There is no advantage in having a bad feeling, of course, but I have never seen any inconvenience from it.

5905. As a military matter, is it not a great advantage to have everything so united as to make the force, whatever it may be, carry out concord and unity of feeling and action?—That is an argument which I would use for having the whole force special in India.

5906. (*Major-Gen. Hancock.*) Is it not the fact that hitherto there has not been that perfect equality between the officers of Her Majesty's service and those of the East India Company's service which is necessary to remove all ground for heartburning?—I believe the only difference has been in the matter of appointments to the staff, and that has been in a great measure rectified of late years.

5907. Have the officers in the Company's service been upon a perfect eqality with those in the royal service during the 70 years that they have held Queen's commissions, have they not in many respects been in an inferior position?—Might I submit that there is no great object in answering that question if you will excuse me from answering it.

5908. Is it not the fact that the rank of officers of the Company's service was not acknowledged in Europe until 1855?—Yes.

5909. Is it not also the fact that the Company's officers were excluded from the commands in chief in India until the year 1856?—Practically so.

5910. Were not nominations to be Queen's aides-de-camp first extended to the Company's officers in 1842?—I cannot speak to dates, but I believe so.

5911. (*Duke of Cambridge.*) Is it not a fact that the whole of the civil service of India was shut against the officers of the army of the line till within a very recent period?—I think it was, with very few exceptions.

5912. (*Col. Forsyth Tait.*) Why, was not it because they did not know the language?—I have no knowledge of that.

5913. (*Duke of Cambridge.*) The civil service being thrown open as it now is to the officers of the line, do you not think that that fact would induce officers, and has induced officers, and is doing so daily, to acquire the language and to become acquainted with the habits of the people more and more?—No doubt to a certain extent.

5914. Would not that of itself induce the officers to learn the language?—Certainly.

5915. (*Viscount Melville.*) Was not the interpreter to the late commander-in-chief in India, and to the three or four preceding commanders-in-chief, a Queen's officer?—Havelock was, I know.

5916. (*Major-Gen. Hancock.*) Although the staff and civil appointments in India were confined to the Company's officers, had not the Queen's officers, as a set-off, the advantage of being able to exchange into regiments in Europe, and of having staff and other appointments open to them in England, the Mediterranean, Canada, and the other colonies?—Necessarily.

5917. From which the officers of the Company's service were altogether excluded?—Certainly.

5918. (*Duke of Cambridge.*) Which are the best appointments, those in India, or those in Canada, or the Mediterranean, or the colonies?—I should prefer those in India, excepting when health fails.

5919. (*Chairman.*) Do you think that it would be possible to consolidate the European forces, so as to allow of exchange from one branch of the service to the other; and what regulations would be necessary and practicable to effect this object, with perfect justice to the claims of all officers lately in the service of the East India Company?—I think that that is utterly impossible; there are so many circumstances against it.

The witness withdrew.

JOHN M'LENNAN, Esq., M.D., examined.

J M'Lennan, Esq, M.D.

29th Nov. 1858.

5920. (*Chairman.*) You belong to the Bombay medical service?—Yes.

5921. Will you have the kindness to state to the Commission how long you have served in India?—I have served 34 years in the Company's service, and nearly 32 of those in India.

5922. Will you state at what periods?—From 1822 to 1855.

5923. You have been furnished with some questions on the part of the Commission?—I have.

5924. We shall be very much obliged to you if you will give us any information relating to them. The first question is, how far the European portion of the army in India should be composed of troops of the line, taking India as parts of the regular tour of service, and how far of troops raised for service in India only?—In a medical point of view the trained and efficient men of these two descriptions of troops appear to me to be equally good. A far greater number of soldiers of the line come to India trained than of the local European force, and the men of the line are certainly more carefully recruited than those of the local force. No soldier of the latter quits India so long as he is able to serve there, while a soldier of the line may quit, and often has quitted, India having 10 or more years of good service in him, if he does not choose or is not permitted to volunteer to remain in India when his own regiment has been ordered home. A consideration of these differences, peculiar to the two descriptions of troops, may, with other matters, assist in fixing the ratio asked for. I do not quite know, as a medical man, whether I may say more on that which seems to me to be a military question.

5925. How long do you consider that a European will serve in India as a soldier without detriment to his health?—A healthy, temperate man, I think, may serve well and efficiently 16 to 18 years.

5926. (*Duke of Cambridge.*) What should you give as the average run of service in India?—I should think probably 10 to 13 years, striking off those who were unfitted, and so forth.

5927. (*Chairman.*) Then you think that it would be necessary to have them relieved every 10 or 13 years?—I do not think that that follows; I think into that consideration many other matters enter. With a regiment relieved every 10 or 13 years, of course it is only the men who went out with that regiment who remain in it 10 or 13 years, but the majority would be found, I think, to be under 5 or 6 years; those men would return having much service in them; it all becomes a matter of economy, which of course I have nothing to do with.

5928. Will you have the goodness to proceed?—To the second question, I would give the following reply: Economy (in the saving of the expense of transport home), and efficiency (in retaining in India soldiers trained to Indian service), would both be consulted by the fullest possible opportunity being always given to the men of a royal regiment ordered home to transfer their services to regiments remaining in India. This ought particularly to be the case with men under 7 to 10 years service, who about that time are probably most efficient for field duties. When regiments of the line are sent out, and particularly for immediate field service, it would be well that neither very young lads (soldiers) nor very old men should be sent. The period of arrival in India should be in the beginning of the cold weather, so as to permit their destination to be reached at a favourable season. Avoidance of exposure to the sun and to temptations on landing, and due regulation of marches, &c., are well attended to in India. More in my opinion depends on a proper selection of men than on any particular roster of service in other colonies before going to India. The efficiency of the local European force would be increased by attention to several circumstances. I do not think its recruits have generally been passed into the service with the same care as in royal regiments. Men have not unfrequently been sent to India who ought never to have been taken as soldiers, imbeciles, deaf, of deficient stamina, with diseased hearts, lungs, &c. I have understood the cause to be that recruits are finally passed into the service at recruiting districts, and that difficulties have been made about their rejection after they have joined the depôt at Warley. Yet, whatever the causes may have been, they must be capable of removal and ought to be removed, the fact of the inefficiency being as I have stated, at least as regards Bombay; and it is likely, I presume, to have been felt at the other presidencies likewise. I ought to state that the recruits alluded to have for the most part belonged to the infantry. The local artillery appears to me to have been well recruited; it is of the infantry that I make this remark. No man of the local force should be embarked for India who was not in perfect health and strength. The number of recruits affected with venereal (in many cases, doubtless, of recent origin, but some even reported to have been transferred from hospital,) has at times been considerable; and if the ship, in which such men were embarked, met with stormy, wet weather on leaving Europe, the result has been that the constitutions of several have been permanently injured, and they have thus been lost to the service. Such a matter, even, as men previously to leaving England being furnished with quilted cap covers to protect the head and neck, would render them more independent of awnings during the passage, and prevent many an attack of illness brought on by exposure. There is one matter of the greatest importance to the European soldier in India, both of the line and of the local force, of which most are, I believe, cognizant, yet on which nothing efficacious has, so far as I know, lately been done. I allude to the check of venereal disease by police regulations in cantonments and cities. No one who has seen the large number of fine men, generally the youngest, who are yearly ruined in constitution from this cause, would hesitate to apply the remedy, which is simple, and consists, principally, in the compulsory cure of the public women who are the causes of the evil. The Bombay Medical Board, some years ago, when pressing recommendations on this subject on the notice of Government, adduced the conduct of all nations in the matter of plague, as an instance of the mode of preventing the spread of one disease, on the advisability of which all agreed, although it was essentially selfish, and abstractedly considered from some points of view, actually cruel. In plague, when a case occurs in a town or district, the sick and well are together confined, and the latter, under penalty of death, are not permitted to escape from the pestilence, in order that their fellow men outside may not be infected. For the prevention of venereal, no such selfish or cruel measure is necessary; harshness to any one even is not required; all that is needed is the cure of diseased public women of cantonments and cities, and the police regulation that they should not live within their precincts, or within a circuit of five miles, unless they were free from disease, and agreed that when they were sick, they should be made well. All wandering tribes, Gipsies, Kolalnees, Nuths, &c., whose women are often of the above character, should (the women I mean) be punished, if they were found nearer than 5 to 10 miles, unless they subjected themselves to the above law. To carry the regulation out, there must be the supervision of the police, and the examination of the women; but, generally, there would be no necessity to institute any hospitals, since at all old stations there are civil hospitals in which these females could be, and are now, cured, whenever they choose to apply for admission. At new cantonments it would be necessary to have a lock hospital.

J. M'Lennan, Esq., M.D.

29th Nov. 1858.

5929. (*Sir H. G. W. Smith.*) Is the lock hospital re-established?—I think not; I am not aware of it. The importance of the prevention of venereal is not to be judged from an inspection of returns of deaths, but from an examination of the causes of invaliding contained in unfit rolls; when it will, I think, be found, that of those discharged as unfit, far more owe the causes of their discharge to venereal, and its sequelae, rheumatism and broken down constitutions, than even to tropical disease. It will be found, too, that the majority are, as I have already said, young soldiers, from whom, but for this pest, there would have been a probability of many years of efficient service. There is another matter which I suggest with diffidence: it is the permanent posting or attaching of a zealous and discreet clergyman to each regiment. On the present system of "station chap-"lains," the reliefs remove soldiers from beneficial influences arising from such men, very often just at the time that they have begun to work the most good. In connection with the subject of "securing "the efficiency of troops," I have not alluded to the institution of schools, of libraries, and of savings banks; the improvement of barracks, of married men's quarters, and of hospitals; the institution of sanataria; the formation of play and garden grounds, and of swimming baths; the improvement of canteens; the encouragement of coffee rooms, &c., since much has been, and is now being done on these and other matters. But I may state my opinion, that with the exception of cholera, from 50 to 70 per cent. of the diseases admitted into European hospitals is excited, either directly or indirectly, by spirituous and other liquors, and by syphilis.

5930. (*Chairman.*) Have you formed any opinion upon the third question,—whether it is possible to admit of an exchange?—There does not appear to be much difficulty in consolidating the enlisted men of the European forces; that is, putting them under the same regulations; and if this were done, benefit might accrue to the local army, by such men of that part of the force as were unfitted for tropical service, yet who might (by removal from India, and the voyage home) become able to serve in Europe, and in temperate colonies, being transferred to regiments there serving, and benefit to the State might result if men of the line sent to England for the recovery of their health were not returned to their regiments in India, but so transferred, for not unfrequently they do not retain their health after returning to the tropics. In the case of commissioned officers there would be difficulties, for the terms of engagement and of service in the two forces are different, yet those of the line are less stringent, and, therefore, the officers of the local force would, in these matters, gain by transfer. In reference to pensions, the officers of the local force would, I imagine, suffer by transfer; but the greatest difficulty might possibly arise from the fact that there are military funds in the local service, to which all officers subscribe, in accordance with the terms of their engagement, and no such institutions (so far as I know) exist in the line; but if the officer of the local force, after transfer to the line, could, by continuing his payments, retain his privileges in the funds, or chose to abandon them, then the officer entering the local force from the line would have to make such payments as would entitle him and his family (if he had one) to the benefits of the fund. The difficulties do not appear insurmountable in as far as a change from one service to the other. for once and finally, is concerned; but there would, I apprehend, be greater difficulty in arranging for exchanges frequently from one branch of the force to the other, and back again Such as the difficulties are, however, in the single exchange even, they are matters on which actuaries could decide, and for the determination of which there are in the regulations of the Bombay Military Fund of 1857 (the only fund that I am acquainted with) rules which might be adjusted so as to meet the proposition. The rules to which I refer are, note to Article 2, section 2nd, page 9; article 20, section 2nd, page 15; articles 23, 24, and 25, section 2nd, page 15. An officer, now retiring on Lord Clive's Fund, which is a charitable pension fund for troops in India, is allowed to retain his claims on the military fund, provided he continues his subscription. I presume that all officers of the local force might be in a similar position, continuing to pay. Of course they would not rise in rank.

5931. (*Viscount Melville.*) They would not get the same pay?—Still I think it is only one day's pay monthly.

5932. (*Chairman.*) Will you have the kindness to proceed?—Upon the fourth question, I am of opinion that if the local European force were kept up by drafts and volunteers from the line, the objections which I have raised to the recruiting for, and embarkation of, men for that force would be obviated; and speaking as a medical man, this would, I think, be the preferable mode. Volunteering from the line to the Honourable Company's army was formerly permitted; and I have often heard regrets expressed that it had been put a stop to. In 1822 I recollect about 100 men from the 17th dragoons transferring their services to the artillery, and, if I mistake not, likewise from the 65th.

5933. (*Major-Gen. Hancock.*) Do you think that there is such a thing in India as the acclimation of European troops?—Yes, I think so, if by acclimation you mean a man becoming aware of all that preserves and all that injures health. The old or cautious resident knows it; but I do not know that residence in India gives any immunity from disease. I think that if a man remains long in India, the most healthy breaks down, and that there is a limit to endurance even of the most healthy, the most careful, and the most temperate. I think that they are worn out sooner in India than in Europe.

5934. Do you think that a European soldier on his first arrival from England is in all respects as fit for enduring the hardships, fatigues, and exposures incident to field service in India as a soldier who has been there for some years?—I think not; I think from three to five years is of advantage. I think a good deal depends upon the age at which the man is brought to India; I think none should be brought to field service or to India before the age of 22, if possible. If a man be brought at 22, he is probably after a year or two as fit as he ever will be.

5935. (*Chairman.*) I understand you to say that the change has an effect upon his habits, and not upon his constitution?—By no means; I think there is a great effect upon his constitution, but I do not think that living in the climate of India secures a man against its evils; that is what I understand acclimation to be. I think that a man living in India learns to know what he should avoid, and what he should encourage.

5936. That is to say, his habits are changed?—Yes.

5937. (*Duke of Cambridge.*) His constitution is not acclimatized?—No.

5938. (*Lord Stanley.*) But practically, be the cause what it may, there is no doubt that a much larger mortality will occur among the men of a regiment newly arrived than among men who have been three or four years in the country?—No doubt; therefore I think that the acclimatized man, or so to speak, the man who is careful in these things, should be kept.

5939. (*Major-Gen. Hancock.*) You mean that there is a moral acclimation, but not a physical one?—Yes, as far as regards the avoidance of various evils, such as exposure to the sun and indulgence in drink, a man knowing that by such imprudence he is likely to suffer from fever or bowel complaint.

5940. Are you of opinion that there is any such thing as the adaptation of the constitution to the climate?—Not, I think, to the degree that is generally supposed; I would not say that there is not a certain proportion, but not at all, I think, to the extent which is generally spoken of. I would mention here that I doubt very much whether men coming from warm

J. M'Lennan, Esq, M.D.

29th Nov. 1858.

climates, for instance, the Mauritius or Australia, are much better fitted for India than men who are at once landed in India. I think more depends upon the age and the selection of the men than upon that sort of acclimation, beyond learning what to avoid and what to take.

5941. (*Sir H. G. W. Smith.*) Do you advocate the issue of beer in lieu of spirits to the soldier ?—I certainly do ; but I think it would be much better if men would take to water. I think that beer is a lesser evil than arrack.

5942. (*Col. Burlton.*) Do you think that a quart of beer daily to a good healthy soldier would do him any harm ?—I am sure it would do myself harm, and I think it would him ; I do not think he requires that sort of stimulus.

5943. (*Chairman.*) Would you recommend any alteration in the age at which recruits are enlisted for Indian service, so as not to take them too young ?—I think so ; I think benefit would be gained if no man were sent to India under 21, or I should say under 22.

5944. (*Major-Gen. Hancock.*) Upon what ground do you rest that opinion ?—I think that boys are not able to take care of themselves, and I think that they are poor helpless creatures when sick.

5945. Apart from their want of care, is it not the fact that growing men are more susceptible of disease than men of mature age ?—Yes, because I think that many of the diseases of India are repelled by being in high health, and I do not think that a growing lad called on to do the full duties of a soldier can be held to have the same fitness to resist those evils as a grown man.

5946. Hitherto the mass of the European troops in India have been located in the plains, do you think that any great advantage would accrue to health if the mass of the troops were located on the elevated mountain ranges ?—A very great advantage.

5947. What are your views upon that subject ?—I think the elevated mountain ranges are far better fitted for quartering troops in the way mentioned than as sanitaria. Convalescence may be advanced by removal to the hills, but your plan is the preferable one.

5948. Are you of opinion that if that course were adopted the mortality of the European troops in India would be to a very great extent diminished ?—I think it would.

5949. (*Viscount Melville.*) Have you ever been in the Bengal presidency ?—No.

5950. Then you do not know the stations on the hills there ?—No.

5951. (*Major-Gen. Hancock.*) You have made no allusion to dress as affecting the health of the troops ; will you be good enough to state your opinion as to the best dress for European troops in India ?—I think, myself, that all soldiers would be better fitted for service, and for encountering the vicissitudes of temperature, particularly if sent to the hills where the vicissitudes would be far greater than in the plains, if they wore flannel. Perhaps if a soldier had a stock of Crimean shirts, or of that sort of material, it might allow of the cotton shirts being dispensed with as superfluous.

5952. (*Viscount Melville.*) What hill stations would you select in the Bombay presidency ?—I think that there are very few; I do not know that you can go much higher than Poonah. I believe that in Bombay there is not much choice over the stations which are there now.

5953. You do not call Poonah a hill station ?—It is 2,000 feet above the sea, and it is about as high as you can get in that presidency.

5954. (*Duke of Cambridge.*) Then you cannot suggest any station in the Bombay presidency which, as regards health, you would prefer to what is occupied now ?—No. There are hill forts, there are places where there might be bodies of troops, but I do not know that there would be opportunities for drilling.

5955. (*Major-Gen. Hancock.*) But there are mountains upon which such stations might be established, are there not ?—Yes, on the Deccan, the reverse side of the Ghauts, the quantity of rain falling is about equal to what falls in Poonah.

5956. About what do you consider the most desirable elevation for the health of European troops in India ?—I cannot speak of the hill stations of Bengal, some of which are above 4,000 feet high.

5957. (*Col. Forsyth Tait.*) From 4,000 to 7,000 ? —I am not acquainted with them.

5958. (*Major-Gen. Hancock.*) It has been stated before this Commission that in the West Indies about 2,500 feet has been found to be a sufficient elevation to make the troops safe from malaria, which engenders fevers and other diseases ?—Poonah is about 2,000 feet above the sea, and there is a good deal of fever there,—there is a good deal of fever in the whole plateau of the Deccan. Therefore what holds in Jamaica, I think, will not hold in India.

5959. You consider the climate of the hills to be much more healthy than the climate of the plains ?—Yes.

5960. (*Sir H. G. W. Smith.*) Are you not aware that there is a certain elevation which medical men consider to be above the line of fever ?—There is ; but I do not think that that elevation is attainable in the Bombay presidency, with which I am aquainted ; the fever is much less, and there is much less of disease altogether, but there is not a total absence.

5961. What do you regard as that elevation which would almost exclude fever ?—I should think 4,000 to 5,000 feet.

5962. (*Col. Burlton.*) If you go much higher than that, do you not get into a region where dysenteric complaints are very prevalent ?—I think you do ; there has been a good deal of diarrhœa and dysentery in the northern stations of India. Dysentery is most fatal in the cold months even in the plains in India.

5963. (*Chairman.*) I suppose wherever you are, both warm and light clothing would be required for the troops ?—I think it might be modified. I think the troops are sometimes too much burthened with their clothes. I think no rule could be laid down for the whole of India, because it is very varied in its circumstances ; I think that rules would require to be different for separate districts.

5964. (*Duke of Cambridge.*) Then how can you arrange about the clothing if the regiments are moved from one part to another ?—I suppose it must be done by the authorities on the spot ; but a soldier requires different clothes in Bombay from what he does in the Deccan.

5965. Is there any district in India where he could do without the warm clothing ?—There may be some districts in Madras, I think, where he could do without the warm clothing.

5966. (*Col. Forsyth Tait.*) You mean the cold weather clothing ?—Yes.

5967. (*Major-Gen. Hancock.*) With respect to the uniform of European troops, are you of opinion that such articles as Highland bonnets and kilts, shakos, bear-skin caps, stiff leather stocks, &c., are well calculated to promote the health and comfort of European troops in India ?—Quite the contrary, I think.

5968. What is the average temperature in the plains in the Bombay presidency in the cold season ? —The temperature varies little ; I should think it is probably from 70° to 80°.

5969. Say between eight o'clock in the morning and four o'clock in the afternoon ?—I think about what I mention, it does not vary much in the plains.

5970. Do you mean 70° to 80° during the twenty-four hours ?—In Bombay there is very little difference between the night and the day ; there may when a land wind blows be some lowering of the temperature about daylight.

5971. What is the average temperature of the table land at about the elevation which you have mentioned at the same time of the year ?—I do not know that the average difference is so very striking as it may be thought, but the fluctuations are considerable ; the nights are cold. The evil of the plain I take to be the uniformly high temperature, the

J. M'Lennan, Esq., M.D.

29th Nov. 1858.

wasting effects of unvarying warmth. In the Deccan, I should think much of the disease may be fairly attributable to the difference between the daily and the nightly range. I should suppose that the average temperature of Poonah is probably not more than 4° or 5° less than that of Bombay.

5972. (*Sir H. G. W. Smith.*) In how far is the dress of the sepoy assimilated to the dress of the British soldier in India?—I think that the warm clothing of the sepoy is lighter; the trousers, I think, are lighter. I believe that arrangements have been made regimentally for dispensing with the warm trousers, and to give compensation for them to the sepoy, who is then allowed to provide himself with a lighter material.

5973. Then they wear warm trousers?—Yes; two kinds of trousers.

5974. And do they wear shakos, like the British soldiers?—They wore a cap assimilating to the shako, without a peak; it is of basket-work, it is perhaps lighter than the shako, but equally stiff and unfitted, I think.

5975. (*Major-Gen. Hancock.*) You are aware probably that of late years that has not been the case in the Bombay army, but that the Bombay sepoy wears only the forage cap?—I am not; I have been away for more than three years.

5976. (*Viscount Melville.*) You do not consider that it would be desirable to do away with cloth clothing for the European troops in India?—No; but I think that it should be lighter than it is. I think that much of the clothing of the European is in many stations too warm, and that a thinner material would be advantageous.

5977. (*Duke of Cambridge.*) Would you have it so for all India?—No; India is so varied in its temperature, that it seems to me to be one of the evils in the orders from home that India is viewed as a whole, and that the regulations fitted for one part of the country are misapplied to another. I think that there are stations, probably in Bengal and in the northern parts, (which I do not know myself,) where far warmer clothing would be required than at Bombay and Madras.

5978. To what orders coming from home do you allude?—I allude to the royal army. I suppose that a regiment takes out the same sort of clothing for Madras as for the northern stations of Bengal.

5979. (*Viscount Melville.*) At this time of the year the nights at Poonah are as cold to the feelings as they are here?—To the feelings, but I think not thermometrically.

5980. (*Major-Gen. Hancock.*) With respect to the police regulations and the lock hospitals, to which you have adverted, do you think that it would be expedient to reintroduce lock hospitals in India?—Certainly; at any stations where they were necessary. I think it absolutely necessary that the extent of the venereal should be checked, and I know of no mode of checking it but by curing the women. They may be called lock hospitals or by any other name; it is only the cure of the disease that I would recommend.

5981. You are aware that lock hospitals were formerly established at all the stations where there were European troops; do you know upon what ground the system was abandoned?—No, I have never been able to learn.

5982. You are not aware then that those hospitals were abolished in consequence of it having been found from statistical returns prepared by the Medical Boards in India that they had been almost, if not entirely, useless in diminishing the disease amongst the European troops?—I cannot myself understand why institutions for the cure of a disease, which is communicated by contact, can ever do otherwise than benefit. I cannot understand why the venereal, if preventive measures were used, might not be eradicated like the plague. They are both diseases of contact.

The witness withdrew.

Colonel Sir ALEXANDER MURRAY TULLOCH, K.C.B., further examined.

Colonel Sir A. M. Tulloch, K.C.B.

5983. (*Chairman.*) You have been requested to give some further information to the Commission upon certain points?—Yes; I was requested to give a comparison of the probable cost of an Indian European regiment and of a regiment of the line, and I herewith submit it, as follows:—

"In the comparison which I have been directed by General Peel to make between the relative cost of a Regiment of the Line and a European corps remaining permanently in India, the first point to be considered is the establishment in each case, being—

For the Regiment of the Line, consisting of 950 privates.	For the East India European corps, consisting of 820 privates.
2 Lieutenant-Colonels.	2 Lieutenant-Colonels.
2 Majors.	2 Majors.
10 Captains.	14 Captains.
12 Lieutenants.	22 First-Lieutenants.
8 Ensigns.	10 Second-Lieutenants.

"The establishment of the non-commissioned officers and drummers is very nearly the same in each case, except that in the East India corps there are 30 half-pay drummers who must be taken into account.

"In consequence of the different constitution of the two corps, there are four captains and ten first and two second-lieutenants more in the Indian European corps than in the regiment of the line, who may be assumed to cost,—

4 Captains, 400*l.* a year each -	£1,600	
10 Lieutenants, 250*l.* a year - -	2,500	
2 Ensigns, 200*l.* a year - - -	400	
		£4,500
"But not only is the number of officers greater in the Indian corps, but the establishment of privates is fewer in the proportion of 820 to 950.		
For which add, say - - -	700	
And for 30 half-pay drummers, say -	400	
Making -		1,100
I have taken the latter at a very low rate, about 11*l* per annum for a drummer.		
Total annual excess in cost of an Indian European corps - - - -		£5,600

"This extra extablishment would in twenty years (being the minimum period of an Indian officer's service for full-pay retirement) cost - - - - - -		112,000
"But each of these officers would, in the Indian army, have to pay his own passage out as well as home, whereas in a line regiment the passages of nearly an equal number would have to be paid for at least twice by the public, supposing the regiment to be relieved every ten years. For this it would be necessary to deduct from the above amount, 34 passages, twice each way, in all 136 passages at, say, 90*l.* each, or - - - - - -	12,240	
"I have already explained that, under the operation of the ten years' enlistment Act, there would not, probably, be more men to come home at the public expense from a regiment of the line than from a local European corps; but even supposing that in the course of 20 years one-fourth of the strength did so, say 237½ men for passage out and home, the cost for 475 passages, at 12*l.* each, would be - - - - - -	5,700	
"But officers of the line, under the rank of captain, returning invalided, have their passages paid out and home; while in the East Indian army, that is paid from a fund of their own raising. On this account add, say two passages, out and home, per regiment, or four each way, annually, for 20 years, in all 80, at 90*l.* each, or - - - - - -	7,200	
Total deductions - -		£25,140
"Leaving excess of cost in 20 years of an East Indian European corps beyond a regiment of the line - - - -		£86,860

Colonel Sir A. M. Tulloch, K C B

29th Nov 1858.

5984. (*Viscount Melville.*) What do you put down a regiment of the line at ?—I do not take a regiment of the line separately, I take the excess. I mean that the cost of the excess of the establishment in the one service as compared with the other is 112,000*l.* in 20 years. The deductions from that are 25,140*l.* leaving a total of 86,860*l.* as the excess of cost in 20 years of an East Indian corps beyond a regiment of the line. I do not take the two regiments separately, because that would involve going into more extended calculations; I merely take the excess in one case over that in the other.

" The expense for pensioning the soldier in the one " service would be almost identical with that in the " other, keeping in view, however, that in future the " Indian Government must necessarily in either case " pay the actual cost of pension, instead of a merely " illusory amount as hitherto, by which the East India " Company has been enabled to throw a very heavy " burden on the Imperial Treasury, which ought for " nearly the last half century to have been borne by the " Indian revenue. I may mention with reference to " this, that the East India Company have been in the " habit of paying 60,000*l.* a year to the British Govern" ment to cover the pensions of all men sent home " belonging to regiments of the line and placed upon " the pension list, and also for the half-pay of officers. " The amount which ought to have been paid for the " men alone was, when I last made the calculation, as " nearly as possible 210,000*l.* a year.

5985. (*Chairman.*) You having the pensioners under your entire control ?—Yes; I was appointed a member of a committee to go into the question about five or six years ago, for the purpose of fixing a larger amount for the Company to pay, more proportioned to what ought to be paid. I do not know for what reason, but the committee received notice that they need not proceed further, and the matter rested there. I at that time made the calculation, and found that about 210,000*l.* was the very smallest sum which would be required to cover the pensions of men sent home from India.

" The retired full pay of the officers in either case " next requires consideration. This, in regiments of " the line, is now attained after a minimum of thirty " years' service, without reference to what portion of it " may have been passed in India. In the Indian Eu" ropean corps it would be attained as a minimum after " twenty-three years' service, of which twenty must " have been spent in India; but as the service of the " officer of the line in that country, or in other tropical " climates, is rarely, on an average, half as long, " though he has to complete thirty years in all, nearly " as many officers of the line may be expected to " attain a right to the full-pay retirement after that " period as in the Indian army after twenty-three " years. The rank to which they will have attained " in that time would also (setting aside the operation " of purchase) be much the same in both, namely, " that of regimental-major, with a retirement of 16*s.* " a day.

" There is, consequently, not much to influence the " calculation on either side as regards retired full pay; " but it must be kept in view that in the Queen's " service a large proportion, amounting to between a " third and a half of the officers, usually sell their " commissions in preference to accepting retired full " pay, thus leaving nothing to be provided by the " public for their services; but as there is no such " feature in the Indian army, every retirement in " that service involves considerable expense.

" What difference this would make in the ultimate " cost of the two corps under comparison it would be " impossible exactly to say, but no doubt economy " would be greatly in favour of the line regiment on " this account also. At all events the difference would " much more than cover any expense arising from " widows' pensions and compassionate allowances, " which for the line have to be provided at the cost " of the Imperial Treasury, whereas in the Indian army " they are provided by an annual contribution from " each officer.

" So far, then, as it is possible to take all the contin" gencies into view, there can apparently be no question " that regiments of the line must be the cheapest force " in the end, principally owing to the greater establish" ment required in the Indian army to meet the faci" lities which it is necessary to afford officers for re" turning to Europe from time to time, as they have " no periodical relief."

5986. I see that you charge to the regimental expense the extra officers upon the Indian establishment? —Yes; the number of officers in the East India local corps beyond the officers in a line regiment.

5987. Is not that extra number in order to cover those who are placed upon staff appointments ?—That may be so to a certain extent, but it is also, I believe, to cover officers coming home, as they must occasionally. When our officers return, they join and do duty with their depôts, but the East India Company's officers have no depôts to go to. Our officers are available in this country and in India too, as may be required. That constitutes one ground of difference; staff employment may also constitute another; but Queen's regiments provide a certain number of officers for staff appointments as well as the others, though to what extent I cannot exactly say.

5988. (*Col. Forsyth Tait.*) Would not the fair way of reckoning the cost of a regiment of Her Majesty's service and of a Company's European regiment be, to equalize the number of soldiers and officers in each corps, and then calculate the cost per corps, instead of, as has been done, taking one corps by one strength and another of a different one ? The number of officers in a Company's corps is greater, on account of the number of officers taken away for civil employment, and for other general staff situations throughout India, the pay of whom ought not to be charged to the regiment, more especially if it is not drawn for in the corps ?—I can only calculate upon what is placed before me, but, as I have already mentioned, we also have officers in various employments, and they would require to be taken out likewise. If it could be said that 14 captains and 22 lieutenants are not required for regimental service, the difference might be taken out of the estimate.

5989. The pay of our officers in civil employment is not drawn for in the regiment at all; it is drawn for in the civil department ?—If you can do with a smaller number of officers than regiments of the line, and yet allow your officers to come home, it will be a fair ground for affecting the calculation, but I had placed before me two establishments, and I had to calculate the difference of cost. I applied to ascertain what the establishment was in each case, and I have given the result on that basis.

5990. (*Chairman.*) In any case an increased number of officers compared with the number of men must be proportionately more expensive ?—Certainly; but were it possible for an East India Company's European corps to do with fewer officers than there are in a regiment of the line, it would be seen that the officers in the latter were too many, and, of course, you would make a reduction there also.

5991. (*Major-Gen. Montgomerie.*) I see that you have mentioned 200*l.* a year for each of the subalterns; but those officers at home on furlough get less pay than you have calculated upon. If those on staff employment alluded to by Colonel Tait are struck off the expense of the regiment, that must also be reduced ?—Certainly.

5992. And those at home on English pay of course do not receive the 200*l.* a year which you have calculated for a subaltern, and the 400*l.* or 500*l.* for a captain. If they are at home on furlough they only draw English pay, and of course a proportion of that amount must be struck off ?—Yes; but it would be necessary also to strike off precisely in the same way for our own establishment of officers at home. I can only make up the calculation upon the principle that in each case the officers are with their

Colonel Sir A M. Tulloch, K C.B.

29th Nov. 1858

regiments in India, and in each case drawing the allowances of the regiments in India; but if you in the one case reduce the amount in the East India Company's army by taking off the officers who are at home and drawing a less allowance, I must do precisely the same with regard to the regiments of the line.

5993. (*Chairman.*) Have you not excluded the costs of the two depôt companies?—Entirely. I have taken out the two depôts companies; I merely include the establishments for regiments in India in each case.

5994. Ought not the cost of those two depôt companies to be added to the expense of the regiment in India?—In a strict sense it ought, but in so far as I have taken no notice of the recruiting depôts or establishments of the East India Company's service, I do not think it necessary to add the officers of the depôt, but if a very minute calculation be gone into, of course they must be taken too. I only profess to give approximate results.

5995. (*Major-Gen. Hancock.*) Supposing the total number of officers required for civil, staff, and other detached employment in India to be 1,200, what difference can it make to the Indian revenue whether those officers are furnished from line or local regiments, the additional expense must necessarily be incurred?—There are a great number of the civil appointments which probably could be filled at a cheap rate by persons specially brought from this country for the purpose, if they were not given to regimental officers. I cannot be expected to go into the details of such arrangements; but I assume that such might be the case.

5996. At present the establishment of officers in the local regiments is fixed with the view of supplying the requisite number not only for regimental duty, but for all the civil, staff, and other detached appointments in India. Those appointments must be provided for of whatever troops the European force may be composed; how then can its particular composition in any way affect the expense incurred upon that account, seeing that 1,200 officers (supposing that to be the number of such appointments) must necessarily be provided in addition to those required for regimental duty to meet those requirements?—All that leads into considerations far beyond what I should be capable of entering upon. I had merely placed before me two establishments, and I give the results with regard to those establishments. As General Peel has remarked, I have left out the depôt companies, which I should be fairly entitled to add, and I have not left out officers away from India. I am supposing every officer to be present with his regiment. If any deduction ought to be made for those items to which you allude, I should be very glad to have it done more minutely; but I have no means of doing it, otherwise than on general principles, and I think that the one change would very nearly counterbalance the other.

5997. Still; as I understand in your estimate of the comparative expense of a line and local regiment you have counted against the latter the entire expense of those 1,200 officers on civil, staff or other detached employment?—Yes, either on staff or other employment.

5998. You do not mean to say that the line army has had 1,200 or 400, or 100, officers on staff or other detached employment in India?—I cannot say with regard to the number, but I understood that they were to have the same privileges with regard to the staff as others.

5999. (*Duke of Cambridge.*) Your evidence relates to the future?—Yes.

6000. You are aware that the Queen's officers have had no staff appointments in India, excepting a connected with Queen's troops?—Yes.

6001. (*Major-Gen. Hancock.*) Regarded prospectively there is no reason, is there, setting aside the 1,200 officers required for detached employment, why the establishment of officers for a local regiment should be greater than that for a line one?—No; but you must always include in the calculation more officers than in Her Majesty's service, because you have to send a number of officers home on furlough and sick leave, and you would otherwise have no one to replace them.

6002. Is not that the case in the regiments of the line?—No; when an officer comes home we replace him from the depôt, and the officer coming home goes to the depôt. That has been especially done of late, when there have been facilities for sending them out overland. If you refer to the returns you will see that the army is thus kept very complete in officers now.

6003. Does not that show that for officers on sick leave you keep up two officers to do the duty when the Company only keep up one?—No, not at all; those officers at the depôts are doing duty at the depôts as other officers of Her Majesty's service; they form a part of the army of this country, and could be called upon if wanted; and when they leave to go out to India, except during the month when they are upon the passage, they are available as officers. The officers of the Company's army come home, and for three years, and sometimes for four, they are lost to the service. That is the great basis of the difference between the two services in this respect.

6004. Still regarding it merely as a matter of comparative expense, as the places of absentees on furlough or sick leave from line regiments are supplied, and the places of such absentees from local regiments are not supplied, surely the Government of India must incur a greater expense on that account for line than for local regiments?—If you are going to have European regiments out there, you must keep a proper number of officers with those regiments; and whatever number you keep and can do military duty with, the Queen's army can do with the same, or perhaps with fewer.

6005. If an officer of a line regiment falls sick, and if, instead of returning to Europe, he proceed, on leave of absence, to Simla or the Neilgherries, or any hill station in India, is his place supplied?—No.

6006. Why, then, should it be necessary to supply the place of an officer who comes to England?—Because in the one place he is within call of his regiment, and if you have any great emergency and he is able to do duty, he can return at once.

6007. If he is sick he is not efficient for duty; of what use could he be with his regiment?—That is true; but it is so with your officers also.

6008. (*Duke of Cambridge.*) Is it not the case that with officers sent to the hills they are not considered sufficiently sick to send them to Europe, and they will rejoin much sooner than officers sent to Europe?—There can be no question of it.

6009. (*Chairman.*) You say that the increased number of men must be considered as in favour of the line regiments?—That is to say, that though we have 34 regimental officers for 950 privates, an Indian European corps has only 820, and a larger number of officers.

6010. Therefore if you add the depôts, you must also add that additional number of men?—Yes, it might be made perfectly clear, I apprehend, by this fact, that whatever number of officers an Indian local corps can do with, a regiment of the line can do with the same; therefore, any deduction made in the one case would lead to a corresponding deduction in the other.

6011. Is there any other point upon which you have any information to give to the Commission?—The adjutant-general asked me whether I had made any calculation of the expense of the rations by the Red Sea route, and the expense of transit; I promised on the last occasion to prepare a statement more in detail than I had been able to give of the cost.

" Explanation respecting the relative Cost of Cape
" and Red Sea Routes for Relief of Troops in
" India.

" In the calculations submitted with my evidence, I
" did not enter into the cost which would probably be

Colonel Sir A. M. Tulloch, K.C.B.

29th Nov. 1858.

“ incurred for the transit of the troops by rail through Egypt, should the overland route be adopted, nor for the cost of subsistence on shipboard by that route; but as the adjutant-general wished me to make some further calculations on that head, they will be found as under.

“ The chief cost of transit hitherto both for officers and soldiers between Alexandria and Suez, has arisen from the railway not being completed, and the consequent necessity for having separate conveyances a considerable part of the way, also from the soldier having to be fed for a day or two; but next month that difficulty will be over, when there will be no reason for a higher charge for transit from sea to sea than on any other railway. The charge was, I believe, at first 5*l.* per man, then, as the railway advanced, it was reduced to 3*l.*, and ultimately it will, I have little doubt, be at the usual rate of 1*d.* a mile for soldiers, and from 2*d.* to 3*d.* for officers, say about 1*l.* for the former, and 2*l.* for the latter, for the whole distance of 216 miles.

“ The distance will be got over, even at the slowest rate of railway travelling, in about ten hours, and, if possible, it should be at night, to avoid the heat, consequently there would be no necessity for supplies till the troops get on board, when breakfast would be waiting for them.

“ The cost of provisions per man on the voyage has, I observe, in most of the estimates, been the subject of miscalculation; 1*s.* 3*d.* a day being stated as the probable amount, but by the annexed return of the cost of provisioning troops on shipboard according to the prices paid by the Admiralty, I find that it is only about $8\frac{3}{10}$*d.* a day, of which 6*d.* is stopped from the soldier, leaving a charge of only $2\frac{3}{10}$*d.* a day to be borne by the public, which for, say, 30 days voyage is but 5*s.* 9*d.* per man. I may add that in the statement of the cost of the rations on shipboard there has been included all the expense of package, and everything of that sort; 5 per cent. has been added for that purpose, the real cost is only about 8*d.* The return is an official one signed by Mr. Richards.

“ The officers, as in all troop ships, would be messed at the rate of 7*s.* 6*d.* a day, of which the public pays 4*s.*, and the officer, from his pay, 3*s.* 6*d.*; the former rate, for 30 days, would amount to 6*l.* So that all the charge against the public for provisions by that route would be 5*s.* 9*d.* per man on 29,600 passages, or about 8,510*l.*; and for 920 officers at 6*l.* each, 5,520*l.*; being for both 14,030*l.*

“ The relative advantages, in a financial point of view, of the two passages, will therefore be,—

“ *By the Cape.*

	£
“ Passage for 29,600 men, including provisions	355,200
“ Passage for 920 officers	82,800
“ Loss of pay without serving during a four months' voyage	282,410
	“ £720,410

“ *By the Red Sea.*

	£
“ Costs of troop-ships annually for passage, including coals	151,800
“ Railway fares for 29,700 men, at 1*l.* each	29,700
“ Provisions for men, less stoppage	8,510
“ Provisions for 920 officers, less stoppage	5,520
“ Railway fares for 920 officers, at 2*l.* each	1,840
“ Loss of pay without service, during a month's voyage	70,602
	“ £267,972

“ Being from one-half to one-third of the cost by the other route, to say nothing of the advantage of having the men three months sooner in India to meet any emergency which might occur there,—a consideration beyond all price. Another advantage, too, in the shorter route is, that owing to the limited duration of the voyage, neither officer nor man would require any outfit, which, for the route by the Cape, always entails considerable expense on both.

“ In this calculation, as well as in my previous evidence, I have not carried the estimated expense of the voyage beyond Bombay, because the progress of railways will, in the course of next year, have so far facilitated the conveyance to Madras and to most of the up-country stations in Bengal, that it will probably be a quicker and more convenient route to proceed from Bombay by railway, so far as completed, and march the rest of the way.

“ I have detailed maps here of the progress of the railways in India, if you wish to see them.

“ In calculations of this kind it is admissible to look forward a year or two, and there can be no reasonable doubt that by that time the necessity for distant voyages in India will have greatly, if not altogether, ceased. It is, indeed, a striking coincidence in the march of events, that just at the time when it seemed probable that our rule in India could only be maintained by a vast accession of European troops, frequently relieved and maintained in the highest state of efficiency, the progress of the railways in India is about to solve the difficulty which must otherwise have arisen in attaining that important object. It is no less remarkable that at the very period when the reliance hitherto placed on our native army has been destroyed, the facilities of transit from one part of India to another by rail are fast rendering us, in a great measure, independent of such a force. Before two or three years have elapsed, nearly every military station of importance in that country will have been brought within a day's journey of each other; the necessity for keeping thousands of native troops constantly on the march escorting stores and treasure over that immense territory will have, in a great measure, ceased; and if we keep the large force of Europeans in India which is proposed, I know of no other purpose for which native troops can be wanted except (as in our colonies) to garrison places which are too unhealthy for Europeans.”

STATEMENT of the Value of a Soldier's Rations on board Ship, according to the Scale of May 1, 1858.

Article.	Allowance for 100 Men for 28 days.	Latest Prices.	Total Cost.	Cost per Man per Day.

N.B.—The calculation has been made for a month, instead of a week, in order to avoid loss by fractions.

(Signed) CHARLES RICHARDS.

6012. (*Major-Gen. Hancock.*) What has been the average annual cost to the State of retiring pensions for the commissioned officers of the East India Company's service?—I cannot say, and if I could, it would not avail the comparison, I think.

6013. (*Duke of Cambridge.*) With reference to the question just put, the explanation which you have given in your paper, or which you have given verbally, is to this effect, that whereas there is considerable expenditure on the retirement of officers from the East India Company's service, there is comparatively

Colonel Sir A. M Tulloch, K C.B.

29th Nov. 1858.

a trifling expenditure on account of officers of the line service, because they do not retire ?—Certainly ; the effect of purchase is to provide for half, at any rate, if not more of your officers without costing the public anything.

6014. (*Viscount Melville.*) Have you no return which will show what, in common parlance, is called the dead weight of the military establishment with us, and the dead weight of the East India Company's establishment ?—Yes, I have here a statement of what the aggregate cost of the retirement of the officers in the one service and in the other was at two different periods, which may be useful for the conclusions in view. I find that in the East India Company's army the number of officers on retired full-pay in 1829 was 207, and the amount was 62,919*l.* ; but in 1857, 28 years afterwards, there were 730 upon retired full-pay, and the amount was 218,000*l.* The number of officers of the East India Company's army on half-pay in 1829 was 247, and the amount was 26,818*l.* ; and in 1857 there were 404 upon half-pay, and the amount was 41,478*l.* There was, consequently, an increase in the retired full-pay of more than treble between 1829 and 1857. I will now give the state of the retired full-pay in our own army at these periods. In 1829, the number of officers on retired full-pay was 724, and the amount 109,000*l.* ; and in 1857 it was reduced to 238 officers, and 57,000*l.*; thus showing that the numbers in our army had been reduced to one-third of their previous amount in the same period that they had trebled in the East India Company's army. It is necessary, also, to look at the half-pay. In 1829, the number on half-pay of our infantry and cavalry and of the household troops was 6,180, and the total amount paid was 590,549*l.* ; but the number in 1857 was 2,102, and the amount paid was only 247,000*l.* So that while in the East India Company's army the number has nearly doubled, in the other army it had been reduced to one-third of its previous number.

6015. (*Col. Burlton.*) That proceeds, I suppose, upon there having been a state of peace here and war there during the interval ?—That, I may say, has nothing to do with it. The events of the Crimean war had very little effect upon it.

6016. Can you tell us what is the annual amount received for the sale of commissions in Her Majesty's service, of all branches, household troops, cavalry and infantry ?—I cannot, but General Yorke made a calculation of the value of all the commissions in the army, and it was about 7,000,000*l.*

6017. I refer to the amount actually received yearly by purchases—young officers purchasing commissions ?—It would be very difficult to say.

6018. (*Duke of Cambridge.*) It must depend very much upon the number which come in every year ?—Yes.

6019. (*Col. Burlton.*) You are aware that in the East India Company's service nothing is received on that account ?—There is nothing ; but in our service 100 commissions were sold by Mr. Sidney Herbert about two years ago, during the Crimean war. He found that he had a great many commissions to give away, and he thought it better to make a little money of them for the benefit of the public. He took the prices, and he commuted a number of old lieutenants upon the half-pay list, who were not in a condition to serve.

6020. (*Major-Gen. Hancock.*) In your former evidence you stated your opinion that troops of the line would be more efficient than local troops, "because as " a body they are likely to be less debilitated by long " residence in India." As recruits for the local army and recruits for the line are now enlisted for only ten years, and it may be assumed that the numbers re-enlisted into local regiments and re-enlisted or received by volunteering into regiments of the line for further service in India, would be equal, why should the local army as a body be more debilitated by long residence than the other ?—If you keep them for precisely the same time I see no reason whatever for any difference ; but it would depend in a great measure upon the stations where you posted them.

6021. I mean, that as recruits for both services are enlisted for ten years only, why should a local regiment be more debilitated from long residence in that country than a line regiment ?—Because you contemplated, as I understood, the men remaining longer in India than regiments of the line. I think you will find that the questions led to that. You conceived that although the men might come home after ten years' service, they would not do so, but would remain in the Company's army, whereas in a European regiment that would not be the case. My position was, that if they remained they would be much more debilitated than the troops who went out fresh from this country. That was the view which I intended to give. I may here mention that a question was put to me upon that subject during the examination by one of the Commissioners, who stated that the men of the East India Company's European regiments very seldom came home. Now, it is my duty to pay them when they come home ; and since I was examined I have obtained exact returns of 2,870 who are in this country. The number of those in the colonies I cannot get so readily without going into the commissariat returns.

6022. Do your returns show the number of those who are pensioned after completing 21 years' service? —I suppose from the rates of those men's pension, that almost all of them have been pensioned after 21 years' service. I can get at the information, but it would require a great deal of detail. Most of the men who come home from the East India Company's service are pensioned after 21 years' service.

6023. Can you state from memory about what is the average number of men of the Company's army who are pensioned after 21 years' service ?—I should say very nearly the whole of those 3,000.

6024. But those, I understand, have been pensioned during a long series of years ?—Yes ; they have been coming home for a long series of years.

6025. Do you know the average number who come annually ?—I cannot exactly say, for they vary so very much. In some years you have a great deal of invaliding, and send home a number of men, or the men are more disposed to come home. What I have stated, however, will be sufficient to show that the idea is very fallacious that men who enlist in the East India Company's army generally remain in India. Many, I know, remained there in former days, when you had only 12,000 men, and were able to give away a great number of good appointments to the non-commissioned officers, if they did remain ; but there will not be that inducement when you have a force of 80,000 men, and the majority will come home in consequence. These men have hitherto remained in India for the same reasons that the soldiers of the line come home, viz., in the hope of getting some employment or appointment here, and I am glad to say that we do get appointments for thousands of them.

6026. Does your return show what proportion of the number who have come home pensioned after 21 years' service were pensioned from their regiments ? —They are all from the European regiments ; they are all men who have served in the East India Company's army, and in that army only.

6027. Does it show separately the number of men pensioned after 21 years' actual regimental service ; and of these pensioned after the same period of service, but on departmental or other detached employment ?—No ; because the 3,000 men that I have under my charge do not include the men in India who are pensioned there ; they are merely the men whom I pay in this country.

6028. But, as I understand you, of the men included in your return, some were pensioned whilst with their regiments, and some whilst on detached employment ? —I do not know how they were pensioned ; they came home to me with instructions from the East

Colonel Sir A. M. Tulloch, K C B

29th Nov 1858.

India Company that they were to be paid a certain amount as pension.

6029. (*Chairman.*) They are military pensioners?—Yes.

6030. (*Major-Gen. Hancock.*) It includes all?—Yes.

6031. (*Duke of Cambridge.*) But it does not follow that there are any of them who are pensioned from civil employment?—No.

6032. (*Chairman.*) Are the terms and amount of pension the same in what was the Company's service as in the line?—Nearly so; and, therefore, it must be military service for which these men were pensioned; besides, as we have the power of calling out those men for training the same as the pensioners of the line, I should very soon have noticed if they did not know anything about their duty.

6033. (*Major-Gen. Hancock.*) Still you are aware that men of the East India Company's army attached to the Ordnance and other departments and on other detached employment are entitled to pensions; and that all such service counts as military service?—Yes; and it is the same in our service.

6034. Of course then there must be many men of that class among the pensioners in Europe borne upon your return?—From the Ordnance, I have no doubt of it.

6035. You have advanced as a strong reason for the employment of troops of the line in India in preference to a local army, "that the loss in line regi-"ments by deaths resulting from disease while "serving there must generally be less (if relieved "every ten years) than that in local regiments, be-"cause the former, as a body, would be composed of "younger men." As line regiments on embarking for India are composed, like the local regiments, of men varying in age from 18 to 40 and upwards, will you explain in what manner the periodical relief of the former would alter the comparative average of all ages in the two forces?—You are aware that when a regiment is about to embark for a foreign station, such as in India, you have, in the first place, a great number of men discharged from it, who are not likely to serve efficiently in India, and they are replaced by recruits. Then, a second class, who are not likely to be very efficient in India, are left at the depôt; so that when you embark a regiment for India you embark a body of almost new men, who have served, upon the average, perhaps only two or three years. I should think that at this moment, if you take the returns of any of the regiments now embarked for India, you will find the average service not more than three years.

6036. (*Duke of Cambridge.*) A regiment gets weeded?—Yes, before it goes to India.

6037. (*Major Gen. Hancock.*) The mortality among European soldiers above thirty years of age is shown by the returns which you have furnished to be much greater in India in proportion to deaths below that age than in England. Coupling with this fact that of recruits for the local army being now enlisted for only ten years, does it not follow that there would be a greater number of men above thirty in regiments of the line on their first arrival in India, and for some years afterwards, than in local regiments?—No; I think that in almost every regiment which has gone out to India that I have known anything about, you will find comparatively few men of thirty years of age. A regiment goes a round of service, say, to the Mediterranean, to the West Indies, to America, and then comes home. In America, a great numder of the mendesert, I am sorry to say, and a great number of them accept their discharges free, having served a certain time, and a number purchase their discharges. When a regiment comes home, what with the casualties which have taken place in the West Indies, and all those changes, it probably only brings home about 300 or 400 men; then commences the recruiting; the additional 700 are perhaps men of merely two or three years' standing; and when an order for India comes, a number of the older men leave the regiment, and many want free discharges, having served their time. In that way a regiment going out to India would have very few men of 30 years of age; they are almost all young men of from 18 to 25 years of age.

6038. Assuming the casualties amongst the line and local troops in India to be equal in proportion to numbers, and the rates of bounty and levy money to the recruit to be the same in both services, the expense to the Government of the drafts sent to India to supply casualties would be the same, would it not, whether for the line or the local army?—It would be the same, provided the men belonging to the Indian European corps were to come home at the end of ten years. Perhaps I do not exactly understand the question.

6038 a. Assuming the casualties amongst the line and local troops in India to be equal in proportion to numbers, and the rates of bounty and levy money to the recruit to be the same in both services, the expense to the Government of the drafts sent to India to supply casualties would be the same, would it not, whether for the line or local army?—It would be much about the same; I do not see where the difference between the two would be.

6039. Does not it follow that if relieved periodically, as you have recommended, the Government would incur, on the completion by each line regiment of its ten years' term, the additional expense of the passage of a relieving regiment to India and of the relieved regiment to England (minus only the men permitted to volunteer from the latter into the regiments in India), and that the whole of this expense would be saved by having local instead of line regiments?—No, I do not admit that, because if there were line regiments entirely, any man who wanted to remain in India might do so by merely transferring his service to the regiment which is to remain in India; in your local European corps he would have precisely the same advantage of transferring his services if he thought proper; and my impression is, and the calculations which I have made are principally founded upon the assumption, that of those men who enlist for ten years' service the greater proportion will be disposed, as they will be in regiments of the line, to return home.

6040. Still the expense arising to the Government from drafts sent to India to supply casualties, is quite a distinct charge from the expense incurred by sending out entire regiments and bringing home entire regiments, is it not?—Yes.

6041. All that expense, then, is additional?—No; that would be to assume that none of your men who enlist for ten years come home at all; but if the men in your local European regiment want to come home, the expense will be as great in bringing them home as in regiments of the line; it is only if they are more disposed to remain in India than men of the line regiments that there will be less expense.

6042. As men enlist for ten years in both services, the men in each service who wish to come home will come home, the Government cannot prevent it?—Just so.

6043. But is it not an extra expense altogether, bringing home regiments, whether they wish it or not, and sending out other regiments to replace them?—If that takes place every ten years I cannot see that there is a greater expense, supposing those enlisting in the local European army wish to come home at the end of ten years. There is this difference, however, that in our regiments of the line which are brought home there may be some men who have not completed their ten years' service, in which case you would be bringing away men of the line who had only served five or six years in India, having gone out to replace casualties, whereas in your Indian European regiment a man must have served the whole time before he returns home. I presume that that is what you are aiming at.

6044. (*Sir Harry G. W. Smith.*) You are quite aware that when a regiment is brought home from

Colonel Sir A M Tulloch, K.C.B.

29th Nov. 1858

India all the efficient men are allowed to volunteer into another regiment?—Yes.

6045. And that the regiment comes home a perfect skeleton, whereas a perfect regiment goes out, and a similar process is carried on at each successive stage?—Yes, I am quite aware of that.

6046. (*Major-General Hancock.*) But you have given it as your opinion, have you not, that the system of encouraging volunteering for further service in India when a regiment is ordered home is a wrong one, and ought not to be continued; that on the assumption that long residence in India leads to moral and physical deterioration, it would be a great perversion of reasoning for the Government to tempt men by the offer of bounty money to remain in India beyond 10 years?—Yes, if you fix ten years I should allow all men who had not completed ten years' service to volunteer if they chose to remain in India, but having completed ten years I think their coming home should be facilitated.

6047. When a regiment of the line is ordered home is it not optional with the authorities to allow the men to volunteer into regiments remaining in India?—I cannot say what is the present rule in India; great alterations have been made from time to time in the arrangements with respect to volunteering since I left India.

6048. Still when a regiment is ordered home, men who have served very short periods as well as those who have served longer periods in India come home with it?—No doubt.

6049. Then, of course, the Indian Government loses the advantage of having service for the full period of ten years in India from many soldiers of regiments of the line, which is secured to it from every soldier in local regiments, for which they have their local recruits?—Yes, but that is, I think, a very small element in the calculation.

6050. As line regiments on embarking for India are composed of men whose periods of service vary from one to ten years, and those embarked for the local army are all recruits, does it not follow that by having line regiments the Government would incur a considerable additional expense during their ten years' term in having to send home, and to supply the places of numerous time-expired soldiers after very short periods of service in India, and that this additional expense would be saved by having entirely a local army?—From what I have already told you in regard to the condition of a regiment in respect of age when it goes out to India, there cannot be much of that. About three years is the average service of those men; the regiment is almost entirely composed of recruits. If it was a very old regiment, what you have mentioned should no doubt enter into consideration. But there is a regulation which prevents men being sent out whose time will soon expire, they remain at the depôt.

6051. Dr. Martin in his evidence made the following statement: "It is stated by Colonel Sir Alexander "Tulloch, as the result of investigations in the War "Office, made by desire of Mr. Sidney Herbert, that "amongst British officers and soldiers of the Queen's "and Company's armies serving in the East Indies "there occurred from 1815 to 1855 inclusive, a total "mortality, exclusive of casualties, of about 100,000 "men, 'the greater proportion of whose lives might "'have been saved had better localities been selected "'for military occupation in that country.'" Is that a correct extract?—It is nearly correct as regards the number, but it includes the whole of the regiments of the line, and the men of the local European corps belonging to the East India Company, and all the different employés of various kinds—of all Europeans serving in any public capacity in India—about 100,000 died in that time. I have shown in the returns with my previous evidence 55,586 deaths from the regiments of the line alone between 1817 and 1856, and I think you will find that in the course of that time there were about 30,000 deaths of the European forces in India belonging to the East India Company; the officers have also to be included, and various persons holding appointments in India, which will, I think, very nearly make up the number.

6052. On the whole you believe that number, viz. 100,000 men to be a correct statement of the amount of actual mortality during the period specified?—Yes, taking the whole of our employés in India. The total loss is 100,000, and my statement is, that the greater proportion of that loss would have been saved had the men been in healthy localities.

6053. (*Sir Harry G. W. Smith.*) That is your opinion?—Yes; it is my opinion from the returns which I have given of the small mortality at some stations. You have in India high lands where the climate is very nearly the same as that of Britain. Take Bangalore, for instance, I have a return for forty years, and in the course of the forty years you only lost about 28 per 1,000, or $2\frac{8}{10}$ per cent., including all the men who went there in bad health from other stations. Therefore I think it is a perfectly fair conclusion that if you had had no men going there in bad health but had men newly arrived from England at Bangalore, you would not have had a mortality of above $1\frac{3}{4}$ per cent., which is the loss now in London.

6054. (*Colonel Forsyth Tait.*) The height of Bangalore is about 2,800 feet above the sea, is it not?—Yes.

6055. (*Major-General Hancock.*) Are there any statistical returns shewing that the mortality in India is smaller at the Hill Stations than in the plains, or do you only rest your opinion upon the experience in the West Indies?—Not upon the experience in the West Indies alone. I have stated to you a number of healthy stations in the high grounds; Poonah, for instance, which is also at a very considerable elevation.

6056. 2,000 feet?—Yes; there your loss is 33 per 1,000, inclusive of the regiments sent there in bad health. There is Kirkee, also, where upon an average of fourteen years you have only lost $2\frac{1}{2}$ per cent., that is healthier, comparatively speaking, than England, when you consider that you have many men going there from other stations in bad health.

6057. Do you mean that when located upon table lands elevated about 2,000 feet above the level of the sea, like Poonah and Kirkee, the health of European troops in India is equal or nearly equal to that of troops in England?—Provided you do not send men in bad health there; provided you do not send a regiment almost decimated at another station to any of those places where the diseases contracted elsewhere terminate fatally, and add to the mortality.

6058. In so far as statistics may be depended upon, then, they appear to you to justify the conclusion that if located at hill stations elevated from 2,000 to 3,000 feet above the level of the sea, and in good health when sent there, the general health of European troops in India, would be equal to that of the troops in England?—That is my impression; and the great advantage is that you have such places in which to put your troops, or the great majority of them, and you will shortly have railways to bring them down whenever you wish it.

6059. (*Viscount Melville.*) Those hill stations in Bengal have not proved so healthy?—Those which are far up in the hills, at 8,000 or 9,000 feet of an elevation, are less healthy than was expected, because the men suffer from what is called a hill diarrhœa, which reduces them very much indeed; but the stations at the height of 2,800 feet or thereabouts seem to be healthy.

The witness withdrew.

Adjourned to To-morrow at eleven o'clock.

Tuesday, 30th November 1858.

PRESENT :

Major-General Peel.	Lieut.-Gen. Sir Harry G. W. Smith.
H.R.H. the Duke of Cambridge.	Major-Gen. Montgomerie.
Lord Stanley.	Major-Gen Hancock.
Marquess of Tweeddale.	Colonel Burlton.
Viscount Melville.	Colonel Forsyth Tait.

Major-Gen. PEEL in the Chair.

JOHN POLLARD WILLOUGHBY, Esq., examined.

John Pollard Willoughby, Esq.

30th Nov 1858.

6060. (*Chairman.*) You are a member of the Council of India ?—Yes.

6061. You formerly belonged to the Bombay civil service ?—Yes.

6062. Will you have the kindness to state to the Commission the length of time that you were in India ?—I arrived in India on the 10th of February 1819, and left it on the 3rd of May 1851. I served in India continuously without a furlough for a little more than 32 years.

6063. You have been a member of the Council of the government of Bombay ?—Yes; I was for some years secretary to the government, and afterwards a member of the government.

6064. You have been furnished by the Commission with some questions upon which they desire your opinion ?—I have.

6065. Will you favour the Commission with your opinion how far the European portion of the army in India should be composed of troops of the line, taking India as parts of the regular tour of service, and how far of troops raised for service in India only ?—The forces in India should, in my opinion, be partly local and partly of the line. It is, in my opinion, essential that the chief portion of those forces should be local. Opinions will vary as to the proportion, but I should say three-fifths for the cavalry and infantry, and the whole, or at least three-fourths for the artillery. I consider a local force essential to the safety of India ; it will be far less expensive, and, judging by past experience, equally efficient. On this point I think there can be no doubt the expenses of the transport of troops to and from India, but more especially from India, are very heavy ; the officers alone of a single regiment for both voyages cost, I believe, between 11,000*l.* and 12,000*l.*; the finances of India could not bear a continuous pressure of this kind, but it must be incurred if the European force required for the security of India is to be supplied wholly or in great part from the army in England. I consider it absolutely necessary that the supreme control of Her Majesty's forces in India should be vested in the Governor-General and not in any authority in this country ; I mean as regards their distribution, employment, and filling up vacancies in the staff, which are at present divided between the Governor-General and the Commander-in-chief in India in Council, and the governors and commanders in-chief of the subordinate presidencies. This is not the time for diminishing but rather, if possible, for increasing the powers of the Governor-General. We should not treat India as a colony but as a distinct empire, the beneficial retention of which has been rendered far more difficult than ever by the recent calamitous events. The existence of two distinct forces excites a wholesome emulation, some may call it jealousy, in which I do not agree generally, though at times such a feeling may have been partially evinced ; but if both forces are justly and impartially administered there will be no cause for this feeling. If the force were composed wholly of the line it would be liable to be re-called, in fact, to be diminished whenever any pressing emergency occurred at home. During the Crimean war we know that two regiments of infantry were withdrawn, against the strongly expressed opinion of Lord Dalhousie, the Governor-General, who declared that the European force at his disposal ought not to be weakened by the withdrawal of a single soldier. Such, I should fear, would always happen, if India came to be solely dependent on England for the troops essential to her security. The opinions of the local authority will probably be overruled, emergencies and requirements on the spot, that is to say in England, will take precedence; those at a distance, namely in India, will be underestimated and not correctly appreciated or understood, not intentionally but from want of correct knowledge. I attach also the greatest importance to having in India a large European force which has been acclimatized. The mortality which occurs in regiments of the line shortly after their arrival in India is sometimes dreadful. In considering also the question of a European force for India, and whether it should be in great part a local force, or wholly furnished from the line, it is important to remember that there must of necessity always be a local native army of considerable strength, to be officered and commanded by British officers, whose *morale* will be much dependent upon their being associated with officers of a European force serving on the same terms and conditions. If they were to be the only officers condemned or rather compelled to serve all their lives in India, whilst officers of the European force were all removable for service in other quarters of the globe, they would probably look upon themselves as inferior, and would become a deteriorated body and discontented with their lot in life; whereas, if, as at present, the officers of the native army continue to be part and parcel of the whole force belonging to India, and eligible as now to the command of European regiments, they would continue to regard themselves as on an equality with their brother officers, and would therefore maintain that self respect which is so essential to a high state of efficiency. Lastly, there is a great *constitutional* question connected with this subject, into which I need not enter, but it must occur to every one.

6066. Have you formed any opinion as to the amount of European force which will be required in India ?—I should say that that is a question which can only be solved in India, and it depends so much also upon the success which may attend the efforts now being made to reorganize the native armies in India and police forces. It is impossible that you can do without a native army of some kind ; you never could attempt to keep India by European troops alone.

6067. Do you suppose that the amount of European troops depends upon the amount of the native army ; that it is required to keep up a certain number of European troops in proportion to the native army?—I should certainly say that we ought to be more careful of the proportion than we hitherto have been, that is to say, we have learnt a lesson by the native army of Bengal having taken their opportunity when our European forces were weak to try and obtain the mastery. We should endeavour by all means in our power to prevent giving them such an opportunity again, by keeping a larger proportion of Europeans than we have hitherto had.

6068. Then you contemplate the necessity of keeping a large local European army in India ?—Partly local and partly of the line.

6069. That would make a large local European force ?—Yes.

6070. Where do you propose to recruit that force ?—In England.

John Pollard Willoughby, Esq.

30th Nov 1858.

6071. Do you not suppose that great inconvenience might arise to the imperial Government by having a large portion of troops raised in England, of which you would have no power to make use in case of emergency?—That arises from our peculiar position in India. The imperial interests are, I conceive, as much involved in the safety and security of India as in any other part of the Empire. There may be, of course, a difficulty in obtaining the number of recruits required both for home and for foreign purposes, but whether the troops are furnished from the line or from a local force they must be recruited from England.

6072. (*Duke of Cambridge.*) Would not one system of recruiting be more easily conducted than a double system of recruiting?—I am not prepared to admit that, because hitherto there have been two separate recruiting establishments not acting in competition with each other, because they are both under the orders and instructions of the same authority, namely, the Commander-in-chief in England.

6073. (*Chairman.*) What do you suppose is the origin of the restriction of the number of European troops to be employed in India by the East India Company?—I really do not know what the origin is; but I believe that it is a well-known fact that the East India Company were always anxious to increase their European forces, but could not obtain assent to it, and when assent was obtained, it was always grudgingly given. I beg to refer the Commission to a correspondence which occurred on this subject in 1814, and more particularly to a letter from the Court of Directors, dated the 15th September 1814, in which the urgent necessity of always having in India a local European force is very strongly and ably argued. This necessity has, in my opinion, much increased since those days.

6074. From whom?—In this country.

6075. When was the last increase authorized?—In 1853. Our limit up to 1853 was 12,200 infantry in India, and 2,000, I think, in this country. An application had been made to make an increase by three European regiments, and the minister of the day, instead of taking merely the number that was applied for, gave a margin, and it was increased to 20,000 in India, and 4,000 in this country.

6076. Notwithstanding the great anxiety of the East India Company to raise those troops, did they ever raise them?—No; but why? The Court of Directors of their own authority had not the power to take advantage of that margin. They had, first of all, to apply to the President of the Board of Control, and get his consent, and the President of the Board of Control could not give his consent without the consent of Her Majesty's Government.

6077. Was the power to raise troops ever refused by Her Majesty's Government?—It was refused very recently. On the 19th of May 1857 the Governor-General applied for permission to raise three regiments. That was refused on two occasions; we have not obtained assent up to this time. We applied on the 9th July, and again on the 23rd July 1857, for permission to raise three European regiments, on the urgent requisition of the Governor of India, to replace six of the native regiments that had joined in the mutiny, but leave was refused in August.

6078. What is now the amount in numbers of the local European troops?—I believe that at about the time of the mutiny there were 14,400 odd.

6079. (*Duke of Cambridge.*) The local troops which have hitherto existed have only been a small body. Do you not think that there would be a very great difference as regards recruiting if that body was very largely increased, and amounted to a very considerable force in proportion to Her Majesty's line forces?—There is no doubt that in proportion to the number of recruits required, it would not be so easy to obtain the number of men; but hitherto, certainly, we have never found any difficulty. On the contrary, we have often been obliged to check recruiting by imposing limits upon the recruiting officers, and within the last year and nine or ten months I believe we have sent out 10,000 recruits; and in the first seven months after the mutiny 4,854 were given in the return presented to Parliament as having been sent out. That does not indicate any difficulty. In fact, I believe that what was the Company's service, but now constituting Her Majesty's Indian forces, is a very popular service. I have a letter here, dated the 27th April 1848, during the time of the Duke of Wellington, declining to accede to a proposition of the then Court of Directors, in which his Grace acknowledges the popularity of the service, and that it would interfere with the recruiting of Her Majesty's forces in this country.

6080. Taking that very valuable opinion as a criterion, do you not think that it would cripple the resources of the empire in contradistinction to the peculiar interests of India, if you did recruit better for the local army than for the Queen's service generally?—I have been accustomed not to separate India from England, and therefore I should consider that the interests of the one were the interests of the other.

6081. If you find that the interests of the imperial army are damaged by recruiting for the local army, do you not think that the resources of the empire are thereby crippled to that extent?—If it was shown to me that the interests of England were damaged, I would probably admit that, but I doubt whether they would be damaged.

6082. Why should there be any necessity in India for that wholesome emulation to which you alluded, which you say exists between the two forces, when such an emulation has never been attempted in any other army in the world? Is there anything peculiar in the circumstances of India which requires a wholesome emulation between two bodies of European troops serving in that country, when in no country in the world have you ever had that wholesome emulation established by a double army of any description or kind?—I do not suppose that in history there is a similar case to that of a small island like Great Britain holding possession of a large empire like India. Therefore I, of course, cannot quote any instance of two armies existing together like the army of England and the army in India. When I use the word "emulation," I mean that two bodies of men serving together in the field against a common enemy will naturally have what I call a wholesome rivalry and a wholesome emulation in performing that service.

6083. (*Lord Stanley.*) You mean to speak of that kind of feeling which may exist, for instance, between soldiers and sailors when acting on a joint-expedition?—Exactly.

6084. (*Duke of Cambridge.*) If that is the principle which ought to regulate the feeling of armies, why should we not have seen it extended in all the great military countries of the world?—I did not say that that was a principle to be sought after, but the two armies existing together the feeling exists.

6085. I thought you said that that was one of the reasons why you considered it to be an advantage to have a double army?—That is one of the effects.

6086. (*Lord Stanley.*) You speak of it as an incidental advantage?—Yes; certainly not as a reason for maintaining two local armies.

6087. (*Duke of Cambridge.*) I believe it is generally admitted that unity of action in armies is of very great importance, and you can get unity of action more in one body than in two bodies?—I never understood, in the course of my experience or reading, that there has been any want of union in the two armies of India, if they are to be called two armies.

6088. They are under different systems; you must admit that they are two bodies, however harmoniously they may work together?—Yes.

6089. I thought that in great bodies of men it was a great advantage to get one system and one organization?—I do not think that that is the only view to be taken, because the local army is maintained for other purposes; the local army becomes more inured to the climate; the local army becomes more acquainted with the country and its customs and manners, all of which are very useful ingredients in an army; it furnishes also a numerous class of officers unequalled, probably, in the world for the numerous situations which spring up in India, which I do not think could be filled by officers who have not that experience. These are some of the advantages of a local army.

6090. (*Chairman.*) Has there been a superiority manifested on the part of the local army over the Queen's army employed in India?—Certainly not in the field. All that I should claim would be equality. I do not know that the local army is in any way inferior, nor certainly is the local army superior to the army of the line.

6091. (*Major-Gen. Hancock.*) Is it not an acknowledged fact that the troops of the line, as well as the local troops, have derived considerable benefit and increased their efficiency by serving together in India, that each has derived from the other various useful improvements?—I have no doubt, on the one hand, that the local army benefits by the improvements of the day introduced by the army of the line; and, on the other hand, I have no doubt that the army of the line is benefited by the experience of the local army in many respects, both in garrison and in the field.

6092. (*Lord Stanley.*) The line army has the advantage of a knowledge of the latest system of discipline, and the latest system of improvements; the local army has the advantage which the other cannot possess, of knowing the climate and the habits of the people, and you think that any exchange mutually of their experience is a benefit to both?—That is my opinion.

6093. (*Duke of Cambridge.*) Do you not think that the army of the line has only received that amount of benefit which it would derive from any service in the field; has it received any other benefit from the local army, excepting the knowledge acquired from actual service in the field?—Yes; I should think that in garrison it would derive great benefit. I consider that when a fresh regiment of the line arrives in India it has a great deal to learn in garrison as well as in the field.

6094. In what respect?—In the first place I should not think that the commanding officer of a regiment of the line would be so competent to prescribe the system which his men should follow in a tropical climate as an officer of the local army would be. I am not intending of course to disparage the officers of the line. They are only for a time inferior in some respects, from not possessing an experience and knowledge, which can only be acquired by residence in India, and by intercourse and communication with the natives of India.

6095. That has regard to local information, but I refer to military knowledge and acquirements?—I do not claim any superiority in that respect.

6096. (*Sir H. G. W. Smith.*) You have dwelt somewhat upon the intercourse of the army with the natives of the army, what is the intercourse between the army of India and the natives beyond the camp servants?—In the first place, of course, many of the local army are acquainted with the language, and can converse with the natives; they have also become acquainted with their customs and prejudices, and of course if they are, as many of them are, wise they take care not to offend those prejudices and unnecessarily to irritate the natives.

6097. That I am aware of; but still it does not describe the amount of intercourse which there is between the population of India and the soldiery?—Many of the local army intermarry with the natives, and when they become entitled to pensions, more frequently settle in India. By the latest returns, I find that of the late Company's service there are 1,059 resident pensioners to 388 of Her Majesty's service. This is an element of strength in times of trouble.

John Pollard Willoughby, Esq

30th Nov. 1858

6098. (*Duke of Cambridge.*) Do the soldiers of the line ever intermarry with the natives?—I cannot answer that question, I should think very rarely; certainly not to such an extent.

6099. (*Lord Stanley.*) As a rule is there any doubt on your mind that whether in peace or war, it is an advantage for the officers and men of an army quartered in a country to understand the habits of the people?—It is undoubtedly an advantage. It must be of immense service to the officers of a regiment to be acquainted with the people, even on an ordinary march from station to station.

6100. Can there be any doubt that that knowledge is possessed in a greater degree by the officers and men of the local army than by those of troops of the line serving in India for a few years only?—Undoubtedly it is possessed both by officers and men, but in a greater degree by the officers.

6101. (*Chairman.*) I understood you to say just now that you did not conceive that there was any superiority in the local portion of the army over the Queen's troops?—I was then talking of their qualities as soldiers in the field.

6102. That is all you require of an army, is it not?—I may have misunderstood the question; I thought your question was whether I considered the Company's army superior as an army on service to her Majesty's army. Of course I do not consider them, in the quality of soldiers, superior one over the other.

6103. As an army, you admit that the one is equal to the other?—Yes; but if you take into consideration the services to be performed, I should consider that the local army would have advantages over the other—not personal advantages. How, for instance, could we expect an officer on his first arrival in India, and altogether ignorant of the languages, customs, and manners of the inhabitants of India, would be competent to conduct with efficiency the commissariat, bazar, or intelligence departments of an army, more especially if employed in field service.

6104. (*Duke of Cambridge.*) Do you allude to the civil services which they perform?—One advantage of a local army is of course that the local authorities are able to draw experienced officers for the numerous situations which must be filled up in India.

6105. Could not arrangements and regulations be made for them to draw from the army in general just as well as from any local force?—I do not think so, for this reason, that of course the army of the line do not look to India as their adopted country, and their energies and associations are not concentrated on India, which those of the local army are.

6106. (*Lord Stanley.*) It is not worth the while, as a general rule, of an officer of the line to study the languages, or to familiarize himself with the habits of the country?—I should say, as a general rule, it is not.

6107. (*Duke of Cambridge.*) Has not that resulted from the fact of officers of the line not having opportunities worth taking advantage of; and if that field were open to them, would they not study, and be anxious many of them to remain, and make India their adopted country?—No, there would still be a great difference; in my opinion the officers of the army composed solely of the line would still not look to India alone. Whenever it suited their convenience they would return to this country.

6108. (*Chairman.*) Do you think that the officers of the line would look to their promotion more than to the chance of any civil employment?—I dare say that the officers of the line, if they were assured of civil employment, would look to it also.

6109. (*Viscount Melville.*) Is it not the fact that the officers of the line do learn the native language, and that every regiment of the line going to that country is not a year in the country before an officer qualifies himself to act as interpreter?—That is not my experience. I see to this day that officers of the local army are frequently attached to Her Majesty's regiments as interpreters.

John Pollard Willoughby, Esq

30th Nov. 1858.

6110. How long ?—I cannot state for how long, but the fact exists.

6111. (*Major-Gen. Hancock.*) With respect to jealousies and heartburnings between two armies, provided the officers of both be placed upon a perfect equality, do you see any reason why any other than a generous spirit of emulation should exist between them ?—I think that what has been called the jealousy between the two armies, existed from the very cause that, until very recently, the two armies were not on an equality. There are a number of privileges which have been conceded, from 1788 downwards, and those inequalities having been removed, I do not see any reason why any jealousy which would be pernicious should exist. The rank of officers of the East India Company's service, beyond the limits of India, was only acknowledged as recently as 1855; royal commissions were first granted to officers of the East India Company's army in 1788; the honour of the Order of the Bath was extended to them in 1815, but I believe not actually conferred until 1826; brevet rank for distinguished service was first granted in 1828; the rank of general, in 1837; the highly-esteemed honour of aide-de-camp to the Queen, in 1842; and eligibility to chief commands, by the appointment of a Company's officer to command the Madras army, in 1856.

6112. Are you not of opinion that whatever jealousies or heartburnings may have existed hitherto, they are rather attributable to those differences to which you allude, than to the mere circumstance of there being two armies ?—I think it very probable.

6113. (*Duke of Cambridge.*) Do you not think that it is human nature that two distinct and separate bodies must always have a certain amount of jealousy, whether it be wholesome jealousy or not; and which can only affect unfavourably two distinct bodies of troops ?—I again say, that if the two bodies are treated with equal justice, being the common soldiers of one sovereign, that feeling ought not to prevail.

6114. Is not the very fact of a portion of the army not being allowed to perform certain duties throughout the empire, which the other portion is allowed to perform, in itself, a very great distinction, which would work prejudicially in some respects ?—I think the distinction arises from our position in India, which renders it unavoidable. I do not think that unless officers become rooted, as it were, in India, the great men who have appeared on the scene, would have had the opportunities of acquiring the qualifications which brought them forward.

6115. As regards the interests of the empire, admitting, which I freely do, that India is one of the most important branches of the empire, still do you not think that the interests of the empire are paramount as regards all interests, whether Indian or any others ?—No doubt the interests of the empire, taken as a whole, are paramount to every other consideration.

6116. Supposing that the interests of the empire were affected by a very large local force, do you think that the interests of India ought to predominate over the interests of the empire ?—Of course I do not consider that, regarding India as a portion only of the British empire, its interests are to be preferred to those of the empire at large; but, as I said before, I consider the interests identical, and the loss of India would, I think, be grievously felt throughout the British empire.

6117. Do you not think, that the fact of a large proportion of Her Majesty's troops being shut up, so to speak, for local service in India, does cripple to some extent the powers of the empire ?—I do not think so, for this reason. Of course the object of a local army is, that India should, if possible, be always placed in a state of security, but there can be no doubt that the authorities in India, on any great emergency, would employ to the utmost all their resources for the benefit of the empire at large, as they have hitherto done. The forces of India have not been confined to India; they have been to Egypt, the Mauritius, Java, China, and Persia. But all that I should contend for is this, that there should not be a power in the authorities in this country, without the consent of the local authorities in India, to withdraw the force which is specially provided for the safety of India.

6118. Do you consider then that troops which are enlisted for local purposes, service in India, for instance, as now proposed, can, without special enactment, serve in any other part of the empire ?—I should say, as a general rule not, because they are raised for the express purpose which I have referred to.

6119. Then how would you get over the difficulty, supposing the empire require them elsewhere. As you have yourself very justly remarked, they have been employed, and usefully employed in Egypt and elsewhere ?—I have that faith in British soldiers, that I believe that even without an enactment, if a great emergency arose, rendering it necessary to employ them elsewhere, there would be no hesitation on their part to do what they were called upon to do.

6120. (*Lord Stanley.*) They would volunteer ?—They would volunteer, and be only too happy to proceed on service when ordered.

6121. (*Duke of Cambridge.*) Do you think that in making great arrangements for a large army for India it would be safe to trust to the good feeling of those employed, or would you not rather trust to the right and proper feeling of a Government in not withdrawing troops from a country which they know is an integral portion of a great empire ?—I am obliged still to say, that I advocate a local army, chiefly with reference to the security of India, and I do not know of any other way in which it can be provided for. I have, however, omitted to notice one thing, which I think settles the question, and that is that the finances of India will not bear the expense of an army unless a large portion of it is local.

6122. Suppose that that difficulty is got over, which after all is a matter of detail and arrangement, and suppose that arrangements are made that the one expense is not proportionately greater than the other, how will the case stand?—The facts within my knowledge answer the question; it is impracticable to make the expense of the one equal to that of the other.

6123. Why impracticable ?—I can only state this, that I have looked into papers lately and find that the expense of the transport of troops would render it impracticable, if whole regiments are to be sent every year. In a letter which I have with me the Government of India advocate the raising of a local army on financial grounds, and on account of the officers being ready at hand, and they make use of the expression, that it is the only scheme financially practicable.

6124. The arrangements now made for transport are very loose and vague. Supposing new arrangements for the transport of troops were made, and it was proved that they could be made much cheaper than is now done, and supposing that, instead of going into the open market, the Government were to undertake to provide large steamers to carry the men, and various arrangements were adopted in order to make the route much cheaper than it is at present, would not that make a great difference ?—My experience is that Government can never do a thing so cheaply as a private capitalist. I do not think that in a money point of view it is likely that the expense would be reduced by means of Government establishments.

6125. (*Major-Gen. Hancock.*) As it may be assumed that the European permanent force to be maintained in India will be fixed at the minimum deemed necessary to hold India securely, how could any portion of it be removed to meet a European crisis without risking the loss of India ?—It could not be so, of course, and that is one of the reasons why I advocate a local army, that India should not be left without protection under all circumstances. I should fear that if it was wholly an army of the line the forces in

John Pollard Willoughby, Esq

30th Nov 1858

India would be reduced to a hazardous extent, whenever any great crisis or emergency arises.

6126. Regarded as an imperial question, what advantages would be gained to the state from having the whole European force composed of troops of the line, if not a single regiment could be withdrawn without endangering the loss of India? How could they be made available for service elsewhere?—They would be available for service elsewhere by order of the authority raising them, but still at the risk, of course, of endangering the safety of India.

6127. (*Duke of Cambridge.*) Supposing that the empire is in danger, supposing that it is in such circumstances (which of course would be the case in such an event) as to require every available man for its safety, do you not think that in a case of that sort the authorities at home would be justified in even calling upon India?—Then it would arise that you must give up India probably; that is to say, you must incur the risk of giving it up by losing your hold on India.

6128. Without such an emergency I think you will admit that no Government would think of reducing the force in India to such an extent as to endanger India?—I have before stated that I have no doubt that no Government would do so intentionally; but I think that the Government at home of course would look at home, and not being so well informed of the requirements of India would very often recal troops against the opinion of the local authority, as was done in a late instance, although, I admit, under a great emergency.

6129. Can you state an instance in which regiments were withdrawn from India for the Crimea, excepting two cavalry regiments?—And two infantry regiments. Our force, when the mutiny broke out, was under the usual complement; it consisted of twenty-two battalions instead of twenty-four.

6130. Was it not the fact that some regiments were offered by the Government at the end of the Crimean war, and refused by the Court of Directors; was it not intended to have replaced them?—Yes; and I am not aware that the Court were opposed to their being replaced. Some delay occurred with reference to the season of the year, which is one of the chief things to be regarded. I think that they were perfectly justified in that, because if that point is not attended to the loss of a regiment is immense on arrival in India.

6131. (*Viscount Melville.*) The only two regiments withdrawn during the Crimean war were the 12th hussars and the 10th lancers, there was not an infantry regiment withdrawn, and whatever deficiency in infantry existed when the war in India broke out was in consequence of the absence of those employed in Persia.—There is no doubt that our complement, as we consider, was twenty four regiments, and when the mutiny broke out there were only twenty-two. Of that force I am aware that 3,000 were in Persia, but by great good fortune the war in Persia terminated, and they were in time; and they, in fact, were the force with which Havelock gained his glorious victories.

6132. (*Duke of Cambridge.*) Can you give any other instance of troops having been withdrawn contrary to the disposition and feeling of the authorities in India?—No, I cannot; because, with the exception of the war in the Crimea, there has been no war of importance since 1815.

6133. How was it during the great war with France; were troops then withdrawn to the extent of endangering our empire in India?—I am not aware that they were.

6134. Then, in fact, the experience which we have gained hitherto only amounts to the one instance during the Crimean war?—Yes; but if the force of the line in India were increased to a great number they would, I presume, be considered more available than they are when they are only a comparatively small number of regiments in India.

6135. Still you will admit that that entirely rests upon the responsibility of Her Majesty's Government?—Entirely.

6136. (*Lord Stanley.*) But the temptation to withdraw them would be greater?—Undoubtedly; of course when there is an emergency at home the requirements of India would be less thought of than the requirements at home, and I think that there wou be an inclination to withdraw them beyond what was safe, which would be obviated by having a local army.

6137. Would not that inclination to withdraw troops from India be increased in proportion as the facilities of communication between the two countries are increased?—I should think it would.

6138. Looking at the matter in another point of view, in the event of a large European force of the line being maintained in India, would not that impose upon every officer entering the Queen's service the duty, in all probability, of passing a considerable period of his service in India?—No doubt the period at which each regiment would proceed to India would be very much shortened The turn of service would occur more frequently.

6139. The amount of service in India relatively to the amount of service elsewhere would be greatly increased?—It would be greater—much greater.

6140. Would not that, in your judgment, have its effect on the willingness of officers of a certain class and station to enter the army?—I do not think that service in India with the large majority of the officers of Her Majesty's forces is popular.

6141. Are there not many men who now enter the Queen's service as officers who are willing to fulfil all the ordinary conditions of military duty, but who, being men of independent fortune, would object to be banished from England during a great part of their term of service?—I think so; and I have understood that whenever a regiment is ordered to India instances of that sort occur.

6142. (*Duke of Cambridge.*) But there is no difficulty in those officers exchanging, if they choose to exchange?—But the exchanges take place on account of a disinclination, if it may be so called, to go to India for ordinary duty.

6143. Do you not think that that disinclination would be very much weakened if the service of India was thrown open to them. Are you not aware that hitherto the services of the officers of the line, with the exception of a few staff appointments connected with the Queen's army, have been exclusively regimental services, with no field of action whatever. Do you not think that the change of that system would make a very great difference?—That is very true; but then they are not content to pass their lives in India. I again say, with no view of disparaging the officers to whom I am alluding, that they have not the opportunity of qualifying themselves in the way that the officers of a local army have; neither can it be expected that they will feel the same interest in India, as the officers of an army specially raised for service in India, and having no views or prospects beyond India.

6144. Do you not think that they would find it worth their while to qualify themselves, and would take every opportunity of doing so, if they had a field open to them?—Still, comparatively, they would be birds of passage. A regiment of the line would go out to India to serve there a certain number of years; they would of course look forward to being relieved at the end of a certain period, which probably would be fixed whenever the nature of the service would admit of it. I do not see how they could take root in the country in the way that the officers of a local army would do.

6145. (*Major-Gen. Hancock.*) Although some officers, who might have the prospect of obtaining high appointments in India, would be tempted to remain, you think the general effect would be that, on regiments of the line proceeding to India, the men of fortune and property would exchange into regiments at home, and that the officers who remained would be

John Pollard Willoughby, Esq

30th Nov. 1858.

principally of the less affluent class?—I mean to say that the officers of a local army look to India solely. If the army of India was composed solely of regiments of the line, the officers of the army there would not do so, whenever it suited their interests they would endeavour to quit the country.

6146. (*Sir H. G. W. Smith.*) Does the opinion which you advocate as to the defence of India, and of Great Britain, consist in this, that India being first provided for by a local army independent of Great Britain, Great Britain will look to itself?—Yes, that is very much my opinion. My first object, having spent the best part of my time in India, is to endeavour to devise a plan, which, under all circumstances, shall maintain the safety of India.

6147. (*Lord Stanley.*) That is to say, you think that in the case of an army which, whatever its composition, is paid out of Indian revenue, India has the first claim to look to the services of such an army?—I think so; another great reason with me for a local army is that the troops become inured to the climate.

6148. (*Duke of Cambridge.*) Do you think then that a long residence in India is an advantage as far as the troops are concerned?—I have no doubt that with long residence in India for a regiment annually recruited as it is, fresh blood being infused into it both in officers and men, that regiment will stand field service and the climate much better than a recently arrived regiment. I have instances of it here, over and over again. You cannot read any medical report received from India without being struck with that fact. I will cite a few instances out of many which have come to my knowledge. Her Majesty's 28th regiment arrived at Bombay in August 1842, and a few days afterwards proceeded to Khurachee in Scinde. Cholera broke out in the regiment with intense severity, and proved fatal to a large number of the officers and men. A court of inquiry assembled, but were unable to discover any preventible cause for this sickness and mortality. No doubt the season of the year was against them. Troops on their first arrival in India are most liable to this fatal disease. Dr. G. S. Beatson, when examined before the Select Committee on East India Transport of Troops (question 2911) stated "all "fresh arrivals are very subject to outbreaks of "cholera." I have not been able to obtain the precise number who perished in Her Majesty's 28th, but I believe it to have been almost without a parallel. Again, that noble and gallant regiment, Her Majesty's 78th Highlanders arrived at Bombay from England on the 31st July 1842. Two years afterwards this fine regiment proceeded to Scinde. In a few weeks, by sickness—chiefly fever and dysentery—it was rendered entirely unfit for service, and when reduced to a remnant was obliged to be recalled. I have examined the records of the day and find the Commander-in-chief at Bombay deploring "the lamentable and prostrate state to which that fine "regiment, the 78th Highlanders, has been reduced "by the prevailing fever." The medical officer in charge describes the regiment "as a perfect wreck," and the superintending surgeon of the province, on the 1st February 1845, reported "the mortality in "Her Majesty's 78th Highlanders, I regret to say, "continues great, and a large number must still fall "victims to the effects of the pestilential climate of "Sukkur." At this time the strength of the regiment had been reduced to 591, of whom 328 were in hospital. The sickness extended to the women and children of the regiment; and the records of the India House show the results in abstract.

Present strength of Her Majesty's 78th Highlanders.

Children - - -	141 -	32 -	109

On the 4th January 1845 an officer of the regiment wrote from Hydrabad,—"Since we marched from "Khurachee our loss has been 365 men, 39 women, "132 children, 2 officers, and officer's child,—making "in all 535 souls. There are 30 other men who, the "doctor says, will never see India again: 12 only "out of 1,000 have escaped the Sukkur plague; that "is exclusive of women and children." The precise number of each class who perished has since been inscribed in a memorial tablet erected in Scotland by the survivors.

Then there is the instance of the mortality which prevailed in 1849–50 in Her Majesty's 70th, 75th, and 87th regiments, the first few months after their arrival in India, to which I have already referred; and the remarkable contrast between the capability of Her Majesty's 71st regiment to endure the exposure of field service in India and the 3rd Bombay Europeans, when serving together in the affair at Koonch, to be cited in support of my argument, that acclimatized or seasoned troops are better able to undergo hard service in India, than what are technically called *green* or newly-arrived troops.

6149. (*Col. Burlton.*) It has been assumed that the local force of European troops in India are not removable without their volunteering to go, that is not the case, I believe. The soldiers of the East India Company have always been enlisted for service without any reference to India alone?—I was not aware until it was put to me in the shape of a doubt that they were anything but Queen's troops, although raised by the Company, and paid from the revenues of India.

6150. You will find that they are enlisted for general service wherever the East India Company choose to order them, and you have never, I conclude, heard of such a thing as a European regiment being asked to volunteer for foreign service, to go to Persia, China, or Java?—Never; they go with the greatest alacrity.

6151. (*Major-Gen. Montgomerie.*) But the officers' commissions, I believe, have generally been considered to be eastward of the Cape, not for general service?—But that distinction was done away with, I think, in 1855: formerly one of the great grievances of the Company's officers was, that their commissions did not hold good on this side of the Cape.

6152. (*Lord Stanley.*) In point of fact, as regards the Europeans, the only difference between the armies is, that the head-quarters of the one army is in India, and the head-quarters of the other is in England?—I am not aware of any other difference.

6153. (*Major-Gen. Hancock.*) With respect to the danger incurred to India by the withdrawal of European troops, was it not the case that at the time of the outbreak of the late mutiny in Bengal the danger of its extending to the native army of Bombay was greatly increased by the circumstance of several European regiments and batteries of artillery belonging to the latter presidency having been withdrawn for service in Persia, and of the southern division of that army having been left, in consequence, without any European regiment?—The Bombay native army no doubt was exposed to great temptation, from the fact of so many of the European troops stationed with it being withdrawn, through the circumstance which you state.

6154. (*Viscount Melville.*) By whose orders were they withdrawn?—The Persian war was a war proclaimed by Her Majesty's Government in England.

6155. (*Duke of Cambridge.*) Are you not subject to that at any time?—No; we thought that it was rather an extraordinary proceeding.

6156. (*Viscount Melville.*) Who ordered it?—I think the Governor-General issued a proclamation which commenced by stating, "Under instructions received "from Her Majesty's Government in England."

6157. Was not it the Governor-General or the Governor of Bombay, Lord Elphinstone, who ordered these European regiments away for this particular service, and not the Government from home?—Most undoubtedly the war emanated from this country. Of course the Governor-General and the Governor of Bombay were obliged to obey orders. It was cer-

John Pollard Willoughby, Esq.

30th Nov. 1858

tainly unwise that such a drain should be made upon the usual resources of India without the consent asked or received of the local authorities, who are the best judges of what the safety of India requires.

6158. (*Major-Gen. Hancock.*) There is one important point with respect to the withdrawal of troops from India, which I think has not yet been alluded to. It is this, that the time of war in Europe would be that of all others, would it not, during which the necessity for maintaining the European force in India would be the greatest; and that if diminished in strength, the natives of India would be likely to take advantage of that particular time to rise in insurrection, supposing them disposed to do so?—There is no doubt that the danger to India increases whenever war is proclaimed. It may be either from the nation with which you are at war being able to aggress upon India, or it may be, as we have unfortunately learned by recent experience, that the native troops are unfaithful.

6159. (*Duke of Cambridge.*) Does not that danger extend to every portion of the empire, and not exclusively to India, in case of war?—Except the danger from the native army, it will always exist, more or less.

6160. (*Major-Gen. Hancock.*) That is the time of all others at which troops can least be spared from India?—No doubt that is the time when European forces ought to be strongest, looking to India alone; but of course in the case of a general war, you must to some extent look to the imperial interests.

6161. (*Lord Stanley.*) Admitting what cannot be denied, that there is a power in Her Majesty's Government to withdraw the local European troops of India for service in Persia or China, or elsewhere, if necessary, I understand your argument to be this, that there is much less probability of such local troops enlisted for the defence of India being so withdrawn than there is of troops of the line being withdrawn, one of whose conditions of service it is, that they shall serve anywhere?—Yes, I think so.

6162. (*Major-Gen. Hancock.*) Do you think that in order to have troops available in India for service in China, Persia, or elsewhere in Asia; it would be desirable to maintain in India a larger European force than may be considered necessary, for the secure hold of the country?—I think that the great difficulty ahead of us is the financial difficulty. I do not think that India can afford to keep up a larger force than is absolutely required for its own defence under ordinary circumstances; of course when war occurs we must increase our forces.

6163. (*Duke of Cambridge.*) Would any Government be justified in keeping up in any portion of Her Majesty's possessions, whether India or elsewhere, more troops than the exigencies of the State required?—No, I do not suppose they would; but that is a very large question, what the requirements are, and all the contingencies. There must be troops in reserve to meet contingencies.

6164. (*Sir H. G. W. Smith.*) With reference to the withdrawal of troops from India, do you remember whether, during the long Peninsular war, perfect tranquillity did not prevail in India from the beginning of it to the end, beginning in 1805 or 1809, after Lord Lake's war?—We have generally had some war on our hands in India.

6165. But the European war did not affect the tranquillity of India?—Probably not directly; but indirectly I dare say it did.

6166. Did it lead Her Majesty's Government to keep more regiments in India upon that occasion, or fewer?—I have no doubt that, according to the state of India, in some years the forces were increased and in some diminished.

6167. A question previously put you implied that whenever there was a European war India was in some degree agitated, and that there was a necessity on the part of Her Majesty's Government rather to increase than to diminish their forces. During the long Peninsular war was there not perfect tranquillity prevailing in India from Lord Lake's time?—No, certainly not.

6168. (*Col. Burlton.*) What was the date of the Nepaul war?—1812. Then there were Lord Hastings' wars against the Mahrattas and Pindarrees. I think you can hardly name a year in which military operations upon a large scale were not being carried on in India.

6169. (*Major-Gen. Hancock.*) Are you not of opinion that all the more important officers of the State in India to which officers of the army are eligible would be much more efficiently filled from a body of officers trained from their youth in India, and with no views beyond it, than from one sent to India only for a ten years' tour, free to leave it at any time by exchanging, having no abiding interest in the country, and whose hopes and aspirations would naturally turn rather to the prospects of professional advancement open to them in Europe?—I think I have rather anticipated my answer to that question in the affirmative. I am decidedly of opinion that the officers of a local army solely devoted to India are much more likely to be efficient, under the circumstances stated in the question, than the officers of the line generally.

6170. If the Indian Government no longer has the training school of a considerable body of officers at its entire disposal and with no views beyond India, which it has hitherto possessed by having a large local army, do you think that such eminent soldiers and administrators as Malcolm, Munro, Ochterlony, Henry Lawrence, Outram, John Jacob, Nicholson, and the many able and devoted men of whom those names are the type, can reasonably be looked for in India in future?—I do not think so certainly.

6171. (*Duke of Cambridge.*) Have you found that the empire has experienced a dearth of valuable and good men for any service that it may have required during the last century?—Certainly not, provided they have had the apprenticeship and again the experience which is one of the chief reasons why I advocate a local army.

6172. (*Viscount Melville.*) Entertaining that view does not it amount to this, that it is better to have at once two armies, and that the whole European force for India should be local, the officers of that army entering a different service from the Queen's service?—No, I do not think so.

6173. (*Col. Burlton.*) Are you not of opinion that a generous spirit of emulation between two branches of the same national army must, without any reference to history or precedent, have a most beneficial effect upon both?—I think so.

6174. (*Duke of Cambridge.*) Then why has it not been established in other countries?—I can only answer that question by stating that I know no parallel instance of a small island, such as that of Great Britain, having under its sway such an extensive empire as India, consisting, I believe, of 1,500,000 square miles, and 200,000,000 inhabitants.

6175. Quite admitting that there are very peculiar circumstances, I put it, as regards the question put by Colonel Burlton, why it should be necessary to have that wholesome emulation amongst armies; I am talking in a military point of view?—I do not think that it is necessary to seek for that emulation, but the two bodies existing together it does exist, and that, I think, produces a good effect.

6176. You do not think it necessary, as regards the organization of an army, that there should be two armies in order to make one emulate the other. I am speaking not as regards India, but generally upon military principles?—No, not, of course, under ordinary circumstances.

6177. (*Col. Burlton.*) You would not think it *necessary* to have that spirit of emulation, but you are of opinion that, as a general principle in human nature, not only in armies but throughout the world, a spirit of generous emulation between any two bodies whatever must be beneficial?—I have no doubt of it, and that is one of the feelings of the day.

John Pollard Willoughby, Esq.

30th Nov. 1858.

6178. (*Duke of Cambridge.*) Is not that wholesome emulation established in every army by the fact of having separate corps, but with this difference, that they are all one body under the same rules and regulations, whereas you want to retain the two bodies under separate rules and regulations?—But then what becomes of the local authority in India? I presume that if it is to be one army, it is, of course, to be under one authority. Now, I consider that the army in India is the right arm of the Governor-General and the Governors of the different presidencies, and that their authority must be uncontrolled save in the way in which it is controlled at present. Under the former system it was controlled to a certain extent periodically by the Court of Directors, and now by the last India Bill it is controlled, to a certain extent, by the Secretary of State in Council.

6179. Do you not approve of that control?—I quite approve of it.

6180. In what way would the control be altered; in what way would there be a difference of control?—In the first place, there would be something like a treble government established; the Secretary of State in Council must exercise a control under all circumstances; and if the chief military authority in this country exercised a control, that would be the second; and then the third would be the local authority. I am afraid that that would lead to collisions of authority and innovations which I should think very prejudicial; also to increase of expenditure.

6181. In what respect can any authority or innovation be introduced by the Commander-in-chief provided that the Commander-in-chief is in exactly the same position with reference to the Secretary of State for India, as he is with reference to the Secretary of State for War, which is that such Secretary of State has entire control over the Commander in-chief?—The distance alone would make a great difference. I do not think that the armies of India can be controlled by a distant authority, in the same manner and to the same extent as the army of England is controlled by the Commander-in-chief and the Secretary of State for War.

6182. Did you not say that you thought they ought to be controlled by the Secretary of State?—There are certain branches of military administration which he can control, but everything connected with the movement of troops and appointment of officers for particular services must be left to the local authority.

6183. Granting, which I cordially do, every word which you say, that that entire control should exist there, why should not it exist there as it has hitherto done, and yet that in all that concerns the organizing an army and keeping it within certain disciplinary bounds the Commander-in-chief should have that legitimate control which he exercises over all other branches of Her Majesty's service?—I am of course giving a civilian's opinion. I think that it would be extremely pernicious to the public service if a greater control was exercised in this country than has hitherto been exercised. I think that India requires a separate administrative agency of its own in every department, and in none more so than the military department.

6184. But you admit the agency of the Secretary of State?—Undoubtedly.

6185. What is the difference between the agency of the Secretary of State living in England and the agency of the Secretary of State with the assistance of the Commander-in chief for the European portion of the army; it would be two armies, would it not?—There would be two instead of one authority.

6186. (*Lord Stanley.*) Your case is that it is interposing an additional authority where there is already, in your judgment, a sufficiently obligatory machinery?—Yes, and where, under the existing system, everything which is required to my mind is provided for. In regard to the troops of the line in India there is a separate military and medical staff kept up for the purpose of communicating with the Commander-in-chief in England upon all matters of discipline regarding Her Majesty's regiments. The Commanders-in-chief in Calcutta, Madras, and Bombay, now communicate with and receive their orders, regarding Her Majesty's regiments, as far as the discipline is concerned, from the Commander-in-chief in England, and I do not really see what more is required as far as that is concerned.

6187. (*Duke of Cambridge.*) What more was suggested in what I stated than that?—I presumed that it was desired to include in the same system the local European forces.

6188. What ill effect has been produced by that state of things which now exists as regards the Queen's troops in India?—If it is confined simply to matters of discipline, and to what is now the practice, there is no objection.

6189. You would not object to that?—Certainly not to what exists at the present moment, but that is a very different thing from what I understood in the question, namely, that the troops in India were to be under the command and authority of the Commander-in-chief in England.

6190. In what respect is there a difference?—Because at present the Commander-in chief has no voice in regard to the distribution or employment of Her Majesty's troops in India.

6191. How could he have?—Then what additional authority is required?

6192. Merely that the Commander-in-chief should, as regards local forces, have the same disciplinary action which he has now as regards the Queen's troops?—That I do not think would be desirable.

6193. Did not you tell me that no disadvantage had accrued from the existence of that power hitherto?—Over Her Majesty's troops.

6194. Why should there be any disadvantage in its extending over the local troops?—It would be introducing the English system of administration over the local troops, which I should think undesirable.

6195. In what way?—That the system of patronage in the two countries is widely different.

6196. There would be no patronage involved in it, but merely discipline?—I think that it would be rather an anomaly, a Commander-in-chief exercising no patronage.

6197. In what respect patronage?—I should say that all situations in India ought to be filled up by the local authority.

6198. Certainly?—They are not now filled up by the local authority in all cases.

6199. Which are not?—The chief commands in India.

6200. What chief commands?—Generals of division.

6201. Was it not under regulation with the Court of Directors, that a proportion should be filled up from the Queen's army and a proportion from the Indian army?—Undoubtedly it was. I am talking about the selection of individuals to fill those commands.

6202. Do you think that the selection of individuals should rest with the Governor-General and the Commanders-in-chief?—In the case of brigade commands undoubtedly.

6203. I admit it to the fullest extent. Where has been the interference of the Commander-in chief in brigade commands?—I do not say it has been so; but I am only fearing that such interference would follow the change which your royal highness seems to advocate.

6204. Why should it follow more now than it has hitherto done?—I should be apprehensive that it would follow.

6205. (*Viscount Melville.*) Am I to understand that you object to the Queen nominating general officers to command divisions as heretofore; for instance, Sir John Inglis or General Mansfield, those officers nominated by the Queen?—General Mansfield was sent out, I think, on the staff in the same way as the Queen's adjutant-general and the deputy adjutant-general.

John Pollard Willoughby, Esq

30th Nov 1858.

6206. (*Duke of Cambridge.*) Are you aware that every appointment which is made for India in fact emanates from Her Majesty's Government ?—Yes.

6207. Do you think that if the Secretary of State for India is responsible for all appointments made, there is any danger of there being any undue interference ?—Yes, I am afraid there would be. My argument is this, that the local authority is much more likely to have accurate information of the qualifications and capacities of the officers in India than a distant authority; and what I should deprecate would be any diminution of the power of the local authority to select those officers.

6208. Suppose there is no diminution of those powers ?—If there is no diminution of course my fears are groundless.

6209. Do you not think that it would be an advantage to get rid of the double staff?—In a pecuniary point of view undoubtedly; but the double staff never, to my mind, could be got rid of, because there must be a large native army, and the staff of the native army must be filled, I suppose, from officers of the local army, and therefore possessing Indian experience.

6210. Still you would have probably only one adjutant and quartermaster-general; you might make arrangements of that description ?—That of course depends upon the extent to which the native army is reorganized, but I should fear that, in practice, you would find it difficult to establish that system.

6211. You do not think that a double staff on principle is a good thing ?—Certainly not.

6212. And it is expensive ?—It is expensive.

6213. (*Major-Gen. Hancock.*) You are aware that the appointments of Her Majesty's officers to divisional commands in India have been hitherto made in England, that those of the Company's officers have been ordinarily made by the Governments in India, and only occasionally by the Home authorities at the India House. Do you think that it would be expedient to continue that system, or as a general rule, to place the divisional commands for both services in the hands of the authorities in India ?—My own impression is, that the more you can throw into the hands of the local Government the better. I certainly should not positively interdict the authorities in England from nominating to divisions, but I should prefer that, in the generality of cases, it was left to the local authorities, for the reason which I have just stated, that they are best able to appreciate the qualities of the officers at their disposal.

6214. (*Sir H. G. W. Smith.*) Are you under the impression that in the event of troops being wanted on any emergency in this country from India, it would be done directly by the Commander-in-chief in England or by Her Majesty's Government through the Commander-in-chief ?—I have no doubt that it would be in communication with Her Majesty's Government; the Commander-in-chief, I presume, can recommend.

6215. (*Viscount Melville.*) Who at present nominates the general officers of the Company's service for divisional commands in India ?—As a general rule it is done by the local governments, occasionally by the home authority; the home authority has the power to nominate, but very seldom exercises it.

6216. Suppose the general officers of the Company's service selected are in England ?—The home authorities have the power, and occasionally exercise it, but rarely.

6217. Has that system been found to militate in any way against the selection of a good class of officers for command in India in the Company's service ?—The instances of the home authorities nominating are so rare, it is in fact the exception not the rule, and this is the system which I should on the whole advocate.

6218. Then why do you object to the home authorities nominating the general officers of the Queen's service to hold commands in India ?—But the system of nomination of Queen's officers to divisions is different. I believe that they are invariably nominated from home.

6219. I want to know what is the objection ?—I have no very strong objection against the system. I should be very sorry to see it extended to the local army of India, that is, that the nomination should be always here.

6220. (*Sir H. G. W. Smith.*) You are aware that there are certain permanent divisional commands established for Company's officers and for Queen's officers ?—Yes, the proportion has been fixed for each presidency.

6221. You are aware the Government of England send out a certain number, namely, two in Bengal. Those officers are sent to the local appointments, no matter what the troops consist of. As an instance, at Umballa, when I was in India, there were, I think, six British regiments, they were commanded by a Company's officer; while at Meerut there were only one regiment of infantry, and one of cavalry, which were commanded by a Queen's officer. Therefore there is not that great distinction of command or favour to the one compared with the other, when the Queen's officers were placed, as it were, in reserve, and the Company's officers were in command of the largest portion of British troops connected with India. Are you aware of that arrangement ?—There probably were circumstances which induced the local authority to make that arrangement, with which I am unacquainted. The Company's officer who is put into a superior command, may be an officer of great merit and experience.

6222. (*Duke of Cambridge.*) Does not that prove that the local authorities were in a position to do just as they liked ?—That is exactly what I advocate, that they should have that power.

6223. The result of that would be, that there has not been any undue interference?—I did not say that there had been any undue interference; I was talking of the original nomination. The original nomination should, in my humble judgment, be with the local authority, for the reason which I have stated.

6224. (*Major-Gen. Hancock.*) Is not it a fair argument in favour of the system of placing the appointments to divisional commands in the hands of the Indian authorities, that they would thereby fall to officers working in India, and who therefore might be justly regarded as having the best claim to them ?—*Cæteris paribus*, I should say, of course, that the man who has worked himself up to the top of the tree should have the reward.

6225. I mean that, as a general rule, those officers who are doing the work should have the benefit of the commands and appointments in India ?—Of course I could not say that they ought to have them exclusively.

6226. (*Duke of Cambridge.*) Do not you think that an arrangement could very easily be made by which, supposing that the army were altogether of the line, the rule in reference to the appointment to divisional commands should be as has hitherto existed with regard to the late Company's service, that is to say, that the Governor-General should send in his schedule, and that unless there was some very serious ground of objection to that schedule, the names in it should be adopted for the army of the line ?—If such a rule could be established, that is to say, preserving the recent system, there would be no evil.

6227. It would be the same thing ?—It would be the same thing; but I am very much afraid that such a rule would not long exist.

6228. Why ?—Because I do not believe that it is the system in Her Majesty's army to delegate the selection of officers to divisions to any one, but the Commander-in-chief, and it is only the peculiar circumstances of India which render any deviation from that rule proper and desirable.

6229. Judging from your experience, do you think that if a public functionary, like the Governor-General of India, made strong recommendations of certain persons, they would not be attended to in preference

John Pollard Willoughby, Esq.

30th Nov. 1858.

to any other recommendations came they from where they might?—I think myself that the Governor-General should not be subject to check from any other authority in these matters.

6230. Not the Secretary of State?—I am saying that, generally speaking, his authority should be supreme in every department in India. Your Royal Highness is supposing the case of simply recommending.

6231. Would not any Commander-in-chief, be he who he may, accept, and with gratitude accept, the recommendations of the Governor-General of India and act upon them?—That of course at once is sapping the authority of the Governor-General, because he is merely to recommend. At present no one can interfere with or dispute his authority.

6232. All authority must be confirmed. All the Governor-General's authority is confirmed in some way; though he has immense power it is confirmed by authority from home. Is not it an admitted principle?—No; the Governor-General in Council at present has the power.

6233. (*Major-Gen. Hancock*) Are not his arrangements final?—Yes.

6234. (*Duke of Cambridge.*) Are they not subject to confirmation?—No; they do not even go through the form of a confirmation; occasionally officers may consider themselves aggrieved by the acts of the Governor-General in Council; then of course they appeal readily to authority at home, but that would be the only exception, otherwise everything is direct and positive.

6235. (*Col. Burlton.*) With your knowledge of the native character, are you not of opinion that it would detract most materially from the high authority and prestige of a Governor-General if it were known that he had not most entire and unlimited control and command over every man within his territory?—I have no doubt that it would cripple his authority amazingly, and diminish his prestige.

6236. (*Duke of Cambridge.*) How is it possible that the Governor-General of India, or any Governor-General in such a position could be without unbounded authority?—If all his appointments were made subject to confirmation by a distant functionary, would not it weaken his authority to a tremendous extent.

6237. Supposing that he had that authority, would there be any difficulty in regulating it in a mode between the Secretary of State and the Commander-in-chief, which would get over all the difficulty?—There is no difficulty under the present system, and therefore I should be very sorry to change the system, and then make an attempt to obviate the difficulties which that change might produce.

6238. But you would continue a double authority?—The authority of the Governor-General in all these matters is final, with the exception above mentioned.

6239. (*Major-Gen. Hancock.*) You are aware that the system in India with regard to the appointment of officers to brigade and divisional commands is this—the Commander-in-chief of each army nominates, and the Government appoints. I allude to the Bengal and Bombay presidencies, the system at Madras being different?—No doubt the Commander-in-chief recommends, and the Governor in Council appoints, that is to say, he confirms the recommendation; you may say practically, that the nomination in the large majority of cases is with the local commander-in-chief.

6240. Is it not very desirable that the local Commander-in-chief, who is responsible for the efficiency and discipline of the army under his command, should have the power of selecting officers for those commands solely on the ground of efficiency without being fettered in any way?—That is the most perfect system certainly.

6241. (*Duke of Cambridge.*) Then you would like to see two independent Commanders-in-chief, one at home and the other in India?—The tenor of my evidence is that India is an exception to the general rule, and should continue so.

6242. (*Major-Gen. Hancock.*) Do you not think that the interests of the public service imperatively require that none but fully qualified officers should ever be placed in the command of either regiment, brigade, division, or army in India?—Undoubtedly, and I am happy to say that that is a system which has recently been promulgated by the Government of India.

6243. Under the system of succession by seniority to regimental brigade and divisional commands, which obtained in India previous to the mutiny, is it not the fact that officers not unfrequently succeeded to those commands who were to a great extent incapacitated by age, or impaired health for the efficient performance of the duties?—I have known occasional instances of that kind, and in fact it arose from pushing the seniority system to an extreme, which has now been remedied.

6244. As you have had 32 years' experience as a member of the civil service, and were for some years member of Council at Bombay, will you be good enough to state whether you ever knew or heard of a single case in the native army of Bombay in which a native commissioned or non-commissioned officer of low caste failed duly to maintain his authority when on duty, or was induced by caste influence to perform any menial office for his caste superior?—Certainly not; I believe that some of our best native officers are of low caste, and have received in recognition of their services the "Order of British India," and the "Order of Merit."

6245. (*Lord Stanley.*) I will now call your attention to the second question, namely, in connection with the question as to the composition of the European army, what are the best means of providing for the periodical relief of the troops of the line, and of securing the efficiency of the local European force; will you favour the Commission with your views upon that point?—The first point I think which ought to be attended to, is to take care that you send out your reinforcements, whether as reliefs or recruits, or drafts, at the proper season of the year. It is melancholy to reflect upon the calamitous losses which have occurred in Her Majesty's regiments on their first arrival in India from a neglect of this precaution. All suffer immediately after their arrival in India until they become what is called seasoned, of which I have given a few out of many examples; but a great deal of the sickness and mortality may be avoided by their arriving in India at a proper season of the year, which is what we call the cold weather. On this important point I beg to quote the opinion of a very competent witness, an esteemed colleague of my own, in the Council of India. Before the Select Committee on East India transport of troops, Captain Shepherd, lately Deputy Master of Trinity House, in reply to question 556 stated, "There is no doubt that there is "nothing more detrimental to troops arriving in India "than to arrive at the unhealthy season, and I think "that from and after October is the proper time. I "remember when I commanded a Company's ship, "arriving in Bengal in the month of July, we did "not lose a man on the way out, and there were five "or six births on board. But, after the troops landed "and went to Fort-William, in less than a week we "heard of eight or ten deaths; and before I left for "China 10 per cent. were dead in consequence of the "heat and the exposure of the men to the sun, and "the facility they had for getting new arrack and "other pernicious spirits."

6246. (*Viscount Melville.*) From November till February?—From the beginning of November till February. Does the question involve the conveyance of troops?

6247. (*Lord Stanley.*) Certainly?—The second means, if a local army is determined upon, is of course by enlarging our recruiting establishment, and working in co-operation with the authorities in this country.

6248. (*Duke of Cambridge.*) Are those establishments to be entirely independent of the Commander-in-chief in England?—I should propose that they

John Pollard Willoughby, Esq

30th Nov. 1858

should be exactly as they are now; they receive their orders and instructions from the Commander-in-chief in England, and everything with regard to bounty money and levy money and enrolment money; and the standard is fixed under the authority of the Commander-in-chief in England.

6249. It is not at present fixed by the Commander-in-chief in England?—We cannot lower or raise it without communicating with the Commander-in-chief in England.

6250. But the authority has come from the Court of Directors?—Whenever we require an authority we cannot issue any order without Your Royal Highness's sanction; it of course comes to the same thing.

6251. (*Lord Stanley.*) The Commander-in-chief has a consultative authority?—Yes.

6252. (*Duke of Cambridge.*) The military discipline of the establishment at Warley is not under the Commander-in-chief?—No.

6253. What number of men do you contemplate having at the depôt establishment for a large local force?—That, I think, cannot be answered until it is decided first that there shall be a local army, and secondly, what shall be its strength.

6254. But of course it will require to be largely increased?—Yes.

6255. From the proposals which have been made it would amount probably to between 10,000 and 12,000 men in depôt, if the local army be largely increased?—That certainly is more than I should have thought necessary; but that is a military question.

6256. Do you think it desirable that that large military force should be in this country without its being under the authority of the Commander-in-chief, I mean for matters of discipline merely?—I am not aware that any difficulty has arisen from the present system on its present scale, and I should not apprehend that there would be any if it was enlarged.

6257. In the event of danger to the State, say an invasion, when there was a call for every man in this country who could be made available, would it be a good system to have 10,000 or 12,000 or even 8,000 men who could not be in any way made use of? You are aware that the depôts of regiments of the line army in England for India are considerable; you are aware, also, that they are entirely under the military authorities, and that, therefore, in the event of danger of invasion they would be a portion of the force at the disposal of the home Government?—Yes.

6258. Do you think that it is a desirable thing that a large body should be in depôt in this country which could not be so made available?—But I should think that under the emergency contemplated every man from Warley would flock to the defence of his country, and act under the chief military authority.

6259. Still it would be optional for him to do so, or not, as he chose?—I cannot suppose that any practical difficulty would arise from the depôt being distinct under the authority of the Secretary-of-State and Council.

6260. Then you do not think that it signifies whether a large military body is under the direct military authority of the country or not; I am referring to the depôt?—The depôt being kept up to feed the army of India, I do not think that there is any connection.

6261. (*Lord Stanley.*) You do not look upon that depôt in the light of a large organized military force?—Certainly not; the men remain there probably, from the necessities of the State, too short a time.

6262. (*Duke of Cambridge.*) You are aware that the men at the depôts for the Indian regiments of the line are also there only for a short time?—Yes.

6263. Still they would be made available in a case of emergency?—But in a case of emergency I think that the inmates of the Warley depôt would be available also.

6264. By what authority, if enlisted not for service in England?—I cannot suppose it possible that men, with the feelings of soldiers, would stickle upon any legal right of that kind to refuse.

6265. Still it would be left to the men; it would not be an act of power; the Government could not use them unless the men themselves chose, it would rest with the good feeling of the men. I admit, with you, that they probably would have that good feeling; but still it would rest with them, would it not?—I consider that the depôt is under the authority now of the Secretary of State for India, and that any orders which were issued by the Secretary of State for India in Council to the commanding officer of the depôt would be obeyed, whatever they were, and without demur.

6266. (*Lord Stanley.*) The only difference would be, in a case of emergency, that the orders, whatever they were, to be issued to the commanding officer of the depôt at Warley, must come through the Secretary of State?—That, I apprehend, is the only difference which would exist.

6267. (*Duke of Cambridge.*) Do you know under what Mutiny Act those troops at Warley are as long as they are in England?—The officer in command of the Warley depôt is in the next room, who will better answer the question.

6268. (*Major-Gen. Hancock.*) Perhaps you are not aware that hitherto the attestation has not been so worded as to make the soldiers available for service in India only; the word "India" does not occur in the attestation?—It so appears.

6269. (*Lord Stanley.*) Are you inclined to believe, from your experience, that soldiers deteriorate in point of constitution and physical strength after a few years' residence in India?—Certainly not. I should be disposed to hold a contrary opinion. I have many instances here of regiments on their first arrival suffering to an immense extent. I will give one instance. In the year 1849 three regiments were sent from this country, in consequence of the Punjaub war. I think Her Majesty's 87th lost 22·55 per cent., in 8 months; the 70th lost about 12 per cent.; and the 75th the same, I believe in 7 or 8 months. I have the particulars here, which I will give as extracted from the Bengal medical report for the year ending the 31st March 1850, and dated the 5th February 1852:—

"The ratio of deaths (they observe) to strength "was 7·27 per cent.;" but at the same time they call "attention to "the lamentable amount of sickness "and mortality due to the unfortunate public exigency "that led to the arrival of three strong regiments at "the most sickly and unfavourable season of the year "for Europeans (composed chiefly of young men) in "the climate of Bengal. A reference to our detailed "history of the hospital transactions, and to the "tabular returns bearing upon Her Majesty's 70th, "75th, and 87th regiments, will show the several "causes to which the frightful mortality in their "ranks, especially the 87th, are to be attributed. But "for this, the mortality would have been 2 per cent. "less; and, excluding cholera, the mortality would "have been 5.02."

Her Majesty's 70th regiment: average strength 953; deaths during eleven months 123, or in the ratio of about 12·90 per cent. to strength, caused by "the "circumstances under which they embarked from "Ireland; their landing in India, in the hottest season "of the year (May 1849), aided by the dissipation, "exposure, and unaccustomed diet, which all act "energetically on new arrivals in India."

Her Majesty's 75th regiment: average strength, 1,023; deaths during eight months 103, or in the ratio to strength of 10.06 per cent.

Her Majesty's 87th regiment: mean strength 891; deaths 168, or in the ratio to strength of 18·85 per cent. In the words of the report,—"Of late years "an unprecedented mortality." But in addition 20 deaths occurred in other hospitals, and two out of hospital, so "that the total casualties in this unfortu- "nate regiment, from the date of arrival in India in "August and September 1849, to the 31st March

John Pollard Willoughby, Esq.

30th Nov 1888.

" 1850, a period of between seven and eight months, " amounted to 190, or in the ratio of 225.5 per cent.

6270. (*Duke of Cambridge.*) Admitting, which I am ready to do, that on first landing regiments are weeded by sickness and death, and that after a certain period they are more efficient for service in India, do you think that that efficiency continues beyond given number of years,—say ten; or that after ten years a residence in India makes the constitution of the men deteriorate?—That is an opinion which would be more authentic from medical men who have long resided in the East; but judging by the deeds of the regiments which have made India their home, the nine European regiments which were formerly the Company's, and are now Her Majesty's Indian forces, I should say that they decidedly do not deteriorate.

6271. You think that there is no difference?—I should think not. I should say that, judging by the deeds which they have performed in the field during the late mutiny, there certainly are no symptoms of deterioration there. On the contrary, there is a most extraordinary case in relation to the difference between the 3rd Bombay Europeans and Her Majesty's 71st regiment in the action before Koonch, on the 7th May 1858, one of Sir Hugh Rose's victories. There were 20 cases of sunstroke in Her Majesty's regiment, 7 of which proved fatal, and not one in the Bombay Europeans. I have a note of that. It is an acknowledged fact.

6272. (*Col. Forsyth Tait.*) Will you have the kindness to read the note, because it has been disputed?—It must be authentic, because it is from the report of a medical committee, composed of the surgeons of Her Majesty's 14th dragoons and Her Majesty's 71st regiment of Highlanders, and the assistant surgeon of the 3rd Bombay Europeans. In the *Times* of the 25th October it stated that in one of General Michel's recent pursuits of the enemy, no less than 200 men of the same regiment either died or were *hors de combat* from the same cause; that is not strictly authentic, because it is not from a medical committee.

6273. (*Viscount Melville.*) That regiment which lost 600 men had been out in India for the last 16 years, had it not?—No; it is the 71st Highlanders.

6274. Was it not the 78th?—No. I beg your lordship's pardon, the 78th was not under General Michel. The following is the statement which I have:—"That European troops cannot keep up a " vigorous pursuit in this climate has been made " painfully evident by the losses which General " Michel incurred in the effort to intercept Tantia " Topee at Ragghur. It has only been lately known " at what sacrifice this victory was achieved. General " Michel lost 200 Highlanders, dead or *hors de combat* " from sunstroke." This is taken from the letter of the Bombay correspondent of the *Times* dated October 25th 1858.

6275. (*Duke of Cambridge.*) That is rather an exceptional case probably?—I only instance it as one out of many cases. I believe that the direct cause was that the one regiment was gradually inured to field service or duty, and the other was sent on field service the moment it arrived. It is a great support to my argument, that you require a degree of seasoning and acclimatization in India which is of great moment to the efficiency of the troops.

6276. Do you not think that that acclimatization of troops, as far as field service goes, is required in any campaign in any part of the world; that is to say, that any regiment taking the field at first will always suffer more largely than a regiment which has been there for some time?—No doubt; but I think it will do so more in India than in any other part of the world.

6277. (*Major-Gen. Hancock.*) The general result of the instances you have mentioned proves, at all events, does it not, that for some time, say two or three years after regiments of the line arrive in India they are not so efficient for service in the field as local regiments, the men of which have been for some years inured to the climate?—That is my impression, they suffer more from the exposure necessarily incident to field service in India.

6278. (*Duke of Cambridge.*) That would be, probably, chiefly confined to the more sickly men and the younger men, would it not?—I am not certain. The Medical Committee, before quoted, say, "the ages of " the men who died from sunstroke on the 7th May " varied from 22 to 31 years. They were amongst " the most athletic men of the regiment. One was " noted as a 'free liver,' another 'tolerably free,' and " the remainder bore the character of 'sober.' Another argument in favour of my opinion is this, I have here several medical testimonies, that as Her Majesty's regiments become seasoned their health improves. For instance, in the year which I mentioned in which there was that excessive rate of mortality in the 87th, the 70th, and the 75th regiments, the rate of the mortality of the 22nd, the 60th Rifles, and one or two other regiments, which had been in the country eight or ten years, was very moderate indeed; I believe as low as 2 per cent. In the Bengal Medical Board's report, from which I have already quoted, I find the following details given:—

Her Majesty's 22nd regiment, encamped; strength 1,081,—deaths 26, ratio 2·40.

Her Majesty's 60th rifles, Hill Station, strength 1,040,—deaths 19, ratio 1·82.

Her Majesty's 32nd regiment, Jullundur, strength 920, deaths 34, ratio 3.70.

Her Majesty's 96th regiment, Cawnpore, strength 824,—deaths 42, ratio 5·10.

The Medical Board, accounting for this comparatively high rate of mortality by observing that this regiment arrived at Calcutta from Van Diemen's Land in two divisions in April 1849, "when the weather " was hot in the extreme—fruits of the worst description in abundance; and some beverages made by " the natives eagerly sought for by the men."

Her Majesty's 80th regiment, Dinapore, strength 906,—deaths 45, ratio 5.

This regiment arrived in India from New South Wales on the 16th November 1844. The surgeon of the regiment compiled tables, showing the comparative mortality during twelve years, of the East India Company's artillery, and Her Majesty's regiments stationed at Dinapore. These give the following remarkable results.

"In these tables (observe the Medical Board) the lesser " rates of mortality enjoyed by the artillery company " is placed in a clear view, and shown to be only 4·37 " per cent., whilst in Her Majesty's infanty regiments " it is as high as 8.74 per cent. of mean strength," that is exactly double.

Her Majesty's 24th regiment, Wuzurabad, strength 728,—deaths 29, ratio 3·98.

6279. Would not the same principle extend to the recruits sent out to fill up the local corps, would not they suffer?—Not to the same extent, for this reason, that recruits would be thrown at once into a body of experienced soldiers, who would teach them what to do and what to avoid to a certain extent; my impression is that the advantage consists in that.

6280. (*Viscount Melville.*) For instance, at Kurrachee, in 1846, there were the artillery who, with all the acclimatizing influences, lost 100 men out of their small force?—That was by cholera chiefly; cholera, of course, is an exceptional case, so much so that we generally give the average from ordinary causes, and then add cholera. I am quite certain of this, that it is proved beyond doubt that Her Majesty's regiments are more susceptible to outbreaks from cholera than other troops; there are numerous instances; there was the 28th, which buried, I am afraid to say how many men in one day. Almost every corps has suffered. The 28th lost about 50 men in the passage between Bombay and Kurrachee.

6281. In the year to which I am alluding, the 86th, which had been four or five years in the country, lost 235 men?—Yes. In a report of the Medical Board,

John Pollard Willoughby, Esq.

30th Nov 1858

dated the 1st May 1851, I find as follows :—"The "corps which suffered most in 1842, were Her "Majesty's 22nd, at Khurachee, in April and May, "and Her Majesty's 28th, at the same station, and on "board the Zenobia, fearfully, in September; Her "Majesty's 86th, at Colaba, immediately after landing "from England, and the troops at Poona, at which "station it (cholera) prevailed almost unremittingly "from March to September."

6282. We have had two medical gentlemen here, who have given us as their opinion that there is no such thing as acclimatizing, in the way in which we have hitherto considered it, and that the European constitution decidedly deteriorates after a lengthened residence in India ?—Of course people get worn out in India as well as in any other climate.

6283. (*Duke of Cambridge.*) It has been given in evidence that the rate of mortality is greater in the increasing age of manhood than it is in the age of youth; that has been the ratio given from statistical papers ?—If you will allow me I will read out a little extract from amongst my notes from the Medical Board's report for 1850. Some, I am told, assert that mortality is greater as the soldier advances in service; but in their general remarks I find the Bengal Medical Board observe as follows: "The whole force was "nearly composed of young men, recently arrived "in India, and among these it was that all this sick"ness and mortality occurred. Of the 216 deaths "recorded 145 were of men under twenty-four, 69 "under thirty-five, and 2 only above the latter age." That is in a very lengthy report describing the sickness of every regiment separately, and is one of the general remarks which they make. I should weary the Commission were I to adduce all the data on which my opinion is founded, that the efficiency of European troops in India, greatly depends on the degree in which they have gradually become inured. I will only therefore add the opinions of two medical officers. In his report for 1850, Dr. Inglis, the surgeon of Her Majesty's 10th regiment, states—"that the health of "the men has been progressively increasing year by "year since its arrival, a fact which he is inclined to "attribute to the combined operation of acclimatization "of the mass of the strength of the corps, more "favourable geographical positions occupied latterly, "and to the more regular habits of the men; and to "the last, he thinks, may be ascribed the largest in"fluence. The effects of climate in preparing the con"stitution for morbific influence operate chiefly on "the young unseasoned recruits, and after a few years' "residence in this country, the constitution seems "better able to resist such influence." Again, Dr. Grant, in charge of Her Majesty's 24th regiment, in his report for 1850, attributes the improved health of his regiment "to the fact that the men's constitutions "are more acclimatized."

6284. (*Viscount Melville.*) With regard to sending out re-inforcements and drafts to India, have you considered the best route ?—I happened to be a member of a Committee of the House of Commons which sat upon that subject. Of course we cannot altogether disregard the question of expense; we have no surplus in India. Parliament have declared, as far as they can do, that there is no connection between Indian liabilities and the imperial exchequer, and therefore the conclusion at which I arrive is that the Overland Route should be resorted to in times of great emergency, but that we should not rely upon it as the ordinary route. In the second place, I think that also in times of emergency steamers by the Cape route should be resorted to; but as a general rule, on the ground of finance, and also from what I have heard from many authorities, namely, that there is superior comfort to the men on board first-class sailing vessels, I think that that should be our great resource. I may state that our expenditure since the mutiny up to this date, in sending the troops to India alone, has been 2,148,336*l.*, as follows :—

Cost of the transport of troops to India since the commencement of the mutiny, so far as the same can at present be ascertained. June 1857 to November 1858.

	£
Passage money of officers - -	288,850
Do. of men - -	1,760,150
Claim by the Admiralty for transport of troops for service in India by Her Majesty's ships and in transports hired by the Admiralty - - -	80,438
Disbursements by Captain Johnson, the agent at Alexandria, up to September 1858, on account of officers and men proceeding overland - - -	18,898
	£2,148,336

6285. (*Duke of Cambridge.*) What number of troops have been sent, in round numbers ?—I think about 60,000. I have not got up to the very latest returns, but I have the precise numbers from Parliamentary papers. In a letter to the Government of India, dated the 9th September, they are informed that when the reinforcements then ordered arrived, the strength of the European forces in India, exclusive of officers, would be 86,968. Between the 1st July and 10th September 1857, 34,777 of all arms were sent from England, the Cape, Mauritius, and China; and, between the 11th September and the 18th February 1858, a further reinforcement of 20,109; see Report of Select Committee of House of Commons, p. 266 and 270. I wish to point out what even now, when the emergency may be said to be passing away, is the difference which it makes. By the Overland Route we are paying 40*l.* per man. By the last four steamers which were sent out viâ the Cape, the rate per man was as follows :—To Bombay, per "Oneida," embarked on the 6th of August from Southampton, 27*l.* 4*s.* 10*d.*; to Calcutta, per "Calcutta," embarked 18th of September from Portsmouth, 33*l.*; to Calcutta, per "Lady Jocelyn," embarked on the 20th of September from Portsmouth, 33*l.*; to Calcutta, per "Golden Fleece," embarked on the 14th of April from Gravesend, 38*l.* By sailing vessels viâ the Cape, the rates per head were as follow :—To Calcutta, 14*l.* 13*s.* 6*d.*; ditto, 13*l.* 16*s.* 10*d.*; ditto, 11*l.* 17*s.* 9*d.*; ditto, 13*l.* 14*s.*; To Madras, 17*l.* 17*s.*; ditto, 10*l.* 16*s.* 3*d.*; ditto, 13*l.* 6*s.* 8*d.*; ditto, 10*l.* 4*s.*; To Bombay, 13*l.* 17*s.* 6*d.*; ditto, 11*l.* 14*s.*; ditto, 11*l.* 4*s.* 10*d.*; ditto, 11*l.* 7*s.* 6*d*; to Kurrachee, 15*l.* 7*s.* 6*d.*; ditto, 12*l.* 12*s.* 6*d.* Those vessels were despatched in August, September, and October, 1858.

6286. (*Lord Stanley.*) So that habitually to substitute the Overland Route for that by the Cape in sailing vessels, would be to increase about threefold the cost of transport ?—I think so.

6287. (*Duke of Cambridge.*) It is now done by going into the open market. Supposing a regular system were established, could not that expenditure be very much reduced ?—My experience of Government establishments is that they are in the end dearer than what you can get from such a large commercial marine as we possess in England. You never find any difficulty in getting ships of the first class.

6288. Taking into account the fact of the railroad being complete throughout, could not you make an arrangement for transit by the Overland-route at a cheaper rate than you have stated ?—Probably; perhaps the Oriental Company, if they were asked tomorrow, would lower their terms somewhat; but the expense of maintaining transports on both sides would be very large, especially on the Suez side, the expense of coal at Suez is, I believe, double what it is even in Bombay.

6289. (*Viscount Melville.*) What is the difference in the length of time between the voyage in a sailing vessel and in a steamer ?—That was all minutely ascertained by the Committee of the House of Commons, and it is recorded in this Blue-book. I cannot exactly state from memory, but I think the difference in the long run was 37 days between steamers and

John Pollard Willoughby, Esq.

30th Nov. 1858.

sailing vessels. There were three instances of the sailing vessel beating the steamer.

6290. (*Lord Stanley.*) But your case is that on ordinary occasions, when there is no pressing emergency, the saving of a few days in the conveyance of the troops is not so great an object as to render it expedient to incur a very large expenditure?—I think not, certainly; and I believe I am right in saying that the men are more comfortable on board a first-class sailing vessel than they are on board a steamer, and certainly when recruits are very young the sea-voyage does them no harm.

6291. If, in lieu of the present system of going into the market for transports, the Indian Government were to establish a regular transport service of its own, would it not be compelled to employ those ships during the whole year, whereas it could only convey troops safely and conveniently, on account of their health, during eight months at most out of the twelve?—Undoubtedly, that is a reason why a Government establishment would not answer, if exclusively devoted to India. The first thing with regard to the efficiency of a force in India, as I have mentioned before, is that it should only arrive at particular periods, excepting, of course, in cases of great emergency. I have mentioned the cases of the three regiments which suffered so much, but I did not of course intend to convey any reflection upon their being sent, because there was a great emergency, and they were obliged to be sent, whatever the consequences were.

6292. (*Duke of Cambridge.*) Supposing that the transport was not an Indian transport, though made use of to take troops to India, but that it was for the general service of the empire, do not you think that that would make a difference?—That is a great question; then I am afraid that you must have such an extensive establishment that it would still be in the long run a very expensive one. You might have one or two vessels like the "Himalaya;" they might be subsidiary to the service, and perhaps of advantage.

6293. (*Major-Gen. Hancock.*) That would apply merely to transports used on this side, and not on the Suez side?—Just so, on the Suez side it would be exceedingly difficult.

6294. For that portion of the transport the vessels must be kept up at all seasons, although only available during part of the year?—Undoubtedly.

6295. (*Viscount Melville.*) I presume that you would always have the reliefs who were sent from here round the Cape to leave this country about June or July?—Yes; or down to August; August I think is as good a time as any. June, July, and August are the best months.

6296. (*Duke of Cambridge.*) You are aware that it had been the rule latterly before the outbreak, not to send drafts excepting at that period of the year?—Yes; the representations from the local authorities in India to my knowledge were very strong, and of course the authorities of England now, whenever they can, adopt that rule.

6297. (*Lord Stanley.*) Have you formed any opinion upon the fourth head of enquiry which we have before us, namely, whether the local European force should be kept up by drafts and volunteers from the line, or should be, as at present, separately recruited for in Great Britain?—I am of opinion that they should be separately recruited for, as at present. In regard to volunteers, the system of volunteering in India now does exist as far as volunteering from one of her Majesty's regiments of the line to another, but I do not believe that it exists, for what were the Company's European regiments.

6298. (*Duke of Cambridge.*) Would you extend it to them?—I can see no objection to it whatsoever, although I should not depend upon that as a permanent resource.

6299. You think that the local force would be too large probably to be kept up in that way, or have you any other way?—My idea is, that if there is sufficient military spirit in the nation to provide for a large army, I should not apprehend that you would find difficulty in obtaining recruits for the local army, because it is a very popular service. It has always been considered so hitherto, and I believe that, except during the pinch of the Crimean war, there has never hitherto been found any difficulty; on the contrary, we have been obliged to put restrictions upon our officers recruiting. The other day the cavalry, which of course was a particular class of men, that is to say, they were of a lower standard than usual, flocked in in such numbers that we were obliged to prohibit further recruiting for a certain time; and even at this moment I believe it is under restrictions.

6300. Have you ever contemplated the idea of exchange between the officers of the local army and those of the army of the line?—Of course that is more of a military question than a civilian's; but I am sorry to think that I do not see my way to introducing that system into two armies, the system of which is so different, the one being a seniority service, and the other a service in which the purchase system prevails. Then, on the other hand, the officers of Her Majesty's local force in India are, as the Commission is aware, entitled to various rights and privileges, and pension either according to rank or length of service, military and medical widow and orphan funds, things which do not prevail similarly in Her Majesty's army, and, therefore, I cannot to myself picture even an instance where the party exchanging and the party with whom he exchanges should be upon equal terms, so that the exchange should be permitted without doing injury to the juniors under the person who exchanges. These important rights and privileges are provided for by the 56th Section of the last India Act, which I do not think can be got over.

6301. Supposing those difficulties could be got over do you think that the power of exchange would be desirable?—I cannot say that I do, on a general system, for this reason, that it would interfere with what I consider to be the great object to be attained in India, namely, concentrating a man's energies upon India alone. If you allow the purchase system, a man whenever it is his interest or pleasure will exchange to England or the colonies, and then poor India will suffer. That is the common sense view which I take of it; of course, my opinion is not worth much.

6302. You do not anticipate what has been given in evidence at various times, and has been stated in various papers, that the local force would be looked down upon, unless it had the power of exchange?—I do not think that the local force would be looked down upon if it had not the power of exchange; it would be looked down upon if it was not treated with equal impartiality as the army of the line, but not otherwise. Of course, in one respect there would be good resulting from the exchange system, as you would be able to employ officers of the local army; but that, I think, is within the prerogative of Her Majesty at the present moment.

6303. As regards the power of the late Court of Directors, had they not the power of superseding any appointment which might have been made by the Governor-General if they so thought fit?—In the last resort they had the power by Act of Parliament of dismissing, or suspending, or restoring any of their servants, civil or military.

6304. And that power is now in the Secretary of State and Council?—Yes.

6305. So that virtually they have now the power to supersede the acts of the Governor-General, though it is rarely and perhaps never exercised?—In the last resort certainly. But what I attach great importance to is that that authority should be exercised by persons possessing a knowledge of India.

6306. Has it been exercised?—Undoubtedly, there have been instances of dispensing with the services of officers, and still more of restoring officers to the service.

John Pollard Willoughby, Esq

30th Nov 1858.

6307. (*Major-Gen. Hancock.*) Is there any difference in the expense (bounty and levy money included) of a recruit sent to India to a Queen's regiment and of one sent to a Company's regiment?—Not the least; the bounty money and the enrolment money are exactly the same.

6308. (*Col. Forsyth Tait.*) It has been stated on several occasions here that the cost of recruits for the Company's service is very much greater than that for Her Majesty's, and that the Company's European force has always been kept below the proper complement in consequence of its being impossible to procure a sufficient number of recruits for India, are you aware that such is the case?—No; I believe that the contrary is the fact. Here is a statement which was furnished to the India house, signed by the paymaster of the depôt at Warley; it gives every expense, I believe, of a company's recruit, and the average is 16*l.* 11*s.* 10½*d.* We have never experienced any difficulty in obtaining recruits, except for a short time during the war in the Crimea. The average number of East India Company's recruits sent out to India in ten years, from 1846 to 1856, I find to have been 1,646. Since the mutiny, however, between 9,000 and 10,000 have been enlisted and despatched. During the first nine months, from June 1857 to February 1858, we sent out 4,583; namely, to Calcutta, 3,197; Madras, 644; and Bombay, 742. *Vide* Report of Select Committee of House of Commons, p. 292.

6309. (*Major-Gen. Montgomerie.*) Before embarkation?—Yes. It is a statement of the expense of the depôt at Warley for the year 1857. I am told that what the Government pays now for a soldier sent to India is below that amount, but unless I see the data upon which the two estimates are formed, I cannot say whether they are true estimates or not. For instance, 18,678*l.* of this estimate is for clothing. I am not aware whether that item is included in the other estimate. Then again the kits of recruits is another item, that is 10,379*l.* I am not certain whether those two items are included in the other estimate, if they are not, of course the comparison is not a fair one.

The witness delivered in the following paper:

STATEMENT of the Expense of the Depôt at Warley for the Year 1857.

No of Recruits borne on the Strength of the Depôt during the Year.	Permanent Staff of the Depôt, Commissioned and Non-commissioned.	Pay of Recruits up to time of leaving Depôt.	Clothing of Recruits.	Kits of Recruits.	Miscellaneous Expenses.							
					Alteration and Marking Clothing	Repair of Arms.	Embarkations, Railway, Boat-hire, Carriage of Baggage, and Staff-Serjeants' Expenses.	Barrack Department, viz. Lights, Fuel, Bedding Straw, &c.; Alterations, Additions, Repairs of Buildings, &c.; Barrack Furniture and Utensils, Pay of Artificers and Men employed, &c.	Route and Rewards, Rates and Taxes, Petty Disbursements, &c.	Recruiting Officers' Bills.	Bounty to Recruits, and Allowances to Serjeants escorting Recruits	Conveyance of Recruits from Districts to Depôt.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
4,541	3,064 6 9¾	19,336 4 4½	18,678 19 0	10,379 19 5	713 6 7	58 7 4	896 18 9½	1,889 14 2½	1,588 7 10½	7,950 9 10½	6,315 12 6	2,478 14 8½
					Total Miscellaneous Charges - - - - £21,891 11*s.* 11*d.*							

Total expense of the depôt at Warley for the year 1857 was - - - - £75,351. 1*s.* 6*d.*

Average cost of 4,541 men is - - - - - £16. 11*s.* 10½*d.* per man.

This Return does not include the cost of the Sappers and Miners sent from Warley for training at Chatham.

(Signed) JOHN T. LESLIE, Colonel Commandant. H. STEVENS, Lieutenant-Colonel and Paymaster.

6310. (*Major-Gen. Hancock.*) Do you see any reason why the expense of the recruits for the two armies might not be prospectively equalized?—Not the least; if there is any difference, which I am not aware of, in what is given either to the men themselves or to the recruiting officers, I do not see the slightest reason why they should not be equalized.

6311. (*Sir H. G. W. Smith.*) You advocate a large European local force in India. Have you conceived any mode for raising, organizing, and commanding such a force?—One of my reasons for thinking that there is no other way of raising the force necessary for India is, that we have a body of officers already provided whose services you cannot dispense with, and as the officers of a regiment constitute the chief portion of the expense, in no other mode do I think, under the present state of the finances of India, that a local force can be raised. If the Commission will allow me, I will read a paragraph of a letter from the Government of India, which explains much better than I am able to do why it should be so. This is a letter from the Government of India to the late Court of Directors, dated the 6th of June 1857. After recommending that a large increase of European strength should be made, they proceed as follows:—"It appears to us that the only means by which an adequate increase to the European troops serving in India can be made, and a safe balance between the European and native armies can be obtained without such an increased expenditure as the resources of the country will not support, is by employing the European officers of the lost native regiments to officer new levies of Europeans, to be added to the Company's establishment. The current revenues of India, of course, will be unable to meet the large increase of current expenditure which this augmentation will involve. It may be (although looking at the great population and the immense extent of territory to be guarded, and the very large native force of regulars and irregulars to be overawed, we cannot flatter ourselves that such a result is possible), that when the strength and the reputation for strength of the British Government is restored, and the native army is reorganized, some small diminution of this augmented strength may be possible as a permanent arrangement; but it may be taken as certain that the greater part of the augmentation is permanently necessary. In order permanently to provide for this large increase of our European troops, we know of no available resource, but to save an equal or nearly an equal amount, by an equivalent or nearly equivalent reduction of our native troops. The officers of a regiment of regular troops, whether Europeans or natives, cost a large proportion of the whole cost of the regiment; and the European officers in the Company's service must be retained, whatever becomes of their men. Therefore we regard the employment of the European officers of the native regiments which have mutinied, or which may mutiny, or which may be found untrustworthy, as officers of new regiments of Company's Europeans, not only as in all respects the best possible arrangement, but also as the only arrangement financially possible. It is already too apparent that this arrangement, if adopted, will relieve the Indian finances from all burden on account of at least a large proportion of the augmentation proposed. The remainder, if there shall be any remainder, may be provided for by an extension of the

John Pollard Willoughby, Esq

30th Nov. 1858.

system, or by a moderate augmentation of the number of Her Majesty's regiments on the establishment, or by both methods combined." I have seen another paper, a long minute by Mr. Peter Grant, of the Bengal Council, in which he has worked that out very strongly. This letter is of more authority of course, it being from the combined Government.

6312. (*Duke of Cambridge.*) Supposing that you could employ these officers fairly to themselves in any other way, the financial difficulty, as far as the officers were concerned, would be got rid of?—It would be, as far as the officers, but not as far as the expense went.

6313. Why not?—There would be an addition to fill up their places. If the officers were otherwise provided for, you must still have European officers for the increased force.

6314. Supposing you were obliged to employ so many more persons that it would absorb the whole of the officers who are without men, would you not then get over the difficulty?—Not the financial difficulty—certainly not; they say, "We have not got the "money."

6315. For instance, we are now raising local police corps?—Yes.

6316. They must have a certain number of officers. Suppose that a large proportion of the officers were so employed—suppose, again, that you adopted the system of *seconding*, by which means all the places in the regiments of officers in civil employment were filled up, a large number of officers would be so absorbed. Supposing that in those modes the officers were absorbed, would not it meet the financial difficulty as regards the officers?—It would meet in part the difficulty; but I cannot suppose that the employment of by far the larger proportion of the officers of the 74 Bengal regiments, can be provided for in that way.

6317. But suppose that it could?—By that hypothesis, of course the case would be met, but I do not myself perceive how it can be realized.

The witness withdrew.

Colonel J T. Leslie, C.B.

Colonel John T. Leslie, C.B., further examined.

6318. (*Chairman.*) You have command of the depôt at Warley?—Yes.

6319. Have you any information to give to the Commission upon the subject of recruiting?—Nothing further than that, as far as we are concerned, it has gone on most favourably. Within the last seventeen months we have sent within 100 of 10,000 men of all arms to India, and we have found no difficulty.

6320. Are you in a position to say what the amount of the European local force in India is now?—About 22,000 I should say, as nearly as possible, exclusive of the Queen's regiments.

6321. Would not that exceed the number allowed by Act of Parliament to be raised for India?—I think not; as nearly as I can calculate it is from 20,000 to 22,000, at present.

6322. (*Duke of Cambridge.*) What does the Act say on that point?—I cannot say, it was altered.

6323. You do not guide yourself by the Act?—No; the requisitions for men are sent from the India House. We send them out as ordered, but we keep recruiting as fast as we can; there is no limit whatever to the recruiting.

6324. Was there never any limit?—There is a limit occasionally, but since the disturbances there has been no limit.

6325. (*Chairman.*) Are the men recruited for the different services and for different presidencies and regiments?—Not for the different presidencies or regiments, but for the different arms, artillery, cavalry, and infantry.

6326. How is it arranged as to the presidency?—That is done at the India House according to the demands of each presidency.

6327. (*Duke of Cambridge.*) Who apportions the men?—When they get out they are put to regiments from the Adjutant-general's office.

6328. Supposing 300 men are wanted for Bombay, 500 for Bengal, and 300 for Madras, you get an order to send out those drafts respectively; how do you select those men?—Sometimes I get an order to send so many artillery and so many cavalry; sometimes it is left entirely to me, and I send them according to the proportions at the depôt at the time.

6329. (*Sir H. G. W. Smith.*) Does a man understand that he is enlisted for Her Majesty's general service or for the Indian service alone?—For the Indian service exclusively.

6330. (*Chairman.*) Where are the services of the men confined to?—To India alone.

6331. (*Col. Burlton.*) There is nothing about India in the attestation?—But it is an understood thing; the men understand it so. The question put to them in the attestation is as follows: "Are you "willing to be attested to serve in the Artillery (or "otherwise) of Her Majesty's *Indian* military forces," &c.

6332. (*Duke of Cambridge.*) Supposing that a regiment was ordered from India to China, and supposing that some of the men refused to go, would they be liable to be punished?—I think they would be bound to go; the oath is exactly the same as for the troops of the line.

6333. What makes you think then that the service is understood to be for India only?—I do not know that I have any further reasons to give, but simply that the men are considered available for service in China or anywhere in the East.

6334. (*Lord Stanley.*) When you speak of the men understanding that they are available for service in India only, you mean that their understanding is that they are to join an army, the head-quarters of which are in India, and which after any expedition beyond the frontier will return to its head-quarters?—Precisely; they are a local army to all intents and purposes, but available for any service in the immediate neighbourhood; there has never been an instance of any regiment coming further than the Cape of Good Hope, and no objection was made at that time.

6335. (*Duke of Cambridge.*) I have no doubt that the good feeling of the men would always make them do it, but do you think that they are compelled to do it?—I think so, certainly.

6336. (*Lord Stanley.*) They are enlisted, I apprehend, without any limit as to the part of the world in which they shall serve?—I think so. I should say that they would not consider themselves bound to come to England again for service, although I do not believe that they would object to it. I consider that it is a local army, and for service to the east of the Cape of Good Hope entirely.

6337. (*Duke of Cambridge.*) Under what authority do you carry on the discipline of the recruits at Warley?—Under the articles of war for Her Majesty's service; we are under the Horse Guards entirely as to discipline.

6338. (*Sir H. G. W. Smith.*) Who confirms your courts-martial?—All our district courts-martial are held at Chatham, and are confirmed by the Commander-in-chief.

6339. (*Chairman.*) What is the average length of time of a recruit being at Warley before he goes out?—It is quite exceptional. The men go now almost as soon as they come in. We embark about 650 men a month, and have done so for the last twelvemonth as regularly as possible. A man is perhaps a fortnight or three weeks at the depôt, but before the late occurrences the general average was from four to five months.

Colonel J T Leslie, C B.

30th Nov 1858

6340. Then he goes out now without any drill whatever ?—Yes ; all we can do is to clothe him and get him clean.

6341. (*Major-Gen. Hancock.*) Have you not an efficient establishment of non-commissioned officers ? —Yes, and quite sufficient ; but we are so limited for room that to supply the numbers required in India we must keep sending them out. We can only take 1,200 men.

6342. Is that establishment of non-commissioned officers retained permanently in England ?—Yes.

6343. They never go to India ?—No ; we send the recruits as non-commissioned officers.

6344. (*Duke of Cambridge.*) Do you think that that answers well ?—It answers when the men have been here a few months and gained a little experience, but latterly we have been obliged to get pensioners to go out with the recruits.

6345. (*Major-Gen. Hancock.*) They merely have, I suppose, what is called lance promotion ?—They get up to be lance serjeants, and receive pay accordingly while at the depôt.

6346. Suppose they go to India ?—Their rank is then all gone ; they lose everything on landing.

6347. (*Col. Forsyth Tait.*) But they are very soon promoted ?—Yes, if they are well behaved.

6348. (*Duke of Cambridge.*) Can you give us any comparative statement of the expense of a soldier enlisted for local service under you, and a soldier of the moveable army who is enlisted by us ?—No ; I do not know what it is in the Queen's service, but as far as I recollect it is about 16*l.* a man for the Company's service before he embarks from the depôt ; I gave it all in figures some time ago.

6349. You do not know the comparison ?—No, but I should imagine that the amount is about the same.

6350. (*Chairman.*) Do you give the same bounty money on enlistment as is given in the Queen's service ?—Yes.

6351. (*Duke of Cambridge.*) A certain amount is given to the officers, is it not ?—Yes, for each man ; when it began we had, I believe, a difficulty in getting recruits, the officers appointed to that service were very few, and that allowance has been continued ever since ; they get 1*l.* per man, and it certainly has worked well, because in all difficulties, we have been able fully to keep up the Indian force by recruiting here. We have only eight recruiting officers for the whole service.

6352. We generally recruit for you, do not we ? —No.

6353. (*Chairman.*) How then does it happen that the number of your recruits is shown in our return every week ?—We send in a return of the number recruited every week by our own people.

6354. (*Lord Stanley.*) The recruiting agency is separate, although it is under the same command ?— Yes.

6355. (*Duke of Cambridge.*) It is under the inspection of the general field officer ?—Yes, so far as the discipline goes, and the inspecting field officer passes all the recruits.

6356. (*Chairman.*) What is the expense of a recruit arriving at Warley ?—It is merely the intermediate levy ; of course in that I would include the officer; I have not given it as a separate thing, but I have given the expense for the whole up to the time of the recruit leaving Warley. I could give information as to the expense up to the time of the recruits coming to Warley, if thought necessary, by reference to the books.

6357. With what clothing do you supply the recruits on their going out ?—Exactly the same as in the Queen's service, with the exception of the recent order. We have not given them the light clothing yet, because it has not yet been taken up, that I imagine will follow.

6358. There will be a suit of light clothing for them to take out as well ?—Yes.

6359. (*Viscount Melville.*) Do you not think that the light clothing is got much better in India ?— I have seen a suit of the light clothing. I think the change is a very good one, but I think the material will very soon break to pieces, it is a jean.

6360. (*Chairman.*) Do you give the recruits the same sea-kit as you have been accustomed to give them ?—We have done so hitherto ; we have not changed it yet, but if we take up what has been taken up in the Queen's service we shall of course change it.

6361. Under what stoppages are your men put for the sea-kit ?—I do not know how that has been calculated, the men have always received on arriving in India a balance of 19*s.* 10*d.*, which has been supposed to be the balance after all expenses of feeding and clothing them ; that was adopted many years back, and it has still gone on. We do not account to the men for the pay which would be issued on the voyage. We give them the sum of 19*s.* 10*d.* on their landing, it is put to their credit after going round the Cape.

6362. The way in which it is done in our service, I believe, is to advance three months' pay ?—I think that that has been a recent order in the Queen's service, but we do not do so ; we do not account to the men for their pay, we give them the balance after the voyage.

6363. You provide them with everything ?—Yes.

6364. Including the sea kit ?—Yes, and then give them a balance of 19*s.* odd.

6365. Out of that does the soldier provide his suit of light clothing on his arrival in India ?—That is left entirely to the commanding officer. As soon as the men join the regiment he provides them with what happens to be convenient to the regiment.

6366. Does the soldier pay for the suit of light clothing ?—Yes, whatever is the custom of the regiment he has to pay for it.

6367. (*Duke of Cambridge.*) It is not furnished him by the Government ?—No ; but there had been no general rule for any light clothing up to the time when I left India. Every commanding officer had his own plan.

6368. Therefore in that respect the recruit for the local service is put exactly in the same condition as the soldier of the ordinary service, excepting that his pay is not accounted for ?—Precisely so.

6369. Do you think that it would be an advantage that the recruits should be longer here, that they should be more fully drilled than they are ?—I think it would be an advantage to a certain extent, but not beyond a certain number of months. I think that formerly when it was four months, it answered very well. If men are kept too long desertions increase, especially at present. I think the men may be got into a very efficient state in four months.

6370. (*Chairman.*) Have you any desertions now ? —Very few, owing to the rapid way in which the men are sent out.

6371. (*Duke of Cambridge.*) Have there not been numerous instances of men deserting from the army of the line and re-enlisting with you ?—Yes, a very great many.

6372. Has not the fact of the facility of being sent out to India and therefore not being discovered, rather encouraged that ?—I dare say it may have done so ; I could not say positively, but it has always been the case that when we have sent recruits out rapidly we have had deserters from her Majesty's service.

6373. Which no doubt is owing to the fact of their getting the double bounty ?—Undoubtedly, but a great proportion of them desert again.

6374. (*Col. Forsyth Tait.*) Before they start ?— Yes, in fact it has been so bad that since I have commanded the depôt I have invariably endeavoured to find a means of keeping those men from receiving their bounty until about to embark.

6375. (*Viscount Melville.*) Are your men armed with the Enfield rifle ?—Yes.

6376. (*Duke of Cambridge.*) Do they go out armed? —No ; we send a certain proportion of arms on board for their drill, and those are returned into store on

Colonel J. T. Leslie, C.B.

30th Nov. 1858.

arrival in India; they are not armed till they get to the regiment.

6377. Are they taught shooting before they go?—Yes, if we have them long enough. We have very efficient drill masters. All our staff-serjeants have been through the drill; they are very efficient in that respect.

6378. Would it not be of great advantage that the men should be taught?—Undoubtedly it would; but we cannot retain them long enough. We have only room for 1,200 in the barracks, and we must keep sending them out, or we must stop recruiting.

6379. (*Chairman.*) If the amount of the local force in India were much increased, it would be necessary to add very much to your accommodation?—Very much.

6380. (*Duke of Cambridge.*) What per-centage do you think would be required at the depôt in proportion to the force in India?—I have reported 15 per cent., which is a large per-centage; but I believe that in actual practice 10 or 12 per cent. would be enough.

6381. (*Chairman.*) What staff have you?—The commandant, a second in command, a paymaster (who is effective as a duty officer), an adjutant, two subalterns, a surgeon, and an assistant-surgeon.

6382. (*Duke of Cambridge.*) Is that sufficient?—It is sufficient for the way in which we carry on the duty at present. We have a large number of very efficient staff-serjeants.

6383. Then in fact the staff sergeants do the duty of officers?—Yes.

6384. Do you think that a good plan?—It has answered admirably with us. They are a very superior class of men, and generally men who have been for some years in Her Majesty's service; we take them on for the special purpose after being pensioned.

6385. (*Viscount Melville.*) Do you send the men out at all seasons of the year?—We have sent them at all seasons lately.

6386. (*Duke of Cambridge.*) Did you say that the staff sergeants were chiefly pensioners from Her Majesty's service?—Yes.

6387. Is there any reason why you should employ them; could not you take men from the local service?—No, we find that men who have been in India are not effective in that respect; men who have earned a pension in India are generally too much worn out for the active duties of a place like our depôt.

6388. (*Chairman.*) Do you know what you pay for the free kit which you give?—Three guineas; that is supposed to be the price of the free kit. We do not know exactly what is paid for it to the contractor, but we charge in that proportion for any that is lost. Our storekeeper supplies all these things. I have no means of knowing the actual cost, it may be three guineas, or more or less, but three guineas is supposed to be the value of it, and if a man is accused of receiving a free kit unlawfully he is charged with three guineas upon his trial.

6389. What balance of the man's bounty do you give, what do you pay in money?—Three pounds; it has been increased lately, it is the same bounty as the Queen's. The free kit is either three pounds or three guineas.

6390. Is the uniform the same in all the local regiments in India?—No; the infantry uniforms are all red, of course, but with different facings.

6391. How do you supply the men with clothing before they go out there?—It is merely depôt clothing which they have here; when they get to their regiments they are supplied from the clothing agency in each presidency.

6392. (*Duke of Cambridge.*) What becomes of the clothing which they take out?—It is given to them, they use it for drill.

6393. What do you give them?—A tunic and drill jacket.

6394. That is used merely to take them out?—Yes; it is now comparatively new by the time the man lands, because he goes so rapidly; but formerly the man had it perhaps a year before he arrived.

6395. (*Chairman.*) He now gets a new suit of clothes on coming to you, and another when he lands?—Yes, and he is entitled to a new suit from the clothing agency when he lands.

The witness withdrew.

C. Raikes, Esq.

CHARLES RAIKES, Esq., examined.

6396. (*Chairman.*) You belong to the Bengal civil service?—I do.

6397. Will you have the goodness to state to the Commission the length of time you have been in India?—I have been 27 years in India, in the North-western Provinces and Punjaub. I have been attached to the North-western Provinces of the Bengal presidency for that period.

6398. From what year?—From 1831; I have also been in the Punjaub. I was Commissioner of Lahore for three years.

6399. You have had some questions submitted to you from the Commission?—Yes; I received them two or three days ago, but they are on military matters with which I am not acquainted. I may state that I was called upon by Mr. Colvin to submit a scheme for the re-organization of the police in the fort of Agra, last August, which I did, and my scheme has, I believe, formed the basis of Lord Canning's present operations with regard to the police, but it has been altered and modified by other people.

6400. (*Duke of Cambridge.*) What is your view as regards the police, without entering into detail?—I think that the civil police is very inefficient, and that it would be much improved by having a military organization or a *quasi* military organization; that thus the men would be better paid, and therefore better servants of the public altogether. I would also take off all those duties which have been hitherto imposed most unnecessarily on the army, or it would be unnecessary in future to impose such duties upon the army, namely, the duties of guarding treasuries, escorting treasure from place to place, furnishing guards at the civil offices; all duties of that kind should be imposed upon the organized police, and thereby the native army might be, in my own opinion, most materially reduced, thus the expenses which have been thrown away upon policemen of no sort of use in protecting the country, would be lessened and the public peace very much better secured.

6401. Do you contemplate that the police force which you propose should be so well organized that fewer men would be required, and that in fact it would be a diminution of expense, or would it be an additional expense?—A diminution of the native army, I think, could be made, and the sum saved by that diminution when added to the sums now paid for the native police would, on the whole, allow a considerable diminution of expense with an immense increase of force.

6402. (*Chairman.*) Do you think that the police would do as a substitute for the native army in the same proportion?—I would certainly reduce the native army in the same proportion as the police were organized.

6403. How would you arm the police?—With light muskets, as they were in the Punjaub.

6404. (*Duke of Cambridge.*) Then, in fact, to all intents and purposes, they would be a military organized body, somewhat on the principle of irregular infantry or cavalry, or whatever it would be?—Yes; or if there is an objection to the term "military police," they would be a kind of organized police.

6405. (*Major-Gen. Hancock.*) Would you make any difference in the arming of the police?—I do not see why there should be any difference.

C. Raikes, Esq.

30th Nov. 1858.

6406. Would you give the police the same military training as the men of the line ?—Yes, the same military training.

6407. (*Duke of Cambridge.*) In taking into account the relative force of Europeans to the natives, you would, according to your views, have to take into account the number of police ?—Yes. I would have them counted as so many soldiers.

6408. What force of armed Europeans would you have to natives, both the troops and police combined ? —I consider that we should have one-third European soldiers to secure the country, supposing the artillery to be exceedingly strong. If the artillery was kept in our hands, I should feel that India was perfectly safe. But I also think (on which I have thought a good deal) that as regards the native portion of the army, particularly the part which is to be the regular native army, if there is a regular native army, an immense deal depends upon throwing separate nationalities into separate companies or troops in every regiment. I am satisfied that the principle upon which the guide corps was raised, upon which I have often conversed with my friend Sir Henry Lawrence, is a most important one, and gives us in a native regiment almost the power of a European regiment. You might have one company of Sikhs, one company of Nepaulese, one of Hindostanees, and so on. It is easy to get up to six or seven tribes or nationalities ; men will enlist in companies, when they will not enlist to be thrown together into a regiment.

6409. You would prefer that ?—Yes ; they will not enlist otherwise.

6410. (*Chairman.*) How are the police organized, in battalions or companies ?—I have been accustomed to see them in regiments.

6411. With what number of officers ?—There were a captain of police, a native commandant, and a native adjutant.

6412. (*Major-Gen. Hancock.*) What number of men were there in a regiment ?—I think 800.

6413. (*Chairman.*) And only three officers ?—The police of which I speak, in the Punjaub, had one captain over two or three regiments, and there were a native commandant and a native adjutant, and several subordinate native officers.

6414. Where were the men taken from ?—Some of them were Runjeet Singh's old regiments, and some of them were raised in my division whilst I was there ; they were magnificent regiments.

6415. (*Major-Gen. Hancock.*) Do you contemplate the local police being exclusively under the civil authorities, or in any respect under the Commander-in-chief ?—I have hitherto contemplated their being under the civil authority.

6416. Exclusively ?—Yes.

6417. (*Col. Forsyth Tait.*) I believe in your book you propose to have more than one European officer ?—Yes. I merely speak of what has been the case in the Punjaub.

6418. I think you propose to have a commandant and adjutant, and one or two officers ?—Yes.

6419. That is four or five officers ?—Yes. I would have an officer at each district, and a regiment, as it were, for a division.

6420. A certain number of police battalions to compose a division ?—Yes.

6421. (*Marquis of Tweeddale.*) Do you contemplate having a civil police as well as a military police ? —I think that the detectives for civil duty should be taken from the military police. I would have no other police except the village Chokeedars. I would have detectives taken from the best men of the military police, and paid more highly.

6422. (*Sir H. G. W. Smith.*) Have you witnessed the revolt of the troops ?—Yes.

6423. Do you think it safe to place arms in the hands of these natives whom you call police ?—I think they are just as dangerous to the State as any sepoys would be.

6424. (*Marquis of Tweeddale.*) What force of military police would you contemplate having for the Bengal presidency ?—I have never considered that matter.

6425. (*Major-Gen. Hancock.*) Do you propose that the police should have the same advantages with regard to pensions as soldiers of the line ?—I think they should.

6426. (*Col. Burlton.*) And the same pay ? — I think so.

6427. (*Major-Gen. Hancock.*) With what powers to reward and punish do you propose to invest the commanding officer of a police corps ?—I would make him as nearly absolute as any man can be with safety.

6428. Have you formed any opinion as to the particular powers which you would give ? — Yes ; I would give the commanding officer the absolute power of dismissal without any court-martial ; he should be an *ex-officio* magistrate, and he should have the power as a magistrate, if any man committed an offence against the civil law, of punishing him at once.

6429. To what extent would that give him power with respect to corporal punishment ?—That would give him no power, but I think that corporal punishment should also be added. Our ordinary regulations would not give him any power over a man to inflict corporal punishment except in the case of theft ; but I think that he should have that power, and that the native soldier and the British soldier should be in the same category as far as that is concerned. I think it a great mistake that the power of flogging native soldiers was ever taken away, and I think it should be given to those officers commanding regiments.

6430. (*Marquis of Tweeddale.*) Would there be any difference between the military police which you contemplate and the sepoy regiments, except giving the commanding officer greater power ?—It would have fewer officers ; it would be less costly.

6431. It would have fewer officers compared with a regular regiment ; would it have fewer compared with an irregular regiment of infantry ?—It would have fewer officers in either case, I think.

6432. I understand you to contemplate 800 men as the force of a regiment of police ?—Yes ; whatever was the number of police organized they would require comparatively a less number of officers than a regular regiment.

6433. They would be just as dangerous as the sepoy would be in the event of another outbreak ?—Yes ; wherever they were organized they have behaved quite as badly in Oude lately, and therefore I suppose they would ; the very jail guards who were organized immediately considered themselves sepoys for the nonce.

6434. Can you give us any idea of what would be considered for the peace of that presidency to which we are alluding, the proportion that there ought to be of armed natives to armed Europeans ?—I can answer for the north-western provinces, excluding the Delhi division. In my opinion 8,500 cavalry and 20,000 infantry would be sufficient ; that is, for Meerut, Rohilcund, Agra, Allahabad, and Benares divisions (civil). I say that we want one European to two native soldiers, and then I count the armed policeman as a native soldier.

6435. Will you be good enough to tell the Commission what number of civil policemen you would require for the Bengal presidency ?—I should say that for each district we require 100 horse (I am speaking of organized police) and 400 foot.

6436. (*Major-Gen. Hancock.*) Are you still speaking of military police ?—Entirely.

6437. (*Viscount Melville.*) How many districts are there in Bengal ?—There are twenty-seven districts in the north-western provinces.

6438. (*Col. Burlton.*) You are not acquainted, I imagine, with the lower provinces—Bengal proper ? —I merely have a small acquaintance with them. I am convinced that the same force would be amply sufficient for Bengal. I have been speaking of the north-western provinces.

C. Raikes, Esq.

6439. (*Duke of Cambridge.*) In the aggregate, how many police do you think would be requisite for the whole of the Bengal presidency, organized in the way you propose?—I have put down the numbers which I thought would answer for the north-western provinces, and I should say about three times that force.

6440. (*Col. Forsyth Tait.*) What was the number which you put down?—I put down 2,700 police, horse, and 10,800 foot; three times that number, I should think, would be sufficient.

6441. That would be 8,100 horse and 32,400 foot?—Yes.

6442. (*Major-Gen. Montgomerie.*) You would probably want fewer horse in certain parts?—Yes.

6443. (*Marquis of Tweeddale.*) Would you arm in any way the civil policemen?—I would arm the cavalry, like irregular cavalry, with carbines and pistols, and swords; and the infantry with a light percussion rifle or musket.

6444. Then the civil police would be military also?—I have so proposed. The total which I have given was supposing there to be an organized auxiliary force; it does not include all the burkundazes—the constabulary force. If the Government converted that into an organized police it would be a great advantage to the country, and a saving of expense, and the numbers would be increased.

6445. (*Col. Forsyth Tait.*) Would the number be very much increased?—Yes.

6446. Would it be double?—No, it would not be double; but it would be one-third as much again, I should say.

6447. That would be 11,000 more?—Yes.

6448. Making about 52,000 altogether?—Yes.

6449. (*Major-Gen. Hancock.*) What amount of force do you contemplate maintaining as a native army in addition to these 52,000 police for the whole of the Bengal presidency?—I should say about the same number.

6450. (*Duke of Cambridge.*) In round numbers 100,000 men?—Yes.

6451. (*Sir H. G. W. Smith.*) You have said that you have no greater faith in the loyalty of the police than you have in the loyalty of the sepoy. Why do you think it necessary to give them fire-arms at all, if you have no faith in them?—We must have a native army. The native army, in my humble opinion, should be organized, as I stated before, of different nationalities, and then I do not think that mutiny is possible. I think that it becomes a moral impossibility. With reference to the police, it is necessary, certainly, to have natives speaking the same language as the inhabitants of the country in which they are employed.

6452. Why would you trust them with fire-arms?—Merely in order to enable us to dispense with a certain number of regular sepoys, in order to avoid keeping up so very large a regular army.

6453. (*Duke of Cambridge.*) Could the duties which you contemplate for the police be performed without fire-arms?—I always found the police very much more efficient when they had fire-arms; and I always drilled them well and armed them with fire-arms. I will give a remarkable instance of it. I remember a large village near Ghazeepore, which contained 6,000 Brahmin cultivators; they rose against the rajah who had purchased their village, and hunted his agent from one place to another, and murdered him. The magistrate did not know how to deal with these fellows; he sent up to Mr. Montgomery, who was then magistrate of Allahabad, and said, "For God's sake "lend me 25 of your red-coated fellows." Mr. Montgomery had a jail guard who had muskets and looked like soldiers; he sent down 25 of those men. The consequence was this, that those 6,000 men all left their village, and ran away and hid themselves in the jungles, and yielded most implicit obedience to the local authorities. They had already driven away the burkundazes from the place, and laughed at them; but the appearance of a military force had such an effect upon them that they at once gave no more trouble. There was not a single creature in the place except some old women. This was all done with 25 or 30 of Mr. Montgomery's jail guard, who wore red coats and had muskets, and looked like soldiers.

6454. Do you think that for 800 men, considering what those police would have to perform, one European officer would be sufficient?—No. I merely said that that was the case in the Punjaub.

6455. How many European officers do you think there should be to that proportion of men?—I think that there should be one officer in each district; that is to say, one officer to 100 horse and 400 foot.

6456. That would be about three officers to the 800 men?—Yes.

6457. (*Major-Gen. Hancock.*) Do you consider that the military discipline of this organized police force would be equally maintained in a police corps as in a regiment of the line?—It could not be in all respects equal, because the men would be very much detached; but for all useful purposes, for the purposes of fighting, it has been proved over and over again during the last twelve or eighteen months, that these police corps are just as useful as any other more elaborate regiments.

6458. As you advise that the military police corps should have the same arms and the same high military training as regiments of the line, and should be, in fact, in all respects as nearly equal as possible to them in military efficiency, would not these police corps be more dangerous to the Government than the regiments of the line, inasmuch as the latter would be under strict military discipline?—I think that the duties of local police are so fascinating to the native mind, that I am convinced that the service would be highly popular.

6459. Still do you not think that such a force would be more dangerous to the Government than regiments of the line, the latter being under strict military discipline?—I do not consider that they would be more dangerous, from the very fact that they would be so much dispersed; I think that there would be less probability of combination amongst them against the Government. But it is almost impossible to look forward to the organization of an army, if we are to suppose that that army is to turn against us. I therefore recommend that such precautions should be taken as should render that probability almost nil.

6460. I understood you to say that the men of the police force should be of the same nationalties as the people of the district in which they are employed?—No. I say that they must be able to speak the same language, but they certainly should not be of the same nationality; they should be brought from a distance. You cannot introduce into the police force the same distribution of companies by nationalities which I would recommend strongly for the regular native army, for this reason, that the policemen must all be able to speak the language of the country in which they are employed.

6461. Do you recommend that the police force to be employed in any district should not be men belonging to that district?—I recommend that they should be brought from a considerable distance, at least 200 miles, if possible.

6462. Would you always locate them in the same district or change them from one district to another?—I would change them.

6463. Throughout the presidency?—Throughout the provinces in which men of their own language were to be found.

6464. (*Viscount Melville.*) In the event of a war and a campaign taking place, do you contemplate this police force acting as a military body in any way?—I contemplate their being at the disposal of the Government for any military duties whatever.

6465. What military duties would they perform; they could not act as regiments?—They have acted most admirably as regiments before Delhi lately.

6466. They might do as baggage guard, and for that sort of duty?—They went into action constantly; they have been constantly engaged in all the actions

C. Raikes, Esq

30th Nov 1858

which we have had lately before Delhi and in Oude, and other places.

6467. (*Duke of Cambridge.*) In what respect would they be different from the sepoys in former days except from the fact of their being more dispersed ?—They would be employed for police duties.

6468. Were not the sepoys employed a good deal in charge of treasuries, and things of that sort ?—Yes.

6469. Therefore a great proportion of those duties were performed by sepoys formerly which you now contemplate for the police ?—Yes ; but they were not used for guarding out stations.

6470. Otherwise as an organized body, would there be much difference between them and irregular regiments of sepoys ?—Except in their duties, I cannot say that there would be much difference; I think that they would be quite as efficient.

6471. (*Marquis of Tweeddale.*) Is not the reason why you proposed that there should be military police, because the police duties which were formerly performed by the sepoys, made them loose and unlike soldiers ?—No, that is not my reason ; I think that we must have a native army, and we also must have a native police, and if you can make the police subsidiary to that army so as to reduce the expense of the army, you gain a point. I do not want to see an immense native army again, and you must have a police; therefore, I would rather have good policemen well paid, and the most useful that we can have.

6472. Where do you contemplate getting your commanding officer of the police corps ?—I contemplate getting him from either the line or the local regiments of India. Any man who is available I should say should have that appointment.

6473. Do you not think that it would be taking away the ablest officers from the regular army if you took them to command the police corps ?—I consider that this is a *quasi* military duty. I would not recommend that men should be withdrawn for purely civil duty, but this is a *quasi* military duty.

6474. (*Major-Gen. Hancock.*) What difference do you contemplate making in the pay of a soldier of the military police and of a soldier of the line ?—No difference at all.

6475. You also said that they should be put upon an equality with respect to pensions ?—Yes.

6476. Then in what respect would the Government gain by reducing 52,000 men of the line, and substituting 52,000 policemen ?—These men would be available for local civil duties, and would supersede the old and comparatively useless Burkundazes, who could not be employed in any way offensive or defensive as soldiers, whereas these men, I think, are fitted for that employment.

6477. Then the Government would benefit to the extent of the saving of the pay in dismissing a certain number of Burkundazes ?—Yes.

6478. What amount of Burkundaz force do you contemplate being reduced ?—The Burkundaz force is very large indeed, and the saving would be a material one, but I am not prepared to state the number of Burkundazes.

6479. Can you state about what number of Burkundazes would be necessary in addition to the 52,000 organized military police which you have recommended for the Bengal presidency ?—I recommend that the Burkundazes should be abolished.

6480. Do you mean that the 52,000 men would be in lieu of all the Burkundazes ?—No. I was not prepared to answer that question. I merely say that I myself would recommend that the Burkundaz should be abolished, and that in his place you should have a military or a *quasi* military constable, like the police of Ireland, for instance; a man who could help the Government in time of danger, and who would not be more likely to turn against them at all events than any other.

6481. If I understand you, the difference to the Government between 52,000 line soldiers, and the same number of military police would be that whilst the former would be available only for military duty the latter would be a force armed and trained as soldiers under the immediate orders, and at the entire disposal of the civil authorities ?—They would be available for the Government in case of war.

6482. As they would not be amenable to the articles of war, nor subject, therefore, to the rules of army discipline, you do not suppose that they would be equally available with troops of the line for war service ?—Experience has proved that they have been.

6483. I do not mean efficient ; I mean available ?—I do not understand the difference ; they would be at the command of the Government ; they could be taken away from their districts in case of need.

6484. If you collect them from all the different provinces where they are employed on civil duties, how are you to supply their place ; suppose you take 20,000 men, and place them under the command of the Commander-in-chief of India ?—That is what I should propose to be done, and other levies raised by the magistrates of districts.

6485. (*Duke of Cambridge.*) How do you propose that the discipline of these 50,000 men is to be conducted ?—I would propose that there should be an officer in each district with native subordinate officers whose duty it should be to discipline and equip these men ; that in all matters of dress and discipline they should be entirely under him ; that in case of misconduct the magistrate also should have the power of dismissing from this body, so that they should feel that they were not irresponsible to the magistrate ; but that he should not interfere in matters of their dress or of their drill ; that is a military matter which a magistrate can know nothing about. Of course he would locate them, and dispose of them as he pleased.

6486. Under whom should the young officers be ?—Under a divisional officer at the head quarters of the civil division, who would be a captain commandant of police.

6487. Who is to work the whole of this force, because of course they must be all under the same regulation ?—There should be one superintendent-general of police for the north-western provinces. I would say the same for Bengal, and the same for the Punjaub. Under the superintendent-general there should be divisional commanders of police, and under them again, in each district, there should be a district commander, who should also have the powers of a magistrate to assist the chief magistrate.

6488. (*Viscount Melville.*) Would there be any difficulty in having this police under the same sort of regulation as the constabulary in Ireland, that the superintendent should have the absolute power of dismissal, and that it should be the same as in London ?—I think that he should have full power ; I think that a court-martial should not be considered necessary, but that fine and dismissal should be in his power.

6489. (*Marquis of Tweeddale.*) You seem to think that the armed police will be equal in discipline to the regiments of the line ?—Nearly equal and nearly as efficient.

6490. Will the 800 men be trained to move in battalion ?—They are taught to move in battalion.

6491. And to move in brigade ?—They will not have an opportunity of learning to move in brigade, but they will have an opportunity of learning drill, and they will learn the manual and platoon exercise, and to move like soldiers.

6492. (*Sir H. G. W. Smith.*) Where would they be quartered, at head quarters ? — They would be distributed to various Tehsil stations in each district, the majority being at the district head quarters, and they would be all brought in in turn for drill ; that is what is now done ; that is what is always done in the Punjaub.

6493. (*Viscount Melville.*) In the Punjaub the native troops, I believe, were not relieved from taking the Kutcherry duty and other duty ?—Yes, they were.

C. Raikes, Esq.

30th Nov. 1858.

I had no seyoys; all my Kutcherries were guarded by organized police, and the treasuries were guarded by organized police in the Punjaub; that was the case in the Lahore division.

6494. (*Major-Gen. Hancock.*) Do you contemplate all the civil treasuries being placed under the charge of the military police?—Entirely.

6495. What would be the average amount of treasure under the charge of each police guard in a district?—At the chief treasury of the district there might be sometimes two lacs of rupees; at the small detachments never above 10,000.

6496. But at none more than two lacs?—No, not in the Sudder treasury.

The witness withdrew.

Adjourned to Thursday next at 11 o'clock.

Thursday, 2nd December 1858.

PRESENT:

- Major-General PEEL.
- H.R.H. the Duke of CAMBRIDGE.
- Lord STANLEY.
- Marquess of TWEEDDALE.
- Viscount MELVILLE.
- Lieut-Gen. Sir HARRY G. W. SMITH.
- Lieut-Gen. Sir GEORGE A. WETHERALL.
- Major-Gen. MONTGOMERIE.
- Major-Gen. HANCOCK.
- Colonel BURLTON.
- Colonel FORSYTH TAIT.

MAJOR-GENERAL PEEL IN THE CHAIR.

The Earl of Ellenborough, G.C.B.

2nd Dec 1858.

The Earl of ELLENBOROUGH, G.C.B., examined.

6497. (*Chairman.*) Your lordship has been so kind as to furnish the Commission with written answers to the questions submitted to you, and for my own part, I may say that those answers are so full and explicit that I should not have thought it worth while to trouble you by asking you to come here, but several other members of the Commission wished for the opportunity of having further information from you, and we have therefore asked you to attend; I perfectly understand the meaning and purport of the answers which you have given. I understand from them that you consider it absolutely necessary that there should be two armies in India, having to a certain degree distinct and separate interests?—Certainly.

6498. That you consider it necessary for the welfare of India that there should be a portion of movable forces, and a portion of her Majesty's army distinct from that, and raised solely for local service in India?—Yes.

6499. And that your opinion is that for certain reasons, those two portions, the local and the moveable portion of the Queen's army should be of equal force?—That they should be balanced.

6500. The grounds for that opinion being that, "notwithstanding its great inferiority in European "troops, the many advantages which the Company's "army has hitherto exclusively enjoyed from the "favour of the Court of Directors, have secured to it "high consideration; but that the Company being "gone, and the local army having no longer exclusive "advantages, real strength can alone secure to it "proper consideration?"—I think so; that is my opinion.

6501. (*Major-Gen. Hancock.*) As it may be assumed that the permanent European force to be maintained in India, will be fixed at the minimum deemed necessary for the secure hold of the country, are you of opinion that any force should be maintained in India for the purpose of meeting calls for foreign service in Affghanistan, Persia, Burmah, or elsewhere within the limits of Asia?—I think it would be very desirable, if you could afford it, to have a reserve, but when you have five regiments as I suggest, at Calcutta, that is to a certain degree a small reserve. I have always thought that it would be desirable to have a reserve in England ready for instant service. I would always have at least 5,000 men at Chatham destined for India, understanding that they were to be ready for instant embarkation.

6502. Does your lordship mean for the purpose of supplying the place of any force which may be sent on service to Persia, or elsewhere beyond the continent of India?—Not merely that, but likewise for any circumstances occurring rendering an immediate reinforcement necessary; they should be ready for instant embarkation. Indeed, 5,000 was the number which I used to think was necessary years ago; I would have a larger number now if it were possible to have them.

6503. Regarded as an imperial question does your lordship think that it would be advisable to maintain any considerable body of troops in India, say 10,000 men, in addition to the minimum force deemed requisite for the protection of India, for the purpose of giving them a training field, in view to increase their efficiency for service?—I think that circumstances will give you field enough without sending 10,000 additional men for the purpose of learning the art of war. I do not see the end of it. But you are brought up by the financial difficulty; indeed, you are brought up by that even in doing what may be considered necessary.

6504. Assuming, then, that the permanent force to be maintained in India will be fixed at the mimimum deemed necessary for the protection of India itself, how could any portion of that force be made available to meet a European crisis without endangering the loss of India?—I think it would be strong to say that it would endanger the loss of India; but, of course, it would be a matter of very serious inconvenience to detach from India any troops whatever, if the establishment was reduced to a minimum; it must be a subject for the consideration of the Government at the time; it might be that it was much more important to retain the troops in India than to send them to Burmah or Persia, or anywhere else, and, of course, the Government must attend to that which was of most importance.

6505. (*Duke of Cambridge.*) You think that a decision come to of that description would rest upon the responsibility of the Government of the day, and would be an imperial question, and not solely an Indian question?—It is, in the first instance, an Indian question, because the Governor-General must decide what he will do with the troops confided to him; but, subsequently, it becomes a question here; there is very easy communicatien, and he cannot do much without having further assistance from hence.

6506. (*Major-Gen. Hancock.*) In advising that the European force in India in future should be composed partly of troops of the line and partly of local troops, did your lordship intend to include the artillery and engineers, or that the whole of this portion of the force should be, as heretofore, of the local army?—I wrote what I submitted rather hurriedly, perhaps, but my in-

The Earl of Ellenborough, G.C.B.

2nd Dec 1858.

tention was to express the opinion that the same principle which I laid down for the division of the infantry should be adopted for the division of the cavalry and artillery; that there should be an equality of force. There can be no doubt that the introduction of the Queen's artillery has led to an enormous increase of expense in the maintenance of the Company's artillery, but it has, at the same time, created, probably, a wholesome rivalry.

6507. (*Duke of Cambridge.*) Could not that additional expense be very much diminished by regulations; by regulating the amount of artillery per company and troop, and diminishing the staff, which perhaps at the present moment is larger than would be the case if the artillery were permanent?—I should think that there might be, no doubt, a reduction of the staff; but when you have once given an allowance to a soldier it is an awkward thing to reduce it.

6508. Is there any additional allowance to the royal artillery beyond what there is to the artillery of the Company?—The additional expense in consequence of the necessity of raising the allowances of the Company's artillery to those of the Queen's, I understand, has been very considerable. It is a great increase of expense.

6509. There was no difference, was there, in the regiments of the line?—No. There never had been any Queen's artillery there, or hardly ever.

6510. Then am I to understand that the local artillery of India was not at a higher rate of pay than the line of India?—I cannot say what the rate of pay was in the artillery, but I know that altogether the advantages of the artillery service of the Company were very considerably inferior to those of the Queen's artillery.

6511. (*Major-Gen. Hancock.*) Would it not be the case that the time during which a European war was being carried on, would be the time of all others at which the European troops could least be spared from India?—No doubt; and the time at which the advantage would be most felt of having a local army.

6512. Considering the great importance of the artillery branch of the service in India, together with the circumstance of the opinion being almost universal, that in future the mass of the artillery in that country must be European, would it not be the arm that could least be spared, and which, from being the most powerful, would be, in all probability, the first to be indented upon in the event of a war in Europe?—I am rather inclined to think not. I think that it would be absolutely necessary to establish so very large a force of artillery in India permanently that it would be adequate to meet any difficulty which might arise.

6513. There would be this difference between the artillery and the cavalry and infantry branches of the service, that the Government of India would be able to supply, to a certain extent, by increasing the native force, the place of cavalry and infantry withdrawn, but if it be ruled that there shall be no native artillery, could not supply the place of artillery?—Yes; no doubt the Government of India by itself has no power of adding to the artillery.

6514. I allude to native artillery?—It cannot add to the artillery if there is to be no native artillery.

6515. But they would be able to supply the place of a few infantry regiments without producing any serious risk?—If the Government of India were to raise new infantry native regiments it would be violating the principle upon which the whole future establishment of the army is, I apprehend, to rest, because while there is to be a balance between the local and the regular army, there must also be a balance between the native troops and the European. It would never do when the danger was increasing to be adding to the native troops, which would tend to create more danger.

6516. Still after a lapse of years when the present excited state of feeling in India is quieted, I imagine your lordship is of opinion that the Government of India would have a margin left with respect to native troops. It may not be necessary always to maintain the native army at the full strength at which it might be maintained without exceeding the proportion to the European force that may be fixed as a safe maximum; and it would seem advisable that the Government of India should have a margin for augmenting the native troops in time of war, as, for instance, by increasing the strength of native infantry regiments from 800 to 1,000 men, as has always been done on such occasions?—I think it quite sufficient for us to deal with matters which are likely to occur during our own lives. I will not pretend to say what a Government of India may do when quiet is re-established as it used to exist in India. That will never happen in our lives,—we must look forward to a state of disquiet and apprehension of war as long as we live.

6517. (*Col. Burlton.*) Supposing that a very serious irruption should take place into our territories, from Nepaul, for instance, or Affghanistan, and that your lordship should be at the time at the head of the Government, you would, I consider, feel yourself fully justified in raising any amount of levies of natives to meet that difficulty?—I hope that, whoever is at the head of the Government, will do whatever he thinks necessary for the public service without regard to any orders or rules; it is his duty to do so.

6518. (*Major-Gen. Hancock.*) With respect to the question whether or not the European permanent force in India should be composed in future exclusively of troops of the line, do you not think that all the more important offices of the State in India to which officers of the army are eligible would be more efficiently filled from a body of officers trained from their youth in India, and with no views beyond it, than from one sent to India only for a ten years' tour, free to leave it at any time by changing, having no abiding interest in the country, and whose hopes and aspirations would naturally turn rather to the prospects of professional advancement open to them in Europe?—Nearly 30 years ago my view was that it would be expedient to draw the whole of the civil service through the army. I was in fact preparing a plan, which if the Government of the Duke of Wellington had lasted I should have laid before them, for effecting that purpose. The Government was dissolved, and the details were never entirely worked out; but I adhere to the opinion that the best education for every civil servant in India is service in the army, especially in the native army. He acquires a better opinion of the natives there than he ever will do by contact with them as a civilian only.

6519. With reference to the difficulty which your lordship has expressed of dividing the Bengal army, will you allow me to ask, whether, if a plan could be devised for effecting such division by which the interests of the officers concerned would be fully respected, and without any additional cost, you consider that the division would be a desirable measure as affects the interests of the State?—I really do not at present see the advantages of it; I have never heard them stated; it is a new question altogether to me.

6520. Assuming that the Madras and Bombay armies will in future be composed to a great extent of men enlisted in Southern India, and therefore having no sympathies in common with the northern tribes, would it not materially strengthen the hands of the Government of India were troops from those presidencies pushed up to the north-west frontier?—Very likely it might so happen, and it would so happen; but there always would be a jealousy on the part of the Bengal army at having its stations taken from it by the Madras and Bombay troops, more especially as I think some of the best stations would be taken.

6521. (*Col. Burlton.*) Does your lordship not think it probable that if such a measure were adopted and the troops from Madras and Bombay were pushed up into constant communication and personal intercourse with the sepoys of Hindostan, they might in a short time be inclined to coalesce together, instead of

The Earl of Ellenborough,
G.C.B.

2nd Dec. 1858

remaining with their present feelings of dislike to one another?—I cannot pretend to say what might be the result. I should have as little communication between them as I could.

6522. (*Major-Gen. Hancock.*) I imagine your lordship would be of opinion that as there would be only a comparatively small portion of those armies stationed in the north-west provinces, as regiments would be there only for a limited period, say two years, and the same men probably not live to go there again, that objection would not prevail to any great extent?—I am unable to speak with respect to it.

6523. Do you not think that if the three armies were equalized in strength the Bengal army would be of a much more convenient size for efficient supervision and control than it has been hitherto, and that it would greatly diminish the danger of the recurrence of so extensive a combination as we have lately witnessed?—I really am unable to give an opinion upon that subject. The Punjaub is very different, and separated to a degree from the north-western provinces; and both the Punjaub and the north-western provinces are separated from Central India. There must be a very large force in all those three divisions; there is very little down in Bengal. The Commander-in-chief must occupy a central position no doubt up above, if he is to look personally after those three armies. But I do not much like division of authority. I am rather inclined to think that an able man would do the whole thing better with absolute power than several individuals.

6524. Assuming that there will be a considerable addition to the European local army in India, and that the officers of the three presidencies might be thrown into one list for the purpose of the augmentation consequent thereon, would not the whole of the officers derive considerable immediate advantage in promotion?—I am quite unable to give an opinion upon the subject. I know that officers do not like changes; they would rather be left as they are.

6525. Whether the European force in India be composed for the future of line or local troops, or of both combined, I presume your lordship is of opinion that the army patronage as regards Indian appointments should remain as heretofore in the hands of the Indian authorities?—No doubt about it.

6526. Your lordship is aware that hitherto the appointments of officers of the Queen's army to divisional commands in India, and occasionally those also of the Company's officers, have been made by the home authorities. Do you think that it would be expedient to continue that system, or that in future the appointments to the several commands-in-chief only should be made in England?—I am not aware of the home authorities having had anything to do with giving the appointments to the Company's officers in India; the Crown has named Queen's officers who were to hold divisional commands and so forth in India, but it has had nothing to do with the appointment of any Company's officers.

6527. I allude to the home authorities at the India House as well as others?—They had nothing to do with it; the governors appointed to all the commands.

6528. I understand your lordship to mean that you think it expedient to continue the existing system with regard to the Queen's officers, but that with regard to the Company's officers they should be appointed only in India?—I do not see how it is possible for the Governor-General to select a Queen's officer from England, and desire him to be sent out; that must rest with the home authorities no doubt, but I think that every appointment of a local officer should rest entirely with the Governor-General.

6529. (*Chairman.*) And it always has done so?—Always, I believe. I never heard of any interference with it. There has been a bad system; a sort of right has been supposed to exist upon the part of officers to be appointed according to their seniority to commands, which of late years has been very properly broken through.

6530. Broken through by the authorities in India?—Yes.

6531. (*Major-Gen. Hancock.*) Do you not consider that the interests of the public service in India imperatively require that none but fully qualified officers should ever be placed in the command of either a regiment, brigade, division, or army?—No doubt it is a matter of the greatest possible importance.

6532. (*Duke of Cambridge.*) Do you not think that that rule holds good with every portion and any portion of Her Majesty's army, whether it is in India or elsewhere?—No doubt; and I can recollect that great inconvenience arose from the high comparative rank of some of the officers sent out in the command of some of the Queen's regiments, that when they were brought together with Company's troops there was no possibility of avoiding giving them brigade commands. I wrote home to represent to the Duke of Wellington that it was a very necessary thing to have regard to the efficiency of officers when they had a certain rank, and were sent out to command regiments. It led to their having higher commands, for which they were unfit.

6533. (*Major-Gen. Hancock.*) Under the system of succession by seniority to regimental, brigade, and divisional commands, which obtained in India previously to the mutiny, is it not the fact that officers not unfrequently succeeded to those commands who were to a great degree incapacitated by age, impaired health, or other causes, for the efficient performance of the duties?—No doubt that must have happened, but it was to a certain degree obviated by the management of the Governor-General, who placed those officers who must be appointed, but who at the same time were not very efficient, in situations in which it was not at all likely that they would be called upon to do anything.

6534. Still they were placed in commands, where, in such a crisis as has lately occurred, it would have been of the highest importance to have efficient officers?—No doubt, for instance, at Benares, Saugor, and some other places.

6535. Considering how much the due maintenance of discipline and efficiency depends upon the entire fitness of the officers in command of brigades and divisions, do you not think that in future all such appointments should be made by selection for efficiency alone, and that the several Commanders-in-chief and Governments in India should not be fettered as they have been hitherto by regulations requiring them to recognize mere negative merit when backed by seniority as giving a claim to such appointments?—I should think that any person who is responsible for the good government of the country would desire to have the power of selecting the most efficient men to carry out his views; and although no doubt there may be some little apprehension of favouritism, I think that it would be better to overlook that and to give the chief authority the power of selecting the fittest men.

6536. Your lordship is aware that under the system which has existed hitherto, the Commanders-in-chief in Bengal and Bombay have had the nomination and the Government the appointment to brigade and divisional commands?—The Commander-in-chief in India has no authority at all, he cannot do a single thing without the Government; he recommends, but he can do nothing whatever; he cannot make the smallest appointment without the authority of the Government; it always confirms. I recollect an instance which happened within the first week of my arrival in India where an officer was recommended by the Commander-in-chief erroneously, he was not aware of the character of the individual; a courteous representation was made to him, and he withdrew the recommendation. There has always been an understanding that certain appointments were to be given by the Commander-in-chief, and I dare say the cases have been very rare in which any representation has been made, but he cannot actually make the appointment without the confirmation of the Government.

The Earl of Ellenborough, G.C.B.

2nd Dec. 1858

6537. Considering that the Commanders-in-chief are held responsible for maintaining the efficiency and discipline of the troops under their command, do you think it just that they should be fettered with regulations giving officers individual claims to such important appointments as the commands of brigades and divisions upon the ground of their seniority?—If I was a Commander-in-chief I would much rather be without any restraint at all myself.

6538. (*Duke of Cambridge.*) But does not your lordship think that those are subjects of general army regulation which must hold good in every part of the world; and that if you make such a regulation it ought to extend to every portion of Her Majesty's troops?—I apprehend that in England the Commander-in-chief may, with what consent I do not know, appoint whomever he pleases. I believe that the Horse Guards may select any man. There is not the restraint which exists in India.

6539. (*Major-Gen. Hancock.*) I apprehend that your lordship considers it would be very desirable to establish a rule by which officers selected by the several Commanders-in-chief, and appointed by the several Governments in India to the higher commands, might have temporary rank conferred upon them sufficient to dispose of the inconvenience now sometimes experienced from there being senior officers in their way?—That is a purely professional question. There is no point upon which there is so strong a feeling, I believe, among soldiers as that of what they call supersession; and I speak with great hesitation of doing anything upon that subject.

6540. Still is it not the existing system in England for the Queen's Government to appoint selected officers to commands, and to confer temporary rank upon them whilst so employed?—A higher rank is often given during the tenure of a command, but I apprehend that it rarely has involved the supersession of any other officer.

6541. Then it would be in conformity with that system were the practice introduced in India?—It would.

6542. (*Chairman.*) It appears to me that the system is very much the same in India and in England; his Royal Highness the Commander-in-chief recommends an officer for the command of a division or brigade, and if there is no objection on the part of the Government he is appointed?—Just so.

6543. The same thing is done in India; the Commanders-in-chief recommend to the Governor-General, and if he does not see any reason to dissent from their views he at once adopts them?—I think the recommendation in India is more authoritative than here; it is never departed from, except the case is extremely strong.

6544. (*Duke of Cambridge.*) The power of a Commander-in-chief in India would be greater than in England?—It is in practice. I know that I felt that the authority given to the Commander-in-chief was inconveniently extensive, because I think that I had but a single regiment of irregular cavalry to which I could appoint an officer, and I thought that rather inconvenient, because many cases occurred of officers who merited reward, and I had very limited means of rewarding them in that manner.

6545. But would not you think that as a general principle it would be extremely inconvenient that one portion of the army should have a system of selection or appointment different from the rest of the army?—I see no advantage in it.

6546. (*Major-Gen. Hancock.*) With respect to honours in reward for distinguished service, do you not think it would be best for the public interests that officers of the local army should look to the Government of India alone as having the power to decide upon their claims to be recommended to Her Majesty for those distinctions?—I appprehend that now the recommendation of the local Government is very favourably considered by the home authorities, and that the cases would not be numerous in which the home authorities would disregard that recommendation; at the same time, I must say, that considering the pressure upon the Governor-General, and the desire which he may have of giving attention to claims of that description, I think it very advisable that there should be a second opinion upon the subject, and there may be cases in which it would be desirable that the authorities here should not accede altogether to the recommendations from India, but I believe that generally they do.

6547. Would your lordship advise that in future those recommendations should come from the Government of India to the Secretary of State for India; I imagine that is the channel through which you would recommend them to come?—I really do not know what the rule may be; I rather think that the recommendation would be submitted first to the Secretary of State for India, and that he would then communicate with the Secretary for War and the Horse Guards, as has always been the case; in fact, there is no alteration; the alteration practically effected by the recent changes is a very small one indeed in the conduct of business.

6548. (*Lord Stanley.*) As regards the authority exercised over the local army of India, the change actually produced by the late Act is none whatever, I apprehend?—I hope not.

6549. You have anticipated my next question, which is, whether you think that any change is desirable?—I think the relations between the local army of India and the Secretary of State and the Council should be precisely the relations which existed before between the army of India, the Board of Control, and the Court of Directors.

6550. Then you are entirely opposed to placing the Commander-in-chief in India under the direct authority and control of the Commander-in-chief here, as a question of general policy?—I do not see how things could go on if there were two such authorities existing as the Governor-General and the Commander-in-chief here. The Governor-General must place his Commander-in-chief wherever he thinks he is of most use; he must be able to order him to Calcutta, if necessary, or send him to the north-west; he must do whatever he pleases with him; he must have the same authority over the Commander-in-chief in India which the civil Government here has over the Commander-in-chief in England; there must always be a supremacy in the civil authority.

6551. (*Duke of Cambridge.*) You are aware that the Commander-in-chief in England has control, to some extent, over the troops of the line serving in India, as regards discipline, and as regards promotion?—Certainly.

6552. Do you object to that?—Not at all; I should be extremely sorry to have any interference whatever with the royal army in India; I would leave it exactly as it is.

6553. If that is all that is meant by the authority of the Commander-in-chief at home you do not see any objection to such an arrangement?—I have no objection whatever to leaving things exactly as they are now, with respect to the royal army.

6554. As regards the local army, do you see any objection to that power being extended merely as respects discipline and promotion under regulation?—I am for keeping the local army as it is, and making no alteration at all in it. It is a part of my principle to keep up two totally distinct armies, and the local army should look to the Secretary of State for India as the authority to decide in all cases respecting it.

6555. Do you not think that that produces a great deal of heartburning and feeling of jealousy, which is objectionable in any army?—I never saw any; I never heard of any. It was impossible for two armies to go on more agreeably than they used to do.

6556. On the principles of human nature, do you not think that two distinct bodies are disposed even on small grounds to be jealous of one another?—I wish to preserve a degree of jealousy which should prevent combination. I desire that there should be two interests and two feelings. I do not think that it would interfere with the conduct of the public service; but I think that the local army would feel more satisfied if it had an authority here which it considered as its protector.

6557. Do you not think that that local army would feel that it was equally protected, and that equal justice was done to both services, if the Commander-in-chief at home was not supposed to have any particular interest in the army of the line; do you not think that the fact of the Commander-in-chief at home being exclusively identified with the army of the line, would give the local army an impression that he might be less disposed to serve it, and more disposed to push forward the officers of the line than the local officers?—I have no such apprehension; I think the local army would rather remain just as they are. The Commander-in-chief at the Horse Guards has nothing whatever to do with them, and never has had anything to do with them, and they desire to remain in that position, I should think. The only case in which it is possible that the Horse Guards can interfere in any degree with their interests or wishes is in the distribution of honours, and I never heard of a single case occurring in which they had reason to complain of the Horse Guards, that I must say. I think honours have been given most liberally to the Indian army on all occasions.

6558. You, no doubt, would attach very great weight to anything coming from the Duke of Wellington?—Yes.

6559. Are you aware that there is a letter dated 12th March 1812, of the Duke of Wellington to Lord Melville?—No, I have no recollection of it.

6560. If you look at that letter you will see what I allude to as regards European troops?—That the whole European army should consist of Queen's troops. That was my own opinion until the necessity occurred for having so very large a European army. When a third battalion of Europeans was added to each presidency, I wrote strongly against it, and when it was understood that there were to be large additions two or three years ago to that army, I wrote to Lord Panmure, or some person in the Government, against it. But the very reasons which induced me then to object to it, induce me now to press it forward, because I thought it desirable to preserve a balance between the Company's and the European force, and that balance would have been overthrown if there had been any large addition then to the Company's army, because the Queen's force was so small; but when the Queen's army becomes so large, and the Europeans of the line so numerous, then in order to preserve a balance there must be an addition to the local army. The principle is exactly the same.

6561. You would feel no apprehension of the army of the line in India, would you?—I believe it is very prudent always to take precautions against persons who have great power in their hands. The power in the hands of that army is now absolute—there is no possibility of resisting them. The state of things is totally altered by the revolution which is now taking place in India; and I think it highly desirable to look well to the right and the left, and to secure all possible means that we can obtain for ourselves of balancing the strength of each of those armies, providing against anything that may occur to them in the exercise of the authority and power which they actually possess.

6562. Have we had any instance of mutiny in the Queen's army?—No, I believe not.

6563. Have we ever had any instance of mutiny in the Company's army?—Yes.

6564. More than one?—There was a very great one at Madras. There were several in early times. There has been occasionally a good deal of ill feeling; but there was a mutiny at Madras, and the Duke of Wellington told me that if there had been hill stations at that time where there could have been white families, it would have led to a separation.

6565. Is not that danger increased in a local army which is so very large as compared to the army of the line? Do you not think that so far from its being the other way, the danger is more increased if you make a very large local army whose interests are solely connected with India?—I think that if you exactly balance that local army by a Queen's army of equal strength, no apprehension is to be entertained, and the Queen's officers will equally with the local officers (not to the same number probably) be entitled to command the irregular native corps.

6566. You would throw it open?—Certainly, supposing them to be competent from a knowledge of the language. I think that everything should be equal with regard to appointments between the two forces. I think it would be very unjust to the Queen's army not to make it so.

6567. (*Major-Gen. Hancock.*) In proportioning the appointments I imagine that you would consider it just to have regard to the advantages open to the officers of the line in England and in the colonies with respect to commands and appointments?—I am not aware what the great advantages are. I of course must put myself into the position of a Governor-General, and as Governor-General I should desire to be able to appoint to every situation in India the fittest man, no matter whence he came, whether from the Queen's army or from the local force, and to reward his service.

6568. As I understand your lordship, then you would have it the rule that all appointments should be made upon the ground of merit and efficiency alone?—I think so.

6569. (*Lord Stanley.*) Practically that opening of all such appointments as those which you mention to officers of the general service army would not be a very large change, because the number of those who would qualify themselves by a sufficient knowledge of the native languages, would, I presume, be small?—It would be smaller, I apprehend, than in the local army, but still when a regiment is sent there certainly for ten years, and perhaps for a longer period, if an officer felt that by making himself acquainted with the native languages he would have an opportunity of obtaining some civil or political employment, I think it is contrary to reason, that those officers should not, in a very great number of cases, qualify themselves, because there is no very great difficulty in it.

6570. (*Duke of Cambridge.*) The fact, I suppose, being that hitherto they having been excluded from those appointments, they have never thought it worth their while to study, whereas now they would?—No doubt hitherto until this revolution commenced the Queen's troops were necessarily placed in certain cantonments; there were no means of housing them anywhere else; they were compelled to remain in certain cantonments, and, unless in the event of war, there they remained, having nothing at all to do; they were certainly in a most deplorable condition, and naturally they looked upon war as a godsend; it gave them something to do; but they had not the same means or necessity for communication with the natives which the officers of the local army had, and very naturally, having nothing to gain by it, the cases must have been very rare in which they acquired a knowledge of the languages, and a knowledge of the language is enormous in real practical value. I recollect that the late Sir Charles Napier and myself happened to come to the same conclusion as to its value. I said 10,000 men,—he said, "that "is my impression too; I would rather be able to "speak the language than have 10,000 men."

6571. (*Lord Stanley.*) Does not your lordship consider that the power of employing Queen's officers in civil and political situations requiring a knowledge of the native languages, would be valuable not only as giving the Governor-General a larger field of selection for such appointments, but also as greatly increasing the knowledge of the country, and therefore to some degree the military efficiency of those

The Earl of Ellenborough, G C B

2nd Dec. 1858

officers ?—Certainly; it would give those officers the great advantage when they were on detached service of being able personally to communicate with the chief people of the district.

6572. (*Viscount Melville.*) Under the present regulations the Queen's officers are not eligible for any political appointments ?—Not under the Company's regulations, I believe; I think Lord Hardinge introduced a novelty, that of appointing a very few Queen's officers to irregular corps, but it was contrary to the rule.

6573. (*Duke of Cambridge.*) And to the supervision of roads, I believe ?—I do not know about that.

6574. But not to any higher positions ?—No.

6575. Contemplating a double army of Europeans, do you propose that the two services should be under the same articles of war, the Queen's regulations, as well the local force as that of the line ?—I am not acquainted with the Queen's regulations so as to be able to speak upon that point, but I see no reason why they should not, and great reason why they should be under the same articles of war. It seems to me that it might be productive of very serious inconvenience if in the same force an offence committed by a European of the local army was to be punished differently from the manner in which it would be punished in a Queen's regiment.

6576. (*Chairman.*) I suppose you anticipate that the European portion of the local army is to be raised in this country ?—Yes.

6577. Seeing that there is a limit to the number of men whom we can raise by voluntary enlistment in this country, do you not think that there must have been some limit put to the number who would be tied up, as I may say, and whom there would be no power in the Government to remove in case of emergency ?—As long as they remained here you could use them. One of the last things which I did at the Board of Control was to increase very largely the establishment of the European army, and it was an understood thing that we should always endeavour to have the whole of the reserve of 4,000 men, which was allowed by Act of Parliament, at Chatham, and have the force at disposal as long as it remained in this country.

6578. If they are only enlisted for service in India, can you call upon them to serve on the continent ?—Not on the continent, but in England; they are a force at our disposal, I apprehend.

6579. (*Duke of Cambridge.*) Do you think that that force ought to be at the disposal of the Commander-in-chief in England ?—Certainly, as long as it stays here. If there is any doubt upon that point it should be made clear by Act of Parliament. There cannot be any reason why that force should not be at his disposal, and there are many reasons why it should. I should certainly consider that the Secretary for War had the entire disposal of those troops upon any service of emergency within England.

6580. (*Chairman.*) Supposing it was anticipated to raise, say so large a force as 60,000 men for local service in India, do you not think that that might be a matter of great inconvenience to the Secretary for War ?—I think not; there are a good many men who will enlist in the local army who will not enlist in the Queen's; I believe it is a more popular service; I have always understood that it is.

6581. The evidence before us generally is that the recruits for the Indian service are not certainly of a higher character than those who enlist in the Queen's service ?—I apprehend that their is no great deal of difference. I saw a Company's European regiment, and the fault seemed to me to be that they sent them out too young. I could see no other fault. Sir Charles Napier had the highest opinion of the European regiments in the Company's service. In internal organization they are somewhat inferior perhaps from the reason which I have mentioned, namely, that some of their best men are taken away for other duties, but otherwise they are extremely well conducted excellent troops. I made a representation on the subject of the youth of the recruits sent out, because no doubt they frequently did not acquire their full strength, and they were more subject to disease than men three or four years older would have been. Indeed I once had an idea (I am speaking of thirty years back) from seeing how many of the very young men fell victims to the climate, at the time when the force in India was much more limited than it must be now, of filling up the regiments in India by volunteers from the regiments at home, and not sending out any man who was not twenty-five years of age.

6582. (*Duke of Cambridge.*) Would not that be difficult if there were a double army ?—It would be impossible, and the force now required in India will be too large to be so recruited.

6583. (*Chairman.*) Then you think it would be an advantage if the depôts here were on a larger scale, so as to allow the men to attain a greater age before sending them out to India ?—I have no doubt about it. It is cruel to see how many men die on their first arrival, especially the young.

6584. (*Duke of Cambridge.*) You would like to see them thoroughly efficient as soldiers before going out at all ?—It is very desirable. I saw the 9th lancers; 100 men died in that regiment in a year who had never seen the enemy. A good deal of that seemed to me to be in consequence of tight lacing; a great deal of it was apoplexy.

6585. How would you do with the young cadets to be appointed ? Do you think that they should all be first appointed to the depôt in England, or should they go out at once ?—With regard to the officers, I think the sooner they go out the better, because they are more likely to acquire native habits, and to like the country if they go almost as boys to it. They settle down more easily, I think.

6586. But do you think it of importance that they should all be first attached to European troops before they had anything to do with native troops ?—My impression had been the reverse. I fancied it better for those about to command natives that their first service should be with a native regiment. Supposing you are to have no native regiments constituted as they are now, but only irregular corps, then, no doubt, you would not employ any very young officer in an irregular corps. You would have ascertained his capabilities in some European corps before you ventured to send him to a native corps, where any mistake is of such very serious consequence. When I thought of drawing the civil service through the army, I had never contemplated that a man was to be entirely taken away, and put into the civil service; that there should be no power of putting him back to a regiment if he turned out not to be competent. My idea was, that those who were detached for civil service should rise in a sort of skeleton corps, which would make their promotion much less rapid than if they remained with their regiments. I think that the result of the plan which I had in my mind would have been that an officer would have risen to the command of a regiment by the time he was 40. It would then have been always a question with the officer whether it was not better for him to remain in his regiment, and take his chance of promotion there instead of going to the civil service. I think it made sixteen years difference in promotion.

6587. (*Chairman.*) Did you anticipate that after he had been a certain time in the civil service, there should be the power of his returning to his regiment? —That there should always be a power on the part of the Government of sending him back again.

6588. If he had been employed 15 or 16 years on the civil service, would it not be a great disadvantage for him to return ?—I am afraid that that disadvantage is encountered now. A man very often remains absent from his regiment a great length of time, and goes back to command it, knowing nothing about military service. I recollect an instance of an officer of high rank acting in a civil situation, and he had not a military coat, and never had had, I believe, from the time when he landed in India.

The Earl of Ellenborough, G C B

2nd Dec 1858.

6589. (*Duke of Cambridge.*) Assuming that the army is to be a double army quite distinct, how would you regulate the intercourse of the Commander-in-chief in India with the Commander-in-chief at home as regards the moveable regiments of the line, if that officer should happen to be an officer of the local service, and therefore, in fact, not at all under the authority of the Commander-in-chief at home ?—In that case perhaps the business relating to the moveable regiments of the line might be conducted through the senior officer of that portion of the Queen's forces ; or the Commander-in-chief in India, being a local officer, might conduct it through the Adjutant-general of the Queen's moveable army, just as, being a Queen's officer, he has hitherto conducted the business of the local army through the "Adjutant-"general of the army" who has been a Company's officer.

I apprehend, that except as regards the internal economy of the Queen's regiments, the Commander-in-chief in India has been in no respect under the authority of the Commander-in-chief at home. The Queen's army in India has been practically in the position of an allied subsidiary force serving under the direction of the local government. The Company's army has been in the position of a national Indian army, and the Governor-General in council (subject of course to orders from the home Indian authorities), has stood in the same relation to that force in which the Crown stands to the army in England and in the colonies.

6590. (*Major-Gen. Hancock.*) Your lordship is aware that every officer in the local army holds Her Majesty's commission ?—Yes.

6591. Why, then, could not he be placed under the Commander-in-chief in England equally as well as any other officer ?—The whole system of the local army is entirely different from that of the Queen's, there are no promotions in it, they all rise by seniority; the Commander-in-chief has nothing to do with the internal organization of a regiment.

6592. Still, as every officer in the local army holds Her Majesty's commission, what is there to prevent his being placed under the Commander-in-chief in England equally as well as any other officer ?—I do not know why he holds Her Majesty's commission, he never uses it for any purpose. I suppose it is to give him a certain station.

6593. But your lordship is aware that he holds Her Majesty's commission, and that in virtue of that commission he commands Queen's as well as Company's troops in India ?—Yes ; but he has no communication with the Horse Guards.

6594. He has had no communication with the Horse Guards hitherto, because no officer of the local army has ever held the chief command in India ; but it appears to me that, holding the Queen's commission, he might have such communication, if Commander-in-chief in India, just as well as an officer of the line army?—Those are really professional matters.

6595. (*Duke of Cambridge.*) Your lordship contemplates a double army of Europeans, local and of the line, the local army being entirely distinct from the authority, limited though it may be, of the Commander-in-chief at home ?—Yes.

6596. Presuming that a local officer is made Commander-in-chief of the whole of the forces of India, I want to know how, he not being under the authority and never having been under the authority of the Commander-in-chief at home, is to be put in connection with the Commander-in-chief at home in such a case ?—I do not at present see any necessity for his being so.

6597. But as regards the Queen's troops ?—As regards the Queen's troops, I think it would be far better that the senior officer should communicate with the Horse Guards ; the local officer knows nothing at all about the Queen's regiments. The promotions in the Queen's regiments are almost a science of themselves, I believe, I do not pretend to know anything at all about them ; and I should very much doubt whether a local officer would, and he could not advise the Commander-in chief upon the subject.

6598. It would necessitate a double command ?—I think so ; it would merely be a separate command for the transaction of that business, which would not at all affect the operations going on.

6599. You see no objection to it ?—I see none.

6600. There would not be a clashing of authority? —Not the slightest : it could not affect military operations in any way.

6601. Why should there be any inconvenience in the Commander-in-chief at home having that control over the local army which would not interfere with the local army further than keeping it up to the regulation ?—I think the local army would rather be where they are under their own head as they always have been, and I do not see what the Commander-in-chief here has to do with them for the reason which I have stated, namely, that their promotion is all by seniority.

6602. The question has regard to the articles of war and interior discipline, nothing more ?—I see no reason why it should be altered. I should prefer leaving it as it is. You must always recollect that in fact the Governor-General does a great deal there : all the promotions which take place in the Company's army pass through the Governor-General in Council ; that is the case with every appointment ; he does the whole business ; upon the Governor-General in Council is thrown the whole government, which is here divided into a great number of departments. Everything that the Commander-in-chief here does is done by the Governor-General as regards the local army, not as regards the Queen's ; with that he has nothing to do ; it never comes before him.

6603. As regards the interior economy and the European discipline of regiments, which I think your lordship will admit is of considerable importance in a professional point of view, do you not think that the Governor-General is hardly the person who can carry that on efficiently, that is to say, that it would be out of his province ?—The interior discipline of the regiments is with the Commander-in-chief in India, he looks after that, he would make a representation if anything was to be done by the Governor-General ; but there is not a single appointment which does not pass through the Governor-General in Council.

6604. Would it not be still an advantage that all the European force should be under one code, and that therefore that code should be administered by one head, and that head the Commander-in-chief at home, to that extent only ?—I cannot take upon myself to say so ; I think it would be desirable that the code should be the same ; I think it would never do to punish two men serving together in a different way for the same offence.

6605. (*Chairman.*) This local army is equally a Queen's army with the other ?—No doubt ; it is as much a Queen's army as the marines. The marines never come under the notice of the Commander-in-chief.

6606. (*Duke of Cambridge.*) When they serve ashore they do ?—They are much more under the Admiralty than they are under the Commander-in-chief. The ordnance used to be under a separate officer altogether. I rather think that all the military force which does not consist of regular troops of the line is under the Home Department ; the Home Department here has a great deal of power. I believe your Royal Highness cannot move any troops without the knowledge of the Home Department.

6607. I do not assume any power at all ; I am only speaking of the internal regulation and economy of regiments which, as a military man, I certainly should think would be better conducted under one system than under two. I want to know whether there would be any objection to that, without any reference to other interference of a local character, which naturally could never take place, and which indeed cannot, as your lordship states, take place even at home, for the

Secretaries of State are responsible for their different departments ?—The Commander-in-chief in India, who I believe always has been a Queen's officer, has full authority as regards the internal discipline of the local army, both native and European ; all the courts-martial go to him.

6608. There is no difficulty as long as he is a Queen's officer, but suppose he is a local officer, will there not be a difficulty ?—The case has never occurred, and I am not at all aware whether or not there would be a difficulty. There is at the present moment a Commander-in-chief at Madras, who is a Company's officer, whether that has led to any inconvenience or not I am not aware.

6609. It has not, because he is under the Commander-in-chief of India as regards Queen's troops, therefore he is under the authority of a Queen's officer ?—I should mention that my view always had been that it would be desirable that the Governor-General should be captain-general and head of the army ; Lord Wellesley was so. The great difficulties have never occurred which might by possibility have occurred, but nothing would be so serious as any practical clashing of authority in India between the Commander-in-chief and the Governor-General ; and with a view to the possibility of any such difficulty I always thought that the Governor-General should have in his pocket the commission of captain-general.

6610. (*Lord Stanley.*) Do you think that you would find men of eminence, who, in addition to the civil administration of a great empire, would take upon themselves the command-in-chief of a great army ?—There have been cases in which a general officer has been Governor-General and Commander-in-chief at the same time. Lord Hastings was so. There may have been others. Lord William Bentinck was so. Lord Wellesley never interfered in the slightest degree in the internal details of the management of the army ; they were left entirely to the Commander-in-chief, to Lord Lake ; but I rather think that the courts-martial used to be sent to Lord Wellesley. I have heard that they were.

6611. (*Duke of Cambridge.*) Do you think that the courts-martial should hereafter go to the Secretary of State or to the Commander-in-chief ?—I think that all matters relating to the Indian army should go to the Secretary of State ; such, for instance, as an application for a revision of punishment, or for a restoration. All those things came before the Board of Control when I was there.

6612. (*Viscount Melville.*) Do you mean for the Queen's army ?—No, for the Company's army ; I used always to communicate with the Duke of Wellington with respect to those matters.

6613. (*Duke of Cambridge.*) Do you think that it is a desirable thing to have the means of communication with the Commander-in-chief ?—The reason of my communicating with the Duke of Wellington was not because he was Commander-in-chief, but because he was prime minister, and because he knew a great deal better than anybody else.

6614. (*Lord Stanley.*) Is there any doubt that if points of military discipline arose the Secretary of State would think it his duty to consult the Commander-in-chief ?—He would always go to the best advice that he could.

6615. (*Duke of Cambridge.*) You think that that would be desirable ?—Yes, of course he would do so. I cannot imagine a man not doing it. I recollect one very useful piece of advice which the Duke of Wellington gave me with respect to these courts-martial. When it was suggested that an officer should be restored, he said, " Never forgive drunkenness." I never did ; I never sent back any man, or relaxed the punishment of any man who had been drunk.

6616. You are of opinion then that a certain intercourse on military and technical points alone should be carried on between whoever is Secretary of State for India and the highest military authority ?—No doubt about it. There must be frequent communication. There always was such communication between the President of the Board of Control and the officer at the head of the army.

6617. You would not think it advisable that any great organic change should be made in the armies of India as regards the European portion of them, which had not been determined upon in concert and after due deliberation with the highest military authorities in England ?—I would not establish any legal restriction ; but I would regard it as a matter of course that every man in a public office does what he considers best for the public service, and he could not carry on the service well unless he communicated in that way.

6618. Might it not lead to very great difficulties on the spot, if an organisation was adopted for the one which was not extended to the other. Take the case of a warrant. Suppose that a new warrant was introduced into the local army which was not adopted in the Queen's army, the relative position of officers might be very considerably changed by it, and it might work very unfavourably towards one service or the other. That would be a great disadvantage, would it not ?—I apprehend that now no such thing would be allowed, that both armies belonging to the Queen, both being European, in any such case as that, the warrant would be made applicable to both armies. I cannot conceive it possible that the Secretary of State and the Commander-in-chief should not always communicate, and act together.

6619. Then practically as far as any home questions are concerned the Commander-in-chief would to a certain extent be taken into council, though not by any law or regulation, but by the necessities of political daily life ?—I should think so. I should object to a law, for I think it might lead to embarrassment. All these things have been conducted hitherto without any inconvenience for the benefit of the public service.

6620. (*Major-Gen. Hancock.*) With reference to the doubt which your lordship has expressed of an officer of the local army being able efficiently to conduct the duties of the chief command in India with respect to the troops of the line, you are aware that, consequently on the abolition of the East India Company, the officers of the local army will henceforth hold only one commission, namely, the Queen's commission ?—Yes.

6621. Do you see any reason why any officer of the local army who may hereafter be appointed to the chief command in India should not be able to conduct the duties with respect to the troops of the line fully as well as an officer of the line army, appointed to that command, would be able to conduct the duties with respect to the local troops, European and native ?—As I have mentioned, the constitution of the two armies is totally different, one rising by seniority, and the other in a different manner. The officer in command of the Queen's troops in India has had nothing to do but to deal with the discipline of the regiment. The local officer would, I think, be very much embarrassed, if he had to deal with questions of promotion and all those other matters which are now transacted between the Commander-in-chief and the home authorities ; he would not know anything at all about them ; it would embarrass him, and occupy a great deal of his time in consequence of his not being acquainted from early youth with the machinery of the Queen's army, which no one, I believe, who has not entered very early knows at all.

6622. (*Chairman.*) I take for granted that you consider that Her Majesty's prerogative with regard to the one army would be entirely the same as with regard to the other ?—No doubt of it.

6623. (*Sir H. G. W. Smith.*) You advocate a considerable European local force ; who do you propose should organise and command that force ?—The Commander-in-chief in India. I should desire that all the troops sent out to India for the local army should be retained as long as possible here in order to make

The Earl of Ellenborough, G.C.B.

2nd Dec 1858.

them good troops, and that they should not be sent out very young, so that when they arrived they should be fit for any service.

6624. Then they should be organised in England?—As far as possible, and when they arrived they should be entirely under the command of the officer commanding in-chief.

6625. Your lordship has intimated that there is some danger in a considerable body of Europeans being so far distant from England as India. Do you not think that if any danger of that sort is to be apprehended, it is much more to be apprehended from a large body of troops invariably local than from a large body of troops of Her Majesty constantly being relieved and imbibing English notions?—But in point of fact they are not relieved, and do not imbibe English notions. There is the 10th regiment which, I believe, is ordered home; there is not one man in that regiment who went out with it. They exhaust themselves in about ten years, and if the regiments remain, as many of them do, for a longer period, in point of fact there is an end of them.

6626. (*Duke of Cambridge.*) Your lordship will admit probably that one of the great beauties of the British army is the *esprit de corps* of that army?—Yes.

6627. Do you not think that that is much more maintained by the prospect of relief even if distant than if a corps is doomed to one locality?—I am not aware. If a man is once sent to India he passes a very great portion of his life there.

6628. (*Chairman.*) What do you suppose that the power exercised by the Commander-in-chief here over that portion of the army which has been located in India has been hitherto?—Nothing whatever. I am not aware of any sort of communication between them. I believe I had occasionally the opportunity of sending to the Horse Guards information with respect to Queen's regiments with which they were not already provided.

6629. (*Duke of Cambridge.*) You are aware that with the exception of the interior economy and discipline of the regiments with regard to regulation and promotion, there is no intercourse between the Commander-in-chief here and the Commander-in-chief in India?—No.

6630. (*Col. Burlton.*) No inconvenience has arisen from that system hitherto?—No, no one could tell who was Queen's officer and who was Company's officer.

6631. Then you see no reason why an alteration should be made in that respect?—No, unless recent events have made an alteration necessary.

6632. (*Sir Geo. A. Wetherall.*) The local army being as much under the Crown as the moveable portion, would you have it recruited as now under the orders of the East India House or of the Commander-in-chief?—I would keep the recruiting quite distinct. There is an officer who would give excellent information to the Commission if they desired it with regard to the recruiting for the East India Company's service, namely Col. Thompson, who is at Cork; he is a very able officer, and he has been there a good many years. Col. Thompson raises the recruits there.

6633. (*Duke of Cambridge.*) Is there any reason why, in former Acts of Parliament the number of Europeans of the Company's service was limited?—I suppose that there was some little jealousy upon the subject, but I am not at all aware of the reason. I thought at the time that they had rather more than they need have.

6634. Then your reason for modifying your opinions as regards the relative proportions of local troops and troops of the line has been in consequence of recent circumstances?—Entirely.

6635. In what respect do you think that those circumstances bear on this great increase?—They make it necessary to have so very much larger an army there than we had there before. I assume that 70 battalions will be required; of course it is impossible to say exactly what the number shall be; hitherto there have been twenty-four usually of the Queen's and until very recently only six of the Company's; thirty was the total number. There will therefore be required forty battalions more than we had before, besides a great increase in cavalry and artillery. The army, I should think, would be tripled in effective force.

6636. (*Major-Gen. Hancock.*) If the officers of the local army be held eligible in future for appointment to the chief command in India, are you not of opinion that there will always be officers in that army who will qualify themselves in every respect for conducting the duties with respect to the troops of the line?—They have always been eligible at all times; the Queen could at any time make a Company's officer Commander-in-chief in India.

6637. Do you not think that officers of the local army would fully qualify themselves for conducting the duties of Commander-in-chief of India with respect to troops of the line, if held eligible for that appointment?—Indeed I do not. I think they would consider it such a very unlikely thing that they should get that appointment, that I doubt very much whether they would give themselves any trouble upon the subject.

6638. (*Sir G. A. Wetherall.*) You have said that the reserve of the local force for India, of 4,000 or 5,000 men, or whatever the number might be, should be disposed of while in England for any purposes in the United Kingdom. Under whose orders would they be placed while they were here?—While in this country they must be under the same orders as those under which the Queen's army is placed, and I think it would be highly desirable to take authority to that effect in the ensuing session of Parliament. I believe there is ground for the doubt which has been expressed, whether at the present time they could be so employed.

6639. Then you would give the Commander-in-chief power over the depôts at Warley, or wherever they might be?—I think certainly they should be disposed of wherever they were wanted. For instance supposing there were an invasion, it would be perfectly monstrous to imagine that 4,000 or 5,000 men were not to be moved. I see no reason for maintaining a separate authority for the India House as to that matter. In point of fact, it would be an understood thing between the departments; but the Act, if passed, would be extending the service of these men who are now engaged for the purpose of being disciplined here, and serving in India. I, under certain circumstances, would require them to serve here; it would only be, I apprehend, in case of invasion, or any outbreak, quite in a case of emergency.

6640. (*Lord Stanley.*) Would it not be within the power of the Secretary of State, by orders sent to the commanding officer at Warley, in such a case of emergency as you speak of, to place any force there at the disposal of the Commander-in-chief?—I should think not. I should not think it advisable to leave that question unsettled by law.

6641. (*Chairman.*) Would not it become more necessary in proportion to the number to which you increased the local army in India?—No doubt about it. If the number of recruits here formerly was 4,000, which was in the proportion of 4 to 24, and if the strength of the army was raised, there might be a reserve of 8,000 or 10,000 men there by possibility.

6642. (*Sir G. A. Wetherall.*) Under whose superintendence would their discipline be carried on?—I apprehend it is now under the authority of the Council of India; there is no reason why it should not be so. The only case in which it would be necessary to use them, would be on an emergency, but there ought to be a legal power to do so; I think, especially in the case of riot, that it would be a most serious inconvenience to have a doubt whether those men could be legally moved or not.

6643. (*Lord Stanley.*) Then you do not propose to transfer Warley from one department to another, but merely to take power for the Secretary of State to

The Earl of Ellenborough, G C B

2nd Dec 1858.

transfer the force there into the hands of the Commander-in-chief in case of emergency ?—Yes.

6644. (*Chairman.*) I take for granted that you would have the same bounty and advantages given to the soldiers of both forces on recruiting, or you would have two systems of recruiting going on at the same time, bidding one against the other, which would be, of course, very inconvenient ?—I think the bounty ought to be the same ; I do not think the standard has always been the same. There is a difference as to the pensions between the two services, and I believe a very marked one ; my impression is, that the Queen's service is better off than the Company's, as regards pensions. I know that I have had a great many complaints from men who have been dismissed from the Company's service without pensions ; and it occurred to me that if they had been in the Queen's service they would have had something, when they got nothing in the Company's service.

6645. (*Sir H. G. W. Smith.*) With your military knowledge you are aware of the axiom, never to carry on two wars by the same Government. Upon the same principle, do you not think it impossible to carry on two recruiting systems in the same country ?—Not if you have the same bounty. You have now a very large recruiting for the marines.

6646. (*Duke of Cambridge.*) The marines have great advantages over the line ?—It is a different thing altogether. The marines of late have got up to their establishment, formerly they never were so.

6647. They are much better off than men of the line ?—I rather think that the concession has been made to them which I wanted and endeavoured to gain for them 12 years ago—something with regard to pension or pay.

6648. (*Sir H. G. W. Smith.*) You have said that there would be probably 10,000 men at one period as recruits in reserve for India ?—It is a possible thing.

6649. How is it possible that those 10,000 recruits can be under any other authority than that of the Commander-in-chief, organized by him, officered by him, and sent out to India ?—I see no necessity for organization or officering, or anything of the kind. I would leave them just as they are now. I never heard of any confusion, they go on very quietly.

6650. (*Duke of Cambridge.*) Would more organization be required for 10,000 men than for 1,200 or 2,000 ?—I am not aware that there is any practical interference ; they are under their own officers there. I suppose they would be under the authority of the officer in superior command at Chatham if sent there. If what I desired had been carried out, it would have been absolutely necessary to come to some new arrangement, because Warley could not hold 10,000 men. The East India Company raised a number of men this year. They did their duty very fairly. They recruited in proportion to their establishment quite as well as the Queen's service. I forget the exact number, but it was a large number.

6651. (*Col. Burlton.*) One of the reasons which your lordship has given for advocating two armies, one local and the other of the line, is, that in the event of any mutinous disposition being manifested, whether in the line or the local army, the Government might rely upon the support of the other. Your lordship has mentioned one instance in which the Queen's troops were brought to bear upon an unsatisfactory state of affairs in the Madras presidency nearly 50 years ago ?—I am not aware that there was any collision.

6652. Does your lordship happen to remember an instance in which one of the Queen's regiments in a mutinous state was compelled to lay down its arms by the troops of the East India Company, and was brought as prisoners in boats down the Ganges from one station to the other ?—I am not aware of it.

6653. Your lordship probably recollects a case in which one of His Majesty's regiments being in a very unsatisfactory state in consequence, as was supposed, of disaffection towards the commanding officer, advanced to the breach of a certain hill fort, and then refused to go on, thereby endangering the life of a most distinguished officer ?—I was not aware of it. Before this revolution, (mutiny, I cannot call it,) the Government of India might have depended upon every native soldier against the Queen's army or against the Europeans, every man would have stood by the Government.

6654. (*Duke of Cambridge.*) The same feeling existing among the local Europeans and the native army of India, which would be one and the same body, would not it produce a very great preponderance of weight on the side of the local army against the army of the line ?—They would not be absolutely equal, but very nearly equal, supposing the numbers of the cavalry, infantry, and artillery to be nearly equal, there might be some little superiority in the number of the local officers employed with the irregular corps, but it would not be very large.

6655. The whole native army of India would be on the side of the local army ; I am talking of the European officers ?—That would not be so, because I assume that the Queen's officers would be eligible to command the native corps, and as they acquired the native languages they would obtain those commands.

6656. Does not your lordship take into account the regular native regiments which have been largely officered hitherto ?—But there would be no regular native regiments, or not above five, I think. I cannot imagine that any new native regiment would be created, and there are not above five which can be said to be in existence in the Bengal army.

6657. In the event of there being a proportion, say 20 or 25 regiments, or whatever the number might be, established upon the old system of European officers, would not that induce your lordship to think that it would be giving a preponderating element to the local army compared with the army of the line ?—I think it would, if there was to be a new native army officered as the old native army was, and of course, under the same conditions as the local European force, it would lead me to modify that opinion which I have expressed as to the necessity of perfect equality between the two European forces, and a portion of the local European force would be in that case taken away; but I do not apprehend that that state of things will exist in Bengal certainly.

6658. (*Chairman.*) If there are now 300,000 native troops and police, do you not imagine that there is some danger to be apprehended from that amount of force ?—The police would not be very different from the irregular corps ; there would be rather fewer officers. I apprehend that the police will have, probably, one officer for 800 or 900 men, that was the police which I was establishing ; you cannot find sufficient officers to have more, it would be desirable if you could ; therefore, it would be an inferior sort of irregular corps, and the Queen's officers might be appointed to it just as well as the local officers.

6659. (*Major-Gen. Hancock.*) Does your lordship contemplate prospectively converting the regular native regiments of Bombay and Madras also into irregular corps ?—I know nothing of the native regiments of Bombay and Madras, and I cannot pretend to speak upon the point ; but I would alter as little as possible. I would leave all things standing which I could leave standing. In Bengal you are obliged to imagine a new system because the old one is all gone.

6660. (*Duke of Cambridge.*) Then you would not extend to Madras and Bombay any large increase of European local troops ?—No ; I see no necessity for it. There would not be a large increase of European troops. I would follow the same principle there, I think, as I would elsewhere. The Queen's troops do not always remain there. They are moved about from Madras to Bengal, and so on. They do not always remain in the presidency to which they are originally sent.

6661. (*Viscount Melville.*) The local Europeans do generally ?—They occasionally move them about from one to the other.

The Earl of Ellenborough, G C B

2nd Dec 1858.

6662. (*Duke of Cambridge.*) I thought that the Bombay Europeans were only employed in Bombay, and those of Madras in Madras, excepting as now, in a case of emergency ?—Yes ; the local Europeans are so, but the Queen's are more moveable.

6663. Would you increase the European local troops of Madras and Bombay ?—I should like to know what was to be done with the native armies of Madras and Bombay. If those armies remained upon the same principle as now, I should adhere to my former opinion, and would not in the same way increase the European corps in the Bombay and Madras presidencies. I want a balance.

6664. Your lordship's opinion goes to the one side being counterbalanced by the other, and you would be sorry to see either party overbalance the other ? —I think a balance highly desirable.

6665. (*Major-Gen. Hancock.*) Assuming that the permanent European force in India will be maintained at a much greater strength than heretofore, I conclude that your lordship contemplates a considerable reduction being made in the native armies of the three presidencies ?—No doubt ; I have said that I should consider two native regiments for one European the utmost limit to which it would be desirable to go, and I am not at all certain that it would be necessary even to go to that extent, except for purposes of war. Military men can speak on that point better than I can, but I think that a European corps requires two native corps with it, that there are so many guards to be taken that there would not be much more than one regiment actually disposable to go into the field by the side of the European regiment.

6666. You are aware that it is usual to calculate three native regiments ? — That has been because there were so few Europeans, but what I considered right was to have a European regiment and a native regiment on each flank ; if you had a third regiment, that third regiment would take the guards, and it would give you effective for the field two native regiments for one European, and if they were kept together and on service those native regiments would become nearly equal to the Europeans ; when they have been long acting together the native will go wherever the European goes, he will do exactly the same thing.

6667. Do you contemplate the police being armed in the same way, and having the same military training as the troops of the line ?—Not the same military training ; a very inferior military training, and very inferior arms, so as not to be exposed to much danger from them.

6668. (*Duke of Cambridge.*) Would you give them a musket or only a pistol ; would you give them firearms ?—Certainly.

6669. (*Col. Forsyth Tait.*) The old musket ?—Some old flint musket, perhaps, would do for them.

6670. (*Duke of Cambridge.*) More as a defence to the person than anything else?—Yes. Nothing could be more wretched than what they were ; they cost an enormous sum ; there were as many men, civilians, in the service of the Government as there were soldiers, and, as a military body, they were utterly useless ; they plundered the people, and did no good.

6671. (*Major-Gen. Hancock.*) Would you have the police placed upon the same footing as men of the line, with regard to pay and pensions ?—No. I established some battalions of police, eight or nine of them ; I was beginning and intended to carry it throughout India. I found that by having a more efficient police I could dispense with a large portion of those who had been formerly employed, and I gave a better pay ; I think I gave four or five rupees. I know that by reducing the numbers the increase of charge was very small ; there was a great increase of efficiency and a very small increase of charge, and I, on one occasion, obtained this great convenience :—A regiment was disbanded for mutiny, and in the course of three weeks I had a new regiment taken by drafts from the battalions of police; it was called the service battalion, and it was just as good a battalion as any other.

6672. You have expressed your opinion that the large addition which it will be necessary to make to the permanent European force in India will enable the Government considerably to reduce the native armies of the three presidencies. If the population generally be disarmed throughout the country, the Government will be enabled still further to reduce the native armies, will it not ?—I cannot venture to say what will be the state of India ; we do not see daylight at all ; I think it is impossible to look forward. When I say that seventy battalions are required, I suppose that there is a certain degree of settlement. It is impossible to say, with precision, what shall be done, I think.

6673. Your lordship is aware that hitherto the Commanders-in-chief at Madras and Bombay have held independent commands as regards the European local troops as well as the native armies of those presidencies ?—Yes.

6674. Would you recommend that that system be continued, or would you put the local European and native troops of Madras and Bombay under the immediate authority of the Commander-in-chief of India ? —They should be, to a certain degree, under the command of the Commander-in-chief of India, because I recollect one instance in which a senior officer being in command at one of the presidencies, thought it necessary to resign when a junior officer was the Commander-in-chief. The communication between them is very small, I believe, but there is some subordination.

6675. But you are aware that practically the Commander-in-chief in India never has interfered with the discipline and government of the local armies of Madras and Bombay ?—He has not interfered practically, but still there was that case. Sir Willoughby Cotton resigned the command at Bombay because Sir Charles Napier, a junior officer, was then Commander-in-chief in India, although, no doubt, communication between them could scarcely ever have existed.

6676. But there was this difference, that Sir Willoughby Cotton was only ieutenant-general commanding the Queen's troops at Bombay, and it was solely in that respect that he was under the Commander-in-chief in India ?—Yes.

6677. Then it was with reference to the supersession in the command of the Queen's troops, and not that of the local army of Bombay, over which the Commander-in-chief in India never has exercised any authority, that the resignation took place ?—Just so ; but I apprehend that the Commander-in-chief has scarcely ever occasion to give any direction to one of the local Commanders-in-chief. I can hardly imagine a case in which it would occur, unless the two armies were acting together on service, and it is not a very likely thing that the two Commanders-in-chief would be in the field.

6678. If I mistake not, the warrants of the Commanders-in-chief in India formerly gave them power to interfere with the commands at Bombay and Madras only in the event of their being personally present within those presidencies ?—I am not aware. That, of course, would be the case, if the Commander-in-chief in India went to Madras or Bombay, as he did formerly to Seringapatam. In that case, of course he must take the personal command of the whole army.

6679. Your lordship has expressed a very strong opinion that with a view to obviate all ill feeling between the officers of the line and local armies, both should henceforth be placed upon a perfect equality ; you have also, I think, stated your opinion that with respect to the staff and civil appointments in India, officers of the line should henceforth have an equal share in proportion to numbers with those of the local army ?—No; not an equal share in proportion to numbers ; that would put an end altogether to my principle. My principle is that the

The Earl of Ellenborough, *G C B*

2nd Dec 1858

Governor-General should be at liberty to take the ablest men he could find anywhere—that they should be eligible, but have no rights.

6680. (*Lord Stanley.*) You do not admit in short the right on the part of any set of men to say, "Here " is a certain proportion of these appointments to be " set aside for us ?"—No, it is contrary to reason.

6681. (*Major-Gen. Hancock.*) The opinion which you have expressed, if I understand your lordship, amounts to this, that without laying down any definite rule, you advocate the adoption of the system of equal favour to the officers of both armies ?—Certainly ; favour to nothing but the public ; that is my principle.

6682. Upon that principle there is one point which I wish to bring to your lordship's attention, and to ask your opinion upon. As the officers of the line in India will have the advantages of being able to exchange into regiments at home, and of having commands and appointments open to them in England and the colonies from which the officers of the local army will be altogether excluded, do you not think that those advantages ought to be taken into consideration in determining their fair proportionate participation in the appointments in India ?—No, I do not. As long as officers of the line remain in India they have the same advantages as the officers of the local army. They are all equal. As soon as they leave India they are a different body altogether. India has nothing to do with them. I would not diminish the advantages in India while they are doing the same service, because they have other advantages when performing another service in a different place. I do not think it would be fair.

6683. (*Chairman.*) The only advantage which they have in India is that they are eligible if they are the best men ?—Yes.

6684. (*Major-Gen. Hancock.*) Have the European artillery and infantry of the East India Company's army been found in any respect inferior as regards efficiency for service in the field to the artillery and infantry of the line army ?—As far as I am aware, never—I believe not ; all commanders-in-chief have spoken in admiration of the artillery. They have said that they have never seen any artillery superior to that of the Company.

6685. Have the officers on the staff of the army in India, and belonging to the East India Company's forces, been found in any respect inferior, as regards efficiency for service in the field, to the officers on the staff of Her Majesty's army, whether in Europe or Asia ?—Not that I am aware of. They have had greater advantages. The officers of the Company's army have acquired a much more extensive knowledge in fact. The probability is, that in former times till this great revolution took place, the officers of the Company's army would have been, as soldiers, superior to the officers of the Queen's army. They had seen a great deal more ; they had more enlarged minds, because they had a great deal more to do.

6686. (*Duke of Cambridge.*) It would be an immense disadvantage to the army of the line if they had not the opportunity of the field of India as well as the local army, and the State would suffer by it ?—It would be an enormous disadvantage. It is the greatest field for soldiers that ever existed in the world.

6687. It would therefore be a great detriment to the State if the general army of the country were debarred that field ?—A very great disadvantage ; and I think that it is a very great advantage that circumstances should lead to the employment, notwithstanding the expense, of a portion of the Queen's artillery, and likewise of a much larger portion of the Queen's cavalry. The fact is, that we are learning war, and teaching it to all the world ; there is not a doubt about it.

6688. (*Major-Gen. Hancock.*) Have the European officers and soldiers of the East India Company's army ever failed to uphold equally with those of the royal army the honour of their Queen and country when employed in the field ?—I believe not. The European regiments in the Company's service have noble records of their achievements. I believe they have done their duty as well as any troops ever did.

6689. (*Viscount Melville.*) Do you think that any European army in India ever equalled or came near the Peninsular army, either in movement, or fighting, or anything else ?—I do ; and I do so because the Duke of Wellington told me that the English army in India came nearer his idea of what the Roman legions were than any troops which he had ever seen in his life. I recollect particularly his saying so, and I do not think that he confined his remark to the Europeans, but that as an army there was no army superior to the English army in India.

6690. (*Chairman.*) Of what period was he speaking ?—He was speaking of what he knew when he was there.

6691. (*Major-Gen. Hancock.*) Your lordship may recollect, perhaps, that the late Duke of Wellington in his place in Parliament gave very strong testimony, so far as his opinion went, to the admirable state of efficiency in which the Bombay division under the command of Lord Melville arrived at Mooltan in 1848, as shown in the fact of those troops having on the very next day taken their place in the line, and carried some of the works which defended the city, and stated that he mentioned that fact as one of the remarkable circumstances of the campaign ?—I do not remember it.

6692. I think your lordship will admit that we may safely take as a test of the efficiency and discipline of an army, the state in which the troops are brought into line in the field ?—I conclude so. I apprehend that no army has ever done more, and perhaps never so much, as our army has done in the last eighteen months—nothing like it.

6693. I imagine you consider that the perfect fitness of the officer at the head of an army is the very foundation of its efficiency and discipline ?—No doubt about it. If you look at the Duke of Wellington's despatches, you will see clearly that no man but he could have done what he did, in India especially ; he was at the head of every department, he was his own commissary-general and his own quartermaster-general, he did everything himself.

His Lordship withdrew.

Maj.-Gen Sir C. Yorke, *K C B*

Major-General Sir Charles Yorke, K.C.B., Military Secretary to the General Commanding-in-Chief, examined.

6694. (*Chairman.*) What are the powers possessed and exercised by the Commander-in-chief in England over the Commander-in-chief in India as regards that portion of the troops which have hitherto been the Queen's troops ?—It has respect to all matters of discipline, and in regard to promotions. I think it is very much confined to that.

6695. There has never been the slightest interference with regard to the movement of troops ?—Certainly not.

6696. (*Lord Stanley.*) You say it has respect to all questions relating to discipline. What is the course of proceeding on such occasions ; a court-martial of course decides upon the spot ?—It does. The Commander-in-chief in India has the power of approving of general courts-martial, even to the dismissal or cashiering of officers, and the power of life and death. The proceedings of general courts-martial on officers are always sent home to the judge-advocate-general in England, and he lays them before the Commander-in-chief, and makes any observations upon the case which he thinks it desirable to submit.

Maj.-Gen. Sir C Yorke, K C B

2nd Dec. 1858.

6697. (*Duke of Cambridge.*) And those observations of the judge-advocate-general are communicated to India ?—Yes, whenever there is any irregularity; anything which affects discipline, or to which it is desirable to draw the attention of the Commander-in-chief in India. A copy is sent to him.

6698. (*Lord Stanley.*) As regards the case of an officer who is tried by a court-martial, if he is acquitted on the spot of course there is an end of the matter ?—Yes.

6699. If he is condemned by the sentence of the court-martial, the sentence is, I presume, put in force by the Commander-in-chief on the spot ?—It is.

6700. Is that sentence altered or not by the Commander-in-chief here ?—Certainly not.

6701. There is no power of altering it ?—The Queen has the power, on grounds being shown to warrant it, to remit the sentence, or, as far as the articles of war authorize an interference, to interfere with the sentence of a court-martial; that power is not lost.

6702. But practically the power is never exercised? —I would scarcely say that. I do not remember any case, certainly, since I have been in the office where it has been exercised.

6703. As regards the case of an individual officer who is tried by court-martial in India, his case is decided upon on the spot ?—It is.

6704. And it is considered in practice to be finally decided upon on the spot?—It is considered in practice to be final; if there is any reason, when the proceedings of the court-martial are sent to England, to induce the judge-advocate-general or the Commander-in-chief to think that there are any grounds in favour of the prisoner, it does not prevent those grounds being considered, and his having the benefit of them.

6705. (*Duke of Cambridge.*) But it is only an informality, in fact, which would be noticed ?—Only an informality.

6706. (*Lord Stanley.*) Then in practice the interference of the Commander-in-chief here with the discipline of the Queen's troops in India limits itself to this, that he either on the recommendation of the judge-advocate-general, or on his own account, makes any comments upon sentences which have been passed and acted upon, which may seem to him fit for the future regulation of discipline ?—For the future regulation of discipline. If ground were shown that a sentence was irregular or disproportionately severe, or anything of that sort, the Queen's power would still remain to do justice in the case.

6707. (*Chairman.*) If a court-martial takes place in this country the Queen's pleasure is taken upon it before the sentence is carried into effect ?—Certainly.

6708. Is that the case when it is transmitted from India ?—No, the Commander-in-chief on the spot approves of it.

6709. (*Duke of Cambridge.*) The Commander-in-chief on the spot has virtually more power in that respect than the Commander-in-chief at home, inasmuch as he can confirm when the Commander-in-chief at home cannot confirm ?—Just so.

6710. (*Lord Stanley.*) Will you explain to us in what respect, as regards the discipline of the Queen's troops in India, the power of the Commander-in-chief here is more than nominal ?—He receives all reports from the Commander-in-chief in India, and if he thought that there were irregularities going on, that the Queen's regulations were violated, or anything of that sort, he would certainly draw the attention of the Commander-in-chief in India to it, and request that it might not occur again.

6711. (*Duke of Cambridge.*) In fact, he would draw the attention of the Commander-in-chief, would he not, to any deviation from the Queen's regulations ?—Certainly.

6712. And by that means would maintain the same system of discipline for the Queen's European troops in India as exists in any other portion of Her Majesty's dominins ?—Exactly so.

6713. (*Lord Stanley.*) Would he give any direct order to the Commander-in-chief in India, or would it be regarded merely in the form of a recommendation or an admonition ?—If he found it necessary to give a direct order to prevent a violation of the Queen's regulations, he certainly would do so.

6714. (*Duke of Cambridge.*) And that only ?—Yes; to see that the regulations of the service were carried out.

6715. (*Chairman.*) Are any orders issued direct from the Commander-in-chief here to the army in India without coming in the name of the Commander-in-chief there ?—Certainly not.

6716. (*Duke of Cambridge.*) In your experience at the Horse Guards you are not aware of any direct orders excepting on matters of discipline and regular regimental promotion having ever been sent to India from the Commander-in-chief here ?—Certainly not since I have been at the Horse Guards.

6717. In that respect there is a direct communication to the Commander-in-chief ?—Yes.

6718. But in none other ?—In none other.

6719. (*Major-Gen. Hancock.*) The authority of the Commander-in-chief in England extends to all matters referred to in what are called the army regulations ?—Yes; to see that those are carried out.

6720. Have the Commanders-in-chief at Bombay and Madras had the power of confirming sentences of capital punishment ?—No; only the Commander-in-chief in India.

6721. They have never had that power that you are aware of ?—Not that I am aware of.

6722. (*Col. Burlton.*) You are aware that the Governor-General in Council must concur before the capital execution of a soldier can take place in India? —Yes; but the Governor-General confirms the sentence of the court-martial.

6723. (*Lord Stanley.*) You say that the interference of the Commander-in-chief here with the discipline of the Queen's troops in India is to enforce the observance of the regulations of the service ?—Yes.

6724. Is there any power vested in him of altering those regulations ?—No; Her Majesty alone alters them.

6725-7. It is done by the authority of the Crown, with the concurrence of the Secretary of State for War ?—Yes.

The witness withdrew.

Adjourned to to-morrow at 11 o'clock.

Friday, 3rd December 1858.

PRESENT :

Major-General PEEL.	Lieut.-Gen. Sir GEORGE A. WETHERALL.
H.R.H. the Duke of CAMBRIDGE.	Major-Gen. MONTGOMERIE.
Marquess of TWEEDDALE.	Major-Gen. HANCOCK.
Viscount MELVILLE.	Col. BURLTON.
Lieut.-Gen. Sir HARRY G. W. SMITH.	Col. FORSYTH TAIT.

MAJOR-GENERAL PEEL IN THE CHAIR.

EDWARD FRANCIS ELLIOT, Esq. examined.

E F Elliot, Esq

3rd Dec 1858

6728. (*Chairman.*) You were formerly in the royal engineers ?—Yes.

6729. And you have been employed at the head of the police at Madras ?—For many years.

6730. For how many years ?—I was 38 years in the police at Madras, and 19 of them at the head of it.

6731. (*Marquess of Tweeddale.*) What other situation did you hold? What were your duties ?—I held also an appointment in a civil court, that of head Commissioner of the Court of Small Causes at Madras.

6732. (*Chairman.*) Will you be so good as to give the Commission any information in your power respecting the formation and organization of the police in India ?—I have come quite unprepared. I was not aware that I was about to be examined. I got the Secretary's letter only on Tuesday morning. I was in France at the time, and I came over immediately, being told that my attendance would be required on Wednesday.

6733. (*Marquess of Tweeddale.*) Although you have not had an opportunity of bringing home your papers, you will have no difficulty in answering any questions ?—I do not expect that I shall have much difficulty.

6734. (*Chairman.*) Will you have the goodness to proceed to give us any information that you can upon the organization of the police ?—My duties were with the police of the town of Madras ; I had nothing to do with the rural police.

6735. (*Col. Burlton.*) Had that Madras police any military organization ?—None whatever, it was purely civil.

6736. (*Chairman.*) Will you state what its organization was, and the duties performed by that police ?—They were as nearly as possible what the duties of the police are in London.

6737. (*Marquess of Tweeddale.*) Have you had any means of comparing the duties of the police in India with the duties of the police in other parts of the world ?—Yes. In 1846 I was sent home under the Government of your Lordship, and did duty in London for two or three months; and from thence was sent to Ireland, where I remained for two months, and where I had an opportunity of seeing the complete working of the constabulary under Sir Duncan McGregor, who gave me every facility.

6738. (*Major-Gen. Hancock.*) Have you formed any opinion with respect to the general system of police which it will be desirable to establish throughout India in future ?—It is upon that point that I should wish to speak. In 1838, when India was extremely disturbed, just about the time of the Affghanistan war, when it was overrun by emissaries of all kinds, I sent up certain suggestions to Government for a more efficient system of police. Those notes were sent to Bengal ; they were afterwards acted upon to a certain degree in the north-west, but never in our part of India, because there was always the financial difficulty to be overcome, how it was to be paid. Within the last four or five years the Madras Government has urged upon the supreme Government the absolute necessity of doing something to obtain an efficient rural police. I remained in India for some time, in hopes that authority would be obtained to carry out the suggestions, but finding that nothing was done, I resigned the service in April 1856. At the beginning of this year I received a communication from Lord Harris, stating that he had received sanction for the re-organization of the police, and inviting me to come out in order to form a police for the whole of the presidency of Madras ; but for reasons which I need not state here I declined the offer. The Madras presidency consists of 20 districts, containing about 140,000 square miles, with a population of 22,000,000. For this vast territory I proposed a police of 22,000 men, besides about 5,000 mounted men ; the force to be divided among the districts according to circumstances ; each district to be under a military officer, termed a superintendent. I lay stress upon military officers, because I wish it to be understood that whatever police there is established for India, I believe it is absolutely necessary that its control should be quite distinct from the civil administration of the provinces. At present what is called police in the districts of Madras are the peons under the magistrate, who is also the collector of revenue. The collection of the revenue is his principal object, and the peons in executing this duty oppress the people and neglect their police functions. In fact there is no regular system of police in the provinces, and therefore one of the first things which I proposed was to divide the duties entirely from the magistrate and to put it under the control of a chief commissioner of police, who should have immediate and direct communication with the Government.

6739. (*Col. Burlton.*) Do you mean a civil commissioner ?—A commissioner for police only. I ought to remark that many particular duties of police in the presidency of Madras have hitherto been performed by sepoys, viz., gaol duties, the escort of treasure throughout the whole country, and to keep the peace on great festivals, all which is simply and solely the duty of a police, if there is a police. But the great difficulty in establishing a police of this kind, as I said before, was the supposed expense. Yet from late returns it would appear the expense would not be so great as first apprehended, inasmuch as the present police force, officers and men, in the provinces, exclusive of village police, consists of 13,111 men, costing 69,556 rupees ; performing other duties as well as police, 4,525 men, costing 14,926 rupees ; and this is exclusive of the presidency town police ; so that there are now 17,600 men employed as police. If these men were brought under control on a uniformity of system, drilled and disciplined, more than half the number of men are already at command.

6740. (*Marquess of Tweeddale.*) Is there any part of the present police in the Madras presidency which you can consolidate with a reformed police ?—Yes, there is a native institution of police, which may be rendered most valuable.

6741. Will you explain it ?—I mean the Talliari system, which is that of the village watchman. Every village has its hereditary watchman ; most valuable men, but unfortunately they are not employed in their legitimate duties, but are the fags of the villages for all manner of purposes.

6742. (*Chairman.*) How do you propose to divide this body of 28,000 men ; into companies or into battalions ?—One force, drafted into the several districts, according to size or circumstances. Some of the districts are very large ; for instance, Bellory contains 13,000 square miles, with a population of 1,229,600 ;

E F Elliot, Esq

3rd Dec 1858

North Arcot, 5,790 square miles, with a population of 1,485,900; whereas Chingleput is only 2,900 square miles, with 583,462 souls.

6743. Do you propose that they should be officered by Europeans?—By European superintendents certainly. There must be European supervision. There must be a superintendent in each district, with two subordinates under him.

6744. (*Duke of Cambridge.*) How many would there be probably in the aggregate to the number of men?—I should think that a superintendent ought to have 1,000 or 1,200 men under him, with two deputies.

6745. There would be about three European officers to 1,000 men?—Yes.

6746. And you would take those gentlemen from the class of officers?—The superintendents, certainly.

6747. So as to have a thorough system of military discipline?—Yes, with a certain amount of drill.

6748. (*Chairman.*) What would be the relative expense of this police compared with native regiments?—As far as I can remember as 7 to 10; let the sepoy be 10, the policeman would be 7.

6749. You propose that they should do some of the duties now performed by the native regiments?—Yes, for gaols and treasure escort.

6750. If this police were established it would reduce the necessity for so large an amount of native force?—So I apprehend.

6751. (*Marquess of Tweeddale.*) To what extent would it reduce them?—It is difficult to say, because the Madras army is constantly called on for duty beyond the boundary of what is generally called the Madras presidency; but when the Madras army is within its legitimate bounds, I think six or eight regiments might be spared.

6752. (*Chairman.*) How do you propose to arm this police?—With small carbine, which they can swing over their shoulders, never to be without it.

6753. What kind of engagement would you make with them?—To make the service at all popular you must have a pension or a superannuated list.

6754. Would you take any oath from them?—Yes.

6755. (*Duke of Cambridge.*) Would you have them under the native articles of war?—No; I would have them take the common oath of a police officer.

6756. You would not put them on the same footing, as far as discipline goes, as the army?—I would not drill them to the same extent. Nothing can be better than the discipline of the constabulary of Ireland.

6757. (*Major-Gen. Hancock.*) You intend to make a marked difference between the arming and the extent of military training of the police and of the line?—Certainly.

6758. (*Duke of Cambridge.*) In fact you wish to take the Irish constabulary as the basis?—Yes; I thought it was the exact thing for India.

6759. (*Major-Gen. Hancock.*) Do you propose to give the police any arms in addition to the carbine?—Yes, a short sword.

6760. (*Duke of Cambridge.*) More like a cutlass?—Yes.

6761. (*Chairman.*) In what position do you contemplate placing the officers attached to these police? Would they have promotion?—Their military promotion would not be interfered with.

6762. In their regiments?—Certainly.

6763. You would detach them from their regiments to do duty with this police?—Yes.

6764. (*Major-Gen. Hancock.*) Do you contemplate the whole of the police throughout India being a military police, or do you contemplate there being also a civil police?—At the three presidency capitals, where there are supreme courts, and where the law of England holds good, it would never do to have an armed police. Dublin has its distinct police.

6765. In the villages you would have them armed?—There I would have entirely an armed police.

6766. (*Col. Burlton.*) Quite distinct from the civil administration?—Yes.

6767. Would you not allow the magistrate of a district to have anything to say to them?—Not as to their discipline or where they should be placed; but they would be at his requisition if he called for them.

6768. Would you not give the superintendent, or one of the officers, magisterial powers?—I think not.

6769. (*Chairman.*) Then how are they to detain the prisoners?—They would be handed over to the civil authorities.

6770. The magistrates are so much more numerous?—There are several authorities in India who have power to deal with offences.

6771. (*Major-Gen. Hancock.*) Would not the magistrates in the different districts be under the chief commissioner, and be deputed by him to exercise authority?—The chief commissioner of police would have no power whatever, except in the control of the police force.

6772. What would be the extent of area of the district over which one commissioner would be placed?—The districts are very different in their sizes.

6773. What do you contemplate as being about the average size?—About 7,000 square miles.

6774. (*Duke of Cambridge.*) How many men would you have in such a district?—From 800 to 1,200 men.

6775. Supposing you take a man up, where are you to take him to?—You must take him to the nearest competent authority,—civil authority.

6776. At what distance would the nearest magistrate be?—It depends upon the locality. In some districts within a very few miles, in others at a great distance.

6777. As I understand you, you want to have this force quite independent of the magistrates as far as organization goes?—Entirely; the magistrates having nothing at all to do with the discipline.

6778. The police are in fact to be the assistants to the magistrates, but still the magistrates are not to interfere with their organization or training?—Certainly not.

6779. (*Chairman.*) You do not propose that they should interfere with magistrates' administration of the law?—Certainly not; if I understand the position right, a magistrate who wants assistance would call on the superintendent of the district, who would be bound to obey it.

6780. (*Major-Gen. Hancock.*) For a district about the size of North Arcot, the establishment of police would consist of a commissioner and two military officers, and about 1,200 men?—Not a commissioner, a superintendent, and two officers under him.

6781. Do I understand you rightly that the commissioner would give his orders only through those two officers?—Through the superintendent.

6782. You think that that would suffice for a district about the size of North Arcot?—So I have calculated.

6783. (*Sir H. G. W. Smith.*) Are you of opinion that the doubled-barrelled carbine would be a very efficient arm for the police?—It is the weapon I should select for the purpose.

6784. (*Duke of Cambridge.*) Have you seen the Cape double-barrelled carbine?—Yes.

6785. (*Viscount Melville.*) Have you seen what the Scinde horse use?—No.

6786. (*Major-Gen. Hancock.*) In the event of the population being disarmed throughout India, a measure which, it is understood, the Government has in contemplation, what necessity would there be for arming the police with the best arms?—The best arms for the purpose.

6787. Do you think that it is impracticable for the Government to disarm the whole of India?—No, I think it could be done very easily.

6788. Then why would you arm the police with the most efficient weapons?—Because police may be called to act at any moment, in times even of profound peace; and when I advocate an efficient weapon,

E. F Elliot, Esq

3rd Dec. 1858

I mean one for the special duty; I do not ask for the longest range, but a light handy arm.

6789. But would not the magistrate always have the power of making a requisition upon the military authorities for detachments of the line to meet an exceptional occasion? — Yes; but notwithstanding the police is liable to be called on very suddenly, in dacoity, for instance.

6790. Surely the Government could authorize such arms being furnished for special occasions to such extent as might be deemed expedient?—Yes; but an emergency at a distance of, perhaps, 500 or 600 miles from the seat of government should not find the police unprepared.

6791. Still, having regard to recent events in India, do you not consider that it would be decidedly expedient for the Government to place the best description of arms only in the hands of soldiers under military discipline?—When I say the best description of arms, I mean for the work required. A policeman should never appear without his arms, and should sleep with them by his side. They should be very light, and strong at the same time.

6792. But as the police generally are intended to act only against an unarmed population, there cannot be the same necessity for their being all armed with superior weapons as in the case of soldiers, who have to act against men as efficiently armed and highly trained as themselves?—I can only repeat that I do not mean a weapon with all the advantage of very long range, but a useful efficient arm; and if I had to select, I should give each man a short double-barrelled carbine.

6793. (*Sir H. G. W. Smith.*) You do not want a weapon of war for the police—you want a handy sort of thing—a remarkably good description of arm for the bush or any such purpose?—Just so. I want something which is light, and portable, and handy.

6794. (*Viscount Melville.*) I suppose you consider that it is just as necessary to have the police efficiently armed in India as it is in Ireland?—Certainly; probably more so.

6795. (*Chairman.*) How do you propose to dress those police?—I would certainly dress them as natives, not as Europeans.

6796. (*Major-Gen. Hancock.*) I imagine you see no necessity for dressing up policemen in the uniform worn by the soldiers of the army, with the view of impressing the natives generally with a greater dread of them?—On the contrary.

6797. (*Marquess of Tweeddale.*) Have you no fear of trusting a superior quality of arms in the hands of the natives. I refer to the police?—I should have no fear myself with the men that I had under my own control.

6798. (*Col. Burlton.*) But one person could not control so large a body as 20,000 or 30,000 men?—Certainly not. Each superintendent I suppose would be an efficient man.

6799. Do you not, after what has occurred, think it dangerous to have so large a body of men as you are contemplating armed with the most efficient weapons, dispersed all over the country, far away from the immediate supervision and control of European regiments?—These men could not easily combine. I am speaking of an extent of country upwards of 1,000 miles long, inhabited by distinct races, with distinct languages and habits.

6800. That may be the case in Madras, but not in Hindustan? — I am speaking of the Madras presidency.

6801. (*Major-Gen. Hancock.*) Supposing that the police generally were armed like the Irish police, and only a certain proportion of them as military police, for the purpose of furnishing gaol and treasure guards, and for the other special duties to which you have referred, do you not think that the public safety would be sufficiently secured by such an arrangement?—I do not; for as I have already observed, the police in India may be called on at any moment to act in districts where it is absolutely necessary to have armed men, even in dealing with gang robberies, so common over all India.

6802. With respect to the establishment which you propose for a district of about the size of North Arcot, would it not suffice were only a portion of the 1,200 men to be armed with fire-arms, and the rest as ordinary police?—The object is to secure one system of discipline throughout the whole body of police, efficient for all purposes; and I would avoid introducing a scheme which would tend to render a portion of the establishment non-combatants.

6803. We were supposing that the population generally throughout the country will be disarmed; hitherto the Government has permitted them to have any arms they chose without restriction; does not this make a very material difference?—I should think not, in the arming of a force of that sort.

6804. Are you of opinion that the marauding tribes will succeed in evading the orders of Government, and will still obtain arms sufficient to enable them to commit depredations and to attack parties of police employed in escorting treasure from one station to another?—You have never been able to put down dacoity to this hour, and it will be still more difficult in the disturbed state of the country.

6805. From whence do you suppose that they will obtain arms?—They will find means to get them.

6806. Is there not an essential difference between what constitutes a good policeman and a good soldier?—The greatest.

6807. The policeman being intended to act individually and in one particular district, to acquaint himself, not only with the people generally, but with the particular classes residing in towns and villages and their vicinity, and to gain every kind of local information; while the soldier is intended to act, not individually, but as part of a body, and against men trained like himself, to be perfectly free from all local ties and sympathies, to be available wherever the Government may require his services, and under the bond of a severe discipline, is made to regard implicit obedience to orders as his sole duty?—I think that the distinction between a policeman and a soldier is the same in all countries, whether the man is a native or not. I look upon a regularly trained and good policeman to be worth ten soldiers not properly trained.

6808. (*Duke of Cambridge.*) For his special duties?—The responsibilities of which are immense.

6809. You mean to say that a policeman would be a very bad soldier, and that a soldier would be a very bad policeman?—I believe a good policeman would prove the best of soldiers.

6810. (*Major-Gen. Hancock.*) Is it not the case, in your opinion, that in proportion as a policeman is taken beyond his own sphere of duty, by giving him the superior arms and military training of a soldier, and in proportion as a soldier is approximated, by giving him inferior arms and training, to the position of a policeman, both must be rendered less efficient for the performance of their own proper duties?—I do not see it in that light, as far as the policeman is concerned.

6811. Do you not think that there should always be a marked line drawn between a native policeman and a native soldier?—Yes, in training.

6812. In everything? — I would not make the policeman inferior to the soldier in anything. On the contrary, the more you can make the policeman understand that his responsibilities are great and what is expected of him, the better; and his duties are most important.

6813. Surely then the policeman would be more dangerous to the Government than the soldier, from his being only under civil discipline?—But I would not put him under a civil discipline, I would put him under a military control and superintendence.

6814. Still he would be only under the civil power; he would not be in any way under the Commander-in-chief of the army, nor under any person in military

E. F Elliot, Esq.

3rd Dec. 1858.

command ?—No ; he would be under the immediate control of Government.

6815. (*Chairman.*) To what extent do you propose that the police shall drill and discipline ?—Very much the same as in Ireland ; I would enable them to form line, and to act very much like like infantry, so as to know how to take advantage of the best places, to cover themselves.

6816. In Ireland they are divided into companies, are they not ?—No.

6817. (*Duke of Cambridge.*) They are a body of men taken from head-quarters in Dublin, and distributed throughout the country, and entirely depending upon the state of the country ?—Yes.

6818. (*Col. Burlton.*) Do you contemplate having any European non-commissioned officers to assist the superintendent ?— No, I do not think they are required.

6819. (*Chairman.*) What class of natives do you propose to take ?—All classes and castes.

6820. (*Duke of Cambridge.*) In striking an average of European troops, as regards native troops, would you take into account the police force ?—Certainly, because they would perform duty that the native force have been doing already.

6821. What proportion of European troops do you think there should be to native troops in India ?—India is a large question. If you will allow me to give my experience in the Madras presidency, I can speak with more certainty. With regard to the Madras presidency, I should say that you never can be efficiently protected under eight European regiments at the least. At present there are 52 native regiments ; with a well-trained, disciplined police in the districts, eight regiments might be spared ; however, the Madras army furnishes troops for Burmah, Malacca, Penang, Singapore, and so on, and occasionally also they are sent across the Bengal boundary. The Madras troops are frequently taken out of their own presidency.

6822. If you add those 28,000 police to which you allude, you will have a very large proportion of armed natives to armed Europeans ?—But the police would be armed men in more than 1,000 miles in extent in the Madras presidency alone.

6823. (*Col. Burlton.*) The eight regiments are still more scattered ; they have the same area?—Yes.

6824. (*Major-Gen. Hancock.*) About what do you think would be a safe proportion to establish between the European and native troops ?—I should say one in five.

6825. (*Duke of Cambridge.*) Including the police? —Yes.

6826. (*Viscount Melville.*) Do your eight regiments include artillery and cavalry ?—No, infantry only.

6827. (*Marquess of Tweeddale.*) You know that there has been a great revolution in India lately ?—Yes.

6828. Supposing that the force which you contemplate now to raise as a military police had been in existence previously to the revolution, or should exist at any future time, would you not know a great deal more about the proceedings of the natives than would be known by the same number of officers commanding sepoy regiments ?—If the police is efficiently trained and handled, every information would be obtained. I am not aware that officers in command of regiments turn their attention to such matters.

6829. To what extent would you know ?—It depends very much upon the ability of the officer who is with them.

6830. Do you remember an occasion in India when there was very nearly a revolution, about the year 1840 or 1841, when the police were the parties who got the information of what was going on ?—Certainly.

6831. Will you be good enough to state that case ? —I think it was in the year 1838 or 1839, when an outbreak was expected every hour throughout all India. Information was sought for, particularly from Hyderabad in the Deccan, and through the Madras police (I am speaking of the town of Madras), we got documents of the very rebels themselves, if I may so term them.

6832. You mean the police belonging to the town of Madras ?—Yes, Fort St. George. Information was obtained of what was going on in the very heart of the town of Hyderabad, and their papers were brought down lithographed by them, and put into the hands of Government ; they were tested and found to be perfectly correct. The information thus obtained led to the taking of Kurnool ; and the same agency was employed in different parts of India with great success. This was all done by native agency,—native policemen. I mention this merely to show that police can be worked in India ; and I may say, in justice to those people, that they are the best qualified for police purposes in the world ; they are vigilant, shrewd, persevering, and loyal as far as I know.

6833. (*Viscount Melville.*) Considering the particular circumstances of the mutiny, do you think that your police would have joined in it in any way ?—I cannot tell. I should have had no fear of them myself.

6834. (*Major-Gen. Hancock.*) As regards the advantages of the Government obtaining information of any intrigues or plots that might be going on amongst the natives of India, of course such information might be obtained through the agency of the police equally well whether it was a military or civil police ?—No doubt ; the point is to have a trained police.

6835. (*Col. Burlton.*) Do you contemplate the employment of a particular sort of people called Nuzzerborses ?—Not as a distinct body.

6836. I mean spies ?—So I understood.

6837. (*Major-Gen. Hancock.*) Would not the particular advantage before referred to be gained, perhaps, to a still greater extent by establishing a portion of the police force as detectives ?—Yes, I would always have a detective police ; but the Talliaris are such from caste. I propose that the whole body of village watchmen should be brought into the police establishment.

6838. And you would have the detective police selected from that class of men, as possessing superior qualifications for that particular service ?—No ; they are hereditary watchmen,—they are born policemen.

6839. (*Sir H. G. W. Smith.*) The Chokeedars and those sort of persons would be absorbed in the police ?—Yes.

6840. (*Marquis of Tweeddale.*) With respect to the country judicial courts they have their police peons, the collector has his police peon, would they be done away with ?—Certainly. I speak with the utmost respect, but it is well known that peons of the public establishments are employed by functionaries in their private households. The object is to bring every man under control in his own calling.

6841. (*Col. Burlton.*) You would recruit your police force from the same class of men notwithstanding, would you not ?—Yes, wherever I found an intelligent man.

6842. Do you think that the simple fact of giving him a different arm and organizing him a little would make him a different man from what he is as a Burkundaz ?—I do not say that ; but proper discipline would make him useful.

6843. (*Major-Gen. Hancock.*) Would you enlist your policemen from the district in which they are to be employed ?—That is a question upon which I am doubtful. In Ireland I believe a man is never employed in the county to which he belongs ; but in India it is different, and for this reason, that the languages are so different. For instance, if you take the men north of Fort St. George, they speak one language; in the south they speak a different language altogether; to the west, they speak another language ; on the Malabar coast there are three or four different languages ; it must be modified according to the judgment of the officer at the head of the district.

6844. On that account I imagine you consider it essential that a policeman should be able to speak

E. F. Elliot, Esq

3rd Dec 1858

pretty thoroughly the language of the district in which he is employed ?—No doubt.

6845. That opinion goes in favor of enlisting the men in the province in which they are to act ?—It does not follow that the men should be employed in their own districts, for the same language is spoken in many districts.

6846. If I understand you, you would have the main body of the police enlisted from the district in which they are to be employed, but you would bring a certain proportion from outside ?—I would not employ the men in their own immediate country, amongst their relatives. I would move them beyond the influence of family pressure.

6847. Would you not also mix the nationalities ?—Certainly, Mahomedans and Hindoos.

6848. (*Marquess of Tweeddale.*) How do you prepose to control them ?—By the officers who would be over them; the captains, who would be the superintendents, should have the control of them, just the same as in the command of a regiment; the promotion should rest with them, always in communication with the chief commissioner.

6849. (*Viscount Melville.*) For misconduct you would dismiss a man at once ?—Yes, the chief commissioner ought to have the power, always reporting it to the Government; I believe that that holds good in Ireland. With regard to the pay of these policemen, there ought to be certain grades. I would have three classes of peons or privates, to commence with five rupees a month, then to rise to six, and then to seven; as long as they have something to look forward to, they will do well. The naicks and duffadars would of course have higher pay.

6850. Do not you think five rupees very low ?—Five is not so very low to a young man who has not a family to provide for, and he is always looking forward to an increase.

6851. (*Duke of Cambridge.*) How would you punish them; how could you punish them, extended as they would be over very large tracts of ground ?—There are particular regulations for that; there are fines, and that is a severe punishment to a native; then you are always able to hold dismissal over their heads.

6852. (*Col. Burlton.*) What grades would you have; would you have, what we might call native commissioned and commissioned officers ?—Duffadars and naicks.

6853. (*Marquess of Tweeddale.*) What was the number of police which you commanded ?—The Madras police was about 850 effective men.

6854. How were they constituted in point of rank ?—They were peons and naicks and duffadars.

6855. Do you propose the same organization ?—Very nearly the same; I would have superior native officers.

6856. (*Major-Gen. Montgomerie.*) Would you have European constables also ?—Not in the provinces; at the presidencies it is necessary, because the police come in contact with Europeans. A European hates to be touched by a native; he would walk away quietly with a European, whereas he would knock down a native, if he touched him.

6857. (*Major-Gen. Hancock.*) I think that you misunderstood my question with respect to the selection of men for the detective police; are you not of opinion that it would be expedient to select men for that particular branch of the police who by natural endowments may possess superior qualifications for that service ?—If you will allow me, I will answer that question by an example. About the time of which my Lord Tweeddale spoke just now, there was a great desire to know what was going on in a particular fort, Golconda; it was shut up at the time, and things were supposed to be going on there of which no intelligence could be obtained. I selected a common policeman, a Mahratta, named Beem Singh, a shrewd determined man, though he could not read or write. He undertook cheerfully to proceed to Golcondah, between 700 and 800 miles from Madras, to endeavour to get service there, for the purpose of getting the required information. I never heard of him for about six months, when he returned, and made an excellent report, having been in Golcondah for some weeks.

6858. You selected that man, as I understand you, because you perceived that he was a man of extraordinary shrewdness ?—Not extraordinary, but of shrewdness and courage.

6859. But it was on the ground of his shrewdness, his shrewdness struck you as particularly qualifying him for that service ?—Yes, but there were fifty others that I might have selected.

6860. Still it was a selection ?—Yes, but for a special purpose. Some might have possessed the shrewdness without the courage, others the courage without the intelligence.

6861. (*Duke of Cambridge.*) But he had had no special training ?—None whatever.

6862. He was an ordinary policeman, and had had no special training for that duty ?—Yes. I mean that an efficient officer should be sufficiently acquainted with the qualifications of his men, to employ the right man.

6863. (*Major-Gen. Hancock.*) I think you mentioned a particular tribe of men in the Madras presidency whom you considered especially qualified for the detective police, from having hereditary occupation of that kind ?—Yes, I alluded to the Talliaris, the native watchmen of the villages. He knows everybody and everything in the village; nothing escapes his notice; he is born and bred to his calling. These men could be rendered most useful; they should be enrolled and placed under the same control as the district police, to ensure uniformity of action, but these men should never be moved from their own homes; it is there where their services might be made invaluable.

6864. Does not that go far to prove that their superior qualifications are founded upon a natural, as well as an acquired, aptitude for the particular service alluded to ?—I do not mean to say that these men have superior qualifications for the duty, but experience and habit render them observing, and for local information indispensable.

6865. (*Sir Geo. A. Wetherall.*) All those mysterious communications which had been going on just preceding this outbreak were passed from village to village by cocoa nuts and other mysterious signs ?—Yes.

6866. Which must have been done with the knowledge of these very Talliaris ?—No doubt it must have been perfectly well known to them, and had they been under the control of a ruling power, the facts would have been duly reported; you would have had accurate information on the state of the country and the feelings and sentiments of the people.

6867. (*Marquess of Tweeddale.*) You suppose that if there had been a connection between the military police of whom you speak and these Talliaris, you would have had some knowledge of what was going on ?—Certainly.

6868. (*Major-Gen. Hancock.*) Is it not the case that the several Governments in India have all adopted the principle of giving employment in the civil police and in the military police corps, to these Talliaris, and to other tribes, such as the Bheels, Ramooses, and Coolies, whose hereditary occupation is that of plundering and thieving ?—I do not know that the principle has been adopted by Government, but private individuals employ such men in certain districts.

6869. (*Marquess of Tweeddale.*) Is it true that the policemen at Madras were accused of being guilty of torture in the execution of their duty ?—In 1855 the Government of Fort St. George appointed a committee to inquire into the question of torture. The report of the committee has been published, from which it appears plain that much persecution exists, arising principally from the police peons being employed to collect the revenue. The evidence clearly proved

E. F. Elliot, Esq.

3rd Dec 1858.

great oppression generally, and many instances of positive torture to elicit evidence in criminal cases.

6870. (*Major-Gen. Hancock.*) Do you consider that that arose from any defect in the system of collecting the revenue, or from the want of a sufficiently strict supervision over the persons employed in its collection?—From a most pernicious system, which placed the police under the magistrate, who, in the Madras presidency, is also collector of revenue.

6871. But as every village, I believe, is visited annually by a civil officer of some description; how do you account for the parties who were oppressed and tortured not coming forward and complaining to him?—Natives do not complain, and will not complain, because they are afraid of the consequences.

6872. Do you believe it to be the fact, then, that until the exposure of the system, two or three years ago, no complaint of that kind ever reached the Government?—Many complaints reached the Government, I think you will find in the book to which I have alluded; but the evil was in the defective system, not from any desire on the part of the Europeans to support the practice.

6873. Do you know whether it is a part of the duty of the collector or commissioner who annually visits the village in each district, to enquire of the villagers whether they have any complaints to make against the police or others?—He supposes himself to be accessible; any one may address him.

6874. Are any means adopted to inform the people of the villages that they are free to come and make such complaints, to the visiting officer; and to prevent the Peons and other officials from interfering to hinder their so doing?—The people universally know that we do not recognise the practice, and if they do not complain it is their own fault.

6875. But, are any measures taken to obviate their being prevented by the police, Peons or other persons from coming forward and making complaints, if they have them?—No; I think not; not any particular measures.

6876. (*Duke of Cambridge.*) Do you not think that the probability is that they are deterred more by a fear of the results after the European collector or commissioner has gone, than by the actual fact of being prevented from coming?—Of course.

6877. It is not that a man is told, "You must not "come up," but it is very well known that if a complaint is made, the person complained of, if it is in his power, will wreak his vengeance upon the party making the complaint?—Yes. One general way of doing it is this: the native authority will keep a man in attendance for days, nay, sometimes for weeks, marching about the district; never allowed to go to his home, kept from his family and business; he is distressed, often ruined; this may not be torture, but certainly dire oppression.

6878. (*Major-Gen. Hancock.*) Will you be good enough to state any other modes that you know of by which the villagers are prevented from obtaining access to the collector on his annual visit?—There are many hundreds have been examined on this very subject, and the result has been published. The whole system is foul.

6879. (*Sir H. G. W. Smith.*) If a native is discharged from the Government service, either as a sepoy or as a policeman, does it affect his caste when he returns to his village?—No.

6880. (*Col. Burlton.*) You attribute this oppression in a great measure to the police, but if you reflect I think you will find that it is done by the collector's people; they are not policemen?—In the Madras presidency the police and revenue establishments are so blended that they are the same.

6881. It is not so in Bengal. The magistrate has the police under him; the collector is quite distinct. In some districts there is a joint officer, both magistrate and collector, but the police are entirely under the magistrate, not under the collector?—In Madras the collector and magistrate is the same person.

6882. (*Duke of Cambridge.*) Do you contemplate that in the event of war these policemen are to be concentrated into battalions and to form a portion of the moveable army?—The Madras army covers nearly the whole peninsula of India to the south of 22° of lat.; in case of its being called on to move in support of the other armies, the Madras presidency would be denuded of troops. In such an emergency, a well-organized police, accustomed to discipline, would be most valuable.

6883. How would you supply their places for the ordinary purposes of a police force?—By additional levies.

6884. (*Major-Gen. Hancock.*) I understand you that you would make the police available to assist the troops when required; but would still keep them under the authority of the commissioner and the officers under him; you would not make them over to the officers commanding the troops?—No, except as a local militia.

6885. (*Duke of Cambridge.*) They would not be under any military authority?—The police would be under the immediate control of Government.

6886. (*Major-Gen. Hancock.*) You mean that the Government on such occasions would give the officer commanding the troops authority over the officers in charge of the police?—I am not aware how the police corps now on active service in Oude and elsewhere are managed, but I presume that the officer in command of the army has full power over their movements.

6887. (*Marquis of Tweeddale.*) Do you think that the new system of police which you propose will have the effect of preventing all the abuses which you state?—No, I do not expect that, there is something more required besides that.

6888. You think that it is in the nature of the people?—Yes, oppression.

6889. (*Major-Gen. Hancock.*) Will you be good enough to state what more you think necessary?—A change or reform in the system of land revenue, the collecting of which causes many of the abuses and much of the oppression on the part of the native revenue servants, who have the control of the police; but this is a subject of vast magnitude and quite foreign, I apprehend, to the object of the present enquiry.

6890. (*Chairman.*) Will you furnish the Commissioners with a copy of the proposal which you have made?—As nearly as I can; I will do so. Vide No.

The witness withdrew.

c/ Colonel R. B. Wood, C.B.

Colonel R. B. Wood, C.B., Secretary to the Commission, examined.

6891. (*Chairman.*) Will you state what you were in India?—I have been 24 years in the army. I have served in cavalry and infantry. I was seven years secretary to the late Lord Hardinge; three years when he was Secretary at War, and four years as his military secretary in India. Since I came home from India I have been employed at the cavalry depôt at Maidstone, and in the adjutant-general's department. I was assistant adjutant-general in Kilkenny, in the year 1848, at the camp at Chobham in 1853, and at the Horse Guards during the war, and lately I have been deputy adjutant-general in Ireland.

6892. Will you favour the Commission with any opinion which you have formed as to the possibility of amalgamating the two armies?—I think that the amalgamation may be prospectively carried out by adopting the principle of promotion for service for the officers employed in India, on the staff and in civil appointments, as well as with the native troops, in contradistinction to the present system of promotion by regimental succession.

The Indian army, under the suggestions contained in the accompanying memorandum, might at once be made a branch of the royal army.

The patronage of first appointments to this branch of the service (if thought desirable) might remain with those to whom it is now by law entrusted; but the change which would be effected by making the Indian army a branch of the royal army would be that the executive of the Crown would be exercised towards this army through Her Majesty's Commander-in-chief, instead of through the Secretary of State and Council for India.

The administration also of the Indian army, as regards recruiting, discipline, and control, whilst serving in this country, &c., &c., would be carried on by orders issued from the Horse Guards, instead of from the Council of India, thereby securing a uniformity of system and economy, and avoiding collision and jealousy between the two services.

Her Majesty's Commander-in-chief would stand, with reference to the army employed in India, towards the Secretary of State for India, in the same relation as he did in former days to the Secretary at War, with reference to the royal army. Not one European soldier could be withdrawn from India, nor one additional soldier beyond the authorized establishment placed on the charge of the revenues of India, without the concurrence and authority of the Secretary of State for India.

The local European regiments now in India should be numbered the 101st, 102nd regiments, and so on; but as they are composed of officers and men who have been engaged for local service, they must for the present be employed in that country, as must also the officers now belonging to the Indian army. Should there be more officers belonging to that service than are required for the new native army in Bengal and for the general staff of the army, they might be attached to European regiments serving in India, and some of the officers of those corps brought home for the purpose of raising such second battalions as may be required.

The artillery and engineer officers of the Indian army would, as explained in the memorandum, rise in their respective regiments, but the cadets entering the service would be all posted to the royal corps.

Even should it be considered expedient to continue permanently the local European force in India, still the proposed amalgamation of the two armies would be most desirable.

The patronage of all the civil and military appointments should rest entirely with the authorities in India, the Commander-in-chief at each presidency, subject to the approval of the governor of the presidency, exercising the military patronage; and the local governors, on the recommendation of the local Commanders-in-chief, making the civil appointments within their respective presidencies.

These appointments should be reported home direct from the local Governors and Commanders-in-chief for approval and confirmation, the Supreme Government of India and the Commander-in-chief in India being kept informed of such changes.

The Commander-in-chief of each presidency should correspond direct with the home authorities, and under their control exercise supreme authority towards the European portion of the army on all matters of discipline. As regards the native portion of the army the authority of the Commanders-in-chief would be governed by laws and regulations which would be framed by the Legislative Council and Supreme Government of India.

The civil Government of India, as at present, would be responsible for all the materiel of the army, and in case of active operations in the field, all reports would continue to be transmitted through the Governor-General to the Secretary of State for India, as well as all recommendations for honours.

By these arrangements it is thought that the vested interests of those now in the service will not be disturbed, and the authority of the Governor-General and civil Government of India in no way curtailed; but that jealousy and collision between the two services will be avoided by the prospective complete amalgamation of the two armies.

The memorandum* alluded to has been circulated amongst the members of the Commission; it is as follows:—

Vide Append. No. 12, p. 19.

"Referring to the last paragraph of my memorandum of the 28th September, and to the suggested head of inquiry, "whether it be possible to consolidate the European forces, so as to allow of exchange from one branch of the service to the other, and what regulations would be necessary and practicable to effect this object with perfect justice to the claims of all officers now in the service of the East India Company.

"It is submitted that as the officers now in the service have entered the Indian army on the faith that they are to rise to the emoluments of a regiment strictly by seniority, no arrangement can be made admitting of an exchange between the senior officers of both services, which would not disturb this seniority system.

"Again, no officer of any standing would voluntarily relinquish the high retiring allowances of the Indian army, nor would he forego the advantages he derives from the military fund, to which he has been compelled to contribute during the whole time he has been in the service, and forfeit the pensions to which his widow and family would be entitled from this source on his decease, for the purpose of serving in another part of the empire on a lower rate of pay.

"In the junior ranks of the army, with subalterns not above a certain standing, the case may, perhaps, be different; an option of transfer here into the royal army might be acceptable, and the officer might be induced to relinquish his claims on the Indian funds and pensions on being allowed to reckon the service he had already passed in the Indian army as service in her Majesty's army.

"The following suggestions, it is submitted, would facilitate such an arrangement.

"The emoluments to be derived from service with native troops should be higher than those for service with Europeans, so as to induce officers to seek employment in native corps, and to qualify for such appointments.

"The officers now in the service selected for employment on the staff or for duty with native troops should maintain their places in their original regiments, and be promoted in them irrespective of the manner of their employment.

"Those hereafter entering the service to be placed on general lists at each presidency; they should be employed in any manner in which their services may be required; they should receive a step of rank after certain periods of actual service in India, to be fixed by regulation. An exception to this system of promotion might be made in favour of extraordinary merit or good service, on the recommendation of the Commanders-in-chief in India to the home authorities; there being no regular establishment of officers, promotion given out of the regular course would in no way retard the advancement of others, whilst the check on its being conferred would, it is thought, prevent any partiality being shown on any occasion.

"An officer entering the Indian service on these terms would be eligible, should his health fail in India, or should he tire of service in that country, to be employed in any part of the empire.

"As these officers could not be called upon to subscribe to the military funds in India, and as those funds are largely supported by the entrance fees

---

* Memorandum, October 5, 1858.

Colonel R. B. Wood, C.B.

3rd Dec. 1858.

"of cadets, Government should guarantee to the present subscribers all the advantages which the funds hold out to them.

"Officers of Her Majesty's royal army, under the proposed arrangement, would be eligible for employment with native troops, or in staff appointments in India. The officers now belonging to the Indian army, whose promotion it is thought must advance in accordance with existing practice, being available for the immediate requirements of the Government of India, time will be afforded for framing regulations which should govern the selection, promotion, and retirement of such officers of the line as may be so employed.

"The selection for appointments would rest, as now, with the authorities in India.

"If it be considered desirable that service with native troops should commence at an early age, young officers might, under the proposed scheme, be told off to do duty with native corps, on a lower scale of allowances, and be eligible for the higher rate of pay proposed for such service only when they are pronounced by competent authority to have the requisite qualifications.

"It would be expedient also, for the efficiency of the service, that the Governments of India should have the power of compelling an officer to retire who is reported by the military authorities to be inefficient, without the report of a medical board of his incapacity.

"Officers selected for the commissariat, pay, or audit departments, or for the secretariat or civil employment, after twelve or eighteen months' probation in such offices, should be removed from the combatant list of the army, and be ineligible for military command. They should receive certain retiring allowances. As it is not proposed to interfere with the claims and privileges of officers now so employed, time will be afforded for the preparation of regulations on this subject.

"The principle of promotion after certain fixed periods of service, it is suggested, should be applied to the officers of artillery and engineers hereafter employed in India, without disturbing the rights of those now in the service. Officers of the Indian army would then be available for service in any part of the empire. This arrangement, while it would secure to the State the services of an efficient and valuable corps of officers, would also, it is believed, be in accordance with the feelings and wishes of the officers themselves."

6893. (*Sir H. G. W. Smith.*) Are we to understand that the armies of Bengal, Madras, and Bombay are, as now, to be distinct ?—Certainly.

6894. Are the promotions to go in the line army direct from one presidency to the other, and by whom are they to be made ?—The promotions of the European troops would go regimentally under the control of the home authorities, as they are now. When a man was promoted in the royal army, I would have the promotion gazetted in the presidency, and it would come home and be confirmed or not, as is now the practice.

6895. Would there be throughout the whole of India one general army list under the Queen, of native regiments and line regiments ?—There would be a list of the native army at each presidency ; there would be officers on the Madras list, officers on the Bombay list, and officers on the Bengal list.

6896. Supposing they wished to enter the European troops, one captain can exchange with another ?—Certainly.

6897. (*Major-Gen. Hancock.*) Am I correct in understanding you to advise that the commands at Madras and Bombay should be under separate Commanders-in-chief ? You spoke as if you intended there should be direct communication between them and the Commander-in-chief in England ?—Certainly.

6898. Then do you mean that the Commander-in-chief at Madras and Bombay should exercise their commands independently of the Commander-in-chief in India ?—Yes ; with the European troops in each presidency ; they would be all under the control of the authorities at home.

6899. Both line and local ?—Yes.

6900. (*Viscount Melville.*) Then what is the use of a Commander-in-chief in India ?—He would have control over the troops if moved out of their respective presidencies, and be the military adviser of the Supreme Government of India.

6901. (*Duke of Cambridge.*) Do you mean then that the three Commanders-in-chief of Bengal, Bombay, and Madras, are to be equal in point of authority and power over the troops, and not, as at present, the one superior to the two others ?—Yes ; the Commander-in-chief in India being, of course, kept informed : to keep the Supreme Government also informed of what is going on in the other presidencies.

6902. (*Chairman.*) Then you contemplate a much more direct interference on the part of the Commander-in-chief here than takes place at present ?—I do not know that; all the confidential reports would come from each presidency, instead of going up to the Commander-in-chief in India and then coming to England.

6903. (*Sir H. G. W. Smith.*) Are you of opinion from the experience which you have had with the Governor-General, and also with the Commander-in-chief in India for the same period, that the system in India would work well if there were three Commanders-in-chief; could the resources of that immense country be rallied together so well with three commanders as with one commander ?—I do not see why not, it would always be under the civil Government, no troops can move without the authority of the Government.

6904. There would be a correspondence between the three Commanders-in-chief which would impede the public service beyond measure. There must be in one country a supreme authority ?—That is the Governor-General.

6905. (*Chairman.*) Do you propose to give to each of these separate Commanders-in-chief the power now held by the Commander-in-chief in India : that of confirming courts-martial, and all the other powers which were formerly held by the Commander-in-chief in India ?—Certainly, subject to the control of the home authorities.

6906. The courts-martial are confirmed out there ?—Yes ; but the appeal against the sentence would be to the Sovereign through the Commander-in-chief in England.

6907. (*Duke of Cambridge.*) You are aware that at present the discipline of the royal troops in India, whichever presidency they may be in, is virtually under the Commander-in-chief in Bengal, that is to say, the Commander-in-chief of India ?—Yes.

6908. You are aware that he alone can confirm courts-martial on royal troops ?—Yes, where a commissioned officer is sentenced to suffer death or to be cashiered.

6909. Do not you think that that is a very good system, and do not you think that the effect of a treble confirmation of courts-martial would be extremely inconvenient ?—It would not be treble.

6910. If every Commander-in-chief had the power to confirm courts-martial, and even the power of the confirmation of life and death now vested in the Commander-in-chief of India, would not it cause a very great inconvenience and a great difference of system, whereas now there is but one system and one authority ?—There would be the same system, only there would be three instead of one.

6911. Is that an advantage ?—If the discipline of the army is under the control of the home authorities, as the royal army is at present, I do not see any objection to it.

6912. You are aware that the control over the royal army is, as was given in evidence yesterday, next to nothing ?—Yes.

6913. As the control is so small, do you think that it is desirable to take away from the authority of

Colonel R. B. Wood, C.B.

3rd Dec. 1858.

the supreme head in India, and to divide it into three?—I think that the communication to England is now so quick that the control exercised here would be quite as efficient as the control exercised in India; that is to say, the Commander-in-chief might confirm a court-martial at Madras or Bombay. The proceedings would come home for your Royal Highness's information; and if there was any appeal, it would be under the consideration of your Royal Highness.

6914. Are you aware what the power of the Commander-in-chief at home is as regards courts-martial in this country, or any other portion of Her Majesty's dominions, irrespective of India. Are you aware that the Commander-in-chief has not the power to confirm courts-martial?—Yes; the Commander-in-chief has only the power of making a recommendation to the Crown upon matters of discipline.

6915. But he has not the power of confirmation?—He has not the power of confirmation.

6916. That power of confirmation rests entirely with the Sovereign?—Yes.

6917. Upon the advice of the judge-advocate-general?—Yes, on legal points, but of the Commander-in-chief on matters of discipline.

6918. But you are aware that the power of the Commander-in-chief in India is to confirm courts-martial?—Yes.

6919. Therefore that is a great power?—Yes.

6920. Do you think that it would be advisable to increase, to the extent of trebling, that great power by placing it in three different heads. Do you think that that is a good military arrangement, there being the unbounded power of life and death?—The Commanders-in-chief at the minor presidencies have, I believe, now the same powers as the Commander-in-chief in India, except in the disposal of the sentences of courts-martial on officers of the line adjudged to suffer death, to be transported, or to be cashiered.

6921. (*Major-Gen. Hancock.*) If I understand you correctly, you advise that there should cease to be a Commander-in-chief in India, but that there should be a Commander-in-chief over the army of Bengal, another over the army of Madras, and a third over the army of Bombay?—I would have a Commander-in-chief of India. The Commander-in-chief of India would be the military adviser of the Governor-General, who must be supreme, and who would determine how to use the armies of the other presidencies, and the Commanders-in-chief of those presidencies would have to obey the orders of the Commander-in-chief of India. But as far as concerned all the detail work, and all the confidential reports, and all matters of discipline, I would have them sent to the home authorities, instead of sending them all the way up to Simla perhaps, and back again to London.

6922. Then you would have a fourth Commander-in-chief, in fact.—No.

6923. You would have one over each presidency, and the Commander-in-chief of India over the whole?—No, the Commander-in-chief of Bengal would be the Commander-in-chief for India.

6924. Would it not amount to this, that you would have a Commander-in-chief in Bengal called the Commander-in-chief in India, but having no immediate authority over the Commanders-in-chief at the other presidencies?—Yes; not in matters of detail.

6925. Still it is part of your plan that the Commander-in-chief at the Horse Guards should communicate directly with the Commanders-in-chief at Madras and Bombay, instead of through the Commander-in-chief in India?—Yes, on matters of detail.

6926. If I understand you correctly, whether the European force in India be composed entirely of troops of the line, or partly of line and partly of local troops, you would advise that all appointments in India, civil and military, should be made subject to the approval and confirmation of the home authorities?—Every appointment in India is made in that way at present. They have never yet interfered, but the home authorities have the power to interfere.

6927. Do you mean that the appointments should not be considered final until they have been approved by the home authorities?—Yes. In some appointments they could not be final. For instance, a man taken from a line regiment, after having passed any examination which may be hereafter determined upon, in order to prove his qualifications for duty with a local corps, would be removed to that local corps, and put in orders in India; but the appointment would come home for final confirmation. You could not take a man out of a regiment of the line without the approval of the home authorities.

6928. If I understand you, you advise that in the event of there being a local force, the officers for that force should be appointed as now by cadetships in England, and should be afterwards permitted to exchange with the officers of the line army?—I propose that there should be no local European force.

6929. But in the event of its being decided that the European force shall be composed partly of line and partly of local troops, in what manner do you propose to officer the local European and native armies?—All officers with the European portion of the army would rise regimentally. I propose that the appointments should rest with those in whom they are vested by law at present.

6930. But how do you advise that they should be vested by law?—There is the law.

6931. What authority; the authority of the Secretary of State and Council of India?—I have said that the patronage of first appointments to this branch of the service, if thought desirable, might remain with those to whom it is now by law intrusted.

6932. (*Duke of Cambridge.*) That being the Secretary of State and Council of India?—Yes.

6933. (*Major-Gen. Hancock.*) Then you mean that the officers of the local army should be appointed as heretofore by cadetships in England?—If thought advisable.

6934. I am asking what you would advise?—I contemplate leaving the appointments as by law vested, if thought desirable.

6935. (*Viscount Melville.*) As you propose that the officers serving with the native troops are to receive a higher rate of pay than those serving with Europeans, do you not consider that it will have a tendency to lower service with a European regiment instead of to raise it, and to make the officers consider that service with a European regiment is a degradation when a higher reward is given for service with the natives?—I would have the native force all on what is termed the irregular system, and then there would be much fewer officers; they would be all selected officers.

6936. Cavalry and infantry?—Yes; I would have one European officer to every company of infantry.

6937. (*Col. Burlton.*) You would consider an appointment to a local regiment as a sort of staff appointment?—Yes.

6938. (*Duke of Cambridge.*) You would, therefore, consider it advisable that such an appointment should have the advantages attached to a staff appointment?—Yes.

6939. In what way would it degrade European corps that there should be a higher rate of pay? I suppose you imagine that the duties to be performed by those parties are more important than the mere routine of ordinary duties?—I think that it requires higher qualifications, and unless you hold out some inducement to these officers to do duty with native corps, of course they will not qualify.

6940. (*Viscount Melville.*) Are the officers to be taken indiscriminately from the local force and from the line force for service in native regiments?—The officers doing duty with the native corps must be placed upon the Indian list; that list must be established by the Government of India, and no addition could be made to that list without the sanction of the civil Government in India. Officers put upon that list must pass a certain test, a certain qualification, and the patronage of that list would rest with the local Governments in India.

Colonel R. B. Wood, C.B.

3rd Dec. 1858.

6941. Then in the event of a line regiment being withdrawn, and a certain number of its officers serving with these irregular corps, are those officers to be removed from their regiment which is withdrawn from India, or in what way are they to be dealt with?—Officers placed upon that list would always be withdrawn from their regiments, and their places in their regiments would be filled up.

6942. Then how is their promotion to go on?—By service, a step of rank being given after fixed periods.

6943. (*Duke of Cambridge.*) Would you have a general list?—The whole principle of my plan is, that promotion should be given for service, instead of the present system of promotion by means of regimental succession.

6944. (*Viscount Melville.*) Do you mean to put every officer in the present Queen's army list, whose regiment is serving in India, upon one general list?—Certainly not. I would take officers out of that army list, and put them on the Indian list of the presidency in which they may be selected to do duty in staff appointments, in civil appointments, or with native troops.

6945. Then in what way is the promotion of an officer to go on in the line if his regiment is withdrawn from the country; in what way is that officer to be dealt with?—He would not belong to a regiment.

6946. You have taken him out of the service?—Out of his regiment; not out of the service.

6947. (*Duke of Cambridge.*) As I understand you, you propose that any officer could be taken out of any regiment of the service for special service with a native corps, or on the staff of India. When once taken for that service, an officer is placed on a separate list of officers altogether, very much, I will suppose, as in the corps of engineers; namely, officers without men, so many field officers, so many captains, and so many subalterns?—I would fix the number of officers, but not the number in each grade.

6948. And they would rise in promotion on that general list in India?—Yes. They would be promoted on that list for service.

6949. (*Viscount Melville.*) If an officer of any regiment were taken out of the regimental army list and put upon the Indian list, where would that officer stand in the line service?—He would stand in the same position as he does at present on the unattached list of the army. For instance, a captain of six or seven years' service is employed, and placed on the Indian list; he would take that six or seven years' service with him to the Indian list, and, after a certain fixed period of further service in India, he would be entitled to a step of rank, and he would rise in the royal army as an unattached officer.

6950. (*Duke of Cambridge.*) Am I to understand that you do not intend to limit the grade of officers on the general list for Indian service?—No; I do not think you can limit it. I would give rank for service; the aggregate numbers must be limited by the civil authorities of India.

6951. How could you then prospectively hold out a chance of promotion, unless you limited the number of field officers, captains, and subalterns, as the case may be?—Because promotion would be given for length of service.

6952. Then, in short, the working of that would be very irregular. For instance, supposing a young captain were to be put upon that list, it would take him much longer to get on, and many men might go over his head, than if you put an old captain on that list?—It would not interfere with his promotion at all; a young captain would take his service with him on to the Indian list as well as the captain of long service; they would both take from the line service into the Indian service the service which they had got, and it would be a question for consideration, whether service in the colonies should carry with it the same claim *pari passu* as service in India.

6953. What is your opinion upon that point?—That is a question which must be decided by regulations carefully drawn up.

6954. On what would the officers' claims depend, in your opinion?—Service in India in some cases has been allowed to count two years for three.

6955. (*Viscount Melville.*) Would you establish that as a rule?—It would be matter of detail; it must be carefully gone into in drawing up the regulations which are to govern this promotion.

6956. (*Sir G. A. Wetherall.*) Of course there will be but one army list now for all officers?—Yes.

6957. If an officer is taken out from that army list and is put upon the special list for special and separate employment, he foregoes all his promotion regimentally?—Certainly.

6958. In the hope of getting promotion by brevet for services performed in his new line of duty?—Yes.

6959. (*Viscount Melville.*) Supposing an officer who has been taken out from a regiment serving in India and placed in this general list, for some reason or another wants to come back to his regiment, how is it to be accomplished?—In the same way as an officer would come back from the unattached list at present.

6960. Paying the difference?—Officers do not always pay the difference.

6961. If he cannot do it without, is he to be subject to paying the difference between half-pay and whole pay?—Officers may be brought from half-pay to full-pay, and often are brought, without paying the difference.

6962. But not as an invariable rule?—Not as an invariable rule, because the Secretary for War sometimes objects.

6963. An officer wants to get back to a line regiment from the special Indian list, I want to know distinctly how that is to be managed?—I can only say in the same way as an officer is now brought from the unattached list to full-pay.

6964. (*Duke of Cambridge.*) In the plan which you contemplate, would you not consider the general list for India as a full-pay list, and would you not so far from considering it as bringing a man from half-pay to full-pay, consider it as an exchange between a regiment of Europeans and the general list of which you speak?—Certainly.

6965. (*Viscount Melville.*) In order to do that, must an officer coming from this general list for India make an exchange with an officer in a regiment, or in what way can he be appointed?—He would be selected by the Commander-in-chief, and put into any vacancy which might occur.

6966. (*Duke of Cambridge.*) He might effect an exchange with an individual, might he not, provided the individual exchanging came up to the qualifications requisite?—Certainly.

6967. Of course, I apprehend that no officer would be placed upon the general list for service in India who had not shown qualifications for such service, and passed through an examination?—It could not be done. The number of that list, not the grades, must be fixed by the civil Government of India, because those officers would be all chargeable to the revenue of India whilst they were on that list.

6968. (*Viscount Melville.*) On what list are the officers of artillery and engineers to stand?—The officers of artillery and engineers would rise in their own respective regiments in India. Those coming into the service would be all posted to the line.

6969. (*Duke of Cambridge.*) In fact, you contemplate an entire amalgamation of the officers of the local and line service?—Yes; the whole army of India would be amalgamated with the army of the line prospectively?

6970. How would you then manage the promotion of the officers who have been in the service?—They would rise by regimental succession as they now stand.

Colonel R. B Wood, C.B.

3rd Dec 1858.

6971. What is regimental succession when the regiments do not exist ?—They would still keep in those regiments.

6972. You would keep skeleton regiments ?—Yes, cadres.

6973. Would you go on appointing the young cadets to these regiments ?—Certainly not ; you would appoint them on a different system of promotion ; promotion for service actually performed, in contradistinction to the seniority regimental system.

6974. (*Viscount Melville.*) Then am I to understand you that as a regiment the artillery is not to exist, but that it is merely to be a general list of officers without a regiment, and that they are to rise in one general list ?—The officers hereafter appointed would rise regimentally in the line artillery.

6975. But if the regiment does not exist how are they to rise regimentally, if they are to be put upon a general list with all other officers of the army ? You say that you would have one general list, if all the artillery officers, all the engineer officers, and all the officers serving with cavalry and infantry, are to be on a general list, how are they, in the first instance, to be appointed, and how are they to be promoted ?—The artillery would not be on the general list ; the artillery would be all the line artillery.

6976. (*Col. Burlton.*) Would you have the artillery rise by the seniority system, as is the case at present with the royal and the Company's artillery ?—Yes.

6977. (*Viscount Melville.*) There would be the artillery serving in India, and there would be the artillery serving in other parts of her Majesty's dominions, but all in one list ?—Yes.

6978. Then if a vacancy takes place in the West Indies, the man to be promoted may be in India, is he to be moved out of India to the West Indies ?—That would be controlled by the authorities at home.

6979. How are you to keep companies in different parts of the colonies ?—Two or three vacancies may occur, one at Gibraltar, one at Corfu, and one in the West Indies, or at Woolwich, the officers next in succession are in India; how would you propose to fill up all those vacancies if there is one general list ?—It is the case now, there would be no difficulty, I think, in arranging that.

6980. There is difficulty now, and the difficulty would be increased ?—I do not think it would.

6981. (*Col. Burlton.*) Do you propose that the young cadets who may be hereafter appointed should go out on the same terms of service and the same amount of pay and allowances and pensions. as have heretofore been granted to the officers of the Indian army ?—I think so. I think that the lower grades in India are rather under-paid than over-paid.

6982. (*Major-Gen. Hancock.*) Then do you contemplate cadets being appointed in England to the native army as a separate service ?—If the inducements are not sufficient to make men qualify in the line army for the local service in India, then you may appoint them as heretofore.

6983. Then you would first of all make the experiment of officering the local troops from the line ?—I would.

6984. And in the event of that failing, you would then recur to the existing system of appointing cadets direct to India for the local service only ?—Yes.

6985. (*Viscount Melville.*) Do I understand you correctly that the engineers and the artillery are to have separate general lists, and the line a third general list including cavalry and infantry ?—I would have all line artillery. As they would be all Europeans and no natives, they would not be upon the general list. The officers on the general list would be only those employed with native troops.

6986. Then am I to understand that there is to be no local artillery whatever ?—No, I think not. At all events if there is local artillery, it will be European, and I contemplate that the promotion of the officers doing duty with Europeans would be regimental, and not for length of service.

6987. (*Duke of Cambridge.*) Supposing, as is the case, I believe, that a great many of the officers of the local artillery are employed in civil positions, that their services are very valuable, and that many of them are some of the most eminent men in India, how are they to be retained specially in India, if their companies are moved to another portion of Her Majesty's dominions ?—With respect to those in civil employ at present belonging as they do to the Indian army, no alteration would be made in their position, because I do not interfere or propose to interfere with anybody now belonging to the Indian army ; everybody now in the Indian army I contemplate rising to the emoluments of full colonel on the Indian establishment as it now stands. The arrangements which I propose are all prospective, and ample time would be given for framing the regulations which would govern the promotion of these officers.

6988. (*Major-Gen. Hancock.*) How do you propose prospectively to meet the difficulty suggested by his Royal Highness when officers of artillery of the line shall be holding those important offices under the Government to which his Royal Highness has alluded ?—Then they must be put upon the Indian list.

6989. (*Duke of Cambridge.*) Do you contemplate that on this general Indian list all military officers holding civil appointments of a permanent character are also to be placed ; I understood you to say that that list was to be confined to officers serving with native troops ?—My own idea is that officers in civil employ should be out of the category of combatant officers, and should have special allowances given to them.

6990. Do you not think that that very fact would prevent many able men from wishing to take civil employment if they were by virtue of that employment excluded from the prospect of returning to military service ?—I do not think so in general. I would not put political officers on the civil list.

6991. You will admit that there are no civil appointments more important than the political appointments to which you allude, and therefore of all officers those are the last whom you would wish under any circumstances to withdraw from their civil occupations in India ?—It would rest entirely with the Government whether they were withdrawn or not. I would not make them ineligible for military commands.

6992. How are you to deal with military officers so circumstanced, are you to call upon them to give up all their military advantages, or are you to expect the Government to allow those officers to return to the service whenever they choose ?—Officers holding political appointments should, I think, be eligible at all times for military command.

6993. Then how do you meet the difficulty of their regiments, or if they are artillery officers, their companies, being removed from India, and their being militarily called upon to make their election ?—The officers in political employ would be placed upon the Indian list.

6994. Then the conclusion at which I arrive from your answers is, that you would consider that the officers holding the civil political appointments of India should be placed upon your proposed general list ?—Yes.

Adjourned to Wednesday next, at Eleven o'clock.

Wednesday, 8th December 1858.

PRESENT :

Major-General PEEL.
H.R.H. the Duke of CAMBRIDGE.
Lord STANLEY.
Marquess of TWEEDDALE.
Viscount MELVILLE.
Lieut.-Gen. Sir HARRY G. SMITH.
Lieut.-Gen. Sir GEORGE A. WETHERALL.
Major-Gen. MONTGOMERIE.
Major-Gen. HANCOCK.
Colonel BURLTON.
Colonel FORSYTH TAIT.

MAJOR-GENERAL PEEL IN THE CHAIR.

Colonel HENRY MARION DURAND, C.B., further examined.

Colonel H. M. Durand, C.B.

8th Dec. 1858.

6995. (*Major-Gen. Hancock.*) Ought not the public interest, in your opinion, to be made the only consideration in appointing officers to such very high and responsible positions as the commands of brigades and divisions of an army ?—The public interests are, I think, always the main thing considered. In my reply to question No. 5536, I said, " I was speaking from " the practice which I had myself seen when I was " in connection, as private secretary, with Lord " Ellenborough, at a time of very great danger in " India, when a great variety of military operations " were going on, and when references were made by " the Commander-in-chief in usual course to the Go- " vernor-General; and it became a question as to who " should have command. With every disposition to " give the utmost attention to the claims of senior " officers, Lord Ellenborough made it a rule, that the " claims of the public service were paramount to " everything else, and that the thing which must be " done upon these occasions was to secure the ser- " vices of a competent officer, the officer who he " thought was the fittest for the command ; therefore " the practice of selection was carried into effect for " commands;" and that, I think, is the proper course to be pursued.

6996. Then, if I understand you, you consider that the public interests ought to be made the paramount consideration, but not the only consideration, and that the claims of individual officers ought also to be taken into consideration with respect to appointments to those very high commands ?—I think that you have to take into consideration two classes of things ; first, you have to take into consideration necessarily the public interests ; and the second thing is, that the organization of all great armies depends, in a great measure, upon attention being paid to officers of a certain rank. You utterly cut away the whole object of the organism of armies, if you entirely put aside attention to the just claims of officers.

6997. As the principle of selection for efficiency only is made the rule by the Government of India in respect to all staff appointments from the adjutant of a regiment up to the adjutant-general of an army, why should not the same principle be adopted in respect to appointments which are so much greater in importance, as the commands of brigades and divisions ? Why should individual claims of negative merit backed by seniority be brought to fetter the Commanders-in-chief and the Government in selecting the men whom they deem the fittest to exercise those commands with advantage to the public service ?—I think that the question assumes as a fact that which I am not at all sure is a fact. Necessarily Commanders-in-chief must pay attention to the claims of the public service—they are paramount—but also, without any attention to mere personal claims, but with attention to the great general question of maintaining the discipline of an army, I think Commanders-in-chief are bound to pay some degree of attention to that which forms an essential part of the organism of an army ; and I do not view it as a purely personal question at all—I view it as having a bearing upon the general tone of that service—upon the hopes and interests of the whole of that service ; therefore I do not admit that it is from purely personal motives.

6998. Are you not of opinion that if selection for efficiency only were made the rule, brigades and divisions of the army would be more efficiently commanded than under the system which you recommend of giving consideration to the claims of seniority on the part of individual officers ?—No, I am not sure that they would, and for this reason, that the matter of selection depends entirely upon the person who selects, and therefore it depends entirely upon the experience of the person who selects, upon his knowledge of the men among whom he has to select ; it depends upon a great variety of questions how far the person who is charged with selection makes a good selection.

6999. May it not be assumed that the Commander-in-chief of the army is the fittest person to make selections for the commands of brigades and divisions of the army under his command ?—That may not always be assumed : for instance a new Commander-in-chief, a person quite new to India and therefore ignorant of the whole service, would be placed under very difficult circumstances if he had to select entirely without reference to anything but his own selection of individuals.

7000. You are aware that the rule is that the Commander-in-chief nominates, but the Government appoints ?—That I know.

7001. Therefore were a Commander-in-chief to send up the name of an officer known by the Government to be inefficient of course the Commander-in-chief's nomination would be set aside, and he would be called upon to nominate another officer, would he not ?—That is the practice. The Commander-in-chief recommends a certain number of names, and I have no doubt that if all those officers were deemed incompetent the Government have the power of refusing to appoint any one of them.

7002. (*Duke of Cambridge.*) Do you not think that it would act very unbeneficially to the service in general, and cast a great damper upon all the best energies of many valuable soldiers in the army, if it was commonly understood that seniority was in no respect whatever to be considered ?—I intended to convey that in my answer, in stating that it was not purely personal motives which made the Commander-in-chief pay attention to seniority—that it was general motives.

7003. Would it not lead to the fear that, at all events, an impression would go through an army that favouritism was more considered than actual merit in many instances, particularly if very young men were put up suddenly ?—It would certainly lead to the impression that there was a great deal of jobbery.

7004. (*Lord Stanley.*) In short, you put it in this way : that a reasonable amount of respect shown to the claims of seniority, if it is on the one hand a check upon a Commander-in-chief or a Governor-General in appointing the best men, is, on the other hand, a great security against favouritism or jobbery? —Exactly.

7005. And that, therefore, you think it equally undesirable to adhere rigidly to the rule of seniority on the one hand, or to treat with entire disregard the claims of seniority on the other ?—Yes, I would subordinate the considerations of seniority to the consideration of the requirements and the good of the public service. Your lordship has put it exactly as I would express it.

7006. (*Major-Gen. Hancock.*) Am I to understand that you would make selection the rule in future, and

Colonel H M Durand, C B

8th Dec. 1858

seniority the exception; or would you leave it as it has hitherto been, seniority being the rule, and selection the exception?—The question assumes that seniority has been the rule. I, so far as my own experience is concerned, do not admit that seniority has been the rule; the two have gone concurrently.

7007. (*Lord Stanley.*) In point of fact, there has always been an admixture of selection and seniority, has there not?—Always, as far as my own knowledge goes.

7008. And the only point in dispute is, what amount of relative importance has, at different times, been ascribed to the claim of merit, or the claim of seniority?—Yes.

7009. (*Sir H. G. W. Smith.*) Admitting that either system be adopted, either seniority or selection, are you of opinion that many commanders fail from their abilities not having been previously ascertained?—That is a difficult question to answer, for several reasons; one is, that it is sometimes very difficult for any one to ascertain the abilities of commanders before they are actually tried in the field; therefore the very best-intentioned Governor-General and the very best-intentioned Commander-in-chief may entirely fail in his selection, because a man, when tried under fire, may be quite a different man from the man when you see him at a table.

7010. (*Sir George A. Wetherall.*) Sir Harry Smith has in some degree met the question which I was going to put, but have you any knowledge of any instances of officers turning out eminent men when employed officially as officers in the field, who were not previously known, and whose merit was only supposed to be negative, there being nothing against them, but nothing in their favour, because they had no opportunity of exercising their talents?—I should have to think it over a good deal, I could not answer the question off-hand; I might do injustice to some men.

7011. (*Major-Gen. Hancock.*) Still, as a general rule, are you not of opinion that the abilities for command of an officer who has been from 20 to 30 years in an army are well known to his own Commander-in-chief and Government?—I think they are known to a certain extent; it depends very much upon what the nature of that 20 or 30 years' service has been; if the greater part of that 20 or 30 years' service has been entirely cantonment peace service, the Government may know that the man is quite competent for the ordinary military duties of peace, but it does not at all follow that that man when thrown into active service will turn out what may have been expected of him.

7012. (*Chairman.*) The best regimental officers may not turn out the best officers for command?—Just so.

7013. (*Duke of Cambridge.*) And *vice versâ*, there have been instances of officers supposed to be good officers who have turned out badly, and those who have been supposed to be careless and indifferent officers have, when responsibility has been thrown upon them, been found the best officers?—Yes.

7014. (*Major-Gen. Hancock.*) Are you of opinion that the Commanders-in-chief at Madras and Bombay should exercise their commands over the local army, European and native, independently of the Commander-in-chief in India as heretofore?—The question I consider to have been answered on the two occasions on which I quoted Lord Elphinstone's words, having reference to maintaining the power of the Governor-General and the governors intact, which implies that the Commanders-in-chief will be in their present relative positions.

7015. Do you consider that the Bengal presidency, extending, as it does, from Calcutta to Peshawur, a distance of some 1,500 or 1,600 miles, is not too large for efficient supervision and control by one Commander-in-chief?—No, I think that the disadvantages, attendant upon the separation of the command, making it two commands, are greater than the disadvantages which arise from the mere length of the command, especially in the present day, when telegraphic communication is so rapid.

7016. Can you state whether it is intended by the Government of India to disarm the population generally throughout India?—I cannot reply to that question.

7017. Are you of opinion that the population of India generally ought to be disarmed?—That is a very large question, and when the habits of the people of India are considered, and when their enormous number is considered, and when the comparative paucity of ourselves and troops is considered, it becomes a very nice question to answer that generally; there may be parts of the country where it is advisable to disarm them if we have the power and can do it thoroughly, but I think it is a very difficult question to answer generally.

7018. It has been carried out to a certain extent already, has it not?—It has been carried out to a certain extent in the Punjaub, and it has been partially carried out, I believe, in other places; I do not know the whole of the districts in which it has been carried out, therefore I cannot state the districts in which it has been carried out.

7019. It has not been carried out throughout the Bengal presidency?—Not to my knowledge.

7020. Do you know how far it has been carried out in the Madras and Bombay presidencies?—I do not.

7021. Upon what system would you advise that the police, military and civil, should be henceforth constituted throughout India?—That again is a general question, covering an enormous field, and I certainly do not feel myself competent to reply to that question, with reference, for instance, to the Madras presidency, or with reference to the Bombay presidency; and I do not think that it can be answered in the same way for Bengal Proper, for Hindostan, and for the Punjaub, in the same way for Scinde. I look upon it that it must depend partly upon the nature and the character of the people; it must depend upon the temper of the people; it must depend upon their own institutions, how far their own police institutions are still existing; therefore, it is a very complicated question, and I think that it has to be treated separately and distinctly for each province; the province of Bengal, the province of Hindostan, the province of the Punjaub, and the province of Scinde; I mean, that I cannot give a general answer to that question.

7022. It may be assumed that in those parts of India in which the population are disarmed, there will not be a necessity for having the same amount of military police as in other districts in which they are armed?—Certainly.

7023. In what manner would you recommend that the military police should be armed?—That I would make dependent upon the character of the people, and whether they were armed or not; because, your police, if they are in districts with an unarmed population need a very different arm from what they require if they are in districts inhabited by a people who still retain their arms; therefore, it would depend upon the character and the social state of the people and their feelings towards the Government.

7024. Would you give the military police as good arms and as high a military training as you would give irregular regiments on the strength of the army?—No.

7025. Are you of opinion that the native armies of India should be armed in future with the same weapons as the European troops of corresponding branches of the service, should have the same military training, and retain the same high status generally in relation to the European army which has been hitherto accorded to them?—I think that the native troops of the three armies should have the same military training as the European troops, otherwise they could not move and act with those troops in the way in which they ought to act. But the question how those troops should be armed is a different one, and there I think that it is perfectly practicable to consider the advisa-

Colonel H. M. Durand, C.B.

8th Dec 1858.

bility of always maintaining a superiority of arm in the hands of the European troops.

7026. With what description of arms would you arm the native infantry?—I do not think that it is necessary that the whole of the infantry should have the best rifle, for instance, the best arm that we can make, continual advancement being made in the rifle at present; I would keep in the hands of the European troops the very best arms that England can furnish. In the hands of the native armies I should be content with a musket, which would be an inferior weapon. I do not mean by that, that I would give them the old musket, but I can quite understand that it would be possible to give them a musket of effective range, say, of 600 or 800 yards, and to reserve the rifle, which is a weapon good for 1,200 or 1,500 yards, and its improvements, in the hands of the European.

7027. (*Lord Stanley.*) That is to say you would arm them so as to be superior to any native force with which they were likely to come into collision, and at the same time markedly inferior to the European?—"Markedly inferior" is perhaps a strong expression. I would rather that it should not be very markedly inferior; but my meaning is, that I would keep as far as practicable the superiority of arms in the hands of the European troops.

7028. Do you think that that could be done without producing ill feeling among the native troops?—For instance, in every regiment if it was thought an object to study the appearance of showing them confidence, it might be possible to give the light companies equally good arms with the Europeans, but I do not think it necessary, and I do not think that the effect upon the native troops would be great. It was some time before any of them got the Enfield rifle.

7029. (*Chairman.*) Naturally any new improvement would be placed first in the hands of the Europeans?—Yes.

7030. And therefore, practically, there would be no difficulty whatever in keeping them to a certain degree armed in a superior manner without showing any marked distinction?—Certainly. I think that all improvements in the small arms should be kept to the Europeans.

7031. (*Major-Gen. Hancock.*) Am I to understand you to mean that prospectively, at some indefinitive time, you would arm the native troops with the same weapons as the European troops?—No; I am not speaking prospectively.

7032. With what object do you recommend that the native soldiers shall not be armed with arms equal in efficiency to those given to the European troops?—For this reason, that we can never forget, or at any rate ought never to forget, how very small a number of European troops are in India. However vigilant we may be, after what has happened, no Government can ever be sure that there may not be a recurrence of revolt, and it is extremely advisable that all the superiority which you can reasonably maintain in favour of the European, should be maintained.

7033. Then you would make two-thirds of the entire Indian army comparatively inefficient for war purposes, with the view of rendering them less dangerous to the Government in the event of another insurrection?—I do not admit that to bethe case, because I look upon it that for war purposes and for what is requisite in action, the arms which I say should be given to the natives are quite sufficient, for this reason, that the practice with the improved small arms of long range requires a great deal of training, and under ordinary circumstances, if you put those improved arms into the hands of the masses of your troops, I look upon it that in a great measure, as soon as it comes to active operations, they do not answer the purpose for which you put them into their hands, and an inferior weapon answers the purpose for which you put a weapon into their hands.

7034. Are you of opinion then that a native soldier could not be brought by training to use the rifle equally as well as a European soldier?—I think that many of them may.

7035. Speaking generally?—Speaking generally, I do not think that you will train a large body of natives to the use (I will instance the Enfield rifle) of the rifle, so that when they really come into action they will use it as effectively.

7036. Do you think that European soldiers generally, by training, learn to use a rifle better than native soldiers?—I have not seen them compared or tried.

7037. (*Duke of Cambridge.*) What your answer tends to, I suppose, is this, that the arms which you propose for the native troops, although in some respects inferior to those of the Europeans, are still so superior to the arms of any troops which could be met with by our native army in India, that they would still feel that amount of superiority which would make them efficient troops?—Quite so.

7038. In giving your opinion that there should be two arms, I have no doubt that you would state that it is very desirable that the same calibre should be maintained?—Certainly.

7039. (*Major-Gen. Hancock.*) In the event of there being occasion again to employ the native troops on service beyond India, in Affghanistan, Persia, Burmah, or elsewhere, do you consider that they would be as efficient with the inferior arms which you propose to give them as they would be if armed with the same arms as the European troops?—I think they would be perfectly efficient for what they had got to meet.

7040. (*Col. Burlton.*) In short, you mean that in either of those countries they would meet with nothing at all to be compared to the ordinary percussion musket?—Quite so.

7041. (*Sir George A. Wetherall.*) Is it not desirable, in your opinion, that the European part of the forces in India should be in every respect held and kept superior to every part of the native armed force, and would you not, therefore, arm them with a superior weapon?—That, in fact, is what I have answered.

7042. (*Duke of Cambridge.*) You would wish the native in every respect to look up to the European?—Yes.

7043. And the fact of there being some advantages even in the arming of the European, you think, would make the native look up to him?—I think that it would tend to give a feeling of superiority.

7044. Which you think would be desirable?—Which, I think, is no disadvantage at all.

7045. (*Major-Gen. Hancock.*) Surely you are of opinion that, were the native troops armed and trained in every respect equally with the European troops, the European army would still be immeasurably superior to the native army in power?—Most certainly I think that the European army would be superior, because I consider that the courage and all the qualities of a soldier are higher in the British soldier than they are in the sepoy.

7046. Then it is not at all necessary to give the native soldier a less efficient weapon, in order to maintain that superiority of the European over the native soldier?—I do not agree with that, because it is not alone the native sepoys whom you have to bear in mind, but the masses of people who may join them; supposing there is a revolt, you have a small number of Europeans in a very large empire.

7047. Do you think that it is expedient that any portion of the military police should be dressed in uniform like soldiers of the army, or have military training to the same extent as native soldiers?—I have said before, I believe, that I do not think that the police should be trained equally well with the native troops.

7048. If I understand you, you would have a marked distinction kept between the two in every respect?—Yes, I would have a marked distinction kept, and I would have not an equal military training or arming.

Colonel H. M. Durand, C.B.

8th Dec. 1858

7049. I think you have stated your opinion that it would be expedient in future to make native promotions in the Bengal army partly by seniority and partly by selection. Will you be good enough to state in detail the system which you would recommend to be adopted in that army in making promotions from the private up to the commissioned grade ?—I have not come sufficiently prepared to answer that question, for it is one which involves considerable detail to go into it.

7050. Have you any objection to state your opinion as far as you have formed it ?—As far as the commissioned grade, I would make the merit of the soldier who was promoted always preponderant in every way. When once the native became an officer, and had a commission, then I think that it would be proper to give more consideration to seniority.

7051. By "merit" I understand you to mean efficiency ?—Yes.

7052. Are you of opinion that it would be advisable to require native regiments to recruit in particular districts within their own presidencies, or would you allow all native regiments to recruit throughout their own presidencies generally ?—That is a subject I think of very great importance, and one which requires grave consideration on the part of all the three Governments, and therefore in answering the question generally, I would qualify my reply by saying that there may be many circumstances in that great empire, in which what I now state could not very well be carried out; in those cases you must modify it, but as a general rule I would prefer that regiments were made to confine their recruiting to particular districts, and I hold that view with reference to what I have observed myself amongst natives, which is, that there is always a strong local feeling. With the native there is perhaps less of the general national feeling than there is among European nations, but there is a great deal of the purely local feeling—his own village, his own community round about his village ; that is a thing which has great effect upon him, and therefore I would rather keep the recruiting to particular districts. I think that it would be in favour of *esprit de corps*, and also as there are usually more or less jealousies between neighbouring districts, it would not be disadvantageous with reference to the corps being more distinct.

7053. (*Col. Burlton.*) You state it as your opinion, that it would be highly desirable to maintain the European element generally on a superior footing to that of the native ; has it ever occurred to you, looking back to the proceedings of the Bengal sepoys for some years past, that their habits of insubordination, their grumbling at orders received, may in a great measure be traced to the fact of their having been led to suppose themselves of much greater value and importance to the State than they ought to have been ; that they have acquired a high opinion of themselves, which would not perhaps have existed if they had been kept altogether in an inferior status with reference to the European troops ?—I think that that has had an effect, and I would instance what appeared to me always a distinguishing circumstance among the officers in command of native regiments in Bengal,—it was their pride to think and say that their regiments were perfectly good to act without the presence of Europeans.

7054. (*Duke of Cambridge.*) From the answer which you have given, am I to understand that the European officers more immediately connected with the native army of India, I will not say looked down upon, but did not think very highly of the European troops as troops ?—That was not my intention at all ; on the contrary they thought very highly of them, and it was their pride to raise their men up to that mark, and their pride to think and say that they could take their troops into action without European troops.

7055. In short, they put them very nearly on an equality in consequence of the efficient manner in which they had trained them ?—It must be remembered that they spoke of taking them into action, not against European troops, but against native troops.

7056. (*Lord Stanley.*) It is not that they looked down upon Europeans, but they thought well of their own men ?—It was very far from looking down upon Europeans, but they thought exceedingly well of their own men.

7057. (*Major-Gen. Hancock.*) To what extent do you consider that the powers of reward and punishment possessed by officers commanding native regiments should be increased ?—My impression is that the powers of officers in command of native regiments, both for reward and for punishment must be very greatly increased ; there has been a great deal written upon that subject in the replies which were laid before the Commission, and the general feeling was certainly that those powers must be very greatly increased ; in the Punjaub the powers which are exercised by the officers in command of the native regiments are very great, but they are limited in the degree pointed out by Sir John Lawrence, in his evidence ; that may be considered an irregular service, therefore it is a question how far the same degree of power may be extended to the regular native army; but I am convinced that it must be extended in a very great degree to the officers in command of the regular regiments of native infantry ; the exact extent of that I am not prepared to state, because it involves the consideration of altering the native articles of war, under which all the native armies at present are ; to alter those articles of war to the extent which I think should be done, would require on my part very careful diction and very careful consideration, but I have no hesitation in saying that I think that the powers of officers in command of regiments of native infantry must be very greatly increased.

7058. Will you favour the Commission with your opinion regarding the system of native courts-martial, do you consider that it would be expedient to continue that system ?—My opinion is unfavourable to native courts-martial ; I think that the commanding officers of corps should exercise those powers themselves.

7059. How would you deal with offences which were considered too serious to be disposed of by regimental commanding officers on their own authority ?—I would prefer having courts composed of European officers.

7060. How would it affect the feelings of the native army, do you suppose, if that great change were introduced ?—With respect to an army to be re-organized, and the men coming under that system, I do not think that it would affect them at all unfavourably, quite the reverse ; with respect to the Madras and Bombay armies it is another question, and there whatever changes are made must be made after full consideration and gradually ; that was one reason why, when the general question was put, which involved doing away in part with the present articles of war, I said, that I could not answer that question without a very great deal of consideration, because in these questions you have to bear in mind that two armies are existing, and those two armies under the native articles of war, in the same manner that the Bengal army was under the native articles of war.

7061. Still you are aware that the Government of India has always possessed and has freely exercised the power of altering the native articles of war ?—Quite so.

7062. Do you consider that it would be expedient to continue the system of administering the oaths of fidelity to the native soldiers on enlistment, or would you confine the arrangement to a simple contract, without requiring them to be sworn in under their colours ?—I think that you require a covenant contract, whether in the form of an oath, or in the form of a covenant contract, or partaking of both, I really do not think matters much. The essential thing is, that there is a well-understood covenant contract.

7063. Would you maintain the existing native pension system as it stands, or what alterations would you introduce into it ?—That, I think, is a very great

Colonel H. M. Durand, C.B.

8th Dec. 1858.

subject, and requires very careful examination. My present impression is (but I consider it open to modification by future inquiry) that it would be a very legitimate opportunity to mark the difference between an army which has revolted and two armies which have not revolted, making very serious modifications in the pension establishment, and especially in connection, if it were carried out, with a recommendation of the Commander-in-chief that sepoys should be enlisted for 10 years, open to having another 10 years if their conduct was approved of, and so forth; and, after a certain period of service, then, I think, that if a man had deserved a pension, a pension might be granted; but I would not establish the pension as a matter of right. However, my opinion is open to modification hereafter, upon further investigation, for I think it a very delicate subject, and I think it a subject which, in fact, merits especial investigation in India.

7064. (*Viscount Melville.*) For what period are the sepoys now enlisted; for life or for a term of years?—For life.

7065. (*Major-Gen. Hancock.*) Do you think that if enlisted for short service, as you propose, there would be the same tie and the same attachment to the Government on the part of the native soldiers, generally, which have existed hitherto under the system of enlistment for unlimited service, with the certainty of being pensioned for life when no longer fit for active duty.?—I think that it would be a great encouragement to men to behave well. If they liked the service, they would behave well in order to be kept in it, and to aim at obtaining a pension. If they were bad and troublesome men you would get rid of them, and the service would be free of them. I look upon it that there is one disadvantage about that system, which is this, that you teach and train a good number of men, a portion of whom may leave your service at the end of 10 years and go back to their own villages.

7066. Has not the system of enlistment for unlimited service been found to afford one of the best securities to the Government for the fidelity of the native army by leading the men to make their regiments their home. Has it not been found that by long service with them the men have become attached to their regiments, attached to their European officers, attached to the Government, and separated, in a way, from the rest of the native community?—The effect in Bengal was not to lead men to make their regiments their home, for the sepoys of Bengal never had their families with their regiments.

7067. But you are aware that in the Madras and Bombay armies the men enlisted in southern India usually have their families with them, and do make their regiments their home to a very great extent?—Yes.

7068. They take a furlough occasionally to visit their own district, but 20 or 30 years of their lives are passed actually with their regiments, their wives and children, fathers and mothers, brothers and sisters, being constantly with them?—I am aware of that, but it does not militate with me against the advantages which I think would be offered by the system of enlistment for 10 years.

The witness withdrew.

Adjourned to 11th January next, at 11 o'clock.

The following papers have been transmitted by the President of the India Board for the perusal of the Commission.

Memorandum by Lord Ellenborough, March 31, 1858.

Now that communication has been opened between all portions of the Bengal army, it is very desirable that immediate measures should be adopted for its reconstruction.

It has lost 48 regiments of regular infantry by mutiny, and has 21 disarmed. There are in Bengal nearly 1,100 officers who have nothing useful to do. They join European regiments, and throw away their lives without the least benefit to the service.

No official report has for many months been received with respect to the new levies raised in the Punjab. It is supposed that the old and new levies of Punjabees and Sikhs amount to a force of between 30,000 and 50,000 men.

The old corps alone have officers regularly appointed to them; many of these have fallen. The new corps are scantily officered, and it is supposed that in many cases civilians are acting as officers.

This great force may, left to itself, become as dangerous as that which has mutinied. There are not more than six or seven European regiments in the Punjab. It is obviously most desirable to bring this force into form, and to utilize the 1,100 officers who have nothing to do; but it is desirable first to know how many of them will be disposable for the command of native regiments. This we cannot know till we are informed whether the European infantry of the local army is to receive any, and if any, what addition.

I earnestly recommend that at least seven European regiments be added to the three now forming part of the Bengal army.

The character and self-reliance of the whole Bengal army will be raised by having this increased European force attached to it.

It is most advisable to balance the Queen's army by another *local* army, partaking largely of the European element.

The fear is that without such an addition of European regiments the local army will be deemed to be an inferior service, now that the number of Queen's troops has been so largely increased. The new seven regiments of European infantry would absorb the officers of 14 native regiments.

I would willingly carry the augmentation much further.

There must be in Bengal 40 European battalions. If these seven were added, the Queen's troops would be to the local European force in the proportion of 3 to 1. I should prefer adding 12, so as to make the whole number of local European regiments 15, those of the Queen's army being then 25, but what I first wish to have decided is the principle, shall the European regiments of a local character in Bengal be increased in number?

The Earl of Ellenborough to the Chairman and Deputy Chairman of the East India Company.

Gentlemen, India Board, March 31, 1858.

On the 25th November last, the Court instructed the Governor-General in Council to appoint a Commission composed of military officers of the armies of the three presidencies, with whom were to be associated officers of the Queen's army who had had experience of Indian service, and one or more civilians, to make inquiry, under twelve different heads which were specified, in addition to any others the Governor-General in Council might think deserving of attention, into questions relating to the future organization of the army.

There can be little reason to expect that that Commission will ever make a joint report

It is more probable that, after much delay and many fruitless discussions, carried on with a view to the making of such a report, the several members will make separate reports, differing greatly from each other.

The five first heads under which it has been directed that inquiry should be made relate to the composition of the regiments.

It appears to me that it would not be prudent to form the army upon any one uniform plan; that our best security against a recurrence of any general combination of the native troops, would seem to be rather in the absence of uniformity in the composition of regiments, than in the adoption of any one model for the composition of all.

The differences between the three armies, the little jealousies and rivalries between them have in these recent events been, as they have often proved heretofore, of great advantage to us, without having on any occasion materially interfered with service in the field

It would be desirable rather to extend these differences to regiments, by varying their composition, than to adopt any one system for all, however perfect it may seem in theory.

I should recommend, therefore, that the Governor-General in Council, should be directed to adopt all the different modes indicated of composing a regiment; that is to say,—

1st. To raise a corps in a prescribed district, recruit it there, and there only.

2nd. To compose a corps of troops or companies, each consisting of a separate tribe or caste, or more than one of the troops or companies consisting of such separate tribes or castes, according as there might be more or less means of recruiting them.

3rd To form a regiment of men of many different tribes, castes, and religions mixed up together.

This was anciently the most approved mode of composing a regiment.

4th. To add flank companies of Europeans to a corps.

5th. To abstain for the present, except under special circumstances, from recruiting any men of influential caste.

6th. To enlist natives of other tropical countries, and form them into corps.

7th To add flank companies of natives of other tropical countries to corps principally composed of natives of Hindostan.

It is to be understood that these seven different modes of composing regiments are suggested for the Bengal army alone.

The Madras army, as far as we at present know, is not in want of any alteration; and as regards the Bombay army, we want more facts before we can consider it at all necessary to change its organization, but the principles recommended to be adopted in Bengal should not be lost sight of at Bombay,

The discontinuance of the grade of native commissioned officer, and the substitution of an European serjeant and corporal to each company, (graduated scales of good service pay and retiring pensions being at the same time established for the benefit of deserving or aged soldiers,) is a change which has been suggested by some officers whose opinions are entitled to respect; but it does not appear to afford the prospect of creating such an increased degree of efficiency as would counterbalance the evil of making the soldier's only incentive the desire of money without honour.

It would be practicable to alter and improve the mode of prooting non-commissioned officers, without assimilating it to the stem in force at Madras and Bombay.

The commanding officer might have the power of advancing at once to the grade of commissioned officer a man of distinguished courage and conduct; but he might also allow a respectable old soldier who had always done his duty to rise to that rank in time, without any peculiar personal fitness. Thus the advantages of both systems could be secured.

It would obviously be advisable, in forming a military police, to keep it decidedly below the regular troops in its arms and its drill,—to promote a portion of the non-commissioned and commissioned native officers from the ranks of the police corps itself, as a reward for good conduct; but to bring into it also for promotion well-conducted men from the army, whose qualities might seem to fit them more for police duties than those of the field.

This system of drafting from the line would accelerate promotion in the regular regiments, at the same time that it gave a higher tone to the men of the police.

There is such an universal concurrence of opinion amongst military men in favour of restoring in its integrity the power of commanding officers of native regiments and of officers in charge of companies, that it would be safe to recur to the ancient practice without further discussion, and advisable to do so at once.

Discipline must be re-established.

The sepoy must be made to fear his officer more than the enemy; but the officer must have the power of reward, that he may be loved too.

It has been proposed that in future all courts-martial should be composed of European officers alone; and it seems desirable to adopt that change, leaving only the smaller offences to be dealt with by native courts-martial.

The cadet posted to an European regiment on his first arrival in India will make but little progess in the vernacular language, which it is so desirable that he should at once acquire, so as to speak fluently. More than this, he will be but too apt to acquire a dislike and a contempt for the natives, whom he will never learn to manage, unless at an early age he learns to like them, and to regard them as the persons amongst whom he is to pass the best part of his life.

The best drilling and training for service as an officer in the native army are those which are to be acquired at a very early age in a native regiment under a good commanding officer; and none but good officers, qualified by temper and tact, and by regard for the natives, as well as by experience in the service, should ever be permitted to command a native regiment.

Discipline in an army cannot be maintained in vigour without corporal punishment occasionally inflicted, with discrimination, and without undue severity.

We must endeavour, no doubt, to create feelings of honour amongst our native soldiers; but in our native army, however superior it may generally be in its composition, there must, as in all armies, be men who only obey orders because they fear punishment.

It is impossible to enter into the question last proposed by the Court for inquiry—the providing for the demands for European officers for staff and detached employments without injuring the efficiency of regiments, unless we take a combined view of Her Majesty's service, as well as of that of the Court; for it is not reasonable to suppose that when the number of Her Majesty's regiments in India is more than tripled, and the number of native regiments is, as it must be, on financial grounds as well as on grounds of policy, materially diminished, the officers of Her Majesty's service can be excluded from their fair proportion of such staff and detached employments.

I have thus gone through all the twelve heads the Court assigned for inquiry by the Commission, which it instructed the Governor-General in Council to form, stating to you under each the opinion I have been led to adopt, not hastily, nor only yesterday, but after much and long consideration, and not without consultation with those whom it seemed most advisable that I should advise with upon the subject.

It will be very gratifying to me if the Court should see reason to concur generally or to some extent in the views I have expressed; and to whatever extent we may agree, it would, I think, be most desirable that the Court's instructions should be at once conveyed to the Government of India.

I have, &c.
(Signed) ELLENBOROUGH.

MEMORANDUM by SIR GEORGE CLERK. INDIA, Military,
P C. 855, parag., 9.

I CONSIDER that there are serious objections to the measure of raising large masses of levies in the Punjab. The more so, as it appears from the brigadier's report that some of the regiments into which they are formed "are bonâ fide commanded and led by "native commissioned and non-commissioned officers."

The latest return of this force which is in this office is of June last. It estimated the number at 37,000 up to last October.

It is to be gathered from the official narratives that this number has since been considerably increased.

It is now, probably, not less than 60,000.

Of the imprudence and danger of thus filling the mouths and putting arms in the hands of anything like so large a number of Punjabees, I have not a doubt.

But, as respects the number of native commissioned and non-commissioned officers of any description of regiment so raised, I conceive that the military authorities there must be the best judges. I, therefore, see no objection to the proposed changes, involving some increase of such officers, and a reduction in the strength with an increase in the number of companies; and so assimilating certain regiments to the formation of some regiments of the same description elsewhere in India.

It is, however, proposed to increase the pay of the rank of jemadar from rupees 24. 8. to 30 rupees a month. The chief commissioner thinks it "politic." The military auditor properly points out the inconvenience of raising the pay of the rank of jemadar so much above that of the same rank in the line. The Court of Directors reluctantly sanction the measure.

I apprehend it will prove very embarrassing; and it, therefore, affords further proof of the necessity that exists for cautioning the authorities in the Punjab against the adoption of ill-considered changes.

INDIA, P.C. 926, Military. Note on Paragraphs 19, 20.

SUCH are the inconsistencies in which the measures of a Government may be involved, if arising from no other impulse than a popular cry in a panic. Because some lieutenant-colonels had a predilection for giants and water drinkers, and so recruited too exclusively from the classes of the military khultree and the priestly boahmun, the only eligible mode of military organization of natives in India has now been generally pronounced to be the recruiting of none but low caste or no caste men; and it is odd enough that some advocates of this novel experiment on the military resources of Hindostan proper have further erred in referring to Sikhs and to Goorkhas as low caste. Perhaps there are no sects in India against whose religious tenets it would be more difficult or dangerous for Europeans to contend. This P.C. affords the illustration. It is here proposed by the Court to rescind, on account of caste prejudices, the late general enlistment order in respect to a certain class, with a view to reconcile them to serve in our army, though this class consists of those of the "hill men," who are notoriously latitudinarian in their habits; some, perhaps, with a slight cross of Goorkha blood or of Rajpoot blood in their veins; others with none at all; but all, nevertheless, imbued with some steady principles of consistency in matters concerning their religious doctrines.

In 1816-17 it was thought to be advisable to enlist Goorkhas in the British service. Their prowess and other soldierly qualities had just then been conspicuous in arms against us. The Nepal Government permitted the enlistment to a certain extent, because it served to keep that Durbar conveniently informed for the future of our military measures, at our expense. But beyond that extent (two battalions), they never allowed our recruiting to be carried. Indeed, that useful and inexpensive system of espionage once established, it became so difficult for our commanding officers to recruit more Goorkhas, even for those two regiments, that now probably they do not contain more than three real Goorkhas per company, if any. But the class of men who, I believe, fill those ranks are, for the most part, of the breed between those original Goorkha sepoys and the women of the lower vallies of the Sewalik range and of the plains outside. They are thus better suited than the Goorkha *for our military service on* the plains of India. They inherit his bravery, vivacity, and good humour, while they suffer less from exposure in hot weather. But this class is not very numerous.

Twenty years ago Runjeet Singh had the same fancy. He wished to introduce in his very troublesome army a counterpoise to his overbearing Sikhs. The Nepal Government indulged him also. But they countenanced his project only to the same extent (as I was informed by his French officers), and for the same purpose of their own. And it is as much as a Goorkha's nose and ears are worth to enlist in Sikh, British, or in any other service without the formal permission of his Government. Now the Court in these paragraphs suggest to the Government of India that it is most desirable to encourage the enlistment of Goorkhas. But they seem to forget that the Goorkha is the native of a cold and mountainous country, and that if he ever finds himself during eight months of the year on the plains of India, his time is passed in fanning himself, and in laying maledictions on the level land that so wearies the muscles of his legs.

April 10, 1858. GEORGE CLERK.

SIR, East India House, May 20, 1858.

I HAVE the honour, by command of the Court of Directors, to acknowledge the receipt of the Earl of Ellenborough's letter of the 31st March last, relating to questions affecting the reorganization of the native army, which, under the Court's orders of the 25th November last, were directed to be referred to a Commission to be especially convened for that purpose.

His Lordship is disposed to consider that a unanimous report on these questions cannot be expected from a Commission, but only individual opinions, differing greatly from each other, and that it is therefore desirable that, to some extent at least, instructions on several points should be at once conveyed to the Government of India.

The Court have not yet received intelligence of the formation of the Commission, and they are apprehensive that some further time must elapse before the Government of India will be able to command the services of officers of rank, talent, and experience as members of it. Concurring with his Lordship in the importance of placing that Government at the earliest date in possession of the views of the home authorities on some of the principal points referred to in his Lordship's letter, the Court have for this purpose framed the draft of a despatch, which is now submitted for the approval of the Board.

The Court have omitted in this draft all reference to the proposed alteration in the constitution of native general courts-martial, as they apprehend that it could not be made applicable to the native officers and soldiers now in the service at the three presidencies, all of whom have been enlisted under the provisions of articles of war, which constitute native officers the members of courts-martial for the trial of native officers and soldiers, except in cases of appeal to a European court martial.

I have, &c.
(Signed) J. D. Dickinson.

The Secretary, India Board.

Extract of a Letter from the Court of Directors of the East India Company to the Governor-General of India in Council, dated May 18th, 1858.

(No. 132, Military.)

Being apprehensive that much time may still elapse before you are able to secure the services on the Commission of inquiry ordered in our letter of the 25th of November, 1857, No. 235, of officers of rank, talent and experience, and deeming it of much importance that you should be apprised as soon as possible of our sentiments, so far as they have been formed, on the several questions we had suggested for consideration, we proceed to make the following observations.

2. Taking in succession the heads of inquiry we have specified in our letter of the 25th of November, we would observe that, upon grounds of general policy, it is very important that there should not be one uniform plan for the composition of native regiments, and, therefore, that the three following modes indicated for that purpose should, when practicable, be adopted; that is to say,—

1st. To raise corps, each in a prescribed district, and recruit them there, and there only

2nd. To compose corps of troops or companies, each consisting of a separate tribe or caste, according as there may be more or less means of recruiting them.

3rd To form regiments, each composed of many different tribes, castes, and religions, taken from the population of the entire presidency in due proportions.

3. This last system, as you are aware, was always the most approved mode of forming a native regiment, and still generally prevails at Madras and Bombay, although it has been departed from in practice in Bengal; and we think it should be regarded as the normal type for the Bengal army under its new constitution, the other systems being exceptional, and, so to speak, experimental.

4. The experiment of adding flank companies of Europeans to a native corps has been suggested. We have great doubts of the expediency of this measure, but we leave it for your consideration and report.

* * * * *

6. It will be proper to inquire whether men of other tropical countries can be enlisted for service on the same terms of pay and pension as natives of India, and, if so, whether they should be formed into separate corps, or be incorporated into regiments principally composed of natives of Hindostan.

7. The different modes above specified of composing regiments are suggested for the Bengal army alone.

8. The Madras army, we believe, is not in want of any alteration, although we should prefer that an increased number of the classes which form the corps of sappers and miners at that presidency should be entertained as recruits We are also of opinion that the system of recruiting for the Madras cavalry should be carefully reconsidered.

9 For Bombay, we are desirous that the principle we have uniformly laid down, of requiring each army to enlist from the tribes resident in the territories of the presidency to which it belongs, should be more strictly enforced than it has hitherto been. It will, we think, be found desirable that the principles recommended to be adopted in Bengal, if found to be advantageous to the service should, by degrees, be acted upon at the other presidencies.

10. Two very important points to be considered are, the continuance of native officers in regiments, and the system of promotion to those commissions.

11. As, under present circumstances, the continuance of native officers in the armies of Madras and Bombay must be sanctioned, we consider that they must also form a component part of the regiments to be raised in Bengal.

12 Under the late organization of the Bengal army, soldiers who had performed any distinguished service have frequently been advanced over the heads of their seniors without remark or objection, but promotion, as a general rule, has been made by seniority The Madras and Bombay system of promoting generally by merit, with due regard to the proportions of each caste, has undoubtedly proved the more beneficial to the service. The same system has been observed in the irregular corps of the Bengal army. It is our opinion, that this system should be introduced into the corps to be raised in Bengal in substitution for the old corps of native infantry of the line.

13. It would obviously be advisable in forming a military police to keep it decidedly below the regular troops in its arms and its drill; to promote a portion of the non-commissioned and commissioned native officers from the ranks of the police corps itself, as a reward for good conduct, but to bring into it also, for promotion, well conducted men from the army, whose qualities might seem to fit them more for police duties than those of the field.

14. This system of drafting from the line would accelerate promotion in the regular regiments, at the same time that it gave a higher tone to the men of the police.

15. The 9th point of inquiry specified in our letter of the 25th November 1857 related to the powers confided to commanding officers of native corps and to officers of companies.

16. There is such an universal concurrence of opinion amongst military men of regimental experience in favour of restoring the

powers of commanding officers of native regiments and those of officers in charge of companies, that we think it will be proper to recur to the ancient practice without further discussion, and advisable to do so at once at all the presidencies.

17. Discipline must be established.

18. The sepoy must be made to fear as well as to respect his officer; but the officer must also have the power of reward, that he may be regarded with feelings of respect and gratitude.

19. *It appears to us to be of importance that the first elements of* military drill should be imparted to the European officer before he joins a native corps. For this purpose a service of six months with a European regiment would probably suffice. The cadet ought then to have gained a perfect knowledge of those elements, so as to be exempted from the necessity of being placed under a native drill master.

20. You have already* been instructed to promulgate rules which will prevent the promotion of ensigns to be lieutenants, unless, in addition to their being qualified as linguists they produce satisfactory testimony that they have conducted themselves towards the native soldiers in a manner calculated to gain their respect and confidence.

21. We have now to add that none but good officers, qualified by temper and tact and by regard for the natives, as well as by experience in the service, should ever be permitted to command a native regiment; that the principle of selection for regimental command must, therefore, be more strictly applied than it has hitherto been, and that if with this view it be necessary at any time to dispense with the services of a lieutenant-colonel who may be posted to a regiment, or the major belonging to it, that officer must remain *unemployed (receiving, however, garrison pay* and allowances), until his services can be made available in some other station for whic he may be well qualified.

2 One more of the subjects in our dispatch of 25th November 857 relates to the system of punishment in the native army.

23. Upon this subject we observe that discipline in an army cannot be maintained with vigour without corporeal punishment occasionally inflicted with discrimination and without undue severity.

24. We must endeavour to create feelings of honour amongst native soldiers; but in our native army, however superior it may generally be in its composition, there must, as in all armies, be men who only obey because they fear punishment.

25. In our military letters of the 6th April 1853 and 24th December 1856, we have authorized the admission, under certain circumstances and on prescribed conditions, of officers of Her Majesty's regiments serving in India to staff and detached employments, which had been previously limited to officers of the Company's army. Under the necessity which has arisen for large additions of Her Majesty's regiments to the army in India, it may be expected that the number so employed will be increased till *the number of the Company's officers withdrawn from regiments* will be very considerable, and it will be necessary to arrange a plan for rendering their detached employment compatible with regimental efficiency; but this measure does not press for immediate settlement. Meanwhile, we consider it right to state that it will be indispensably necessary that the European officers should continue, as at present, to be classed for promotion by seniority, in numbers and proportions corresponding with those now on the establishment of regiments, in order that there may be equal chances of promotion at the three presidencies.

Eaton Square,
May 21, 1858.

My dear Sir Frederick,

I AM quite satisfied with the draft on the re-organization of the Indian army, and will sign it as soon as I receive from you an explanation of the last paragraph, which I am not sure that I correctly understand.

Does it mean, that whatever may be the number fixed for the future establishment of officers in a Bengal regiment, the proportion of ensigns, lieutenants, captains, &c., should continue as it is, so that the promotion may continue subject to the same chances as promotion in the Madras and Bombay armies. This is a correct principle, but it may be better for you to send me a paragraph expressing your meaning more clearly than this concluding paragraph does.

A letter of such importance should be as clear as daylight.

Yours, &c.,
(Signed) ELLENBOROUGH.

Sir Frederick Currie, Bart.,
East India House.

My dear Lord,
East India House, May 21, 1858.

THE last *paragraph of the dispatch about* re-organizing the army is quite correctly interpreted by your Lordship, and the military men in this house consider it quite clear, and capable of no other interpretation. There will be difficulty in getting it out by the next mail if any alteration is made in the letter now, either by your Lordship or myself, as then it must go again before the Court for the alteration to be adopted.

I have, &c.,
(Signed) F. CURRIE.

The Earl of Ellenborough,
&c. &c. &c.

MEMORANDUM by Sir G. CLERK.

I DO not consider that a British or any other European Government can possibly be secure in India while surrounded by a native army, if neglecting to keep good faith in matters of religious feeling and of real rights with the populations from which the sepoys are recruited. Such a Government cannot subsist if served by Europeans alone. Therefore, the first step in re-organization of a Bengal army is to withdraw councillors, commandants, commissioners, magistrates, collectors, and other enthusiasts in the service of the Government from that new field of activity in experimental conversion by persons in so false a position, and to desist from measures undertaken, sometimes recklessly, at other times insiduously, to subvert, curtail, or destroy rights in property. These have created throughout the continent of India, if not beyond, not only a distaste for our military service but a thirst for Christian blood.

---

* Military Dispatch, 8th July, No. 1,131 of 1857.

It is strange that at this time of day it is necessary to observe,—not in France, or Holland, or Russia, for they know better there,—but in England, and to some visionary ladies and gentlemen in India, that the Asiatic disposition is not the English disposition. You may be mild with the Indian, Hindoo, or Mahommedan. You may be ferocious with him. In either case, with due circumspection, the European will be safe. But you cannot practise deceit towards him and prosper. He has a great notion that he can beat you at that, and that you are in such arts a baby in his hands. And so it really is.

Whenever the natives see reason to confide in us again, confidence will be restored. That done, it matters not much from which of the many martial classes a native army is recruited, provided the local Government insist on a return to long-neglected regimental discipline and magisterial vigilance.

Of all the wild ideas lately exhibited in print not one, perhaps, is more absurd and dangerous than that of "never again having "a single Brahmin or Kuttree in the army." Brahmins should be few because they are of the priestly order, but they should not be quite excluded. Many a commanding officer in the days of Colonel Arthur Wellesley in the Deccan made their influence highly useful for British purposes; and even during this trying occasion some Brahmins have nobly done their duty by us, as they did in the last century by our predecessors the Mahommedans. But the Kuttrees should be many in our army, because they are of the military class, and most soldierly in their habits.

The lowest caste should also be used for military and police purposes. I know their pluck, and have been indebted to it during disturbances. But they are generally drunken, turbulent characters, and it is troublesome to confine them to quiet habits during peaceful times.

In India, as elsewhere, there are classes who, with few exceptions, are poltroons. These hear the cry for new levies, and are desirous of obtaining the pay, but with no intention of going to the front in time of war.

In Lord Ellenborough's minute the expediency of increasing the number of European regiments in the Bengal presidency is considered. In whatever degree the permanent army of Bengal is to be benefited or gratified by improvement or increase in its organization, or in promotion of its officers, consequent on the mutiny of that army, where discipline, generally, has been notoriously slack, it is most just and necessary that, at least in a proportionate degree, benefits and encouragement should be conferred upon the armies of Madras and Bombay, which not only have not mutinied, but for 10 months have been so earnestly and materially aiding in Bengal, as well as in several other parts of India, in suppressing disaffection, and even in contending against Bengal mutineers.

It seems to me that there is great want at home of some precise and constant information regarding the numbers and character of the several existing and increasing levies which have been, and are being, raised, in the North, the East, and the West, of India, since the rebellion commenced. I have seen nothing in the shape of a return, or present state, or indeed general information of any kind on the subject which it is so important to comprehend when considering the question of the re-organization of the Indian army.

G. C.

June 9, 1858,

From Lieut.-Col. H.M. Durand, C.B. to

Allahabad, May 21, 1858.

1. Under instructions received from the Right Honourable the Governor General of India, I have the honour to forward a printed copy of letter, No. 235, dated 25th November 1857, from the Honourable the Court of Directors,

2. Circumstances have rendered it hitherto impracticable, notwithstanding the successes which have attended our troops in the field and the important advance which has been made towards the re-establishment of the authority of Government in the disturbed districts, to constitute such a Commission as the Honourable Court desired to see appointed, the Governor General has determined to adopt the alternative of obtaining in writing, from eminent and experienced public servants, civil and military, their opinions on the several heads of the inquiry, the conduct of which would otherwise have been entrusted to the Commission.

3. In respect to the order in which these heads shall be taken up, his Lordship is of opinion that the main features of the revolt of the native army in Bengal, and the general and financial considerations which the issue of this unparalleled mutiny entail, are of themselves sufficient to prescribe the point, to which, practically, the attention of the Home Government must first be directed, that point being the strength and the composition of the European army, which must be permanently maintained in India as the broad and fixed basis of our power and security.

4. This being so, the fifth paragraph of the Honourable Court's Dispatch becomes the one of primary importance, and indeed a decision on the point above noticed, as well as on the question raised in that paragraph, viz., the proportion which the European should bear to the Native portion of the army in India generally, and at each Presidency separately, will go far to simplify inquiry into other parts of the whole subject, the financial aspect of which will then be brought clearly into view.

5. Impressed with the necessity for a speedy though a well directed settlement of these fundamental data, the Governor General has directed me to forward for your attentive consideration the appended series of questions, and to request that replies may be returned with as little delay as the weighty nature of the points referred for your opinion may render practicable.

6. The series of questions will be followed by other series upon the various heads to which the Court's dispatch calls attention; therefore, in replying to those which I am now directed to place before you, there will be no necessity for touching upon the many important particulars to which the letter of the Honourable Court adverts, but which are foreign to the main question raised in the fifth paragraph.

I have, &c.
On special duty.

Questions having reference to Paragraph 5 of Dispatch, No. 235, of November 25, 1857, Military Department, from the Court of Directors.

1. What is the number of European troops of each arm now serving in   , and what is their distribution?

2. What is the number of European troops of each arm you deem necessary for   , and what should be their ordinary distribution?

3. What is the number of native troops of each arm now serving in   , and what is their distribution?

4. What is the number of native troops you deem necessary for   , and what shall be their ordinary distribution?

5. What proportion of native troops now serving in   are regulars, irregulars, and police corps: of what races are they composed, and in what proportions do the races occur?

6. What proportion of your proposed establishment of native troops should be regulars, irregulars, and police?

7. What proportion should the European bear to the native troops in   , and state the ratios, both inclusive and exclusive of police corps?

8. What proportion should the European bear to the native troops in India generally, and state the ratios as affected by the inclusion or exclusion of native police corps?

9. Is there adequate barrack accommodation for the European troops now serving in   and state its amount?

10. Would additional barrack accommodation have to be provided in   for the strength of European troops you deem necessary, and to what extent?

11. What proportion of the European force should belong to Her Majesty's regular army; and what portion should be composed of troops raised for service in India?

12. Under the supposition that additional corps of Europeans have to be raised for service in India, how would you officer them?

13. Under the supposition that a considerable increase takes place in the number of corps raised for service in India, and they are officered from the officers of the mutinied battalions of the Bengal army, will this accession of seniority promotion corps create any greater embarrassment in juxtaposition with the purchase promotion system than what now accrues from the existence of the Royal Artillery, Royal Engineers, Royal Marines, and the three Indian Armies, in all which corps and seniority promotion is the system?

14. The feasibility of raising corps of foreign mercenaries, such as Tartars, Chinese, Malays, Dyaks, Africans, Madagascarenes, &c., being assumed, would you consider that the proportion of European to native and foreign mercenary troops could, with safety to our power and supremacy in India, be modified from the ratio stated in reply to Questions 7 and 8; if so, to what extent?

NOTES on the EVIDENCE taken before the COMMISSIONERS appointed to Inquire into the Organization of the Army, at present Serving in the Pay and under the Control and Management of the Honourable the East India Company.

THE experience we have gained of the slight dependence we can place on the faithful services of the Bengal army, composed of high caste men, is a sufficient warning to us for the future, whilst on the other hand, the conduct of the Bombay and Madras armies, composed for the most part of a different class, has shown how necessary it is for the British Government to consider from what class the native army of Bengal should in future be raised.

With such experience, it appears to be our interest to enlist men into our service whose position will be raised in their own estimation, as well as in that of their fellow-countrymen, by serving in the native army on terms of equality as soldiers with those who formerly thought themselves by birth, from their high caste, or any other cause, their superiors. Caste must in future be disavowed in the native army, in all the duties of a soldier, but this disavowal of caste should in no way interfere with the private life of the native soldiers. It will also be necessary to consider what proportion the different nationalities or castes should bear to each other. At present we have too great a proportion of Mahomedans in the Madras army, we have it in evidence, that there is 35 per cent. of Mahomedans in the infantry, and the cavalry are high-class Mahomedans; with few exceptions they are excellent soldiers, but not to be trusted by a Christian government, when the standard of the Prophet or of the descendant of a Mahomedan emperor has been unfurled, as it would be contrary to their own religious faith to act in support of Christians.

The native army cannot be commanded or ruled by conciliatory measures involving concessions, which they will attribute to weakness or timidity, or by favouring one class more than another, but by strict discipline, based on principles of full and ample justice to all. It is not the native, but the European force, which must form the basis of our power in India, and its security ought to be our first consideration, so that it may be a pillar of strength in maintaining the peace of the country, in giving protection to our revenue and judicial officers in the execution of their duties, and in enabling Government to carry out such beneficial measures as will ameliorate the condition, and secure protection to the peaceful and industrious classes of the native population.

To make everything secure for the future, and to impress on the native mind our determination to leave nothing to chance, permanent fortifications must be erected in those parts of the country which contain an excitable, a military, or a lawless population. In selecting positions for these fortifications, consideration must be given to the health of the European force, their site should depend on the nature of the country, the railroad communication, water carriage, and a sufficient space for magazines, arsenal, wells, tanks, casemated barracks, and accommodation for the families of the soldiers. They must be so constructed, that in the event of any portion of the garrison being required for service in the field, the equipments and families, as well as the incumbrances of other troops belonging to the district, may be safely left under a small, but sufficient force for their protection.

The navigation of the principal rivers should also be made safe for the transit of goods, military stores, and all munitions of war. A marine force should be raised and disciplined for the working and management of a river flotilla of gunboats; this marine corps should be enlisted for general service in the East, as recommended by the late Duke of Wellington.

To make railroads generally available for military purposes, short lines to connect the commercial lines of railroad will be found necessary.

A corps of camels and elephants should be attached to each corps of the army, for the rapid transport of light troops within its district. The elephants should be trained to render assistance to the artillery in difficult ground.

With such means and conveniences for the transit of stores, ammunition, and all requisites for military purposes, the armies would at all times be ready to take the field fully equipped

In order to enable the three armies of Bengal, Madras, and Bombay to afford each other mutual support, it will be necessary to have a railroad running through the centre of the Peninsula, having one terminus at Ghooty in the Madras presidency, and passing by Hyderabad, Nagpore, and Jubbulpore, having its other terminus at Allahabad. The southern terminus would be on the Madras and Bombay railroad, the line would cross the Bombay and Calcutta railroad at Jubbulpore, and have its terminus on the Calcutta trunk railroad, leading to Agra and the north-west. With such a communication by rail, a large force could be readily thrown into the Nizam's, Nagpore, and Bundelcund territories. In Hyderabad there is a numerous, turbulent, and lawless population of Pathans and other Moslems, and in the interior of the Nizam's country the zemindars live in feudal grandeur, in forts, retaining Arabs as their defenders.

A permanent fortification, to be held by Europeans, near Hyderabad and another near Nagpore, would enable the garrisons to keep the two principal towns in check, and render disposable the greater part of their garrison for occasional service in the field.

In the event of the Madras army occupying the Saugur and Bundelcund territories, it would be well to consider the distance that Madras troops will be from their own presidency and place of enlistment, and whether therefore, Madras corps can be sent for garrison duty to the stations in these districts, without serious inconvenience, as the greatest difficulty will be experienced in carrying out the recruiting, in withdrawing the non-effective men, and in arranging the reliefs. The Madras sepoys, it must be remembered, are generally married men, and when proceeding on field service leave their families in depôt at any convenient station, but when moving from station to station for garrison duty they take their families with them, an arrangement not simply of their own choice, but unavoidable, for when serving in garrison, and consequently without batta, the men have not the means of supporting their families at a distance apart from themselves. This is noticed as a point which must be kept prominently in view in any measure connected with the location and relief of the troops.

The distance from Ghooty, in the north of the Madras presidency, (through which the contemplated railroad from Madras to Bombay will run) to Kamptee is 520 miles, from Kamptee to Jubbulpore 200 miles, from Jubbulpore to the centre of Bundelcund 100 miles, or an average of 800 miles from Ghooty to the cantonments in Bundelcund.

It would appear that if the railroad from Bombay to Calcutta is to pass through Jubbulpore, it would be a more convenient arrangement for the Bombay army to take the Saugur district, and the Madras army the Southern Mahratta country and Doab, unless a railroad is to be made, as I have indicated, from Ghooty to Jubbulpore, which would then place the Madras army on an immediate transit communication with its own presidency.

In peaceable districts, the natives should be made to register their arms, and they should be subject to a heavy penalty in the event of arms being found in their possession unregistered. In districts where the inhabitants have shown a turbulent or unruly disposition, they should be disarmed, as in Malabar, where the moplahs, a fanatical Moslem population, have been disarmed and regulations and laws enacted empowering the magistrate to punish or restrain this turbulent class.

The uniform of all arms should be more attended to, and made more suitable to men undergoing fatigue in a tropical climate. The European barracks should be made airy, and accommodation should be afforded to married men and their families in barracks suitable for their position.

1. *The proportion of European to native troops to be employed in Bengal.*

If I am to assume that the population of Bengal, and of those districts where the Bengal army is to be employed, have a deadly feeling of hostility to our rule, it will be a difficult matter to say what amount of force will be required to maintain our superiority in these territories. There may, indeed, be predatory tribes, such as the Gogras and Bheels, or excitable Mahomedans, such as the Wahabees, who will at any time take advantage of any disorganization of our military force; but the experience of others, as well as my own, justifies me in taking a more favourable view of the feeling of the great majority of the inhabitants as well as of the native soldiers; the desire of the former, I believe, is to live under a just and humane government, secure from the scenes of rapine and murder to which the mutiny of the Bengal army has led; and the Bengal army itself, in former days, when kept under strict discipline, has displayed all the good qualities of soldiers, that have justly given it the reputation of a noble and faithful army.

It does not appear to me that the recent mutiny or revolt had any connexion with the industrious body of the inhabitants, but it had its origin in the widespread influence and organization of the fanatical leaders of a section of Mahomedans, who were always ready to take advantage of every occasion to assert the supremacy of the Mussulman dynasty and their faith. To accomplish this, they were regardless of the means they took to effect their object. They could not have selected a more opportune occasion than when the discipline of the Bengal native army was so defective and impaired. We have it in evidence (Qu. 3701) that a sepoy who fancied himself aggrieved by any act of his commanding officer, upon a trifling occasion, could appeal against him and make a representation to the commander-in-chief direct (Qu. 3705), without passing through the intermediate authorities. Such an act is contrary to the rules of military service and the maintenance of discipline; the consequence has been, that the regimental officers felt that the sepoy did not care for their authority (Qu. 3706, 3713). As might have been anticipated, this has become more and more apparent during the last twenty years.

It also appears that the commander-in-chief, with the approval of the Governor-General, altered the regulations, so as to limit or circumscribe the powers of commanding officers (Qu. 3716, 3719).

Enough, therefore has been given in evidence during the investigation to establish the necessity of a change in the system of carrying on the discipline of the Bengal army.

In the history of our rule in India it is known that insubordination has not been confined to the native ranks alone, it has been witnessed in the ranks above them, amongst those who ought to have set a better example.

This insubordination is still fresh in the memory of many old native officers. If on no other account, this alone ought to make us lenient in dealing with the sepoy. Even-handed justice requires that we should not treat the sepoy with more severity than we have treated those of our own race.

The superiority of European discipline, the bravery of our officers and soldiers, their endurance under privation and fatigue, and all those high qualities which distinguish the character of the British officer and soldier, have been so manifested of late to the natives as to leave no doubt on my mind that they will be inspired with more and more terror of what they consider our magical power. On this ground, I think we may safely trust the native soldiers to a large extent. At the same time recent experience teaches us that we should be prepared with all those measures of foresight and protection necessary to meet any emergency which may arise in future.

Impressed with these views, and considering that in the reconstruction of the Bengal army natives of mixed caste and creeds will fill the native ranks, it appears to me that one European, of the effective European force, to three natives, is a sufficient balance; at the same time, while I consider a large European force to be necessary, I do not see the necessity for the strength of the native army being kept up to the proportion indicated—three natives to one European,—as I look on it as a mere auxiliary force.

2. *Amount of force which will be required in Bengal hereafter.*

In forming any opinion on the amount of force required for the duties of the Bengal army, there are some considerations of importance which must be well considered. These are as follows:—

Are permanent fortifications, such as I have described, to be erected?

Will railroads and water carriage be made available for moving troops to a general point of rendezvous in the event of an outbreak?

Is the artillery in future to be European, with only a few native batteries for frontier service, or for localities not suited for the European constitution?

Is the regular cavalry to be European in future?

Is there to be a camel or elephant corps for moving small bodies of troops rapidly in case of minor outbreaks?

Are the natives to be disarmed in lawless, turbulent, or fanatical districts?

Are native soldiers to be armed with an inferior class of arms to that of Europeans?

Is there to be a regular effective police establishment?

If these questions are answered in the affirmative, fewer European troops will be required.

Until the fortifications, railroads, &c. are completed, the following is the amount of the *effective* force which I consider necessary for Bengal:—

Europeans.

Artillery - - - - - - -	12,040	
Infantry - - - - - - -	28,000	
Cavalry - - - - - - -	9,000	
Sappers - - - - - - -	400	
Total effective European force - -		49,440
Add for sick and casualties 20 per cent.		9,888
Total Europeans - -		59,328

Natives.

Regular infantry - - - - -	37,400	
Irregular infantry - - - -	37,400	
Marine corps - - - - - -	8,000	
Sappers - - - - - -	2,000	
Gun lascars - - - - - -	2,100	
Besides such number of irregular cavalry as may be found necessary by the authorities in India. There have hitherto been twenty-four corps of irregular cavalry, I therefore put down	14,000	
Military police force, about which I require further information; in the meantime say - - - - - -	10,000	
Total of natives - -		110,900
Total of army - -		170,228

On the completion of the railroads and other works above mentioned, I consider that the following reduction in the strength of the army may be made:—

Europeans (Effectives).

Artillery - - - - - - -	2,580	
Infantry - - - - - - -	5,600	
Cavalry - - - - - - -	1,800	
	9,980	
Casualties, &c., 20 per cent. - -	1,996	
		11,976

Natives.

Infantry - - - - - - -	14,800	
Gun lascars - - - - - -	480	
		15,280
The sappers, marine corps, irregular cavalry, and military police remaining the same.		
Total reduction - -		27,256

The army would then stand thus:—

Europeans, effective and non-effective -	47,352
Natives - - - - - - -	95,620
Total - - - -	142,972

The above calculations are made on the supposition that a considerable civil police force is to be established. It will be necessary to hear officers experienced in Indian police before an opinion can be formed of the number required.

3. *Whether the native force should be continued on the regular system, as heretofore, or should the irregular be introduced.*

In the Madras presidency there has been little experience of irregular corps of infantry or cavalry. There is a corps of mounted police in Mysore, and another in Kurnoul. They have received a military training, and are efficient for their purpose. The absence of regular troops has been supplied by sebundees or hired peons.

In the Nizam's territory and in Nagpore there are irregular regiments both of cavalry and infantry, as well as artillery. I would dispense with the native artillery and cavalry in both the Nizam's and Nagpore territories.

There should be no irregular cavalry in Madras. The Government have never employed any, as has been done in Bengal and Bombay; at the same time, an extension of the system of the Mysore horse to that presidency in special cases might be advantageous.

The uniform of the native troops should be light and suitable to the country and climate where they are to serve.

Their arms should be a smooth barrel musket, but light, and of the same bore as the European musket. More consideration is required as to the shape of the gunstock for sepoys than is given at present. Their accoutrements should be made conformable to their uniform.

The cantonments of the native troops ought to be more substantial. The allowance for hutting is insufficient, and the inconveniences to which the sepoys of the Madras army, on a change of station, are put by the exorbitant demands for carriage to move their families, ought to be remedied. The sepoys often deprive themselves of sufficient sustenance in order to save money to pay for their carriage on those occasions, and much disease is caused by the fatigue they undergo; for after they have performed their day's march, they are obliged to go back part of the road to render assistance to their families, and to bring them into the encampment.

It appears to be a bad system to allow sepoys to hold farms as ryots; they should have one occupation and one object, that of faithfully performing the duty of a soldier. If they are married, their wives should live with them in the lines, except in cases of foreign service, when their presence would be inconvenient. Arrangements in such a case should be made under the direction of the Government for their comfort and support, as it is done in the Madras army.

When the sepoy is on actual service, he should have daily rations issued by the commissary-general, as regularly as the European.

The difference between officers and men as to batta should be abolished, and all should receive alike half batta, except when marching or on field service.

Such native cavalry as are required for particular local service should be irregulars, and their numbers left to the decision of Indian authorities. This appears to be the prevailing opinion of the witnesses.

The success of the Scinde horse, a corps of irregular cavalry, may be attributed to the selection of the European officers, and to a commanding officer of rare attainments for such service.

This regiment has remained true to the Government when most other regiments of irregular horse have mutinied. If selection is necessary in the choice of officers, from what body are they to be selected? It may be said, a competitive examination on first appointment will secure the efficiency of officers for irregular corps. No doubt a military education may give an officer a military turn of mind, and qualify him by good training ultimately to excel in the higher branches of his profession. To excel as an officer of irregular troops, it requires that the officer should have a very practical mind, be energetic, have a thorough knowledge of human nature, be of very even temper, have abundant ingenuity to make shifts in difficulties, and great confidence in natives.

I am not aware in what branch of competitive examination such qualities as those mentioned will become apparent, and without them an officer would not be likely to arrive at the high standard General Jacob has done in command of irregular horse.

If the selection of officers for the irregular service is to be made, as at present, from the officers of the regular army, it would be to disregard all our late experience, to allow the selection of regimental officers being made for thè staff, and irregular regiments of cavalry and infantry, and to leave those of inferior qualifications with the regular regiments. May this not be one of the principal causes to which the falling off in the discipline of the Bengal army might be attributed?

4. *Whether the native artillery should be continued.*

The artillery of the three armies should be Europeans, with the exception of a few companies to serve field guns in localities not suited to the European constitution, and on frontier stations, and the regulation number of gun lascars to each European battery.

The cavalry should also be European light horse, and they should be clothed in a uniform more suitable to the climate.

5. *Whether the native sappers should be continued.*

The sappers of the Madras army, composed of low caste men, have long been a corps of brave and faithful men, in whom the Madras army have the greatest confidence. I had a letter from Lord Saltoun, under whom they arrived in China, purposely to bring to my notice their conduct as being most exemplary. I had also a letter from Sir Charles Napier, under whom a company fought at the battle of Meeanee, in which he stated that he placed unlimited confidence in their bravery and steadiness. He could only compare them to British troops, and said they were only second to the 22nd regiment of Her Majesty s European infantry. Sir Willoughby Cotton, also, has always spoken to me in the same terms of them during their long service under him in Burmah, in 1824 and 1825.

I do not see how we can avoid employing natives in the scientific branches, such as the making of gunpowder and other parts of arsenal work. These are well known to the natives; they are greater adepts at such works than the European artillerymen, and they can stand the heat of the workshops better.

Any one who has seen a display of fireworks in India must have been impressed with the ability with which they are made, and the talent of the natives for such work.

It appears to me advisable that officers who have been employed in the scientific department, or a conductor who has had experience in an arsenal, should be examined on this point.

It would be well also to call for evidence as to the system of training sappers in the Madras presidency.

6. *Whether the Bengal army should be composed of different nationalities or castes; and if so, in what proportion.*

We commenced the conquest of India with low-caste men; and our experience of the Madras and Bombay armies has proved them to be faithful soldiers to the British Government. We should remember this in the enlistment of our sepoys, and bear in mind, that in the history of native powers, low-caste men, it appears, were formed into élite battalions, which were brought forward to recover the day when the regular army failed and fled.

The native army should be composed of various castes and religions; and when the recruits are enlisted, it should be thoroughly explained to them that no distinction of race or caste will be acknowled in the army, that all sepoys will be considered *on an equal footing in their regiment* until they attain the rank of non-commissioned or of native officers, and further; that all sepoys equally must work willingly when the service requires it, under the direction of their officers.

Although the fidelity of the Moslems and high-caste men in the Bengal army has of late been shaken by designing persons, yet, when the army has again been recruited by a general mixture of caste, as in the other armies, we may expect to see the same good effects produced as in Bombay and Madras; still, in all mercenary armies, where no national feeling exists between the soldiers and the Government which pays them, strict discipline, an unvaried observance of the rules and regulations of the service, and the regular payment of the troops, are the best modes of ensuring their faithful services. It will prove so with the sepoys.

If discipline be strictly enforced, and a kind feeling shown to the sepoys by their European officers, I do not doubt that those qualities which they so brilliantly displayed as soldiers in former days will become again as conspicuous under the Queen's Government; and the less personal distrust now shown for what has passed, the sooner will the Government regain the confidence of its native soldiers.

I am decidedly of opinion that no material change should take place in the organization of the sepoys of the Madras native infantry, except that they should be enlisted for general service. The sepoys, having had restored to them the advantages of which they had been deprived, are now willing to go on foreign service.

The sepoys of the Madras army have never, I believe, completely regained the confidence they had in the Government previous to Lord William Bentinck altering the pay, pensions and allowances of the native army, without consulting the Madras Government, or considering the effect it would have on the sepoy, with whom "Mamoul," or usage, is the watchword.

No doubt the large proportion of Mahomedans in the Madras army has, more or less, created an excitement in that army during the late occurrences in Bengal; and the cavalry of the Madras army have been dissatisfied in consequence of the reduction of their pay which took place some years since; they felt this to be a grievance; they are principally composed of a high class of Mussulmans, who are brave soldiers in the field, but entertain strong prejudices against Christians, with which their own faith, founded on the Koran, inspires them.

If we have a sufficient force of Europeans, I see no occasion to have corps of Africans, Malays, or Arabs, as the introduction of these would be apt to create feelings of jealousy and distrust in the native mind. I am also of opinion that the sepoys of one army should not be taken from the population living under the protection of the army of another presidency. At present no sympathy or national feeling exists between the three armies, and nothing should be done to encourage it.

7. *Whether the Bengal army is to be enlisted under a new code.*

The code of the Madras army has proved sufficient to maintain the discipline of that army when it has been strictly enforced. The Bombay code has had a similar effect. The military codes of these armies have been framed so as to resemble that of the Queen's army, as far as consistent with a native service. I can see no reason against a general uniform code for the native armies, if it is made short, and is thoroughly intelligible to the natives.

Many of the sepoy pensioners are able-bodied men, and are allowed to have their pensions too early in life. After fifteen years' service they receive four rupees a month, and are then often only from thirty-one to thirty-four years of age; something should be done to induce the sepoy to remain longer in the service, and not to leave it in the prime of life, when his soldier-like qualities are at the best.

The native regimental courts-martial should be less complicated; the punchayet system should be much more generally introduced for the punishment of crimes; the sufficiency of the amount of punishment ordered by a punchayet will depend upon the general state of discipline of the army.

The officer commanding a regiment should have power to discharge men of bad character, without a court-martial.

A great inconvenience is felt by the commander-in-chief from not having it in his power to remove majors from one regiment to another, instead of lieutenant-colonels. The practice is as follows:—Majors, on rising to that rank, take their home furlough of three years; on returning, they find their regiment commanded by a lieutenant-colonel, and that junior majors are in command of regiments, and receiving command money. They apply to have the command of their regiment, and if their petition is attended to, the consequence is, that the lieutenant-colonel is removed to a regiment which is commanded by a junior major, and to which he is most probably a perfect stranger. This operates injuriously to the lieutenant-colonel, who may be removed to a regiment hundreds of miles off. This system requires amendment.

The three armies should be enlisted for general service.

8. *Whether commanding officers should have more power than they now have to reward or punish.*

I answer, most certainly.

If the rules and regulations of the service were carried out *strictly*, it would be found that they give sufficient power to commanding officers of regiments, and this would remedy the defects which have been made apparent in the discipline of the Bengal army. But there is too much English law, not thoroughly understood by the responsible officer, to secure a just administration of it in the native courts-martial. The sepoys do not comprehend it, and a more summary investigation and sentence, would be more satisfactory to the natives.

One of the punishments for high military offences is a sentence of hard labour to work on the roads. This is not a native punishment, it interferes with caste and self-respect, and is very unpopular with high caste men, as it subjects them to a punishment which, on its being carried out, may be the cause of their being worked with a low caste man, while the crime in the eyes of the native may not be a disgraceful one.

The discipline of a native regiment does not depend so much on the number of European officers present with the regiment, as it does on the commanding officer and adjutant, and one officer to each company, being thoroughly masters of their business and able to instruct others. Example and regularity in carrying on duty commands the respect of a native soldier more than any other cause. In the Madras army, many regiments have had their full compliment of officers on the staff, besides sick and those on furlough, but when commanded by an intelligent officer, who took an interest in the personal comfort of the sepoys and their families, such regiments are always in a good state of discipline. The services of the company officers are always of the greatest consequence, more particularly so in the field. On such service all officers are ordered to join, from their staff and other appointments.

9. *Whether the Bengal army is to be divided into two armies.*

I see no sufficient reason for dividing the Bengal army into two armies.

In the event of its not being so divided, it is obvious, from the military positions which it will occupy, that Calcutta is not a convenient place for the head quarters of the commander-in-chief Agra appears more centrical.

When the railroads contemplated have been executed, the cantonments occupied by the Bengal army, European and native, will be supplied from the seaports with all the munitions of war. Stores also of every description will be supplied for the wants of the British soldier, and every facility through them afforded for the transport of troops.

10. *Whether any change is required in the system of promotion as regards native commissioned and non-commissioned officers.*

The advantages expected from the appointment of native officers, as a medium of communication with the European officers, and as affording the means of ascertaining the state of feeling of the sepoys, where any cause for excitement may have arisen in their minds, have not been realized.

The native officers now attain their rank at an advanced age, which unfits them for active service; and it deserves consideration whether they should not be pensioned according to seniority, when vacancies occur in the native officers' list, from the havildars' seniority list, as a reward for long and faithful services. A certain number of native gentlemen might be allowed to enter as volunteers, until they are reported sufficiently instructed in the duties of the lower branches of the service, and have acquired the attainments in English language and literature required of a cadet on first entering the army. After passing an examination, they would then be qualified for the rank of officer, when they should receive an officer's commission and be entered in the regimental list of officers. They should rise in the regiment by seniority until they attain the rank of major, which should be the highest rank they can attain, unless by selection of the Governor-General for superior rank; this, however, is a question of great difficulty and delicacy.

The Order of India should be the reward for energy, gallantry, and good and faithful service in the field.

The selection of naiks in the native army should be left to the commanding officer of the regiment. The naiks, on promotion, should be placed on a seniority list of havildars, and they should be selected by the same authority.

11. *As to whether there should be any admixture of European and native forces, either regimentally or by brigade.*

The system which obtains at present is suitable for maintaining a sufficient connexion between the European and native troops, viz. one regiment of European infantry brigaded with two of natives.

Police.

The information obtained from the witnesses who have been examined about the formation of a police establishment for India does not enable me to give any well considered opinion in regard to the organization of such a force.

A great deal of information about rural and town police is in the possession of Mr. E. Elliot, late head of the police establishment at Madras, who, after thirty years' service in the police, was sent from Madras home, to inform himself in regard to the organization of the Metropolitan, Manchester, and Rural police of the United Kingdom, as well as of the Irish constabulary force. He is the only person I know who is master of the whole subject, and he is well qualified to give information to the Commission on every branch of a police establishment, practical, theoretical, and financial.

The following is a summary of my views on the reconstruction of the army for Bengal:—

1. I think that the European force must form the basis of our power in India, and that a large force of Europeans is at present necessary.
2. That the native army should not be so large as heretofore, but considered only as an auxiliary force.
3. That the artillery, with limited exceptions, should be Europeans.
4. That the regular cavalry should be European light horse.
5. That native sappers (composed of low caste men) can be safely and usefully employed under the direction of Europeans.
6. That lower caste men should be enlisted.
7. That there should be an uniform code for the three armies, and that the powers of commanding officers should be enlarged.
8. That there is no sufficient reason for dividing the Bengal army into two armies.
9. That native gentlemen should receive commissions in the army, and that non-commissioned officers should be selected by commanding officers. The question, however, is one of great delicacy.
10. That European and native troops should be brigaded as at present.
11. That further information is required on the question of police.
12. That railroads should be completed and made available for military purposes.
13. That fortified commanding positions should be held in important districts.
14. That a marine force, composed of natives, should be raised for the navigation of the rivers.
15. That the natives should be disarmed, or put under strict regulations.

Tweeddale, General.

Yester. Oct. 18, 1858.

EXPLANATION respecting the relative COST of CAPE and RED SEA ROUTE for RELIEF of TROOPS in INDIA.

IN the preceding calculations I did not enter into the cost which would probably be incurred for the transit of the troops by rail through Egypt, if the overland route be adopted, nor for the cost of subsistence on shipboard by that route, but as the Adjutant-General wished me to submit further calculations on that head, they will be found as under:—

The chief cost of transit hitherto both for officers and soldiers between Alexandria and Suez, has arisen from the railway not being completed, and the consequent necessity for having separate conveyances, a considerable part of the way, also from the soldier having to be fed for a day or two, but *next month*, that difficulty will be over, when there appears no reason for a higher charge being made for transit from sea to sea, than on any other railway. The charge was I believe at first *5l.* per man, then, as the railway advanced, it was reduced to *3l.*, and ultimately it will, I have little doubt, be at the usual rate of 1*d.* a mile for soldiers, and from 2*d.* to 3*d.* for officers, say about 1*l.* for the former, and 2*l.* for the latter for the whole distance of 216 miles.

The distance will be got over, even at the slowest rate of railway travelling in about 10 hours, and if possible, it should be at night to avoid the heat, consequently there would be no necessity for supplies till the troops got on board, when breakfast would be waiting for them.

The cost of provisions per man on the voyage has, I observe, in most of the estimates been the subject of miscalculation, 1*s.* 3*d.* a day being stated as the probable amount, but by the annexed return of the cost of provisioning troops on shipboard, according to the prices paid by the Admiralty, I find that it is only about $8\frac{3}{10}$*d.* a day, of which, 6*d.* is stopped from the soldier, leaving a charge of only $2\frac{3}{10}$*d.* a day to be borne by the public, which for, say 30 days' voyage, is but 5*s.* 9*d.* per man.

The officers, as in all troop ships, would be messed at the rate of 7*s.* 6*d.* a day, of which the public pays 4*s.* and the officer, from his pay, 3*s.* 6*d.*; the former rate for thirty days would amount to 6*l.*

So that all the charge against the public for provisions by that route would be 5*s.* 9*d.* per man on 29,600 passages, or about 8,510*l.*, and for 780 officers, at 6*l.* each, 4,680*l.*, being for both 13,190*l.*

The relative advantages, in a financial point of view, of the two passages will therefore be,—

By the Cape.

	£	
Passage for men, including provisions	355,200	As given in evidence, p.
Passage for officers, „ „	82,800	
Loss of pay, without service, during a four months' voyage - - - - -	282,410	
	£720,410	

By the Red Sea.

	£	
Cost of troop ships annually for passage, including coals - - - - -	151,800	As above.
Railway fares for 29,700 men, at 1*l.* each	29,700	
Provisions for men, less stoppage - -	8,510	
Provisions for officers, less stoppage - -	4,680	
Railway fares for 780 officers, at 2*l.* each -	1,560	
Loss of pay, without service, during a month's voyage - - - - -	70,602	
	£266,852	

Being about one-third of the cost by the other route, to say nothing of the advantage of having the men three months sooner in India, to meet any emergency which might occur there.

In this calculation, as well as those in my previous evidence, I have not carried the estimated expense of the voyage beyond Bombay, because the progress of railways will, in the course of next year, have so far facilitated the conveyance to Madras and to most of the up-country stations in Bengal, that it will be a quicker and more convenient route to proceed from Bombay by railway so far as completed, and march the rest of the way.

In calculations of this kind, it is admissable to look forward a year or two, and there can be no reasonable doubt that by that time the necessity for distant voyages in India will have greatly, if not altogether, ceased.

It is, indeed, a striking coincidence in the march of events, that just at the time when it seemed probable that our rule in India could only be maintained by a vast accession of European troops frequently relieved, and maintained in the highest state of efficiency, the progress of the railways in India is about to solve the difficulty which must otherwise have arisen in attaining that important object. It is no less remarkable that, at the very period when the reliance hitherto placed on our native army has been in a great measure destroyed, the facilities of transit from one part of India to another by rail are fast rendering us in a great measure independent of such a force. Before two or three years have elapsed, nearly every military station of importance in that country will have been brought within a day's journey of each other; the necessity for keeping thousands of native troops constantly on the march escorting stores and treasures over that immense territory will have in a great measure ceased; and if we keep the large force of Europeans in India which is proposed, I know of no other purpose for which native troops can be wanted, except (as in our colonies) to garrison a few places which are too unhealthy for Europeans.

(Signed) CHAS. RICHARDS.

COMPARISON of the probable COST of an INDIAN EUROPEAN REGIMENT and one of the LINE.

In the comparison which I have been directed by General Peel to make between the relative cost of a regiment of the line and one of the Indian European corps, remaining permanently in that country, the first point to be considered is the establishment in each case, being,

For the Regiment of the Line, consisting of 950 privates.	For the East India European Corps, consisting of 820 privates.
2 lieutenant-colonels.	2 lieutenant-colonels.
2 majors.	2 majors.
10 captains.	14 captains.
12 lieutenants.	22 first lieutenants.
8 ensigns.	10 second lieutenants.

The establishment of non-commissioned officers and drummers are very nearly the same in each case, except that in the East India corps there are thirty half-pay drummers whose pay must be taken into account.

In consequence of the different constitution of the two corps, I find that there are four captains and ten first and two second lieutenants more in the Indian European corps than in the regiment of the line, who may be assumed to cost, say,

4 captains, 400*l.* a year - - -	1,600*l.*	
10 lieutenants, 250*l.* „ - - -	2,500*l.*	
2 ensigns, 200*l.* „ - - -	400*l.*	4,500

But not only is the number of officers greater in the Indian corps, but the establishment of privates is fewer in the proportion of 820 to 950,

For which add - - -	700*l.*	
And for 30 half-pay drummers, say -	400*l.*	1,100
Total annual excess in cost of an Indian European corps - - - -		5,600

This extra establishment would in twenty years (being the minimum period of an Indian officer's service for full pay retirement) amount to -		112,000
But each of these officers would, in the East India Company's army, have had to pay his own passage out as well as home, whereas, in a line regiment, the passages of nearly an equal number would have to be at least twice defrayed at the cost of the public, supposing the regiment to be relieved every ten years. For this it would be necessary to deduct from the above amount thirty-four passages, twice each way, say at 90*l.* each, or	12,240	
I have already explained that, under the operation of the Ten Years' Enlistment Act, there would not probably be more men to come home at the public expense from a regiment of the line than from a local European force; but even supposing that in the course of twenty years one-fourth of the strength did so, say 237½ men for passage out and home, the cost for 475 passages, at 12*l.* each, would be -	5,700	
But officers of the line, under the rank of captain, returning invalided, have their passages paid out and home, while in the East India Company's, that is paid from a fund of their own raising. On this account add, say two passages out and home per regiment, or four each way annually, for twenty years, in all eighty, at 90*l.* each, or - - - - - - - -	7,200	
Total deductions - -	25,140	25,140
Excess of cost in twenty years of an East Indian European corps beyond a regiment of the line		£86,860

The expense for pensioning the soldier in the one service would be almost identical with that in the other, keeping in view, however, that in future the Indian Government must necessarily, in either case, pay the actual cost of pension instead of a merely illusory amount, as hitherto, by which the East India Company has been enabled to throw a very heavy burden on the imperial treasury, which ought, for nearly the last half century, to have been borne by the Indian revenue.

The retired full pay of the officers, in either case, next requires consideration. This, in regiments of the line, is now attained after a minimum of thirty years' service, without reference to what portion of it may have been passed in India. In the Indian European corps it would be attained, as a minimum, after twenty-three years' service, of which twenty must have been spent in India; but as the service of the officer of the line in that country, or other tropical climates, is only on an average about half as long, nearly as many officers of the line may be expected to attain a right to the full-pay retirement after thirty years' service as in the Indian army after twenty-three. The rank to which they will have attained in that time would also (setting aside the operation of purchase) be much the same in both, namely, about that of regimental major with a retirement of 16*s.* a day.

There is, consequently, not much to influence the calculation on either side as regards retired full-pay; but it must be kept in view that in the Queen's service a large proportion, amounting to between a third and a half of the officers usually sell their commissions in preference to accepting retired full-pay, thus leaving nothing to be provided by the public for their services; but as there is no such feature in the Indian army, every retirement in that service involves considerable expense.

What exact difference this would make in the relative cost of the two corps under comparison it would be impossible to say, but no doubt economy would be greatly in favour of the line regiment on this account. At all events, the difference would much more than cover any expense arising from widows' pensions and compassionate allowances, which, for the line, have to be provided at the cost of the imperial treasury, whereas, in the Indian regiments, they are provided by an annual contribution from each officers' pay.

So far, then, as it is possible to take all the contingencies into view, there can apparently be no question that the regiments of the line must be the cheapest force in the end, principally owing to the greater establishment required in the other to meet the facilities which it is necessary to afford officers for returning to Europe from time to time when they have no periodical relief, such as takes place in regiments of the line.

War Office,
November 17, 1858.

ALEX. TULLOCH, Colonel.

MEMORANDUM.

Horse Guards, December 30, 1811.

IN considering the arrangements for renewing the Charter of the East India Company, it will probably be one of the first and most important measures to take a view of the means by which the military force, now under the control and arrangement of that Company, may be transferred to His Majesty's service.

Upon the original formation of this commercial body, the military force consisted only of a few companies for the guard and protection of the factories upon the Peninsula of India, and continued upon a confined establishment until an accession of territory and consequent political power in the East effected the gradual increase of the Company's army to an extent of force inconsistent with the original principle, which suggested the expediency of investing the East India Company with military control.

Upon the supposition therefore that many considerations of policy may suggest the propriety of placing the army of the East India Company upon a footing with His Majesty's forces, it will be essential to consider the best means by which this measure may be carried into execution with advantage to the public service in general.

No difficulty can arise in the transfer to His Majesty's service of the corps of artillery and engineers, which are composed of Europeans; and this branch of the service may be readily placed under the arrangements of the Master-General and the Board of Ordnance, and supplied with men and stores from Woolwich. The composition of this corps will not call for such regulations as it will be necessary to adopt in regard to the service of officers in the native army; but the case is different in respect to the native forces, the efficiency of which depends upon a strict attention to their national and religious prejudices, of which they are tenacious to a degree not to be conceived by any officer placed at once in a situation of rank in a sepoy battalion; and it is only by a residence in the country that a facility is acquired in the language, and a habitude in the peculiarity of native customs, together with a feeling for the necessity of their due observance, so absolutely essential to the existence of a force thus composed in a state of efficiency.

It will appear under these circumstances that the native force in India cannot be viewed as on a footing with His Majesty's local establishments at other stations, or as like them, admitting, without restriction, of transfers and exchanges from or to regiments of the line. In the transfer, therefore, of the sepoy troops to the service of His Majesty, it will be a measure of expediency to leave the organization of the corps very much in the same state as at present, with the exception of such regulations as shall hereafter be specified, and that the force should be denominated His Majesty's Local Army in the East Indies.

With regard to promotion, it is essential to the good of the service that the discretion should not be clogged by a rigid adherence to the present regulation of the Company's service, which, without the admission of any exception, provides for the succession of regimental promotion. An understanding should, therefore, be established that, after the rank of captain, a discretionary power is vested in the Commander-in-chief in India to make a selection for the rank of field officer from the captains of the native corps generally, as vacancies shall occur, provided the officer in regimental succession shall not be considered in all respects an eligible candidate for promotion.

With the exception of this discretion, subject, as in all other cases, to the final approval of His Majesty, the promotion should be favourably considered in regimental succession; and in all cases to be confined to the officers of the Sepoy service, and without purchase.

Although it is essential to the efficiency of the Sepoy force, that no officers should rise in that service but those who are habituated to the customs of the country; yet, on the other hand, it will be necessary to guard against such a separation of interests between the two services as might lead eventually to disunion and jealousy. It will, therefore, be a consideration of policy to connect the regular and local army together by the grant of such a boon to the officers of the latter as would prevent any feeling of professional inferiority. The most effectual mode of attaining this desirable object, and of placing the two services on an equal footing, as far as the nature of the native force will admit, would appear to be the extension of rank to the officers of the local army, and an eligibility to general employment after they shall have attained the brevet rank of colonel; and a permission under certain restrictions, to exchange from one service to another.

It will not appear that the indulgence of extended employment to the officers of the local army, after they shall attain the rank of colonel, will place them with the retired pay of lieutenant-colonel (which they will probably at that period be entitled to from the East India Company), upon a footing of greater advantage than the officers of the regular army, who will generally be lieutenant-colonels of regiments when holding the same rank.

Exclusive of the advantages which will result from this grant to the local officers, by binding together the interests of the two services, the experience of such men of talent and acquirement in the local army will be rendered available to the general service of the country.

With regard to exchanges, it will be essential to provide that none shall take place that would in any degree infringe upon the necessity of a knowledge of the language and habits of the country. But while a due regard is paid to this necessity, care must be taken at the same time that the difficulty is not of such an extent as would tend to continue that separation in the situation and interests of the two services, which it is the chief object of the proposed measure to avoid. When the means of exchange from the regular to the native army shall be held out, many young men will make the language an object of acquirement, even before they shall leave this country, and under such a view it would not be expedient to adopt any regulation to increase the difficulty by a specific term of residence in India, for the purpose of attaining a knowledge of the language. But in order that exchanges should not be arranged without a certain acquaintance with the habits and peculiarities of the country, it should be stipulated that under a certified knowledge of the language, exchanges may be admitted on the part of candidates from the regular army according to their rank and the proportion of experience in the customs of the country, which it is presumed they would require to fill their relative situations in the native army. Upon this principle it is conceived that one year's residence in India in the rank of lieutenant, two years for the rank of captain, and four years for that of field officer, will be essential, with *a knowledge of the language*, to give officers in those ranks respectively a claim to exchange with sepoy officers.

In order, however, that lieutenant-colonels from the regular army may not be induced to exchange to the native service with a view to the possible succession to a regiment at an early period, it would be essential to provide against the eligibility of an officer to promotion under such circumstances, until he shall have served five years as a lieutenant-colonel in the native army.

If exchanges were to be admitted without any regulation providing for the eligibility of officers from the line, it would be necessary to confine the pretensions of such officers to the retired pay from the East India Company, after a service in India of 23 years from the date of their entrance into the local army. But under the stipulation that a proportionate residence in the country and a knowledge of the language shall be required on the part of the regular officer before an exchange can be admitted, it would appear equitable that credit should be given for that period towards a claim for eventual retirement, particularly as in every case the officer exchanging from the local army would forfeit a portion of service to a greater extent, and which of course would have led to a claim for retirement, had he remained in that service, much sooner than the officer who exchanges from the line, taking with him a credit for one, two, or four years only. By this arrangement, the peculiarity of the native service would be preserved, and the East India Company, in a pecuniary point of view, would be gainers in every instance of exchange, but particularly so in the case of field officers.

Such a connection might be established under these regulations between the two services, as would hold out mutual inducements to exchange, and the views of officers whose inclinations and predilections might induce them to remain in the native service would be facilitated towards more rapid advancement, than what they now enjoy under the tedious certainty of progression.

The appointments of cadets should rest with His Majesty, as tending to ensure the introduction of a proper description of officers into the native force, and with a view to prevent the possibility of any person being borne upon the strength of those corps who is not perfectly competent to perform the duties of his station. Lest, however, any question should arise as to the deprivation of patronage on the part of the Court of Directors, no difficulty can attend the power of recommendation of a certain number being left with the Court, the advantage of control as to the propriety of the appointment and the eligibility of the candidates being still left with His Majesty, as in the case of recommendations to the regular army.

The transfer of the Company's army to His Majesty's service, might, according to the principle set forth in this paper, be carried into effect under the following general regulations.

1st.—The East India Company's officers to become His Majesty's officers, with the dates of their respective commissions.

2nd.—When the officers of the native army shall have attained the rank of colonel, they will be classed with the officers of the regular army in this country and considered eligible to employment generally.

3rd.—No purchase or sale of commissions to be allowed in His Majesty's local army.

4th.—The promotion in the native troops to be progressive in the regiment up to the rank of captain, but above that rank the promotion may be made by His Majesty, where the good of the service may suggest a more eligible selection for a vacancy than the officer in regimental succession.

5th.—The whole of the native army to roll together, and not by presidencies.

6th.—Exchanges will be allowed under the recommendation of the Commander-in-chief in India, between the officers of the native army and those of the regular forces serving in the country.

7th.—No officer will be allowed to exchange under the rank of lieutenant, and a knowledge of the language, and a residence in India of one year for the rank of lieutenant, two for the rank of captain, and four for the rank of field officer, will be required to render regular officers eligible to exchange in their respective ranks.

8th.—Officers in the rank of lieutenant-colonel who exchange to the local army cannot be considered eligible to succeed to a regiment until they shall have served five years in that service.

9th.—Officers exchanging under such regulations will be entitled to reckon the periods of residence above specified towards a claim for retirement on their pay after 20 years' service in India.

10th.—Cadets shall be appointed by His Majesty, leaving a power to recommend a certain number of eligible candidates in the hands of the Court of Directors.

(Signed) FREDERICK,
Commander-in-Chief.

OPINION on the General Subject of transferring the ARMY of the EAST INDIA COMPANY to The CROWN.

Horse Guards, S.W., Dec. 31, 1858.

THE whole army, European and native, to be incorporated with, and become part of, the army of the Crown.

ARTILLERY.

The artillery to form a second regiment of royal artillery, and to consist as follows:—

Bengal - - - -	Batteries or Battns.
Madras - - -	Do. do.
Bombay - - - -	Do. do.

ENGINEERS.

The engineers to form a second regiment of royal engineers in like manner.

The whole to be recruited and trained in Great Britain under one system, as now in force with those corps.

The recruiting and depôt staff to be provided by the second regiments respectively.

The depôts of artillery to be at Woolwich, that of the engineers to be at Chatham, where all will perform the same course of instruction as now. Cadets of the East India Company are now instructed at Chatham.

No reserve companies of either artillery or engineers in India: they are receptacles for the idle and unprofitable officers and men.

EUROPEAN CAVALRY.

The European cavalry to have its depôts at Maidstone and Warley, or Canterbury; all to be recruited and trained alike. No recruit to be sent to India until dismissed from drill: the same rule to apply to newly appointed officers.

EUROPEAN INFANTRY.

The European infantry to follow the same rules, and be recruited and trained in depôt battalions, according to the present system.

The cavalry and infantry to be in all respects regiments of the line, and numbered accordingly.

NATIVE REGIMENTS.

The native regiments to be numbered as are colonial corps, viz.:—

1st, 2nd, 3rd, &c., Bengal regiments.
1st, 2nd, 3rd, &c., Madras regiments.
1st, 2nd, 3rd, &c., Bombay regiments.

Irregular regiments, although placed in the army list, to have their several local denominations, and to be officered from the regular regiments.

Irregular regiments may be composed of various tribes and nationalities. No officer to be appointed to such who has not a competent knowledge of the language and habits of those over whom he is placed. Such appointments to be considered as staff appointments, and to be paid accordingly. If found fit after one year's probation, the officers to be seconded in their own corps, and be eligible for promotion in it.

Officers in civil employment to be in like manner seconded; but, if continued in employment more than two years, to be placed on the non-effective list.

PERMANENT EUROPEAN FORCE.

The permanent European force to be maintained in India has been defined by the Governor-General and the governors of presidencies as follows:—

For Bengal alone.

Artillery,—	78 batteries for siege, ordnance, garrison, and other duties - - - -	11,180
Cavalry,—	3 regiments of line - - - - -	6,398
	10 local - - - - - -	
Infantry,—	15 regiments of line - - - -	15,000
	30 local - - - - - -	24,000
		56,57

Such a force of artillery is very inadequate for the required purpose. 78 batteries, at 180 men per battery, require 14,040.

Madras (Lord Harris).

Artillery,—	6 batteries	1,080
	19 companies	1,900
	11 reserve companies	550
Cavalry,—	4 regiments	2,664
Infantry,—	14 regiments	14,000
		20,194

Lord Canning considers that 26 batteries are necessary, and that the Madras artillery should consist of 5,160.

Bombay (Sir H. Somerset).

Artillery,—	24 batteries and troops	4,320
	9 companies reserve	450
Cavalry,—	3 regiments	1,998
Infantry,—	15 regiments	15,000
		21,768

The Governor-General considers this force of artillery unnecessarily large.

Lord Elphinstone proposes:—

Cavalry (2)	1,492
Horse artillery	764
Field artillery	3,600
Infantry	9,630
	15,486

Military trains, and sappers, are not included in the above estimates.

TOTAL EUROPEANS.

Artillery	19,480
Cavalry	11,960
Infantry	68,000
	98,540
Add sappers	2,000
	100,540

The estimate of the Commander-in-chief at Bombay has not been adopted in the artillery for that presidency, as he proposes 1,000 native artillery; and as the opinion is unanimous that all artillery should be European, the batteries have all been calculated at 6 guns and 180 men.

No horse artillery has been calculated for, it has only been proposed in the Bombay command.

NATIVE FORCE, REGULAR OR OF THE LINE.

(The 30 irregular corps are here included as they are for purely military purposes.)

Lord Canning is of opinion that when peace is restored, 50 native battalions will be sufficient for *purely military purposes,*

20 to be regular,
30 to be irregular.

Bengal.		
50 battalions at 700	35,000	infantry.
Madras.		
No specification	60,000	„
Bombay.		
	39,000	„
Total	134,000	„

N.B.—4 regiments of cavalry proposed for Madras, 2,812; 3 ditto for Bombay, 1,950; not included; it being intended that all the native cavalry should be irregular.

PROPORTION OF EUROPEAN AND NATIVE TROOPS.

If to these 134,000 native infantry be added the irregular cavalry and infantry of the three presidencies, the number of which is not known, and the police of the three presidencies, at the least 150,000, the aggregate proportion of European to native armed forces will be about 1 to $2\frac{21}{25}$.

N.B.—Madras police is estimated at 22,000
Bombay do. at 28,000

Assuming that, according to the estimates mentioned, 100,000 men will be the amount of the European troops in India, 10,000 men will be annually required to maintain their efficiency in numbers, it being proved by the statistics of years, that the wear and tear in India in peace is ten per cent., or that a regiment of 1,000 is renewed every ten years. This may possibly be increased in consequence of the Ten Years' Enlistment Act, which will soon be in active operation, having been passed in 1847. This number will be necessary, whether the European regiments are local, or of the line, all being enlisted for the same period, and subject to the same casualties. As the services of a soldier enlisted for ten years may be prolonged, on foreign service, for two years more, and assuming that he will not be sent to India until he is trained and habituated to a soldier's life, the amount of his services in India may be reckoned at eleven years.

By sending out ten per cent. of the establishment annually, regiments may be kept up to an indefinite period; and as the men are thus perpetually renewed, there would be no great hardship, as regards them individually, to keep regiments in India for long periods. The officers would be the chief sufferers. Many regiments have been kept more than 20 years in India, but no murmur or complaint was ever heard on that account.

It is, however, considered desirable that every regiment should be relieved every 14 or 15 years.

There are now in India—

1 regiment,	14th Dragoons	18	years in May next.
„	9th Lancers	- 17	„ „
5 regiments	infantry	- 17	„ „
1 „	„	- 15	years in August next.
2 „	„	- 14	„ „

When peace is restored, these regiments will probably return home without relief; three of them are now under orders.

After these, there remain—

3 regiments	of infantry,	13	years in May next, of which one is under orders for home.
5 „	„	10	years in May next.
4 „	„	6	„ „
2 „	„	4	„ „
46 „	„	2	„ „
12 „	„	1	„ „

So that, when the regiments named have returned home, there will be no reliefs for several years, and then after long intervals, viz.:—

$\underbrace{1861}_{3}$ $\underbrace{1864}_{5}$ $\underbrace{1870}_{2}$

After which the relief of those that went to India in 1857 will require consideration.

ABSORPTION OF OFFICERS OF THE LATE BENGAL ARMY.

An important question in the re-construction of the Bengal army remains to be considered; how are the officers to be provided for?

By the latest East Indian Army List there were, exclusive of artillery and European line regiments, the following officers to be posted:—

	Cavalry.	Infantry.
Colonels	10	73
Lieut.-Colonels	10	71[*]
Majors	10	74[†]
Captains	69[‡]	508[§]
Lieutenants	74	750[‖] Subs.
Cornets	3	

If, as proposed by Lord Canning, ten regiments of European cavalry are raised, all the unattached officers of that arm will be provided for.

But following up his lordship's scheme, of forming only twenty regiments of regular and thirty regiments of irregular native infantry, there will be a considerable remainder of the higher ranks unprovided for.

The colonels, who are all non-effective as regimental officers, may be permitted to draw their off-reckonings, or colonel's pay, although not posted to regiments.

Deducting those on civil and staff employ, there will remain, of infantry,

Lieut-Colonels	63	Regimental Rank.
Majors	55	
Captains	305	
Subalterns	589	

---

[*] 8 of these on civil or staff employ.
[†] 19 „ „ „
[‡] 22 „ „ „
[§] 203 „ „ „
[‖] 161 „ „ „

—	Colonels.	Lieut.-Cols.	Majors.	Captains.	Subalterns.
Three Regiments, in course of formation, will absorb - -	3	6	6	42	96

A number inadequate to the demand, if, as Lord Canning proposes, thirty battalions of irregular infantry be raised, and the irregular cavalry be kept up on its present scale.

It will be observed, that all officers employed on civil or staff duty are seconded, as proposed in a former part of this minute.

The twenty-four European regiments proposed by Lord Canning to be raised for local service in Bengal are not included in the above calculation.

Having proposed the amalgamation of the East India Company's army with the line, it remains to remark on the supposed difficulty, if not impracticability, of that measure.

The objections are :—

That one is a seniority service, and the other not.

The adjustment of the funds, supported by the compulsory subscriptions of officers in the one service, in which they have a vested interest, and which do not exist in the Queen's army.

The superior retiring allowance of the East India Company's service.

The danger to India of withdrawing troops in the event of war in Europe, or pressure at home.

The Queen's service is one of regimental seniority, as much as that of the East India Company, indeed more so, since the latter are promoted regimentally until they attain the rank of major only, when they are placed on a *general* list, and promoted according to seniority, a system fraught with disadvantages, by estranging commanding officers from regiments in which they have been brought up, and subjecting them to great inconvenience and expense, by removing them to distant stations, and which has driven many from the service. Lieutenant-colonels are never sure of remaining with a regiment. Transfers from one regiment to another are by no means unfrequent in the East India Company's service, and exchanges, it is believed, are also sanctioned.

It is difficult to imagine that any personal disadvantage could accrue from the exchange or transfer of officers from one service to the other, if both parties consider it for their mutual convenience. It would, on the contrary, be beneficial for many reasons; would weaken local habits, local prejudices, and interests, take away the provincial character of a local force, expand the minds of officers, and improve them by enlarged intercourse with the world, and afford relief to many whose constitutions and efficiency are impaired by climate.

The same arguments apply to purchase. It is well known that purchase accelerates the promotion of those who do not purchase, and there are many examples of officers, unable to do so, who would never have obtained high rank in the army but for the promotion of their juniors as well as their seniors.

A vicious system of purchase now exists in the service of the East India Company, a system well known to the controlling authorities, and tacitly, though not officially, encouraged.

In every corps a fund is formed from the monthly subscription of all the officers for the purpose of purchasing out the seniors, by which the juniors gain no more immediate advantage than an advance of one step in the general list. This tax, in addition to the compulsory subscription to military funds, loads the junior ranks with debt which is often ruinous; the advantage they hope to derive is distant and prospective, and often never attained; the immediate advantage is derived by others.

To admit the direct purchase of commissions would be a boon to the service, generally and individually.

Exchange would be made by the mutual agreement of parties, and an actuary would calculate the value of the advantages which the one derives from retiring allowance and assistance from the military fund, as compared with those of the other service.

The minute calculation of the respective advantages cannot be entered into in this minute, the scope of which is confined to opinions on general principles; but, as regards the effect on the military fund, one example taken at random may suffice.

Two captains wish to exchange. He of the East India Company's service has been fifteen years in it, and has paid as follows to the military fund, the benefits of which he forfeits on exchange, and the other does not acquire:—

	R.	a.	R.	
As ensign, on appointment - -	135	0		Unmarried.
„ three years' subscription -	162	0		
			297	
As lieutenant, on promotion - -	67	8		
„ on joining - -	202	8		
„ eight years' subscription - - -	540	0		
			810	
			1,107	
As captain, on promotion - -	135	0		
„ on joining - - -	337	0		
„ four years' subscription	432	0		
			904	
			Rs. 2,011	

So that an ensign wishing to exchange would be reimbursed for his subscription to the military fund by Rs. 297, or 29*l.*; a lieutenant, by Rs. 1,107, or 110*l.*; a captain, by Rs. 2,011, or 201*l.*

These sums might either be paid by the contracting party, or be repaid by the fund itself, which would be relieved from all claims upon it from that party.

It is understood that the Bengal government has taken upon itself the responsibility of all claims on the military fund of that presidency, and that the fund is not solvent. If so, the government will gladly relieve itself from future claims by such small payments.

In order to carry out more effectually the amalgamation of the two services, all subscriptions from new appointments should cease, and the Indian government take upon itself the management of the funds, which, in the presidencies of Madras and Bombay, are supposed to be solvent, and capable of securing all just claims, and securing to all subscribers their vested interests.

The future retiring allowances of officers must be a matter for the consideration of the highest authorities. Those who have really served a given number of years in India may be chargeable to the India revenue.

The danger of withdrawing troops from India is so purely a ministerial question, that it cannot be entertained by individuals.

The withdrawal of two cavalry regiments during the Crimean war is instanced as a reason for not more promptly suppressing the late revolt. This cannot be supported, one having been withdrawn from Madras and the other from Bombay; and one had returned and the other been replaced before the revolt took place. There were at no time fewer European troops in India than by law permitted.

SUMMARY.

The summary of these opinions is,—

That the army of India should be one and indivisible, as regards its relation to the Crown.

That the armies of the three presidencies should remain, as at present, distinct commands, with well defined limits.

That the officers in chief command of the troops at Madras and Bombay should be styled commanders of the forces.

That the proportion of European to native forces, according to the scales of the authorities quoted, is not too great—being nearly one European to three natives.

That all native infantry should be regular, and all the native cavalry irregular.

No native artillery at either presidency.

A corps of European sappers at each presidency, as superintendents of public works, and corps of native pioneers as workmen.

That the native army be composed of all castes and nationalities—the more the better.

The native army to be enlisted on the same terms at all presidencies, and governed by one and the same code; having for its text the Queen's regulations, as is now the case at Madras and Bombay.

That the Bengal army, although of one body, under one commander-in-chief, should be composed of three or four *corps d'armée.*

That commanding officers should have the power to promote non-commissioned officers without reference to higher authority, and to recommend for promotion to officers (native), and to exercise the same authority, in their regiments, as is accorded to commanding officers in regiments of the line.

That the European portion of the army should be numbered regiments of the line, taking India as a part of their tour of duty.

That their efficiency can be maintained by periodical reinforcements of ten per cent. on their established strength, and for an indefinite period.

The periodical relief of regiments to take place after service in India of fifteen years.

That there is no insuperable obstacle to the gradual amalgamation of the whole army, so as to allow the exchange from one branch to the other.

G. A. WETHERALL,
Lieut.-General.

REPORT of Lieut.-General Sir HARRY SMITH.

THE Commission appointed by Her Majesty's warrant, under date 15th July 1858, for the purpose of inquiring into the organization of the army late in the service of the Hon. the East India Company, and of reporting what changes it may be expedient to make in the system now obtaining in the armies of India and the troops of the line; having assembled from time to time, and having taken the evidence of various officers in the civil and military employ of the late Company, many old hands who served previously to the revolt of the Bengal native army, and very many officers, civil and military, recently returned fresh from the field of operations, and having received minutes upon the subject from the Governor-General (who also sent over his military secretary, Colonel Durand). from the Governors of the respective provinces, from the Committee of Punjaub, from the secretary to Government, and from various other public functionaries high in office, civil and military, came to the decision, on the 9th of December instant, that, on or before the 1st of January 1859 each member of the Commission should transmit, separately, his written opinion previous to a General Report being framed. Sufficient evidence, both oral and documentary, having been taken to enable the Commission to arrive at a conclusive opinion.

I annex my view of this great question, derived from so extensive a field of information, and in some degree sanctioned by military services in India, proceeding to reply seriatim to the "Twelve Questions" embodied in the Order for the Assembly of the Royal Commission on the armies of India of the 15th June 1858.

1. *The terms on which the army of the East India Company is to be transferred to the Crown?*

1. This is comprehensively provided for in sections 30, 56, and 57 of "The Act of Parliament for the better Government of India," under date 2nd of August 1858.

2. *The permanent force necessary to be maintained in the Indian Provinces, after the restoration of tranquillity?*

BENGAL.

Eight regiments of European cavalry, at 800 each - - - - - -	6,400
Twelve regiments native regular cavalry, at 800 each - - - - -	9,600
Eighteen regiments irregular cavalry, at 800 each - - - - - -	14,400
Thirty-five regiments British infantry, at 1,000 each - - - - -	35,000
Sixty regiments native infantry, at 1,000 each	60,000
Four hundred and two field guns, whereof—	
120 guns, horse artillery, twenty troops -	2,420
282 guns, horse batteries, forty-seven batteries divided into battalions.	5,687
402 guns, all nine-pounders.	
Total for Bengal - -	133,507

This calculation is totally regardless of "battering trains," which must be organized at every great fortification, not as a part of the guns mounted on the "works," and irrespective also of "police."

MADRAS.

Sir Patrick Grant's Estimate.

Europeans.

Forty-three companies of artillery, averaging 121 of all ranks, (guns, 258), - - - - - - -	5,203	
Three regiments of dragoons, each 703 sabres - - - - -	2,109	
Thirteen regiments of infantry, each 1,152 bayonets - - - -	14,976	
Total Europeans, - - -		22,288

Natives.

Four regiments cavalry, each 703 sabres - - - - - -	2,812	
Fifty-five regiments infantry, and two battalions of veterans, amounting in all to, bayonets, - - -	63,920	
Total Natives - - - -		66,732
General total for Madras - -		89,020

BOMBAY.

Lord Elphinstone's Estimate.

Europeans.

Cavalry	1,492	
Horse artillery (guns, 36)	764	
Foot artillery (guns, 180)	3,600	
Sappers	120	
Infantry	9,630	
Total Europeans		15,606

Natives.

Three companies African artillery	300	
Five companies sappers	620	
Twenty-five regiments regular infantry	28,600	
Nine regiments irregular cavalry	6,930	
Fifteen regiments irregular infantry, including marine battalion	11,000	
Total natives		47,450
General total for Bombay		63,056

Bengal	133,507
Madras	89,020
Bombay	63,056
General total for the three Presidencies	285,583

3. *The proportion which European should bear to native troops, in infantry, cavalry, and artillery, respectively?*

3. Invariably one third European in the armies of the three presidencies.

4. *How far the European portion of the army should be composed of troops of the line, taking India as part of the regular tours of service; and how far of troops raised for service in India only?*

4. Upon all the evidence adduced I found my opinion that *no European local force* should be maintained; the whole to be troops of the line.

The local European regiments now existing in the three presidencies to be at once embodied with or absorbed in Her Majesty's regiments of the line, numbering them from the 100th regiment onwards; every care being taken that strict faith be observed with the officers about to be thus amalgamated; the regiments, as previously stated, being at once absorbed, and numbered with the line.

5. *In connection with this question, the best means of providing for the periodical relief of the former portion, and of securing the efficiency of the latter.*

5. Regiments to be relieved every 10 years, generally viâ "The Cape of Good Hope;" the voyage being most beneficial to the troops, reserving the route, viâ "Suez," for cases of peculiar emergency.

6. *Whether it be possible to consolidate the European forces, so as to allow of exchange from one branch of the service to the other, and what regulations would be necessary and practicable to effect this object, with perfect justice to the claims of all officers now in the service of the East India Company?*

6. There is great difficulty in meeting this question. Some of the best suggestions are those laid before the Commission, in a memorandum by Colonel Wood, its secretary, and formerly military secretary to the late Lord Hardinge, when Governor-General. I allude to the plan he proposes for the transfer of the "European Troops" to the "Line," and that for the general amalgamation of the European and native forces.

7. *Whether there should be any admixture of European and native troops, either regimentally or by brigade?*

7. This is a matter of command; there ought, however, to be no regimental admixture whatever beyond 40 men per troop and company to be attached to the artillery, the operatives attached to the engineers, and the various and absolutely requisite number of camp-followers, in a climate like that of India.

Brigades should always consist of one regiment of the line, and two native regiments.

8. *Whether the local European force should be kept up by drafts and volunteers from the "Line," or should be, as at present, separately recruited for in Great Britain?*

8. This question is fully answered in the reply to query 4. viz. :—"*No European local force whatever* to be *maintained.*"

9. *Whether it would be possible to raise any regiments in the colonies, either for temporary or permanent service in India?*

9. It is not considered possible to do so, nor does the evidence adduced regard it as expedient, when peace is established.

10. *Whether the native forces should be regular or irregular, or both · and if so, in what proportions?*

10. Both combined; for proportions, vide answer to query No. 2.

11. *Whether any native artillery corps should be sanctioned?*

11. No native artillery whatever, in any locality.

It is advanced in evidence that there are some few localities, so pernicious to the health of Europeans, as to render it absolutely necessary: I say, withdraw artillery from such stations, rather than infringe upon the general principle.

To each troop and battery I would attach 40 natives, of low caste, to relieve the Europeans from duties *of fatigue*.

12. *Whether cadets, sent out for service with native troops, should, in the first instance, be attached to European regiments, to secure uniformity of drill, and discipline?*

12. Assuredly; teach the cadets the duties of soldiers, by attaching them to regiments of the line in the first instance; especially now, as all the troops in India are royal, and to be amalgamated.

GENERAL OBSERVATIONS.

1. The European troops, of every description, to be as now as to discipline, organization, interior economy, the regulated reliefs of regiments (which imperatively ought to arrive in India in the month of November), confirmation of promotion, first commissions, &c. &c., under the paramount authority of the Queen, and the orders of the Commander-in-chief at home.

2. The native royal armies to be as now, *three armies, distinct* and *separate* from *each other*. Under the orders of the Governors and Generals commanding of the three presidencies.

3. The native troops, for *the present*, to be armed with the old percussion musket.

4. The Governor-General, and the Commander-in-chief in India to possess the paramount authority over all the troops in the three presidencies, exercising this unlimited power through the Governors and Commanders of the forces of Madras and Bombay.

5. All interior military arrangements during peace in these respective presidencies to rest with the Governors and Commanders of the forces, nor would military discretion and judgment order any body of troops to be withdrawn from the minor presidencies, without previous intimation and reference.

6. The Commander-in-chief in India ought most assuredly to occupy a central position in the "Upper Province of Bengal."

7. The presidencies to remain as now established, viz.:—

Bengal -
Madras - } This, I admit is rather political than military.
Bombay -

8. In Bengal, the Governor-General and the Commander-in-chief of all India.

9. In Madras, the governor of the presidency and a commander of *the forces*, in whom should be vested, under all ordinary and peaceful circumstances, the disposition of regiments, the construction of fortifications, the appointment of staff-officers (confirmed by the Governor), and regimental promotions of the native royal troops.

10. Bombay to be precisely the same.

11. The Generals in supreme command in the three presidences, to hold warrants vesting them with the power to convene and to confirm the sentences of general courts-martial awarding the punishment of death, or its mitigation.

GENERAL STAFF.

12. The army in India being greatly increased in troops of the line, cavalry, and artillery, the staff of these must be considered accordingly.

13. The appointments of Commander-in-chief, and Commanders of the forces in the minor presidencies, to be made by the Queen, at the recommendation of the Commander-in-chief at home, as also

The adjutant-general	*Bengal.*
The deputy-adjutant-general	
The assistant-adjutant-general (for artillery)	
The quartermaster-general	
The deputy-quartermaster-general	
The deputy-adjutant-general	*Madras.*
The deputy-quartermaster-general	
The deputy-adjutant-general	*Bombay.*
The deputy-quartermaster-general	

14. The alteration in the composition of the armies of India, reverses the order which previously obtained. *The Queen's army* is now the paramount force of the Indian empire. *The native royal troops* the auxiliaries.

15. Hence it must be clearly understood, that the Queen's staff-officers in the three presidencies are to be at the head of their respective departments, and to move, organize, and maintain the discipline of the troops, *aided* by the staff of the royal native forces.

16. In the former composition of the armies of India this was not the case; the company's adjutant-general and quartermaster-general moved the armies.

17. A considerable staff must be attached to the native royal forces; of these the local authorities are the only competent judges as to number, &c.

18. My present object is to recommend that the heads of departments in India should be appointed by the Queen, through the Horse Guards, which authority Her Majesty would exercise so as to ensure the most efficient officers at the head of each department, selected from the army generally, as hereafter to be amalgamated.

19. The Governor-General and the Governors of the presidencies, to appoint such subordinate staff-officers, commandants of fortifications, &c. as they consider requisite, upon the recommendation of the respective generals in superior command.

20. There ought to be two officers of the quartermaster-general's department, viz., an assistant and a deputy-assistant-quartermaster-general at Calcutta.

21. Troops require great assistance upon disembarkation, and equally so upon the embarkation of invalids, which is frequently occurring; and this department should pay all detachments, as a major of brigade now does, who should be discontinued.

22. These staff-officers should be selected from the troops of the line who have served some time in India.

23. A judge-advocate-general at the head-quarters of each presidency, appointed at the recommendation of the respective Commanders of the forces, subject to the confirmation of the respective Governors.

24. The judge-advocates of the different presidencies should be selected for those offices, with reference rather to their common sense than to any legal knowledge they may possess. The subtilties of the law are not required in military matters, the object is to secure a just sentence, conscientiously, and directly attained.

25. The minor staff appointments, viz., assistants, &c. to be equally divided between the troops of the line, and the native royal troops, in the proportion of the numerical strength of each branch of the army.

26. The control of the general resources for the armies, all military establishments, the implements of war, ammunition, gun-carriages, tents, &c. &c. must ever exclusively rest with the authorities in India. The gun-carriages constructed in India are capital.

27. That proportion of divisional commands now nominated by the Queen, at the recommendation of the Commander-in-chief, Horse Guards, to remain as at present established. The remainder of the local commands to be vested in the respective Governors, and Commanders of the forces.

28. I do not approve of a "staff corps;" I cannot conceive how it could work beneficially, either to the "staff," the "troops," or the "regiments." Our knowledge of duty, our aptitude for certain classes of it, are never developed until tried; a man may be a right good regimental officer, and yet a regular stick as a staff-officer, and your "staff corps" becomes saddled with inefficient men, while the troops suffer, and the regiments lose able officers.

29. I emphatically recommend the staff of the armies of India to be furnished on the system of "seconding;" which preserves regiments effective in officers, (a matter of vital importance,) and does not banish true, and most valuable regimental feelings and associations.

Hospitals.

30. Hospitals, both in camp and quarters, require considerable improvement everywhere.

31. There should be continued, as now, an inspector-general of hospitals at each presidency, the senior being with the Commander-in-chief, the others reporting to him.

32. There is an error which necessity, I fear, compels us to commit, viz., the sending our soldiers to India at too early an age; were it practicable, no man should go to India under twenty-two years of age.

33. A system prevailed when I was adjutant-general in India of holding medical boards up the country on soldiers to be invalided. The men thus invalided *should go home:* whereas a second board was held in Calcutta, upon their arrival there, from distances of 100 to 1,400 miles. Many men were rejected as invalids, having improved in health on the march or passage down, and sent back to their corps; their hopes of returning once more to their native land were blighted, and if they reached their regiments 99 out of 100 fell victims to disease; this I assert from experience.

Clothing.

34. The attention of the Government and of the Commander-in-chief is already directed to the clothing in wear by the army in India, and measures to improve it are in progress; formerly, a soldier in India and in Canada was clothed in the same material.

35. It is a difficult question to meet; the seasons of the year vary, the twenty-four hours vary, and a soldier must march all day, and probably sleep in the same clothes at night. Hence, the clothing ought to be of woollen texture, but light, loose, and flexible.

36. The head-dress of the troops in India is ill-adapted to the climate; it should be light, and calculated to protect from the rays of the sun, as well as from the rain.

37. The soldier, upon his arrival in India, ought to be provided, by the respective local governments, with a linen jacket and two pairs of trowsers gratis; and also with a head-dress of some material hereafter to be determined on.

38. Our horse appointments cannot be too light, combined with serviceable utility; and our swords ought to be of the best quality.

Railroads, &c.

39. The construction of railroads in India will undoubtedly facilitate the movement of troops, but no general must place implicit dependence on them; they can be alone regarded as auxiliaries, so simple are the means of their partial destruction.

40. Troops by rail move rapidly it is true, but it must be borne in mind that in India you require elephants, camels, &c., for the transport of camp equipage, provisions, &c. &c. and the rail will bring these with the troops undoubtedly; but must unload them at the station, there to remain till the quartermaster-general's and commissariat departments can collect transport. Hence, rail conveyance becomes, as I state, a dubious auxiliary.

41. It has frequently occurred to me that the navigation of the rivers might be most advantageously improved, and made available.

42. I am on principle opposed to irregular troops; but in a country like India, so numerous is the population, that irregular troops frequently absorb roving spirits, and turn to good account those who would otherwise be opposed to us.

43. The time has not yet arrived when native gentlemen might at one be admitted into the army as officers; many of them have served ably and well with the irregular troops, and as tranquillity is re-established, I see no reason whatever why native gentlemen should not be received into the service, reserving to the Governor-General and the Governors of presidencies the power of immediate dismissal.

44. The force I have named appears to me to be adequate not only for the preservation of tranquility in "Bengal," including the "Punjaub," and the other presidencies; but equal to meet any emergency which may arise on the confines of our territories, its disposition to rest with the "Governor-General," and "the Commander-in-chief;" but I recommend that in lieu of the system which has hitherto prevailed in India, of having so many small and detached posts and stations, the troops should be concentrated in large and efficient bodies, ready to move in force, and the "marching establishment" to be maintained for the present.

45. This is irrespective of the police now embodied, and contemplated to be embodied all over India, of which I make no mention, and which must be *totally separate* and *distinct* from *the "Army"* and armed with inferior weapons; and all duties of a civil and financial character should be performed by the "police."

46. An army is weakened and its rapidity of movement impeded by being scattered, as it were, over an extensive province, such as "Bengal," to which "the Penjaub" is now added; and wherever troops are stationed, there should be a "Place d'Armes" capable to contain stores, "treasure," "Women," "Children," and the "Impedimenta of War;" and so constructed that its defence may be ensured by a very small garrison, *defensive alone.*

47. Exclusively of the small "Place d'armes," I recommend that such posts as—

Peshawur -	(a strong place d'armes),
Lahore -	(a strong place d'armes),
Umritsir and Gwindghur	(already fortified),
Delhi -	(works to be improved and large stores erected),
Agra -	(already a work which may be made formidable),
Gwalior -	(a citadel to be constructed in the centre of the great fort),
Lucknow -	(to be fortified),
Calcutta -	(Already "Fort William,")

should be regular fortifications, as depôts for all military stores, manufactories of arms, tents, saddlery, &c., &c.

48. Care, however, must be taken in the construction of barracks in these fortifications, for the health of the troops is *paramount*.

49. I name the above on general principles; but there are other places, such as "Cawnpore," "Benares," "Allahabad," "Saugor," &c., &c., where places d'armes are indispensible.

50. The natives in India hold in high estimation "fortresses" and "works," regarding a country that does not possess them, as exposed to irruption. Hence, when they see the territory thus held by "works," garrisoned by British troops, their passiveness is ensured.

51. Engineers are invariably disposed to construct great fortifications, the expense of which is enormous, while they absorb the troops and cramp the movements of an army.

52. It is established generally by evidence, that the royal native armies should be composed of different "castes," and "nationalities," from one end of India to the other; and the principle of collecting nationalities in companies is judicious; on the one hand it tends to prevent combination, on the other it creates emulation.

53. A very stringent "code of military law" or "Mutiny Act and Articles of War," should be framed, that recruits may be well aware under what law and conditions they take service.

54. "Corporal punishment" should be re-established; and the power of "capital punishment" being fully provided to punish every act of "mutiny" or "gross insubordination;" and every power, consistent with judgment and discretion, should be restored or established for officers commanding corps and regiments.

55. Courts-martial on natives should hereafter be composed of regimental (instead of native) officers, and detachment courts-martial should be authorized wherever occasion demands.

56. Increase of pay should be granted for "good conduct," after   years' service; and "pension on discharge," after   years' service.

57. The issue in India called "Batta," should not be regarded as "a right," which has often originated a spirit of mutiny, but as a donation from the Government under peculiar circumstances.

58. Enlist for a period of twenty years for "general service," and upon the express understanding that every native soldier must perform *every duty* required of him, as the British soldier does.

59. The proportion of Mahommedans should be one in four.

60. I am irrevocably opposed to any division of the army in "Bengal;" the strength of all commands consists in the absolute and undivided authority of the General-in-chief, of course under the supreme local authority, "the Governor-General."

61. With reference to regimental promotion, I am of opinion that the promotion to "corporals" and to "serjeants" should be vested entirely in the hands of commanding officers, and on the principle of "eligibility."

62. To "commissions," eligibility most decidedly upon the recommendation of the officer commanding, whose power requires to be strengthened in every way, and his decisions rendered definitive, and without appeal in all regimental interior economy, promotions, &c. Great injury to discipline has arisen from soldiers preferring complaints after the decision of the commanding officer of the regiment has been given.

63 Whenever a serjeant is promoted to a commission over the heads of others, on the ground of their ineligibility, these generally worn out individuals should be invalided and obliged to retire on pension, if the *native officers be continued*, the expediency of which is *very doubtful*.

Treatment of the Royal Native Troops.

64. In a memorandum by Lieutenant-General Sir Patrick Grant, (dated 21st May, 1857,) detailing various causes of

the revolt of the Bengal Sepoys, he says:—"Further, these officers are discontented, only looking forward to leave their *regiments for some more pleasant employment*, so that they perform unwillingly the bare outline of their duty, and never, as a general rule, mix or converse with *their men; but, on the contrary, too often refuse* to listen to their complaints; at the best telling them to 'go to the 'adjutant,' and not unfrequently to 'go to ——,' and 'don't bother me.'"

65. This is so pernicious, so monstrous, so opposed to all discipline and soldier-like feeling, that I cannot avoid to comment upon it.

66. The ruling feelings among colored men throughout the world are "fear" and "self-interest." The influence of these will be brought to bear, by the exercise of judicious, yet *absolute command*, founded on just and equitable principles. The native soldiery should be taught to regard the articles of war as imperative and definitive, ensuring discipline, protecting the good, and coercing the bad.

67. Officers of all ranks should mix with their men, as much as is compatible with discipline; attend to their wants, comforts, &c.; and, in short, make them clearly see and understand that the interest of officers and soldiers is one and the same; and that the great object of the former is the welfare and happiness of the latter, which is to be attained alone by implicit obedience on the one side, and by that fraternal kindness and attention on the other, which elevates military authority.

68. The officers have this part of their duty zealously to perform; but they must ever bear in mind that the native is suspicious and *capable of the most profound cunning* and dissimulation.

69. No portion of mankind is more susceptible of kindness than the "*colored races;*" *but it must* be a manly, judicious, and discriminating kindness, based upon a distinct understanding on the part of the Sepoy, that although the British *soldier* is a *comrade* and a brother, he is also his superior as a man of indomitable courage and endurance, and that the Sepoy only approaches his military position by being officered by British officers and associated with troops of the line.

70. Another point I desire to record for the observance of officers, viz., that whatever may be the virtue or otherwise of the religion professed by the natives, it should be scrupulously respected by officers; and nothing but imperative military duty (the service for which they are enlisted) must interfere with either their religion, caste, or prejudices.

71. There is no doubt that the late revolt originated, or was accelerated by a firm belief that the government contemplated their forcible conversion, a feeling for which, *however erroneous*, some ground was afforded by the fanatical zeal of a few individuals in positions of military authority, though far from sanctioned by the government of India.

CONCLUDING REMARKS.

72. In the foregoing observations I have avoided detail; the outline of the composition of this vast army is that on which alone I have dwelt (its minutiæ are local matters), desiring to regard India as part and parcel of the British empire, whose interests should be one and undivided, and its defence based upon a general levy of its military resources.

73. Those who apprehend danger to India from the withdrawal of any portion of the troops of the line, should remember this mutual and *inseparable interest*, as well as the energetic manner in which troops were poured into that country during the late crisis, and they must then feel assured that the government of England will ever equally provide for the maintenance of British supremacy in India.

74. Military opinions must be based upon military principles, and no wise government will ever wage two distinct and distant wars at the same period, if avoidable; nor will *any able government attempt to divide its resources for two separate and incongruous objects*, such as England, with all her numerous colonies, and the vast empire of distant India, but will rather rally and concentrate those resources of men, &c. upon which so great a strain is laid, as England has, by recent events, been compelled to sustain.

75. India was won by the sword, and by the sword of its *conquerors* it must be retained. History produces no example where for any *lengthened* period a conquered territory has been maintained in subjection and tranquillity by the agency of troops raised from among its *native inhabitants*; sooner or later they have revolted, as recently in India.

76. Hence, I again advocate the policy which regards India as an integral portion of the British empire with *mutual interests*, mutual sources of improvement, &c. &c., and thus at some future period India, progressing as it now

will, more rapidly in civilization, will, however *gradually*, abandon the religion and customs of barbarism.

77. One point, which I have hitherto avoided, I must allude to, viz., the enormous number of Sikhs in our service. Levied at a moment of vast emergency, they have been faithful so far, and their services have been of vital importance to our interests. That they have been so, is well accounted for in the evidence produced before the Commission, in which there is a reply containing this significant observation :—" They hate the Hindoos and the Mussulmen " more than they do us, and the love of plunder has actuated " them."

78. On the restoration of tranquillity this motive will *no longer exist*. It is therefore evident that the sooner we diminish their numbers in our service the better; they carry two-edged swords. The measure was a bold one: *it succeeded!*

79. I conclude this report with an anxious hope that as these great armies are amalgamated, and the service of the Queen pre-eminent, one interest may actuate all classes, the service of our country being paramount to all other considerations, and that the amalgamation may ensure that harmony and unanimity which so essentially contributes to maintain the efficiency of an army, and is ever the prelude to victory.

H. G. Smith,
Lieut.-General.

Manchester,
December 23, 1858.

ADDITIONAL NOTES on the EVIDENCE taken before the Commissioners appointed to inquire into the Organization of the Army in India.

European Troops to belong to the Line, and Local Regiments to be added to the Line.

I agree with those who think that the European portion of the army should be composed of troops of the line, and that the nine regiments which are now local regiments should be added to the regiments of the line and receive the numbers 101, 102, &c., with the name of the presidency to which they at present belong attached to their numbers.

Discipline of European Troops to be under the Supervision of Commander-in-chief at Horse Guards.

In common with many influential parties, both civil and military, I attach the greatest importance to the discipline of the European portion of the Indian army being placed under the supervision of Her Majesty's Commander-in-chief at the Horse Guards, in order to insure uniformity of discipline and the improvement of the *matériel* in all branches of the service, as well as that undivided responsibility should rest on the Commander-in-chief of the British army.

Governor-General to have paramount Authority in every other respect. No Troops to be removed from India without Consent of Governor-General in Council.

Although I think that the Royal European army in India should be moveable, and that its discipline should be under the undivided responsibility of Her Majesty's Commander-in-chief at the Horse Guards, the Governor-General must have paramount authority over the European troops in every other respect, after their landing in India; and I would not allow any portion of them to be removed from under his authority without the consent of the Governor-General in Council.

A great many witnesses have been examined on this point. Colonel Durand quotes Lord Elphinstone's words, as the clearest way of expressing his views on the subject. His opinion is expressed in words most explicit, and any one who has held a high situation in India must agree with his lordship. In no way does he express an opinion adverse to the Commander-in-chief at the Horse Guards giving instructions to the Commander-in-chief in India in regard to promotions in and the discipline of the line regiments.

When I was Commander-in-chief at Madras, the Commander-in-chief at the Horse Guards exercised that power over me in regard to the regiments of the line, without interfering with my authority as Governor in Council, and in my opinion with the very best effect. For various reasons I often wished that he had the same power over the local troops I commanded.

Confirmation of Sentences of Courts-martial to rest with Commander-in-chief in India. All Communications as to Discipline to pass direct between local Commanders-in-chief and Horse Guards.

I am of opinion that there are sufficient grounds for placing the confirmation of sentences of courts-martial passed on officers or soldiers belonging to line regiments, where the sentence is one of dismissal, penal servitude, or death, in the hands of the Commander-in-chief in India. It appears to me, however, that all communications about discipline should pass direct between the commander of each of the three armies and the Horse Guards, in order to save time, and all the more so as the Commander-in-chief in India has no means of personally inspecting the regiments in the other presidencies.

The result of experience has shown that Goverment has diminished the number of troops in India, contrary to the expressed opinion of the Governor-General. It is possible the same thing might in a greater degree be repeated by other governments with dangerous effect. We have seen the country engaged in war, and before its conclusion, instead of the ranks of the army being filled by able and disciplined men, they have been recruited by lads of tender age, in consequence of war being undertaken, and the means of carrying it on not being accurately calculated. We must be more cautious in future. India will prove a great drain on our population in this country.

Discipline of Local Regiments not so good as Line.

I do not look with the same confidence in the feeling and discipline of local European infantry as I do to regiments of the line. The officers do not exercise, nor do they possess the same influence over their men as in corps serving in England. The soldiers are of the same dominant class as the officers, and as they will feel their services essential to the government, and that they cannot be dispensed with under any circumstances, there will not be the same obedience, nor securities for it, as with the moveable army. Excepting in rare cases, under special commanders, the Company's Europeans are not equal to regiments of the line in discipline and *morale.* If you have local regiments for India they must be enlisted for India. I therefore doubt the possibility of getting the same class of men as for the home army, except in time of war; in general, as a whole, they will be of a lower grade. When they belong to a local army they lose all the ties of home influences; they are for ever separated from parents, relatives, and friends at home, and they lose the independent spirit of the population in which they were brought up. Will there be the same *esprit de corps* in a local regiment? Will a soldier uphold the character of the British army, if he is not one of that army, but only one of a local force? He would never be engaged in general service against men of his own colour and stamina who were commanded by officers of the greatest renown and experience, and consequently he would think less of himself as a British soldier.

It has been stated in evidence that long residence in India deteriorates the soldier. We should, in time to come, have as little separation as possible from England and English influences, and the more of fresh and purely English feeling and blood that is thrown into our Indian system amongst the officers and soldiers, the more efficiently will the government be served. To a certain extent the higher class of officers of a local army have their English feeling renewed when at home on furlough or on sick certificate. The soldiers belonging to a local army cannot be expected to have the same advantage.

Indian Press interferes with Discipline.

Nothing interferes so much with the discipline of the army in India as the encouragement given to the Indian press, to officers to bring before the public their imaginary grievances, by the publication of anonymous letters, which are re-printed in the native newspapers, with the worst effect as regards those in authority.

Ten Years to be the Limit of a Regiment's Service in India, and an annual System of Reliefs to be established.

The most experienced officers think that ten years should be the limit of a regiment's service in India. As it will always be of consequence that the greatest amount of force should be in India at the commencement of the cold season, a regular system of annual relief by a transport communication well matured, would place within the power of the Governor-General in Council an additional force, equal in amount to one-tenth of the European army in India at the commencement of the campaigning season, and of which he might avail himself if it was found necessary to do so.

Exchanges between Officers of European and Native Army, Few Officers brought up in Native Regiments are equal to the command of Europeans.

Great caution should be observed in allowing exchanges between officers who have been brought up in European and in native regiments. The natural bravery of a British officer will always command confidence and make him conspicuous on the field of battle in India, and while experience of the climate will teach him to take care of himself, he will always prove superior to a native enemy. Many able and experienced officers think that few officers brought up in native regiments are equal to the command of a British European regiment, and in their opinion I concur; no doubt there are exceptions, and very brilliant exceptions, to the contrary, and Her Majesty has always the power of availing herself of their services.

It is very important that those who are to command British soldiers in the midst of temptation and difficulties, either in India or elsewhere, should acquire a knowledge of their character and habits in early life.

The system of the Company's army was established on the supposition that officers and soldiers were to spend their lives in India, and to look on that country as their permanent domicile or home. I have stated my reasons for thinking why that system should be modified, and that the European branch of the army should be incorporated with regiments of the line.

Native Regiments and Police to be under Governor-General as formerly. Native Troops and Police to be armed with a Percussion Musket, and not to be trained the same as Europeans.

The European officers of the native regiments of infantry, regular and irregular, and of police corps, will in every respect be under the Governor-General as formerly; they will form a corps having special duties to perform, and be trained accordingly. From the evidence adduced regarding native troops it would appear that the general opinion is that the native army, regular and irregular, and the police corps, should be armed with a good musket having a percussion lock, but not with a Minié rifle, and that they should not be trained to the same nicety of movement as the European regiments. With such a difference in the arms and training there cannot now be the same spirit of emulation which was formerly so desirable amongst the officers of the native and European regiments.

Officers should have some inducement to enter Native Regiments.

Officers ought to have some stimulus or inducement to serve in native regiments; their regimental pay is the same as that of officers of the line serving in the colonies or elsewhere, the only difference being that in native corps allowances are made to officers to compensate or indemnify them for the increased expenses incurred in India. I am inclined to think that many officers would prefer serving with native regiments stationary in India, and receiving Indian allowances, than with regiments of the line, which take their tour of duties in the varied service of the British army.

Officers now unemployed to be appointed to new Regiments.

The mutiny of the Bengal army has thrown many officers out of employment. The services of the infantry officers will be required in the new levies of regular and irregular infantry; the officers of the late cavalry regiments will be again employed, either as officers in the new regiments of European light horse or in the irregular cavalry regiments, and the police will require the services of both cavalry and infantry officers. It is not improbable that some officers may wish to retire on their pensions according to the regulations of the East India Company, while others who prefer belonging to a moveable army may desire to serve in regiments of the line, it being understood of course that all officers must conform to the rules and regulations of the service to which their new corps belongs.

Local European Regiments to be continued for a time and gradually reduced.

As it would be inconvenient to make any great change in the organization and constitution of the army until India is more settled, the local European corps might be continued for a time, and as officers and men decrease in numbers, or are otherwise provided for, those who survive or remain should be drafted into one corps until the whole are exhausted, and all future officers appointed to serve in these *local corps*, so long as they exist, should receive their commissions as officers of the line, on the understanding that they will be transferred to the new European corps to be raised as regiments of the line.

Military Funds.

If it is an object to maintain the same system of funds in the native army as that which now exists, I cannot help thinking that an arrangement could be entered into with a mutual assurance office (on an understanding that the 8 per cent. given by the East India Company was guaranteed by government), which would afford the same advantages to subscribers as those they enjoy from the various funds which now exist.

Officers to command Divisions or Brigades, or for the Staff, to be selected for their Efficiency.

With every disposition to do justice to the claims of senior officers for the command of divisions, or brigades, or to hold other staff appointments, I think there ought to be a thorough understanding that efficiency for the public service will be the paramount consideration with those who exercise the power of making appointments, either civil or military, and it should ever be borne in mind that it is as necessary to maintain the discipline of the army by officers who possess the highest and most varied qualifications for the discharge of their regimental duties, as it is to select and employ those who are capable of undertaking the duties of staff officers or of holding civil positions, from possessing those qualifications which peculiarly fit them for such appointments.

Long experience has taught me that the officer entrusted with the command of an army should be a man of vigorous mind, which has been cultivated and improved by large experience in war and other ways;—possessed alike of coolness and decision of character, fit for every emergency and knowing all the requirements of an army in the field and elsewhere. He ought also to be able to appreciate the qualifications of others, and to employ their scientific acquirements in the service of the army he commands.

Claims of Merit and Seniority to be left to Commanders-in-chief of Army in India.

To estimate the several claims of merit and seniority must be left to the judgment of the Commanders-in-chief of the different armies of India. It is to him that the army looks for a just distribution of their patronage, and no one is more interested in keeping up a high tone of feeling in the army than the Commander-in-chief.

In the Madras army it was unimportant whether the Commander-in-chief was called upon on the day he arrived in the country, to name a qualified officer to fill a particular situation. He had only to desire the edjutant-general to supply him with the half-yearly confidential reports on the conduct of the officers and their various attainments. In this way he had no difficulty in selecting an officer possessing the qualifications required.

Education and Examination of Cadets.

It appears to me that the examination which a young gentleman must at present pass before he receives his commission gives no satisfactory proof that he is at heart a soldier, or that he has been grounded in those qualifications which will make him useful in the various appointments open to him in India. The duties which a regimental officer may be called on to perform in Europe, in the colonies, or in India must not be lost sight of, the most intelligent officers are selected for staff and other appointments, leaving with the regiments those of less ability and education, and frequently having no natural taste for the life of a soldier.

The three Military Colleges to be placed under control of Minister of War; and Commander-in-chief and Council of India to nominate young Gentlemen to be educated.

In future, instead of commissions being given for the military service subject to competitive examination, I would place the three military colleges under the control of the Minister for War, with power to Her Majesty's Commander-in-chief and the Council of India to make nominations in favor of young gentlemen who desire to make the army their profession.

They would receive a course of militrary instruction and of other branches of education, which would develope their military qualities, and lay the foundation of those accomplishments that mark the English gentleman and soldier. Periodical reports of their proficiency in study, in languages, of their moral character, energy, and other military qualifications, would indicate the branch of the service for which their attainments best qualified them, and the services of those proving deficient would be dispensed with. If all young gentlemen had to pass such an ordeal before they received their commissions, a selection from a body of regimental officer, possessing high and varied attainments for civil or military appointments, would never interfere with the efficiency of those who remained with their regiments.

The nominees of the Commander-in-chief and of the Council in India thus receiving their education at the same military college, a sympathy of kindly feeling and emulation would be produced among all ranks which would remove the jealousy and heartburnings which are said to exist under the present system.

Artillery for India to form part of Royal Artillery.

I see no force or weight in the arguments of those who wish to continue the system of local European artillery, on the ground of its being more suited to India than the royal artillery, except that the royal artillery is said to be more expensive from having a greater number of gunners attached to a gun, and that a number of grass-cutters and scices must be added to their establishment in India, in addition to the disadvantage of men unaccustomed to the country, and who cannot speak the languages. The first part of this reasoning is a mere question of detail, and in regard to the languages, they will gradually be learned by the royal artillery after their arrival in India, as they have been by the Company's artillery.

Sir Archdale Wilson, an artillery officer of the highest authority, has answered such objections as he thinks to the point, and his opinion confirms me in thinking, that in a military point of view, the local European artillery of India should be merged in and form part of the royal artillery; the two services when embodied will possess the experience and knowledge peculiar to India, as well as all the modern improvements in artillery which originate in Europe.

The royal artillery which served under Sir A. Wilson, landed at Calcutta, where they were equipped, and having, after a long march, joined him at Delhi, they served to his entire satisfaction during the siege.

It is well known that the natives of India have been awed by the Minié rifles, from the distance they carry with so much precision. The sooner Armstrong's 12 and 32-pounder guns are sent out to be used by the contingent and other forces as a part of their *matériel*, the sooner the natives will be brought under subjection; for nothing could produce more effect on their minds, than seeing a 32 lb. shell setting fire to a town at the distance of four miles.

Barracks.

There are, I have no doubt, healthier localities to be found for European troops at no great distance from the sites of the barracks now occupied.

Mortality in new and old Barracks at Cannanore.

In the Madras presidency, with which I am acquainted, the hill station of Ramadroog, near Bellory, is an example, about which there is no difference of opinion. It is well known that there are healthy localities where disease prevails, in consequence of an inferior or bad construction of barracks being occupied by European troops. The station at Cannanore is an example of this. Her Majesty's 25th regiment was stationed at Cannanore; a portion of the regiment occupied the old European barracks, and the remainder occupied the new barrack. The site of the latter is contiguous to that of the former; the old barracks had low ceilings, while the new barrack had no ceiling at all, but ample space for air, as the roof was high and well ventilated. A return of the mortality in the new and old barracks was prepared for me, signed by the surgeon of the regiment, and countersigned by the deputy inspector-general of Her Majesty's hospitals. From this return it appeared that the ratio of mortality in the old barracks was 34 per 1,000, while in the new barrack it was only 16 per 1,000. The average strength occupying the old barracks was 1,774, and the new 431. The return embraced the period from 1st June 1845 to 30th September 1847.

If proper Barracks constructed on a healthy Site, Troops will be more healthy on Plains of India than in the West Indies. Sanitariats on Hills would be of great benefit.

There seems to be a wide difference of opinion about the most suitable localities where European troops ought to be stationed. The medical authorities, in expectation that railroads will be made available for the movement of troops, give a preference to the hills from sanitary considerations. It is their opinion that localities situated on high ground above the fever range, and below the level where Europeans are subject to diarrhœa, are more suitable to the European constitution. The positions are not indicated and an opinion is merely expressed of the desirableness of such situations being occupied instead of those previously occupied on the plains.

Other authorities, from considerations of defence, say that the bad effects of long marches to and from the hills, from the troops not being at all times within reach of places where their services may be required, and other inconveniences, would counterbalance the advantages that would be gained by a residence on the hills. Looking at it in the view of meeting a rebellious attack, it is necessary to keep the European troops on the plains (4755). And if a proper consideration be given to the quality of the soil on which barracks are built, as well as to their construction in a district which is free from miasmas, epidemics, or other inconveniences, no bad results would follow. I agree with Sir George Clerk, that the troops will be more healthy on the plains of India than they are in the West Indies, or even in many of our European stations; at the same time, I think that sanitariats on the hills for European regiments that are suffering from disease would be of great benefit to the army.

It is generally admitted, that the sites of barracks have been ill selected, and their construction imperfect.

Additional Statistics of Mortality desirable.

From all that is given in evidence, it appears to me, that while the statistics of the mortality of European troops in India are based on the experience of the past, it might be well to ascertain whether the example I have given of the new barrack at Cannanore would be supported by the statistics of the mortality in other well-selected localities, and in barracks built on an improved construction. I confess my distrust of all speculative opinions not based on experience, as regards the preservation of health in warm climates. It is too important a matter to be dealt with as a mere speculative question.

Number of Troops required for Madras.

The number of native troops necessary to do the duties of the Madras presidency will depend very much upon the efficiency and numbers of the police under organization. This presidency is far removed from foreign aggression, the inhabitants are naturally peaceable. If the bad feeling caused by the severe and questionable exactions of the revenue and judicial peons from the simple-minded natives, who come to pay their kist at the collector's cutchery, or who are summoned to attend at a judicial court, was overcome by more vigilance on the part of their superior officers than has hitherto been exhibited, much good would result from such a course of action; and by a well organized police, doing the duty of peons, of money escorts, collectors, honorary guards, and such like, fewer native regiments would be required.

Troops required in Nizam's Territory.

I agree with the Governor and Commander-in-chief in the number of European regiments required for doing the duty of the presidency proper. In the Nizam's territory there should at least be two regiments of European infantry, and one of cavalry, six regiments of native infantry, two troops of horse artillery, four horse batteries (9-pounders), and a reserve company of artillery, and three companies of sappers.

A permanent Fortification should be erected near Hyderabad, and new European Barracks.

A permanent fortification should be erected in the vicinity of Hyderabad, where new European barracks, on a healthy site and on the most approved construction, should be built.

Madras Troops should not garrison Posts beyond the Nerbudda.

I have a decided opinion, that the Madras troops should not garrison posts beyond the Nerbudda, for the reasons stated in my notes on the re-organization of the Bengal army. At the same time I see no objection to their serving beyond that river in times of emergency, if their families accompany them, or if they receive batta for foreign service when their families are left behind, in order that the regiments may be able to move in light marching order.

Troops required in Nagpore Territories, and Tennasserim and Pegu Provinces.

The Nagpore territories, if Jubulpore is to be occupied by Madras troops, will require two regiments of British infantry, and two of British cavalry, two troops of horse artillery, three horse batteries, and four regiments of native infantry. If Seetabuldee is fortified one regiment of European infantry will suffice, but a reserve company of artillery should be added.

The organization of the Tennasserim and Pegu provinces is under the consideration of the local authorities, who are most competent to fix the military establishment required for that country.

TWEEDDALE,
General.

Yester, January 1, 1859.

Minute by Colonel Burlton.

1. In compliance with the request of our Chairman, I beg to submit the following observations in elucidation of my opinions, on the nature and tenor of the Report which the Commission has now to prepare for submission to Her Majesty the Queen.

2. I conclude it may be assumed that our Report will be fashioned in the shape of seriatim replies, more or less amplified, to the thirteen principal questions on which evidence has been taken before us; with such general remarks, in addition, as may appear desirable or called for.

3. On nine of these questions the Commissioners have already recorded their individual opinions; and Resolutions founded thereon were framed, and adopted by a majority of the members at the meeting on the 21st of October last.

4. It would seem unnecessary, therefore, for any member to revert to the subject-matter of these questions, in the present instance, unless he may since have seen reasons for modifying the opinions he formerly recorded, or should be strongly opposed to any of the resolutions which have been agreed to by the majority.

5. Taking this view of the case, and, with one exception, acquiescing generally in the spirit of those resolutions, I do not now propose to enter into a renewed discussion of any of them, save the one of which I have made exception, and to which I entertain strong and serious objections.

6. That resolution is the first, on "the proportion of European to Native force to be maintained in India." It affirms that the proportion should be, "exclusive of Police Corps,"

In Bengal, 1 European to 2 Natives.
In Madras 1 " " 3 "
In Bombay 1 " " 3 "

7. To this proportion, as regards the Bengal presidency, I would wish to record my strong objections; and if my colleagues would reconsider the question, and more especially advert to the amount of police force proposed to be kept up, and the nature of its armament and organization, as developed in the evidence before us, and in information mainly brought to our knowledge since the adoption of the Resolutions of the 21st of October, I cannot but think that they would concur with me in the opinion that such a body of armed, disciplined, and semi-disciplined Natives, as the proposed proportion would give, would be not only unnecessary, but fraught with extreme peril.

8. Let us first consider what will be the aggregate amount of armed Natives (regulars, irregulars and police) which this proposed proportion would give us for the Bengal presidency alone. By our second resolution, we recommend that the minimum amount of permanent European force to be maintained in that presidency after tranquillity is restored, shall be 50,000 men. That would give us 100,000 Native troops, exclusive of the armed police. The latter force cannot be so accurately estimated, but, I believe, we shall be under, rather than over, the mark if we calculate it at 80,000 men. It may surely be considered, that this latter force would be amply sufficient for the preservation of the public peace and tranquillity, within our territories; and with 50,000 Europeans in hand we could unquestionably and securely bid defiance to all aggression from without, without encumbering ourselves with so large a body as 100,000 Native troops, on whose fidelity we could place no reliance; and who would be greatly more dangerous to us than any foreign enemy whom we are at all likely to encounter.

9. Again, supposing the police force to be sufficient, as it ought to be, for the preservation of order and tranquillity within our territories, and also for the performance of the various quasi-civil duties (such as treasure escorts, jail guards, &c.,) on which the Sepoy army has heretofore been so largely employed, what occupation could be found for the latter in times of peace? How could they be kept free from the dreary stagnation of idleness, and the unsettled state of feeling,—the morbid brooding over imaginary, if not real, grievances, which idleness so commonly engenders in the Native mind?

10. It is true, an European force will always hold double their number of Native troops in check, and effectively and instantly, if properly handled, put down any attempt at outbreak or revolt, but it is obvious that the larger is the number of the latter, the larger must be the European force to overawe them; and in the proportions proposed, it seems to me, that we should in fact be keeping up a large and untrustworthy army, whose services we do not require, and then have to maintain, of necessity, an European force to prevent their turning their arms once more against us.

11. If, then, we find that a large Native army (beyond what is positively indispensable) is not only an useless expense but a machine entailing a farther heavy outlay in the main-

tenance of additional European troops for its surveillance, even in times of peace; let us consider also the dangers that might, not unreasonably, be apprehended from it in case of war.

12. Can any one, with the events of 1857 before his eyes, again feel confidence in the fidelity of a Native army, if circumstances should at any time arise, giving them, what might appear, in their short sightedness, a fair chance of successful revolt? What security should we have in the event of an insurrection within our territories, or of an invasion from without, (say from Affghanistan, or Nepaul for instance) that our Native troops would not march off and swell the ranks of our enemies at the first opportunity? "Quis custodiet custodes ipsos?" Who could stay or stop them, if they selected a moment for their departure, when our Europeans were engaged with an enemy? Or who can calculate what might be the consequences, if, at such a moment, instead of taking to flight, in the hope of another Meerut paralysis or Dinapore lethargy to favor their escape, they were to turn upon us, in the field of battle? Great numerical strength will give confidence even to cowards, at times, to do what smaller numbers would not dare to attempt.

13. Another consideration arises here—In estimating our proportion of European to Native troops it must be remembered we have altogether ignored the police force, or left it out of our calculations, as though it could work no mischief, or would necessarily remain loyal in the event of another outbreak of the Native army; but I can see no good foundation on which to rest this very dangerous assumption. The men composing the police force which will, in fact, be nothing more or less than a very large, but not highly disciplined, body of troops, will, of necessity, comprise all castes, tribes and nationalities, precisely as will the ranks of the army itself—their feelings, both religious and political, will be the same as those of the latter—their power of combination will even be greater, for they will be diffused over the whole country in one continuous unbroken chain, through which, whilst the right hand, as it were, of any one or every district, grasps the left hand of its adjoining neighbour on the North, and *vice versâ*, on its South, the electric shock of preconcerted or acceptable rebellion would travel with the rapidity of the fiery cross (far quicker than circulated cocoa-nut, or Chapatties) from Chittegong to Peshawar. It is scarcely necessary to add, that a rising of the police, if, as is most probable, they could also raise the population against us, would be infinitely more dangerous, and more difficult to deal with, than a revolt of the largest Sepoy army. What are the practical lessons these considerations should teach us?

1st. To maintain not one Native soldier more than is positively and indispensably necessary.

2nd. To disarm the population, as far as can be possibly done.

3rd. To arm the police with weapons sufficient merely to deal with unarmed or badly armed mobs (a few ordinary carbines, swords, spears, and bludgeons, for instance), but altogether inferior, as should be those of our Sepoys, to the arms of the European force, so that the superiority of the latter, in this, as in all other respects may be ever patent, palpable, to the comprehension of all, and lead them to feel in their hearts, that opposition or conflict must ever be hopeless.

14. In my former minute I advocated the maintenance of equal numbers of European and Native regiments of Infantry, and of three regiments of Native to one of European Cavalry, for the Bengal army, and I would still earnestly uphold an equality in the former branch. I would also modify my former opinion, so far as to recommend, that the Native force of Cavalry should not exceed the European in a greater ratio than two, instead of three to one, and consequently that twelve of the thirty-six regiments of Irregular Cavalry, which I formerly recommended, might be dispensed with. I feel a thorough conviction that with 50,000 European troops (including the Artillery) 40,000 Native Infantry, and 24,000 Native Cavalry, the Bengal Presidency would be securely and safely provided for, as far as human foresight can provide for any thing. Any increase to that number of Natives, would be but an increase of danger instead of safety—the larger the Native force, the larger as I have before said, would be their confidence in their own strength, and the greater would be the chance of their again trying that strength against us. I need not dwell on the financial importance of my proposition, but the saving that would result from the maintenance of sixty-four, instead of one hundred thousand men is a matter of no trifling consideration.

Europeans, in round Numbers, thus—

40 regiments Infantry, say at 800 - -	32,000
12 regiments Cavalry, say at 700 - -	8,400
Artillery - -	10,000
	50,400

15. There is another of the resolutions adopted on the 21st of October on which I should wish to make a brief remark. I allude to the 7th, and the question of Enlistment for General Service. The evidence in favor of this is so nearly unanimous that it would indicate a larger share of self-complacency and *opiniâtreté*, than I wish to have credit for, were I to persist in upholding my own views on the subject; but at the same time I cannot but confess that I am still very much in the position of

> "The man convinced against his will,"—who,
> "Is of the same opinion still,"

and that I cannot, even now, help thinking that it would be the better plan (for the Bengal army, at all events) to have, as I before recommended, only a certain number of regiments raised expressly for general service, including service on ship-board, instead of exacting from every recruit, an engagement so generally repugnant, not merely to his prejudices, but, in the case of most of them, to his legitimate and honest feelings. I have a very strong opinion indeed, that the Government General Order (of 1855 or 1856?) directing that all recruits thereafter enlisted, should be attested for general service, including embarkation on board ship, whenever required to do so, was one, and by no means one of the least, of the exciting causes of distrust and dissatisfaction, which finally resulted in the great revolt of the army.

16. I will now proceed to the consideration of the four remaining questions, on which the Commissioners have as yet recorded no written opinions. On the first of these, viz:—how far the European portion of the army in India should be composed of troops of the line, and how far the troops raised for service in India only, the Commission came to a verbal resolution at our last meeting, that it was necessary to maintain a local European army; but, with a reservation on the part of some of the members, that this was to be considered a temporary decision only, and that their opinions were to be considered open to modification hereafter.

17. My own opinion on this subject is so strong, and is supported by so powerful a phalanx of evidence of the highest ability and most extended experience, that I am desirous of at once placing it on record, in case the question should be again agitated in the Commission.

18. It would be both unprofitable and tedious, were I to enter, in any detail, into the reasons which lead me to advocate as a prominent measure the establishment of a strictly local European force in every presidency in India.

The question has been so fully discussed, its advantages and supposed disadvantages have been so fully dwelt upon, and the arguments on both sides are so clearly exhibited in our minutes of evidence, that when I express my entire concurrence in the opinion of the great majority of eminent men, statesmen, commanders, and civilians of extensive Indian experience (some of whom are enumerated in the margin*), who have pronounced so strongly in favor of a local European army, I feel it would be superfluous to say more; and will content myself with adopting the words of the Earl of Ellenborough, that, "it is necessary to present this state "of things; it affords the only "security for the continued "maintenance of the dependence of India upon England," words full of importance, and abounding in foresight and truth.

*Governor-General of India.
Governor of Madras.
Earl of Ellenborough.
Commander-in-Chief, Madras
Do. do. Bombay.
Sir W. Mansfield,
Military Secretary to Government of India
Adjnt General, Bengal Army.
Sir J. Outram
Sir J. Lawrence and fellow Commissioners.
Sir H. Vivian,
Sir Frederick Abbott,
J. P. Willoughby, Esq.
J. R Martin, Esq.
Colonel Holland.
Colonel Durand.
&c. &c.

19. The second and fourth of the questions to which I am now replying are very closely allied, and scarcely demand any detailed observations. As regards the line regiments I should strongly recommend their being relieved, if practicable, every ten or twelve years, and I am disposed to think the long sea-route by the Cape, as a general rule, would be preferable to the overland route through Egypt, when no urgent demand exists for the early presence of the troops in India. I anticipate no particular difficulty in obtaining recruits in sufficient numbers for the local force in India, if drafts or volunteers from the line regiments returning home are allowed to enter it.

20. I come now to the third question, as to the practicability of consolidating the European forces, so as to allow of exchange from one branch of the service to the other, and the regulations that would be necessary and practicable to effect this object with perfect justice to the claims of all officers now (or rather who recently were) in the service of the East India Company.

21. I confess I do not see that any particular benefit would accrue to the public service from the proposed consolidation of the European forces in India, in view to the

introduction of the system of exchanges between the officers of the line and the local army, whilst on the other hand it seems almost if not entirely impossible to effect such an arrangement consistently with a due regard to the rights and claims of the officers at present in the latter service.

22. If only the interests of the two individual officers who proposed to exchange were involved in the question, it would be simply a matter to be settled by themselves; but it is obvious that in a seniority service the interest of every individual junior to the exchanging officer must be affected for better or for worse by every exchange that took place, unless, which is next to impossible, the ages, or rather the exact value of the lives of the two parties could be ascertained, and proved to be precisely the same. If, for instance, my senior officer, who may be aged and shattered in constitution from long residence in India, should exchange with another from the line, in all probability a younger and a stronger man; it is clear that my chances of promotion, as well as those of every other man in the regiment junior to the exchanging officer, would be damaged, and our advancement unfairly retarded. I can see no means of averting this sort of injustice, except by rendering it a condition imperative on all the exchanges, that they should first be acquiesced in by every officer of the seniority, or local regiment, junior to him who wished to quit; and this would be so objectionable in principle, as well as difficult to carry out in practice, that I would not for a moment think of recommending its adoption, even though there were advantages to be gained by the introduction of the exchange system, which I do not at present perceive. In the lowest commissioned ranks (those of second lieutenants, cornets, and ensigns) perhaps there would be no objection to the system of exchange, as any one of these who might do so would of course come in as junior of his rank and regiment, and so no injustice would be done to the prospects of any one, and every junior of the officer who went out would rejoice in the step so gained.

23. Another obstacle that presents itself, if not to the introduction, certainly to the working of the proposed system of exchange, is the difference in the nature of the pensions or full pay retirements in the Indian army (as now established for all actual incumbents) as compared with those of the line. In the former every officer, after serving a certain number of years, becomes entitled of right to the full pay of a specified rank. Twenty years' service in India gives the full pay pension of captain, or *10s. 6d.* a day; 24 years' service that of major, *292l.* per annum; 28 years' service that of lieutenant-colonel, *365l.* per annum; 32 years' service that of colonel, *456l. 5s.* So also all lieutenant-colonels, majors, and captains who from ill-health are unable to serve longer in India can retire, whatever be the length of their service, on half-pay pensions as follows:—

Captains at	£127	15	0	per annum.
Majors at	173	7	6	„
Lieut.-Colonels at	200	15	0	„

Similar proportionate advantages are also granted to subaltern officers, who (lieutenants after ten, ensigns after six years) are unable from ill-health to serve longer in India, their pensions in such cases being—

Lieutenants,	£73	0*s.*	per annum.
Ensigns	54	3	„

Lieutenants, after even six years' service, can also retire on ensigns' half-pay, if unable from ill health to remain in India; whilst all officers who may be compelled to retire by wounds or ill health contracted on duty, after only three years' service, are allowed the half-pay of whatever rank they may have obtained. Lastly comes the great prize of the Indian service, the rank of regimental colonel, with a share of off reckonings, or a commuted allowance in lieu, which enables the recipient to live at home at ease as long as he pleases, on an income of about *1,100l.* or *1,200l.* per annum.

24. The advantages above enumerated are those which the officer of the Indian army receives from the Government he has hitherto served. They are vested rights, as far as the officers now in the service are concerned, and could not be violated or interfered with without flagrant injustice and breach of faith. In addition to these the Indian officer has also private rights and interests in the funds (two in Bengal, the military and the orphan, one each; the military, including provision for orphans, in Madras and Bombay) to which he has been obliged, by the terms of his service, to contribute by donations and subscriptions from the date of his first commission. From these he derives the heartfelt gratification of knowing that, whenever he may die, his widow and children will not only be provided for, to a certain extent, but that they will be indebted for their comfort to his own pecuniary sacrifices during life.

25. Taking these circumstances into consideration, and there are other advantages from the funds to which I have not adverted (such as passage money, income allowance, and outfit, in certain cases), it is difficult to suppose that many officers would be found willing to exchange into the line, even if the system were permitted; in all probability few or none, save the very young or the thoughtless and improvident, tempted perhaps by a pecuniary consideration, would be likely to forego the advantages I have enumerated, and of which they know they cannot well be deprived.

26. There is, however, another difficulty to be taken into account ere the system of exchanges can be fairly introduced. Supposing that such exchanges were sanctioned, and that officers could be found in both services ready and wishing to make them, and that the difficulties attendant on doing so without injustice to others could by any means be overcome, it will still be necessary to consider the question again, and to ascertain what would be its effects on the funds (military and orphan), and how far those noble institutions could be protected from the damage or peril to which the system, unless carefully guarded against, would assuredly subject them.

27. The first question that arises, in considering the subject, is whether an officer exchanging from the Indian army into the line should or could carry with him the advantages derivable from the funds which he had already fairly purchased by his donations and subscriptions: or whether, divesting himself of all claims thereupon, he could transfer them to the line officer with whom he exchanges, supposing the latter were able and willing to purchase them. On the last point there could of course be no objection to any officer forfeiting at once all he had ever paid as well as all his claims, present or prospective, on the funds, if he thought proper to do so; but if it be proposed or expected that the officers who come into the Indian army, by means of exchange, should step into the place of those with whom they exchange, as regards their position in the funds, the case would assume a very different aspect, and the committee of management of the funds, having due regard to the interests entrusted to them, might find it necessary to require the payment of so large a sum in the shape of donations and arrears of subscription, perhaps (consequent on differences in the value of lives, in the respective ages of the husband and wife, in comparative health of the parties, and other causes), as would in most cases, in all probability, operate as a bar to the exchange contemplated. The adjustment of the amount to be so paid by incoming members would be a matter of great complexity and much nicety, and could scarcely be effected without the assistance of a professional actuary. As regards the case of officers transferred to the line, by exchange, they might perhaps be permitted (and I see no objection to such an arrangement) to continue subscribing members of the funds, and to retain all their rights and claims as such, if they wished to do so. The payment of their subscriptions, &c., as they became due, could easily be effected through the paymasters of their new regiments, wherever they might be stationed; the difficulty, however, is not, as I before said, with those who leave, but with those coming into the Indian army by exchange.

28. On the whole question I have arrived at this conclusion, that in the lowest commissioned ranks only (second lieutenants, cornets, and ensigns) could the exchange system be introduced without the chance, I might almost say the certainty, of its bringing hardship and injustice in its train. At the same time I see no objection to the officers of the Indian local force being permitted a transfer, if they wished and could effect it, by purchase or otherwise, to fill vacancies in line regiments at the pleasure of the Commander-in-chief, leaving their places to be filled up in their former corps in regular seniority succession as at present. I believe a similar system is now permitted in the Royal army, in which an artillery officer may be transferred to a line regiment, though no officer from the latter can take his place by exchange in the former.

29. It is scarcely necessary to add, that the difficulties which seem to interpose in the way of the regular exchange system being introduced between the two armies are only applicable to the case of the present officers of the Indian service, who have the pledge of their Government that their rise shall be strictly by regimental seniority; of course, if it be deemed advisable new rules may be introduced in the case of all future appointments to the service.

30. I would wish to add a few words on the subject of those admirable institutions, the Funds (Military and Orphan) of the Indian army, by which, at no cost to the Government, beyond the liberal assistance which it affords to their support, the widows and orphans of all officers are provided for in a state of comparative comfort, and assistance is rendered in the form of passage money, outfit, and income allowance to officers returning to or from Europe, on sick leave, &c.

31. It is only by making it obligatory on all young officers entering the service to become members of these funds that they can be upheld; and I most sincerely hope that the present regulations to that effect may not, on any consideration be relaxed. If subscription were left optional it is but too probable that the proverbial thoughtlessness and improvidence of the young would operate to prevent many from joining institutions of which they can scarcely appreciate the eventual inestimable value; and it is, I fear, almost if not quite certain that if the present rule of compulsory subscription were departed from, the insolvency of the funds would, after a certain term of years, be the inevitable result, bringing penury and misery to the hundreds of widows and orphans, who might at the time be subsisting and entirely dependent on its pensions. It would indeed be not only a short-sighted policy, but a gross injustice to the officers of the service, if the Government were to sanction any modification of the present rule, by which alone the stability of these institutions is upheld.

32. In support of this view it is only necessary to bear in mind that all officers who have entered the Indian army, for many years past, have been compelled to contribute to the funds, on the full understanding that they were thereby securing certain benefits to themselves personally, whilst living, as well as to their widows and orphans, after death; so that these benefits were, in fact, guaranteed to them by the Government; that Government was no doubt fully alive to the great advantages which it derived from being thus released from all obligation to support or pension the widows and orphans of its officers; and having compelled the latter to join in supporting the funds, and pledged itself that all who subsequently entered the service should do the same, it would clearly be a palpable and flagrant injustice were it to depart from that pledge, and thereby imperil the solvency of the institutions,

33. The importance of these funds, and the magnitude of their operations, is not, I believe, much understood in this country; but it may give some of my colleagues useful information, perhaps, in helping them to a correct judgment on the question, if I mention some particulars connected with the one of them with which I happen to be best acquainted, the Military Fund of Bengal.

At the date of the last annual report (October, 1858), the capital of this institution amounted to	£567,988
Of which was invested in the treasury notes of the Government - - - - - -	£558,527
The contributions of the officers of the army amount annually to upwards of - - -	£75,000
There are now widows, annuitants on its books	666
Whose pensions amount to, per annum -	£106,905
The actuary's value of its liabilities, as estimated by Mr. Neison, is - - - - -	£871,185
From which if the amount of capital shown above be deducted - - - - - -	567,988
There will remain a deficiency of capital - -	£203,197

This deficiency of capital to meet liabilities would be amply covered, if the fund could realize a claim it has against the Indian Government for losses sustained through erroneous computations, during many years past, in adjusting its accounts at the India House. About four years since, the eminent actuary, Mr. Neison, estimated these losses at 437,913*l.*; but the managers and officers of the fund, I apprehend, would be quite satisfied if they could compromise the claim for about one-half the amount.

34. I fear I have been led rather too far into a subject not, perhaps, exactly within the legitimate scope of our inquiries, but as the question of compulsory subscription

may come under the consideration of the Commission I am anxious to put my colleagues in possession of the fact, that this fund (and I believe all the others are the same) was originally framed on correct principles, and would be in a perfectly prosperous and solvent state, as well as quite self-supporting (with the aid it receives from the Government) at the present moment, if its resources had not been curtailed, by the erroneous rules of computation of interest, exchanges, &c., above adverted to, as adopted at the India House. I believe the Bengal Military Orphan Fund and the Military Funds of Madras and Bombay are in a highly flourishing condition, dispensing their blessings on many hundreds of widows and orphans; and it is, I repeat, of the greatest importance, that nothing should be done, which can tend in the slightest degree to shake their stability, or check their beneficial action.

35. In conclusion, I will only add, that throughout this minute, I have abstained, purposely, from touching on matters connected with the Madras and Bombay armies (with reference to either their present or their future) deeming it best to leave the question to be dealt with, first, by my colleagues from those presidencies, whose acquaintance with the subject must necessarily be much greater than my own. There are numerous other matters of detail connected with the organization, armament, clothing, &c., of the army in India which will have to be entered into in our Report, but I am disposed to think they may be more conveniently discussed and settled in verbal conference at our Board, than in written minutes; and I have therefore contented myself with dealing rather with generalities, and confining myself principally to the important and distinct questions on which we have been particularly called to report, rather than weary the patience of my colleagues with a more extended exposition of my views and opinions on points of minor importance.

William Burlton,
Colonel.

Bath, January 30, 1858.

CONFIDENTIAL MEMORANDUM, INDIAN ARMY.

Horse Guards, December 27, 1858.

THE question as to the re-organization of the Indian army, appears to me to be one of such grave importance that in addition to the replies I am prepared to give to the various heads of inquiry, I would desire to record my opinion generally in a separate paper to embodying my views on a subject of so much delicacy and difficulty.

There are many points under consideration, which can alone be settled in India, and all details must, more or less, be left to the local authorities.

The object of the Commission should be to lay down general rules and principles of action, with a view to assist Her Majesty's Government in forming their opinion, and which can hereafter be worked out in detail by the various departments to which they may apply.

Commencing with the first heads of inquiry, I am come to the conclusion, backed by very high authority, and in spite of much evidence to the contrary, that the object of our legislation should be to have but one European army for the whole empire including India. On imperial and military grounds, I cannot conceive the possibility of two armies *co-existing* without the gravest injury to the best interests of the country.

I cannot but admire the esprit de corps which animates the officers of the Indian army in general, all leading them to the conclusion, that the army with which they have been associated from boyhood should be retained separate and distinct. But I cannot share their views, regarding the question as I do from a military point of view, and as one vitally affecting the best interests of the State, and I feel the firmest conviction, that nothing but mischief can result from the jealousies, divisions, and heartburnings, which must be inherent in any double army organization.

At the same time I am prepared to admit, that it would be a matter of great difficulty at once to adopt a plan of general service, however desirable such might be, and the feelings and interests of a large body of most efficient and valuable officers must doubtless be considered, as well as the financial difficulties which might result from any sudden change of system.

Keeping these objects in view, I think that for the present a middle course must be adopted, which would give time for effecting the necessary change, would least disturb the present state of things, but would yet ultimately tend to that complete fusion and amalgamation the absolute necessity of which I so strongly advocate.

Artillery.—I would therefore begin by at once forming a second regiment of artillery composed of the artillery of the three presidencies; the battalions and brigades to be kept distinct as at present in their three presidencies, but the whole of the officers being placed in one seniority list and the whole to be considered as one corps, without reference to the different presidencies in which they may be serving. I would let it be understood, that for the present this 2nd regiment would be employed in India only, but all the men to be enlisted henceforth, for the corps and all the officers to be appointed to it from the present time, should be so enlisted and appointed for general service, not confined exclusively to India. The officers for the 2nd regiment of royal artillery, to be appointed from the cadets who have passed through the military college of Addiscombe. The various ranks of the officers to be assimilated to those of the royal artillery, and the establishments of men in troops, field batteries, and reserve companies to be identical in both regiments.

Engineers.—I would in like manner deal with the corps of engineers of the three presidencies, forming out of this body a second regiment of royal engineers.

It may be a matter for after consideration, whether this regiment should not have a more permanent local Indian character, as a large portion of this force, as regards the non-commissioned officers and men, must be composed of natives. It might therefore be desirable to look upon the second regiment of engineers as a local corps, but giving the officers of this corps full power to exchange with those of the first regiment of engineers, by which term I designate our present royal corps of this branch of the service.

Should this view be carried out, I would suggest, that only natives should be attached to the second regiment of engineers, with the exception of a large body of European non-commissioned officers who are indispensable as overseers, and I would always maintain in India a few companies of the present regiment of royal engineers, composed exclusively of Europeans, with their own officers attached to the first regiment. The non-commissioned officers for the second regiment could easily be obtained by volunteers from the men and non-commissioned officers of the first regiment, and thus the same system would be established in both corps.

Cavalry.—The European cavalry for Bengal should consist, as it appears by the estimates of Lord Canning and

General Sir William Mansfield, of between 6,000 and 7,000 sabres. At present we have five regiments of cavalry of the line in Bengal, and ten regiments are in the course of formation for local service only.

I observe that a general opinion is expressed in favour of small regiments for local service in preference to the larger ones of the royal establishment. I confess myself opposed to such a plan, as small regiments can never be maintained efficient for service, and are more expensive in consequence of their staff than larger corps.

In deference, however, to the opinion so strongly expressed, I would propose a middle course by forming the ten local regiments of three squadrons each into eight regiments of four squadrons and 500 sabres, leaving the line regiments at their present establishment, though it may be a question for consideration, whether hereafter cavalry regiments should not be sent to India at the same establishment as that now proposed for the local corps, should it be found on trial that the lower establishment answers better for the service required of them. Four regiments of the line, with the eight local corps, would give 6,800 sabres. The local regiments to have three field officers each, one lieutenant-colonel, and two majors.

The local regiments should at once be numbered as regiments of the line, and the men to be enlisted for general service, though it may be clearly understood, that for the present these eight regiments are to be retained for duty in India only, till it is otherwise ordained, or as long as the present generation of officers, all of whom have belonged to the late Company's service, remain in the service. The whole of the officers who have belonged to the native regular regiments of cavalry regiments will, by such an arrangment, be absorbed. Seniority will regulate promotion in these corps; the cadets from Addiscombe will be appointed to them, but exchanges will be allowed between them and the other cavalry regiments of the line.

Infantry.—The local regiments of European infantry at present, 12 in number,—six in Bengal, and three in Madras and Bombay respectively,—should, in like manner, be at once numbered as regiments of the line, but to be employed for the present exclusively in India, though the men to be enlisted from henceforth, should be for general service; the officers to be appointed from the cadets at Addiscombe, and seniority to regulate the promotion in these corps. It is stated in the memorandum by Lord Canning and Sir William Mansfield, that 45 regiments of European infantry will be required for Bengal. There being six local European corps already in existence, the remaining 39 should be all regiments of the line, and if the present number of battalions of the army of the line should not be sufficiently numerous to furnish the corps serving in India and the colonies with adequate reliefs, any additional European corps to be formed, to be officered by the officers of the late Company's service, by which means a considerable number might and would be absorbed. A scheme, giving full details of the measures proposed to carry out these views, shall be annexed to this paper; but I would wish here to remark that the establishment for an infantry regiment might in time of peace consist of 10 service companies of 900 rank and file, with two companies of 100 rank and file as a depôt.* The infantry force would thus amount in Bengal to about 40,000 men. I think it right to point out, that of late great complaints have been made as to the want of officers in regiments in India, consequent on the change established some years ago, when one subaltern per company in all regiments in India was reduced. Possibly a certain number of supernumerary subalterns, say four or six per regiment, might be added to each infantry corps; these to be all taken from the unemployed subalterns of the late Bengal army. By allowing these supernumerary officers to remain on the general army list, to which I shall allude hereafter, their promotion by seniority would go on irrespective of the regiment to which they might be temporarily attached, and thus their rights and privileges would be maintained. It will be observed, that in all the proposals I have made, I have endeavoured to assimilate the establishments of European corps in India, as far as possible, to those at home. My object in so doing has been to make as little change as possible necessary on the transfer of a corps from the home or colonial establishment to that of India, or, vice versâ, on its return to the mother country after service in the East.

I have thus endeavoured, however imperfectly, to sketch out my views of the future organization of our European forces for service in India. I have not touched upon the presidencies of Madras and Bombay, as, in conformity with my views already expressed, I contemplate that the whole of the European cavalry and infantry of those presidencies, and a portion of the artillery and engineers, should be from the army of the line, with the exception of the six regiments of local infantry, three in each presidency, which already exist, and which I propose to deal with in like manner as the local European corps of the Bengal presidency.

---

* This establishment might be still further reduced to 800 rank and file, if that number be deemed sufficient, as stated in the memoranda of the Governor-General and Sir Wm. Mansfield.

Native Army.—I now proceed to a consideration of the native armies; and here, for the same grounds upon which I hold it to be absolutely necessary that there should be but one European army for India, I would most decidedly continue in its fullest integrity the three separate native armies of the three presidencies. The vastness of our empire in the East makes it imperative that we should maintain a much larger native army in our Indian possessions than would otherwise be at all desirable. These native troops must, from henceforth, be looked upon in the light of auxiliaries to the European troops. Their number should be kept as low as possible. But, however much we may endeavour to do so, they must be at all times large, looking at the vast extent of territory to be covered and defended. That they must ever be looked upon as a somewhat doubtful and dangerous element, the recent mutinies have fully proved. The only mode by which this danger can be neutralized is by keeping up those distinctions and jealousies, which I so much deprecate in European armies, in which but one feeling should inspire the whole mass. Our retention of India, during recent painful events, may be largely attributed to the feeling of jealousy, not to say animosity, which has existed in the Madras and Bombay armies towards the native army of Bengal. Let this feeling, therefore, be fostered and maintained to the fullest extent.

But a further very important feature presents itself for our consideration. In dealing with the native army of Bengal we have an open field before us, the late Bengal army having ceased to exist, and a new one having to be provided with a view of replacing it. Not so as regards the armies of Madras and Bombay, which still exist, exactly on the same footing, and to the same numbers as before the late outbreak. I concur fully in the views expressed by all the Indian authorities, that it would be most dangerous to introduce at once any great changes into these two large bodies. For the present we must confine ourselves to the Bengal presidency only, and leave the armies of Madras and Bombay for future legislation should a change be deemed absolutely necessary in those two perfectly distinct bodies. Doubtless the time may arrive when, should the principle upon which the Bengal army is to be reorganized be found to answer, these may be extended to the two other presidential armies, but certainly that time has not yet come, and the greatest caution is imperatively called for.

Bengal Native Army.—For the Bengal army, therefore, I would at once place the officers composing it upon one general list of seniority, fixing the numbers of each grade, and allowing them to go up from the ensign to the colonel in regular and unbroken seniority. Cases for selection to higher rank may at times arise and might be sanctioned, but there should be considered the exception to the general rule, which, as heretofore, should be seniority only. From this list the selections should be made for officers to the regular infantry regiments, the irregular cavalry and infantry regiments, the staff, both civil and military, the police corps, in short for all the various employments which have hitherto been open to the officers of the Indian army. I do not mean to confine my selections for irregular or special duties to this general service list; officers will equally have to be selected from the European corps for these various staff duties, but a considerable proportion of them would, as a matter of course, devolve to the officers of the purely local and native service, and these would all be selected from the list above referred to. It is in this list that I would equally place the supernumerary officers of the late Company's army, for whom at present no employment can be found, and whom I propose to attach to the European regiments of the line. Their promotion would be thus ensured, and they would rise in regular gradation with the rest of their brethren. The general officers of the late Company's army who have been named as colonels of regiments, and received the off-reckonings of such appointments, would be at once appointed to the new regiments, both European and native, to be formed, and it may be a matter for consideration, whether all the newly raised 2nd battalions of the line should not have a full colonel appointed to them, to be taken from the generals of the late Company's army for whom no regiments can be found.

A staff list or corps has been advocated by many. Such a corps might be formed, but I am myself on the whole rather opposed to it, and I think the general list above advocated will do away with the necessity for it, as a proportional number of officers may be always borne on that list with a view to their being employed on the staff.*

---

* In the European regiments the officers employed away from their regiments should be seconded after they have been absent from their corps for six months.

It may be argued that all esprit de corps would be lost by having a general list for the native army. I cannot concur in this view, for in the plan suggested I do not advocate a constant removal of officers from their regiments. I contemplate, that as far as practicable, officers will be retained for duty with the regiment to which they were originally appointed, unless specially selected, from superior qualifications, for service on the staff with irregular corps or with the police. In the royal artillery, where we have 14 battalions, all the officers are posted in the general list for promotion, and are yet appointed to different battalions, and no ill effect is found to arise from such an arrangement. A similar system has been recently introduced into the military train, and it has existed for years in the royal marines and in all regiments of the line having more than one battalion with the best possible results.

Though the mode of distributing the local native forces is a question which must mainly depend on the authorities in India, I cannot but think that it would be very valuable that some native corps should be ordinarily associated with every European regiment, both cavalry and infantry.

The *two* bodies forming a brigade under a well selected officers. Thus the brigade system which is found so necessary on service, would be permanently established. Two European corps with two or more native corps combined, and having a detail of European artillery attached, would thus form a brigade, and a certain number of brigades thus constituted, and of various arms, would form a division, two or more divisions a corps d'armée, an arrangement which, for purposes of discipline and military organization, I hold to be quite indispensable in a large army such as that of Bengal ever must be. As regards the composition of this native army, it must be as mixed as possible, the cavalry wholly on the irregular principle, the infantry regular and irregular combined; and no native artillery, excepting possibly for a few localities where Europeans could not exist. I should not be disposed to give the Enfield rifles to native corps, but let them have the percussion arms hitherto in use. The police force should be differently armed for their special duties.

As regards the command of the troops, I would leave that much as it is at present. I would not add a fourth army to those of the three existing presidencies, but I would as now make the Commander-in-chief in Bengal Commander-in-chief in India, with the same powers he now exercises over the two other presidential armies, and I would denominate the superior officers at Madras and Bombay, commanders of the forces in those presidencies, in contradistinction to the Commander-in-chief. I would, however, as already stated, divide Bengal into corps d'armée, probably three in number, the officers commanding these corps to have considerable powers, but still all directly under the authority of the Commander-in-chief in Bengal. Such an arrangement would greatly reduce the detail labours of the latter, would give him more time to devote to the many important subjects which are daily brought before him, and would in a great measure get over the difficulties consequent upon the vast distances that separate the various stations from one another, and render constant supervision a matter of so much trouble and inconvenience. I would further suggest, though this again is a purely local subject, that the whole of the stations, whether cantonments or garrisons of Bengal and indeed India, should be carefully revised, that a principle should be laid down not to allow any grand depôt or arsenal for the army to be situated in any locality which will not admit of the constant presence of European troops, and to establish no cantonment without a small work attached as a sort of citadel to contain arms and stores of all description, and to which the European portion of the garrison could at all times resort in the event of mutiny or disaffection amongst the native troops or the inhabitants of the province.

In conclusion I would strongly urge the necessity for appointting a small committee of experienced departmental officers for carrying out the details of the measures now recommended for consideration. The presence of Colonel Durand in this country would greatly facilitate the formation of such a committee. In conjunction with any other officer, either military, or civil, to be selected by the Secretary of State for India, and with one or two departmental officers of the royal army, such a committee could work out the general system as regards finance and organization, specially with reference to the officers of the Bengal army now unemployed, which Colonel Durand could take back with him to India, and he would thus be enabled to explain to the Governor-General and the Commander-in-chief of India the grounds upon which the recommendations have been made, and the mode in which it is suggested that they could be carried out, subject naturally to any modification or alteration that they might think it right to recommend.

GEORGE.

Horse Guards, S.W., December 29, 1858.

MEMORANDUM on the Re-formation of the INDIAN ARTILLERY and its Amalgamation with the ROYAL ARTILLERY.

THE Indian establishment of artillery, as well as the Royal artillery, are each so vast that it is essential in the first place to determine what system of organization can be most readily adapted to both services, in order that one uniform system may prevail, and that the many questions of detail and practice may be assimilated; so that the entire corps can with facility be worked under one head, instead of having, as at present, a diversity of custom in carrying on the various duties of the artillery service, which, if continued, would naturally tend to retard the good effects which must otherwise inevitably follow the formation of the two artilleries into one large corps, so as to admit of one branch taking up the duties of another without the many transfers and alterations both in men and material which are inseparable from a difference in the establishment and equipment of troops and companies.

To effect this it is submitted that the new brigade system proposed for the royal artillery will be the most simple, whilst the assimilation of the present Indian equipments and establishments to those of the royal artillery will render the corps efficient in all its details, without involving any serious change or delaying even for a day the duties of the artillery service.

It is therefore proposed that the two arms should be converted into one corps consisting of two regiments, the first of which will comprise the present royal artillery, and the second, that of the three presidencies of Bengal, Madras and Bombay united.

As it is not intended to alter the present numbers of the royal artillery, it will not be necessary in these remarks to refer further to the first regiment, but to confine them solely to the formation of the second, which it is proposed should be constituted of eighteen brigades, as follows:—

	Guns.
4 brigades of horse artillery, of 6 troops each -	144
10 brigades of field artillery, of 8 batteries each -	480
4 brigades of garrison or siege artillery of 8 companies each,	

Distributed as follows, viz.:—

Bengal.

2 brigades of horse artillery, of 6 troops each -	72
5 brigades of field artillery, of 8 batteries each -	240
2 brigades of siege or garrison artillery, of 8 companies each.	

N.B.—In addition to the above, it is proposed that the present royal artillery in India, consisting of 3 brigades or 24 batteries of 140 guns, and the 4 troops of royal horse artillery should remain in India, making a total in the Bengal presidency of 450 guns.

Madras.

	Guns.
1 brigade of horse artillery, of 6 troops - -	36
3 brigades of field artillery, of 8 batteries each -	144
1 brigade of garrison or siege artillery, of 8 companies.	
	180

Bombay.

1 brigade of horse artillery, of 6 troops - -	36
2 brigades of field artillery, of eight batteries each	96
1 brigade of garrison or siege artillery, of 8 companies:	
	132

Total in India.	Bengal	1st regiment, 310 140 2nd regiment, 140 310	450
	Madras, 2nd regiment - - -		180
	Bombay, 2nd regiment - - -		132
		Total guns -	762

The establishment of each troop, battery, and garrison company is proposed to be as follows:—

Troop or Battery.	Ranks.	Garrison or Siege Company.
2	Staff sergeants	—
10	Sergeants	6
8	Corporals	4
5	Bombardiers	4
90	Gunners	90
60	Drivers	—
2	Trumpeters	2
1	Farrier	—
6	Shoeing smiths	—
3	Collar-makers	—
3	Wheelers	—
190	Total	106

And the number of men in each presidency would therefore be:—

		Men.
Bengal.		
12 troops of horse artillery -	× 190 = 2,280	
40 batteries - - - - -	× 190 = 7,600	
16 garrison companies - - -	× 106 = 1,696	
		11,576
Madras.		
6 troops of horse artillery - -	× 190 = 1,140	
24 batteries - - - - -	× 190 = 4,560	
8 garrison companies - -	× 106 = 848	
		6,548
Bombay.		
6 troops of horse artillery - -	× 190 = 1,140	
16 batteries - - - -	× 190 = 3,040	
8 garrison companies - -	× 106 = 848	
		5,028
Total in India - - - - -		23,152
Depôt at Woolwich - - - -		2,500
Grand total of 2nd regiment - - -		25,652

It is submitted that all artillery cadets should pass through the practical course at Woolwich, whether they are educated at the academy at Woolwich or Addiscombe.

By this arrangement uniformity of system and instruction will be secured, and a feeling of good fellowship and unanimity will be engendered amongst the officers of the corps by bringing them together at the commencement of their service, and teaching them that they are portions of one vast corps, and that in whatever part of the globe they may be called upon to serve, it will be their interest, as well as their pleasure, to maintain that esprit-de-corps which now so happily prevails in the artillery, and which is so conducive and essential to its efficiency and well-being.

The brigades of the first regiment serving in India should be on the same footing as the second, and officers of either, when meeting, should take precedence according to the dates of their regimental commissions for command of any portions of the two regiments that may from circumstances be thrown together.

It is admitted by all parties that the artillery in India should be comprised entirely of Europeans, and be maintained in a thorough state of efficiency, and ready at all times to undertake the important part that arm is called upon to sustain in the event of war; and keeping this fact in view, it will be found that the proposed establishment, 190 men, has been fixed on as low a scale as is consistent with the great end to be attained; nor should it be forgotten that 30 men per gun has always been admitted as being absolutely requisite for ordinary European service, whilst the royal artillery in the Peninsula, and lately in the Crimea, averaged nearly 40 men per gun, which was never found too many.

It may here be observed that most continental nations have the latter average, and the first Napoleon laid it down that no gun should take the field with less than 40 men and the late Sir Alexander Dickson, 35. General Mansfield strongly exemplifies the danger of under-manning guns, and recommends 30 per gun, which has been taken as the basis in preparing the new establishment, which will be found to be less in actual numbers than when the Indian batteries were composed of part Europeans and part natives.

It is submitted that there should be European artificers, as although it is an admitted fact that Europeans cannot work during the very hot seasons, yet having these few to each battery will ensure to their captains that the work is properly performed, and give them greater confidence in the efficient state of the whole of their material, constituting as it does the main strength and thorough usefulness of all field artillery.

There is no doubt that every artillery soldier, whether gunner or driver, should be able to assist in working the guns, but for the present this would manifestly be impracticable until the corps is in a more complete state, when officers should be held responsible that such should be the case; and it should be distinctly understood that every company, whether belonging to a field or garrison brigade, should at all times be available for any duty, either for field battery, siege, or garrison purposes, which the Commander-in-chief might think it necessary to order.

GEORGE.

Confidential.

MEMORANDUM.

Horse Guards, S.W.,
January 4, 1859.

REFERRING to the memorandum of the 29th December 1858, relative to the formation of the royal artillery and the artillery of the three presidencies in India into two regiments, in which it was proposed to form the present royal artillery into the 1st regiment, to consist of—

1 brigade of horse artillery, and
14 brigades of field batteries or siege artillery;

And the artillery of the three presidencies into the 2nd regiment to consist of—

4 brigades of horse artillery, and
14 brigades of field batteries or siege artillery;

It is now submitted that the 2nd regiment of royal artillery should only consist of 16 brigades instead of 18 as formerly proposed, and that the other two brigades be added to the present royal artillery making two regiments of 17 and 16 brigades respectively, the second of which would be composed of the existing Indian artillery, and be distributed as follows:—

In Bengal.

2 brigades of horse artillery, of 6 troops each - -	12
5 brigades of field batteries, of 8 batteries each -	40
2 brigades of garrison artillery, of 8 companies each -	16
	68

In Madras.

1 brigade of horse artillery, of 6 troops - -	6
2 brigades of field batteries, of 8 batteries each -	16
1 brigade of garrison artillery, of 8 companies - -	8
	30

In Bombay.

1 brigade of horse artillery, of 6 troops - -	6
1 brigade of field artillery, of 8 batteries - -	8
1 brigade of garrison artillery, of 8 companies -	8
	22

Total troops, field batteries, and companies of 2nd regiment in India - - -	120

The present number of troops and companies of Indian artillery in the three presidencies is 104.

By this it will be seen that the number of companies to be added to the Indian artillery, to form the 2nd regiment, will be 16, whilst there will be 16 to be added to the royal artillery to complete the 1st regiment. The number of guns in India would thus remain the same as at first proposed, but the total of the 2nd regiment would be altered as follows:—

Strength at first proposed - -	25,652
Deduct 16 companies, at 190 each -	3,040
Total -	22,612

The artillery in India would thus consist of the following detail:—

Bengal.

		Guns.
1st regiment,	2 troops of horse artillery -	12
	3 brigades, or 24 batteries -	144
2nd regiment,	2 brigades of horse artillery -	72
	5 brigades, or 40 batteries -	240
	2 brigades, or 16 companies.	
		468

Madras.

1st regiment,	1 troop of horse artillery -	6
	1 brigade of 8 batteries -	48
2nd regiment,	1 brigade of horse artillery -	36
	2 brigades, or 16 batteries -	96
	1 brigade, or 8 companies.	
		186

I.A.—98.

Bombay.

1st regiment,	1 troop of horse artillery	6
	1 brigade, or 8 batteries	48
2nd regiment,	1 brigade of horse artillery	36
	1 brigade of 8 batteries	48
	1 brigade of 8 companies.	
		138
	Total guns	792

If this arrangement is sanctioned it will of course be necessary to send out two complete brigades of the 1st regiment to India, and the new brigades would be raised at home.

The present establishment of the Indian artillery being below that of the Royal artillery the greater proportion of the promotion consequent on the augmentation would still fall to the former.

GEORGE.

Précis of Lord Ellenborough's Answers to the several Questions proposed to be put by the Commissioners as to the Bengal Army.

Question 1.—*Proportion European should bear to native force in Bengal.*

Assuming that an army is to be henceforth maintained for *fighting* purposes only, a brigade of 1 European and 2 native regiments would answer the purpose in war; it being understood that the arms of the Europeans are to be superior, and the *artillery* all European.

Question 2.—*What amount of force will be required in Bengal hereafter?*

For the Bengal territories, including Saugor and Nerbuddah, 50 European regiments, 25 European cavalry regiments; battery to each European infantry regiment.

Question 3.—*Should the native force be regular or irregular?*

The regiments that have remained faithful should be maintained as the regular establishment.

The remainder should be on the irregular system. Irregular regiments should have five instead of three officers.

Question 4.—*Should native artillery be allowed?*

No. The Indian European artillery is a noble corps, and it should be increased "so as to more than make up for the loss of the native."

A small proportion of natives may perhaps be necessary in each battery.

Question 5.—*Native sappers.*

Their services are essential. Low caste men only would be taken.

Question 6.—*Question as to nationalities or castes.*

The more mixture the more security. The Hindoos of Rohilcund, the Rajpoots, and Affghans may still be trusted, and we may recruit in the Deccan.

Natives of the East not Hindostanees should also be recruited.

Question 7.—*As to enlisting under a new code.*

Doubts necessity of "general enlistment," and would not abolish native courts-martial.

Question 8.—*Division of Bengal army.*

It could not be effected without altering the present system of promotion of officers, a result to be deprecated. The divided armies must still act together.

Question 9.—*Promotion of natives, commissioned and non-commissioned.*

Native gentlemen might be admitted at once as officers into the army. The first gentlemen in the country should be induced to enter the army.

August 24, 1858.

I.A.—7.

SUGGESTIONS with reference to the THIRD HEAD OF INQUIRY, as to the Exchange of OFFICERS from one Branch of the Service to the other.

Referring to the last paragraph of my Memo. of the 28th September, and to the suggested Head of Inquiry,—

> " Whether it be possible to consolidate the European
> " forces, so as to allow of exchange from one
> " branch of the service to the other, and what
> " regulations would be necessary and practicable
> " to effect this object with perfect justice to the
> " claims of all officers now in the service of the
> " East India Company,"—

It is submitted that as the officers now in the service have entered the Indian army on the faith that they are to rise to the emoluments of a regiment strictly by seniority, no arrangement can be made admitting of a transfer from one service to the other, or an exchange between the senior officers of both services, which would not disturb this seniority system.

Again, no officer of any standing would voluntarily relinquish the high retiring allowances of the Indian army, nor would he forego the advantages he derives from the military fund, to which he has been compelled to contribute during the whole time he has been in the service, and forfeit the pensions to which his widow and family would be entitled from this source on his decease, for the purpose of serving in another part of the empire on a lower rate of pay.

In the junior ranks of the army, with subalterns not above a certain standing, the case may, perhaps, be different; an option of transfer here into the royal army might be acceptable, and the officer might be induced to relinquish his claims on the Indian funds and pensions on being allowed to reckon the service he had already passed in the Indian army as service in Her Majesty's army.

The following suggestions, it is submitted, would facilitate such an arrangement.

The emoluments to be derived from service with native troops should be higher than those for service with Europeans, so as to induce officers to seek employment in native corps and to qualify for such appointments.

The officers now in the service selected for employment with native troops should maintain their places in their original regiments, and be promoted in them irrespective of the manner of their employment.

Those hereafter entering the service to be placed on general lists at each Presidency. They should be employed in any manner in which their services may be required. They should receive a step of rank after certain periods of actual service in India, to be fixed by regulation. An exception to this system of promotion might be made in favour of extraordinary merit or good service, on the recommendation of the commander-in-chief in India to the Home authorities. There being no regular establishment of officers, promotion given out of the regular course would in no way retard the advancement of others, whilst the check on its being conferred would, it is thought, prevent any partiality being shown on any occasion.

An officer entering the Indian service on these terms would be eligible, should his health fail in India, or should he tire of service in that country, to be employed in any part of the empire.

As these officers could not be called upon to subscribe to the military funds in India, and as those funds are largely supported by the entrance fees of cadets, the Government should guarantee to the present subscribers all the advantages which the funds hold out to them.

Officers of Her Majesty's royal army, under the proposed arrangement, would be eligible for employment with native troops or in staff appointments in India. The officers now belonging to the Indian army, whose promotion, it is thought, must advance in accordance with existing practice, being available for the immediate requirements of the government of India, time will be afforded for framing regulations which should govern the selection, promotion, and retirement of these officers.

The selection for appointments would rest, as now, with the authorities in India.

If it be considered desirable that service with native troops should commence at an early age, young officers might, under the proposed scheme, be told off to do duty with European or native corps, on a lower scale of allowances, and be eligible for the higher rate of pay proposed for such service when they are pronounced by competent authority to have the requisite qualifications.

It would be expedient, also, for the efficiency of the service that the government of India should have the power of compelling an officer to retire who is reported by the military authorities to be inefficient, without the report of a medical board of his incapacity.

Officers selected for the commissariat, pay, or audit departments, or for the secretariat or civil employment, after twelve or eighteen months' probation in such offices should be removed from the combatant list of the army and be ineligible for military command. They should receive certain retiring allowances. As it is not proposed to interfere with the claims and privileges of officers now so employed, time will be afforded for the preparation of regulations on this subject.

The principle of promotion after certain fixed periods of service, it is suggested should be applied to the officers of artillery and engineers without disturbing the rights of those now in the service. Officers of the Indian army would then be available for service in any part of the empire. This arrangement, while it would secure to the State the services of an efficient and valuable corps of officers, would also, it is believed, be in accordance with the feelings and wishes of the officers themselves.

B. B. Wood,
Col. and Secretary.

Indian Army Commission,
October 5, 1858.

The DUKE OF CAMBRIDGE'S ANSWERS to the NINE QUESTIONS proposed by the COMMISSIONERS, 3rd August 1858.

1. *The proportion of European to native troops to be maintained in the Bengal presidency?*

1. I think that in the Bengal presidency, irrespective of the police force to be established, one third should be Europeans to two thirds natives. For Bombay and Madras, I am disposed to think that one fourth of the whole force should be Europeans.

2. *What amount of force will be required in the Bengal presidency after the country is settled?*

2. This is a question which it is next to impossible to decide upon in this country, and which must depend upon many local circumstances and considerations, which can only be determined upon in India itself. After, however, hearing the opinion of a vast number of most intelligent evidences, I am disposed to name as an approximate force, 50,000 Europeans of all arms for Bengal, to 100,000 natives, or 150,000 in all. For Madras and Bombay each, 15,000 Europeans to 45,000 natives, or 60,000 in all for each presidency; making for the whole of India an army of 270,000 men.

3. *Whether the native force in the Bengal presidency shall have the regular or irregular system, or both combined?*

3. The force should be combined of both regulars and irregulars as regards the infantry, and of irregulars as regards the cavalry.

4. *Whether any native artillery shall be allowed in the Bengal army?*

4. I would have no native artillery in the Bengal army, but I would attach a certain number of gun lascars to every European troop or battery. The Bombay officers give it in evidence that there are certain stations in that presidency which must be garrisoned by natives, no Europeans being able to live in them. An exception might be made in that presidency to these unhealthy stations, but I should make this an exception to the general rule, and I have even a doubt whether this exception should be made.

5. *The same question with regard to sappers and miners?*

5. For all scientific duties Europeans should be employed, and a certain portion of the force should therefore be European; but for all ordinary purposes of work, natives are indispensable, and I would have them formed on the Madras principle of low caste men, who would not object to the performance of the work required of them.

6. *Whether the Bengal native army should be composed of different nationalities or castes; and if so, in what proportion?*

6. The army should be composed of every description of nationalities and castes, and all should be as much as possible mixed up together, care being taken not to allow any special caste or nationality to have the predominance. It appears that some regiments are trying the experiment of having certain nationalities by companies, and it is said that it has been found in practice to answer well. Though I prefer the admixture of all throughout the regiment, I would not object to continue the experiment by companies, but I would not extend that system throughout the army.

7. *Whether the native army of Bengal is to be enlisted under a new code?*

7. I think the code requires considerable alteration. Every soldier should be enlisted for general service, and I would give greater power to commanding officers of regiments, as I feel certain that undue centralization does not suit the native character. The question of caste should never be tolerated as an excuse for the non-performance of military duties. The conditions upon which a man enlists should be carefully and fully explained to him from the outset, and if he does not object to enlist upon the terms proposed, he should be held to his contract afterwards. Strict discipline is essential in all armies, and a laxity of discipline should never be tolerated. The system of petitioning direct to superior authority without doing so in a respectful manner through the authorized channel of the commanding officer should be peremptorily forbidden.

8. *Whether the Bengal army ought not to be divided into two or more armies?*

8. I think the Bengal army should remain as at present, and not be further divided; but I think that the com-

mander-in-chief should have his head-quarters, if practicable, at a more central station than Calcutta; and I would introduce the system of *corps d'armées* into the Bengal presidency, to be commanded by lieutenant-generals, all being part of the same army, and under the undivided authority of the commander-in-chief.

9. *Whether any change is required in the system of promotion as regards native commissioned and non-commissioned officers?*

9. I think a change is required for Bengal, where hitherto the seniority system has prevailed. I would introduce the system of selection, as prevailing in Bombay, and which appears to have answered well. I would not introduce native gentlemen without passing through the ranks. This system would, in my opinion, be very objectionable, and would endanger our position. In the civil service an introduction of more native element may be desirable, but certainly not in the military service, and all the native officers should, as is now done, be promoted from the ranks. The promotion in the non-commissioned grades should be made in companies, on the recommendation of the officer commanding each company; to the commissioned grades, on the recommendation of the commanding officer, by the commander-in-chief.

GEORGE.

Note.—With reference to my answers to questions 1 and 2, I would wish to observe that I have merely given the relative proportions I deem essential for the three presidencies. I have given the number of European troops which I should consider necessary in each presidency, and though I have given the relative number of native troops that might safely be maintained in each in proportion to Europeans, I would wish it to be clearly understood that I do not bind myself to the numbers thus given, but would at all times maintain as few native troops as possible.

Col. BURLTON'S ANSWERS to the NINE QUESTIONS proposed by the COMMISSIONERS, 3rd August 1858.

1. *The proportion of Europeans to natives to be maintained in the Bengal presidency.*

1. First: Artillery.—To be all European.

Second: Cavalry.—One European to three native regiments.

Third: Infantry.—Equal numbers of regiments, European and native; but the former might be of smaller numerical strength than the latter. The moral effect of the presence of an European regiment at any post is very considerable on the native mind, without reference to, or knowledge of its strength; and financial considerations should also be allowed to have some weight. It would seem, therefore, the best policy to have a large number of small regiments rather than a small number of large ones.

2. *The amount of force for the Bengal presidency when the country is settled.*

2. First: Artillery.—Admitting the very great importance of this arm, I am disposed to think, assuming that it is to be entirely European (except as regards a few gun lascars for every battery), that the former strength of the Bengal artillery will be nearly sufficient for the fixed establishment hereafter. It consisted previous to the mutiny of 13 batteries of horse, and 23 (including a small mountain battery) of foot artillery; and I should think if these were increased to, say, 16 or 18 troops of the former, and 25 or 26 of the latter, there would be enough for all purposes. For siege trains and garrison duties 24 companies should be maintained, being an increase of, I think, five companies to the former establishment.

Second: Cavalry.—Twelve regiments of European cavalry and 36 of irregular horse, would, I think, be sufficient. The former should consist of four squadrons, of not less than 160 rank and file each, to allow of their division into good and efficient wings, if it should be desirable at any time to detach a portion of the corps on any emergency.

The irregular horse should be corps of 1,000 strong, as at present.

Third: Infantry.—Forty regiments of European infantry, and the same number of native regiments should be sufficient for all purposes of defence against aggression from without (save in the most improbable contingency of an European invasion), or broad rebellion within our territories; provided, as is understood to be the intention, the preservation of ordinary tranquillity, the suppression of dacoitee, and the quasi police duties of various kinds, which have heretofore been assigned to the regular native army, are henceforward to be entrusted entirely to an armed and organized police, supported by local corps, such as have hitherto been maintained in particular districts, and of which I believe few or none have joined in the recent mutiny. I may add here, as regards the composition of the European force, that I would have one half of it, of all arms, supplied from the regular army of England (as heretofore with a certain portion of it), and the other half to be a strictly local force, raised especially for the army of India, as has hitherto been the case with the European regiments of the East India Company. This, and many other points connected with the organization, discipline, dress, &c., both European and native, as well as the disposal of the vast numbers of irregular troops we have at present on our hands do not come within the legitimate scope of the question to which I am now replying, and may therefore be left for future consideration and discussion.

3. *Whether the native troops should be regular or irregular, or both combined?*

3. The whole of the cavalry, I think, should be irregular.

As regards the infantry, there is much to be said on both sides of the question, and on the whole I am inclined to think it would be desirable in the first instance, if only experimentally, to have one half of the native infantry on the regular, and the other half on the irregular system; but any how, whatever number of regulars may be kept up, it would be highly desirable that there should be much less adherence to European costume, and the minutiæ of drill and equipment than has prevailed of late years, to the great disgust, as well as discomfort, of the native soldier. A larger proportion of European officers should also be allowed to the irregular regiments, not less, I should say, than five (exclusive of the medical officer), as well as two carefully selected European non-commissioned officers for each company, both in the regular and irregular regiments, in lieu of the native commissioned officers by whom our regiments have hitherto been uselessly encumbered. These last might be allowed gradually to die off or retire to the pension establishment. I do not expect that native gentlemen of family and influence could be found willing, in any appreciable numbers, to accept commissions in any regular regiments of infantry, but many might very probably be found ready and happy to join the irregular branch, as commissioned officers, and I would give them every possible encouragement and inducement to do so. This, however, is not the place to enter on that question.

4. *Whether any native artillery shall be allowed?*

4. Not a man, except gun lascars, for cleaning the guns and such like duties.

5. *The same question as regards sappers and miners.*

5. We must have some natives for rough day-work, but I would not admit or employ them in laboratories, magazines, &c., and all those we enlist should be low caste men.

6. *Whether the native army should be composed of different nationalities or castes, &c.*

6. By all means. The more the better. Mix them up promiscuously in general, but I should be inclined to have a few national regiments also, say, some all Seikhs, some all Goorkhas, and so on. Some of the finest classes of men in India for soldiers have never yet taken to our service from their utter dislike to our clothing, discipline, &c. If they could be enlisted for our irregular regiments they would make splendid soldiers. I allude to the real native Rajpoots, Rathores, &c. of Rajpootana, as well as to Jhats, Rajcoomars, and various others, few, if any, of whom have ever yet been induced to enter our service, for the reason stated.

7. *Whether the native army should be enlisted under a new code?*

7. The evidence on this subject has been almost unanimous in favour of enlistment for general service, but I confess I am not satisfied that such a condition would, on the whole, be a desirable one to exact. I have no doubt whatever that if such a rule existed, it would have either one or the other of these results,—either it would deprive us of very many of our best recruits, or it would lead to numerous and most inconvenient desertions whenever a regiment was called on to embark on board ship. Lord Ellenborough's opinion on this point seems to me to be exceedingly well founded, and deserving of the most careful consideration. It is so seldom that native troops are required to serve beyond sea (and then they can only be withdrawn to a comparatively limited extent), that I think the old plan of having only a certain number of regiments enlisted specially for general service, and keeping them more than heretofore on the sea-board frontier would be greatly preferable to the exaction of one universal engagement to serve beyond sea on the part of our recruits, most of whom would enter into it with great repugnance, if not with the full intention of violating it on the first occasion of being called to its performance. I do not perceive any other points in the present code or terms of enlistment that require alteration, but if we abolish the rank of native commissioned officers we must also abolish native courts-martial, a measure of which the expediency is open to some doubt, at all events.

8. *Whether the Bengal army ought not to be divided into two or more armies?*

8. I should answer this question most decidedly in the negative. I see no one advantage that could be derived from such a measure, but I do see very great objections to it. Our Commission has not to deal with financial considerations, perhaps, but still I may point to the great additional expense which the division of the army must necessarily entail in a duplication of all departments nearly, of the general staff, as well as in the salaries and allowances of a second commander-in-chief and his personal staff. I look on this, however, as a secondary consideration compared with others; and more especially I would advert to the great discontent which such a measure would assuredly create amongst the officers of the army, to some of whom it would, of necessity, be fraught with hardship, if not injustice. This remark, I would observe, applies not only to the question of their comparative standing and promotion, as adverted to in Lord Ellenborough's reply, but to other circumstances also, which must not be lost sight of. We must bear in mind that the officers of the Bengal army have entered the service, and have lived in the expectation of serving alternately or occasionally in the fine climate of the north-west provinces, or the Punjab, as well as in the generally less congenial climate of Bengal. That portion of the army which might in the proposed division be allotted to the latter would surely have fair ground of complaint, if they found themselves doomed to spend so much larger a proportion of their lives than they had calculated on in the swamps of

Bengal, a province, too, where they could scarcely ever hope to see any service more exciting than the suppression of some disturbance, perhaps, amongst the Coles or other wild races of the jungles, or of some petty outbreak of a refractory zamemdar. On the other hand, it is by no means unprobable that many who might find themselves permanently located beyond the Sutlege or the Indus, might, for reasons of their own, be equally dissatisfied at being shut out, as it were, for the whole period of their service from the upper provinces of Hindostan; and, as they might possibly deem them, the pleasant and ever verdant plains of Bengal Proper. It has been supposed that the division of the army would have a beneficial tendency in preventing extensive combinations amongst the native troops in future, and the fact of the Madras and Bombay armies not having coalesced with the Bengal sepoys to any extent during the recent revolt has been adduced as a case in support of the argument; but there is no analogy whatever between the two cases. With exception of the comparatively few Hindostanee sepoys in the Madras and Bombay armies, the ranks of both are filled by men differing *toto cœlo* from those of Bengal; their customs, habits, and ideas are greatly different, and their feelings towards the Bengal sepoys are those of marked enmity rather than of sympathy. It is no wonder, therefore, that they did not join in the frantic outbreak of the latter. But how would the case stand if the present Bengal army were to be divided? The men in the one division or army would almost of necessity be of the same classes, castes, and countries, as the other; the two armies must continue to draw their recruits from the same localities (Bengal proper does not supply a single man to our ranks, and never will); and if, as doubtless will be the case in future, all nationalities and castes are to be mixed up freely in the ranks of both, there can scarcely be a shade of difference in their general composition; nor could the mere interposition of a river as the boundary line between the two cut off their communications, or frustrate their combinations. Another argument that has been adduced in favour of the division of the Bengal army is founded on the great extent of territory which it holds, and which has been assumed to be too vast to be thoroughly and efficiently supervised by one commander-in-chief. The weakness of this proposition requires no proof. We have only to look to the British army, to its dispersion in nearly all parts of the world, under one commander-in-chief, and the argument at once falls to the ground. I conclude, moreover, that a considerable portion of the territory held at various times by the Bengal army in Central India and Rajpootana will hereafter be occupied by troops from the Madras and Bombay presidencies, a measure which would at once annihilate the last vestige of argument that has been brought forward in support of the proposed dismemberment of the army of Bengal.

9. *Whether any change is required in the system of promotion as regards native commissioned and non-commissioned officers?*

9. There can be no doubt, I presume, in any quarter that the system of promotion by selection of the best men must be the most effectual in securing a body of smart and efficient officers in all ranks. All that is of any great importance in giving effect to such a system is, that commanding officers should be men above all suspicion of undue partialities, and of fair discriminating judgment; and it should be carefully explained to every recruit that he will have to look to merit only for his future advancement.

William Burlton, Colonel.

October 11, 1858.

Viscount MELVILLE'S ANSWERS to the NINE QUESTIONS proposed by the COMMISSIONERS, 3d August 1858.

1. *The proportion of European to native force to be maintained in the Bengal presidency.*

At present, not less than one third of the whole force.

2. *What amount of force will be required in the Bengal presidency after the country is settled.*

For the Punjaub, Bengal, and North-West provinces, 150,000 men.

3. *Whether the native force in the Bengal presidency shall be on the regular or irregular system, or both combined.*

Both combined.

4. *Whether any native artillery shall be allowed in the Bengal army.*

I am of opinion that native artillery cannot be altogether dispensed with, but the number must be limited to the necessity.

5. *The same question with regard to sappers and miners.*

It is impossible to do without native sappers and miners.

6. *Whether the Bengal native army should be composed of different nationalities or castes, and if so, in what proportion.*

Of all castes, without distinction, where the man is physically fit for service.

7. *Whether the native army of Bengal is to be enlisted under a new code.*

For general service.

8. *Whether the Bengal army ought not to be divided into two or more armies.*

Not unless a fourth presidency is established, when a division of the army would be rendered necessary.

9. *Whether any change is required in the system of promotion as regards native commissioned and non-commissioned officers.*

Unquestionably, and should be assimilated to the practice prevailing in the Bombay army.

MELVILLE, Major-General.

Lieutenant-General Sir HARRY SMITH's ANSWERS to the NINE QUESTIONS proposed by the COMMISSIONERS, 3d August 1858.

1. *The proportion of European to native force to be maintained in the Bengal presidency.*

1. One European to two natives.

2. *What amount of force will be required in the Bengal presidency after the country is settled.*

2. Eight regiments European cavalry, at 800 each - - - - -	6,400
Twelve regiments native regular cavalry, at 800 each - - - -	9,600
Eighteen regiments irregular cavalry, at 800 each - - - - -	14,400
Thirty-five regiments British infantry, at 1,000 each - - - -	35,000
Sixty regiments native infantry, at 1,000 each - - - - -	60,000

Four hundred and two field guns, of which—

120 guns, horse artillery - - 20 troops.
282 guns, horse batteries - - 47 batteries.
Divided into battalions.

402 guns, *all nine-pounders.*

This calculation is totally regardless of "battering trains," which must be organized at every great fortification, *not* as a part of the guns mounted on the "works."

3. *Whether the native force in the Bengal presidency shall be on the regular or irregular system, or both combined.*

3. There are localities where irregular infantry may be required at native courts; this must rest with the Governor General.

I am on principle opposed to irregular troops, but in a country like India, so numerous is the population, that irregular troops frequently absorb roving spirits, and turn to good account those who would be against us.

This is exclusive of the police force now embodied, and contemplated to be embodied.

The force I have named appears to me to be adequate, not only for the preservation of tranquillity in Bengal, including the Punjaub, but equal to meet any emergency which may arise on the confines of our territories, its disposition to rest with "*the Governor-General*" and "*the Commander-in-chief.*" But I venture to recommend that, in lieu of the system which has hitherto prevailed in India, of having so many different posts and stations, the troops should be kept together in large and efficient bodies, ready to move in force, when actually required, and the marching establishment to be maintained *for the present.*

Nothing so weakens an army, and impedes its rapidity of movement, as to have it scattered as it were over an extensive province, such as Bengal, to which the Punjaub is now added; and wherever troops are stationed, there should be a "place d'armes" capable to contain stores, treasure, women, children, and the "impedimenta" of war, such "place d'armes" to be so constructed that its defence may be ensured by a very small garrison, *defensive alone.*

Engineers are invariably disposed to construct great fortifications, the expense of which is enormous, while they absorb the troops, and cramp the movements of an army.

All duties of a civil and financial character to be performed by the police.

4. *Whether any native artillery shall be allowed in the Bengal army.*

4. No native artillery, most assuredly, but to each troop and battery of British artillery I would attach forty natives of low caste, for duties of fatigue, &c.

5. *The same question with regard to sappers and miners.*

5. The nucleus of this corps must be British. I see no objection to the labourers being natives.

6. *Whether the Bengal native army should be composed of different nationalities or castes, and if so, in what proportion.*

6. There is nothing more important than that the Bengal native army should be composed of different castes and nationalities, from one end of India to the other; and the principle of collecting nationalities in companies is judicious;

on the one hand it tends to prevent combination for evil, on the other it creates emulation.

7. *Whether the native army of Bengal is to be enlisted under a "new code."*

7. A very stringent code of military law, or Mutiny Act, and articles of war, to be framed and promulgated, that recruits may be well aware under what law and conditions they take service. "Corporal punishment" to be re-established, and the power of "capital punishment" to be fully provided to punish every act of "mutiny" or "gross "insubordination;" and every power consistent with judgment and discretion should be restored or established for the officers commanding corps and regiments.

Increase of pay to be granted for "good conduct" after years service, and pension on discharge after years service.

The issue in India called "batta" is not to be regarded as a right, but as a donation from the Government, under peculiar circumstances.

Enlist for a period of years for "*general service,*" without reference to "caste," and upon the express understanding that every native soldier must perform *every duty* required of him, as the British soldier does.

The proportion of Mahommedans should be one in four.

8. *Whether the Bengal army ought not to be divided into two or more armies.*

8. I see no advantage whatever in dividing the Bengal army into two; on the contrary, it would add to correspondence, and create obstacles in all combined movements.

9. *Whether any change is required in the system of promotion as regards native commissioned and non-commissioned officers.*

9. I am of opinion that the promotion to corporals and to sergeants should be vested entirely in the hands of commanding officers, and on the principle of eligibility.

To a commission, *eligibility* most decidedly, upon the recommendation of the officer commanding, whose power requires to be strengthened in every way, and his authority rendered definite and absolute in all regimental interior economy.

Whenever a sergeant is promoted to a commission over the heads of others on the ground of their ineligibility, these generally worn-out individuals should be invalided, and obliged to retire on pension.

A staff corps, if practicable, to avoid denuding regiments of their officers, who ought to regard regimental duty as the first and most important. Regimental officers to be eligible for transfer to this corps after years zealous regimental duty. Every effort should tend to attach officers to their regiments, and those accepting service in the staff corps are not to return to their regiments, but must invalid when nearly worn-out, a fair retiring pension being provided.

As to the occupation of Bengal and the Punjaub, this must ever be vested in "the Governor-General" and "the "Commander-in-chief;" but the ordinary rules and science of war, as well as the recent revolts, demand that, in a country of the enormous extent in question. Exclusively of the small "places d'armes," I recommend such posts as—

Peshawur (a strong place d'armes),
Lahore (a strong place d'armes),
Umritsir and Govindghur (already fortified),
Delhi (works to be improved, and large stores erected),
Agra (already a work which may be made formidable),
Gwalior (a citadel to be constructed in the centre of the great fort),
Lucknow (to be fortified),
Calcutta (already Fort William),

should be regular fortifications, as depôts for all military stores, manufactories of arms, tents, saddlery, &c. &c. &c.

Care, however, must be taken in the construction of barracks in these fortifications, for the health of the troops is "*paramount.*"

I name the above on general principles, but there are other places, such as "Cawnpore," Benares," "Allahabad," Saugor," &c. &c. &c. where places d'armes are indispenable.

The natives in India hold in high estimation "fortresses" and "works," regarding a country that does not possess them as exposed to irruptions; hence, when they see the territory thus held by "works" garrisoned by British troops, their passiveness is ensured.

H. G. Smith, Lt.-General.

ADDENDUM.

A question now arises: what is to be done with that portion of the native troops who have stuck to their colours, on terms of service, in Bengal?

There are also to be discussed and acted on,—

Arms for native cavalry.
Clothing for native cavalry.
Horse appointments.
Camp equippage, &c. &c.
The *clothing* for the British troops.
Appointments and camp equipage.
Clothing for native infantry, arms, accoutrements, baggage, &c. &c. &c.

Then come the all-important subjects,—

Medical staff.
Regimental surgeons.
Inspectors.
Hospital and field establishments, &c. &c.; than which, when I served in India, from 1839 to 1847, nothing could be less efficient.
"Commissariat."

H. G. SMITH, Lt.-General.

on the one hand it tends to prevent combination for evil, on the other it creates emulation.

7. *Whether the native army of Bengal is to be enlisted under a "new code."*

7. A very stringent code of military law, or Mutiny Act, and articles of war, to be framed and promulgated, that recruits may be well aware under what law and conditions they take service. "Corporal punishment" to be re-established, and the power of "capital punishment" to be fully provided to punish every act of "mutiny" or "gross "insubordination;" and every power consistent with judgment and discretion should be restored or established for the officers commanding corps and regiments.

- "Commissariat."

H. G. SMITH, Lt.-General.

Lt.-Gen. Sir GEORGE WETHERALL'S ANSWERS to the NINE QUESTIONS proposed by the COMMISSIONERS, 3rd August 1858.

Horse Guards, S.W., September 27, 1858.

1. *The proportion of European to native force to be maintained in the Bengal Presidency.*

1. For several years past the army of the East India Company has received many augmentations, but no proportionate increase of Europeans, the proportion of whom has always been below what it ought to be. No cordial union can be expected between the native and European troops serving in Bengal for a long time to come. I am therefore of opinion that the proportion should be one-fourth European.

2. *What amount of force will be required in the Bengal presidency after the country is settled.*

2. This will depend upon local circumstances, and can be better decided by the local Government; but, considering the present extent of the Bengal presidency, I consider that 152,700 is the minimum, viz. :—

Artillery - - -	7,000	European.
Sappers - - -	700	
Cavalry - - -	5,000	
Infantry - - -	30,000	
	42,700	
Cavalry* - - -	10,000	Irregular.
Infantry - - -	100,000	Natives.
	110,000	Natives.
	42,700	European.
	152,700	

* In twenty regiments of 500.

Half-castes (topee-wallahs) who did good service under Clive, and native Christians should be encouraged to enlist.

3. *Whether the native force in the Bengal presidency shall be on the regular or the irregular system, or combined.*

3. The only native force to be of cavalry and infantry. The cavalry to be irregular, and the infantry regular. Although proposing that the infantry should be on the regular system, it is worthy of consideration whether a multiplication of European officers tends to promote the efficiency of a native corps.

For all purposes, excepting actual field-service, a native regiment is not improved by a multiplicity of officers. Many of them are unavoidably young and inexperienced, and ignorant of the native languages. Like all other youths, they are for some time idle and thoughtless; the climate is adverse to mental or bodily exertion; they congregate in mess houses, and are absorbed in pursuits exclusively of European character. The greater the number of officers in a regiment, the more are they estranged from intercourse with the soldiery; personal influence or attachment necessarily declines; obedience is not cordial. The more subalterns, the slower the promotion; and slow promotion is one of the evils of the service.

It was the opinion of Sir Thomas Munro :—

"So far from thinking the efficiency of native troops "increased in proportion to the increased number of "European officers, I think the number of officers may be "too great, and that when this is the case, it injures the "discipline of the corps, and lessens the respect of the "natives for their European officers."

"One to a company is quite enough for every useful "purpose."

MINUTE, 21st January 1823.

The great expense of a regiment is the pay of European officers.

According to Mr. Grant's minute, the present amount of military expenditure cannot be exceeded; and as the increase of European troops is indispensable, so must the expense of native regiments be diminished.

Mr. Grant states :—"I have never heard it denied that "it is a waste of money and strength to use up the services "of a score of European gentlemen to officer a battalion "of natives."

I quite agree to this.

4. *Whether any native artillery shall be allowed in the Bengal army?*

4. None, as trained gunners.

5. The same question as regards sappers and miners?

5. A corps of 700 trained Europeans, as before stated, as superintendents; but all working men to be Coolies, hired as required, or low caste men embodied as pioneers.

6. Whether the Bengal army should be composed of different nationalities, or castes, and, if so, in what proportion?

6. Not to consist of separate nationalities or castes. The more nationalities and castes are blended in the same battalion, the greater the security. No class or caste should be excluded, but not more than 30 per cent. of Musselmen should be admitted into the same corps.

This observation applies to the Bengal army.

7. Whether the native army is to be enlisted under a new code?

7. Sepoys should be enlisted for general service, and be given distinctly to understand that they are liable to perform every duty, whether of arms or fatigue, to which a soldier is subject. It is in evidence, that, in the better regulated armies of Madras and Bombay, no duty is objected to by the native soldiery.

8. Whether the Bengal army ought to be divided into two or more armies?

8. Not into distinct armies, but into distinct corps d'armeé—each commanded by a Lieutenant-General—the whole comprising one army under a local commander-in-chief.

This would essentially destroy the present system of centralization, by which all subjects are referred to head-quarters, to the injustice of individuals, and the destruction of discipline, by depriving commanding officers of that respect which is indispensable to the maintenance of their authority.

"The authority they once possessed has, with the view
" of checking abuses, been so much divided, that there is
" too little left anywhere to command respect.
" Sir THOMAS MUNRO."

9. Whether any change is required in the system of promotion as regards native commissioned and non-commissioned officers.

9. A radical change is required.

The establishment of native officers, under the existing seniority system of promotion, is shown by the evidence to be useless; and so long as commanding officers are forbidden to select the active, intelligent, and trustworthy for the ranks of jemadar and subadar, the sooner those ranks are abolished the better.

The sudden subversion of old customs is, however, dangerous,—not as regards the mode of promotion, but whether there should be such ranks as native officers. There must be a connecting link between the native soldier and the European officer; the familiar intercourse, so indispensable to mutual confidence and support, can never be maintained without it. There is no other channel through which a commanding officer, whether of a battalion or a company, can become familiar with the character and conduct of the sepoy under his command, and through which those little services can be rendered which bind the soldier to his officer. Such intercourse is, moreover, necessary, as the best means of acquiring the colloquial dialects of the natives,—more valuable than all the knowledge imparted by books or moonshies.

The fact that, during the whole course of the late mutiny in Bengal, not a single native officer gave any information, invests this subject with a peculiar and painful interest.

I do not agree with those who consider that native officers are useless, but they must be selected for merit, &c., as before stated,—not promoted for length of service, or as matter of right. A different system would produce trustworthiness and confidence, a new impulse would be given to the native soldier, emulation excited, and the service benefited.

We cannot expect to establish a bond of fidelity between the native army of India and ourselves, but we can improve their discipline and better their condition. They consider us as a foreign people, whom their necessities oblige them to serve. They have no bond to each other; the army consists of all classes and creeds. They are mercenaries; but they should be attached to our service by the hope of reward, by present promotion, and future pension.

The rank of native officer should therefore be maintained, their promotion depending on their commanding officer, but necessarily confirmed by Government in the name of the Queen.

Non-commissioned officers to be entirely promoted at the discretion of commanding officers, without reference to higher authority.

G. A. WETHERALL, Adjutant-General.

General MONTGOMERIE'S ANSWERS to the NINE QUESTIONS proposed by the COMMISSIONERS, 3rd August 1858.

1. *The proportion of European to native force to be maintained in the Bengal presidency,*

1. I consider one European to three natives should be about the proportion, not including armed police.

2. *What amount of force will be required in the Bengal presidency after the country is settled.*

2. On the supposition that Saugor, and the greater part of Bundelcund, shall hereafter be occupied by Madras troops, as recommended by Sir George Clerk, in his evidence before this Commission, No. 1180, and by Lieut.-General Sir Patrick Grant, in his memorandum dated 29th June 1857, that Rajpootanah, Malwa and Scinde, which geographically belong to Bombay, shall also be provided with troops from that presidency, there will then remain the countries bordering on the Ganges and Jumnah, and the Punjaub to be furnished with troops from Bengal. I estimate the troops required for this purpose at about 36,000 Europeans of all arms, and about 96,000 natives, regular and irregular, exclusive of police.

By the Return from the India House, dated April 1858, laid before this Commission, the Bengal army stood as follows, on an average of the six years prior to the mutiny.

AVERAGE STRENGH of the Bengal Army from 1852 to 1857.

—	Europeans, non-commissioned, Rank and File.	Natives, commissioned, non-commissioned, Rank and File.
Cavalry	1,500	5,000 Regulars. 14,000 Irregulars,
Infantry	16,800	84,000 Regulars. 28,000 Irregulars.
Artillery	3,330	3,200
Sappers	80	1,200
Total	21,710	135,400

ESTABLISHMENT of the Bengal Army as now proposed.

—	Europeans, non-commissioned, Rank and File.	Natives, non-commissioned, Rank and File.
Cavalry	3,000	12,000 Regular and Irregular.
Infantry	27,000	80,000 Regular and Irregular.
Artillery	6,000	2,600
Sappers	300	1,000
Total	36,300	95,600

The European infantry I suppose to be located as follows:—

In the lower provinces, including Allahabad and Garruckpore - - -	8,000
In Central India, including Gwalior -	8,000
In the Punjaub - - - -	11,000
Total European infantry - -	27,000

The regular troops to be massed in strong brigades and divisions, with a fortified post at each station.

When the country is perfectly settled, and the Punjaub considered in a satisfactory condition, I think it will be found that a portion of the European troops may be reduced, and the native troops increased, till the ratio of one to three is established.

3. *Whether the native force in the Bengal presidency shall be on the regular or irregular system, or both combined.*

3. A combination of both, but the majority of the infantry to be regulars.

4. *Whether any native artillery shall be allowed in the Bengal army.*

4. The general tenor of the evidence before the Commission is to the effect, that the fewer natives employed in the

artillery the better. My own judgment does not lead me to the same conclusion, at least, not to the same extent as that expressed by most of the evidence before us; yet in deference to the opinion so generally maintained, I would, in the re-organization of the Bengal army, confine the native portion of the artillery, to the manning some of the batteries in the Punjaub, to the duty of gun lascars, and to that of drivers to some of the batteries, as recommended by Sir John Lawrence, *vide* Lord Canning's Minute of the 9th of August 1858.

In computing the strength of the artillery, as I have proposed in paragraph 2, I have been guided by Lord Canning's Minute of the 9th August 1858, on the organization of the Bengal artillery, in which it is reckoned, that the same number of field guns will be required as before the mutiny, viz., 36 field batteries, which, at the rate of six guns a battery, gives 216 field guns. His Lordship further states that in addition to the foregoing, field guns will require to be provided to replace the guns hitherto supplied by contingents, viz.:—

Gwalior - -	5	Carried over -	8
Malwa - -	1	Oude - -	4
Bhopal - -	1	Punjaub -	5
Goudpore - -	½	Hydrabad -	4
Kotah - -	½	Nagpoor -	2
	8	Total batteries	23

One half, however, of the above or 12 batteries only, fall to be provided for from the Bengal artillery, viz.:—

Gwalior -	2	Lord Canning in his Minute, proposes an increase to the guns for Oude, and a decrease for Gwalior, which I have followed here.
Oude -	5	
Punjaub -	5	
Total batteries	12	

The other contingents named above, fall within the geographical limits I have supposed in paragraph 2, to be provided with troops from Bombay and Madras. Indeed, Hydrabad never has, and Nagpoor has not, for the last 35 years, been dependent on Bengal for military occupation or defence.

There will, therefore, be, by my calculation, the following field batteries to be provided for from Bengal.

36 field batteries as before the mutiny, at six guns each, makes	216 field guns.
12 field batteries as above - -	72 „
Total - - - -	288

Thirty men a gun for each field piece, will I reckon allow a proper proportion of men of all classes, European and native, for all artillery duties, including arsenals, reserves, &c., and that will amount to a total of 8,640 men, of whom I propose Europeans, 6,000; natives, 2,600, as in paragraph 2.

The following Table will show the strength of the artillery in Bengal before the mutiny, taken from the return dated India House, April 1858.

AVERAGE STRENGTH of the Bengal Artillery from 1852 to 1857.

	Europeans, non-commissioned, Rank and File.	Natives.			Total of all Classes
		Non-commissioned, Rank and File.	Drivers	Gun Lascars.	
Horse Artillery	1,030	459	—	351	
Foot Artillery	3,300	1,860	550	—	
Total . .	3,330	2,319	550	351	6,555

The total of all ranks, European and native, as shown above, gives 6,550, which divided by 216, the number of field guns is nearly 27 men a gun before the mutiny; I have allowed 30 men in my calculation.

5. *The same question with regard to sappers and miners.*

5. With respect to the sappers, I think about one-fourth should be European, or about 300 Europeans to 1,000 natives.

6. *Whether the Bengal native army should be composed of different nationalities or castes, and if so, in what proportion.*

6. The greater the diversity of castes in a regiment, and the nearer equality in point of numbers, one caste bears to another the better. But on the question of different nationalities in the formation of a battalion, I wish to record my opinion, that I am strongly in favour of forming some regiments, with European companies as their basis, say two flank companies of Europeans, and the remainder natives of any part of India, who might choose to enlist, knowing that European companies formed the basis of the corps, a regiment so formed would, in my opinion, possess many advantages:—

1st. The real security against anything resembling the disasters which have lately occurred.

2nd. The spirit of emulation, likely to exist in a regiment so formed, as has been shown by the distinguished services performed of late by certain Punjaub corps composed of different classes.

3rd. The stricter discipline and more constant supervision that would be required from individual officers in such a regiment than has hitherto prevailed in our native regiments in general. In many regiments, the commanding officer and adjutant did the greater part of the work, and the consequence was, that the regimental officers did not take that interest in the internal economy of the corps, that it was desirable they should have done.

This is not an idea I have taken up in consequence of the late mutiny, though that disastrous event has greatly strengthened my former opinion. I some years ago visited the island of Java, and had an opportunity of seeing a portion of the Dutch colonial army in that island, and was much struck with finding that they had battalions composed of two companies of Europeans, two of African negroes, and the remainder of Javanese.

The plan was found to have answered well, and I may add was *first adopted after the great insurrection in that island in* 1825-26-27.

We have also something analogous in our own service in the horse artillery, both of Bengal and Madras. In the Madras horse artillery, of which I can speak from personal knowledge, there are four European troops, and two of natives in the brigade. There are almost always an European troop and a native one quartered together at Bangalore, without our experiencing any of the inconveniences or jealousies, apprehended by some of the evidences examined before the Commission, by such mingling of Europeans and natives.

7. *Whether the native army of Bengal is to be enlisted under a new code.*

7. The code, in my opinion, requires revision, especially as regards pensions to sepoys. I think a man should have a right to retire on a pension, after a certain period of service, say 25 or 30 years, without reference to his bodily strength; but before that period his pension should depend on wounds or illness contracted on service, or injury sustained in the actual discharge of duty.

8. *Whether the Bengal army ought not to be divided into two or more armies.*

8. I think if the Bengal army were divided into two, that it would be advantageous in many respects, but I confess there are many practical difficulties to the carrying out such a change.

9. *Whether any change is required in the system of promotion as regards native commissioned and non-commissioned officers.*

9. I am of opinion that naiques should be chosen from the most intelligent men, without reference to length of service; and that the havildar major, also a selected man, should be considered first for promotion to be a native officer. If to this were added employment in the police, with higher pay for deserving native officers, and the power of removing the less efficient ones to the pension or a half-pay list, such a system would, I consider, secure an efficient class of non-commissioned and commissioned native officers.

P. Montgomerie,
Major-General.

October 11, 1858.

Colonel Tait's Answers to the Nine Questions proposed by the Commissioners, August 3, 1858.

As the only officer on the present strength of the Bengal army who has the honour of being a member of this Royal Commission, I cannot but deeply regret having been detained abroad by a severe illness, which has hitherto prevented my attendance, and I beg to express to the President and members my regret at my unavoidable absence.

After an attentive consideration of the proceedings and evidence already elicited, and as the only officer of that army, and one who has recently returned from India, being in England on medical certificate, I trust to be permitted to offer a few observations on certain statements which have been made before the Commission, which, if uncontradicted by me, will go forth to the world in the proceedings as facts, although several of these assertions appear to have been founded entirely on hearsay evidence, and, in some instances, are to my own personal knowledge quite erroneous.

Colonel Skeffington Poole, Bombay Light Cavalry, Friday, 27th August 1858, page 23, states that,—"At " Mooltan one evening a naik's (native corporal's) party of " the Bengal army was *going* past; when they passed on " I asked what was the matter, and one of my native " officers said, 'The naik is a lower class man of that party " 'than one of the privates, and the private has just said, " ' 'We have left our lines, I intend to take command, and " ' 'you go into the ranks, and you will obey me' ' I was " informed by native officers in my own regiment that it " was not a solitary instance."

"This arises," says Colonel Skeffington Poole, "from the " difference of system and the difference of discipline " throughout the army.' "Everything appears to be by " caste there."

I should account for the above entirely in a different manner, by supposing that the colonel's own people were imposing upon him; as, from my thirty-three years' experience in the Bengal army, I know that what they told him was simply impossible.

Colonel Poole goes on to detail some circumstances of a Bengal sentry at Mooltan taking "dustoorie, i. e., a few " sticks out of every bundle of fire-wood at one of the gate- " ways, &c." This, of course, was simple robbery, and the man ought to have been handed over to the provost marshal. The discipline at Mooltan must have been lax indeed when such conduct was passed over without being reported.

Again, Saturday, 28th August, Major-General Casson, Bombay army, pages 10 and 11, states some "irregularities " regarding the sentry of a guard at Mooltan," who had his clothes only partly on, &c., while "he lounged about " unlike a soldier," and, on this, founds the assertion of the laxity of discipline in the Bengal army generally.

Major-General Casson, when questioned afterwards, in answer to Colonel Burlton, admits, "I have no experience " in the Bengal army, I only speak from what I have " heard. I have certainly seen the native officers unfit from " old age, &c. &c."

Major-General Robert Alexander, Adjutant-General, Madras presidency, in proceedings dated 25th August, at page 28, reflects on the discipline of the Bengal army, stating, "We never allow caste to be put forward for not " performing any military duty in the Madras army The " same men as those who have mutinied in Bengal do pre- " cisely the same duty in our army from the difference of " discipline," &c. &c.

I have known no cases of "caste" being permitted to interfere with the duties of a soldier. There always must be some little difficulty on board ship regarding the food of the men. However, this can be got over with management.

They only cook once during the twenty-four hours, and two hours are usually required for that purpose, should there be no pressure of service; otherwise they can live for days together on parched grain and sweetmeats, which require no cooking. This seemingly, *too*, without losing their strength; for they are a most frugal and abstemious race. Each man cooks his own simple food, giving less trouble to the commissariat than the cooking of any description of soldier I have yet served with; but the inhabitants of the Bengal presidencies, whom we can alone look to for soldiers in any number, will not cook in messes, and so far their "caste" must be respected, whatever may be the case with the 1,500 or 2,000 Hindostanees in the Madras army. These men, being so small a proportion in a vast army, may have adopted the customs of the majority; but, however desirable, it will be years before the inhabitants of Bengal adopt this habit.

Again, at page 29 Major-General Alexander states under the same head, "want of discipline in the Bengal army," "It is a very common custom for the Bengal sepoy to get deeply into debt, and to be constantly brought up before Courts of Requests; the officers themselves (Madras?) felt that it was lowering the tone of discipline, and injuring the men in several ways;" and a representation would appear *to* have been "made by the officers commanding the regiments, that they would not be responsible for the duties done if they remained under the discipline in which they were placed." On this representation, "a brigadier was sent up to command their own troops at Saugor."

This is the first time I have heard it was a "common custom in Bengal for the sepoys to get deeply into debt, and to be continually brought up before the Courts of Requests." I have usually found the very reverse during my experience of the Bengal sepoy; whatever his other faults may have been, getting into debt is the exception. They are much more given to hoard up money, and to stint themselves of their proper food, should food be dear, than to spend too much. Courts of Requests are ordered to be held monthly throughout the whole of India at every station of the army. During the thirteen or fourteen years I commanded the 3rd Bengal Irregular Cavalry, I never had one single man brought before this Court, although my men were nearly all Mahomedans, a race much more given to extravagance than Hindoo sepoys, who are notorious for *being penurious* in their habits, and who remit more than half, their pay every month to their families, a fact well known to every civilian throughout Bengal.

Again, page 34, Major-General Alexander states "the Bengal army was ill-composed, ill-disciplined, and demoralized, and to this I simply attribute the general mutiny of the Bengal army. The whole army was badly disciplined, including the European officers and all. I think that the whole system was bad." The example given is:—"The moment our troops got into the Saugor division, the officers thought nothing of leaving their detachments. There were others again (a thing very unusual with us) who were brought up before Courts of Requests. Another thing is, that there was not a large station in the Bengal army in which there was not a committee of officers; and if another wanted to run in debt, they would sit in judgment on his character, and inform the Bank whether he was in good credit or not." "All these things are injurious and ruinous to military discipline."

In answer to a question, "Have you any personal knowledge on which you *found these statements?*" General Alexander replies only, "that they are notorious." And again:—"If any one will contradict them, I will say that I have been misinformed." And again, in answer *to a question*, "Do you not know from your experience of the Bengal army, that the European officers in that army actually considered it no disgrace to be brought before a Court of Requests in order to oblige them to pay the wages of their servants, when, in the Madras presidency, an officer would have been turned out of his regiment for such conduct?" "I believe that it was a very general circumstance (I am speaking of what is notorious) that such officers were brought up before the Courts of Requests. It is a rare thing in Madras. We have had some instances of debt and demoralizing consequences in the Madras army, but they were exceptional, &c. &c."

I beg to contradict the above most distinctly as applying to the officers of the Bengal army as a body. Individuals of bad character no doubt there may be in any army, but I can confidently state that it was ever, in the Bengal presidency, considered disgraceful to any officer, whether of Her Majesty's or of the Company's service, "to be forced to pay his just debts by the award of a Court of Requests." Such a man becomes a marked man, and all chance of advancement in India is utterly destroyed. But, as any one may be summoned before a Court of Requests by any native servant or shop-keeper on the most false and fraudulent grounds, and the case must be given against an officer (be his rank what it may) if he does not attend to defend it, the *most scrupulously honourable man* might be forced to appear before a Court of Requests, even as a duty to himself and others; I know not how any officer of any presidency could ever be brought to a court-martial for simply appearing before a Court of Requests, as his doing so might only be to resist what he believed to be a grossly exorbitant or altogether fraudulent claim, and it is within my own knowledge that such false claims are occasionally preferred by natives of India.

In regard to committees of officers sitting in every station on the part of the Banks, I can only state that neither have I myself, nor any of my numerous military friends, ever heard of such proceedings in the Bengal presidency. I beg most distinctly to deny the imputations cast upon the officers of the Bengal army, than whom, I am proud to feel, a more honourable body does not exist.

On perusing the evidence of Lieutenant-Colonel John Hill, Bombay Engineers, page 26 of proceedings, dated 26th August, I find it thus stated:—"I have seen a Bengal "cavalry regiment on the line of march within two miles "of the enemy's guns, and every horse was led by a horse-"keeper, the arms and accoutrements of the men were on "the horses, camels, and horsekeepers, and the men were "plundering in the fields, and paddling in water at the "wells."

This statement it is out of my power to account for, as the Bengal cavalry have only one horsekeeper to every two horses; and in general, these men are barely sufficient to lead the horses of the sick and absent troopers. I have marched, during my time of service, through most parts of Hindostan, both during war and peace, with cavalry regiments, regular and irregular, and I never saw or heard of such undisciplined conduct as described by the Lieutenant-Colonel, more especially within two miles of the presence of an enemy.

During a long and fatiguing pursuit, such as that by Sir Walter Gilbert to Peshawur, I have known commandants cause their troopers to dismount and lead their horses, in order to cool their backs, and save them as much as possible; but, beyond this, I never witnessed any relaxation of proper discipline in the line of march. In Sir Walter Gilbert's celebrated pursuit, when the Bengal column distinguished itself by fairly out-marching the Bombay troops, of course a commander would deem it his imperative duty to save his horses in every possible manner; and Lieutenant-Colonel Hill, if present on that occasion, may have witnessed the laxity of which he has made mention; but in such a case the reason ought to have been obvious, viz., that of saving and relieving both horses and men.

1. *The proportion of European to native force to be maintained in the Bengal presidency.*

1. The present police force, under the denomination of "burkundauze," must be abolished throughout the Bengal presidency as utterly useless, and the police duties of every part of India taken in future by well paid and properly organized irregular native soldiers, under selected European commissioned and non-commissioned officers, on a system somewhat similar to that recommended by Mr. Charles Raikes, late civil commissioner with Sir Colin Campbell, and of the Sudder Court at Agra. The present strength of native police under this denomination of burkundauze chuprassies, &c. &c. is perfectly incredible, and, from their numbers, the cost to the state must be very great indeed, although they are so badly paid. Such a force has proved utterly inefficient, except to extort money from the community, and add to the general confusion during the late outbreak.

Excluding from the estimate a properly organized police irregular force for all the internal arrangements and peace of the country, I am of opinion that one European to two native soldiers of regular and irregular infantry ought to be ample, and, of the native portion, probably one half or two thirds might be irregular. This is a point, however, which can best be determined by the local government of India on the spot; and calculating the regular police force at 100,000 more, actually required, which are in reality native infantry soldiers, will make one European to four native soldiers.

When tranquillity is once effectually restored throughout the country, and this revolt has been sufficiently punished by the removal of every mutineer from the soil of India, no doubt it may be possible to reduce the proportion of Europeans. This must, however, entirely depend upon the manner in which our insulted authority is vindicated in the punishment of every soldier who has joined in the late rebellion. In my belief, the European prestige can alone be sufficiently restored by the transportation of every single mutineer. This is a punishment more dreaded than even death itself, and our future security, in a great measure, will depend on the manner in which this punishment is carried out. Should every mutineer be hunted down throughout the length and breadth of the land, the word mutiny will be held in such terror for hundreds of years to come by the natives of India, that there will be little danger of any future outbreak. There must be no half measures; it ought to be done thoroughly and completely, as "the thugs" have been put down; and there will now be little difficulty, in my opinion, as the Government holds a minute descriptive roll of each individual; and all who have done good service ought in like manner to be rewarded.

As to the proportion of cavalry, I am inclined to think that the same ought to hold good in that branch, but this will depend upon circumstances; and possibly, with reference to the number of mounted men required for the police duties, it may be necessary to have even a larger proportion of native horsemen than four to one European.

2. *What amount of force will be required in the Bengal presidency after the country is settled.*

This must be determined by circumstances, and it is impossible to hazard an opinion, but no doubt, when once peace and quietness is thoroughly established throughout India, and all the mutineers have been made a sufficient example of, the number of our European army may be very greatly diminished; and as the native troops increase in efficiency for the police and other internal duties of the country, so ought their numbers to be kept under control.

With a country the size of the Bengal presidency, extending some 1,800 miles from Calcutta to Peshawur, and from the borders of Nepaul across to Oudeypore and Mount Aboo,—probably some 1,200 miles more,—of course the number of troops that can be spared for foreign service must always be small, and the army will rarely be able to furnish men for other parts of the world, and at the same time hold India secure. This must be kept in mind in organizing the Indian army. We shall require that army for the duties of India, call them local if you will, and any great proportion cannot be spared to send beyond seas without risking the loss of India.

I coincide with Sir George Clerk and with General Tucker, that from 40,000 to 50,000 European troops will be required for years to come in the Bengal presidency.

3. *Whether the native force in the Bengal presidency shall be on the regular or irregular system, or both combined.*

The native force in Bengal must be partly regular and partly irregular. Of the infantry, the proportion of regular troops would probably be one third to two thirds irregulars; and of the native cavalry, I would have them all on the irregular system, but the irregular cavalry soldier must be properly and adequately paid; not, as the system has hitherto been in the Bengal presidency, paying the men so miserably that it was almost impossible to keep them efficient upon the pittance allowed by Government (viz. 20 rupees, or 2*l.* sterling a month) to cover every expense of arms, clothes, horses, tents, foragers, carriage, &c. &c.

Having served in the irregular cavalry ever since 1831, and, for very many years, commanded one of the oldest regiments in the service, I have the more confidence in speaking on this subject, and I entirely concur with Sir Patrick Grant in what he states regarding the Bengal irregular cavalry.

The constant intermeddling with all their regimental institutions and customs;—the insane desire seemingly to turn them into regulars;—curtailing the power of commanding officers, and depriving both native officers and men of the inducements they formerly had to enter the service; and the constant desire of assimilating them in every way to the regular native army, whom they had always most cordially looked down upon, and detested with a most thorough hatred;—the above alterations in their customs and institutions; the abolishing trial by punchait, and substitution of courts-martial on all occasions; and the feeling they had gradually imbibed that they were being turned into regulars in spite of all they could do;—these things have mainly contributed to the disgust of that branch, and the old description of irregulars have mostly left the army, being unable to live, and subsist their families, and keep their horses and followers in an efficient state under the new regime, introduced of late years. For years past this has been the cause of the deterioration of this most important branch of the service, and was frequently urged upon Government by Sir Charles Napier, Lord Gough, and all the officers commanding regiments of irregular cavalry: and I took the liberty myself of pointing it also out to the late Governor-General, as well as to the late General Anson, in a written statement showing the altered circumstances under which the Bengal irregular army were now placed, and the impossibility of their existing on 20 rupees a month with the increased expenses they were subjected to in order to maintain themselves, families, and horses.

These facts have, to my knowledge, been frequently urged on the Government, and the only reply apparently was, "We get men at the present rates." We got them, it is true, but not "the men;" only an inferior class would take service at such rates,—not the good sturdy yeomen of old days, who used to supply our ranks from Rohilcund, men of family and substance, holding lands and villages, and mounted on their own family horses,—their own breeding,—whose position was in a great measure a security for their good conduct and fidelity to the state. The old men still in the service (I speak of my own old corps, the 3rd Bengal Irregular Cavalry, the old "Rohillah or Roberts' Horse," which was raised in 1814,) nearly all appear to have been faithful to their salt, and throughout the late insurrection have done good and faithful service, and were the means at Saugor, in a great measure, of saving the lives of all the Europeans, men, women, and children, as well as the guns and treasure, by escorting them to the old fort of Saugor, some miles distance from the cantonments, when no infantry sepoy could be depended upon; and throughout the whole of the late rebellion these men have invariably done good service, although there was only a small body at head quarters. The 3rd Irregular Cavalry, joined by the 31st Bengal Native Infantry, without a single European officer, attacked the mutineers and drove them out of the station, following them up for miles, and capturing the only gun which the enemy had attempted to carry off, together with the colours of the 42nd Native Infantry and standards, as detailed to me in a Persian letter received from one of the native officers of the regiment, and forwarded by the commanding officer.

As an instance of the changes which have taken place since I entered the service, and which have gradually led to increased expenses to the men, I may mention that originally the irregular cavalry were local to particular districts, and were employed in the collection of the revenue, for which they received extra allowances in the shape of one rupee (two shillings) a day per man while so employed, and enjoyed other advantages in their horses being fed. Now they have lost all such advantages, the rupee being duly collected, but carried to the credit of Government; and the men being strictly prohibited from taking forage for their horses without payment, under all sorts of pains and penalties, when sent out on such duties. They have entirely lost all such perquisites and advantages and are put to the expense of "general service;" and, in fact, the whole condition of the irregular horsemen of Bengal has been materially altered for the worse, while his pay of 20 rupees per mensem, to cover every expense, has been allowed to remain the same. This is utterly inadequate to meet their monthly expenditure and keep them in a creditable way. On such terms, and with no permanent nominal head-quarters from which to draw their supplies, which might be laid in cheaply for them by their friends and relations at the proper seasons, as in the case of the Scinde Horse, who have a fixed head-quarters, it may well be understood what difficulties commanding officers of Bengal irregular cavalry have laboured under. The Scinde Horse, comparatively in a cheap country, with fixed and permanent head-quarters, get 30 rupees a month, while our men, liable to move to the other end of the world at a moment's warning, get only 20 rupees. I have perused the standing orders of Brigadier-General Jacob's Scinde Horse, which have been published and sent to the members of the Commission, and which I cannot but approve of, being almost word for word, in every particular, the old and original standing regulations of my own corps "the 3rd Bengal Irregular Cavalry," raised in 1814 on the system of Skinner's Horse, and which regulations and customs have been invariably the regulations ever since the 3rd Irregular Cavalry was first raised, while the Scinde Horse was only raised in 1839, or even later; so that these regulations were most probably derived from my regiment, as I had a detachment for fourteen months in Scinde in 1839–40, or they may have been taken from the Poonah Horse, which went originally from Skinner's, I have understood.

I would have no regular native cavalry whatever. They have been most expensive, costing, on an average of ten years, 85 rupees, or 8*l*. 10*s*. per mounted trooper per mensem, and without any adequate result.

4. *Whether any native artillery should be allowed in the Bengal army.*

4. I would have the whole of the artillery Europeans, or as nearly so as possible. For particular purposes it may be necessary to have a few native artillerymen, on account of the nature of the climate where the guns may be required to be located, but the number need be very small, and even for such purposes, there could be little difficulty in mixing all classes so as to prevent any danger.

I would gradually introduce the European element into every troop and battery throughout the three presidencies.

5. *The same question with regard to sappers and miners.*

5. You must have natives for the manual labour, but there need be no difficulty or danger from employing natives thus, and the different classes and races can be so mixed as to render combination, among so small a body as the sappers, utterly impossible.

6. *Whether the Bengal native army should be composed of different nationalities or castes, and if so, in what proportions.*

6. Certainly; it must be composed of all nationalities, castes, and classes,—Sikhs, Rajpoots, Gwallahs, Mahomedans, and a small proportion, if any, of the Brahmin class; but there can be no difficulty in finding men of inferior castes, fitted for the duties of a soldier.

We can get no real Goorkahs, but "hill men from the "lower ranges" may be had in diminished numbers. I would here beg to remark, however, that throughout the entire length and breadth of the Bengal presidency, it is a mistake to suppose that men fit for military duties can be got who are altogether devoid of caste feelings, and prejudices; such men are not to be had in the Bengal presidency. With all due deference to those who, from their knowledge of the inhabitants of other parts of India, expect to find similar races in the Bengal presidency, I beg to point out, as my experience, that we have no races of men in Bengal who are without caste, and at the same time fitted for the duties of a soldier. Certain attention must always be paid to caste, if you expect to get men to enlist for the Bengal army. There is, however, no caste, high or low, which should be permitted in any way to interfere with military duty.

It will be most desirable that in the reconstruction of the Bengal army, all variety of castes should be intermingled as much as possible, and that no large proportion of priestly and intriguing Brahmins should be admitted. After what has occurred, there is little danger on this head, and every soldier in the regular army ought to be enlisted for general service, with the distinct understanding that proper arrangements would be made on board ship in regard to food and water, and their caste duly respected in such matters.

7. *Whether the native army of Bengal is to be enlisted under a new code.*

7. Under a new state of things in the Bengal army, of course; the old code of regulations for the natives must be entirely revised, and, in my opinion, the less the discretion of commanding officers is limited the better, they being held duly responsible to head-quarters. I believe that the limitations placed on their power of late years have been greatly instrumental in causing an entire separation between the native soldiery and their European officers, from whom they had nothing to hope or fear.

8. *Whether the Bengal army ought to be divided into two or more armies.*

8. I quite agree with those who have, in evidence, set forth the inexpediency of dividing the Bengal army.

9. *Whether any change is required in the system of promotion as regards native commissioned and non-commissioned officers.*

9. There is no doubt in my mind that the present system of promotion in the native commissioned and non-commissioned grades must be entirely changed in the Bengal army, and proper men selected to fill those ranks. The system of promotion by seniority has worked extremely ill.

I believe we must have native officers, and the object ought to be to select those best qualified.

THO. F. TAIT
Colonel.

Fulham Palace,
October 20, 1858.

Major-General HANCOCK'S ANSWERS to the NINE QUESTIONS proposed by the COMMISSIONERS, 3rd August 1858.

1. The proportion of European to native force to be maintained in the permanent establishment of each presidency should be sufficient to form at all times a just equipoise. It may not be necessary, however, in all cases to keep up the maximum proportion of native troops which might be maintained without destroying that equipoise; they may, therefore, bear a varying proportion, as circumstances may render expedient, within certain limits; and the following would, in my opinion, form the best general rule that can be adopted:—

Horse artillery - -	All Europeans.
Foot artillery - -	Five Europeans to not more than two natives (fighting men).
Sappers and Miners -	All natives, but with a large proportion of European non-commissioned officers.
Cavalry, Infantry -	One European to not more than four natives.

The above refers only to troops borne on the returns of the army of each presidency, excluding police. Until the country is restored to tranquillity, the proportion of European to native force will require to be much greater in the Bengal presidency than in the others, and would, I think, be best regulated by means of temporarily retaining such additional troops belonging to Her Majesty's regular army as may be deemed requisite, and fixing the establishment of native regiments at a lower strength than in the other presidencies.

2. The amount of permanent European force that will be required in India, and its proportionate distribution to the several presidencies, should be determined principally by the considerations of what will be sufficient to maintain a secure hold of the entire country, and to furnish besides in each presidency a due proportion of European troops for field service beyond India. The maintenance of a just equipoise to the native force should also be made a consideration; but the best security against a recurrence of such a mutiny as we have lately had in the Bengal native army will, in my opinion, be found, not in the maintenance of a large preponderating European force, but in the adoption of a better system of organization and discipline, and in the re-establishment, in a greater degree than ever, if possible, of mutual confidence and attachment between the native soldier and his European officer, and between the native army and the government.

As the amount of European force that will be required in one presidency will, in some measure, depend upon that which may be maintained in the others, and as the expediency or otherwise of dividing the Bengal army into two, which would probably involve an alteration of the present territorial limits of the Madras and Bombay presidencies, forms another of the subjects submitted for the opinion of the Commissioners, I shall confine my estimate to the total European force that will be required for the whole of India.

If the permanent native force to be henceforth maintained in India be confined for the future (as I think it ought to be) to the legitimate purpose of an army, namely, that of assisting to maintain the general peace of the country, and of furnishing a due proportion of troops for field service beyond India, when occasion may require; if also the population be disarmed, and an efficient police force be organized throughout the country (measures which I understand to be already in course of being carried out) a very much smaller native force will suffice than has hitherto been maintained. Whatever amount may be determined on, it should, in my opinion, be armed with the best description of weapons, have the highest military training, and be made in every other respect as efficient as possible for fighting purposes; it should also have as high a status in relation to the European force as can possibly be given to it, and should receive (as I am satisfied it will deserve to receive, if properly organized and disciplined) the full confidence of the Government.

The greater part of the officers who have given evidence before the Commissioners have expressed indeed very strong opinions in opposition to this view, and under the influence of their own total distrust of the future fidelity of any native soldier, consequent on the late mutiny, have advocated the adoption of a system, the effect of which would be to place the entire native army upon the footing of a mere armed police force. They would exclude natives altogether from the artillery and engineer corps; would give the native soldiers of the cavalry and infantry an inferior description of arms and ammunition, with as little scientific instruction and field training as possible, and would keep them in every other respect, as regards efficiency for fighting purposes, considerably below the standard for European troops, with the view of rendering them less dangerous in the event of another mutiny. But it is obvious that the adoption of this course would render the native army impotent also against the troops of an enemy in the field, would so brand it with the distrust of the Government as to render all confidence and attachment on the part of the native officers and soldiers towards it impossible for the future, and would so lower it in the estimation of the European army and of the country, that no British officer could serve with it without a feeling of degradation.

Nor, in my opinion, does the late mutiny justify the conclusion that no native army can again be trusted by the Government; for the more that the pre-existing state of the Bengal native army has been exposed to view during the present inquiry, the more apparent has it become that its whole system of organization and government was the worst possible; that it was consequently, and had been for many years previously, totally devoid of discipline; and that, as stated by General John Jacob in his remarks on the Bengal army, published in the year 1851, its normal state was in fact a state of mutiny. Further, the records of the Indian army abound with instances, of which that faithful band of Bengal sepoys at Lucknow has furnished perhaps the most remarkable, of devoted attachment to their European officers, and of fidelity to the Government on the part of the native soldiers, under the most trying circumstances; and the fidelity of the Madras and Bombay armies generally, although there is much in their systems calling for amendment, during that most critical period between the first outbreak of the mutiny and the arrival of the European reinforcements, afford strong additional ground for believing that by the adoption of a better system of organization and discipline, and the observance in future of perfect good faith on the part of the Government with respect to the terms of enlistment, both as regards pay and service beyond sea, an efficient and trustworthy native army may always be maintained in every presidency sufficient for all Indian requirements.

The following is my estimate of the amount of European and native force which will be required in India after the country is settled:—

	Strength before the Mutiny, as given in the India House Returns.			Proposed Strength.		
	Non-commissioned, and Rank and File.			Non-commissioned, and Rank and File.		
—	European.	Native.	Total.	European.	Native.	Total.
Artillery -	6,410	9,138	15,557	12,000	6,000	18,000
Sappers - -	110	3,043	3,153	500	3,500	4,000
Cavalry - -	2,456	30,533	32,989	7,000	20,000	27,000
Infantry -	29,760	188,660	218,420	40,000	120,000	160,000
Total - -	38,745	231,374	270,119	59,500	149,000	209,000

The above estimate has been formed on the assumption that all such duties as treasure and jail guards and escorts, which have been hitherto performed by the native army, will be henceforth performed by the police force. It may be necessary that for these duties a portion of the latter should have a military organization; but police corps should not in future be allowed to wear a uniform resembling that of the army, nor to have a better description of arms, nor a higher military training, than will suffice to render them efficient for their own proper duties.

The artillery has been calculated at the estimate of four guns to 1,000 cavalry and infantry, not too large a proportion when it is understood to comprise all reserves, and to be attached to an army greatly reduced in numbers in consideration of its improved organization, in which the increase of European artillery forms of itself an integral portion. The number above given would allow of 120 batteries of six guns and 150 men each, including gun lascars. Of these it is calculated that about twenty batteries would usually be in the arsenals, and their men would form a reserve.

The drivers of the European horse batteries should be furnished, as in the horse artillery, from among the gunners. As the gun lascars (about twenty to each battery) and the drivers of the native batteries are included in the 6,000 men shown in the table, the number of actual native artillery, it will be observed, will be reduced to a minimum.

I have added a large number of Europeans and a small number of natives to the proposed strength of the sappers and miners, which should be strong enough to furnish a complete company for each division of the army, leaving a body at regimental head-quarters sufficient for the periodical relief of detached companies, so that the whole may go through a course of field training at least once in three years.

3. The cavalry should be all on the irregular system in the three presidencies, with the following modifications.

The pay should be fixed at such a rate as will enable the men to provide themselves with the best description of arms, and with as good horses as Government has hitherto furnished to the regular regiments.

The periods of service entitling to pension should be made the same as for the regular regiments.

The designation "native light cavalry" should be substituted for that of "irregular cavalry."

I advise the exclusive adoption of the irregular system, because with the modifications above suggested the native cavalry would, I think, under it be the best that can be formed for the service required from this arm in Indian warfare. The irregular system, too, accords best with the customs and feelings of the natives, and rendering the service more popular, would, it may be hoped, in course of time so extend the recruiting ground for the cavalry branch as to obviate the necessity which appears hitherto to have existed in all the presidencies, for allowing the regular cavalry regiments to be composed principally of men of one caste and nationality.

The infantry, with the exception of such few local corps, as under peculiar circumstances may occasionally be found necessary, should be in all the presidencies on the regular system, under which this arm may be made perfectly efficient for every description of service: but in order to render it more popular it would be expedient, I think, to alter the dress of the native ranks to a style more in accordance with native taste and usage.

There should be only two European non-commissioned officers, as at present, in the establishment of native regiments, namely, a sergeant-major and quartermaster-sergeant. The addition of two to each troop and company, which has been advocated by some of the officers who have given evidence before the Commissioners, in my opinion would not answer the object they had in view, and would on every account be most unadvisable.

The present establishment of native non-commissioned officers should be maintained in all the regiments, and it would, in my opinion, be highly expedient to raise their position and emoluments, and to enlarge the sphere of their duties by opening to them, both in the cavalry and infantry, the commands of troops and companies, the effect of which would be, I think, to strengthen their authority and influence, and to afford a great additional security for their fidelity to the government. The total inefficiency and untrustworthiness of this class of officers in the Bengal army is clearly attributable to the vicious system under which, in that presidency, only the superannuated could obtain promotion to the commissioned grade; and the senior havildar on the list, if of respectable character, instead of the most deserving and best qualified, was held entitled to this promotion. Under the system of selection for merit and superior qualifications which obtains in the Bombay army, the native commissioned officers generally are highly efficient, and during the late troublous times have been found also more trustworthy. It was by two native officers, one a Brahmin and the other of the Mahratta caste, that the intended rising in mutiny last year of the 21st regiment of native infantry, which was composed principally of men enlisted from the upper provinces of Bengal, was revealed to the commanding officer in time for the necessary measures to be taken for disarming the corps, which was thus effected without bloodshed.

The admission of native gentlemen into the commissioned ranks of the army without passing through the inferior grades, would, in my opinion, be an inexpedient measure. It would necessarily diminish greatly the principal stimulus which the existing system (at least in Bombay) affords to zeal and fidelity on the part of the non-cemmissioned ranks; and would, I think, give us a less efficient and less trustworthy class of native officers than can be obtained by the promotion of men, selected for known superior qualifications and of tried fidelity, after a service of from ten to twenty years.

With regard to European commissioned officers, the commanding officer of every regiment, regular and irregular, should be appointed by selection for superior qualifications alone. The adoption of this rule is, in my opinion, essential to the maintainance of that high state of efficiency and discipline, in which it is necessary that every regiment should be at all times maintained, and will be practicable under whatever system the establishment of European officers for the Indian army may be prospectively organized.

As regards the number of officers required with each regiment, it has, I think, been fully shown by the results of the system that has obtained in irregular regiments, and especially in the instance of the Scinde horse, which has been, for many years past, so distinguished for its high state of officiency and discipline, that a very small number of well-qualified officers has been found sufficient to meet all regimental requirements in those corps; and there is no reason why the same should not also suffice for regular regiments, provided they, too, be placed under the command of officers selected on account of their superior qualifications, and invested with ample powers. The total number should be fixed, I think, at five for each regiment, including the commanding officer, but in determining the future establishment and organization of European officers, for the army of each presidency, it will be necessary to make provision for supplying duly qualified officers to fill vacancies occurring among this limited number with native corps, as well as for the numerous staff and other detached appointments, civil and military, for which the army is required to furnish officers.

The plan of placing the whole of the officers of each branch in one list unattached for the native army (as originally proposed by Sir John Malcolm, and at present advocated by General John Jacob and Sir Charles Trevelyan) would have the great disadvantages of altogether preventing the existence of that esprit de corps which the regimental system establishes and fosters, and, by keeping the entire body upon a dead level with respect to promotion, of considerably aggravating the evil, already so great, of continually filling the higher grades with superannuated officers. A plan by which the principal advantages, both of the unattached and regimental systems, would be secured, and the disadvantages of the former would be in a great measure obviated, was originated by Colonel Holland of the Bombay army some years ago, and embodied in a memorandum which included also many other suggestions for the improvement of the native army. As I concurred generally in the views which it contained, I submitted it, at that officer's request, to the commander-in-chief at Bombay, in my capacity of adjutant-general; but from a reluctance to initiate any change in the established system, the commander-in-chief declined even to look at it. As I am of opinion that Colonel Holland's plan would form the best basis for the future system of organization of the European officers, and as in consequence of his being absent from England during August last, he was prevented from giving his evidence before the Commission on the subjects connected with the native army, I beg to append his memorandum, somewhat modified from the original document in personal communication with myself. Some further modification of his plan for organizing the European officers may, perhaps, be found expedient when the future organization of those for the European branch of the service comes under the consideration of the Commissioners. But I have no hesitation in recommending its adoption, as a basis for the system of officering the native army, in preference to that of an unattached list.

4, 5. Artillery being so powerful an arm, and held, as it is known to be, in so great respect by the natives of India, the mass of it should undoubtedly be kept in European hands. There are, however, some districts in all the presidencies where it is necessary to have artillery stationed, but where, from the unhealthiness of the climate, European troops could not be located without a great sacrifice of life; and it will be required also for mountain warfare and occasional service with small detachments in the hot or rainy seasons, on which Europeans could not be employed without such sacrifice. A proportion of native artillery sufficient to provide for such requirements should therefore be maintained in each presidency. Excepting local artillery, which under some peculiar and exceptional cases it may be expedient to admit, it should be all on the regular system, and to ensure it being always efficiently manned, and composed of men of various castes and nationalities, the pay should be again made, as it was originally, superior to that of the infantry. Since the reduction in 1837 to the infantry rate, the difficulty in obtaining efficient men for the Golundauze battalions in the Bombay presidency has been so great that it has been found absolutely necessary to recruit them almost entirely from the upper provinces of Bengal, and to admit men of a much inferior class, too, as regards physical capacity. When the pay was higher than in the infantry, not only was the recruiting more successful, but the infantry soldiers volunteered freely for transfer to the Golundauze battalions, which thus obtained from time to time a great number of ready drilled men of the best description, and were in consequence easily maintained at their full complement. The deterioration which has followed the reduction of pay, and the advisability of again raising it to the original rate, in view to render the artillery the more attractive service, was pressed by the commander-in-chief at Bombay, some years ago, upon the attention of the Bombay Government, and of the Home authorities, but without success.

With respect to sappers and miners, I am of opinion that in India Europeans could not possibly bear the work which is required from this branch of the service, except as instructors and directors in the non-commissioned grades; and that as regards privates the corps of sappers in all the presidencies should therefore be composed, as heretofore, entirely of natives. If exempted from camp conservancy duties, as the Madras and Bombay corps now are, and if the pay be again made, as it was formerly, superior to that of the infantry, there can be no doubt but that men of all castes would readily enlist into them in all the presidencies as they now do in Bombay; and that assisted with volunteers from the infantry, the several corps of sappers and miners would thus obtain men of superior physical capacity as well as of various castes and nationalities, and would be maintained always at their full complement without difficulty.

I do not recommend a body of pioneers being attached to the sappers. If the whole army were trained, as it ought to be, to the use of the spade and pickaxe, pioneers would not be wanted; and were a body of men under this designation attached to the sappers for camp conservancy duties, a mischievous distinction between high and low caste soldiers would be at once introduced. Such men as may be required for scavengering, and the other lower duties of camp conservancy should be hired as occasion may require.

The number of European non-commissioned officers should be considerably increased for the purpose of supplying detached companies and camps of exercise with directors in training the men of the regiments of the line in digging trenches and constructing roads and field works; and the non-commissioned staff of the corps should be placed on an equal footing, in respect to emoluments with assistant overseers in the department of public works, in order that they may not be losers, as they now are, by remaining with the corps, while many of their juniors of inferior qualifications and merit are employed with better salaries in that department.

The number of European commissioned officers on the establishment of the corps of sappers should also be increased, and should consist of a commandant, a second in command, and general instructor in field practice, an adjutant and a quartermaster. They should all be officers of the engineer corps, and placed with respect to emoluments on an equal footing with the officers of corresponding rank and standing in the service, holding the best paid appointments in the department of public works. In the Bombay corps, the establishment of which consists only of a commandant and adjutant, the emoluments have hitherto been so inferior that these appointments, instead of been objects of ambition to the officers of the engineers, as the interests of the public service require that they should be, have been generally avoided, and the command has been too often held in consequence by the least instead of the most efficient officers of the corps.

The total exclusion of natives from the scientific branches of the service, and from employment as artificers in the arsenals and laboratories in India, which at present finds every where so many advocates, in my opinion, is not practicable, and were it so would be unnecessary. Forming so small a proportion as the requisite amount of native artillery and sappers would form to the entire army of each presidency, and distributed as their companies would be to separate stations, a handful of Europeans would annihilate them at any moment; and native artificers, if excluded from the army laboratories, would assuredly find means of acquiring elsewhere all the knowledge from which the advocates for their exclusion would debar them. Further, even at present, the ordnance officers in India find it impossible to procure or retain anything like an adequate number of European skilled workmen, and an order prohibiting the employment of natives would be tantamount to shutting up the arsenals.

6. In my opinion the best general system that can be adopted would be that of having each regiment composed of men of many different tribes, castes, and religions, taken from the entire population of each presidency, permitting none to be excluded and none to have any great preponderance in number, and of so mixing up the whole throughout the regiment as to keep all the troops and companies as nearly equal as possible in their relative numbers of each tribe and caste in every grade. A small proportion, say one-fourth, should be allowed to be enlisted from the other presidencies, in view to multiply the nationalities, the actual recruiting ground in each being at present confined by the distaste of the native population generally for military service to particular districts of comparatively small extent.

I recommend, therefore, that the above be made the established system in all the presidencies and in all branches of the service; that officers commanding regiments be allowed no discretion whatever in the matter; and that any regiment which the government of either presidency may deem it expedient to have organized upon a different system be regarded as exceptional. The various other plans for the composition of native regiments which have been submitted to the Commissioners in the papers received from the President of the Indian Board, may be found better suited for local corps and for other irregulars raised principally among the tribes on the Punjaub frontier; but for the native army in general, I feel confident, would not work so well." The plan of adding flank companies of Europeans to a native corps, which is one of those suggested in the papers referred to, would be upon every account most unadvisable.

The great importance of having not only the native army as a body, but each regiment in particular, composed of men of many nationalities, castes, and religions, and of not leaving commanding officers of corps any discretion in the matter, has been abundantly shown in the late mutiny. In the Bengal army, indeed, no option was left to regimental commanders, a predilection for high caste having led the Government of India, almost from the first, to establish and maintain the system of excluding all low caste men from its ranks. The effect of this system was, that in 1852, according to the evidence given by Mr. Melvill before the House of Lords, two-thirds of the Bengal native infantry were composed of Brahmins and Rajpoots, affording thus a most dangerous facility for general combination, and tending greatly to weaken discipline by the undue deference to caste among the European officers, and pride of caste among the native ranks, which it fostered. Even so lately as in 1855, in the revised Bengal military regulations, sanctioned by the Government of India, commanding officers of corps are directed to take special care to reject all men of the inferior castes, and thirteen are expressly particularised for exclusion. In the Bombay army, the regulation of 1824, which required officers commanding regiments to confine their recruiting within the limits of the presidency, was allowed to remain for many years a dead letter; and under the influence of a growing predilection for the taller and handsomer class of recruits obtained from Hindostan, large numbers of men from the upper provinces of Bengal were constantly enlisted, till in the year 1848 the numbers had attained in many corps so large a proportion, and in some so dangerous a preponderance, that the commander-in-chief was induced to move the Government to adopt measures for gradually reducing them to a small minority. Of the two Bombay regiments which were found seriously implicated in the late mutiny, the 21st and 27th native infantry, about two-thirds of the former were men enlisted from the upper provinces of Bengal, and a still larger proportion of the latter were men enlisted from the Sawunt Warree and adjoining districts, in the Southern Mahratta country, where this corps was raised in 1846; where shortly before that time there had been a serious insurrection, and the population have been since and are still extremely disaffected, and where this regiment unfortunately happened to be stationed at the time of the outbreak.

All castes should be placed upon a perfect equality. No preference should be shown towards any on the part of Government or of the European officers; and care should be taken by a fair proportionate distribution among them, in every regiment, of promotion and all other advantages, to prevent them from supposing that any such preference exists. Of course all just consideration should be shown by the Government and by the European officers to the feelings of every class by carefully avoiding all interference with their caste and religious usages, and all offence to their caste and religious prejudices; but there is no service or duty in the army which the highest caste soldier cannot perform without any real sacrifice of his caste and religious principles; and the plea of caste, therefore, need not and never should be admitted for a moment as an excuse for hesitating to undertake or omitting to perform any service or duty on which he may be ordered.

7. In my opinion all enlistments into the native armies of India should be for general and unlimited service in and beyond India. This is the rule which has always obtained in the Bombay army, and although there is a full proportion of high caste men in its ranks, and it has frequently been called upon to furnish troops for service beyond sea, no regiment, so far as I am aware, has ever failed to obey promptly the order to proceed on such service. Nor has the liability to be sent beyond sea caused any difficulty in keeping its ranks complete; and there appears, therefore, no reason to doubt but that the same rule might be maintained in the other presidencies with equal success. It may seem carrying the principle over far to insist upon the whole of the Indian army being enlisted for service beyond sea, when not a tenth part of it can ever be required for such service, but the false position in which the Government has been constantly placed under the volunteering systems which have hitherto obtained in the Bengal and Madras armies, in having to regard their performance of such service as matter of favour; the breach of good faith involved in the Government endea-

vouring to compel non-volunteer corps to proceed on foreign service, and indirectly punishing the men in the event of their refusing, although not bound by the terms of their enlistment *so to serve*; and the deep injury to the discipline of regiments resulting from the men, thus having legitimate ground for refusing to obey the orders of the commander-in-chief and government, render it, in my opinion, absolutely necessary that the Bombay system should be extended throughout the armies of the other presidencies.

One fixed scale of garrison pay, batta when in the field or marching in India, and foreign service rations, or money allowance in lieu, where employed beyond sea, or in the countries beyond the British frontier, should be established for each branch of the service, and for all the presidencies. The batta should be fixed at an amount fully sufficient to meet the extra expenses incurred for carriage and by the additional wear and tear of clothing and necessaries, and should be granted to the men whenever it is allowed to the European officers.

The regulation under which additional pay, at the rate of 1 rupee a month after 16, and 2 rupees after 20 years' service, is at present allowed to all privates of the line, if well conducted, should be prospectively rescinded; and, in lieu, good conduct pay, at the rate of 1 rupee after 7, 2 after 14, and 3 after 21 years' service, should be allowed to 100 privates in each regiment of infantry, and to a number bearing the same proportion in all other corps of the line (regular and irregular) of lower strength; to be conferred by the commanding officer of each regiment upon those privates of each class, who by a long continued course of good conduct and a zealous performance of their duty may be in his opinion most deserving of the reward. The men to wear a good conduct badge for each reward conferred, and to retain the good conduct pay which they may have held for five years, in addition to their pension, but to be subject to be deprived of it while serving, by order of the commanding officer of the regiment, for misconduct.

The number of each class to be—

45, 3rd class, at 1 rupee per mensem.
35, 2nd class, at 2 do. do.
20, 1st class, at 3 do. do.

The pay of the native commissioned ranks (especially that of Jemidar) and the staff pay of the subidar major and native adjutant should be considerably increased, and one fixed rate should be established for subidars, as well as Jemidars, instead of having the former (as at present) divided into three classes, with rates of pay increasing with length of service. Superior zeal and fidelity in the performance of duty, combined with good conduct, and not mere length of service, should form the principle on which increased honours and emoluments are made attainable to native officers and soldiers. Under the operation of the former a general stimulus to zeal and fidelity is infused into all ranks; under the operation of the latter, zeal flags, and the army is burdened with numbers of superannuated men in every grade.

The invalid pension regulations should be revised. The period of service giving claim to half-pay rates of pension should be increased from 15 to 21 years, and the period entitling to full pay rates should be reduced from 40 to 35 years. On the completion of 28 years' service, all ranks should be entitled to be transferred to the pension list at their own request, and should be liable to be so transferred by government, whether they desire it or not, at the recommendation of officers commanding regiments upon the half-pay rates of pension, without being passed as unfits by medical committees.

When non-commissioned officers or soldiers are discharged from the army, solely on account of ill health, before they have completed the period of service which entitles to pensions, they should be allowed gratuities (agreeably to the practice obtaining in the Bombay presidency) at the rate of half a month's garrison pay for every year's service, broken periods of less than half a year being excluded from the account.

All native soldiers should be made liable by the terms of their enlistment to be ordered on working parties, as a duty, whenever the service may require it, whether in garrison or in the field, without extra pay; and every regiment should be regularly trained in the use of the spade, pickaxe, and barrow, and frequently employed upon field works as well as in the ordinary work of levelling ground in the vicinity of the camp or lines, making roads, constructing butts for target practice, &c., in view to accustom all ranks to these duties, which they should be led to regard as being equally honourable with those they have to perform under arms.

All particulars regarding pay and other allowances and pensions, as fixed by the regulations, also the liability to be employed on working parties and to be sent on service beyond sea, should be carefully explained to every recruit in the presence of the commanding officer of the regiment previously to his being enlisted: and a distinct pledge to proceed on service beyond sea, or wherever ordered, should be included in the oath or contract of fidelity. Perfect good faith should be observed in future on the part of the government with respect to the terms of enlistment; but all cases of regiments or individual soldiers refusing to abide by them, or even hesitating to obey when ordered to perform any service, should be treated as crimes of the gravest character, and promptly punished.

8. The Bengal army is certainly much too large, and is spread over too great an extent of country for efficient control and superintendence. Its immense size and union under one head have also had the evil effect of facilitating a much more extensive and dangerous combination, than could possibly have taken place had the same extent of territory been garrisoned by two separate armies, each under a commander-in-chief of its own, which has been sufficiently proved by the Madras and Bombay armies not having joined in the late mutiny. Had such been the case, in all probability each would have been recruited principally within its own districts, and like the Madras and Bombay armies, would have had differences in its composition and system of government, which would have similarly lessened very considerably the facilities for combination between the two.

Another evil effect resulting from the immense size of the Bengal army and its union under one head has been, that it has held a fixed and most undeserved position of superiority with the Government of India, which has not only shown it undue favour by placing almost all classes of its officers, by means of a larger proportion of full batta stations, and a higher scale of allowances for staff and other detached appointments, on a much superior footing to those of the minor presidencies, but has regarded it as a model on which to mould the other armies, not unfrequently negativing suggestions submitted by the commander-in-chief of the latter for improving their efficiency, upon the sole ground of the particular measure proposed not according with the system obtaining in Bengal. This effect has probably resulted in a great measure from the circumstance of the commander-in-chief in India being also the commander-in-chief of the Bengal army, and of all the principal offices immediately under him, and the Government of India being held by officers of that army, who may reasonably be supposed to have been prepossessed in favour of their own system, and whose official influence has doubtless had very great weight with those high authorities; but the consequence has assuredly been most disastrous, and the only effectual remedy for the evils above pointed out will be found, I think, in making the armies of all the presidencies as nearly as possible equal in size, and entirely so in all other respects. In order to carry this fully out, the commander-in-chief of each army should be made perfectly independent of the others. Although it is most desirable that perfect uniformity should be maintained in all with respect to pay and allowances of every kind, pensions, and the system of promotion, and of field exercise and evolutions, it is equally so that much diversity should be allowed in their respective systems with regard to all minor matters, in view to afford in each a safe field for testing the value of changes which may be suggested from time to time for improving its own organization and discipline, and to foster that emulation and rivalry between the three armies which cannot but tend to promote the efficiency of them all; and it is obvious, that if placed under the supreme command of the Bengal commander-in-chief, he would be generally led to regard his own army as a model one, and be constantly tempted to exercise his authority to bring the Madras and Bombay systems into conformity with that of Bengal in matters wherein diversity would be more advantageous to the public service.

Assuming, however, that the native force for the whole of India will henceforth be smaller by about 80,000 men than it was before the mutiny, the reduction of the Bengal native army within reasonable dimensions would not involve the necessity of dividing it into two by constituting a fourth presidency, because by proportionately augmenting that of Bombay by incorporating in it the requisite amount of Bengal troops, the three armies might be equalized, and each would be of a very convenient size for ensuring its efficient supervision and control. The whole of the European artillery and infantry which it may be necessary to raise in augmentation of the present local force in India, should be officered from the armies of the three presidencies by throwing the whole of the officers of each branch into one list for the purpose. This would be, I think, the most just arrangement for all, in giving each army an equal share of the promotion consequent on the augmentation, and would have the further advantage of bringing a large number of all ranks trained in the armies of Madras and Bombay into the heart of the Bengal army. I should have recommended the adoption of the same plan in making the augmentation that will be required to complete the larger establishment of officers for the European local cavalry for the whole of India; but as it is understood that European cavalry regiments have been already organized in Bengal, to which the officers of the late native corps have been permanently posted, it would, perhaps, be inexpedient to disturb that arrangement. The better course, therefore, would be to give each army its fair proportionate share of the cavalry augmentation, and afterwards to transfer bodily from the Bengal to the Madras and Bombay armies the number of regiments required to equalize the three.

Many objections would probably be raised to the mode of equalizing the three armies above proposed, as well as to the measure itself, and doubtless some cases of individual hardship would be involved in its adoption; but such cases necessarily attend all great changes in established systems, and if Government should be of opinion that, by enabling it always to keep in the upper provinces of Bengal considerable bodies of Madras and Bombay troops composed principally of men from southern India who have no sympathies in common with the northern tribes; by diminishing the facilities for extensive combination in future; by insuring an equally efficient supervision and control over each of the three armies, and by substituting a generous spirit of emulation for the jealousy and heartburning which undue favour towards the army of Bengal has hitherto fostered between it and the other two, their equalization would materially strengthen its hands in restoring and maintaining the peace of the country, and conduce greatly to the future efficiency and wellbeing of the entire native army,—the present opportunity for carrying out this measure certainly ought not to be lost. A considerable advantage in promotion would be gained by the great majority of the officers, which would doubtless fully reconcile them to the unusual mode of making the augmentation; and any exceptional cases in which officers might satisfy the Government that they had sustained positive injury by the measure, might be met by conferring on them some other benefit to compensate for the loss, and should be dealt with in the most liberal spirit.

With respect to the particular districts in the Bengal presidency which, in the event of the three armies being equalized, it would be most expedient to make over to Madras and Bombay respectively, the best general arrangement would be, I think, to assign to the Madras army the country south of the Chumbul river, leaving Mhow, Nusseerabad, and Neemuch, as at present, in charge of the Bombay army, and giving to the latter the occupation of the entire Punjaub, which, from its geographical position and facilities of water communication, can be most conveniently supplied with troops and stores from Bombay. By this arrangement the seventy-fifth parallel of longitude would very nearly delineate the eastern boundary of the Bombay presidency, while a line drawn from Gwalior to a point somewhere between Cuttack and Calcutta would mark the north-eastern frontier for the Madras army; the occupation of Arracan and Pegu being either divided between the Bengal and Madras armies or assigned to whichever of the two can most conveniently garrison them.

9. Under the above head the inquiry instituted by the Commissioners has been extended to all the powers of reward and punishment, which have been hitherto, or ought to be in future, vested in officers commanding native regiments. It is upon the sufficiency and judicious exercise of those powers that the Government must principally depend for the maintenance of that perfect discipline, without which no army can be either efficient or trustworthy, and the fatal policy of reducing them to a minimum has been only too fully illustrated in the case of the Bengal native army, in which, by the system established by the commander-in-chief and Government of India, commanding officers of regiments had been, in respect to this matter, reduced to cyphers, and the maintenance of sound discipline, even by commanders of the highest ability, had been rendered absolutely impossible. Under that system commanding officers of regiments were strictly prohibited from enlisting any but men of high caste, pride of caste, instead of pride of good soldiership, being thereby fostered alike both in officers and men; and every regiment composed almost exclusively of Brahmins and Rajpoots, enlisted from the same districts and forming a brotherhood, which greatly facilitated combination for evil, and extended through the entire army; were deprived of the principal means of rewarding merit by being compelled to make promotions in all the native ranks, from private to commissioned officers by seniority, instead of by selection for merit and efficiency, and to grant leave of absence (which for any longer period than thirty days required the sanction of superior authority) according to

the regimental roster; and were so completely stripped of all power to punish upon their own authority alone, that private soldiers were authorized to claim a court-martial, at their option, on their commanding officer awarding a punishment of only a few days' drill, and were permitted to forward written complaints against him *direct* to the commander-in-chief. What wonder that, under such a system, even with a body of European officers who, by their noble conduct throughout that fearful storm of mutiny which last year swept the Bengal presidency from one extremity to the other, have set an example of heroism and devotion to duty to all the armies in the world; the bond of discipline was at length found to have been reduced to a thread, and that the whole fabric of the Bengal native army fell to pieces at once under the first shock of the outbreak at Meerut!

The true principle, and the only one that will secure the maintenance of sound discipline in a regiment, is to place at the head of it an officer of undoubted qualifications for the command; to give him large powers of reward and punishment, together with a generous confidence in his right use of them, and to place no further check upon their free exercise than that resulting from a general but vigilant supervision and control on the part of the superior authorities; such supervision and control to be exercised mainly with reference to the results, with as little interference as possible with the details producing them. A principle the very reverse of this has hitherto been acted on. Officers have succeeded to the command of regiments solely in virtue of their seniority in rank; and to this system, which has continually placed so many incapable officers in those commands, is to be attributed the constant tendency that appears to have existed on the part of the several commanders-in-chief to abridge their power, and to fetter them in its exercise. From the instructions recently sent to India, however, by the home Government (as shown in the papers transmitted for the perusal of the Commissioners) it may be assumed that in future all appointments to the command of native regiments will be made by selection for superior qualifications alone; and upon this assumption I recommend that the following powers of reward and punishment be vested in all officers commanding native regiments in the three presidencies, viz.:—

They should have power to enlist and to promote, upon their own authority alone, as regards all the non-commissioned ranks; to select for all promotions to and in the commissioned grade, and for the appointments of subadar-major and native adjutant; to appoint to the commands of troops and companies, and in cavalry regiments to bestow "assamees," by selection from the entire list of native comsioned officers; and to confer good conduct badges with additional pay by selection from the entire list of privates of each class. Further, they should have power to select for appointment to the "Order of British India," and to the "Order of Merit," when the service in action which gives claim to the latter is performed under their own immediate command; also for appointments in the police force, and any other branches of the service, civil or military, which the government may open to the native ranks of the army. They should have, further, the sole power of granting leave of absence in time of peace to all the native ranks.

They should have power, upon their own authority alone, to reduce and to discharge as regards all non-commissioned officers and soldiers, and to inflict upon privates the minor punishments at present authorized by the 112th article of war, to which should be added corporal punishment, not exceeding fifty lashes, for insubordination or insolence to a superior officer, and for other offences against discipline, in cases which may appear to require an immediate example. They should also have power, at their discretion, to bring non-commissioned officers and soldiers to trial before regimental courts-martial, and to dispose of each case upon their own authority alone, for offences against discipline which may appear to require a more severe punishment than they are themselves empowered to inflict. Further, they should have power to recommend to the commander-in-chief the removal to the pension establishment on a minimum amount of pension, or from the service altogether, any native commissioned officer who, either by continued want of zeal and negligent performance of his duty, or by falling into low and disreputable private habits, may become a burden or disgrace to the army.

Under existing regulations, the power of ordering the dismissal or discharge of native commissioned officers, and of reducing and discharging non-commissioned officers and soldiers, except by the sentence of a court-martial, is vested, as regards the former, in the government, and, as regards the latter, in the commander-in-chief of each presidency.

It is, I think, highly desirable that the government should establish in each presidency a certain proportionate number of honorary commands to be filled by distinguished and meritorious native officers selected from the army, upon the same system as that which was established many years ago in the Bombay presidency, on the particular recommendation of the late Sir John Malcolm, and maintained until 1838, in which year those commands, so well calculated to foster zeal and fidelity on the part of the commissioned ranks, were, in an evil hour, abolished.

It is also, I think, highly desirable that the rules under which justice by courts-martial is at present administered in the native army should be at once revised and simplified; and, especially so, that the forms of proceeding should be cleared from all law technicalities, which serve only to puzzle and confuse the minds of the uneducated class of officers of which such courts are composed, and to defeat the ends of justice. The native mind is not a whit less acute that the European, and if left to follow pretty much their own way of examining witnesses, and of sifting evidence, as under their own simpler system of punchayets, these officers would be much better enabled to form a just decision, whatever might be the case submitted to their investigation. I recommend, therefore, that for all military offences which the government may consider expedient to include in the category to be henceforth placed within the jurisdiction of regimental courts-martial, the forms of proceeding be assimilated, as nearly as may be, to those of punchayets; and that all offences considered of too grave a character to be therein included be placed in two other categories and made cognizable before district or garrison and general courts-martial respectively, to be composed partly of European and partly of native officers, except in special cases in which the officers respectively empowered to convene such courts may consider it best for the interests of the public service to order them to be composed wholly of Europeans The offences which may be classed as military, and the kinds and amount of punishment which each description of court may be empowered to award, should be briefly and clearly set forth; and I strongly recommend that the amount of corporal punishment be increased from fifty lashes for every description of court, as at present, to two hundred for regimental and three hundred for district or garrison courts, excluding this kind of punishment altogether in future from the category of those awardable by general courts-martial.

The system of promotion should be that of selection by regimental commanders, for merit and superior qualification alone, in all ranks, from private to subadar major. The promotions to the several non-commissioned grades should be made by regimental commanders on their own authority, subject only to the control resulting from it being made the duty of brigadiers and generals of division, at their periodical inspections, to examine into the promotions made, and to report as to the general efficiency of the non-commissioned officers in each grade. Regimental commanders should of course avail themselves at their discretion of the assistance of officers *commanding* troops or companies in making their selections, but the responsibility for the fitness of the men promoted should be held to rest in all cases with themselves alone.

The names of the men selected for promotion from the non-commissioned to the commissioned grade, and from one commissioned grade to another, should be transmitted *direct* to the adjutant-general of the army for the commander-in-chief's approval, accompanied with a full statement of their qualifications, services, and general good character. No report should be required regarding those passed over; but if satisfied of the merit and fitness of the men selected, the commander-in-chief should forward their names to the government with his recommendation that the promotions be made accordingly.

The above system would secure, I think, better than any other, the promotion of the men most fitted to make efficient and trustworthy commissioned and non-commissioned officers, and is therefore best calculated to promote the interests of the public service, which ought alone to be considered by regimental commanders in making these promotions.

The system of leave of absence in time of peace should be that of placing the power of granting it in the hands of regimental commanders alone, and of making it fully understood by all the native ranks that they can obtain it only as matter of indulgence and not of right. The maximum number of all ranks permitted to be absent at one time, also the maximum period for which leave may be granted, should be fixed by government regulation, and the full number should be allowed to be absent throughout the year; but, with these exceptions, regimental commanders should be left free from restriction in respect to details, and from all interference on the part of officers commanding stations and divisions.

I append a summary of the systems of promotion and leave of absence at present obtaining in the three presidencies respectively.

With regard to petitions, complaints, and appeals on the part of non-commissioned officers and soldiers to the superior authorities, they should of course be permitted, but only from individual men and through the channel of regimental commanders; and all cases in which those rules may be wilfully transgressed, or in which the complaint or appeal may be found to be groundless or frivolous, should be severely punished. Brigadiers and generals of divisions should require of each regiment at their periodical inspections whether there are any complaints or unadjusted claims; but with selected officers at the head of regiments it may be confidently expected that a complaint or appeal to the superior authorities will be in future of rare occurrence.

The powers which I have recommended to be conferred upon regimental commanders, may perhaps be regarded by some officers as unnecessarily large, and the fear lest they should be abused to purposes of undue favour or oppression, will not improbably deter others also from concurring in my recommendation. Doubtless, after every possible security has been taken for having none but the best qualified officers in the command of regiments, cases would occur in which such officers would disappoint the expectations formed of them, and fail in ability to exercise their authority with advantage to the public service, or abuse their high trust under the influence of unworthy feelings and motives; but such cases would assuredly form but rare exceptions; and I am myself fully convinced, from my own knowledge of the native character, acquired during an actual residence in India of about thirty-one years, of which about eighteen were passed with a native infantry regiment, which I commanded for about six years, that the European system of regimental government, especially as regards the very limited power given to the commanding officer, is most unsuited to the native mind; that the stronger his hand is made by the Government in native corps, the less necessity will there be for actual punishment; and that the more completely all ranks are led to look up to him alone for advancement and honour, as the reward of zealous and faithful service, and for degradation and prompt punishment as the sure consequence of misconduct, the stronger will be the bond of sound discipline in every regiment, and the greater therefore the security to Government for the efficiency and trustworthiness of the native army.

After the terrible events of the past year in India, it will most probably appear to very many persons worse than idle to argue, as I have done, that the native army may deserve, and ought again to receive, the full confidence of the Government. I must not omit, therefore, to remark that the confidence for which I contend is not that blind trust which led to the Bengal presidency being, in the early part of that year, almost denuded of European troops, and to the principal arsenals and treasuries being placed under the sole charge of native guards, but that reasonable confidence which, with a just equipoise of European force throughout the country, and in possession of all the principal arsenals and treasuries, might well be accorded to a native army well organized, disciplined, and governed, and kept in its own proper subordinate position as an auxiliary to the European force.

HENRY HANCOCK, Major-General,
London, 20th Oct. 1858. Bombay Army.

Summary of the systems of promotion at present obtaining in the native armies of Bengal, Madras, and Bombay respectively, as regards native commissioned and non-commissioned officers:—

Bengal System.

(General Regulations of the Bengal Army, 1855, pages 397 to 400).

In all ordinary cases vacancies are to be filled from the seniority roll of the regiment. When companies are detached on field service, vacancies are to be filled from the seniority rolls of companies. The seniority rule is to be followed in every grade, except only in cases of proved disqualification. The names of all men passed over and the cause of their supercession are to be published in the regimental order making the promotion. No sepoy is to be promoted in corps of the line without a competent knowledge of reading and writing in at least one character; the sanction of the commander-in-chief is required for the promotion of a sepoy not so qualified. General officers and brigadiers are required to enforce the strictest observance of the above regulations.

Madras System.

(General Regulations of the Madras Army, 1849, pages 354 and 355.)

In all ordinary cases, promotion from the ranks to lance-naiques are to be made by selection of officers commanding companies. The completion of three years' service in the ranks and the ability to read and write are made indispensable qualifications for such promotions. Lance-naiques are liable to be summarily remanded to their duty as privates, if found not to answer the expectations formed of them. They are to be promoted to naique according to their standing on the roll, and a senior is not to be passed over except to render castes proportionate according to the relative number of each in the regiment. Naiques are required to pass an examination before they can be promoted to havildar; if found qualified and well conducted, they are to be promoted according to seniority; in cases of incapacity or careless performance of duty, a special report is to be made to the adjutant-general. Havildars considered unfit for promotion to the commissioned grade, although otherwise good men, are not to be promoted beyond colour havildar. Promotion to the non-commissioned ranks is to be made by the authority of the officer in permanent command of the regiment.

Promotion from havildar to the commissioned grade is to be made by selection, giving all proper weight to seniority. Promotion for efficiency to be the general rule, but to be made for seniority also occasionally. The names of all havildars passed over are to be inserted in the recommendation rolls, with full particulars of their services, character, and claims.

Bombay System.

(As given by Major-General Hancock, late Adjutant-general, there being no copy of the Bombay army revised regulations at the India House.)

In all cases promotion to the several non-commissioned grades are made by selection for merit and superior qualifications, by regimental commanders, who, at their discretion, avail themselves of the assistance of officers commanding troops or companies, by calling for recommendation rolls. Regimental commanders alone, however, are held responsible to the commander-in-chief for the efficiency of the men promoted. The ability to read, write, and keep accounts is made one of the qualifications which afford ground of claim, but by no means the principal one. Superior natural talent and energy, proficiency in their military duties, and a zealous execution of the same, combined with general good conduct, being always held to give the best claim to advancement. The only control placed upon regimental commanders in making these promotions, is that resulting from it being made the duty of brigadiers and general officers, at the periodical inspections, to examine into the promotions made, and to report upon the general fitness and efficiency of the non-commissioned officers of each corps in their respective grades.

Promotions to the commissioned grades, in like manner, are made by selection from the list of havildars, for merit and superior qualifications, by regimental commanders, subject only to the control of the commander-in-chief, for submission to whom, recommendation rolls, containing the names of the havildars selected, with full particulars of their services, qualifications, and character are forwarded direct to the adjutant-general. No report is required of regimental commanders of the havildars passed over; but if satisfied of the merit and efficiency of the men selected, the commander-in-chief forwards the rolls to Government, accompanied by his recommendation, that the promotions may be sanctioned, and they are thereupon gazetted in the Government General Orders, as a matter of course. Promotions from jemidar to subidar are made by seniority, but the senior may be, and is occasionally, passed over by the commander-in-chief, on the recommendation of regimental commanders, if considered undeserving of further advancement.

Summary of the systems at present obtaining in the native armies of Bengal, Madras, and Bombay respectively, as regards the grants of leave of absence to the native ranks in time of peace.

Bengal System.

(General Regulations of the Bengal Army, 1855.
Pages 344 to 349.)

Regimental commanders may grant leave of absence between musters; and in emergent cases for 30 days, irrespective of musters, to three commissioned officers and non-commissioned officers and sepoys together to the extent of five per company. The leave must be granted by the regimental roster. Leave for a greater length of time can be granted only with the sanction of the officer commanding the station, and is never to exceed four months. Applications for leave are to be made through officers commanding companies, with whom it is discretional, to submit them for the consideration of the officer commanding the regiment. Commanding officers of stations may at any time suspend the usual indulgence of leave of absence.

Madras System.

(General Regulations of the Madras Army, 1849. Pages 284 and 285.)

Leave of absence may be granted by commanding officers of regiments or stations, to all ranks for such period, and to such number as they may deem proper, subject to the control of the officer commanding the division or brigade. Except in emergent cases leave is not to be granted, which would involve absence at the annual inspection, or during the drill season. Extensions are not to be granted by officers commanding stations, except under very urgent circumstances

Bombay System.

(Jameson's Code, 1850. Pages 388 and 389).

The power of granting leave of absence is vested in regimental commanders alone, who are left in this matter entirely free from all interference on the part of officers commanding divisions, brigades, or stations. They are empowered to grant leave for periods not exceeding six months, when to any place within the limits of the presidency; and not exceeding one year when to any place beyond those limits. The maximum number allowed to be absent at one time is fixed by Government regulations at ten per company, including non-commissioned officers. The number of commissioned officers allowed to be absent is fixed at two per regiment. The full number may be absent on leave at all seasons of the year. Special cases requiring the grant of leave in excess of the number or periods above mentioned are referred direct to the adjutant-general, for the commander-in-chief's previous sanction. Extensions are not to be granted by officers commanding divisions or stations, except in urgent cases, in which a previous reference to the regimental commanding officer may be impracticable.

THE following is a summary of my views upon the questions submitted by her Majesty for the opinion of the Royal Commission appointed to enquire into the organization of the army lately serving in the pay and under the control of the East India Company, and of the changes which it would be expedient to make in the existing system.

1st. The terms on which the army of the East India Company is to be transferred to the Crown.

1. The terms should be those of a guarantee on the part of her Majesty's Government to all European officers and soldiers borne on the lists of the army at the date of transfer, whether effective or non-effective, of the continuance to them for life of the same advantages with respect to regimental pay and allowances, regimental promotion, furloughs to Europe or beyond India, pensions, and military funds of which they stood possessed by the regulations then in force.

2. The native officers and soldiers, borne on the returns of the army at the date of transfer, should have a similar guarantee for the continuance to them for life of the same advantages with respect to regimental pay, batta when in the field or marching, rations in kind at sea, and money rations on shore in addition to their field batta when employed on foreign service, and exemption from being required to serve beyond sea or beyond certain specified boundaries in India, of which they may have stood possessed under the regulations then in force within their respective presidencies.

3. The officers and soldiers, European and native, admitted into the army, subsequently to the date of its transfer to the Crown, should have a similar guarantee for the continuance to them for life of whatever advantages with respect to the matters particularized in the preceding paragraphs, they may have become possessed under the regulations in force at the time of their entering the service.

2nd. The permanent force necessary to be maintained in the Indian provinces respectively, after the restoration of tranquillity.

My opinion upon this point is stated in my answer to the second question proposed by the Commissioners on the 3rd of August.

3rd. The proportion which Europeans should have to native troops in the infantry, cavalry, and artillery respectively.

My opinion upon this point is stated in my reply to the 1st question proposed by the Commissioners.

4th. How far the European portion of the army should be composed of troops of the line, taking India as part of the regular tour of service, and how far of troops raised for service in India only.

1. The permanent European force in India should be composed partly of troops of the line, taking India as part of the regular tour of service, and partly of troops raised for service in India only.

2. Of the minimum force that may be considered necessary to form the permanent garrison of India after tranquillity shall have been restored, the whole of the artillery and engineers, and two-thirds of the cavalry and infantry should be local troops, and one-third of the cavalry and infantry troops of the line.

3. Whatever additional European force may be required, pending the restoration of tranquillity, should be furnished from the army of the line.

4. If it should be considered necessary for the imperial interests to keep a body of troops of the line in India in excess of the minimum force deemed requisite for maintaining a secure hold of the country, in order that the Home Government may have such a body, seasoned and practised in the field of India, available for recall at any time to meet a European emergency, the cost of that extra force should be borne mainly by the English revenue, the Indian revenue being charged only with such portion of it as may be equivalent to the saving effected by the Government of India being enabled proportionally to reduce the amount of the permanent native force.

5th. In connection with the preceding question, the best means of providing for the periodical relief of the former portion, and of securing the efficiency of the latter.

1. If the proportion of line to local troops be fixed, as I have proposed, at one-third of the permanent force of cavalry and infantry, the best general mode of effecting the periodical reliefs of the former would be that of taking up merchant sailing vessels, as has hitherto been the practice for their transport to India, *viâ* the Cape. As regards infantry, the reliefs should be formed, as far as practicable, of regiments which may have had a year or two of seasoning in the semi-tropical climates of the Mediterranean, the Cape, or Australia. All relieving regiments should be embarked at such time as will ensure their arriving in India, with an ordinary passage, in the month of November; and all re-

lieved regiments at such time as will ensure their arriving in England in the month of May.

2. The best means of securing the efficiency of the local European force in India will be found in the following arrangements:—

(1.) It should be of a strength sufficient to render it self-dependent, and to prevent it being regarded and treated as subordinate to the line force; and it should be kept equally complete with respect to the number of officers present with regiments wherewith to maintain discipline.

(2.) The two forces should be placed upon a perfect equality with respect to regimental pay and allowances; and the various army commands, staff and other detached appointments, should be open to the officers of both in such proportion as, considering the comparative advantages and disadvantages exclusively pertaining to either, from the inherent differences in the conditions on which they respectively entered the line and local armies, and their relative proportionate numbers on the fixed establishment in India, may be deemed equitable.

(3.) The armies of Bengal, Madras, and Bombay, should continue separate, and the European force, line and local, as well as the native force, in each presidency, should be under a separate Commander-in-chief, who should be perfectly independent of the others and subject only to the authority of the local government under the supreme control of the Government of India.

(4.) The general system of government and discipline in the European local force should be the same as that established for the army of the line; but the several Indian Commanders-in-chief should be left free to order any differences in minor matters of detail, which climate or local circumstances may appear to them to render expedient.

(5.) The armies of the three presidencies should be equalized in numerical strength, and a corresponding portion of territory transferred to the Madras and Bombay armies in the manner suggested in my reply to the 8th question proposed by the Commissioners.

(6.) The establishment of officers and men for regiments and battalions of the local army should be organized upon the basis of the plan suggested by Colonel Holland at page 5 of his note on the Indian army, appended to my answers to the nine questions proposed by the Commissioners.

(7.) The existing rules relative to promotion and retiring pensions of officers should be continued to those who may be henceforth admitted into the local army, but with the following modifications,—

   i. No officer under the rank of regimental major should be eligible for promotion to the next superior grade unless he shall have passed the examination with regard to professional qualifications, prescribed by the rules of the service, and shall have been reported by the Commander-in-chief as qualified in every other respect for the efficient performance of his duties in the superior grade. When the senior on the regimental list may be ineligible for the promotion, the next senior qualified officer should succeed to the vacancy.

   ii. It shall be in the power of the several local governments to require any officer to take his pension and retire from the service whenever, from whatever cause, it may be considered no longer desirable to retain him on the strength of the army.

(8.) The military funds should be maintained, and should continue to receive the same support from the Government as at present.

(9.) The existing system of having different scales of staff pay to different departments, and of having staff and regimental pay composed of items under the heads of Net pay, Gratuity, Ordinary, and Presidency house-rent, half and full batta, tent allowance, horse allowance, &c. &c., while staff allowances are sometimes given in addition to and sometimes in substitution of part or the whole of the regimental allowances should be abolished; and one scale of staff pay for all departments, another of regimental pay for each branch of the service, and each scale under two heads only, viz., garrison and field, should be established in lieu, upon the basis of the plan suggested by Colonel Holland.

(10.) The present system, under which half-staff salaries are granted to officers on staff or other detached employ during their absence on sick leave should be abolished, and the officers who actually do the duty should be entitled in all cases, those of absence on privileged leave excepted, to the full salaries of the appointments.

(11.) Whether the armies of the presidencies be equalized in strength or not, the pecuniary advantages hitherto given to the European officers of one presidency over those of the others, in a large proportion of full batta stations, larger salaries and allowance for office establishment annexed to identically the same appointments, &c., &c., should be all prospectively abolished, and one scale adopted for the three presidencies

(12.) The existing system under which officers at stations beyond 200 miles' distance from Calcutta to Madras and Bombay are allowed full batta, and those at stations within that distance only half batta, should be abolished. The garrison pay should be a consolidated salary of such amount for each grade as the Government may deem sufficient, and batta should be granted alike to officers and soldiers only when in the field or marching, or when specially ordered to be held in readiness for field service. The batta for each rank should be of sufficient amount to cover all ordinary expenses attendant on movement, which the present field allowance to captains and subalterns is not.

(13.) All appointments to the command of regiments should be made by selection without reference to seniority from amongst the best qualified field officers, all of whom should be made available, as lieutenant-colonels in the local army now are, for duty with any regiment. Officers of inferior regimental rank who may have obtained that of field-officer by brevet for distinguished service, should be included on the list of those eligible for such appointments. Temporary rank, as lieutenant-colonel, should be annexed to all regimental commands.

(14.) All appointments to the command of brigades and divisions should be made in like manner, by selection from amongst the most active and best qualified colonels and lieutenant-colonels, without reference to seniority; the interests of the public service alone being considered in making these appointments. The temporary rank of brigadier-general should be annexed to all brigade, and of major-general to all divisional commands.

(15.) As a rule the officers of the line and local armies should share in proportion to numbers in the commands-in-chief, as well as in all the divisional and brigade commands in India.

(16.) As a rule, no officer should be appointed to a brigade, divisional, or chief command in India, who has not, in addition to general fitness, the particular qualification of having had some years actual local experience by previous service in that country; and rules should be adopted for effectually guarding against the appointment to those commands of officers, however highly distinguished, who either by age, impaired health, or other causes, may be in any degree incapacitated for that active personal supervision of the troops under their command which the interests of the public service require.

(17.) Of whatever troops the European force in India may be composed, the army patronage, as regards all Indian appointments, those to the commands in chief alone excepted, should be vested in the hands of the Indian authorities.

(18.) All army patronage should be authoritatively declared to be given by Her Majesty to those vested with it, as a trust to be administered *bonâ fide*, in such manner as shall best promote the interests of the public service; and it should be declared to be an abuse of trust for any public officer under the Crown, to take advantage of his official position, and attempt to influence the authorities in India who may be invested with such patronage, by selecting staff or other appointments for any person whatever.

(19.) Rules should be established to ensure the entire fitness of all officers employed on the staff of the army, for the particular appointments for which they may be selected.

(20.) Temporary army rank, and of higher grades than at present given, should be substituted for the official rank annexed, under existing regulations, to certain appointments on the general staff of the army in India, when filled by officers of inferior rank, to be confirmed on the officers vacating them after a certain term of years, if specially recommended for such promotion by the local Commander-in-chief or Government.

(21.) The power to decide upon the claims of officers of the local army to be recommended to the Crown for honours in reward for distinguished service, should be vested in the Government of India alone.

(22.) The armies of India, European and native, should be entirely subordinate to the Government of India; and, except with regard to the promotion of officers, which should be entirely left to the Horse Guards, the troops of the line while serving in India should be wholly subject to the authority of the several local governments under the supreme control of the Government of India.

(23.) The uniform of European regiments in India should be modified to suit the climate. The clothing should be of a lighter texture than that for troops in England, and should be fitted loosely so as to allow the soldier perfectly free use of all his limbs. All such articles as hussar pelisses, highland bonnets and kilts, metal helmets, schakos, stiff leather stocks, thick heavy boots, &c., &c., should be at once and for ever abolished in India; and a lighter description of uniform should be devised for regiments while serving in that country, better calculated to promote the health and comfort as well as the general efficiency of the troops. When in the field the soldier should carry nothing on his back but his cloak folded in his knapsack slings, and a havresack, and water canteen slung over his shoulder; his knapsack, together with all his other necessaries being carried on the baggage animals, except only on occasions of special service on which it might be necessary that he should carry his pack also on his person.

(24.) The European cavalry should be all light cavalry, and should be made really such by being composed of men of light weight, and by neither man nor horse being loaded with any article which is not essentially necessary for efficiency in the field. The arms of a trooper should be a sword and a double barrelled rifle carbine; and his dress accoutrements and horse furniture should be so regulated that, when fully equipped for field service, his weight on his horse should not exceed 14 stone, which is about that of a native trooper of the Scind horse.

(25.) Sergeants-major of European regiments should have increased advantages with respect to rank, staff allowances, and pension, after completing certain periods of service in that appointment; and the scale should be so fixed as to make the appointment, in regard to those advantages, at the least equal in value to appointments in the several army departments.

(26.) The measures which of late years have been in progress in India to improve the dwellings of married soldiers, and to elevate the position of their wives, should be strenuously persisted in.

(27.) Every possible care should be taken to withdraw European troops from those stations in the plains which experience has shewn to be unhealthy, and to make the greatest possible use of elevated table-lands for their location.

(28.) The system hitherto adopted of maintaining numerous small stations, garrisoned with a single regiment or small mixed detachments, should be as far as practicable, abandoned; and the troops in each presidency should be cantoned in large masses, composed of troops of all arms, European and native, at a few well selected stations, with good roads of communication and ready means of access to the trunk lines of road and railway, and in the Madras and Bombay presidencies to the principal ports on the seacoast.

(29.) Camps for exercise and field training should be annually formed in each division of the army during the cold season, and the troops of all arms marched through the country and practised in every description of field duty.

vi. Whether it be possible to consolidate European forces so as to allow of exchange from one branch of the service to the other, and what regulations would be necessary and practicable to effect this object with perfect justice to the claims of all officers belonging to the local army of India.

It is not possible to consolidate the European forces so as to allow of exchanges from one branch of the service to the other, with perfect justice to the claims of all officers now in the local army.

vii. Whether there should be any admixture of European and native forces, either regimentally or by brigade.

There ought to be none regimentally; but the European and native troops should be constantly combined in brigade, both in garrison and in the field, and in field detachments, as has always been the practice.

viii. Whether local European force should be kept up by draughts and volunteers from the line, or should be as at present, recruited for separately in Great Britain?

Partly by volunteers from the line, and partly by recruiting for it separately in Great Britain.

ix. Whether it would be possible to raise any regiments in the colonies, either for temporary or permanent service in India?

It might be possible, but would not be expedient.

x. Whether the native forces should be regular or irregular, or both, and, if so, in what proportion.

My opinion upon this point is given in my answer to the third question proposed by the Commissioners.

xi. Whether any native artillery corps should be sanctioned?

My opinion upon this point is given in my reply to the fourth question proposed by the Commissioners.

xii. Whether cadets sent out for service with native troops should, in the first instance, be attached to European regiments to secure uniformity of drill and discipline.

No, not after their arrival in India; cadets should not be appointed in England to the native army but as at present, only to the general branch of the service, and to the presidency to which they may have been nominated; their particular appointment to European or native regiments being left to be determined by the authorities in India according to the regulations in force at the time. All cadets should be required to pass through a military college, and should be perfected in their regimental drill before going to India; those who may be subsequently appointed to native regiments should join them at once.

HENRY HANCOCK,
Major-General, Bombay Army

Tunbridge Wells,
December 30, 1858.

I

Colonel Tait's Answer to the Four Questions, suggested Heads of Inquiry proposed by the Commissioners.

Fulham Palace, January 1, 1859.

1. How far the European portion of the army of India should be composed of troops of the line, taking India as part of the regular tour of service; and how far of troops raised for service in India only.

1. The Indian Government must have at its command a body of officers experienced in all the usages, habits, and customs of the country, and qualified to fill all those situations which can only be taken by persons who have acquired a thorough and complete knowledge of India; it therefore appears a necessity that the army, as well as the civil service, should be composed chiefly of troops raised for duty in that portion of the empire, and the requirements of the Indian Government, for such a number of officers can only be met by a force local to India. The officers of Her Majesty's regiments of the line, looking upon India merely as a tour of duty, cannot be expected to take the same interest in the country, which those belonging to an exclusively local service must naturally feel. With very rare exceptions, nearly all officers and men of the line will always consider themselves as mere birds of passage in India, and it is not to be expected that it should be otherwise. Officers of the local service who, from early youth, have devoted their whole lives and prospects to making "India their profession," as has hitherto proved the case with the East India Company's officers, both civil and military, are no doubt the sort of men whom any Government would prefer. It takes a long servitude in that country before men acquire that experience and knowledge of the language, habits, and customs of the East, which are so essential towards making a really efficient Indian employé. It is no mere smattering that will prove sufficient in filling such important situations as the Indian Government have constantly to fill up in all parts of the empire, and officers belonging to regiments of the line will rarely be found who have qualified themselves sufficiently for such duties. When such men are to be found, their services are not likely to be overlooked, for really efficient men are in demand in India, to whatever branch they may belong. Such duties, however, require real efficiency, combined with thorough local knowledge and capability for hard work. To obtain such officers and men, who will be content to make India their homes for the greater portion of their lives, as has hitherto been the case with the East India Company's civil and military servants, and to ensure a constant command of such men of character, respectability and integrity, must be the object of Government, for otherwise it will be impossible to carry on the duties of the country with proper efficiency, and no English officers, however clever, who go to India only for a few years, will ever effectively supply the places of the officers of the late East India Company's service, who have hitherto devoted their lives to that country.

I am the more urgent on this head, as there appears to be great danger lest a mere smattering of native languages and the passing some petty examinations, should be considered sufficient qualification to enable an officer to hold an Indian appointment, however responsible it may be, without reference to any peculiar knowledge of the people and of the requirements of the country.

It will, however, be impossible to insure such a body of officers as the India government has a right to look for, unless the local service of India be maintained on a footing of perfect equality with the rest of the British army, and, perhaps, in order to further this object, a limited power of exchange from one branch of the service to the other might be admitted with advantage to both services.

Lord Canning recommends that the number of local European regiments of infantry for the Bengal presidency should be raised to thirty. Taking everything into consideration, I hold to the same opinion:—The officers being drafted, as his Lordship proposes, from the different native battalions which have mutinied.

The remaining European troops required for that presidency will be furnished by the line, and as circumstances admit, such regiments in excess as may happen to be in India, can gradually be withdrawn to Europe.

It is to be hoped that no very long period will elapse before the state of the country may admit of a very considerable reduction in the present number of regiments now employed in that presidency, so that twenty (20) of Her Majesty's regiments of the line may be found ample, with the thirty (30) local corps, making up fifty (50) European infantry regiments for the Bengal presidency alone.

The question as to the artillery appears to be simple. The Company's European artillery has always proved itself most efficient in every respect:—There can be no necessity for keeping any of the Royal Artillery in India after peace is restored to the country. The local artillery has been proved to be much less expensive and quite equal to the requirements of the service, and there can be no difficulty in increasing that branch to any extent that may be necessary. I, therefore, am of opinion that, as a matter of finance, which must be considered, all the Royal Artillery may safely, in a very short time, be withdrawn, and, as a simple matter of cost, it appears to be absolutely necessary that the measure should be carried out as soon as the requisite increase has been made to the local artillery of India. This increase, it appears to me, can best be carried out in the most economical manner, as recommended by Lord Clyde and General Mansfield, by increasing all the horse artillery and horse field batteries to eight guns each, so as to admit of half troops and half batteries of four guns each being detached when requisite,—second captains, subalterns, and additional gunners and European drivers being added to each, so as to give the complement required for eight instead of six guns, and, at the same time, replacing with Europeans all the native drivers now in the Indian artillery.

Hitherto there have been of late years three of Her Majesty's European cavalry regiments in the Bengal Presidency, and no other European cavalry whatever. Now that five strong local European light cavalry regiments have been raised for Bengal, there can be no necessity for continuing always these three dragoon cavalry regiments belonging to Her Majesty's general army. The men who have been raised for the new local European cavalry corps, are understood to be much smaller than any light dragoons ever raised before for Her Majesty's service, and such men are required in European war. There cannot be a doubt that on account of the perpetual difficulty of mounting heavy large men in India, it will be a great matter that all the European cavalry to be employed for the future should be small and active, and raised especially for that peculiar service; such fine, heavy cavalry as the royal dragoons, although called light and dressed as such, are not requisite for Indian warfare; and in time these three cavalry regiments, as well as the two in Madras and Bombay, might be withdrawn altogether, and the saving, in point of horses alone, ought to be very considerable. It is almost impossible to mount our present English royal dragoons; and, in fact, that description of European cavalry is not requisite in such a country, unless you retain one or two regiments for mere show, and to keep up the spirit of emulation between the two services.

> 2. In connection with this question, "The best means of providing for the periodical relief of the former portion; viz., the troops of the line; and of securing the efficiency of the latter?"

2. The Local Indian Army.—It has been pointed out to the Commission that troops from the Cape and Australia stand the climate of India better than regiments direct from England. If thought advisable, a depôt (as suggested by Sir George Clerk) might be established at the Cape, where all European regiments and all recruits for India might be usefully employed in the duties of that colony for a year or two before being forwarded on to India; but by taking advantage of the different sanatory hill-stations throughout India, I consider such precaution would hardly be requisite. When hill stations at an elevation of from 1,500 to 4,000 feet have once been fixed upon in different parts of India, all Europeans of the army might have their tour of such climate, and all invalids might at once be sent to the nearest hill depôts of the regiment. Each corps having a depôt of its own would enable commanding officers, on the recommendation of the surgeon, to send off at once all sickly or weakly men, and thus be the means of saving many lives; but such minor details can best be worked out in India. I feel convinced that thus you would in a great measure obviate the necessity of sending your European soldiers to Europe until their service in India was at an end, and this would be a great saving of cost in transporting men backwards and forwards.

> 3. Whether it be possible to consolidate the European forces so as to allow of exchange from one branch of the service to the other, and what regulations would be necessary and practicable to effect this object, with perfect justice to the claims of all officers now in the service of the East India Company?

3. In my opinion it will be impossible to consolidate the European forces so as to admit of free exchange from one branch of the service to the other, with perfect justice to the claims of all officers now in the service of the East India Company, nor does such appear advisable for the public

service. I have no hesitation in giving my opinion that a separate local service for India is absolutely necessary, but there would be a decided advantage in a limited power of exchange from one branch of Her Majesty's service to the other, as in the Ceylon rifles, the Cape mounted rifles, and other branches of the army; although, excepting in the junior grades, it is rarely that much advantage would be taken of this permission. It would, however, be a decided advantage to both services that such an arrangement should be permitted, and it is just possible that hereafter it might be found a very great boon, and found to work well; and there is no doubt, in the meantime, it would be so esteemed by the local army of India as the arrangement best calculated to uphold the honour of the service, and to prevent any feeling of jealousy.

> 4. Whether the local European force should be kept up by drafts and volunteers from the line, or should be, as at present, separately recruited for in Great Britain?

4. The local European force may be kept up by drafts and volunteers from the line, as well as by separate recruits in Great Britain, as at present. The buildings at Haileybury (late the Civil College of the East India Company) are now available for the home depôts, and a trifling increase to the present home Indian recruiting establishments would easily enable the officers to complete the requirements for the Indian service.

Smaller and lighter men are required for the Indian European cavalry. It would greatly facilitate the recruiting generally for the Indian service were the standard of the infantry recruits also fixed a trifle lower than for the line. For Indian service the European soldier is required, but height is of little consequence. Goorkahs and other hill tribes, who are very much smaller than the Bengal sepahis, are sufficient proof that it is pluck, not height or weight, which carries the day in India, as indeed, in most parts of the world, but there more especially.

T. F. Tait, Colonel.

MEMORANDUM by Major-General MONTGOMERIE on the TWELVE HEADS of INQUIRY laid before the Commission.

1. The terms on which the army of the East India Company are to be transferred to the Crown?

All that it appears necessary to do on this head, in my opinion, is to declare to the troops, that the well-being and interests of officers and men will be looked after and guarded by Her Majesty's Government, as hitherto under the rule of the Company.

2. The permanent force necessary to be maintained in the Indian provinces respectively, after the restoration of tranquillity?

The opinions of the highest authority laid before the Commission concur in recommending a great addition to the European force hitherto maintained in India, especially in Bengal. My own opinion is, that the number now called for is considerably higher than will be thought necessary when tranquillity prevails, and when railways and river steam navigation is more advanced. I would therefore say, for some years, rather than for a permanency, the force to be maintained in the Indian provinces respectively should be as follows:—

In Bengal—About 40,000 European troops of all arms.
„ About 100,000 Native troops of all arms.
In Madras—About 20,000 European troops of all arms.
„ About 60,000 Native troops of all arms.
In Bombay—About 18,000 European troops of all arms.
„ About 40,000 Native troops of all arms.

3. The proportion which European should bear to Native troops, in infantry, cavalry, and artillery respectively?

In Bengal—					
One European to	two	Natives	in the	Infantry.	
One	„	three	„	„	Cavalry.
Three	„	one	„	„	Artillery.
In Madras—					
One	„	three	„	„	Infantry.
One	„	three	„	„	Cavalry.
Three	„	one	„	„	Artillery.
In Bombay—					
One	„	three	„	„	Infantry.
One	„	three	„	„	Cavalry.
Three	„	one	„	„	Artillery.

4. How far the European portion of the army should be composed of troops of the line, taking India as parts of the regular tour of service, and how far of troops raised for service in India only.

My opinion is that the troops of the line should bear the proportion of one to two of the European local army.

5. In connection with this question, the best means of providing for the periodical relief of the former portion, and of securing the efficiency of the latter?

The periodical relief of regiments of the line should, I think, as a general rule, be by the Cape of Good Hope.

If the local European army is much increased, the recruiting depôts must of necessity have much enlarged barrack accommodation and increased establishments.

Officers from India, whose leave of absence has expired, should, in my opinion, as a rule, do duty at the recruiting depôts, and take charge of drafts proceeding to India.

6. Whether it be possible to consolidate the European forces, so as to allow of exchange from one branch of the service to the other; and what regulations would be necessary and practicable to effect this object, with perfect justice to all officers now in the service of the East India Company?

I do not consider it practicable to effect the object proposed on this head with perfect justice to the officers of the Company's service.

7. Whether there should be any admixture of Europeans and native forces, either regimentally or by brigade?

My opinion is strongly in favour of an admixture of Europeans with natives regimentally in a portion of the regiments to be raised in Bengal, both in the cavalry and infantry.

8. Whether the local European force should be kept up by drafts and volunteers from the line, or should be, as at present, separately recruited for in Great Britain?

I think by both means. When regiments of the line are ordered home, the men might, under proper restrictions, be allowed to volunteer for local regiments.

9. Whether it would be possible to raise any regiments in the colonies, either for temporary or permanent service in India?

I do not think it would be advisable to raise regiments of coloured men for service in India in any of the colonies.

10. Whether the native forces should be regular or irregular, or both, and if so, in what proportion?

In Bengal, in my opinion, there should be a considerable number of irregular regiments, and the proportion of them to regular regiments may be much greater than in either of the other presidencies. Neither in Madras nor in Bombay have there been hitherto many irregular regiments, and I can see no necessity for increasing them now. Both in policy and in justice we should leave these presidencies as much as possible as they are. We should not lose sight of the fact that the armies of Madras and Bombay, as a whole, have stood staunch, and have taken a faithful part in putting down the revolt, and that India has been saved to us by their loyalty.

Sir James Outram, in his minute of the 7th of September, so forcibly expresses my ideas on this head that I will quote his own words:—

"Most thoroughly do I concur in the opinion expressed by his lordship, that it would be a great error to forget that, in prudence as well as justice, the native armies of Madras and Bombay, which are still standing at their full numbers, and have shown themselves, on the whole, loyal, must be treated continuously and considerately in the introduction of changes. Not merely do I say, with the Governor-General, 'that before any change which will 'introduce discontent in these armies, the new Bengal 'army ought to be well in hand;' but I go further. I consider that no change should be attempted, nor should it be allowed to appear that any such is contemplated, so long as those armies evince no symptoms of disloyalty.

"The system and discipline maintained in those armies is in a great measure freer from the blemishes which produced the revolt of the Bengal army, and I doubt whether any great change could be introduced for many years to come. Certainly no change could be attempted, especially such as would entail the disbandment of large bodies of troops, without causing discontent and excitement, which might lead to disastrous consequences. Nor would I introduce even trifling changes just now in any branch of the armies of those presidencies, for any such would excite mistrust and suspicion that greater changes were about to follow. On the contrary, I would proclaim to those armies how deeply Her Majesty appreciated the loyalty they have evinced throughout the late trying crisis, in consideration for which they are assured that no alteration whatever shall be made in their organization, and that their constitution and privileges will be maintained, so long as they continue loyal; pointing to the utter extinction of the Bengal army as the consequence of disloyalty. Some such assurance is, I think, necessary, and should not be delayed, for our native troops throughout India cannot otherwise than feel anxiety lest the misconduct of the sepoys of Bengal may cause us to discard from our service all of their caste and creed in other parts of India, as soon as we conveniently can do so."

11. Whether any native artillery corps should be sanctioned?

In this respect, in my opinion, a marked difference should be shown between the Bengal Artillery and that of the other presidencies. In Bengal there need be very few natives taught to work the guns, though I see no good reason why a portion of native drivers and gun Lascars should not be employed. With respect to the other presidencies, for the reasons given in the last paragraph, every favour should be shown to the native artillerymen, their pay should be raised to what it was before 1837, when a private golundauze received nearly two rupees a month (or, say three half-pence a day) more than an infantry sepoy; this among a small body of men, was no burden on the public purse, but it was sufficient to make the artillery a favourite service, and gave the State a body of men, which within my own knowledge stood loyal, when the cavalry and infantry in the same cantonment showed a mutinous disposition. And only last year, when a body of Mahomedan fanatics from the city attacked the residency at

Hyderabad, a detachment of Madras Native Horse Artillery stood staunch, and instead of wavering in their duty, opened fire on the insurgents, men of their own creed; had this detachment not stood firm at this critical moment, it is perhaps, not too much to say, that the whole of the Nizam territories might have been in revolt, and the south of India from Cape Comorin to the Nerbuddah in a blaze. The services of these men should not be ignored.

12. Whether cadets sent out for service with native troops, should in the first instance be attached to European regiments, to secure uniformity of drill and discipline?

Whatever training cadets undergo before joining their native regiment, would in my opinion, be better acquired in a military seminary or doing duty at a depôt in England, than with a European regiment in India, to which they are not to be permanently posted. I have observed, that in many cases, neither the commanding officer nor the regimental officers take the same interest in a cadet doing duty with a regiment, that they do in a youth posted permanently to it. I therefore think, the sooner after a cadet arrives in India, that he joins the regiment he is ultimately to belong to, the better.

P. Montgomerie,
January 3, 1859. Major-General.

1st. How far the European portion of the army in India should be composed of troops of the line, taking India as part of the regular tour of service; and how far of troops raised for service in India only?

The answer to this question appears to me to involve the whole principle on which the European force to be employed in India should be constituted. Considering that the Government of India is now to be carried on under the direct authority of the crown, there does not seem to be any reason, when the army becomes a royal army, that it should not be made so in reality, and not merely in name, and that two descriptions of European troops should be maintained, the one being the Queen's army, as now constituted, and the other equally the Queen's army, but organised on a different system, under different, regulations, and nominally not actually under the crown. This distinction should now be done away with, and the entire European force to be employed in India should be a royal army, all serving under the same rules and regulations, the same Mutiny Act, and articles of war, and under the same system that has hitherto prevailed for her Majesty's troops serving in India. Difficulties have been stated to exist in effecting this incorporation, but they do not appear to be so insuperable as not to make it desirable to overcome them, for the sake of having one army organized and disciplined on one system, and under the same rules and regulations. Little difficulty can be found in incorporating the artillery and engineers of the late Company's service, as the promotion in these corps is the same as in the royal artillery and engineers, the officers retaining all the rights they now enjoy as to pension on retirement; and all other advantages to which they are entitled, which were in force at their entry into the service of the East India Company. The artillery in point of equipment and organization should be the same in all three presidencies, so that, whenever serving, the stores, arsenals, and magazines may be available for batteries moved for service from Madras or Bombay to Bengal, which is not the case now, and much inconvenience results from the system.

In transferring the nine infantry regiments to the line, these regiments might for the present remain in India until the officers now belonging to them are absorbed; all new appointments being made as in other regiments of Her Majesty's service. No appointments to the army in India should now be made by the Council for India, but the name of every candidate for a Commission should be submitted for the approbation of Her Majesty, in the same way as is now done for commissions in the line. It has been recommended, and it is deserving of consideration, whether all cadets should not, in the first instance, be attached to European regiments for the purpose of learning their drill, and being instructed in their duty previous to being posted to a native regiment. Possibly this might be effected by sending all cadets to a garrison town in the same manner as the Company's engineer officers have been sent to Chatham to go through a course of instruction previously to proceeding to India. The more these officers are instructed in the discipline and interior economy of a European regiment the more efficient they will become, notwithstanding the necessarily different system, in the command of native troops, and should exchanges be permitted, under certain regulations, between officers of the European army and officers of the native army, the latter would be more fit to serve with a European regiment, from having once been instructed in all the detail of duty, than is the case now, from service in a native regiment being so different from what it is in a European regiment. No exchanges to be allowed from a European regiment to a native one without passing an examination in the native language, and officers serving entirely with native regiments till they attain the rank of regimental field officers, and who have never served in a European regiment, should not be allowed to exchange, but should be eligible to all other commands to which their standing would entitle them, whether of a brigade or a division. The subscriptions to all military funds to be voluntary, and no longer compulsory, Government guaranteeing to the present subscribers, who will of course continue on the same footing as at present, all the advantages to which they are entitled from these funds on the retirement from the service. All general officers employed on the staff in India to be nominated by the Home authorities, and such other staff officers as it has hitherto been the practice to appoint, but all other appointments to the staff, and brigade commands to be made by the local governments on the recommendation of the Commanders-in-chief in the different Presidencies, subject to the confirmation of the supreme Government.

No officer to be nominated to the staff by the local government, who has not passed in the native language, except to the command of brigades and divisions, as is at present the practice. Much stress has been laid on the necessity of maintaining a European force formed for service only in India, on the ground that on a European war arising, troops might be injudiciously withdrawn from India. As the finances of India can only support a certain number of European troops, it is to be presumed that no greater number will be maintained than are absolutely necessary for the security of that empire, and whatever the strength at which that force may hereafter be fixed, it could never be calculated on by any government as forming any portion of the strength of the force necessary to be maintained for service at home, or in the other dependencies of the British Crown. The force for India must be, in addition to the force to be maintained in Europe and the colonies; and as Her Majesty's Government will be as responsible for the safety of India as for the other parts of Her Majesty's dominions, it is impossible to suppose that any Government, especially without the consent of the Governor-General, would endanger the safety of India by the withdrawal of any portion of a force calculated at the minimum ratio of that which will be required. The supposition is so improbable as in no way to counterbalance the immense advantage that will be gained from the whole of the European force in India being organized, disciplined, and equipped on the same system, and under the same rules and regulations. The new raised European cavalry regiments may likewise be transferred in the same way as the nine infantry regiments; or, if thought more advisable, the men might be allowed to transfer their services to the cavalry regiments now serving in India, the officers remaining on the strength of the regiments they formerly belonged to, and new calvary regiments added to the army at home; formed regiments being sent out to bring up the strength of the cavalry to the number proposed to be maintained in India. All the European officers belonging to native regiments should be required to make themselves acquainted with the Mutiny Act, and Articles of War, and the Queen's Regulations, unless the practice of employing them to sit on courts-martial on European soldiers is discontinued. At present they know nothing about them, and are quite dependent on the Queen's officers who may be on the court for a knowledge of what they ought to do. It is not their fault that they are not acquainted with them, as no copies are ever sent out for their use, and they have very little means of becoming acquainted with them.

In answering the second question, there is but one reply, namely, that the force to be maintained at home shall be of sufficient strength to admit, not only in India, but in all other foreign stations, of a periodical relief every ten years. In the colonies the relief is nominally stated to be every ten years, but it never is; regiments being more frequently 12 or 15 years absent than 10. To give an instance of the period to which the foreign service is extended. the first regiment which I had the honor to command, was 24 years abroad at one time, and in the last 54 years has been exactly ten years in the United Kingdom, and is now in its eleventh year of service in India. The second regiment I commanded has, in the last 34 years, been nine years in the United Kingdom, and is now in its fourteenth year of service in India. No periodical relief can be established unless the force at home is of sufficient strength to enable a certain number of regiments to be constantly in transitu independent of what force may be required for other duties and emergencies.

The answer to the third and fourth questions are comprisee in the foregoing remarks.

MELVILLE,
Major-General.

1. The terms on which the army of the East India Company is to be transferred to the Crown?

This has been already settled by Act of Parliament, and the transfer has been made.

2. The permanent force necessary to be maintained in the Indian provinces respectively after the restoration of tranquillity?

This is a local question, and must be settled in India itself. It would appear to me, however, that about 90,000 Europeans—58,000 for Bengal, 19,000 for Madras, and 13,000 for Bombay—would be more than sufficient, with a proportionate number of native troops and police corps, to be decided upon by the local authorities.

3. The proportion which Europeans should bear to native troops of infantry, cavalry, and artillery respectively?

The number of Europeans to natives to be at the rate of two Europeans to five natives, inclusive of police, for Bengal; and about one European to three natives in the two other presidencies. These proportions never to be exceeded. No native artillery to be permitted, except in most exceptional cases.

4. How far the European portion of the army should be composed of troops of the line, taking India as part of the regular tour of service, and how far of troops raised for service in India only?

The whole of the Europeans to be prospectively, and as soon as practicable, troops of the line, and the local European corps to be gradually converted into line regiments.

5. In connexion with this question, the best means of providing for the periodical relief of the former portion, and of securing the efficiency of the latter?

5. As all corps are to be of the line, all would in the course of time be periodically relieved, and the recruiting for all regiments would be provided for in the usual direct manner. On regiments leaving India, they should be called upon to volunteer for regiments remaining in the country.

6. Whether it be possible to consolidate the European force, so as to allow of exchanges from one branch of the service to the other, and what regulations would be necessary and practicable to effect this object, with perfect justice to the claims of all officers now in the service of the East India Company?

The European force of both armies to be consolidated with the least practicable delay, and exchanges to be freely allowed in every branch of the service. The Government to guarantee the military funds, and an actuary to decide the terms upon which the transfer of officers is to be permitted.

7. Whether there should be any admixture of European and native forces, either regimentally or by brigade?

The only admixture of the forces can be by brigade, and such an admixture would be most desirable and highly important.

8. Whether the local European force should be kept up by drafts and volunteers from the line, or should be, as at present, separately recruited for as in Great Britain?

Having expressed my opinion in favour of one army, this question hardly requires an answer on my part, further than to say I would recruit directly for all regiments.

9. Whether it would be possible to raise any regiments in the colonies, either for temporary or permanent service in India?

I think decidedly not. All the authorities in India seem to be opposed to it, and I think their arguments are correct, and lead me to the same conclusion.

10. Whether the native forces should be regular or irregular, or both, and if so, in what proportion?

This again is a local question, but I would suggest that all native cavalry regiments should be on the irregular system, and the infantry should be partly regular and partly irregular.

11. Whether any native artillery corps should be sanctioned?

I think certainly not, excepting in such localities in which Europeans cannot exist for any length of time, from the deadly effect of climate.

12. Whether cadets sent out for service with native troops, should in the first instance be attached to European regiments, to secure uniformity of drill and discipline?

Much may be said on both sides, but on the whole I incline to the belief that the plan I have advocated will make such an arrangement unnecessary, though it is open to consideration, whether the young officers or cadets before going out to India should not be thoroughly drilled at the home depôts of Indian regiments.

GEORGE.

COMPARISON of the ESTABLISHMENTS of TROOPS and COMPANIES of ARTILLERY, HER MAJESTY'S and the EAST INDIA COMPANY'S.

BOMBAY	6 Troops Horse Art. 16 Batteries	— 8	5,028	3 Line at 700	2,100	9 6 Line, 3 Local.	8,100	7,200	Artillery Cavalry Infantry	14,628	14,328	BOMBAY.
Total in India	104	32	23,152	18	11,000	67	60,300	53,600		92,452	87,752	
	Add as per note		4,560			Additional artillery as per note				4,560	4,560	
	Total		27,712						Total	97,012	92,312	

N.B. This force of artillery includes only the second regiment, in addition to which there will be of 1st Regiment Royal Artillery, three brigades, four troops of them horse artillery (4,560), 24 batteries or 144 guns, all for Bengal, completing the number of guns in that Presidency, as proposed by Lord Canning

The annexed return shows 1,574 officers of native infantry to be posted to regiments, on the reconstruction of the Bengal army —

Aggregate Number.	On Regimental Duty in their own Regiments.	On Duty with Irregular and Local Corps.	On the General and Divisional Staff.	On other detached Employ, Civil and Military, including Duty with Her Majesty's Regiments.	Employment unaccounted for in the Army List.	On Furlough and Leave.
1,574	76	295	101	566	309	227

1,574

From this number may be deducted on duty with irregular and local corps, which, according to Governor General, are to be retained as at present	295
On civil employ, having always been so	149
On general staff	101
	545
Twenty regular regiments of native infantry, at twenty-five	500
Thirty irregular regiments for purely military service, at eight, as recommended by Lord Clyde	240
Fifty police corps	200
	1,485
There will then remain only sufficient to meet the ordinary contingencies of other service besides regimental	89

Horse Guards, December 28, 1858.

GEORGE.

I.A.—99.
